This account of the peninsula must not be con- cluded without a brief notice of the very remarkable temple of S arab el-Chadine, and the stelae which are found in such numbers, not only in the temple, but in other parts of the peninsula, where large masses of copper, mixed with a quantity of iron ore, were and still are found in certain strata of the sandstone rocks along the skirts of the primeval chain, and which gave to the whole district the name still found in the hieroglyphics, Maphat, "the copper land," which was under the particular pro- tection of the goddess Hathor, Mistress of Maphat. The temple, dedicated to her, stands on a lofty sandstone ledge, and is entirely filled with lofty stelae, many of them like obelisks with inscriptions on both sides; so crowded with them in fact, that it would seem only made to circumscribe the stelae, although there are several erected outside it, and on the adjacent hills. The monuments belong, apparently, to various dynasties, but Dr. Lepsius has only specially mentioned three, all of the twelfth. The massive crust of iron ore covering the hillocks, 250 yards long and 100 wide, to the depth of 6 or 8 feet, and blocks of scoria, prove that the smelting furnaces of the Egyptian kings were situated on these airy heights; but the cavens in which the ore was found contain the oldest effigies of kings in existence, not excepting the whole of Egypt and the pyramids of Gisch.

The chief authorities for this article, besides those referred to in the text, are Niebuhr (Loyage en Arabie, vol. i. pp. 181—204); Seetzen (Reisen, vol. iii. pp. 55—121). For the physical history and description of the peninsula, Russegger is by far the fullest and most trustworthy authority (Reisen, vol. iii. pp. 22—58). Dr. Robinson has investigated the history and geography of the peninsula, with his usual diligence (Travels, vol. i. §§ 3, 4, pp. 87—241); and Dr. Wilson has added some important observations in the way of additional information or correction of his predecessor (Lands of the Bible, vol. i. chapters vi.—vii. pp. 160—275). Lepsius's Tour from Thebes to the Peninsula of Sinai (Letters, pp. 310—321, 556—562), which has been translated by C. H. Cottrell (London, 1846), argues for Serbal as the true Mountain of the Law; and his theory has been maintained with great learning and industry by Mr. John Hogg (Remarks on Mount Serbal, &c., in Transactions of the Royal Society of Literature, 1849). The graphic description of the country from Mr. A. P. Stanley's pen is the latest contribution to the general history of the peninsula (Sinu and Palistine, 1856). The decipherment of the inscriptions has been attempted by the learned Orientalists of Germany, Gesenius, Roediger, Beer, and others (Ch. Bunsen, Christianity and Mankind, vol. iii. pp. 231—234); and Mr. Forster has published a vindication of his views against the strictures of Mr. Stanley on his original work (The Voice of Israel from the Rocks of Sinai, 1851; The Israelitish Authorship of the Sinaitic Inscriptions, 1856).

SINCI, a sub-division of the Sarmatian tribe of the Tauri. (Anm. Mar. xxii. 8. § 33.) [T. H. L.]

SINDA (6'k06a: Fth. Sindusis), a town which seems to have been situated on the western frontier of Fidistan, in the neighbourhood of Cilyra and the river Cauarlis (Livy. xxviii. 15; Strabo, xii. p. 570, xiii. p. 630). Stephanus B. (s. v. Siuida), who speaks of Sindus as a town of Lycia, is probably alluding to the same place. (Comp. Hieroc. p. 650; Polyb. Excerpt. de Leg. 30.) Some writers have confounded Sindia with Isinda, which is the more surprising, as Livy mentions the two as different towns in the same chapter. (Leake, Asia Minor, p. 152.) [L. S.]

SINDA SARMATICA. (6'kido koid, Ptol. v. 9. § 8). A town or village in Asiatic Sarmatia, in the territory of Sindi, with an adjoining harbour (6'kido oMiy, Ptol. V. 72.), 180 stadia E. of the mouth of the Besorus, Camerinus at Corcondiana, and, according to Arrian (Per. P. Exu. p. 19). 500
SINDI.

SINGARA (τὰ Σινγάρα, Dion Cass. xiii. 22), a strongly fortified post at the northern extremity of Mesopotamia, which for awhile, as appears from many coins still extant, was occupied by the Romans as an advanced colony against the Persians. Its position has not been clearly defined by ancient writers, Stephanus B. calling it a city of Arabia, near Edessa, and Ptolemy placing it on the Tigris (v. 18, § 9). There can, however, be no doubt that it and the mountain near it, called by Ptolemy ὁ Σιγάρατος ὄρος (v. 18, § 2), are represented at the present day by the district of the Singar. It appears to have been taken by Trajan (Dion Cass. xlviii. 22); and as the legend on some of the coins reads ἈΤΡ. ΤΡ.-ΚΩΑ.-ΣΙΝΓΑΡΑ., and bears the head of Gordian on the obverse, it appears to have formed a Roman colony under the emperors Severus and Gordian. It was the scene of a celebrated nocturnal conflict between Constantius and Sapor, king of the Persia, the result of which was so unsatisfactory that both sides claimed the victory. (Amm. Marc. xviii. 5; Evagrius, xii. 10; Zos. iii. c. 7.) Still later, under the reign of Julian, it is recorded that it underwent a celebrated siege, and at length was carried by the Persians by storm, though gallantly defended by the townspeople and two legions. (Amm. Marc. xx. 6.) The country around it is distinctly marked by the geographical character; and it has been extremely arid, which rendered it equally difficult to take or to relieve from a distance. [V.]

SINGDAVA (Σινγδάβα, Ptol. iii. 8, § 8), a town in the interior of Dacia, between the rivers Tysia and Abuta, now Dorna on the Marosch. [T.I.D.]

SINGIDUNUM (Σινγίδον, Ptol. iii. 9, § 3), a town in the province of Mesia Superior, at the spot where the Scutus falls into the Danubius, and on the main road along the banks of the latter river, opposite to the town of Tunaram (Semlina) in Panonia. (Iun. Ant. p. 192; Hln. Hierocd. s. 568.) By Praeposus (de Aed. iv. p. 287) it is called Σιγγίδων. It was a fortress, and the head-quarters of the Legio iv. Flavia Felix (Not. Imp.), the modern Belgrade. [T. II. D.]

SINGILLI or SINGILIS, a town of Hispания Baetica. (Ptol. iii. 1, s. 3.) It lay near Carmon and Itáligüilla, and D'Avil (i. p. 39) identifies it with Puente de don Gonzalo. Concerning its ruins and inscriptions, see Florez, Esp. Sagr. ix. p. 42, xii. 20; Morales, p. 21. [T. II. D.]

SINGITICUS SINUS. [Singer.]

SINGONE (Σιγγόνη), a town of the Quadi in the south-east of Germany, mentioned by Ptolemy (ii. 11, § 30), but otherwise unknown. [L.S.]

SINGLIS, a tributary river of the Baeticus, navigable as far up as Astigi. (Ptol. iii. 1, s. 3.) Now the Xumil. [T. II. D.]

SINGUS (Σινγός, Herod. vii. 122; Thuc. v. 18; Böckh, Corp. Inscrip. vol. i. p. 304; Ptol. iii. 13, § 11; Steph. B. s. s.; Ptol. iv. 17; E. H. Σιγνός), a town of Tithorea in Macedonia, upon the gulfs to which it gave its name, SINGITICUS SINUS (Σιγγίτικος κόλπος, Ptol. i.c.: Gulf of Ἀθίαν Oros), identified with Sibina, probably a corrupted form of the old name. (Leake, Northern Greece. vol. iii. p. 159.)

SINHAR, a district of Babylonia, which Josephus mentioned in Genesis under the title of the "land of Sinlar." It is noticed under the name of Σινθαρ by Hierocles in Miletus, quoted by Josephus (Ant. Jud. i. 5) and Eusebius (Theophr. Evan. ix. 15; comp. Gen. xi. 2; Isatah, xi. 11;
Zeoh. v. 11). It would seem to comprehend especially the great plain land of Babylonia, as distinguished from Assyria and Elamians (Gen. xiv. 1), and probably intended to the junction of the Tigris and Euphrates, if not so far as the Persian Gulf. Some have, without reason, confounded it with Singara, the modern Singir. [V.]

SINIS (Σίνις), a Roman colony in the district of Melitene in Armenia Minor. (Ptol. v. 7. § 5.) The place is not mentioned by any other writer, but it is possible that it may be the same place as the one which Procopius (de Aed. iii. 4) simply calls Καλως εἰς. [L. S.]

SINNA. 1. (Σίννα, Ptol. v. 18. §§ 11, 12,) the name of two towns in Mesopotamia, one on the S. declivity of Mount Masius, the other more to the SE., on the Tigris.

2. (Σίννα, Strab. xvi. p. 755,) a mountain fortress in Libanon. [T. H. D.]

SINONIA (Σινώνεια), the name given in ancient times to the smallest of the three islands known as the Σίνωνεια. It is situated about 5 miles to the N.E. of Pontia (Ποντία), the principal island of the group (Plin. iii. 6. s. 22; Mol. ii. 7. § 18). [E. H. B.]

SINOP (Σινόπη; Ἐθ. Σινούπες), one of the most important of all the Greek colonies on the coast of the Black Sea. It was situated on a peninsula on the coast of Paphlagonia, at a distance of 700 stadia to the east of Cape Carambis (Strab. xii. p. 546; Marcian, p. 73; Eustath. ad Dion. Per. 775.) It was a very ancient place, its origin being referred to the Argonauts and to Sinope, the daughter of Aeopos, (Apollon. Rhod. ii. 947; Val. Flacc. v. 108.) But the Sinopians themselves referred the foundation of their city to Autolycus, a companion of Heracles, and one of the Argonauts, to whom they paid heroic honours (Strab. L. c.). But this ancient town was small and powerless, until it received colonists from Miletus. The Miletians were in their turn dispossessed by the Cimmerians, to whom Herodotus (iv. 12) seems to assign the foundation of the city; but when the Cimmerians were driven from Asia Minor, the Ephesians (in b. c. 632) recovered possession of their colony. (Sceynn. 204, foll.; Anonym. Perip. P. E. p. 8.) The leader of the first Miletian colony was called Ambros, and the leaders of the second Cos and Clbrotes; though this latter statement seems to be a mistake, as Eustathius and Stephanus B. (c. c.) call the founder Clbrotes, a native of Cos. After this time Sinope soon rose to great power and prosperity. About the commencement of the Peloponnesian War the Sinopians, who were then governed by a tyrant, Timoleon, received assistance from the Athenians; and after the expulsion of the tyrant, 600 Athenian colonists were sent to Sinope (Plut. Peric. 20). At the time of the retreat of the Ten Thousand under Xenophon, Sinope was a wealthy and flourishing city, whose dominion extended to the river Haly, and which exercised great influence over the tribes of Paphlagonia and Cappadocia, independently of its colonies of Cerasus, Cotyra, and Trapezus. It was mainly owing to the assistance of the Sinopians, that the returning Greeks were enabled to procure ships to convey them to Heraclea (Xenoph. Anab. v. 5. § 3; Arrian. Perip. P. E. p. 17; Diod. Sic. xiv. 30, 32; Ann. Mom. xxii. 8). Strabo also acknowledges that the fleet of the Sinopians held a distinguished position among the naval powers of the Greeks; it was mistress of the Euxine as far as the entrance of the Bosporus, and divided by Byzantium the lucrative tunny fisheries in that sea. In the time of Ptolemy Soter, Sinope was governed by a prince, Sydr,othenes, to whom the Egyptian king sent an embassy. (Strab. Hist. iv. 82, foll.) Its great wealth, and above all its excellent situation, excited the cupidity of the kings of Pontus. It was first assailed in B. C. 220, by Mithridates IV, the great-grandfather of Mithridates the Great. Polybios (iv. 56), who is our principal authority for this event, describes the situation of Sinope in the following manner: It is built on a peninsula, which advances out into the sea. The isthmus which connects the peninsula with the mainland is not more than 2 stadia in breadth, and is entirely barred by the city, which comes up close to it, but the remainder of the peninsula stretches out towards the sea. It is quite flat and of easy access from the town; but on the side of the sea it is precipitous all around, and dangerous for vessels, and presents very few spots fit for effecting a landing. This description is confirmed by Strabo (xii. p. 545), for he says that the city was built on the neck of the peninsula; but he adds, that the latter was girt all around with rocks baulked out in the form of basins. At high water these basins were filled, and rendered the shore inaccessible, especially as the rocks were everywhere so pointed that it was impossible to walk on them with bare feet. The Sinopians defended themselves bravely against Mithridates, and the timely aid of the Rhodians in the end enabled them to compel the aggressor to raise the siege. Pharnaces, the successor of Mithridates IV., was more successful. He attacked the city unexpectedly, and finding its inhabitants unprepared, easily overpowered it, b. c. 183. From this time Sinope became the chief town, and the residence of the kings of Pontus. (Strab. L. c.; Polyb. xxiv. 10.) Mithridates, surnamed Euergetes, the successor of Pharnaces, was assassinated at Sinope in b. c. 120 (Strab. x. p. 477). His son, Mithridates the Great, was born and educated at Sinope, and did much to embellish and strengthen his birthplace: he formed a harbour on each side of the isthmus, built naval arsenals, and constructed admirable reservoirs for the tunny fisheries. After his disaster at Cyzicus, the king intrusted the command of the garrison of Sinope to Bacchides, who acted as a cruel tyrant; and Sinope, pressed both from within and from without, was at last taken by Lucullus, after a brave resistance. (Strab. L. c.; Plut. Lucull. 18; Appian, Bell. Mith. 83; Mommsen, in Phot. Cod. p. 238, ed. Bekker.) Lucullus treated the Sinopians themselves mildly, having put the Pontian garrison to the sword; and he left them in possession of all their works of art, which embellished the city, with the exception of the statue of Autolycus, a work of Sthenis, and the sphere of Billarums. (Strab. Polit. ii. 73; Cass. pro Leg. Mav. 8.) Lucullus restored the city to its ancient freedom and independence. But when Pharnaces, the son of Mithridates, had been routed at Zela, Caesar took Sinope under his protection, and established Roman colonies there, as we must infer from coins bearing the inscription Col. Jui. Caes. Felix Sinope. In the time of Strabo Sinope was still a large, splendid, and well fortified city; for he describes it as surrounded by strong walls, and adorned with fine porticoes, squares, gymnasia, and other public edifices. Its commerce indeed declined, yet the tunny fisheries formed an inexhaustible
source of revenue, which maintained the city in a tolerable state of prosperity. It possessed extensive suburbs, and numerous villas in its vicinity (Strab. l. c.; Plin. vi. 2). From Pliny's letter's (x. 91), it appears that the Sinonians suffered some inconvenience from the want of a good supply of water, which Pliny endeavoured to remedy by a grant from the emperor Trajan to build an aqueduct conveying water from a distance of 16 miles. In the time of Arrian and Marcian, Sinope still continued to be a flourishing town. In the middle ages it belonged to the empire of Trebizond, and fell into the hands of the Turks in A.D. 1470, in the reign of Mahomet II. Sinope is also remarkable, as the birthplace of several men of eminence, such as Diceneus the Cynic, Bato, the historian of Persia, and Diphilus, the comic poet.

Near Sinope was a small island, called Scopelus, before which large vessels were obliged to sail, before they could enter the harbour; but small craft might pass between it and the land, by which means a circuit of 40 stadia was avoided (Marcus, p. 72, &c.). The celebrated Sinopian coinage (Σινόπικη μίλις, Σινόπης ή Σινιοπής γῆ) was not a product of the district of Sinope, but was designated by this name only because it formed one of the chief articles of trade at Sinope. (Grosskird on Strabo, vol. ii. p. 457, foll.) The imperial coins of Sinope that are known, extend from Augustus to Gallienus. (Sestini. Num. Itet. p. 63; Rasche. Lex. Num. iv. 2. p. 1105, foll.)

Sinope, now called Sinaib, is still a town of some importance, but it contains only few remains of its former magnificence. The wall across the isthmus has been built up with fragments of ancient architecture, such as columns, architraves, &c., and the same is found in several other parts of the modern town; but no distinct ruins of its temples, porticoes, or even of the great aqueduct, are to be seen. (Hamilton. Researches, vol. i. p. 306, &c.)

SINOPHIA. (Ζινοφια, Strab. xii. p. 555), a town on the frontier of Armenia Major, a circumstance which gave rise to a pun of the historian Theophanes who wrote the name Σινοφια. The place is no doubt the same as the one called Sinorea by Appian (Mithrid. 101), by Ammianus Marcellinus (xvii. 7) Synhorium, by Polenus (v. 7. § 2) Sinuba or Sinura, and in the Antonine Itinerary (p. 208) Sinuvas. The pun upon the name made by Theophanes seems to show that the form Sinoria, which Strabo gives, is the correct one. The town was a fortress built by Mithridates on the frontier between Greater and Lesser Armenia; but assuming that all the different names mentioned above are only varieties or corruptions of one, it is not easy to fix the exact site of the town, for Polenus and the Antonine Itinerary place it to the south-west of Satala, on the road from this town to Melitene, and on the Ephrhapides, while the Table, calling it Sinura, places it 75 miles to the north-east of Satala, on the frontier of Pontus; but there can be no doubt that the Sinura of the Table is altogether a different place from Sinoria, and the site of the latter place must be sought on the banks of the Ephrhapides between Satala and Melitene, whence some identity it with Mirsad Chai and others with S Feldi. [L. S.]

SINOTHUM. (Synodomum).

SINSI (Σινσησι, Ptol. iii. 8 § 5), a people in the S. of Dacia. [T. H.D.]

SINTI (Thuc. ii. 98; Steph. B. s. e.; Liv. xiii. 51), a Thracian tribe who occupied the district lying between the ridge called Cucine and the right or W. bank of the Strymon, in the upper part of the course of that river, which was called from thence SYNTHIC (Συνθικ, Ptol. iii. 13. § 30). When Macedonia was divided into four provinces at the Roman conquest, Synthia was associated with Bisaltia in the First Macedonia, of which Amphipolis was the capital (Liv. xiv. 29). It contained the three towns HERACLEA, PARAEOCOPOUL, TRISTOLA. [E.B.J.]

SINTIES. [Lemnos.]

SINUESA (Σινύεσσα or Σινύεσσα: Ett. Σινύεσσας, Sinussamus: Mandrubone), a city of Latium, in the more extended sense of the name, situated on the Tyrrhenian sea, about 6 miles N. of the mouth of the Volturru. It stood on the line of the Via Appia, and was the last place that great highroad touched on the sea-coast. (Strab. v. p. 233.) It is certain that Sinuessa was not an ancient city: indeed there is no trace of the existence of an Italian town on the spot before the foundation of the Roman colony. Some authors, indeed, mention an obscure tradition that there had previously been a Greek city on the spot which was called Sinope; but little value can be attached to this statement. (Liv. x. 21; Plin. iii. 5. s. 9.) It is certain that if it ever existed, it had wholly disappeared, and the site was included in the territory of the Aesclonian city of Ve-cia, when the Romans determined to establish simultaneously the two colonies of Minturnae and Sinuessa on the Tyrrhenian sea. (Liv. x. 21.) The name of Sinuessa was derived, according to Strabo, from its situation on the spacious gulf (Sinus), now called the Gulf of Gaeta. (Strab. v. p. 234.) The object of establishing these colonies was chiefly for the purpose of securing the neighboring fertile tract of country from the ravages of the Sannites, who had already repeatedly overrun the district. But for this very reason the plebeians at Rome hesitated to give their names, and there was some difficulty found in carrying out the colony, which was, however, settled in the following year, B. C. 296. (Liv. x. 21; Vell. Pat. i. 14.) Sinuessa seems to have rapidly risen into a place of importance; but its territory was severely ravaged by Hannibal in B. C. 217, whose cavalry carried their devastations up to the very gates of the town. (Liv. xxii. 13, 14.) It subsequently endeavoured, in common with Minturnae and other colonies maritimas, to establish its exemption from furnishing military levies; but this was overruled, while there was an enemy with an army in Italy. (Id. xxvii. 39.) After a period (B. C. 191) they again attempted, but with equal ill success, to procure a similar exemption from the naval service. (Id. xxxvi. 3.) Its position on the Appian Way doubtless contributed greatly to the prosperity of Sinuessa; for the same reason it is frequently incidentally mentioned by Cicero, and we learn that Caesar halted there for a night on his way from Brandusium to Rome, in B. C. 49. (Cic. ad Att. ix. 15, 16, xiv. 8, ad Fam. xii. 20.) It is noticed also by Horace on his journey to Brandusium, as the place where he met with his friends Varus and V. (Sat. i. 5, 40.) The fertility of its territory, and especially of the neighbouring ridge of the Mons Massicus, so celebrated for its wines, must also have tended to promote the prosperity of Sinuessa, but we hear little of it under the Roman Empire. It received a body of military colonists, apparently under the Triunvirate (Lib. Col. p. 237), but did not retain the rank of a Colonia, and
SINUS AD GRADUS.

is termed by Pliny as well as the Liber Columbarium only an "opusculum," or ordinary municipal town. (Plin. iii. 5. s. 9; Lib. Col. L. c.) It was the furthest town in Latium, as that term was understood in the days of Strabo and Pliny, or "Latium adjunctum," as the latter author terms it; and its territory extended to the river Savo, which formed the limit between Latium and Campania. (Strab. v. pp. 219, 231, 233; Plin. iii. 5. s. 9; Mel. ii. 4 § 5.) At an earlier period indeed Polybius reckoned it a town of Campania, and Ptolemy follows the same classification, as he makes the Liris the southern limit of Latium (Pol. iii. 91; Ptol. iii. 1. § 6); but the division adopted by Strabo and Pliny is probably the most correct. The Itineraries all notice Sinussa as a still existing town on the Appian Way, and place it 9 miles from Minturnae, which is, however, considerably below the truth. (Itin. Ant. p. 108; Itin. Hier. p. 611; Tab. Peut.) The period of its destruction is unknown.

The ruins of Sinussa are still visible on the seaward just below the hill of Mondragone, which forms the last underfall or extremity of the long ridge of Monte Massico. The most important are those of an aqueduct, and of an edifice which appears to have been a triumphal arch; but the whole plain is covered with fragments of ancient buildings. (Claver. Ital. p. 1080; Romanelli, vol. iii. p. 340.)

At a short distance from Sinussa were the baths or thermal springs called AQUAE SINUSSANAE, which appear to have enjoyed a great reputation among the Romans. Pliny tells us that they were esteemed a remedy for barrenness in women and for insanity in men. They are already mentioned by Livy as early as the Second Punic War; and though their fame was eclipsed at a later period by those of Baiae and other fashionable watering-places, they still continued in use under the Empire, and were resorted to among others by the emperor Claudius. (Liv. xxii. 13; Tac. Ann. xii. 66; Plin. xxxi. 2. 4.) It was there, also, that the infamous Tigellinus was compelled to put an end to his own life. (Tac. Hist. i. 72; Plut. Oth. 2.) The mild and warm climate of Sinussa is extolled by some writers as contributing to the effect of the waters (Tac. Ann. xii. 66): hence it is called "Sinussa tepens" by Silius Italicus, and "mollis Sinussa" by Martial. (Silv. iv. 226; Mart. vi. 42.) The site of the waters is still called I Bogni, and the remains of Roman buildings still exist there. [E. H. B.]

SINUS AD GRADUS or AD GRADUS. [Fossa Mariana.]

SION, M. (Σιόν), originally the name of a particular fortress or hill of Jerusalem, but often in the poetical and prophetical books extended to the whole city, especially to the temple, for a reason which will presently be obvious. Sion proper has been always assumed by later writers to be the SW. hill of Jerusalem, and this has been taken for granted in the article on Jerusalem [JERUSALEM, p. 18]. The counter hypothesis of a later writer, however, maintained with great learning, demands some notice under this head. Mr. Thrupp (Antient Jerusalem, 1855) admits the original identity of Sion and the city of David, but believes both to have been distinct from the upper city of Josephus, which latter he identifies with the modern Sion, in agreement with other writers. The transference of the name and position of Sion he dates as far back as the return from the Babylonish captivity, believing that the Jews had lost the tradition of its identity with the city of David; so that, while they correctly placed the latter, they erroneously fixed the former where it is still found, viz., at the SW. of the Temple Mount, which mount was in fact the proper "Sion," identical with "the city of David;" for it is admitted that the modern Sion is identical not only with that recognised by the Christian (he might have added the Jewish) inhabitants of Jerusalem, and by all Christian (and Jewish) pilgrims and travellers from the days of Constantine, but with the Sion of the later Jewish days, and with that of the Maccabees. The elaborate argument by which it is attempted to remove this error of more than 2000 years standing from the topography of Jerusalem, cannot here be stated, much less discussed; but two considerations may be briefly mentioned, which will serve to vindicate for the SW. hill of the city the designation which it has enjoyed, as is granted, since the time of the Babylonish captivity. One is grounded on the language of Holy Scripture, the other on Josephus. Of the identity of the original Sion with the city of David, there can be no doubt. Mr. Thrupp (pp. 12, 13) has adduced in proof of it three conclusive passages from Holy Scripture (2 Sam. v. 7; 1 Kings. viii. 1; 1 Chron. xi. 5). It is singular that he did not see that the second of these passages is utterly irreconcilable with the identity of the city of David with the Temple Mount; and that his own attempt to reconcile it with his theory, is wholly inadequate. According to that theory Mount Sion, or the city of David, extended from the NW. angle of the present Haram, to the south of the same enclosure; and the tombs of David, which were certainly in the city of David, he thinks might yet be discovered beneath the south-western part of the Haram (p. 161). That the temple lay on this same mount, between these two points, is not disputed by any one. Now, not to insist upon the difficulty of supposing that the threshing-floor of Araunah the Jebusite, where the temple was undoubtedly founded (2 Chron. iii. 1), lay in the very heart of the city of David, from which David had expelled the Jebusites, it is demonstrable, from the contents of the second passage above referred to, that the temple was in no sense in the city of David; for, after the completion of the temple, it is said, that and the parallel passage in (2 Chron. v. 2, 5, 7) that Solomon and the assembled Israelites brought up the ark of the covenant of the Lord out of the city of David, which is Sion, into the temple which he had prepared for it on what Scripture calls Mount Moriah (2 Chron. iii. 1). Again, in 2 Samuel, v. 6—9, we have the account of David's wrestling "the stronghold of Sion, the same is the city of David," out of the hands of the Jebusites; after which "David dwelt in the fort, and called it the city of David." Josephus, in recording the same events, states that David "had siege to Jerusalem, and took the lower city by assault, while the citadel still held out." (Ant. vii. 3. § 2.) This citadel is clearly identified with the upper city, both in this passage and in his more detailed description of the city, where he says that the hill upon which the upper city was built was by far the highest, and on account of its strength was called by King David the "fortress of David." (Bell. Jud. iv. 4. § 1.) We are thus led to a conclusion directly opposite to that arrived at by Mr. Thrupp, who says that "the accounts in the books of Samuel and Chronicles represent David as taking the stronghold of Sion first
and the Jebusite city afterwards; Josephus represents him as taking the lower city first, and afterwards the citadel. There can be no doubt, therefore, that in Josephus's view, Sion was the lower city, and the Jebusite city the citadel; "for a comparison of the 7th verse of the 2 Chron. xvi. and at the 5th with the 7th verse in 1 Chron. xi. can leave no doubt that the intermediate verses in both passages relate to the particulars of occupation of Sion, which particulars are narrated by Josephus of the occupation of the upper city, here called by him by the identical name used by the sacred writer, of the "castle in which David dwelt;" therefore they called it the city of David;" and this counterpart of Josephus is admitted by Mr. Thrupp to be the upper city (p. 56, note 2). Josephus subsequently used in a much wider acceptation, and applied particularly to the sanctuary, is certain; and the fact is easily explained. The tent or tabernacle erected by David for the reception of the ark was certainly on Mount Sion, and in the city of David (2 Sam. vi. 12; 1 Chron. xv. 1, 29), and therefore in all the language of his own divine compositions, and of the other Psalmists of the conclusion of his and the commencement of Solomon's reign. Sion was properly identified with the sanctuary. "And when the ark was transferred to the newly-consecrated temple on the contiguous hill, which was actually united to its former resting-place by an artificial embankment, the signification of the name should be extended so as to comprehend the Temple Mount, and continue the propriety and applicability of the received phræsophy of David's and Asaph's Psalms to the new and permanent abode of the most sacred emblem of the Hebrew worship. But to attempt to found a topographical accuracy on the at the directive and frequently elliptical expressions of Psalms or prophecies is surely to build on a foundation of sand. It was no doubt in order not to perplex the topography of Jerusalem by the use of ecclesiastical and devotional terminology that Josephus has wholly abstained from the use of the name Sion.

G. W.

SIPHI or ZIPHI (LXX. Alex. Ziph, Vat. Oqô: Eth. Zeqô); a city of the tribe of Judah, mentioned in connection with Maon, Carmel, and Juttah (Judg. xv. 51). The wilderness of Ziph was a Levite's holy-land-place of David when concealing himself from the malice of Saul. (1 Sam. xxiii. 14, 26, xxvi. 1; Psalm liv. title.) This wilderness of Ziph was contiguous to the wilderness of Maon (1 Sam. xxiii. 25); and this Maon is connected with Carmel in the history of Nahal and Abigail (xxv. 2). The three names are still found a few miles south of Hebron, as Kironel, Main, Ziph. The ruins lie on a low ridge between two small wadys, which commence here and run towards the Dead Sea. "There is here little to be seen except broken walls and foundations, most of them of unknown stone, but indicating solidity, and covering a considerable tract of ground. Numerous cisterns also remain." (Robinson, Bibl. Res. vol. ii. p. 191.) Ziph is placed by St. Jerome 8 miles E. of Hebron (S. would be more correct), and the desert of Ziph is frequently mentioned in the annals of the reduses of Palestine, while the site of the town was identified by travellers at least three centuries ago. (Furer, Itinerarii, vol. i. 46.) [GW.]

SIPHIAE, TIPHIA (Σιπήα, Τιφήα, Thucyd. iv. 76; Sicily, p. 135; Steph. B. s. r.; Itol. iii. 15; § 5; Plin. iv. 3, s. 4; Toep, Paus. iv. 32. § 4; Eth. Telearios, Teoarios, a town of Leucip, upon the Corinthian gulf, which was said to have derived its name from Tiphys, the pilot of the Argonauts. In the time of Pausanias the inhabitants of Siphia pointed out the spot where the ship Argo anchored on its return from its celebrated voyage. The same writer mentions a temple of Hercules at Siphia, in whose honour an annual festival was celebrated. (Paus. l.c.) Thucydides (l.c.), Apollonius Rhodius (I. 105.), and Stephanus B. (s. v. Ziphia) describe Siphia as a dependency of Thespiae; and it is accordingly placed by Müller and Kiepert at Alkyös. But Leake draws attention to the fact that Pausanias describes it as lying W. of Thisbe; and he therefore places it at port Sarandil, near the monastery dedicated to St. Taxaiabes, where are the remains of a small Hel·lenic city. On this supposition the whole of the territory of Thisbe would lie between Thespiae and Siphia, which Leake accounts for by the superiority of Thespiae over all the places in this angle of Boeotia, whence the whole country lying upon this part of the Corinthian gulf may have often, in common acceptance, been called the Thespiae. (Leake, Northern Greece, vol. ii. p. 515.)

SIPHNOΣ or SYPHINΩ Σ (Σύφων: Eth. Σύφων: Siphano Gr., Siphano Italo), an island in the Aegaean Sea, 10 miles S.S.W. of the Aegina. This was the seat of the island Siphilus, and the place where the Argonauts were said to have landed in the course of their pilgrimage (Paus. x. 26. § 66) it describes it as 28 miles in circuit, but it is considerably larger. The same writer says that the island originally called Merope and Avis; its ancient name of Merope is also mentioned by Stephanus B. (s. v.). Siphnos was colonised by Ionians from Athens (Herod. viii. 48), whence it is said to have derived its name from Siphnos, the son of Sunias. (Steph. B. s. v.) In consequence of their gold and silver mines, of which remains are still seen, the Siphnians attained great prosperity, and were regarded, in the time of Polycrates (n. c. 529), as the wealthiest of all the islanders. Their treasury at Delphi, in which they deposited the tenth of the produce of their mines (Paus. x. 11. § 2), was equal in wealth to the treasuries of the most opulent states; and their public buildings were decorated with Parian marble. Their riches, however, exposed them to pillage; and a party of Samian exiles, in the time of Polycrates, invaded the island and carried away a considerable part of its produce. (Herod. iii. 57, 58.) The Siphnians were among the few islanders in the Aegean who refused tribute to Xerxes, and they fought with a single ship on the side of the Greeks at Salamis. (Herod. viii. 46, 48.) Under the Athenian supremacy the Siphnians paid an annual tribute of 3600 drachmae. (Firzen. Elem. Epigr. Gr. n. 32.) Their mines were afterwards less productive; and Pausanias (l.c.) relates that in consequence of the Siphnians neglecting to send the tenth of their treasure to Delphi, the gods destroyed their mines by an inundation of the sea. In the time of Strabo the Siphnians had become so poor that Σύφων ἀπόγευσαν became a proverbial expression. (Strab. x. p. 448; comp. Eustath. ἐν Dionys. Per. 523; Hesych. s. v. Σύφων ἀπόγευσαν.) The moral character of the Siphonians stood low; and hence to act like a Siphonian (Σύφωνικός) was used as a term of reproach. (Steph. B.; Suid.; Hesych.) The Siphnians were celebrated in antiquity, as they are in the present day, for their skill in pottery. Pliny (xxxvi. 22. § 159. Silius) mentions a particular kind of stone, of which drinking cups were made. This, according to Fidler, was a species of talc, and is probably intended by
SIPIA.

Stephanus B. when he speaks of Σιπνεος θωτη-

pow.

Siphos possessed a city of the same name (Ptol.
iii. 15. § 31), and also two other towns, Apollonia
and Milita, mentioned only by Stephanus B. The
ancient city occupied the same site as the modern
town, called Kastron or Siphon, which lies upon
the eastern side of the island. There are some re-
mains of the ancient walls; and fragments of marble
are found, with which, as we have already seen,
the public buildings in antiquity were decorated. A
range of mountains, about 3000 feet in height, runs
cross Siphos from SE. to NW.; and on the high
ground between this mountain and the eastern side
of the island, about 1000 feet above the sea, lie five
near villages, of which Stauro is the principal. These
villages contain from 4000 to 5000 inhabitants;
and the town of Kastron about another 1000. The
climate is healthy, and many of the inhabitants
live to a great age. The island is well cultivated,
but does not produce sufficient food for its popu-
lation, and accordingly many Siphians are obliged
to emigrate, and are found in considerable numbers
in Athens, Smyrna, and Constantinople. (Terme-nor,
Voyage, &c. vol. i. p. 134, seq. trans.; Fiedler,
Reise, vol. ii. p. 125, seq.; Ross, Reise auf den
Griech. Inseln, vol. i. p. 138, seq.)

COIN OF SIPHOS.

SIPIA, in Gallia, is placed by the Table en a
route from Condacte (Remnes) to Julianagmus (Angers).
The distance from Condacte to Sipia is xvi. and this
distance brings us to a little river Seche at a place
called Vi-soche, the Vi being probably a corruption
of Vadam. The same distance xvi. measured from
Vi-soche brings us to Combaristum (Combrie) on the
route to Angers. But see the article COMBARISTUM.
The Seche is a branch of the Vilaine (D'Anville,
Notice, &c.).

SIPIUM, or SIPUTUM, but in Greek al-
ways SIPUS (Σιπους-σιπους: Eti. Σιπουτος, Si-
pontia; Sta Maria di Siponto), a city of Apulia,
situated on the coast of the Adriatic, immediately S.
of the great promontory of Garganus, and in the
height of the deep bay formed by that promontory
with the prolongation of the coast of Apulia. (Strab.
vii. p. 284.) This bays is now called the Gulf of
Mafredonia, from the city of that name which is
situated within a few miles of the site of Sipontum.
The Cebalos, or Cerraro, and the Canderal fall
into this bay a short distance S. of Sipontum, and
form at their mouth an extensive lagoon or salt-
water pool (στενωρος, Strab. l.c.), now called the
Pantani Salas. Like most places in this part of
Apulia the foundation of Sipontum was ascribed to
Diomed (Strab. l.c.); but with the exception of this
vague and obscur tradition, which probably means
no more than that the city was one of these belonging
to the Daunian tribe of Apulians, we have no ac-
count of its being a Greek colony. The name is
structively analogous in form to others in this part of
Italy (Hydruntum, Butuntum, &c.); and its Greek
derivation from σπιως, a cattle-fish (Strab. l.c.), is
in all probability fictitious. The Greek form Sipus,
is adopted also by the Roman poets. (Sil. Ital. viii.
633; Lucan. v. 377.) The only mention of Sipontum
in history before the Roman conquest is that of its
capture by Alexander, king of Epirus, about n. c.
330. (Liv. viii. 41.) In the manner in which it passed
under the yoke of Rome we have no data; but in n.
c. 194 a colony of Roman citizens was settled there,
at the same time that those of Salerno and
Buxentum were established on the other sea.
(Liv. xxxiv. 45.) The lands assigned to the colo-
nists are said to have previously belonged to the
Arapmi, which renders it probable that Sipontum
itself had been merely a dependency of that city.
The new colony, however, does not seem to have
prospered. A few years later (n. c. 184) we are
.told that it was deserted, probably on account of
malaria; but a fresh body of colonists was sent
there (Liv. xxxix. 22), and it seems from this time
to have become a tolerably flourishing town, and was
frequented as a seaport, though never rising to any
great consideration. Its principal trade was in
corn. (Strab. vi. p. 284; Mel. ii. 4. § 7; Plin.
iii. 11. s. 16; Ptol. iii. 1. § 16; Pol. x. 1.) It is, how-
ever, mentioned apparently as a place of some im-
portance, during the Civil Wars, being occupied
by M. Antonius in p. c. 40. (Appian, B. C. v.
56; Dion Cass. xlvii. 27.) We learn from inscrip-
tions that it retained its municipal government
and magistrates, as well as the title of a colony,
der under the Roman Empire (Mommsen, Inscri.
R. N. 927—929); and at a later period Paulus
Diacos mentions it as still one of the "urbes
ii. 21.) Lucan notices its situation immediately at
the foot of Mount Garganus ("sub sita Sipus munibus");
Lucan, v. 377). It was, however, actually situated
in the plain and immediately adjoining the marshes
at the mouth of the Candeleo, which must always
have rendered the site unhealthy; and in the middle
ages it fell into decay from this cause, till in 1250
Manfred king of Naples removed all the remaining
population to a site about a mile and a half further
N., where he built a new city, to which he gave
the name of Mafredonia. No ruins of the ancient
city are now extant, but the site is still marked by
an ancient church, which bears the name of Sta Maria
di Siponto, and is still termed the cathedral, the
archbishop of Mafredonia bearing officially the
title of Archbishop of Sipontum. (Graven's Southern
Tour, p. 67; Romanielli, vol. ii. p. 209.) The name
of Sipontum is found in the Itineraries (Ita. Aut.
p. 314; Top. Pest), which give a line of road pro-
ceeding along the coast from thence to Barium,
passing by the Saline at the mouth of the Pulas
Salapina, and therefore following the narrow strip
of beach which separated that lagoon from the sea.
There is still a good horse-road along this beach;
but the distances given in the Itineraries are certainly
corr upt. [E. H. B.]

SITULLUS (Σιτουλος), a mountain of Lydia be-
tween the river Hermus and the town of Smyrna:
it is a branch of Mount Tmolus, running in a north-
western direction; along the Hermus, a rugged,
much torn mountain, which seems to owe its present
form to violent convulsions of the earth. The
mountain is mentioned even in the Iliad, and was
rich in metal. (Hom. ii. xxiv. 615; Strab. i. p. 58,
xii. p. 579, xiv. p. 680.) On the eastern slope of the
mountain, there once existed, according to tradition, an ancient city, called Tantalus, afterwards Sipylos, the capital of the Maeonians, which was beloved to have been swallowed up by an earthquake, and plunged beneath the waves by [1] Strabo, which bore the name of Sale or Sakei: (Strab. i. p. 58, xii. p. 579.; Steph. B. s. c.; Plin. v. 31; Paus. vii. 24. § 7). Pliny relates that the spot once occupied by Sipylos was successively occupied by other towns, which he calls Archapeolis, Copie and Lebade. Pan-samius (v. 13. § 4) calls the lake the marsh of Tantalus, and adds that his tomb was conspicuous near it, and that the throne of Pelops was shown on the summit of the mountain above the temple of (Cybele) Plata. The tops of the mountains of Sipylos were believed to have been seen under the water for some time after (Paus. vii. 24. § 7): and some modern travellers, mistaking the ruins of old Symyra for those of Sipylos, imagine that they have discovered both the remains of Sipylos and the tomb of Tantalus. Chandler (Travels in Asia Minor, p. 331) thought that a small lake of limpid water at the north-eastern foot of Mount Sipylos, not far from a sepulchre cut in the rock, might be the lake Sale; but Hamilton (Researches, i. p. 49, fol.) has shown that the spot could not be sought for in the marshy district of Manniss.

In speaking of Mount Sipylos, we cannot pass over the story of Niobe, alluded to by the poets, who is said to have been metamorphosed into stone on that mountain in her grief at the loss of her children. (Hom. Il. xxiv. 614; Soph. Antig. 822; Ov. Met. vi. 310; Apollod. iii. 5; Paus. vii. 2. § 3.) Pan-samius (i. 21. § 5) relates that he himself went to Mount Sipylos and saw the figure of Niobe formed out of the natural rock, when viewed close he saw only the rock and precipices, but nothing resembling a woman either weeping or in any other posture; but standing at a distance you fancied you saw a woman in tears and in an attitude of grief. This phantom of Niobe, says Chantler (p. 331), whose observation has been confirmed by subsequent travellers, may be defined as an effect of a certain portion of light and shade on a part of Sipylos, perceivable at a particular point of view. Mount Sipylos now bears the name of the Niobe of the Maeonians (Strab. v. 7). 

SIRACELAI. (Itin. Ant. p. 332; Ib. p. 353; Siracellæ; It. Hier. p. 602. Singellæ; Tab. Peut. Syracellæ; and in Geog. Rav. iv. 6, and v. 12, Syracelse), a place in Thrace, on the road from Trajanopolis to Callipolis, and on the main road to Constantinople. Its distance from Trajanopolis is variously given in the Itin. Ant., and the readings of the MSS. differ,—one stating the distance to be as much as 59,000 paces, another as little as 50,000. According to Mancert (Vit. p. 265), its site is near the modern Cleuchon or Cleusper (2) of P. Lucas (Trioz. Vog. p. 47); but Richard places it near Zerma, and Lappe near Malagrita or Mylagryra; the uncertainty of the Itinerary above mentioned being probably the cause of this discrepancy. [J. R.]

SIRACNE. [NIDIC.]

SIRACEN (2) Sperchus, (Strab. v. 9. §§ 17, 19), a great and mighty people of Asiatic Sarmatia on the east shore of the Maeotis, beyond the Ida and on the Aichadnus, in the sea-tract called by Strabo (xi. 504) Sarmica. They appear under various names. Thus Strabo (xi. p. 500) and Nela (i. 19) call them Siraces; Tacitus (Ann. xii. 15, seq.) Siraci (in Strabo, xi. p. 492, Σαρμιαῖοι), and in an inscription (Röckh, ii. p. 1009) we find the form Σαρμιάιοι. They were governed by their own kings, and the Romans were engaged in a war with them, A. D. 50. (Tac. I. c.; Strab, ib. p. 504.) [T. H. D.]

SIRAE or SEIÆE. [Prophe].

SIRAEAE. [Thuris.]

SIRANGAE (Σεργαγανία or Σεργαγανία, Ptol. iv. 6. §7.), a tribe in the interior of Libya. [T. H. D.]

SIRBESE. [Xanthus.]

SIRB. [Sir.]

SIRBITUM, a city of Aethiopia, above which the mountains cease, and at a distance of 14 days' sail from Meroë. (Plin. vii. 30. s. 33.) From these particulars Mannert (x. pt. i. p. 171) is induced to regard it as the modern Semara. [T. H. D.]

SIRRIONIS LACUS (q; Σαρριόνι or Σερριόνιον Αίορν, Herod. ii. 6; Diodor. i. 30; Ptol. iv. 5. §§ 12, 20; Strab. 1. p. pp. 50, 65, xvi. 760—763; Ziegler, Steph. B. s. c.; Plin. v. 12. s. 14; Sebaelt—Barboil), was a vast tract of marshes, the centre of which formed the Serronian lake, lying between the eastern angle of the Delta, the Isthmus of Suez, Mount Cæsus, and the Mediterranean sea. With the latter it was at one time connected by a natural channel (της Ερυθρας), running through bars of quicksand and shingle (τα βασανία), which separated the sea from the marshes. The limits of the Serronian lake have, however, been much contracted in later ages by the elevation of the sea-borde and the drifting of the sands, and the lake is now of inconceivable extent. The Serronian region is celebrated in history for having been the scene of at least the partial destruction of the Persian army in B. C. 350, when Darius Oebus was leading it, after the storming of Sibon, to Aegypt, in order to restore the authority of Persia in that kingdom. Diodorus (i. 30) has probably exaggerated the serious disaster into a total annihilation of the invading host, and Milton (P. L. ii. 293) has adopted the statement of Diodorus, when he speaks of

"—that Serronian bog
Betwixt Damasit and Mount Cæsus old
Where armies whole have sunk."

The same Persian army, however, afterwards took Pelusium, Bubastis, and other cities of the Delta. The house of the Deltaic triangle of Aegypt was reckoned by Herodotus (i. 6) from the bay of Plinthis to the lake of Serronius. [W. R. D.]

SIREXUSAE INSULAE. [Minervar. Promontorum].

SIRICA, a place in Cappadocia on the road from Comana to Melitene, and 24 miles NW. of the first. (Itin. Ant. pp. 210, 211.) According to Lapie, near the Benboudagh. [T. H. D.]

SIRIO, in Gallia, is placed by the Itins. on a road from Burgidala (Bourdoués) to Aquinum (Agni). The distance is probably correct in the Table, which places Sirio x. from Bordeaux; for the true distance is xv. or xvi. Galliæ leagues. D'Anville fixes Sirio (the Pont de Sirion) near the point where the small river Sirion or Ciron joins the Garonne on the left bank. [G. L.]

SIRIS (Σίρις; Euh. Σιρίνη, but also Σιρινα; Sirines), an ancient city of Magna Græcia, situated at the mouth of the river of the same name flowing into the Tarentine gulf, and now called the SPone. There is no doubt that Siris was a Greek colony, and that at one time it attained to a great amount of wealth and prosperity; but its history is extremely obscure and uncertain. Its first origin was generally ascribed to a Trojan colony; and, as a proof of this,
an ancient statute of Minerva was shown there which is said to be the true Trojan Palladium (Strab. vi. p. 264; Lyceoph. Alex. 978—985). Whatever may have been the origin of this legend, there seems no doubt that Siris was originally a city of the Chones, the native Oenotrian inhabitants of this part of Italy (Strab. l. c.). A legend found in the Etymologicum (s. r. Σηρία), according to which the city derived its name from a daughter of Merges, king of the Siculi, evidently points in the same direction, as the Morgetes also were an Oenotrian tribe. From these first settlers it was wrested, as we are told, by a body of Ionian colonists from Calaphon, who had fled from their native city to avoid the dominion of the Lydians. (Strab. l. c.; Athenae. xii. p. 523.) The period of this emigration is very uncertain; but it appears probable that it must have taken place not long after the capture of the city by Gyges, king of Lydia, about 700—690 B.C. Archilochus, writing about 660 B.C., alludes to the fertility and beauty of the district on the banks of the Siris; and though the fragment preserved to us by Athenaeus does not expressively notice the existence of the city of that name, yet it would appear from the expressions of Athenaeus that the poet certainly did mention it; and the fact of this colony having been so lately established there was doubtless the cause of his allusion to it (Archil. ap. Athen. xii. p. 523). On the other hand, it seems clear from the account of the settlement at Metapontum (Strab. vi. p. 263), that the territory of Siris was at that time still unoccupied by any Greek colony. We may therefore probably place the date of the Ionian settlement at Siris between 690 and 660 B.C. We are told that the Ionian colonists gave to the city the name of Poilomen (Ποιλομέων, Strab. vi. p. 264; Steph. B. s. r. Σηρίας); but the appellation of Siris, which it derived from the river, and which seems to have been often given to the whole district (Σηρίας, used as equivalent to Σηρίπος), evidently prevailed, and is the only one met with in common use. Of the history of Siris we know literally nothing, except the general fact of its prosperity, and that its citizens indulged in habits of luxury and effeminacy that rivalled those of their neighbours the Sybarites. (Athen. xii. p. 523.) It may be received as an additional proof of their opulence, that Damasus, a citizen of Siris, is noticed by Herodotus among the suitors for the daughter of Cleisthenes of Seiyen, about 580—560 B.C., on which occasion Siris and Sybaris among the cities of Italy alone furnished claimants. (Herod. vi. 127.) This was probably about the period that Siris was at the height of its prosperity. But an Ionian city, existing as it did in the midst of the powerful Achaeian colonies, must naturally have been an object of jealousy to its neighbours; and hence we are told that the Metapontines, Sybarites, and Crotonians formed a league against Siris; and the war that ensued ended in the capture of the city, which appears to have been followed by the expulsion of the inhabitants (Justin. xx. 2). The accurate date of the destruction of Siris cannot be fixed with any approach to certainty; it was probably after 550 B.C., and certainly preceded the fall of its rival Sybaris in B.C. 510. Its ruin appears to have been complete, for we meet with no subsequent mention of the city, and the territory is spoken of as open to colonisation at the time of the Persian War, n. c. 480. (Herod. viii. 62.)

Upon that occasion we learn incidentally that the Athenians considered themselves as having a claim of old standing to the vacant district of the Sirites, and even at one time thought of removing thither with their wives and families. (Herod. l. c.) The origin of this claim is unknown; but it seems pretty clear that it was taken up by the Athenian colonists who established themselves at Thurii in n. c. 443, and became the occasion of hostilities between them and the Tarentines. These were at length terminated by a compromise, and it was agreed to found in common a fresh colony in the disputed territory. This appears to have been at first established on the site of the ancient city, but was soon after transferred to a spot 3 miles distant, where the new colony received the name of Heraclea, and soon rose to be a flourishing city. (Strab. vi. p. 264; Diod. xii. 36.) [HERACLEA.] According to Strabo, Siris still continued to exist as the port or naval station of Heraclea; but no other mention of it is found, and it is not clear whether Strabo himself meant to speak of it as still subsisting in his day. No remains of it are extant, and the exact site does not appear to have been determined. But it may be placed on the left bank of the river Siris (now called the Simno), at or near its mouth; a position which well accords with the distance of 24 stadia (3 miles) from Heraclea, the remains of which are visible at Politoara, near the river Agri, the ancient Acris. (HERACLEA.)

The river Siris is mentioned by Lyceophron (Alex. 982), as well as by Archilochus in a passage already cited (ap. Athen. xii. p. 523); but the former author calls it Σηρίς, and its modern name of Simno would seem to be derived from an ancient period; for we find mention in the Telausa of a station 4 miles from Heraclea, the name of which is written Semnun, probably a corruption for Ad Simnum or Sinnun. The Siris and Acris are mentioned in conjunction by Pliny as well as by Strabo, and are two of the most considerable streams in Lucania. (Plin. iii. 11. s. 15; Strab. vi. p. 264.) The name of the former river is noticed also in connection with the first great battle between Pyrrhus and the Romans, n. c. 280, which was fought upon its banks (Plut. Pyrrh. 16). It has been absurdly confounded by Florus and Orosius with the Liris in Campania. (Flor. i. 18. § 7; Oros. iv. 1.)

The fertile district of the Sirisit (Σηρίπος or Σηρίπος) is a portion of the level tract or strip of plain which borders the gulf of Tarentum from the neighbourhood of Rocca Imperiale to the mouth of the Bradano. This plain stretches inland from the mouth of the Simno to the foot of the hill on which stands the modern city of Tarai, about 3 miles from the sea. It is a tract of extraordinary fertility, but is now greatly neglected, and, in common with all this coast, desolated by malaria. [E. H. B.]

SIRIS, SIRAE, SERRhAE (Σηρίας, Herod. viii. 113; Sirae, Liv. xiv. 4; Σήρβια, Herod.: Eth. Σηραγοναύος, Herod. v. 15; Steph. B. s. Σηρεύς), a town of Macedonia, standing in the widest part of the great Strymonian plain on the last slopes of the range of mountains which border it to the NE. Xerxes left a part of his sick here, when retreating to the Hellespont (Herod. l. c.) and P. Aemilius Paulus, after his victory at Pydna, received at this town, which is ascribed to Odoannicis, a deputation from Persia, who had retired to Sunothrace. (Liv. l. c.) Little is known of Sirrae, which was the usual form of the name in the 5th century (though from two inscriptions found at Serreis it appears that Siritha, or Serreia, was the more ancient orthography, and that which obtained at least until the division of the empire), until the great spread of 3 T 8.
the Servian kingdom. Stephen Dushan in the 14th century seized on this large and flourishing city, and assumed the imperial crown here, where he established a court on the Roman or Byzantine model, with the title of Emperor of Romania, Schilavia, and Albania. (Nicoph. Greg. p. 467.) After his death a partition of his dominions took place but the Greeks have never since been able to recover their former preponderance in the provinces of the Strymonic valley. Sultan Murad took this town from the Servians, and when Sigismund, king of Hungary, was about to invade the Ottoman dominions, Bayezid (Bajazet Ilerim) summoned the Christian princes who were his vassals to his camp at Serraa, previous to his victory at Nicopolis, A.D. 1396. (J. von Hammer, Gesch. des Osman. Reiches, vol. i. pp. 193, 246, 600.)

Besides the Macedonian inscriptions of the Roman empire found by Leake (Jas. 126) and Cousinéry, the only other vestige of the ancient town is a piece of Hellenic wall faced with large quadrangular blocks, but composed within of small stones and mortar forming a mass of extreme solidity. Servian remains are more common. (Leake, Northern Greece, vol. iii. pp. 200—210.)

SIRMIO (Sirmione), a narrow neck or tongue of land, projecting out into the Lake Benacus (Lago di Garda), from its southern shore. Though a commodious and picturesque object in all views of the lake from its southern shores, it is unnoticed by any of the geographers, and its name would probably have been unknown to us, but for the circumstance that Catullus, who was a native of the neighbouring Verona, had a villa on its shores, and has sung the praises of Sirmio in one of the most charming odes in the Latin language (Catull. xxxxi.). The name of Sirmio is, however, found in the Itineraries, which place a "Sirmione mansio" on the road from Brixia to Verona, and just midway between the two cities, 22 M. P. from each (Itin. Ant. p. 127). This must, however, have been situated at the entrance of the peninsula, probably where a road turned off to it, as it is clear that the highroad could never have turned aside to the promontory itself.

Extensive substructions and other remains of ancient villas are still visible at the extremity of the promontory, where it juts out into the lake; but these undoubtedly belong to an abode on a much more magnificient scale than the villa of Catullus, and probably belong to some villa of the imperial times, which had replaced the humble dwelling of the poet.

SIRMUM (Sisiana), an important city in the south-eastern part of Lower Pannonia, was an ancient Celtic place of the Taurisci, on the left bank of the Savus, a little below the point where this river is joined by the Baetius (Plin. iii. 28.) Zosimus (ii. 18.1) is mistaken when he asserts that Sirmum was surrounded on two sides by a tributary of the Later. The town was situated in a narrow valley, surrounded on one side by a mountainous range, where several roads met (It. ant. pp. 124, 131; It. Hieros, p. 563), and during the wars against the Dacians and other Danubian tribes, it became the chief depot of all military stores, and gradually rose to the place of the chief city in Pannonia. (Herodian, vii. 2.) Whether it was ever made a Roman colony is not quite certain, though an inscription is said to exist containing the words Dec. Colon. Sirmiens. It contained a large manufactory of arms, a spacious forum, an imperial palace, and other public build-

SISCIA.

SIRIDES, a group of small islands off the promontory Samanum in Crete. (Plin. iv. 12. s. 20.)

SIROC (Σιρόκ), a town of Parathe, noticed by Strabo. (Stat. Parth. c. 12, ed. Muller.) It is not clear whether there is any corresponding modern town; but Renell thinks it is represented by the present Serbaka. (Geog. Hierod. p. 297.) Ptolemy places a district which he calls Siracene among the Astabeni, a people who occupied part of Hyrcania (vi. § 9). It is not impossible that Siroc and Siracene may be thus connected. [V.]

SISAPON (Σίσαπων, Strab. iii. p. 142), a considerable town in Hispания Bactrica. (Cic. Phil. iv. 19; Plin. iii. 1. s. 3.) It lay N. of Corduba, between the Baetis and the Anas, and was celebrated for its silver mines and veins of cinnabar (Strab. l. c. : Vitruv. vii. 9; Plin. xxxiii. 7. s. 40; Dacier. v. 109.) The town of Almaden in the Sierra Morena, with which Sisapo is identified, still possesses a rich mine of quicksilver. "The mine is apparently inexhaustible, becoming richer in proportion as the shafts deepen. The vein of cinnabar, about 25 feet thick, traverses rocks of quartz and slate, and runs towards Almadenejo. Virgin quicksilver occurs also in pyrites and hornstein." "Between 20,000 and 25,000 quintals of mercury are now procured annually." (Ford, Handbook of Spain, p. 70; comp. Laborede, His. ii. p. 133; Dillon's Travels, ii. pp. 72, 77.) The name of this town is variously written. It appears on coins as "Sisipo" (Sestini, p. 87), whilst others have the correct name. (Floret, Med. iii. p. 119 ; Mionne, i. p. 25, and Supp. l. p. 114.) The town is called "Sisalio" (Itin. Ant. p. 444) is probably correct. It appears to be the same as the island Sisalone by Ptolemy (ii. § 59), who, however, places it in the territory of the Oretani, in Hispания Tarraconensis, on which indeed it borders. [T. H. D.]

SISAR. [Unar.]

SISARA (Σισάρα, Potl. iv. 3. § 17), a lake in Attica Propria, in the neighbourhood of Hippo Darrhythus. Now Benizert or Biceria. [T. H. D.]

SISARCA (Σισάρσκα, Potl. ii. 6. § 32), a town of the Muracci or Turmogli in Hispания Tarraconensis. For coins, see Sestini, p. 197. [T. H. D.]

SISABANUM (Σισάβανου, Procop. Pers. ii. 19, de Aedil. ii. 4), a fortress of Mesopotamia, above Dara, noticed by Procopius. It is not elsewhere mentioned.

SISCIA, SEGESTA, or SEGESTICA (Σισίκια, Σεγεστά, Σεγεστική), a great town in the south of Lower Pannonia, on the southern bank of the Savus, on an island formed by that river and two others, the Colapis and Odra, a canal dug by Tiberius completing the island. (Dion Cass. xiv. 57.) It was situated on the great road from Acrona to Sirmium.
SITACE.

(H. Ant. pp. 259, 260, 265, 266, 272, 274; Plin. iii. 28.) According to Pliny the name Segestica belonged only to the island, and the town was called Siscea; while Strabo (vii. p. 314) says that Siscea was a fast in the neighbourhood of Segestica; but if this was so, it must be supposed that subsequently the island town became united as one place. (Comp. Strab. iv. p. 202. v. p. 214. vi. p. 218; Appian, Illgry, 16, 23. &c.) Siscea was from the first a strongly fortified town; and after its capture by Tiberius, in the reign of Augustus (Appian, Dion Cass. iil. cc.; Vell. Pat. ii. 118), it became one of the most important places of Pannonia; for being situated on two navigable rivers, it not only carried on considerable commerce (Strab. v. pp. 207, 214), but became the central point from which Augustus and Tiberius carried on their undertakings against the Pannonians and Illyrians. Tiberius did much to enlarge and embellish the town, which, as early as that time seems to have been made a colony, for Pliny mentions it as such: in the time of Septimius Severus it received fresh colonists, whence in inscriptions it is called Col. Septimia Siscea. The town contained an imperial mint, and the treasury for what was at a later time called the province Sisicia; at the same time it was the station of the small fleet kept on the Sava. Siscea's importance until Sirmium began to rise, for in proportion as Sirmium rose, Siscea sank and declined. (Comp. Zosim. ii. 48; Orelli, Inscrip. n. 504, 505, 2703, 3075, 3346, 4993.) The modern town of Sisak, occupying the place of the ancient Siscea, contains many interesting remains of antiquity. (Marulli, Danubius, p. 47; Schönherr, Antiqu. Sabariae, p. 52, f. l.; Mochar, Novakiss, i. p. 153.) [L. S.]

SITACE (Srđak), a large town, first noticed by Xenophon (Anab. ii. 4. § 13), situated about 8 parasangs from the Median Wall, and 15 from the Tigris and the mouth of the Phrynen. The exact situation cannot be now determined, but several travellers have noticed, in this neighbourhood, extensive ancient remains, which may perhaps belong to this city, (Manuet, v. pt. ii. p. 281; Niebuhr, ii. p. 305; Ives, Travels, &c. p. 153.)

SITACUS (Srakos, Arrian, Ind. c. 38), a river of Persia, to which Xenophon gave in his celebrated coasting voyage. It is in all probability the same that called by Pliny Sitionagus (vi. 23. s. 26); although his statement that, from its mouth, an ascent could be made to Pasargada in 7 days, is manifestly erroneous. There is no reason to doubt that it is at present represented by a stream called Srba-Rhebiga. (Vincent, Voy. of Nearchus, i. p. 385; D'Anville, Mem. de l'Acad. xxx. p. 158; Ritter, Erdkunde, vii. p. 765.)

SITHIO-NAMA (Srhtin, Herod. viii. 123; Steph. B.; Virg. Enol. x. 66; Hor. Carm. i. 18. 9; Longus), the central of the three prong s which run out into the Aegean from the great peninsula of Chalcedon, forming a prolongation to the peak called Solomon or Kolomoin. The Sithonian peninsula, which, though not so hilly as that of Acte, is not so inviting as Pallene, was the first, it appears, to be occupied by the Chalcidic colonists. A list of its towns is given in Chalcidice. [E. B. J.]

SITIA, a place in Hispania Baetica. (Plin. iii. 1. s. 5.) [T. H. D.]

SITIFI (Srhefa, Plol. iv. 2. § 34), a town in the interior of Mauretania Caesariensis, situated in an extensive plain not far from the borders of Numidia, and on the road from Cartagia to Cirta. (Itin. Ant. pp. 21. 29, 31, &c.; comp. Ann. Mar. xxviii. 6.) At first, under the Numidian kings, it was but an unimportant place; but under the Roman dominion it became the frontier town of the new province of Numidia, was greatly enlarged and elevated to be a colony; so that on the subsequent division of Mauretania Caes., into two smaller provinces it became the capital of Mauretania Sitifensis. Under the dominion of the Vandals, it was the capital of the district Zab. (Zden, Procop. B. Vaud. ii. 20.) It is still called Setif, and lies upon an eminence in a delightful neighbourhood. Some ruins of the ancient town are still to be seen. (Sisae's Travels, p. 49.)

STILLIA, in Gallica, is placed by the Table on a road from Aquae Bororens (Bourbon L'Archambault) to Pocoinium, supposed to be Perrigny. Stillia is xvi. from Aquae Borome and xiii. from Pocoinium Stillia is probably a place named Tiev. (D'Anville Notice, &c.)

SITIOGAGUS. [STACUS.]

SITIOHAGUS, a town of the Iceni or Simeni, in the E. part of Britannia Romana. (Itin. Ant. p. 480.) Camden (p. 456) identifies it with Thetford in Norfolk, whilst others seek it at Stonemarke, Southwold, and Stowmarket. In the Tab. Peut. it is erroneously written "Sinnasculus." [T. H. D.]

SITONES, a population coextensive with the Sitiotes, from whom they differ only in being governed by a female: "in tantum non modo a libertate sed etiam a servitate degerantur. Hic Sveiae finis." (Tac. Germ. 45.) The Sitones locality is some part of Finland; probably the northern half of the coast of the Gulf of Bothnia.

The statement that they were under a female rule is explained as follows. The name by which the East Bohman Finlanders designate themselves is Katnu-naiset (in the singular Kainu-nainen). The Swedes call them Kvania (Kivias). The mediavall name for their country is Cajunia. Now kivina in the Norse language = woman, being our words queen and queen; and in the same tongue the land of the Kvania would be Queen-land; as it actually is, being Queen-land (Queen-land) in Anglo-Saxon. Hence the statement of Tacitus arises out of information concerning a certain Queen-land, erroneous considered to be a terra feminarum, instead of a terra Quemorum. The reader who thinks this fanciful should be informed that in Adam of Bremen, writing in the 12th century, when the same country comes under notice, the same confusion appears, and that in a stronger form. The Sitonia country is actually terra feminarum. More than this, the feminae become Amazones: "circa hanc litum Baltici maris furent esse Amazones, quand une terra feminarum dicitur, quas aequae gestas aliqui dicunt conciperi;... Haec simul viventes, spernunt consortia virorum, quos etiam, si adventerint, a se viriliter repellunt," p. 228. (Zeuss, Die Deutschen, &c. s. v. Kvenen.)

It is worth noticing that King Alfred's locality of the Cunetias, in respect to their relations to the Scitas, exactly that of Tacitus, — Cuneta-land succeeding Scvia-land.

The Siteion seem to have been the ancient representatives of the Finns of Finland, — the Fenni of the ancients being the Laes. This is not only what the words Sitones and Queen suggest, but the inference from the word Fenni also. To the Finlanders, Fin is a strange name. The Swede calls him Kvania;
SITTACE.

Be calls himself Smoianaen or Hamelanen. On the other hand, it is the Lap of Finmark that is called a Fin, and it is the Norwegian who calls him so. [FENNI.]

[SITTACE (Σίτατας, Ptol. vi. 1, § 6)] is a town of ancient Assyria, at the southern end of this province, on the road between Arthenita and Susa. (Strab. xvi. p. 744.) It is called Sitta (Σίτη) by Diodorus (xiv. 110). It was the capital of the district of Sittacene, which appears to have been called in later times Apolloniatis (Strab. xvii, p. 524), and which adjoined the province of Susa (Comp. p. 792). Phily, who gives the district of Sittacene a more northerly direction, states that it bore also the names of Arbela and Palaestine (vi. 27, s. 31). It is probably the same country which Curtius calls Satrapene (v. 2).

[SITTACENE. [SITTACE.]

SITTOCATIS (Σῖττοκατις, Arrian, Ind. c. 4), a navigable river, which, according to Arrian, flowed into the Ganges. It has been conjectured by Mannert that it is the same as the present Sinn, a tributary of the Jumna, near Rampar (v. pt. i, p. 69).

[SUPIH (Σουφ, Herod. ii. 172), a town of the Saltic nome in the Delta of Egypt. It does not appear to be mentioned by any other writer besides Herodotus.]

[SIVA (Σίβα), a town in the prefecture of Cilicia in Cappadocia, on the road from Mazaaca to Tavium, at a distance of 22 miles from Mazaaca. (Ptol. v. 6, s. 15, Tab. Pont.)]

[SMARAGDUS MONS (Σμάραγδος ὄρος, Ptol. iv. 5, § 15), was a portion of the chain of hills which runs along the western coast of the Icid Sea from the Heroopolite gulf to the straits of Babbel-Mandeb. Between lat. 24° and 25° in this range is the Mount Smaragdus, the modern Dykel Zabarch, which derived its name from the emeralds found there, and early attracted by its wealth the Egyptians into that barren region. The principal mine was at Dykel-Zabarch, but at Bender-el-Sheikh to N., and at Sekket to S., each a portion of Mount Smaragdus, there are traces of ancient mining operations. Small emeralds of an inferior quality are still found in this district. (Mannert, Geograph. vol. x. p. 21.) Strabo (xvii. p. 815) and Pliny (xxxvii. 15, s. 16) mention the wealth obtained from these mines. At Sekket there is a temple of the Ptolemaic era; but the mines were known and worked at least as early as the reign of Antinoeh III., in the 18th dynasty of the native kings of Egypt.]

[SNIENUS. [Laconia, p. 114, b.]

[SIMILA. [Corsea.]

[SMYRNA (Σμύρνα: E. Σμύρνας, Smyrnaeas: Smyrna or Iznair), one of the most celebrated and most flourishing cities in Asia Minor, was situated on the east of the mouth of the Heurus, and on the bay which received from the city the name of the Smyrnaeas Sinus. It is said to have been a very ancient town founded by an Amazon of the name of Smyrna, who had previously conquered Ephesus. In consequence of this Smyrna was regarded as a colony of Ephesus. The Ephesian colonists are said afterwards to have been expelled by Aeolians, who then occupied the place, until, aided by the Colophonians, the Ephesian colonists were enabled to re-establish themselves at Smyrna. (Strab. xiv. p. 633; Steph. B. s. c; Plin. v. 31.) Herodotus, on the other hand (L. 159), states that Smyrna originally belonged to the Aeolians, who admitted into their city some Colophonian exiles; and that these Colophonians afterwards, during a festival which was celebrated outside the town, made themselves masters of the place. From that time Smyrna ceased to be an Aeolian city, and was received into the Ionian confederacy (Comp. Paus. vii. 5, § 1.) So far then as we are guided by authentic history, Smyrna belonged to the Aeolian confederacy until the year B.C. 684, when by an act of treachery on the part of the Colophonians fell into the hands of the Ioniens, and became the 13th city in the Ionian League. (Herod. i. c.; Paus. i. c.) The city was attacked by the Lydian king Gyges, but successfully resisted the aggressor (Herod. i. 14; Paus. ix. 29, § 2.) Alyattes, however, about B.C. 627, was more successful; he took and destroyed the city, and henceforth, for a period of 400 years, it was deserted and in ruins (Herod. i. 16; Strab. xiv. p. 646), though some inhabitants lingered in the place, living a precarious existence. It was stated by Strabo, and as we must infer from the fact that Sclavus (p. 57) speaks of Smyrna as still existing, Alexander the Great is said to have formed the design of rebuilding the city (Paus. vii. 5, § 1); but he did not live to carry this plan into effect; it was, however, undertaken by Antigonus, and finally completed by Lysimachus.

The new city was not built on the site of the ancient one, but at a distance of 20 stadia to the south of it, on the southern coast of the bay, and partly on the side of a hill which Pliny calls Maestra, but principally in the plain at the foot of it extending to the sea. After its extension and embellishment by Lysimachus, new Smyrna became one of the most magnificent cities, and certainly the finest in all Asia Minor. The streets were handsome, well paved, and drawn at right angles, and the city contained several squares, porticoes, a public library, and numerous temples and other public buildings; but one great drawback was that it had no drains. (Strab. i. c.; Marmor. Grac. n. 5.) It also possessed an excellent harbour which could be closed, and continued to be one of the wealthiest and most flourishing commercial cities of Asia; it afterwards became the seat of a convenuts juridicus which embraced the greater part of Aeolis as far as Magnesia, at the foot of Mount Sipylos. (Cic. p. Place. 30; Plin. v. 31.) During the war between the Romans and Mithriates, Smyrna remained faithful to the former, for which it was rewarded with various grants and privileges. (Liv. xxxv. 42; xxxvii. 16, 54, xxxviii. 39.) But it afterwards suffered much, when Trebonius, one of Caesar's murderers, was besieged there by Dolabella, who in the end took the city, and put Trebonius to death. (Strab. i. c.; Cic. Phil. ii. 2; Liv. Epit. 119; Dom Cass. xlvi. 29.) In the reign of Tiberius, Smyrna had conferred upon it the equivocal honour of being allowed, in preference to several other Asiatic cities, to erect a temple to the emperor (Tac. Ann. iii. 63, iv. 56). During the years A.D. 178 and 280 Smyrna suffered much from earthquakes, but the emperor M. Aurelius did much to alleviate its sufferings (Dom. Cass. lxii. 32.) It is well known that Smyrna was one of the places claiming to be the birthplace of Homer, and the Smyrnaeans themselves were so strongly convinced of their right to claim this honour, that they erected a temple to the great bard, or a 'Odiheiv, a splendid edifice containing a statue of Homer (Strab. i. c.; Cie. p. Arch. 8); they even showed a cave in the neigh-
SMYRNAEUS SINUS (Σμύρναιος Σίνος), also called the bay of Hermus (Ερμύους Κόλπος), from the river Hermus, which flows into it, or the bay of Meles (Μελιτίνη Κ.,) from the little river Meles, is the bay at the head of which Smyrna is situated. From its entrance to the head it is 350 stadia in length, but is divided into a larger and a smaller basin, which have been formed by the deposits of the Hermus, which have at the same time much narrowed the whole bay. A person sailing into it had on his right the promontory of Celaenae, and on his left the headland of Phikessa; the central part of the bay contained numerous small islands. (Strab. xiv. p. 645; Pomp. Mela, i. 17; Vit. Hom. 2; Steph. B. s. v. Σμύρνα.)

SOANAS (Σοανας, Ptol. vii. 4. § 3), a small river of Taprobane (Ceylon), which flowed into the sea on the western side of the island. Lassen (in his map) calls it the Kilam. On its banks lived a people of the same name, the Soani. (Ptol. vii. 4. § 9.)

SOANDA or SOANDUM (Σανδά or Σανδού), a castle of Cappadocia, between Therman and Sacoena. (Strab. xiv. p. 663; It. Ant. p. 202.) The

same place seems to be alluded to by Frontinus (iii. 2. § 9), who calls it Sueda. Hamilton (Researches, ii. p. 286, foll.) identifies it with Suogunli Dere, a place situated on a rock, about 8 miles on the south-west of Karahissa, but other geographers place it in a different locality. [L. S.]

SOAS (Σοας), or probably more correctly Suvatra (Συβάτρα), as the name appears on coins, was an open town in Lycaonia, in the neighbourhood of Apaneia Chottos, on the road from thence to Laodicea. The place was badly provided with water (Strab. xiv. p. 668: Ptol. v. 4. § 12; Hieroc. p. 672; Tab. Peut.), whence travellers are inclined to identify its site with the place now called Su Verna, that is, there is no water here. [L. S.]

SOATRAE, a town in Lower Moesia (Hist. Ant. p. 229), variously identified with Prasulia and Kiöpilami. In the Tab. Peut. and by the Geogr. Pav. (iv. 6) it is called Scatras [T. H. D.]

SODUSA (Σοδώσα ημιπόρος), a place on the eastern coast of Hindostan, mentioned in the Peries (p. 54). It is probably the same as the modern Sadrās, between Fondicherry and Madras. (See Lassen's map.)

SOCANA, or SOCANIA (Σοκάνια or Σόκανια), a small river of Hycania, noticed by Ptolemy (vi. 9. § 2). It is probably the present Giurgiu. Ammianus Marcellinus speaks of a place called Scouda, on the shores of the Hycanian or Caspian sea (xiii. 6).

SOCRATIS INSULA (Σωκράτους Ἰησοῦ), an island of the Sinus Arabicus (Red Sea), placed by Ptolemy (vi. 7. § 44), who alone mentions it, in long. 70°, lat. 16° 40', and therefore off the N. coast of his Elisan, the Sabei of other geographers, 30° east of his Accipatrum Inula (Ipsarum) and 24° 20' south of them. They are probably identical with the Farasan islands, of the E. I. Company's Chart, described by commanders Moreby and Elion, in their Sailing Directions for the Red Sea, as the largest all along this coast, situated upon the extensive banks west of Ghesen. They are two in number, but may be considered as forming one island, being connected by a sandy spit of shoal-water which cannot frequently pass from one to the other. The westernmost is Farasan Koeber (= the greater), 31 miles in length, extending from lat. 16° 35' long. 42° 15' to lat. 16° 54' long. 41° 47'. Farasan Sogger (= the smaller) is, on its N.E. side, 18 miles in length, and extends to lat. 17° 1' 30'; their whole breadth is only 12 miles. The land is of considerable height, interspersed with some plains and valleys; the billy parts are coral rock (pp. 38, 39; C. Muller, Tabulæ in Geoe. Graece. Min. tab. viii). In other comparative clauses, adopted by Arrowsmith, the modern name is given as Kouthubbal Is., considerably to the N. of the Farasan, described by the same writers as lying only 2 miles from the main, a small island about ½ a mile in length and therefore not likely to have been noticed by Ptolemy, who obviously mentions only the more important. (Sailing Directions, p. 50.) Munnert identifies the Socrates Inula with Niebuhr's Firan, where the traveller says the inhabitants of Lohia have a pear fishery. This name does not occur in the "Sailing Directions," but is probably the same as Farasan. (Munnert, Geographie von Arabinien, p. 49; Niebuhr, Description de l'Arabie, p. 201.)

SOUCUNDA. [SOCANIA.]

SODOM (τά Ζώγορα, Strab. xvi. p. 764; Steph. B.
SODOM.

Sodoma, -orum, Tertull. Apolog. 40; Sodona, -orum, 6; Schub Curt. ii. 105; Sod voi, Curt. 43, § 8; Sodoma, Tertull. Curt. de Sodoma, 4), the immense city of Caanan situated near the Dead Sea in an exceedingly rich and fruitful country, called in its early history "the plain of Jordan" and described as "well watered everywhere, before the Lord destroyed Sodom and Gomorrah, even the garden of the Lord, like the land of Egypt, as thou comest to Zoar." (Gen. xii. 10—12.) It is also reckoned one of the cities of the plain (xii. 22 xii. 30), and was probably the Pentapolis which consisted of Sodom, Gomorrah, Admah, Zeboim, and Bela, afterwards Zear (Deut. xxxii. 23; Gen. xiv. 8, xix. 22), all of which towns, however, had their several petty kings, who were co-confederate together against Chedorlaomer king of Elam and his three allies, Amraphel king of Shinar, Arioch king of Ellasar, and Tidal king of nations. After Chedorlaomer had succeeded in reducing these sovereigns to subjection, they served him twelve years; in the thirteenth year they revolted, and in the fourteenth year were again vanquished by their northern enemies, when the conquerors were in their turn defeated by Abraham, whose nephew Lot had been carried captive with all his property. The sacred historian has preserved the names of four of the petty kings who at this time ruled the cities of the plain, viz. Bera of Sodom, Birsha of Gomorrah, Shima of Admah, and Shemeber of Zeboim; and the scene of the engagement was "the vale of Siddim, which is the salt sea." (Gen. xiv.), an expression which seems clearly to imply that the battle-field, at least, was subsequently submerged; the admission of which fact, however, would not involve the consequence that no lake had previously existed in the plain; although this may be probably inferred from the earlier passage already cited, which seems to describe a wide plain watered by the river Jordan, as the plain of Egypt is irrigated by the Nile: and as this vale of Siddim was full of slime-pits (beds of bitumen), its subsidence naturally formed the Asphalt Lake. The catastrophe of the cities, as described in the Apocalyptic books of the Old Testament, was on a large scale, and was attended with results from which a modern traveller, so far as he knows the site of the towns, could not infer the existence of a single large city, or of a medium-sized one, like that of the Pentapolis, which was once the capital of the territory known to the Persians; therefore, by a rise of waters, which has since destroyed the lake, and surrounded it with sand and dunes, the name of the ancient city has been lost. The singular ridge has been several times explored and described by modern travellers, whose testimony is collected and confirmed by Dr. Robinson (Bibl. Res. vol. ii. p. 481—483); but it was reserved for the diligence and imagination of M. de Sunley to discover the extensive débris of this ancient city covering the small plain and marshes, on the north and north-east of the salt-ridge, and extending along the bed of Wady Zareeibah (Voyage autour de la Mer Morte, vol. ii. pp. 71—74). On the other side of the question M. Van de Velde is the latest authority. (Syria and Palestine in 1851 and 1852, pp. 114, 115, note). Lieut. Lynch, of the American exploring expedition, has given a striking view of this salt mountain, illustrative of his description of the vicinity of Usham. (Expedition of the American result. 1851, pp. 182—189.)

SODRAS (Sodra), a tribe met with by Alexan- der the Great in the lower Punjab, near Patalana, according to Diodorus (xvii. 102). The name is probably of Indian origin, and may represent the caste of the Sudras. [V.]

SODID (Sodid), one of the smaller tribes noticed by Arrian (Anab. vi. 15) as encountered by Alexan- der in the lower Punjab. By their name, they would appear to represent an immigration from the north. [V.]

SODIGANA (Sodiga), Chief p. 516; Ptol. vi. 12, &c.), a widely extending district of Central Asia, the boundary of which are not consistently laid down by ancient authors. Generally, it may be stated that Sogdiana lay between the Oxus and the Jaxartes, as its N. and S. limits, the former separating it from Bactriana and Ariana, the latter from the nomad populations of Scythia. (Strab. xi. pp. 511, 514; Ptol. vii. 12, § 1.) To the W. the province was extended in the direction of the Caspian sea, but, in early times at least, not to it; to the E. were the Sœiœ and the Seres. The district comprehended the greater part of the present Turkestân, with the kingdom of Bok- barha, which bears to this day the name of Sogd. The character of the country was very diversified; some part of it being very mountainous, and some part, the valley of Bokbarha, very fertile and pro- ductive. The larger extent would seem to have been, as at present, a great waste. (Arrian, Anab. iv. 16; Curt. viii. 10, § 1.) At the time when Alexander visited the country, there appear to have been extensive forests, filled with all manner of game, and surrounded, at least in some parts, with walls, as preserves. Alexander is said to have hunted down 4000 wild beasts. (Curt. viii. 1, § 19.)

The principal mountain chains are those called the Môntes Oxai to the N. (at present the Pamer Mountains) the Comodarum Montes (probably the range of the Ak-toj or White Mountains) to the S., and the Mountains of the Sea to the E. The modern name of which is not certain, there being a doubt whether they comprehend the Bilor-toj as well as the Kura-toj. The two great rivers of the country were those which formed its boundaries; the Oxus (Gíkon or Anu-Darja) and the Jaxartes (Síhun or Syr-Darja). There are, also, besides these main streams, several smaller ones, feeders of the great rivers, as the Dumus, Bascatis, and the Polytimiiæ, the latter, doubless, the stream which flows beside the town of Sogd. The generic name of the in- habitants of Sogdiana is Sogdi or Sogdian (Arrian, iv. 16, 18; Plin. vi. 16; Curt. iii. 2, § 9, &c.), a race who, in his state by Strabo (xi. p. 517), appear, in character at least, to have borne a great ressemblance to their neighbours of Bactriana. Besides these, Ptolemy and other writers have given a list of other names, — those, probably, of local tribes,
who occupied different parts of the province. Many of these show by the form of their name that if not directly of Indian descent, they are closely connected with that country. Thus we have the Pasiace, near the Montes Oxi; the Thacori (Tokare) on the Jaxartes; the Oxynandrae, Drybactae, and Gandari (Gandharas), under the mountains; the Mardjyan (Madrass), Cherassini (Khorensamian), near the Oxus; and the Cirrodos (Kiratas) near the same river. (Wilson, Ariana, p. 164.)

The historians of Alexander's march leave us to suppose that Sogdiana abounded with large towns; but many of these, as Professor Wilson has remarked (i. e.), were probably little more than forts erected along the lines of the great rivers to defend the country from the incursions of the barbarous tribes to its N. and E. Yet these writers must have had good opportunity of estimating the force of these places, as Alexander appears to have been the best part of three years in this and the adjoining province of Bactria. The position of towns of which the names have been handed down to us, were Kyresthata or Cyropolis, on the Jaxartes. (Steph. B. s. v.; Curt. vi. 6); Gaza (Ghaz or Ghazna, Iba Hankul, p. 270); Alexandria Ultima (Arrian, iii. 30; Curt. l. c.; Amm. Marc. xxiii. 6), doubtless in the neighbourhood of, if not on the site of the present Khojend; Alexandrea Oxiama (Plut. vi. 12. § 3; Steph. B. s. v.); Nautaca (Arrian, iii. 28, iv. 18), in the neighbourhood of Karshi or Nakshib; Brahmeia (Strab. xi. p. 518), a place traditionally said to have been colonised by a Greek population and Margnia (Curt. vii. 10. § 15), probably the present Margianum. (Droysen, Rhein. Mus. 2 Jahr. p. 86; Mannert, iv. p. 432; Burnes, Travels, p. 350; Memoirs of Biber, p. 12; De Sacy, Notices et Extraits, iv. p. 354; Thirwval, Hist. of Greece, vi. p. 284.)

[SOGDI MONTES. [SOGDIANA.]

SOGIUNTH, an Alpine people mentioned by Pliny (iii. 20. s. 24). Nothing but resemblance of name gives us any indication of the position of these small mountain tribes, but the names remain frequently very little changed. The position of the Sogiuntii is conjectured to be shown by the name Souce or Souaces, NE. of Briowon in the department of Hautes Alpes. But this is merely a guess; and even the orthography of the name Sogiuntius is not certain.

[G. L.]

SOLE, a small town in the interior of Hyrcania, mentioned by Ammianus (xxiii. 6).

SOLEN (Σάλην), Plut. vii. 1. §§ 10, 34), a small river of S. India, which has its sources in M. Bettige, and flows these into the Sinus Colchicus or Gulf of Mannar. It is not certain which of two rivers, the Iaiparv or the Tonraparni, represent it at present : Lassen inclines to the latter. [V.]

SOLENTA. [Solenta Insula.]

SOLENTUM. [SOLVS.]

SOLETUM (Soleto), a town of Calahria, situated in the interior of the Iapygian peninsula, about 12 miles S. of Lupiae (Lecce). It is mentioned only by Pliny, in whose time it was deserted ("Soleto desertum," Plin. iii. 11. s. 16), but it must have been again inhabited, as it still exists under the ancient name. That the modern town occupies the ancient site is proved by the remains of the ancient walls which were still visible in the days of Galateo, and indicated a town of considerable magnitude (Galateo, de Sit. Iapyp, p. 81; Romanelli, vol. ii. p. 26.) [E. H. B.]

SOLI (Σόλης: Eib. Σόλεας or Σόλως), an im-

portant town on the coast of Cilicia, between the mouths of the rivers Lamus and Pyramus, from each of which its distance was about 500 stadia. (Strab. xiv. p. 675; Stephan. Mar. Mag. § 170, &c.) The town was founded by Ariges joined by Lindians from Rhodes. (Strab. xiv. p. 677; Pomp. Mem. l. i. 13; Liv. xxxv. 86.) It is first mentioned in history by Xenophon (Anab. i. 2. § 24) as a maritime town of Cilicia; it resists to such opulence that Alexander the Great could flte its citizens for their attachment to Persia with 200 talents. (Arrian, Anab. ii. 5. § 5; Curt. iii. 17.) During the Mithridatic War the town of Soli was taken and destroyed by Tigranes, king of Armenia, who probably transplanted most of its inhabitants to Tigranocerta. (Dion Cass. xxvii. 20; Plut. Pompe. 25.; Strab. xi. p. 582.) But the place was revived by Pompey, who peopled it with some of those pirates who had fallen into his hands, and changed its name into Pompeipolis (Pompeipolis, Plut. l. e.; Strab. xiv. p. 671; Appian, Mit. 105; Plut. v. 8. § 4; Plin. v. 22; Steph. B. s. v.; Tac. Ann. ii. 58; Hierocl. p. 704.) Soli was the birthplace of Chrysippus the philosopher, and of two distinguished poets, Philemon and Aratus, the latter of whom was believed to be buried on a hill near the town. The Greek inhabitants of Soli are reported to have spoken a very corrupt Greek in consequence of their intercourse with the natives of Cilicia, and hence to have given rise to the term sol-cilicius (trokousatios), which has found its way into all the languages of Europe; other traditions, however, connect the origin of this term with the town of Soli, in Cyprus. (Dioz. Laer. i. 2. § 4; Eustath. ad Dion. Per. 875; Scal. s. v. 260.) The locality and the remains of this ancient city are described by Beaufort (Karanamia, p. 261, foll.). "The first object that presented itself to us on landing," says he, "was a beautiful harbour or ba-in, with parallel sides and circular ends; it is entirely artificial, being formed with surrounding walls or mole, which are 50 feet in thickness and 17 in height. Opposite to the entrance of the harbour a portico rises from the surrounding quay, and opens to a double row of 200 columns, which, crossing the town, communicates with the principal gate towards the country. Of the 200 columns no more than 42 are now standing; the remainder lie on the spot where they fell, intermixed with a vast assemblage of other ruined buildings which were connected with the colonnade. The theatre is almost entirely destroyed. The city walls, strengthened by numerous towers, entirely surrounded the town. Detached ruins, tombs, and sarcophagi were found scattered to some distance from the walls, on the outside of the town, and it is evident that the whole country was once occupied by a numerous and industrious people." The natives now call the place Mezetta. (Comp. Læcke, Asia Minor, p. 213, foll.) The little river which passed through Soli was called Lyapris, from the oily nature
of its waters. (Vitr. viii. 3; Antig. Cursyt. 130; Plin. l. c.) Pliny (xxxi. 2) mentions bituminous springs in the vicinity, which are reported by Beumont to exist at Bickhardy, about six hours' walk to the southeast of Nanthobriga (Tarvis).[14. § 4]

SOI. or SOLE (Σαλών, Ptol. v. 14. § 4), an important seaport town in the W. part of the N. coast of Cyprus, situated on a small river. (Strab. xiv. p. 683.) According to Plutarch (Sol. 26) it was founded by a native prince at the suggestion of Solon and named in honour of that legislator. The sojourn of Solon in Cyprus is mentioned by Herodotus (v. 113). Other accounts, however, make it an Athenian settlement, founded under the auspices of Phalerus and Aratus (Strab. l. c.), or of Demophon, the son of Theseus (Pant. l. c.). We learn from Strabo (l. c.) that it had a temple of Aphrodite and one of Isis; and from Galen (de Simpl. Med. i. 3, 8) that there were mines in its neighbourhood. The inhabitants were called Solii (Σαλωνες), to distinguish them from the citizens of Soli in Cilicia, who were called Σαλειοι (Diog. Laert. V. Solon. 4). According to Ptolemy (ii. p. 323), the valley which surrounded the city is still called Solon; and the ruins of the town itself may be seen at the road from Alemona and beyond in Pers. 889; Scyl. p. 41; Stadiasmus. M. Magni, § 295, seq.: Const. Porphyry de Thecm. i. p. 39, Lips.; Hieroc. p. 707, &c.). [T. H. D.]

SOLIA. [Araq Hispera.]

SOILUNIUM, a town in the Aeg Decumates, in South-western Germany, on Mount Pirus, where Valentine in a.d. 359 gained a victory over the Alamanni. (Amm. Marc. xxvii. 10, xxviii. 2, xxx. 7.) A variety of conjectures have been made to identify the site of the town, but there are no positive criteria to arrive at any satisfactory conclusion. [L. S.]

SOLMAIACA, in Gallia, is placed in the Antonine Itin. on the road from Andecanum (Langres) to Tulbun Leucorium (Tomis), and nearly half-way between Mosae (Iena) and Tulbun. There is a place named Saudose, which in name and in position agrees with Solmaiaca. "The trace of the Roman road is still marked in several places by its elevation, both on either side of Saudose and beyond it on the road to Tomis" (D'Anville, Notice, &c.) G. L.

SOLMINIA, a small island of the Aegean sea, off the coast of Thessaly, near Scopelos. (Plin. iv. 12. s. 23.)

SOLIS INSULA (Ptol. vi. 22. n. 24), an island mentioned by Pliny between the mainland of India and Ceylon, in the strait. There can be no doubt that it is the present Ramaeram Cor, famous for a temple of Rama. It bore also the name of Kapo [Corax].

SOLIS FOINS. [Oasis, p. 458.]

SOLIS PORTUS (θαυμα λιμή, Ptol. vii. 4. § 6), a harbor near the NE. corner of Taprobane (Ceylon). It has been conjectured by Foringer that it is the present Vedabottali,—a name we do not discover on the best maps. Its position, south of the Maha mountains (Akden's Peak), is certain. [V.]

SOLIS PRAEIOITOTRIMUM (ίταλα Χαλον ήπαρ), "Scara solis extrema," a promontory of the east coast of Arabia at the south of the Persian gulf, traced by the mouth of the river Lar and Ilumna, in the country of the Nariotes. (Ptol. vi. 7. § 14.) [Lar. Hissam.]

SOLLUM (Σαλούμ; Ech. Σαλαδόνος), a town on the coast of Acarnania, on the Ionian sea.

Its exact site is uncertain, but it was probably in the neighbourhood of Palaeus, which lay between Leucas and Alyzua. [Palaeus.] Leake, however, places it S of Alyzua, at Stronchintimina (i.e. Port of Stronchintimina), on the Corinthian colony, and as such was taken by the Athenians at the beginning of the Peloponnesian War (v. c. 431), who gave both the place and its territory to Palaeus. It is again mentioned in v. c. 426, as the place at which Demosthenes landed when he resolved to invade Aetolia. (Thuc. iii. 30, iii. 95, comp. v. 30; Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 18, seq.)

SOLMUSUS (Σολμοσόνος), a hill near Ephesus, rising above the grove of Leto, where the "sirens," by the loud noise of their arms, prevented Hera from hearing the cries of Leto when she gave birth to her twins. (Strab. xiv. p. 640.) [L. S.]

SOLOMATIS (Σολοματιάς, Attic, Ind. c. 4), a river named by Arrian as one of the feeders of the Ganges. There has been much difference of opinion as to what modern stream this name represents. Munster thinks that it is one of the affluent of the Jumna (v. p. i. p. 69); while Benfer, on the other hand, considers it not unlikely that under the name of Solomatis the Indian S.frau/imi7no is meant, which, owing to its being lost in the sands, is falsified by the Indians to flow under the earth to the spot where the Ganges and Jumna join, near Allahabad. (Benfer, art. Indien, in Erckh. und Grobcr, p. 4.)

SOLONA (Eth. Solones; Città del Sole), a town of Gallia Cispadana, mentioned only by Pliny among the municipal towns of the 8th region (Plin. iii. 15. s. 20), but the name of the Solonates is found also in an inscription, which confirms its municipal rank (Gruter, Inscr. p. 1095. 2). Unfortunately this inscription, which was found at Ariminum, affords no clue to the site of Solona; it is placed conjunctly by Cluver at a place called Città del Sole about 5 miles SW. of Forli; but this site would seem too important to the important town of Forum Livii. (Cluver, Ital. p. 291.) [E. H. B.]

SOLONIUM (Σολωνίων), in Gallia Narbonensis, where C. Ponsinus defeated the Allobrogos, n. c. 61. (Cass. Alex. xvi. 8.) On its position it is said, "C. Ponsinus Prsetor Allobrogos qui rebeliarent ad Solonem (Solonen ?) domuit." It has been conjectured that Solonius is Sollomac, in the department of Ain, near the small river Priurus; but this is merely a guess. The narrative of Dion is useless, as usual, for determining anything with precision. Other guesses have been made about the position of Solonius; one of which is too absurd to mention. [G. L.]

SOLONIUS AGER (Σαλωνινόιον, Plat.), was the name given to a district or tract in the plain of Latium, which appears to have bordered on the territories of Ostia, Ardea, and Lanuvium. But there is some difficulty in determining its precise situation or limits. Cicero in a passage in which he speaks of a prodigy that happened to the infant Rescinius, places it "in Solonius, qui est campus agri Lanuvini" (de Div. i. 36); but there are some reasons to suspect the last words to be an interpolation. On the other hand, Livy speaks of the Antesians as "in agro Ostiense, Ardeateno, Solonam" (viii. 12). Plutarch mentions that Marius retired to a villa that he possessed there, when he was expelled from Rome in n. c. 88; and from thence repaired to Ostia. (Plut. Mar. 35.) But
SOLORIUS MONS.

The most distinct indication of its locality is afforded by a passage of Ptolemæus (c. v. Pontiana, p. 250), where he tells us "Pomonal est in agro Solonii, vita Osiensi, ad duodecimum lapidem, divertiulo a miliaria octava." It is then evident that the "anger Solonii," extended westward as far as the Via Osiensis, and probably the whole tract bordering on the territories of Ostia, Laurentum, and Ardea, was known by this name. It may well therefore have extended to the neighbourhood of Lavinium also. Cicero tells us that it abounded in snakes. (De Dic. ii. 31.) It appears from one of his letters that he had a villa there, as well as Mairius, to which he talks of retiring in order to avoid contention at Rome (ad Att. ii. 5).

The origin of the name is unknown; it may probably have been derived from some extinct town of the name; but no trace of such is found. Dionysius, indeed, speaks of an Etruscan city of Solonium, from whence the Lucumon came to the assistance of Romans (Dionys. ii. 37); but the name is in all probability corrupt, and, at all events, cannot afford any explanation of the Latina district of the name.

[S. H. B.]

SOLORIUS MONS, an offshoot of Pannonia, running to the SW., on the borders of the Germania Tarraconensis and Baetica, and connecting Mount Orthespa with Mount Htubia. (Plin. iii. i. s. 2.) It is probably the same mountain mentioned by Strabo (iii. p. 156) as rich in gold and other mines, and the present Sierra Nevada. [T. H. D.]

SOLUS or SOLUNTUM (Σολον, Thuc. Σολουν, Diod. Σωλονίους, Diod., but coins have Σωλονίαος; Soluntum: Solonita), a city of Sicily, situated on the N. coast of the island, about 12 miles E. of Panormus, and immediately to the E. of the bold promontory called Capo Zofifarno. It was a Phoenician colony, and from its proximity to Panormus was one of the few which that people retained when they gave way before the advance of the Greek colonies in Sicily, and withdrew to the NW. corner of the island. (Thuc. vi. 2.) It afterwards passed together with Panormus and Motya into the hands of the Carthaginians, or at least became a dependency of that people. It continued steadfast to the Carthaginian alliance even in B.C. 397, when the formidable armament of Dionysius shook the fidelity of most of their allies (Diod. xiv. 48); its territory was in consequence ravaged by Dionysius, but without effect. At a later period of the war (B.C. 396) it was betrayed into the hands of that despot (D. 75), but probably soon fell again into the power of the Carthaginians. It was certainly one of the cities that usually formed part of their dominions in the island; and in B.C. 307 it was given up by them to the soldiers and mercenaries of Agathocles, who had made peace with the Carthaginians when abandoned by their leader in Africa. (Diod. xx. 69.) During the First Punic War we find it still subject to Carthage, and it was not till after the fall of Panormus that Soluntum also opened its gates to the Romans. (Id. xxiii. p. 505.) It continued to subsist under the Roman dominion as a municipal town, but apparently one of no great consideration, as its name is only slightly and occasionally mentioned by Cicero (Verri, ii. 42, iii. 49.) But it is still noticed both by Pliny and Ptolemy (Plin. iii. 8. s. 14; Ptol. iii. 4. § 8, where the name is corruptly written Ο'ολονίас), as well as at a later period by the Itineraries, which place it 12 miles from Panormus and 12 from Terracina (Termini).

(Solin. Ant. p. 91; Tab. Peut.) It is probable that its complete destruction dates from the time of the Saracens.

At the present day the site of the ancient city is wholly desolate and uninhabited. It stood on a lofty hill, now called the Monte Catolfano, at the foot of which is a small cave or port, with a fort, still called the Castello di Solonto, and a station for the tunny fishery. The traces of two ancient roads, paved with large blocks of stone, which led up to the city, may still be followed, and the whole summit of the hill is covered with fragments of ancient walls and foundations of buildings. Among these may be traced the remains of two temples, of which some capitals, portions of friezes, &c. have been discovered; but it is impossible to trace the plan and design of these or any other edifices. They are probably all of them of the period of the Roman dominion. Several cisterns for water also remain, as well as sepulchres; and some fragments of sculpture of considerable merit have been discovered on the site. (Favizzi, de Rep. Sic. viii. p. 352; Amico, Lec. Top. vol. ii. pp. 192—193; Horea's Class. Tour, vol. ii. p. 234; Serra di Falco Ant. della Sicilia, vol. v. pp. 60—67.) [E. H. B.]

SOLYGEIA, SOLYGEIUS. [Corinthius, pp. 614, b. 685, a.]

SOMAIA (κα τα Σωλονς), a high mountain near Phaselis in Lycia. (Strab. xiv. p. 666.) As the mountain is not mentioned by any other writer, it is probably only another name for the Chimaera Mons, the Olympus, or the mountains of the Solymi, mentioned by Homer. (Od. v. 283.) In the Stadiumus it is simply called the οσως ομηρια: it extends about 70 miles northward from Phaselis, and its highest point, now called Toghatat, rises immediately above the ruins of Phaselis, which exactly corresponds with the statement of Strabo. (Leake, Asia Minor, p. 189.) [L. S.]

SOLYMI. [Lycia.]

SOMENA. [Simena.]

SONAUTES, according to Pliny (vi. 1), a river in Pontus; while, according to Apollonius Rhodius (ii. 747), the Acheron in Bithynia was anciently called Sonantes (Σώναντας) to the son of Proetus. (L. S.]

SONEUM, a place in Moesia Superior, on the borders of Thrace, at the pass of Mont Scenans, called Sucei. (Plin. Hieros, p. 567.) Identified with Ragnia. [T. H. D.]

SONDITA, a town in Upper Pannonia, on the road from Postumium to Siscia. (Geog. Rav. iv. 19; Tab. Peut.; It. Hieros, p. 561, where it is written Sonistia.) Its exact site is unknown. [L. S.]

SONITA (Eth. Sontimis: Sunzaca), a town of Lucania, known only from Pliny, who enumerates the Sontini among the municipal towns of that province (Plin. iii. 11. s. 15). It is probable that it is the same place now called Sunzaca, situated in the mountains about 12 miles N. of the Gulf of Policastro. [E. H. B.]

COIN OF SOLUS.

SONTIA. 1021
SONTIUS (Ioomo), one of the most considerable of the rivers of Venetia, which has its sources in the Alps, at the foot of the lofty Mt. Tergvou, and has from thence a course of above 75 miles to the sea, which it enters at the innermost part of the Adriatic, between Aquileia and the Tisarua. It receives at the present day the waters of the Natisone and Torre, the ancient Nartise and Turcis, both of which in ancient times pursued independent courses to the sea under the walls of Aquileia, and from the E. those of the Vippach or Vipus, called by the ancients the Flevtvia Frigirata. Though so important a stream, the name of the Sontius is not mentioned by any of the geographers; but it is found in the Tabula, which places a station called Ponte Sonti (Ad Pontem Sontii) 14 miles from Aquileia on the highroad to Acenova (Lapoch). This bridge, which lay on the main entrance into Italy on this side, was a military point of considerable importance. It checked for a time the march of the emperor Maximin when advancing upon Aquileia, in A. D. 238 (Herodian, viii. 4; Cassiod. i. 14). Meanwhile, it was here that Olibac took up his position to oppose the advance of Theod. sinus, by whom he was, however, defeated in a decisive battle, A. D. 489 (Cassiod. Chron. p. 472; Id. Var. i. 18; Jornand. Got. 57). The Sontius is correctly described by Herodian, though he does not mention its name, as a large and formidable stream, especially in spring and summer, when it is fed by the melting of the Alpine snows. 

SOFUS (S), Ariatn, Ital. c. 4; Plin. vi. 18, s. 22, a principal affluent of the Ganga, which flows in a N. direction, to it from the Vindhya Mountains. Its modern name is Soana. There is no doubt that it has been contracted from the Sanscrit Swarnas, golden. The Soas (Swarnas) of Ptolemy (vii. 1. § 30) is certainly the same river. [V.] 

SOFHENE (Sfipvri), Strab. et ali.; Sfipwvri, Dion Cass. xxxvii. 36; Procop. de Aedif. iii. 2, B. Pers. i. 21; Ath. Sfipwvri), a district of Armenia, lying between Antiochus and Mount Masis, separate from the latter by a formidable system of mountains, and separated from the others by a formidable system of mountains. It is the capital of Caracotbucta. (Strab. xi. pp. 521, 522, 527.) It formed at one time, with the neighbouring districts, a separate west Armenian kingdom, governed by the Sophianit Artes, and was annexed to the east Armenian kingdom by Tigranes. Sophene was taken away from Tigranes by Pompey. (Strab. xi. p. 532; Dion Cass. xxxvi. 26; Phil. Lact. 24, Pomp. 33.) Nero gave Sophene as a separate kingdom to Sophanes. (Tac. Ann. xiii. 7.) 

SOPHIA, a town in the central part of Lower Pannonia, on the road from Mursa to Sabaria (It. Ant. pp. 231, 232, 264, 267), was assigned to Aginiamius Marcellinus (xxviii. 1) the birthplace of the emperor Maximinus. Its site is occupied by the modern Papferken. [L. S.] 

SORA (Susa), Eth. Sarason; Sora), a city of Latium, situated in the valley of the Liris, on the right bank of that river, about 6 miles to the N. of Arpaeum. Though included in Lomn in the more extended sense of that term, as it was understood under the Roman Empire, Sora was originally a Volscian city (Liv. x. 1), and apparently the most northerly possessed by that people. It was wrested from them by the Romans in B.C. 343, being surprised by a sudden attack by the consuls Fabius Dorso and Ser. Sulpicius. (Liv. vii. 28.) It was subsequently occupied by the Romans with a colony; the establishment of this is not mentioned by Livy, but in B.C. 315 he tells us the inhabitants had revolted and joined the Samnites, putting to death the Roman colonists. (Id. ix. 23; Diod. xix. 72.) The city was in consequence besieged by the dictator C. Fabius, and, notwithstanding the great defeat of the Romans at Lutulae, the siege was continued into the following year, when the city was at length taken by the consuls C. Sulpicius and M. Postelius; the citadel, which was in a very strong and inaccessible position, being betrayed into their hands by a deserter. The leaders of the defection were sent to Rome and doomed to execution; the other inhabitants were spared. (Liv. ix. 23, 24.) Sora was now occupied by a Roman garrison; but notwithstanding this it again fell into the hands of the Samnites in B.C. 306, and it was not recovered by the Romans till the following year. (Id. ix. 43, 44; Diod. xxi. 80, 90.) After the close of the Second Samnite War it was one of the points which the Romans determined to secure with a colony, and a body of 4000 colonists was sent thither in B.C. 303. (Id. x. 1.) From this time Sora became one of the ordinary "coloniae Latinae," and is mentioned in the Second Punic War among the refractory colonies, which in B.C. 209 refused any further contributions. (Liv. xxvii. 9, xxix. 15. The text of Livy gives Sora in the first passage, and Sora in the second, but the same place is necessarily meant in both passages, and it is probable that Sora is the true reading.) From this time we hear no more of Sora, which lapsed into the condition of an ordinary municipal town. (Cic. pro Plane. 9.) Its rank of a Colony Latina was merged in that of a municipality by the Lex Julia; but it received a fresh colony under Augustus, consisting, as we learn from an inscription, of a body of veterans from the 4th legion. (Lib. Colon. p. 257; Phil. iii. 5. s. 9; Orell. Inscri. 3681.) Juvavel speaks of it as a quiet country town, where houses were cheap (Juv. iii. 229); and it is mentioned by all the geographers among the towns of this part of Italy. (Strab. v. p. 238; Phil. iii. 1. § 63; Stil. viii. 394; Orell. Inscri. 3972.) Nothing more is heard of it under the Roman Empire, but it survived the fall of the Western Empire, and continued throughout the middle ages to be a place of consideration. Sora is still an episcopal see, and much the most important place in this part of Italy, with about 10,000 inhabitants. The modern town doubtless occupies the same site with the ancient one, in the plain or broad valley of the Liris, resting upon a bold and steep hill, crowned by the ruins of a mediaeval castle. The ancient citadel, described by Livy, stood on a hill at the back of this, called the Rocca di S. Angelo, where some remains of the ancient walls, constructed of massive polygonal blocks, are still visible. No remains of Roman times are preserved, except a few inscriptions, and some foundations, supposed to be those of a temple. (Bomarzo, vol. iii. pp. 362-366; Haare's Classical Towns, vol. i. pp. 269-302.) [E. H. B.] 

SORAJO (Sora'), or Sora, a town of ancient name, noticed only by the latest writers of antiquity, and of unknown site. (Constant. Porph. Thes. i. 7; Novellae, xxix. 1; Hieroc. p. 695; Conc. Nican. ii. p. 52; Conc. Chalcad. p. 664, where it is called Suna.) [L. S.] 

SORA (Susa), Pet. vi. 1. § 68, a town in the southern part of India, between M. Bettico and Adiesbhamu. It was the capital of a nomad race
SORACTE.

called Sorne (Paul. L. c.), and the royal residence of a king named Arcates. The people are evidently the same as the Surae of Pliny (vi. 20. s. 23). Lassen places them in the mountains above Medrur (see map).

SORACTE (Monte S. Oreato), a mountain of Etruria, situated between Falerii and the Tiber, about 26 miles N. of Rome, from which it forms a conspicuous object. It is detached from the chain of the Apennines, from which it is separated by the intervening valley of the Tiber; yet in a geological sense it belongs to the Apennine range, of which it is an outlying offset, being composed of the hard Apennine limestone, at which once distinguishes it from the Mons Ciminium and the other volcanic hills by which it is surrounded. Though of no great elevation, being only 2420 feet in height, it rises in a bold and abrupt mass above the surrounding plain (or rather table-land), which renders it a striking and picturesque object, and a conspicuous feature in all views of the Campagna. Hence the selection of its name by Horace in a well-known ode (Carm. i. 9) is peculiarly appropriate. It was consecrated to Apollo, who had a temple on its summit, probably on the same spot now occupied by the monastery of S. Silvestro, and was worshipped there with peculiar religious rites. His priests were supposed to possess the power of passing unharmed through fire, and to walk on the hot coals with their bare feet. (Virg. Aen. vii. 696, xi. 785—790; Sil. Ital. v. 176—181, vii. 662; Plin. vii. 2.) Its rugged and craggy peaks were in the days of Cato still the resort of wild goads. (Var. R. R. ii. 3. § 3.)

Sorne stands about 6 miles from Civita Castellana, the site of the ancient Falerii, and 2 from the Tiber. It derives its modern appellation from the village of Sant' Oreato, which stands at its S. extremity on a steep and rocky hill, forming a kind of step or ledge at the foot of the more elevated peaks of Sorace itself. This site, which bears evident signs of ancient habitation, is supposed to be that of the ancient Feronia or Lucus Feroniale. (Deni. S. Etrurias, vol. i. p. 179.) [E. H. B.]

SORIODU'NUM, or SORVIODU'NUM, a town of Britannia Romana, in the territory of the Belgae. (Itin. Ant. pp. 483, 486.) It is identified with Old Sarum, where coins of several Roman emperors have been found, and where the traces of the ancient Roman walls show it to have been about half a mile in circumference. (Camil. p. 113. [T. H. D.]

SORICE, a lake in Gallia. A river Soris ran out of the Etang Sorice, in the country of the Sorides or Sorii. [Sordones.]

"Stagnum hic palusque, quippe diffuse patet, Et incola istam Soricien cognominant." (Avienus, Or. Mar., as I. Vessius reads it.)

The Sorice is supposed by some geographers to be the Etang de Leuze; but others take it to be an étang further south, called Etang de St. Nazaire, and the Etang de Leuze to be that now called Salacou, which is described by Strabo, Mela, and others. [Salacou; Ruscung.] [G. L.]

SORDONES, or SARDONES, as the name has sometimes been written, a people in Gallia. Mela (ii. 5) writes: after the Taballutus was slain by a Sardones, and the small streams Telis and Tichis; the Colonia Ruscung, and the vicus Hilberis. Pliny (iii. 4) begins his description of Gallia Narbonensis from the foot of the Pyrenees. He says: "On the coast is the regio Sardonum or Sardorum, and in the interior the Consorani; the rivers Techem, Verdudubrum; towns, Illiberis and Ruscino." These Sordones are the Sardi of Avienus (Or. Marit. 362):—

"Sardus inde denuique Populus agebat inter arias locos Ac perimines usque ad interius mare, Qua pinferene stant Pyrena vertices, Inter ferarum lastra ducebat greges, Et arva late et gurgitum ponti primit:"

as I. Vessius reads the passage in his edition of Mela. The Sardi then occupied the coast of the Mediterranean from the Pyrenees northward, and the neighbouring part of the interior at the north foot of the Pyrenees. Ptolemy, as D'Avrille observes, does not mention the Sordones, and he has made the territory of the Volcan Tectosages comprehend Illiberis and Ruscino. The Sordones probably occupied the whole of the territory called Roussillon, and they would be in possession of that pass of the Pyrenees called Col de Pertus, which is defended by the fort of Bellevarde. They bordered on the Consorani. [Consorani.] [G. L.]

SORICARIA, a place in Hispania Baetica, mentioned by Hier. (R. H. c. 24), and the same place called also "Soritia" by that author (c. 27). Uxerit (ii. pi. i. p. 361) seeks it in the neighbourhood of the Flumen Salsum (the Salado), S. of the Buitis, and between Ossun and Antequera. [T. H. D.]

SORINGE (Särige, Peripl. M. F. p. 34), a people of the southern part of Iliadostan, who apparently dwelt along the banks of the Chabers (Kâverī). Lassen places them below the Sorna, on the slopes of the hills above Medrur. [V.]

SORITIA. [SORICARIA.]

SORNUM, (Särnum, Paul. iii. 8. § 10), a city of Dacia; now Giuncina. [T. H. D.]

SOROTES (AD), a station in Lucania, X. of Emerita. (Itin. Ant. p. 433.) Variously identified with Montemenech and Alistica. [T. H. D.]

SOSTOMAGUS, in Gallia, is placed by the Jerusalem Hist. between Tolea (Toulouse) and Carcaso (Carcassone), 38 miles from Toulouse and 24 from Carcassone. The road is nearly direct, and if the distances are correct, we might perhaps find some name like Soto in the proper place. Some geographers have found Sostomagus near Castelhoudard. [G. L.]

SOTERA, a place in Ariana, mentioned by Ammianus (xxiii. 6). It is probably the same as that called by Ptol. X. (17. § 7). [V.]

SOTIAE or SOTIANAE, a people of Aquitania. Schneider (Causar, B. G. iii. 20) who writes "in Sotianum Flores" has a long note on the various forms of this word. Nicolais Damascenus (quoted by Atheneus, vi. p. 249) writes the name Satuni, but as Caeser was his authority for what he says, he may have altered the form of the word. In Dion Cassius (xxxix. c. 46) the reading is "Aravads" (ed. Reimar) but there are other variations in the MSS. In Pliny (iv. 19) we find among the nations of Aquitania "Aunei, Elucettes, Sotiaes, Osquitelles, Canapesertes." Orosius (vi. 8, ed. Havernkamp) has Sotiates, but one MS. has Sotasites and others have Socrates.

In n. c. 56 Caesar sent P. Crassus into Aquitania. Crassus came from the north, and after summoning the men of fighting age who were on the muster rolls of Toulouse, Carcassone and Narbonne,
he entered the territory of the Sotiates, the first of the Aquitanian peoples whom he attacked. The Sotiates were the neighbours of the Elusates, a name represented by the town of Eunae. A line drawn from Asch (Ancoi) on the Cesae to Boccia in the department of La Gironde, passes near Sus, a town which is on the Gellse, and in the Cabaret. In the middle ages it was called Sotiam. Ancient remains have been found at Sus. Here we have an instance of the preservation of ancient names in this part of France, and there are many other instances.

D’Avuille in determining the position of the Sotiates argues correctly that Crassus having passed through the Santones, a people who had submitted to Caesar (B. G. iii. 12) and would offer no resistance, entered Aquitanica by the north, and the Sotiates who were only seven or eight leagues south of the Garonne would be the first tribe on whom he fell. He says that he has evidence of a Roman road very direct from Sus to Eunae; and he is convinced that this is part of the road described in the Jerusalem Itin. between Vacatae and Elusae. On this road the name Sictium occurs in the Itin., and as the distance between Sictium and Elusae corresponds very nearly to the distance between Sus and Eunae, he conjectures that this word Sictium is written wrongly, and that it should be Sotiam. The Sotiates, who were strong in cavalry, attacked the Romans on their march, and a battle took place in which they were defeated. Crassus then assaulted their town, which made a stout resistance. He brought up his vineum and towers to the walls, but the Sotiates drove mines under them, for as they had copper mines in their country they were very skilful in burrowing in the ground. At last they sent two very heavy and thick walls of skirmishers (B. G. iii. 21). While the people were giving up their arms on one side of the town, Adceanus, who was a king or chief, attempted to sail out on another side with his 600 “soldiers.” The Romans met him there, and after a hard fight Adceanus was driven back into the town; but he still obtained the same easy terms as the rest.

These Sotiates were a body of men who attacked the town of Sus, and with whom they enjoyed all the good things without working, so long as the chief lived; but if any violence took off their leader it was their duty to share the same fate or to die by their own hand. This was an Iberian and also a Gallic fashion. The thing is easily understood. A usurper or any desperate fellow seized on power with the help of others like himself; lived well, and fed his friends; and when his tyranny came to an end, he and all his crew must kill themselves, if they wished to escape the punishment which they deserved. (Plut. Sertor. c. 14; Caesar, B. G. vii. 40; and the passage in Athenaeus.)

The MSS. of Caesar vary in the name of Adceanus. Schneider writes it Adiataus, and in Athenaeus it is Αδιαταοιος. Schneider mentions a medal of Pellecin, with REM ΔΑΛΕΤΕΩΝΩΣ and a lion’s head on one side, and on the other SO-TIOGA. Walckenaer (Geogr. d. c. i. 284) may be speaking of the same medal, when he describes one which Crassus has been found at Toulouse, with a head of Adiataus on one side and the word Sotogae on the other. He thinks it “very suspicious,” and it may be.

**SOZOTOLIS** (ΣΟΣΩΤΟΛΙΣ), a town noticed only by late writers as a place in Pisidia, on the north of Termessus, in a plain surrounded on all sides by mountains. (Hieroc. p. 672; Evag. Hist. Eccl. iii. 33.) It is possibly the same place which Stephanus B. notices under the name of Sobzus. Nicetas (Ann. p. 9) mentions that it was taken by the Turks, the latter time by John Connesus. (Comp. Ann. p. 169; Cinnamus, p. 133.) The traveller Paul Lucas (Sec. Voy. vol. i. c. 33) observed some ancient remains at a place now called Susum, south of Aygusolon, which probably belong to Sozopolis.

**SPARTA.** (L. S.)

**SOZOTOLIS,** a later name of Apollonia in Thrace. (Vol. i. p. 160.)

**SPALATHEA** (Plin. iv. 9. s. 16; Σπαλαθέα, Scylax, p. 25; Σαλαθέη, Steph. B. s. e.; Σαλα-θιανα, Halicarnass. ap. Steph. B. H. iv. 8 καθ. Σαλα-θιανα), a town of Magnesia, in Thessaly, upon the Pasaean gulf. It is conjectured that this town is meant by Lycephron (899), who describes Protonus, the leader of the Magnesians in the Iliad, as ὃ εἷς Παλαθεών (Σαλαθιανων). (See Müller, ad Scyl. l. c.)

**SPALATUM.** [Salona.]

**SPATERA,** a town in Lower Pannonia, of unknown site. (It. Ant. p. 268; It. Hieros. p. 563; Geogr. B. G. i. 29, who places Spatera. [L. S.])

**SPARTA,** a town in Messenia, S. of the Euripus on the river Isar. (It. Hieros. p. 567.) By the Geogr. Itav. it is called Spalthon (iv. 7). (T. H. D.)

**SPARTA** (Σπαρτή, Συρ. Σπαρτή: Εὐριπ-τόρης, Spartiates, Spartans), the capital of Laconia, and the chief city of Peloponnesus. It was also called ΛΑΚΕΔΑΛΕΜΟΝ (Λακεδαιμων: Εὐρίπ-τόρης, Λακεδαιμονιν, Λακεδαιμονινιος), which was the original name of the country. [See Vol. ii. p. 103, a.] Sparta stood at the upper end of the middle vale of the Eurotas, and upon the right bank of the river. The position of this valley, shut in by the mountain ranges of Taygetus and Parnon, its inaccessible character, and its extraordinary beauty and great fertility, have been described in a previous article [LACONIA].

The city was built upon a range of low hills and upon an adjoining plain stretching NE. to the river. These hills are offshoots of Mt. Taygetus, and rise almost immediately above the river. Ten-stadia S. of the point where the Oenus flows into the Eurotas, the latter river is divided into two arms by a small island overgrown with the oleander, where the foundations of an ancient bridge are visible. This is the most important point in the topography of the site of Sparta. Opposite to this bridge the range of hills rises upon which the ancient city stood; while a hollow way (Map, ff.) leads through them into the plain in Magnesia, a village situated about half-way between Mistra and the island of the Eurotas. Upon emerging from this hollow into the plain, there rises on the left hand a hill, the south-western side of which is occupied by the theatre (Map, A.). The centre of the building was excavated out of the hill; but the two wings of the cavea were entirely artificial, being built of enormous masses of quadrangular stones. A great part of this masonry still remains; but the seats have almost entirely disappeared, because they have for many ages been used as a quarry by the inhabitants of Mistra. The extremities of the two wings are about 430 feet from one another, and the diameter of length of the orchestra is about 170 feet; so that this theatre was probably the largest in Greece, with the exception of those of Athens and Megalopolis. There are traces of a wall around this hill, which also embraces a considerable part of the adjoining plain to the east. Within the
The hill we have been describing is the largest of all the Spartan heights, and is distinguished by the wall which surounds it, and by containing traces of foundations of some ancient buildings. From it two smaller hills project towards the Eurotas, parallel to one another, and which may be regarded as portions of the larger hill. Upon the more southilly of the two there are considerable remains of a circular brick building, which Leake calls a circus, but Curtius an amphitheatre or odeum (Map, 3). Its walls are 16 feet thick, and its diameter only about 100 feet; but as it belongs to the Roman period, it was probably sufficient for the diminished population of the city at that time. Its entrance was on the side towards the river. West of this building is a valley in the form of a horse-shoe, enclosed by walls of earth, and apparently a stadium, to which its length nearly corresponds.

To the north of the hollow way leading from the bridge of the Eurotas to Magula there is a small insulated hill, with a flat summit, but higher and more precipitous than the larger hill to the south of this way. It contains but few traces of ancient buildings (Map, B.). At its southern edge there are the remains of an aqueduct of later times.

The two hills above mentioned, north and south of this hollow way, formed the northern half of Sparta. The other portion of the city occupied the plain between the southern hill and the rivulet falling into the Eurotas, sometimes called the River of Magula, because it flows past that village, but more usually Trypíotíko, from Trypi, a village in the mountains (Map, cc). Two canals, beginning at Magula, ran across this plain: upon the southern one (Map, bb), just above its junction with the Trypíotíko, stands the small village of Psychídha (Map, 6). Between these two canals, and the remains of the ancient buildings upon which the town of New Sparta is now built; (Map, D.). Here are several ancient ruins, among which are some remains of walls at the southern extremity, which look like city-walls. The plain between the heights of New Sparta and the hill of the theatre is covered with corn-fields and gardens, among which are seen fragments of wrought stones, and other ancient remains, cropping out of the ground. The only remains which make any appearance above the ground are those of a quadrangular building, called by the present inhabitants the tomb of Leonidas. It is 22 feet broad and 44 feet long, and is built of massive square blocks of stone. It was probably an heroum, but cannot have been the tomb of Leonidas, which we know, from Paussanias (iii. 14. § 1), was near the theatre, whereas this building is close to the new town.

This plain is separated from the Eurotas by a range of hills which extend from the Roman amphitheatre or circus to the village of Psychídha. But here the hills and the river is a level tract, which is not much more than 50 yards wide below the Roman amphitheatre, but above and below the latter it swells into a plain of a quarter of a mile in breadth. Beyond the river Trypíotíko there are but few traces of the foundations of ancient buildings near the little village of Kalogónidh (Map, 7). Leake mentions an ancient bridge over the Trypíotíko, about a quarter of a mile N.E. of the village of Kalogónidh. This bridge, which was still in use when Leake visited the site, is described by him as having a rise of about one-third of the span, and constructed of large single blocks of stone, reaching from side to side. The same traveller noticed a part of the ancient causeway remaining at either end of the bridge, of the same solid construction. But as this bridge is not noticed by the French Commission, it probably no longer exists, having been destroyed for its materials. (Leake, Morea, vol. i. p. 157, Peloponnesei, p. 115.)

Thus is the site of Sparta, and such is all that now remains of this famous city. There cannot be any doubt, however, that many interesting discoveries might be made by excavations; and that at any rate the foundations of several ancient buildings might be found, especially since the city was never destroyed in ancient times. Its present appearance corresponds wonderfully to the anticipation of Thucydides, who remarks (i. 10) that "if the city of the Lacedaemonians were deserted, and nothing remained but its temples and the foundations of its buildings, as men of a distant age would find a difficulty in believing in the existence of its former power, or that it possessed two of the five divisions of Peloponnese, or that it commanded the whole country, as well as many allies beyond the peninsula.—so inferior was the appearance of the city to its fame, being neither adorned with splendid temples and edifices, nor built in continuity, but in separate quarters, in the ancient method. Whereas, if Athens were reduced to a similar state, it would be supposed, from the appearance of the city, that the power had been twice as great as the reality." Compared with the Acropolis of Athens, which rises proudly from the plain, still crowned with the columns of its glorious temples, the low hills on the Eurotas, and the shapeless heap of ruins, appear perfectly insignificant, and present nothing to remind the spectator of the city that once ruled the Peloponnese and the greater part of Greece. The site of Sparta differs from that of almost all Greek cities. Protected by the lofty ramparts of mountains, with which nature had surrounded their fertile valley, the Spartans were not obliged, like the other Greeks, to live within the walls of a city pent up in narrow streets, but continued to dwell in the midst of their plantations and gardens, in their original village trim. It was this rural freedom and comfort which formed the chief charm and beauty of Sparta.

It must not, however, be supposed that Sparta was destitute of handsome public buildings. Notwithstanding the simplicity of the Spartan habits, their city became, after the Messenian wars, one of the chief seats of poetry and art. The private houses of the Spartans always continued rude and undecorated, in accordance with a law of Lycurgus, that the doors of every house were to be fashioned only with the saw, and the ceiling with the axe (Thuc. Lyce, 13); but this regulation was not intended to discourage architecture, but to prevent it from exceeding in height, breadth, or壮丽ness, that which it properly belongs to its proper objects, the buildings for the gods and the state. The palace of the kings remained so simple, that its doors in the time of Agesilaus were said to be those of the original building erected by Aristodemus, the founder of the Spartan monarchy (Xen. Ages. 8. § 7); but the temples of the gods were built with
great magnificence, and the spoils of the Persian
wars were employed in the erection of a beautiful
stoa in the Agora, with figures of Persians in white
marble upon the columns, among which Pausanias
admired the statues of Mardonios and Artemisia
(ii. 11. § 3). After the Persian wars Athens be-
came more and more the centre of Greek art; but
Sparta continued to possess, even in the time of
Pausanias, a larger number of monuments than most
other Grecian cities.

Sparta continued unfortified during the whole
period of autonomous Grecian history; and it was
first surrounded with walls in the Macedonian pe-
riod. We learn from Polybius (ix. 21) that its walls
were 48 stadia in circumference, and that it was
much larger than Megalopolis, which was 50 stadia
in circuit. Its superiority to Megalopolis in size
must have been owing to its form, which was cir-
cular. (Polyb. v. 22.) Leake remarks that, "as
the side towards the Eurotas measured about two
miles with the windings of the outline, the computa-
tion of Polybius sufficiently agrees with actual appear-
ances, though the form of the city seems rather to have
been semicircular than circular." (Morea, vol i.
p. 180.) Its limits to the eastward, at the time of
the invasion of Philip (b.c. 218), are defined by
Polybius, who says (r. 22) that there was a distance
of a stadium and a half between the foot of the cliffs
of Mount Messenius and the nearest part of the
city. Livy also describes the Eurotas as flowing close
to the walls (xxxiv. 28, xxxv. 29). When Demetrius
Polecrotes made an attempt upon Sparta in b.c.
296, some temporary fortifications were thrown up;
and the same was done when Pyrrhus attacked the
city in b.c. 272. (Pans. i. 13. § 6, viii. 8. § 5.)
But Sparta was first regularly fortified by a wall
and ditch by the tyrant Nabis in b.c. 193 (Livy.
xxxv. 27; Pans. vii. 8. § 5); though even this wall
had not been owing to its form, which was cir-
cular, as the side towards the Eurotas measured about
two miles with the windings of the outline, the computa-
tion of Polybius sufficiently agrees with actual appear-
ces, though the form of the city seems rather to have
been semicircular than circular." (Morea, vol i.
p. 180.)

It appears from the passage of Pindar quoted above,
that Pindar was at the ford of the Eurotas, and con-
sequently in the northern part of the city. It was
the favourite and fashionable place of residence at
Sparta, like Colybytus at Athens and Crane on
Corinthian soil. It was also said that Pindar was
near the temple and stronghold of Issorium, of
which we shall speak presently. (Polyb. ii. 1. § 14;
Plut. Ages. 32.) Limnae was situated upon the Eu-
rotas, having derived its name from the marshy ground which once existed there (Strab. viii. p. 363); and as the Dromos occu-
pied a great part of the lower level towards the
south, it is probable that Limnae occupied the
northern. (Leca, Morea, vol i. p. 177.) It
was situated upon the Agora, the principal town of the
city [see below, p. 1026, b], and Cynosura in the
SW.

In the midst of these separate quarters stood the
Acropolis and the Agora, where the Dorian invaders
first planted themselves. Pausanias remarks that
the Lacedaemonians had no acropolis, towering above
other parts of the city, like the Cadmeia at Thebes and
Larissa at Argos, but that they gave this name to the
loftiest eminence of the group (iii. 17. § 2). This
is rather a doubtful description, as the great hill,
upon which the theatre stands, and the hill at the
northern extremity of the site, present nearly the
same elevation to the eye. Leake places the Acro-
polis upon the northern hill, which, he observes, was

* Some modern writers mention a fifth tribe, the AEgeidae, because Herodotus (iv. 149) speaks of the Aegeidae as a great tribe (φάνηκα) in Sparta, but the word φάνηκα seems to be here used in the more general sense of family, and there is no evidence that the word Aegeidae was the name of a tribe, like the other four mentioned above.
better adapted for a citadel than any other, as being separated from the rest, and at one angle of the site; but Curtius supposes it to have stood upon the hill of the theatre, as being the only one with a sufficient large surface on the summit to contain the numerous buildings which stood upon the Acropolis. The latter opinion appears the more probable; and the larger hill, cleared from its surrounding rubbish, surrounded with a wall, and crowned with buildings, would have presented a much more striking appearance than it does at present.

The chief building on the Acropolis was the temple of Athena Chalcioecus, the tutelary deity of the city. It was said to have been begun by Tymbareus, but was long afterwards completed by Gitiadas, who was celebrated as an architect, stately, and poet. He caused the whole building to be covered with plates of bronze or brass, whence the temple was called the Brazen House, and the goddess received the surname of Chalcioecus. On the bronze plates there were represented in relief the labours of Heracles, the exploits of the Dioscuri, Helios, and the Nymphs, reposing her mother from her chains, the Nymphs arming Hercules, with various other subjects, against Medusa, the birth of Athena, Amphitrite and Poseidon. Gitiadas also made a brazen statue of the goddess. (Paus. iii. 17. §§ 2, 3.)

The Brazen House stood in a sacred enclosure of considerable extent, surrounded by a stoa or colonnade, and containing several sanctuaries. There was a separate temple of Athena Ergane. Near the southern stoa was a temple of Zeus Cosmetas, and before it the tomb of Tymbareus; the western stoa contained two temples, dedicated by Lysander in commemoration of his victories over the Athenians. To the left of the Brazen House was a temple of the Muses; behind it a temple of Areus Arcia, with very ancient wooden statues; and to its right a very ancient statue of Zeus Hypatus, by Learchus of Rhegium, parts of which were fastened together with nails. Here also was the oinochoe, a booth or tent, which Curtius conjectures to have been the oinochoe of the Muses, 6 thou at 6 below Agora, and the place of a stall, in which he supposed the shrine to be a suppliant. Near the altar of the Brazen House stood two statues of Pausanias, and also statues of Apollodite Ampholobera (delaying old age), and of the brothers Sleep and Death. The statues of Pausanias were set up by order of the Delphian Apollo to expiate his having starved to death within the sacred precincts. (Paus. iii. 17. §§ 2—18. § 1.)

The Agora was a spacious place, surrounded, like other Greek market-places, with colonnades, from which the streets issued to the different quarters of the city. Here were the public buildings of the magistrates,—the council-house of the Gerrusia and senate, and the offices of the Ephori, Nomophylakes, and Bidei. The most splendid building was the Persian stoa, which had been frequently repaired and enlarged, and was still perfect when Pausanias visited the city. The Agora contained statues of Julius Caesar and Augustus; in the latter was a brazen statue of the prophet Agias. There was a place called Choros, marked off from the rest of the Agora, because the Spartan youths here danced in honour of Apollo at the festival of the Gymnopaedia. This place was adorned with statues of the Pythian deities, Apollo, Artemis, and Leto; and near it were temples of Earth, of Zeus Agoraen, of Athena Agoraea, of Apollo, of Poseidon Asphaleus, and of Hera. In the Agora was a colossal statue representing the people of Sparta, and a temple of the Muses or Fates, near which was the tomb of Orestes, whose bones had been brought from Tegea to Sparta in accordance with the well-known tale in Herodotus. Near the tomb of Orestes stood a statue of Polyedorus, whose effigy was used as the seal of the state. Here, also, was a Hermes Auroearus bearing Dionysus as a child, and the old Ephoria, where the Ephors originally administered justice, in which were the tombs of Epimenides the Cretan and of Aphares the Aecian king. (Paus. iii. 11. §§ 2—11.)

The Agora was near the Acropolis. Lycurgus, it is said, withdrew by his opponents, fled for refuge from the Agora to the Acropolis, but was overtaken by a fiery youth, who struck out one of his eyes. At the spot where he was wounded, Lycurgus founded a temple of Ophithés * or Ophthalmités, which must have stood immediately above the Agora. Plutarch says that it lay within the temenos of the Brazen House; and Pausanias mentions it, in descending from the Acropolis, on the way to the so-called Alpium, beyond which was a temple of Artemis, and probably also a temple of Artemis Cecaia. (Plut. Lyce. i. p. 227, b.; Paus. iii. 18. § 3.) The Agora may be placed in the great hollow east of the Acropolis (Map. 2). Its position is most clearly marked by Pausanias, who, going westwards from the Agora, arrived immediately at the theatre, after passing only the tomb of Brasidas (iii. 14. § 1). The site of the theatre, which he describes as a magnificent building of white marble, has been already described.

The principal street, leading out of the Agora, was named Aphelaitis (Αφέλαιτις), the Coro of Sparta (Map. d6). It ran towards the southern wall, through the most level part of the city, and was bordered by a succession of remarkable monuments. First came the house of King Polyedorus, named Boemeta (Βοημέτα), because the state purchased it from his widow for some oxen. Next came the office of the Bidei, who originally had the inspection of the race-cours; and opposite was the temple of Athena Archegetis, with a statue of the goddess dedicated by Ulysses, who erected three statues of Celeithya in different places. Lower down the Aphelaitis occurred the aereon of Iopa, Amphiarus, and Lelex,—the sanctuary of Poseidon Taenarius,—a statue of Athena, dedicated by the Tarentini,—the place called Hellenion, so called because the Greeks are said to have held counsel there either before the Persian or the Trojan wars,—the temenos of Talithybius,—an altar of Apollo Areias,—a place sacred to the earth named Geaspeum,—a statue of Apollo Maleates,—and close to the city walls the temple of Dictyna, and the royal sepulchres of the Euryptidae. Pausanias then returns to the Hellenion, probably to the other side of the Aphelaitis, where he mentions a sanctuary of Arisine, the sister of the wives of Castor and Pollux; then a temple of Artemis near the so-called Phuria (Φυρία), which were perhaps the temporary fortifications thrown up before the completion of the city walls; next the tombs of the Lamiades, the Eryman prophets,—sanctuaries of Mars and Alpheus, who fell at Thermopylae,—the temple of Zeus Troopes, built by the Dorians after conquering the Achaean inhabitants of Laconia, and especially the Amyclaei,—the temple

* So called, because ἀφήλαιος was the Lacedaemonian form for ἄφθαλος, Plut. Lyce. 11.
of the mother of the gods,—and the hero of Hippolytus and Aulon. The Aphaetans upon quitting the city joined the great Hyacinthian road which led to the Amycheum. (Paus. iii. 12. §§ 1—9.)

The next most important street leading from the Agora ran in a south-easterly direction. It is usually called Scia, though Pausanias gives this name only to a building at the beginning of the street, erected by Theodorus of Samos, and which was used even in the time of Pausanias as a place for the worship of the statue of the Muses. Near the Scia was a round structure, said to have been built by Epimenides, containing statues of the Olympic Zeus and Aphrodite; next came the tombs of Cy- noras, Castor, Isias, and Lyceus, and a temple of Core Soteira. The other buildings along this street or in this direction, if there was no street, were the temple of Apollo Carneus, who was worshipped here before the Doric invasion,—a statue of Apollo Aphaetans,—a quadrangular place surrounded with colonnades, the theatre and the way (stoa) of anciently sold,—an altar sacred to Zeus, Athena, and the Dioscuri, all adorned Ambuli. Opposite was the place called Colona and the temple of Donouvs Cobostas. Near the Colona was the temple of Zeus Euannemus. On a neighbouring hill was the temple of the Argive Hera, and the temple of Hera Hypanereia, containing an ancient wooden statue of Aphrodite Hera. To the right of this hill was a statue of Hetoemocles, who had gained the victory in the Olympic games. (Paus. iii. 12. § 10—ii. 19.) Although Pausanias does not say that the Cabeiro, was a hill, yet there can be no doubt of the fact, as κολώνια is the Doric for κολώνια, a hill. This height and the one upon which the temple of Hera stand are evidently the heights NW. of the village of Παιχτία between the Euorota and the plain to the S. of the theatre (Map, C.).

After describing the streets leading from the Agora to the S. and SE. Pausanias next mentions a third street, running westward from the Agora. It led down the slope of the Akjadon in front of the theatre were the tombs of Pausanias and Leucidas (iii. 14. § 1).

From the theatre Pausanias probably went by the hollow way to the Eurotas, for he says that near the Sepulchres of the Agiadas was the Leonch of the Crotani, and that the Crotani were a portion of the Cretan people. It would appear from a passage in Athenaeus (i. p. 31) that Pilane was in the neighborhood of the Omus; and its proximity to the Eurotas has been already shown. [See above, p. 1026, a. ] It is not improbable, as Curtius observes, that Pilane lay partly within and partly without the city, like the Cerameicus at Athens. After proceeding to the tomb of Taenaros, and the sanctuaries of Poseidon Hippocrumus and the Argivean Artemis, Pausanias returns to the Lecha, near which was the temple of Artemis Issoria, also called Limmneia. Issoria, which is known as a stronghold in the neighborhood of Pilane (Polyen. ii. 1. § 14; Plut. Ages. 52), is supposed by Curtius to be the hill to the north of the Acropolis (Map, C.), Leake, as we have already seen, regards this hill as the Areopag itself, and identifies the Issoria with the height above the ruined amphitheatre or circus. Pausanias next mentions the temples of Thetis, of Demeter Cithonia, of Sarapis, and of the Olympian Zeus. He then reached the Dromos, which was used in his day as a place for running. It extended along the stream southwards, and contained gym-
chus, and the temple of Hera Aegophanes. He afterwards returns to the theatre, and mentions the different monuments in its neighborhood; among which were a temple of Poseidon Genethlius, hero of Cleobus and Oenomaus, a temple of Asclepius, near the Booneta, the most celebrated of all the temples of this god in Sparta, with the heroum of Teleclus on its left; on a height not far distant, an ancient temple of Aphrodite armed, upon an upper story of which was a second temple of Aphrodite Morpho; in its neighborhood was a temple of Hicratis and Phoebie, containing their statues, and an egg suspended from the roof, said to have been that of Leila. Pausanias next mentions a house, named Chiton, in which was worn the robe for the Amyleean Apollo; and on the way towards the city gates the heroum of Chilon and Athenaeus. Near the Chiton was the house of Phorimnon, who hospitably entertained the Dionysii when they entered the city as strangers (Paus. iii. 15. § 6—16. § 4.) From these indications we may suppose that the Amyleean road issued from this gate, and it may therefore be placed in the southern part of the city. In that case the double temple of Aphrodite probably stood upon one of the heights of New Sparta.

Pausanias next mentions a temple of Lycourgos; behind it the tomb of his son Eucoenus, and an altar of Lathria and Alexandra; opposite the temple were monuments of Theopompus and Eurybiades, and the heroum of Astrabacus. In the place called Limaeum stood the temples of Artemis Orthia and Leto. This temple of Artemis Orthia was, as we have already remarked, the common place of meeting for the four villages of Pitane, Messa, Cynoura, and Limnae. (Paus. iii. 16. § 6 seq.) Limnae was partly in the city and partly in the country; and, as the road to the N. of the Dromus has been mentioned above; and, if an emendation in a passage of Strabo be correct, it also included a district on the left bank of the Evrotas, in the direction of Mt. Thamnos (τὸ Ἀμυντικόν κατὰ τὸν ὀρέα) Meineke's emendation instead of ὀρέα), strab. viii. p. 364).

The most ancient topographical information respecting Sparta is contained in the answer of the Helichric oracle to Lycourgos. The oracle is reported to have directed the law-giver to erect temples to Zeus and Athena, and to fix the seat of the senate and kings between the Babycia and Cnacion. (Plut.Lyce. 6.) These names were obsolete in the time of Pindar. He says that the Cnacion was the Oenus, now the Keloïsas; and he also appears to have considered the Babycia a river, though the text is not clear; in that case the Babycia must be the Tryphoëtis, which forms the southern boundary of the city. It appears, however, from the same passage of Pindar, that Aristotle regarded the Babycia as a bridge, and only the Cnacion as a river; whence he would seem to have given the name of Cnacion to the Tryphoëtis, and that of Babycia to the bridge over the Evrotas.

The left, or eastern bank of the Evrotas, was not occupied by any part of Sparta. When Epaminondas invaded Lacedaemon in B. C. 370 he marched down the left bank of the Evrotas till he reached the foot of the ridge which led through the narrow way into the city. But he did not attempt to force the passage across the bridge; and he saw on the other side a body of armed men drawn up in the temple of Athena Alea. He therefore continued his march along the left bank of the river till he arrived opposite to Anychse, where he crossed the river. (Xen. Hell. vi. 5. § 27.) The account of Xenophon illustrates a passage of Pausanias. The latter writer, in describing (iii. 19. § 7) the road to Therapne, mentions a statute of Athena Alea as standing between the city and a temple of Zeus Phliusus, above the right bank of the Evrotas, at the point where the river was crossed by a bridge. There is only one bridge across the Evrotas mentioned by ancient writers; it can be no doubt that the road to Therapne crossed the bridge which Xenophon speaks of, and the remains of which are still extant. Therapne stood upon the Meenelion or Mount Meenelains, which rose abruptly from the left hand of the river opposite the south-eastern extremity of Sparta. (Μειν. Λακ. Polyb. v. 22: Μειν. Λακ. Steph. B. s. v.; Meenelains Mess. liv. xxiv. 28.) The Meenelium has been compared to the Janiculum of Rome and rises about 760 feet above the Evrotas. It derived its name from a temple of Meenelains, containing the tombs of Meenelins and Helen, whither solemn processions of men and women were accustomed to repair, the men imploring Meenelins to grant them bravery and success in war, the women invoking Helen to bestow beauty upon them and their children. (Paus. iii. 19. § 9; Herod. vi. 61; locr. Encom. Hell. 17; Heerch. s. v. Ελένη, Θρεπανία, Λειναί.) The foundations of this temple were discovered in 1834 by Ross, who found amongst the ruins several small figures in clay, representing men in military costume and women in long robes, probably dedicatory offerings made by the poorer classes to Meenelains and Helen. (Ross, Wanderungen in Griechenland, vol. ii. p. 13, seq.) The temple of Meenelains was expressly said to have been situated in Therapne (Θεράπνη, Θεραπνή; Theramne, Phil. iv. 5. s. v.), which was one of the most ancient and venerable places in the middle valley of the Evrotas. It was said to have derived its name from a daughter of Lelex (Paus. iii. 19. § 9), and was the Achaean citadel of the district. It is described by the poets as the lofty well-towered Therapne, surrounded by thick woods (Pind. Isthm. i. 31; Coluth. 225), where slept the Dioscuri, the guardians of Sparta. (Pind. Nem. x. 53.) Here was the fountain of Messela, where the captive women had to carry (Paus. iii. 10. § 1; Steph. B. s. v.; Plin. Hist. Nat. xvi. 457); and it is probably upon this height that the temple of Meenelains stood, which excited the astonishment of Telemachus in the Odyssey. Hence Therapne is said to have been in Sparta, or is mentioned as synonymous with Sparta. (Θεράπνη, θείους Διόνυσιος, νήσου, των θειοτάτης θεαίς, Steph. B. s. v.; en Σταυροτής φασίν, Schol. ad Apoll. Rhod. ii. 162, Pind. Isthm. i. 31.) It is probable that further excavations upon this spot would bring to light some tombs of the heroic ages. The Phochaenians, which has been already described as the open space on the right bank of the Evrotas [see p. 1028, b.], contained a temple of the Dioscuri. Not far from this place was the temple of Poseidon, surrounded by Gaeaconus. (Paus. iii. 20. § 2.) After the power of Sparta was destroyed by the battle of Leuctra, its territory was exposed to invasion and the city to attack. The first time that an enemy appeared before Sparta was when Epaminondas invaded Lacedaemon in B. C. 390, as already related. After crossing the river opposite Amychae, he marched against the city. His cavalry advanced as far as the temple of Poseidon Gaeaconus, with which we have seen from Pausanias was in the Phochaean. We also learn from Xenophon that the Hippodrome was
in the neighbourhood of the temple of Poseidon, and consequently must not be confounded with the Dromea. The Thebans did not advance further, for they were driven back by a body of picked hoplites, whom Agesilaus had placed in ambush in the sanctuary of the Tyndaridae (Dioscuri), which we likewise know from Pausanias was in the Phoebeum. (Xen. Hell. vi. 5. §§ 31, 32.) In B.C. 362 Epaminondas made a daring attempt to surprise Sparta, and actually penetrated into the market-place; but the Spartans having received intelligence of his approach, the city had been put into a state of defence, and Epaminondas again withdrew without venturing upon an assault. (Xen. Hell. vii. 5. §§ 11—14; Polyb. ix. 8; Diod. xv. 83.) In B.C. 218 Philip unexpectedly entered Laconia, descended the vale of the Eurotas by the left bank of the river, passing by Sparta, and then laid waste the whole country as far as Taenarum and Malca. Lycurgus, the Spartan king, resolved to intercept him on his return; he occupied the heights of the Menelaium with a body of 2000 men, ordered the remaining forces of Sparta to be ready to take up their position between the city and the western bank of the river, and at the same time, by means of a dam, laid the low ground in that part under water. Philip, however, contrary to the expectation of Lycurgus, stormed the Menelaium, and brought his whole army safely through the pass, and encamped two stadia above the city. (Polyb. v. 17—24.) In B.C. 195 Quinctius Flamininus attacked Sparta, because Nabis, the tyrant of the city, refused obedience to the terms which the Roman general imposed. With an army of 50,000 men Flamininus assaulted the city on its three undefended sides of the Phoebeum, Dictynnæum, and Hepiagonææ. He forced his way into the city, and after overcoming the resistance which he met with in the narrow ways at the entrance of the city, marched along the broad road (probably the Aphetaia) leading to the citadel and the surrounding heights. Thence Nabis set fire to the buildings nearest to the city walls, which compelled the Romans to retreat. But the main object of Flamininus had been answered, for three days afterwards Nabis sent his son-in-law to implore peace. (Liv. xxxiv. 38, 39.) The position of the Phoebeum has been already explained. The Dictynnaeum was so called from the temple of Artemis Dictyna, which Pausanias describes as situated at the end of the Aphetaia, close to the walls of the city (iii. 12. § 8). Leake thinks that the name of the village of Kalagonia may be a

SPARTARIUS CAMPUS.

corruption of Heptagoniae: but it is more probable that the Heptagoniae lay further west in the direction of Mistra, as it was evidently the object of Flamininus to attack the city in different quarters.

The small stream which enclosed Sparta on the south, now called the Trypsitikos or river of Magula, is probably the ancient Tissa (Tisaea), upon which stood the sanctuary of Phaena and Cleta, and across which was the road to Amyclae (Plin. H. N. iii. 18, § 6). Leake, however, gives the name of Tissa to the Pandeltamos, the next torrent southwards falling into the Eurotas.

With respect to the gates of Sparta, the most important was the one opposite the bridge of the Eurotas: it was probably called the gate to Therapne. Livy mentions two others, one leading to the Messenian town of Pharae, and the other to Mount Barbosthenes (xxxv. 50). The former must have been upon the western side of the city, near the village of Magula. Of the southern gates the most important was the one leading to Amyclae.

In this article it has not been attempted to give any account of the political history of Sparta, which forms a prominent part of Greek history, and cannot be narrated in this work at sufficient length to be of any value to the student. A few remarks upon the subject are given under LACONIA.

SPARTARIUS CAMPUS (Σπαρτάριον πανίων, Strab. iii. p. 160), a district near Carthage Nova in Hispania Tarraconensis, 100 miles long and 30 broad, which produced the peculiar kind of grass called spartum, used for making ropes, mats, &c. (Plin. xix. 2. s. 8) It is the stipe tenacissima of Linnaeus; and the Spaniards, by whom it is called esparto, still manufacture it for the same purposes as those described by Pliny. It is a thin wiry rush, which is cut and dried like hay, and then soaked in water and plaited. It is very strong and lasting, and is the material of which a large number of the lower class of citizens manufacture the ropes, cords, and children. It was no doubt the material of which the Iberian whims mentioned by Horace (Epod. iv. 3) were composed. (See Ford, Handbook of Spain, p. 168.) From this district Carthage Nova itself obtained the surname of "Spartaria." [T. H. D.]

SPARTOLUS (Σπαρτόλος, Thuc. ii. 79, v. 18; Steph. B.), a town of the Chalcidic peninsula, at a great distance from Olynthus (Isaeus, de Dichaeogen. Haeret. p. 55), under the walls of which the Albanian forces were routed, A.C. 249. It belonged to the Battians, and was perhaps their capital, and was of sufficient importance to be mentioned in the treaty between Sparta and Athens in the tenth year of the Peloponesian War. [E. B. J.]

SPAUTA (Σπαύτα), a lake in Media Atropatene, which is intensely salt, so as to cause the itch on the bodies of persons who have unwittingly bathed in it, with injury also to their clothes (Strab. xi. p. 320). Its present name is the Sea of Urwanish. Its earliest Aramaic name is said to have been Kapatun or Kaputan Chow, whence the Greek form would seem to have been modified. (L. Ingófí, Archæol. Arm. i. p. 160; St. Martin, Mémoires, i. p. 59.) It is probably the same as the Maspáteá or river of Tolyeny (vi. 2, § 17). Many travellers have visited it in modern times. (Tavernier, i. ch. 4; Morier, Sec. Voy. ii. p. 179.)

SPELAEUM, a place in Macedonia which Livy says was near Pola (Herv. 33).

SPELUNCA (Sperlonga), a place on the coast of Latium (in the modern sense of that name), situated between Terracina and Caetia. The emperor Tiberius had a villa there, which derived its name from a natural cave or grotto, in which the emperor used to dine, and where he on one occasion very nearly lost his life, by the falling in of the roof of the cavern (Tae. Ann. iv. 59; Suet. Tib. 39).

The villa is not again mentioned, but it would appear that a village had grown up around it, as Pliny mentions it in describing the coast ("locus, Sp lunae," Plin. iii. 8. s. 9), and its memory is still preserved by a village named Sperlonga, on a rocky point about 8 miles W. of Gaeta. Some Roman remains are still visible there, and the cave belonging to the Imperial villa may be identified by some remains of architectural decoration still attached to it (Craven's Abruzzi, vol. i. p. 73). [E. H. B.]

SPEOS ARTEMIDOS, the present grooves of Beni-hassen, was situated N. of Antinoe, in Middle Aegypt, on the eastern bank of the Nile, in lat. 26° 40' N. The name is variously written: Poes in the Itinerary of Antoninus (p. 167, Wesseling); Pois in the Notitia Imperii; but Speos is probably the true form, implying an excavation (σπήος) in the rocks. Speos Artemidos was rediscovered by the French and Tuscan expedition into Aegypt early in the present century. It was constructed by some of the Pharaohs of the 18th dynasty in a desert-valley running into the chain of Arabian hills. The structure was a kind of temple, and of between thirty and forty catacombs. The temple is dedicated to Pashbt, Bobbastis, the Artemis of the Greeks. (Herod. ii. 58.) The catacombs appear to have served as the general necropolis of the Hermopolite nome. For although Hermopolis and its district lay on the western bank of the Nile, yet as the eastern hills at this spot approach very closely to the stream, while the western hills recede from it, it was more convenient to ferry the dead over the river than to transport them across the sands. Some of these catacombs were appropriated to the mummies of animals, cats especially, which were worshipped by the Hermopolitans. In the general cemetery two of these catacombs merit particular attention: (1) the tomb of Neophyt, a military chief in the reign of Sesostris I. and of his wife Rotet; (2) that of Amenemheb, of nearly the same age, and of very similar construction. The tomb of Neophyt, or, as it is more usually denominated, of Rotet, is in front of an architrave excavated from the rock, and supported by two columns, each 23 feet high, with sixteen fluted facettas. The columns have neither base nor capital; but between the architrave and the head of the column a square abacus is inserted. A denteled cornice runs over the architrave. The effect of the structure, although it is hardly detached from the rock, is light and graceful. The chamber or crypt is 30 feet square, and its roof is divided into three vaults by two arcades, each of which was originally supported by a single column, now vanished. The walls are painted in compartments of the most brilliant colours, and the

SPEOS ARTEMIDOS. 1031
Spercheius is generally the best style of Egyptian art. They represent various events in the life of Neophit. From the tomb of Ross, indeed, might be compiled a very copious record of the domestic life of the Egyptians. On its walls are depicted, among many others, the following subjects: the return of warriors with their captives; wrestlers; hunting wild beasts and deer; the Nile, including its banks and fertile valleys, its fisheries and fishing boats; gophers and fowl; grapes, dates, and gardens; and the rites of sepulture. The tomb of Amenemhe is covered also with representations of men in various poses of wrestling; and the other grooves are not less interesting for their portrayures of civil and domestic life. (Wilkinson, *Modern Egypt and Thebes*; Rosellini, *Mon. Civ. vol. i.; Kerrick, *Anc. Egypt*, vol. i. p. 47, foll.)

Spercheius (Σπερχεύς; Elibdya), a river in the S. of Thessaly, rising in Mount Tymbhrestus (Strab. ix. p. 433), and flowing into the Malace gulf. The Dryopes and A-manes dwelt in the part of its course till it entered the plain of Malis, through which it flowed to the sea. In ancient times it joined the sea at Anticyra; and the rivers Dysis, Melas, and Aesopus fall separately into the sea to the S. of the Spercheius. (Herod. vii. 198.) But the Spercheius has changed its course, and now falls into the sea much further south, about a mile from Thermopylae. The Dysis and Melas now unite their streams, and fall into the Spercheius, as does also the Aesopus. (Thesmophylae.) Spercheius is celebrated in mythology as a river-god (*Dict. of Biogr. a. e.*), and is mentioned in connection with Achilles. (Hom. II. xvi. 142.) Its name also frequently occurs in the other poets. (Aesch. *Pers.* 486; Sophoc. *Pho.* 722; Virg. *Georg.* ii. 485; Lucan, vi. 366.) (Leake, *Northern Greece*, vol. ii. pp. 8, 11, 15.)

Spercheia, a place in Thessaly, which, according to the description of Livy (xxxi. 13), would seem to have been situated at no great distance from the sources of the Spercheus. Ptolemy (iii. 13. § 17) mentions a place Spercheia between Echinus and Thebes in Phthiotis; and Piny (iv. 7. s. 13) places Spercheis in Doris. It is probable that these three names indicate the same place, but that their real position was unknown.

Spina (Σπίνα, Strab., Σπινά, Steph. B.; *Ath. Σπίνας* and Σπινάς), an ancient city of Italy, situated near the southernmost mouth of the Padus, within the limits of Gallia Cisalpina. It was, according to Dionysius, a Pelasgic settlement, and one of the most flourishing cities founded by that people in Italy, enjoying for a considerable time the dominion of the Adriatic, and deriving great wealth from its commercial relations, so that the citizens had a treasury at Delphi, which they adorned with costly offerings. They were subsequently expelled from their city by an overwhelming force of barbarians, and compelled to abandon Italy. (Dionys. i. 18, 28.) Strabo gives a similar account of the naval greatness of Spina, as well as of its treasury at Delphi; but he calls it a Greek (Heleteric) city; and Sclavus, who notes only Greek, or reputed Greek, cities, mentions Spina apparently as such. Its Greek origin is confirmed also by Justin, whose authority, however, is not worth much. (Strab. v. 214, ix. p. 421; *Syl. p. 6.* § 19; Justin, xx. 1; Plin. iv. 16. s. 20.) But these authorities, as well as the fact that it had a treasury at Delphi, which is undoubtedly, seem to exclude the supposition that it was an Etruscan city, like the neighbouring Adria; and whatever may have been the foundation of the story of the old Pelasgic settlement, there seems no reason to doubt that it was really a Greek colony, though we have no account of the period of its establishment. Sclavus alludes to it as still existing in his time: hence it is clear that the barbarians who are said by Dionysius to have driven out the citizens, was a fact that is doubtless history, which is also the case with the neighboring Gauls; and that the period of its destruction was not very long before the conquest of Cisalpine Gaul by the Romans. It does not appear to have ever been rebuilt or become a Roman town. Strabo speaks of it as in his time a mere village; and Pliny repeatedly alludes to it as a place no longer in existence. (Plin. iv. 16. s. 20, 17, s. 21; Strab. v. 214.) No subsequent trace of it is found, and its site has never been ascertained. We know, however, that it must have been situated on or near the south-eastern confines of the Padus, which is derived from it the name of Spinethicum Oium, and which probably corresponded with the modern Po di Primerno. [*Padus.*] But the site of Spina must now be sought far from the sea: Strabo tells us that even in his time it was 90 stadia (11 miles) from the coast; though it was said to have been originally situated on the sea. It is probably now 4 or 5 miles further inland; but the changes which have taken place in the channels of the rivers, as well as the vast accumulations of alluvial soil, render it almost hopeless to look for its site.

Pliny tells us that the Spinetie branch of the Padus was the one which was otherwise called Eidusianus; but it is probable that this was merely one of the attempts to connect the mythical Eidusianus with the actual Padus, by applying its name to one particular branch of the existing river. It is, however, probable that the Spinetie channel was, in very early times, one of the principal mouths of the river, and much more considerable than it afterwards became. [*Padus.*]

Spiniae, a place in Britannia Romana, E. of Aquitania. (Bath.) (*Itin. Ant.* pp. 458, 458.) Now the village of Spin near Newbury in Berkshire, whose name is new in regard to Spiniae, the ancient borough. (Camer. p. 166.) [*T. H. D.*]

Spiniaeum (Plin. iv. 5. s. 9) or Speriaeum (Tol. iii. 16. § 12), a promontory on the eastern coast of Teopeumenaus upon the confines of the territories of Cornith and Ephes. For details, see Vol. vi. 85.

SPOLETO, a city of Umbria, situated between Interamnna (Terini) and Trebia (Trevi), about 9 miles S. of the sources of the Clitumnus. Its name is not mentioned in history as an Umbrian town, nor have we any account of its existence previous to the establishment of the Roman colony, which was settled there in B.C. 240, just after the close of the First Punic War (Liv. *Epit.* xx.; Vell. Pat. i. 14). It was a Colonna Latina, and its name is repeatedly mentioned during the Second Punic War.
SPOLETUM.

In n. c. 217, just after the battle at the Lake Trasimenus, Hannibal advanced to the gates of Spoletium, and made an assault upon the city, but was repulsed with so much vigour by the colonists, that he drew off his forces and crossed the Apennines into Picenum. (Liv. xxi. 9.) A few years later (c. 209 B.C.) Spolegium was again attempted, which distinguished themselves by their fidelity and zeal in the service of Rome, at the most trying moment of the war. (Id. xxvii. 10.) For some time after this we hear but little of Spolegium, though it seems to have been a flourishing municipal town. In n. c. 167 it was selected by the senate as the place of confinement of Genius, king of Illyria, and his son; but the citizens declined to take charge of them, and they were transferred to Imugium (Liv. xiv. 49). But in the civil war between Marius and Sulla it suffered severely.

A battle was fought beneath its walls in b. c. 82, between Pompeius and Crassus, the generals of Sulla, and Carrinas, the lieutenant of Carbo, in which the latter was defeated, and compelled to take refuge in the city. (Appian, B. C. 1. 89.) After the victory of Sulla, Spolegium was one of the places severely punished, all its territory being confiscated, apparently for the settlement of a military colony. (Firr. iii. 21; Zumpt, de Civitat. 274.) Florus calls Spolegium at this time one of the "municipia Italica splendidissima," but this is probably a rhetorical exaggeration. Cicero, however, terms it, in reference to a somewhat earlier period, "colonia Latina in primis firma et illustris." (Cic. pro Balb. 21.) It became a municipium (in common with other Latin colonies) by virtue of the Lex Julia; and does not appear to have subsequently obtained the title of a colony, though it received a fresh accession of settlers. (Lib. Col. p. 225; Zumpt, i. c.) It is again mentioned during the Persian War (b. c. 41), as affording a retreat to Munatius Plancus when he was defeated by Octavian (Appian, B. C. v. 39); and seems to have continued under the Empire to be a flourishing municipal town, though rarely mentioned in history. (Strab. v. p. 227; Plin. iii. 14. s. 19; Poli. iii. 1 § 54; Orell. Inscr. 1160, 1103, 3966.) It was at or near Spolegium that the emperor Aurelian was encamped, when the death of his rival Gallus and Volusianus gave him temporary possession of the empire; and it was there also that he was himself put to death by his soldiers, after a reign of only three months. (Vict. Epit. 31.) Spolegium is again mentioned during the Gothic Wars, after the fall of the Western Empire, when it was taken by the Gothic king Totila (Procop. B. G. iii. 12), who partially destroyed its fortifications; but these were restored by Xeres (H. iv. 33). It was at this time regarded as a strong fortress, and was a place of importance on that account. Under the Lombards it became the capital of a duchy (about A. D. 570), the dukes of which soon rendered themselves altogether independent of the Lombard kings, and established their authority over a considerable part of Central Italy. The duchy of Spoleto did not cease to exist till the 12th century.

Spolegium was not situated on the Via Flaminia, properly so called. That line of highroad proceeded from Narnia to Mevania (Bevagna) by a more direct course through Carsulae, thus leaving on the right hand the two important towns of Interamna and Spolegium. (Strab. v. p. 227.) We learn from Tacitus that this continued to be the line of the Flaminian Way as late as the time of Vespasian (Tac. Hist. iii. 60); but at a later period the road through Interamna and Spolegium came into general use, and is the one given in the Itineraries. (Itin. Ant. p. 125; Itin. Hier. p. 613.) This must have followed very nearly the same line with the modern road from Rome to Perugia, which crosses a steep mountain pass, called Monte Somma, between Spoleto and Terni; and this was probably the reason that this line was avoided in the first instance by the Via Flaminia. But there must always have been a branch road to Spolegium, and from thence, as we learn from Suetonius (Vesp. 1), another branch led to Nursia in the upper valley of the Nar.

Spoleto is still a tolerably flourishing place, with the rank of a city. It has several Roman remains, among which the most interesting is an arch commonly called the Porta d‘Annullio, as being supposed to be the gate of the city from whence that general was repulsed. There is, however, no foundation for this: and it is doubtful whether the arch was a gateway at all. Some remains of an ancient theatre are still visible, and portions of two or three ancient temples are built into the walls of modern churches. A noble aqueduct, by which the city is still supplied with water, though often ascribed to the Romans, is not really earlier than the time of the Lombard dukes. Some remains of the palace inhabited by the latter, but first built by Theodoric, are also visible in the citadel which crowns the hill above the town.

E. H. B.

STABIAE. 1093

SPORADES (Στροπάδες), or the "Scattered," a group of islands in the Aegean, Cretan, and Carpathian seas, so called because they were scattered throughout these seas, in opposition to the Cyclades, which lay round Delos in a circle. But the distinction between these groups was not accurately observed, and we find several islands sometimes ascribed to the Cyclades, and sometimes to the Sporades. The islands usually included among the Cyclades are given under that article. [Vol. I. p. 723.] Sclavus makes two groups of Cyclades; but his southern group, which he places off the coast of Laconia and near Crete, are the Sporades of other writers: in this southern group Sclavus specifies.

An account of each island is given under its own name.

STABATIO, in Gallia, a name which occurs in the Table on a road from Vienna (Vienna) past Calaro (Grenoble) to the Alps Cottia (Mont Genèvre). Stabatio is placed between Duroticum and Alpis Cottia. D‘Anville fixed Stabatio to Monetier or Monetier near Briangon.

G. L.

STABIAE (Στάβιας). Eth. Stabianus; It. Stabian. Inu. near Castellamare, a city of Campania, situated at the foot of the Mont Calvario, about 4 miles S. of Pompeii, and a mile from the sea. The first mention of it in history occurs during the Social War (n. c. 90), when it was taken by the Samnite general C. Papius (Appian, B. C. i. 42). But it was retaken by Sulla the following year (n. c. 89), and entirely destroyed.
(Plin. iii. 5. s. 9). Nor was it ever restored, so as to resume the rank of a town; Pliny tells us that it was in his time a mere village, and the name is not mentioned by any of the other geographers. It is, however, incidentally noticed by both Ovid and Columella (Ovid. Met. xv. 711; Colum. R. E. x. 139), and seems to have been common with the whole coast of the Bay of Naples, a favourite locality for villas. Among other Pompeians, the friend of the elder Pliny, had a villa there, where the great naturalist sought refuge during the celebrated eruption of Vesuvius in A. D. 79, and where he perished, suffocated by the cinders and sulphurous fumes (Plin. Ep. vi. 16). It is certain that Stabiae was on this occasion buried under the ashes and cinders of the volcano, though less completely than Pompeii and Herculaneum; but the site was again inhabited, and the name was retained throughout the period of the Roman Empire, though it appears to have never again risen into a place of any consideration. It was chiefly resorted to by invalids and others, on account of its neighbourhood to the Mens Lactaria, for the purpose of adopting a milk diet. 

"It is said that Pliny, though buried the vicius mentioned Argent coast, for traces of which he took refuge at Stabia and Herculaneum. They confirm the account of Pliny, by showing that there was no town on the spot, but merely a row of straggling villas, and these for the most part of an inferior class. They seem to have suffered severely from the earthquake of A. D. 63, which did so much damage to Pompeii also. (Swinburne's Travels, vol. i. p. 82.) [E. H. B.]

STABULA, in Gallia, is placed by the Antonine Itin. vi. from Cambes (Gros Kembs) and xviii. from Argendoravia (Artenzeche). These distances bring us to a place between Oymaerde et Bauche, where inspection was made by D'Arcy, and says that traces of an old place are found. The word Stabilia meant a station or resting place for travellers, a kind of inn, as we see from a passage of Ulpian (Dig. 47. tit. 5. s. 1): "qui uxes, carpones, stabula excert;" and the men who kept these places were "Stabulari." [G. L.]

STABULUM, AD, in Gallia, is placed by the Antonine Itin. between Salubrac (Soleers) and Sumnum Pyreneum, or the pass of the Pyrenees at Bellenegne. It was supposed to be Le Puy, which looks like a part of the old name, on the left bank of the Tech. The distances in the Itin. both from Salisus to Ad Stabulum, and from Ad Stabulum to Sumnum Pyreneum, are a great deal too much. The name, however, and the place Le Boulu on the Tech seem to fix the position of this Stabulum. [CENTURIONES, AD; STABULA.]

STABULUM DIOBETHIS (Itin. Ant. p. 381; It. Hier. p. 609), a place on the coast of Thrace, on the river Evros, 18 miles to Itin. Ant. 12,000, according to It. Hier., from Porsemia, or Maximianopolis; probably the same as Pliny (iv. 11. s. 18) calls Tirida: "Oppidum fuit Tirida, Dio melis equorum stabulis dirum." This Diosnedes was king of the Bistonians in Thrace, and was in the habit of throwing strangers to be devoured by his savage horses, till at length he himself was punished in the same way by Hercules. (Mela, ii. 2. § 8.) Lapio places it which Pliny (v. 1. s. 1) calls Salaxis, and may be the modern St. John or St. Antonio river, also called Rio de Guano. [T. H. D.]

STACHIR (Στάχειρ, Ptol. iv. 6. §§ 7 and 8), a river on the W. coast of Libya Interior, which rose in Mount Rysaudam. Not far from its source it formed a lake named Glania, and after flowing in a westerly direction, discharged itself into the Sinus Hesperus, to the S. of the promontory of Rasama, and it is supposed that the place which Pliny (v. 1. s. 1) calls Salaxis, and may be the modern St. John or St. Antonio river, also called Rio de Guano. [T. H. D.]

STAGEIRA, STAGEIRUS (Σταγειρός, Herod. vii. 115; Thuc. iv. 88, v. 18; Strab. vii. p. 331, Fr. 33. 35; Στάγειρα, al. Σταγέιρα, Ptol. iii. 13. § 10; Pline. iv. 17. xvi. 57), a town of Chalcidice in Macedonia, and a colony of Andros. The army of Xerxes, after passing through the plain of Sileus, passed through Stageira, and the site is supposed to have been situated on the coast, in the midst of the island of Stabia, and the exact spot was forgotten till the remains were accidentally brought to light about 1750; and since that time excavations have been frequently made on the site, but the results are far less interesting than those of Pompeii and Herculaneum. They confirm the account of Pliny, by showing that there was no town on the spot, but merely a row of straggling villas, and these for the most part of an inferior class. They seem to have suffered severely from the earthquake of A. D. 63, which did so much damage to Pompeii also. (Swinburne's Travels, vol. i. p. 82.) [E. H. B.]

STAGNA VOLCARUM, on the coast of Gallia Narbonensis. Mela (ii. 5) speaks of the Stagna Volcarum, which he places W. of the Rhone. They are the long line of stans between Aiga-Morie
and Apel, separated from the land by a long, narrow, flat, which widens near Cetio, where the Mona Selius is. These lagoons are the Etang de Tan, de Foretigane, de Magnolone, and others. Avienus (Or. Marit. 58) mentions the Taurus or Etang de Tan:

"Taurus paludam annque gentes vocant."

[Prerii Jcma: Eubus.

[219] STAILOCANUS PORTUS (2qαλακοαυς λιμη). Ptolemy (ii. 8, § 2) places this port between (yeumanni (Pomontum) (Gorataim) and the mouth of the Tana on the coast of Gallia Lagunensis. D'Anville (Notice, yc) found in a manuscript plan of the Aue de Conquet the name of Port Siocon, N. of Cap Maleh, at the bottom of the road of Loo. Theobald in his History of Bretagne says that the name means White Tower, and that there were traces of a port there, constructed of brick and cement. Gosselin places the Stalocans on the N. coast of Bretagne, at the outlet of the river on which Morlaix stands. It is impossible to determine which of the numerous bays on this irregular coast is Ptolemy's Stalocans.

[219] STANACUM, a place in Noricum, on the road leading along the Danube from Augusta Vindelicarum to Carantum and Vindobona. (It. Ant. p. 249; Tab. Peut.) Its exact site is uncertain. (Comp. Munch, Noricum, i. p. 285.) [L. S.]

STATIELLI [Στατιελλοι], a tribe of Ligurians, who inhabited the northern slopes of the Apennines, on both sides of the valley of the Bormida. Their locality is clearly fixed by that of the town of Aque Statiellei, now Acqui, which grew up near the Roman Empire from a mere watering place into a large and populous town, and the chief place of the surrounding district. The Statielli are mentioned by Livy in B. C. 173, as an independent tribe, who were attacked by the Roman consul, M. Popilius; after defeating them in the field, he attacked and took their city, which Livy calls Carytus, and, not content with disarming them, sold the captives as slaves. This proceeding was severely arraigned at Rome by the tribunes, especially on the ground that the Statielli had previously been uniformly faithful to the Roman alliance; but they did not succeed in enforcing reparation (Livy. xiii. 7, 8, 9, 21). Livy writes the name Statiellates, while Decimus Brutus, who crossed their territory on his march from Matina, B. C. 44, and addresses one of his letters to Cicero from thence, dates it "finibus Statiellensium" (Cic. ad Fam. xii. 11). Pliny, who enumerates among them the tribes of Ligurians existing in his time, calls them Statielli, and their chief town Aque Statiellorum (Plin. iii. 5. 7). The site of Carytus, mentioned only by Livy, in the passage above cited, is wholly unknown. [E. H. B.]

STATONIA (Στατονία: Eub. Statienniasis), a part of Southern Etruria, which is mentioned by Strabo among the smaller towns (πολιτίς) in that part of Italy. (Strab. v. p. 226.) Pliny also mentions the Statones among the municipalities of Etruria (iii. 5. 8), but neither author affords any nearer clue to its situation. We learn, however, that it was celebrated for its wine, which was one of the most noted of those grown in Etruria (Plin. iv. 6. s. 8), and that there were valuable stone-quarries in its territory. (Vitr. ii. 7. § 3.) From the terms in which Vitruvius speaks of these, it seems probable that the district of Statonia, which he calls "profectura Statoniensis," adjoined that of Tarquinii; and both Pliny and Seneca allude to the existence of a lake "in agro Statoniensi," on which there were floating islands. (Vitruv. ii. 95, s. 96; Sene. N. Q. iii. 25.) This can hardly be any other than the small Lago di Mezzano, a few miles W. of the more extensive Lago di Bolsena: we must therefore probably look for Statonia between this and Tarquinii. But within this space several sites have been indicated as possessing traces of ancient habitation; among others, Farmaces and Castro, the last of which is regarded by Cluver as the site of Statonia, and has as plausible a claim as any other. But there is nothing really decisive to the point. (Cluver, Ital. p. 517; Deane's Etruria, vol. i. pp. 463-468.) [E. H. B.]

STATUAS (AD), the name of two places in Pannonia, one of which was situated on the Danube, a little to the west of Bregetio (It. Ant. p. 246; Notit. Imp.), and the other farther south-east, in the neighbourhood of Alsaca and Alto Ripa (It. Ant. p. 244), which Munch (Noricum, i. p. 264) identifies with Stickencord. [L. S.]

STATUAS (AD), a town in the territory of the Contesti in Hispania Tarraconensis. (Itin. Ant. p. 400.) Variously identified with Adacana and Saxetia or S. Felice. [T. H. D.]

STAVANI (Σταρανάω, Ptol. iii. 5. 25), a people in European Sarmatia, at the N. foot of Mons Bologna. Ubert (iii. 2. § 435) conjectures that we should read Σαιανον, that is, Slavi, and seeks them on the Don and the Donacera. [T. H. D.]

STECTOBRIUM (Στηκτόβριον, Esh. Stavapotrup), a town of Phrygia, between Peltae and Sisamna. (Ptol. v. 2. § 25; Paus x. 27. § 1.) Kiepert (in Franz's Fünf Inschriften, p. 36) identifies it with the modern Afjina Karahisar. (Comp. Sestini, Num. Vet. in 126.) [L. S.]

STEFIA. [Attica. p. 332, a.]

STELAE (Σταλες, Steph. B. s. e.), a Cretan city which is described by the Byzantine geographer as being near two towns, which are called, in the published editions of his work, Paroos and Basilthymna. In Mr. Pasheley's map the site is fixed at the Mohammedan village of Philippo on the route from Kasteliandia (Isatus) to Hagbnae Dhekia (Grotnys). [E. B. J.]

STELLATIS CAMPUS was the name given to a part of the rich plain of Campania, the limits of which cannot be clearly determined, but which appears to have adjoined the "Palernus ager," and to have been situated likewise to the N. of the Vulturnus. Livy mentions it more than once during the wars of the Romans with the Samnites (ix. 44, x. 31), and again during the Second Punic War, when Hannibal found himself there by an error of his guides (Livy. xxii. 13). From his expressions it would appear to have adjoined the "Calenus ager," and apparently was the part of the plain lying between Cales and the Vulturina. It was a part of the public lands of the Roman people, which the tribune Tullius proposed by his agrarian law to parcel out among the poorer citizens (Cic. de Leg. Agr. i. 7. ii. 31): this was for the time successfully opposed by Cicero, but the measure was carried into effect a few years later by the agrarian law of Caesar, passed in his consulship, B. C. 59 (Suet. Caes. 20). The statement of Suetonius that the district thus named was previously regarded by the Romans as consecrated, is clearly negatived by the language of Cicero in the passages just referred to. The name of Stel- latinus Ager seems to have been given to a district in quite another part of Italy, forming a part of the
STENA.

A river of Thrace, mentioned by Mela only (ii. 2. § 8) as near Maronea, on the south coast. The name is perhaps given east of certain but MSS. in a great variety of forms.—STENOS, Stenos, Schoenus, Seoums, Sthenos, &c. (See Tschucke, ad loc.).

[STENOS].

STEREOVNTIAM (Στερεοντιῶν), a town in North-western Germany, probably in the country of the Bructeri or Marsi, the exact site of which cannot be ascertained. (Ptol. ii. 11. § 27.) [L. S.]

STILI

A. B.

STINI.

[ATHICA, p. 332, a.]

[ATHICA, p. 332, a.]

STIRIS [Στίρις Εθ. Στίρινης], a town of Phocis situated 120 stadia from Chaeronea, the road between the two places running across the mountains. The inhabitants of Stiris claimed descent from an Athenian colonist of the Attic demus of Stiris, led by Icteus, when he was driven out of Athica by Aegaeus. Pausanias describes the city as situated upon a rocky summit, with only a few wells, which did not supply water fit for drinking, which the inhabitants obtained from a fountain, four stades below the city, to which fountain there was a descent excavated among the rocks. The city contained in the time of Pausanias a temple of Artemis Stiris, made of crude brick, containing two statues, one of Pentelic marble, the other of ancient workmanship, covered with bandages. (Paus. x. 33. §§ 8—10.) Stiris was one of the Phocian cities destroyed by Philip at the close of the Sacred War (Paus. x. 3. § 2); but it was afterwards rebuilt and was inhabited at the time of the 2nd Punic War. The ruins of Stiris, now called Toulakh, are situated upon a tabular height defended by precipitous rocks, about a quarter of an hour's ride from the monastery of St. Luke. The summit is surrounded with a wall of loose construction, and the surface of the rock within the inclosure is excavated in many places for habitations. The fountain of water described by Pausanias is probably the copious source within the walls of the monastery issuing from the side of the hill. This fountain is mentioned in an inscription fixed in the walls of the Byzantine church. (Leake, Northern Greece, vol. ii. p. 528, seq.)

STILOPHORI or STILOPHORI (Στιλοφόροι, Στιλοφόροι, Ptd. ii. 16. (17.) § 9), a place in Liburnia. The inhabitants are called Stilupini by Pliny (iii. 21. s. 25). Perhaps the present Slomi. [T. H. D.]

STOBI (Στοβί, Strab. vii. p. 339, Fr. 4. viii. p. 389; Ptol. iii. 13. § 4; Liv. xxxi. 19, xxxiii. 59, xl. 21, xlv. 29; Plin. iv. 17), a town in the NW. of Macedonia in Macedonia, which appears to have been a place of some importance under the Macedonian kings, although probably it had been greatly reduced by the incursions of the Dacians, when Philip had an intention of founding a new city near it in memory of a victory over these troublesome neighbours, and which he proposed to call Perses, in honour of his son. At the Roman conquest, Stobi was made the place of deposit of salt, for the supply of the Dacians, the monopoly of which was given to the Third Macedonia. In the time of Pliny (l. c.) Stobi was a municipal town, but probably as late as the time of the Byzantine church it was made a "colonia." When about A. D. 400 Macedonia was under a "comital," Stobi became the chief town of Macedonia II or Salutaris (Marquardt, in Beckers Rom. Alter. vol. iii. pt. i. p. 118). According to the Tabular Itinerary it stood 47 M. P. from Heraclea of Lyncestis, which was in the Via Eptatis, and 55 M. P. from Naissus, and was therefore probably in the direct road from Heraclea to Serdica. The position must have been therefore on the Erigone, 10 or 12 miles above the junction of the river with the Axios, a situation which agrees with that of Livy, who describes it as belonging to Demetrius of Macedon, which was watered by the Erigone, Stobi being a point from which four roads issued. (Pent. Tab.) One proceeded NW. to Scupi, and from thereto to Naissus on the great SC. route from Viminacium on the Danube to Byzantium; the second NE. to Serdica, 100 M. P. SE. of Naissus on the same route; the third SE. to Thessalonica; and the fourth SW. to Heraclea, the last forming a communication with that central point on the Via Eptatis leading through Stobi from all the places on the three former routes. In A. D. 479 Stobi was captured by Theodric the Ostrogoth (Maih. Philadelph. Exc. de Leg. Rom. pp. 78—86, ap. Muller, Fragn. Hist. Graece, vol. iv. p. 125); and in the Bulgarian campaign of A. D. 1014, it was occupied by Basil II. and the Byzantine army (Στοψή, Cedren. p. 709). The geography of the basin of the Erigone in which Stobi was situated
STOBORRUM PROL.

is so imperfectly known that there is a difficulty in
identifying its site: in Kiepert's map (Europäische
Tarbe), the ruins of Stobi are marked to the W. of
Demirkaşi, or the pass of the "Iron Gate." (Leuke,

STOBORRUM PROL. (Στουβορρούμ, Ptol. iv. 3. § 5), a headland of Numidica, between the
promontory of Hippus and the town of Aprioisidum,
at the E. point of the Sinus Ochaitae. Now Cap
Ferro or Ras Hadid.

STOCHADES (Στοχαδες πεζους) or STOC-
CHAIDES on the S. coast of Gallia. Strabo (iv. p. 184)
speaks of the Stochades islands lying off the
coast of Naronbonesia, five in number, three larger
and two smaller. They were occupied by the Mass-
liots. Steph. B. (v. Στοχαδες) says, "islands near
Massalia; and they are also named Lyciades." Ptol-
emy (ii. 10. § 21) also mentions five islands Stoc-
chaides, which he places in the meridian of the
Citharistes Promontorium [Citharistes].

Pliny (iii. 5) mentions only three Stochades, which he
used to so name it being in a line (ερυθρας), and he gives to them the Greek names
respectively, Prole, Mese or Pomponiana, and Hy-
paia. These must be the islands now named Isles
d'Hieres, of which the most westerly is Porquerolles,
the central is Portoroz, and the most easterly is
L'Ule du Levant or du Titan, opposite to the town
of Hieres, in the department of Var. These islands
are mere barren rocks. Besides the three larger
islands, which have been enumerated, there are two
smaller, and mere rocks, l'Esgueulade and Bognear,
which make up the number of five. Coral was got
in the sea about the Stochades (Plin. xxxii. 3), and
is still got on this part of the French coast.

Agathemerus (Geo. Min. ii. p. 13, ed. Hudson)
places the Stochades along the coast which was
occupied by the settlements of the Massaliots; but he
fixes the two small Stochades near Massilia.
These are the two dismal rocks named Rattonce
and Pomegine which are seen as soon as you get out
of the port of Marseille, with some still smaller
rocks near them [Massilia, p. 292], one of which
contains the small fort named Château d'Ile.
The Stochades still belonged to the Massaliots
in Tacitus' time (Hist. iii. 43). The Romans who
were exiled from Rome sometimes went to Massi-
lia, as L. Scipio Asiaticus did; if he did not go to
the Stochades as the Scholast says (Cic. pro Sest.
c. 3), but the Roman must have found the Stoc-
chaides a dull place to live in. When Lucan (iii.
516) says, "Stochades arvum, he uses a poetic license;
and Ammianus (xv. 11) as usual in his geography
blunders when he places the Stochades about Nii-
cua and Antipolis (Nicaea, Antioha). [G. L.]

STOENI. [Eugenet.]

STOMA, AD, a place in Moesia on the Southern-
iv. 5.) Mannert (vii. p. 123) places it by the
modern Zof. [T. H. D.]

STOMALIMNE. [Foss a Mariana.]

STRABELLUM. [Apulia, p. 167.]

STRATIA. [Enespe.]

STRATONICEA (Στρατωνικεια, Ptol. iii. 13. § 11), a town of Chalcidice in Macedonia, which Ptolemy
places on the Sicigian gulf. Leake (Northern Greece,
vol. iii. p. 160) considers that there is here the same
mistake as in the case of Acanthus [Acanthos], and
refers it to the Hellenic gulf on the coast of the Stry-
monic gulf in the confined valley of Stratonice. [E. B. J.]

STRATONICEA (Στρατωνικεια or Στρατω-
νικεια, Ptol. v. 2. § 20. Eth. Στρατωνικειο) one of
the most important towns in the interior of Caria, was
situated on the south-east of Mylasa, and on the
south of the river Marsyas. It appears to have
been founded by Antiochus Soter, who named it
after his wife Stratone. (Strab. xiv. p. 660; Steph.
B. s. v.) The subsequent Syro-Macedonian kings
adorned the town with splendid and costly
buildings. At a later time it was ceded to the
Rhodians. (Liv. xxxii. 18. 30.) Mithridates
of Pontus resided for some time at Stratone,
and married the daughter of one of its principal
citizens. (Appian, Mithr. 20.) Some time after
this it was besieged by Labienus, and the brave
resistance it offered to him entitled it to the gratitude
of Augustus and the Senate (Tac. Ann. ii. 62;
Dion Cass. xlvii. 26). The emperor Hadrian is
said to have taken this town under his special pro-
tection, and to have changed its name into Hahrama-
npolis (Steph. B. l. c.), a name, however, which
does not appear to have ever come into use. Pliny
(iii. 5) enumerates it among free cities in Asia.

Near the town was the temple of Zeus Chrysaearces,
at which the confederate towns of Caria held their
meetings; at these meetings the several states
had votes in proportion to the number of towns
they possessed. The Stratonicæans, though not of
Carian origin, were admitted into the confederacy,
because they possessed certain small towns or
villages, which formed part of it. Menippus, sur-
named Catochas, according to Cicero (B. R. 91)
one of the most distinguished orators of his time,
was a native of Stratone. Stephanus B. (s. v.
Τρόπας) mentions a town of Idris in Caria, which
had previously been called Chrysaoros; and as
Herodotus (v. 118) makes the river Marsyas, on
whose banks stood the white pillars at which the
Carians held their national meetings, flow from a
district called Idris, it is very probable that
Antioehus Soter built the new city of Stratone
upon the site of Idris. (Leake, Asia Minor, p.
235.) Edithian, which now occupies the place
of Stratoneia, is only a small village, the whole
neighbourhood of which is strewed with marble
fragments, while some shafts of columns are standing
single. In the side of a hill is a theatre, with the seats
remaining, and ruins of the prosenium, among which
are pedestals of status, some of which contain
inscriptions. Outside the village there are broken
arches, with pieces of massive wall and marble
collains. (Chandler, Travels in Asia Minor, p. 240;
Leake, Asia Minor, p. 229; Fellows, Asia Minor,
ETRATONIS

Strato'nis Turris. [Caesar. de, No. 4. p. 470.]

Stratus (Στράτος; Eth. Στράτων; its territory Στράτος: Surovglis), the chief town of Acranius, was situated in the interior of the country, in a fertile plain on the right bank of the Acheron. It commanded the principal approaches to the plain from the northward, and was thus a place of great military importance. Strabo (p. 430) places it 200 stadia from the mouth of the Acheron by the course of the river. At the distance of 80 stadia S. of the town the river Anapus flowed into the Acheron; and 5 Roman miles to its N., the Acherons received another tributary stream, named Petitaurus. [Thuc. ii. 82; Liv. xliii. 22.] Stratus joined the Athenian alliance, with most of the other Acranians towns, at the commencement of the Peloponnesian War. In B. C. 429 it was attacked by the Ambraziotics, with a number of barbarian auxiliaries, aided by some Peloponnesian troops, under the command of Cneus; but they were defeated under the walls of Stratus, and obliged to retire. Thucydides describes Stratus at that time as the chief town of Acranius, which it also called by Xenophon in his account of the expedition of Agesilas into this country. (Thuc. ii. 80, seq.; Xen. Hell. iv. 6.) When the Aetolians extended their dominions, Stratus fell into the hands of this people, whence it is called by Livy a town of Aetolus. It is frequently mentioned during the Macedonian and Roman wars. Neither Philip V. nor his successor Persius was able to wrest the town from the Aetolians; and it remained in the power of the latter till their defeat by the Romans, who restored it to Acranius, together with other towns, which the Aetolians had taken from the Acranians. (Polyb. iv. 63, v. 6, 7, 13, 14, 96; Liv. xxxvi. 11, xlii. 21, 22.) Livy (xlii. 21) gives an erroneous description of the position of Stratus when he says that it was situated above the Ambraeian gulf, near the river Inachius. [Both remains of Stratus at the modern village of Surovglis. The entire circuit of the city was about 24 miles. The eastern wall followed the bank of the river. Leake discovered the remains of a theatre situated in a hollow; its interior diameter below is 105 feet, and there seem to have been about 30 rows of seats. (Leake, Northern Greece, vol. i. p. 137, seq.)

Stravi'i'nae or Stravi'iana, a town in Lower Pannonia, on the road from Siscia to Murcia, of which the exact site has not been ascertained. (It. Ant. ii. 265, where it appears in the ablat. form Staviani.)

Stre'nuus (Στρενούς; Eth. Στρενών), a town of Crete, which Stephens of Byzantium (x. v.) mentions on the authority of Herodian (others read Herodotus), but no further notice is found of it either in Herodotus or any other author. [E. B. J.]

Stre'vi'ta (Στρεβίττα), a place in the south-east of Germany, near Mons Ascivarius, of uncertain site. (Ptol. ii. 11, § 24.)

Stro'bilius (Στροβιλεύς), a peak of mount Caucasus, to which, according to the legend, Prometheus had been fastened by Hephaestus. (Ariam. Peripl. E. p. 12.)

Siro'nyl'ye. [Areol. Insulae.]

STHYNGYLUS, (Semiramis Mons)

Sti'rotha'des (Στίροθαδής; Eth. Στίροθαδεύς; Strofidas and Stieylides), formerly called Phene (Bawrat), two small islands in the Indian sea, about 55 miles S. of Zeylan, and 100 stadia distant from Cyprus in Mesopotamia, to which city they belonged. The sons of Boreas pursued the Harpies to these islands, which were called the "Turning" islands, because the Boreae here returned from the pursuit. (Strab. viii. p. 359; Ptol. iii. 16. § 23; Steph. B. s. r.; Plin. iv. 12. s. 19; Metz. ii. 7; Apoll. Rhod. ii. 296; Apollod. i. 9. § 21; Virg. Aen. iii. 210; H. Ant. p. 528.)

Stiri'chates (Στυρίχατες), one of the six tribes into which the Corinthians divided the ancient inhabitants of Media. (Herod. i. 101.)

Stiruthus. [Hermon.]

Sty'me (Στυμώ), a town on the S. coast of Thrace, a little to the W. of Mesembria, between which and Styrmie flowed the small river Lissus, which the army of Xerxes is said to have drank dry. (Herod. vii. 108.) Styrim was a colony of Thespians; but disputes seem to have arisen respecting it between the Thespians and the people of the neighboring city of Marnæa. (Philip. ap. Dion. iv. 9. p. 163, E.)

Styr'mon (Στύρμων), Ptol. iii. 13. § 18), the largest river of Macedonia, after the Axios, and, before the time of Philip, the ancient boundary of that country towards the E. It rises in Mount Sthenus near Pantala (the present Gustingou) (Thuc. ii. 96), and, taking first an E. and then a SE. course, flows through the whole of Macedonia. It then enters the lake of Prasias, or Cercinias, and shortly after its exit from it, near the town of Amphipolis, falls into the Styrmic gulf. Pliny, with less correctness, places its sources in the Haemus (iv. 10. s. 12). The importance of the Styrmion is rather magnified in the ancient accounts of it, from the circumstance of Amphipolis being seated near its mouth; and it is navigable only a few miles from that town. Apollodorus (ii. 5. 10) has a legend that Hercules rendered the upper course of the river shallow by casting stones into it, having it previously navigable much farther. Its banks were much frequented by Boreas (Herv. xliii. 167; Virg. Aen. x. 269; Mart. ix. 308). The Styrmion is frequently alluded to in the classics. (Comp. Hesiod. Theog. 333; Aesch. Suppl. 228, Agam. 192; Herod. vii. 75; Thuc. i. 200; Strab. vii. p. 323; Meid. ii. 2; Liv. xiv. 44. &c.) Its present name is Struma, but the Tzunis call it Karaus. (Comp. Leake, Nat. Gr. iii. pp. 225, 456, &c.) [T. H. D.]

Styrm'onicus Sinus (Στυρμονικός Σαῖνος, Strab. vii. p. 330), a bay lying between Macedonia and Thrace, on the E. side of the peninsula of Chalcidice (Ptol. iii. 13. § 9). It derived its name from the river Styrmion, which fell into it. Now the gulf of Neaundia. [T. H. D.]

Styrm'onn (Στύρμων), the name by which, according to tradition, the Bithynians in Asia originally were called, because they had immigrated into Asia from the country about the Styrmion in Europe. (Herod. vii. 75; Steph. B. s. r. Στυμών.) Pliny (v. 40) further states that Bithynia was called by some Styrmion. [L. S.]

Stubera. [Styrmhalka.]

Stuccia (Στυκκία), Ptol. ii. 3. § 3), a small river on the W. coast of Britain, identified by Camden (p. 772) with the Fayette in Cornwallshire. [T. II. D.]
STYMPHALUS. 1039

STURIA. (Stura), a river of Northern Italy, one of the confines of the Padus (Plin. iii. 16. s. 20), which joins that river a few miles below Turin (Augusta Taurinorum), within a few miles of the Dura Minor or Dora Riparia. It still retains its ancient name and is a considerable stream, rising in the glaciers of the Alps, between the Roche Melon and the Dru, and flowing southwards to Soleto, a small place in the Pataliene, near the mouth of the Indus, mentioned by Arrian (Ind. c. 4). [V.]

STURIA INSULA. [Philai.]

STURNIUM (Στύρνιον: Euth. Staurinum; Sternocces), a town of Calabria, mentioned both by Piny and Ptolemy among the municipal towns of that region. (Plio. iii. 11. s. 16; Pto1. iii. 1. § 77.) Its name is not otherwise known, but it is supposed to be represented by the modern village of Sternococe, about 10 miles S. of Lecce (Lupiae) and a short distance N. of Sodeto (Soletum). (Cluer. Ital. p. 1231; Romanelli, vol. ii. p. 114.) There exist exes with the inscription ΣΤΤ, and types resembling those of the Tarentines, which are ascribed to Sturnium. [E. H. B.]

STYLLANGIUM (Στυλλάνγιον, Polyb. iv. 77, 80; Στυλλάγιον, Steph. B. s. v.: Eth. Στυλλάγιος, Στυλλάγιος), a town of stylinus in Elis of uncertain site, which surrendered to Philip in the Social War.

STYMBARA, (Στυμβάρα, Strab. vii. p. 327; Στυμβέρα, Polyb. xxviii. 8. § 8; Stubera, Liv. xxxi. 39, xliii. 20, 22), a town on the frontier of royal Macedonia, which is by some assigned to Deuriopus, and by others to Pelagonia, which in the campaign of B. C. 400 was the third encampment of the consuls Sulpicius; it must be looked for in the basin of the Engon. (Leake, Northern Greece, vol. iii. p. 306.) [E. B. J.]

STYMPHALIS, a district annexed by the Romans, along with Attinania and Elimiotes, to Macedonia upon the conquest of this kingdom, a.d. 168. (Liv. xiv. 30.) From the mention of this district along with Atlinania and Elimiotes, which were portions of Epeirus upon the borders of Thessaly, it would appear that Stympalhis is only another form of the more common name Tymphalos or Tymphalos; though it is true, as Cranmer has observed, that Dodorus has mentioned Stympalhos (Diod. xx. 28), and Callimachus speaks of the Styphalian oxen in that territory (Hymn. in David. 179). Ptolemy (iii. 13. § 43) likewise mentions a town Gyronia in Stympalhis, but in this passage other MSS. read Tymphalim. (Cramer, Ancient Greece, vol. i. p. 198.)

STYMPHALUS (Στύμφαλος, Στυμφάλος, Paus. et alii: τὸ Στύμφαλος, Schol. ad Pind. Od. vi. 129; Stympalhsm, Plin. iv. 6. s. 10; Stympalhsm, Lucret. v. 31: Eth. Στυμφάλος, Στυμφάλος), the name of a town, district, mountain, and river in the NE. of Arcadia. The territory of Stympalhis is a plain, about six miles in length, bounded by Achaeia on the N., Sicynia and Phliaena on the E., the territory of Mantinea on the S., and that of Orchomenus and Phenaeus on the W. This plain is shut in on all sides by mountains. On the N. rises the gigantic mass of Cyllene, from which a projection, so called M. Stympalhos, descends into the plain. (Στυμφάλιος ὄρος, Pto1. iii. 16. § 14; Hesych. s. v.; nivalis Stympalos, Stat. Silv. iv. 6. 100.) The mountain at the southern end of the plain, opposite Cyllene, was called Apelaunum (τὸ Ἀπελαύνων, Polyb. iv. 69), and at its foot is the kata-vótora or subterranean outlet of the lake of Stympalhos (ἕ Στυμφάλης Λίμνη, Strab. viii. p. 371; ἡ Στυμφάλη Λίμνη, Herod. vi. 76). This lake is formed partly by the rain-water descending from Cyllene and Apelaurn, and partly by three streams which flow into it from different parts of the district and of the plain. From the last-named stream, which rises in Mount Gerontium in the neighbourhood of Kastasia; and from the east comes another stream, which rises near Duna. But the most important of the three streams is the one which rises on the northern side of the plain, from a copious kefalòvrysi. In summer it flows about two miles through the plain into the kata-vótora of Apelaurn; but in winter it becomes almost immediately a part of the waters of the lake, though its course may be traced through the shallower water to the kata-vótora. This stream was called Stympalhis by the ancients; it was regarded by them as the principal source of the lake, and was universally believed to make its reappearance, after a subterranean course of 200 stadia, as the river Erassinus in Argolis. (Herod. vi. 76; Paus. ii. 3. § 5, ii. 24. § 6, viii. 22. § 3; Strab. viii. p. 371; Anaes, Vol. i. p. 201.) The Stympalhos worshipped the Erassinus and Metope (Μετόπη, Aelian, v. ii. 33), whence it has been concluded that Metope is only another name of the river Stympalhos. Metope is also mentioned by Callimachus (Hymn. in Jov. 26), with the epithet pobly (ποτα- λυτείος), which, as Leake observes, seems not very appropriate to a stream issuing in a boly from the earth, and flowing through a marsh. (Peloponnesiacs, p. 384.) The water, which formed the source of the Stympalhos, was conducted to Corinth by the emperor Hadrian, by means of an aqueduct, of which considerable remains may still be traced. The statement of Pausanias, that in summer there is no lake, is not correct, though it is confined at that time to a small circuit round the kata-vótora. As there is no outlet for the waters of the lake except the kata-vótora, a stoppage of this subterranean channel by stones, sand, or any other substance occasions an inundation. In the time of Pausanias there occurred such an inundation. which was ascribed to the anger of Artemis. The water was said to have covered the plain to the extent of 400 stadia; but this number is evidently corrupt, and we ought probably to read τεσπαρφόωντα instead of τεσπαρούσιος. (Paus. viii. 22. § 8.) Strabo relates that Iphicles, when besieging Stympalhos without success, attempted to obstruct the kata-vótora, but was diverted from his purpose by a sign from heaven (viii. p. 389). Strabo also states that originally there was no subterranean outlet for the waters of the lake, so that the city of the Stympalhi, which was in his time 50 stadia from the lake, was originally situated upon its margin. But this is clearly an error, even if his statement refers to old Stympalhos, for the breadth of the whole lake is less than 20 stadia.

The city derived its name from Stympalhos, a son of Elatus and grandson of Arcas; but the ancient city, in which Temenus, the son of Pelasgus, dwelt, had entirely disappeared in the time of Pausanias, *There was also a small town, Apelaurnus, which is mentioned by Livy as the place where the Achaeans under Nicostratus gained a victory over the Macedonians under Androtheneus, n. c. 197. (Liv. xxxiii. 14.)
and all that he could learn respecting it was, that Hera was formerly worshipped there in three different sanctuaries, as virgin, wife, and widow. The modern city lay upon the southern edge of the lake, about a mile and a half from the katadura, and upon a rocky promontory connected with the mountain by a long mule-trail or path. It was called Homer (II. ii. 608), and also by Pindar (O. v. 162), who calls it the mother of Arcadia. Its name does not often occur in history, and it owes its chief importance to its being situated upon one of the most frequented routes leading to the westward from Argolis and Corinth. It was taken by Apollonides, a general of Cassander (Diod. xix. 63), and subsequently belonged to the Achaean League (Polyb. ii. 55, iv. 68, &c.). In the time of Pausanias it was included in Argolis (viii. 22. § 1). The territory of the city, mentioned by Pausanias, was a temple of Armeia Symphalida, under the roof of which were figures of the birds Stymphalides; while behind the temple stood statues of white marble, representing young women with the legs and thighs of birds. These birds, so celebrated in mythology, of the destruction of which was one of the labours of Hercules (Dict. of Biogr. Vol. ii. p. 396), are said by Pausanias to be as large as cranes, but resembling in form the ibis, only that they had another beak, a shorter crest, smaller wings, and a longer tail, like that of the ibis (viii. 22. § 5). On some of the coins of Symphalida, they are represented exactly in accordance with the description of Pausanias.

The territory of Stymphalida is now called the vale of Zerebi, from a village of this name, about a mile from the eastern extremity of the lake. The remains of the city upon the projecting cape already mentioned are more important than the curvy notice of Pausanias would lead one to expect. They cover the promontory, and extend as far as the fountain, which was included in the city. On the steepest part, which appears from below like a separate hill, are the ruins of the polygonal walls of a small quadrangular citadel. The circuit of the city walls, with their round towers, may be traced. To the east, beneath the acropolis, are the foundations of a temple in antis; but the most important ruins are those on the southern side of the hill, where there are numerous remains of buildings cut out of the rock. Among the walls of Stymphalida are the ruins of the medieval town of Krania (Leake, Morca, vol. iii. p. 108, seq.; Peloponnesian, p. 384; Roblaye, Recherches, etc., p. 384; Ross, Reisen im Peloponnes, p. 54; Curtius, Peloponnesos, vol. i. p. 201, seq.).

STYRA. (τὰ Στύρα: Eth. Στυρεία: Stuira), a town of Euboea, on the W. coast, N. of Caryxstus, and nearly opposite the promontory of Cynosura in Attica. The town stood near the shore in the inner part of the bay, in the middle of which is the island Aegileia, now called Stuira. Styra is a name of the modern city, and originally of Carystus. It was a town of great importance in Attica. It is described by Lepper and Dusbec (Strab. x. p. 446) as a town of the Persian War (n. c. 490) the Persians landed at Aegilea, which belonged to Styra, the prisoners whom they had taken at Eutrin. (Herod. vi. 107.) In the Second Persian War (n. c. 480, 479) the Styrians fought at Artemision, Salamine, and Plateae. They sent two ships to the naval engagements, and at Plateae they and the Eretrians announced together to 600 men. (Herod. viii. i, 46, iv. 28; Perc. v. 23. § 2.) They afterwards became the subjects of Athens, and paid a yearly tribute of 1200 drachmae. (Thuc. vii. 57; Franz, Elem. Ephgr. Gr. n. 49.) The Athenian fleet was stationed here b. c. 356. (Dem. c. Mid. p. 568.) Strabo relates (x. p. 446) that the town was destroyed in the Mucian war by the Athenian Plutarch, and its inhabitants fled to the Eretrians; but that the Mucian war is not mentioned elsewhere, we ought probably to substitute Laminus for it. (Leake, Northern Greece, vol. ii. pp. 422, 432.)

STYX (Στύξ), a waterfall descending from a lofty rock in the Arcadian mountains, above Nonacris, a town in the N. E. of Arcadia, in the district of Pheuceas. The water descends perpendicularly in two cascades, which, after winding among a labyrinth of rocks, unite to form a torrent so narrow into the Crathis. It is by far the highest waterfall in Greece; the scenery is one of wild desolation; and it is almost impossible to climb over the rocks to the foot of the cascade. The wildness of the scenery, the inaccessibility of the spot, and the singularity of the waterfall made at an early period a deep impression upon the Greeks, and invested the Styx with superstitious reverence. It is correctly described by Homer (Iliad, vii. 17, § 6) as the “down-flowing water of the Styx, tebhepanos Στυξος ύδωρ, II. x. 37), and of the "lofty torrents of the Styx" (Στυξος έρησος αυτος θεότρον, II. viii. 369). Hesiod describes it as "a cold stream, which descends from a precipitous lofty rock "(έρησος ψευδών θανάτι λείπουσα, Theog. 785), and as "the perennial most ancient water of the Styx, which flows through a very rugged place" (Στυξος άβατον Στυξος έρησος, τό θανάτι λείπουσα, Theog. 785). The account of Herodotus, who does not appear to have visited the Styx, is not so accurate. He says that the Styx is a fountain in the town Nonacris; that only a little water is apparent; and that it dropped from the rock into a cavity surrounded by a wall (vi. 74). In the same passage Herodotus relates that Cleomenes endeavoured to persuade the chief men of Arcadia to swear by the waters of the Styx to support him in his enterprise. Among the later descriptions of this celebrated stream, the most correct is that of Pausanias (viii. 22. § 5); the most full and exact. "Not far from the ruins of Nonacris," he says, "is a lofty precipice higher than I ever remember to have seen, over which descends water, which the Greeks call the Styx." He adds that when Homer represents Hera swearing by the Styx, it is just as if the poet had the water of the stream dropping before his eyes. The Styx was transferred by the Greek and Roman poets to the invisible world [see Dict. of Gr. and Rom. Biogr. and Myth. art. Styx]; but the waterfall of Nonacris continued to be regarded by Homer, Pindar, and Strabo as a terror; its water was supposed to be poisonous; and it was believed that it destroyed all kinds of vessels, in which it was put, with the exception of those made of the hoof of a horse or an ass. There was a report that Alexander the Great had been poisoned by the water of the Styx. (Arr. Anab. vii. 27; Plut. Alex. 77, de Prim. Frig. 20. p. 954; Paus. viii. 18. § 4; Strab. viii. p. 389; Aelian. H. An. x. 40, the situation, Hist. Monarch. 158 or 174; Smith, Elch. Phys. i. 52. § 48; Plin. ii. 103. s. 106. xxx. 16. s. 55, xxxi. 2. s. 19. Vitruv. viii. 3; Senec. Q. N. i. 25.) The belief in the deleterious nature of the
SUAGELA.

water continues down to the present day, and the inhabitants of the surrounding villages relate that no vessel will hold the water. It is now called the Black Waters, and sometimes the Pisco-viga, or the Terrible Waters. (Leake, Morea, vol. iii. p. 160, seq.; Fiedler, Reise durch Griechenland, vol. i. p. 400, who gives a drawing of the Syx: Curius, Peloponnesos, vol. i. p. 195.)

SUAGELA (Σωογέλα), a town of Caria, in which was shown the tomb of Car, the ancestor of all the Carian; the place was in fact believed to have received its name from this circumstance, for in Caria oφων signals a tomb, and γάναξ a king. (Steph. B. G. ii. 5.) Strabo, who calls the place Swayne (xii. p. 611), states that this town and Myndus were preserved at the time when Maussolus united six other towns to form Halicarnassus. [L.S.]

SUANA (Σωοα), Ptol.: Euth. Suanensis; Sueana), a town of Southern Etruria, situated in the valley of the Fiora (Arminia), about 24 miles from the sea, and 20 W. of Volstini (Bolithas). No mention of it is found in history as an Etruscan city, but both Pliny and Ptolemy notice it as a municipal town of Etruria under the Roman Empire. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 49.) Its site is clearly marked by the modern town of Sorana or Souna, which was a considerable place in the middle ages, and still retains the title of a city, and the title of a bishop, though now a very poor and decayed place. It has only some slight remains of Roman antiquity, but the ravines around the town abound with tombs heaped in the rock, and adorned with architectural façades and ornaments, strongly resembling in character those at Castel d'Azio and Bieda. These relics, which are pronounced to be among the most interesting of the kind in Etruria, were first discovered by Mr. Ainsley in 1843, and are described by him in the Annali dell'Istituto di Corrispondenza Archeologica for 1843 (pp. 223-226); also by Mr. Dennis (Etruria, vol. i. pp. 480-500). [E. H. B.]

SUAORDONES, a tribe of the Suevi in Northern Germany, on the right bank of the Alib, south of the Saazyes, and north of the Langobardii. (Tac. Germ. 40.) Zeises (Die Deutschen, p. 154), deriving their name from suer or sues (a sword), regards it as identical with that of the Zarandii, mentioned by Ptolemy (ii. 11. § 13) as living in nearly the same part of Germany. [L. S.]

SUARNI, a rude people of Asiatic Sarmatia, in the neighbourhood of the Portae Caucasii and the Rha. They possessed gold mines (Plin. vi. 11. s. 12). They are probably the same people whom Ptolemy calls Sarana (Σωοαγελα, v. 9. § 20) and places between the Hippie and Ceremion mountains. [T. H. D.]

SUASA (Σωοα), Euth. Susanaus; Rus. near Castel Leone), a town of Umbria mentioned both by Ptolemy and Pliny, of whom the latter reckons it among the municipal towns of that country. Ptolemy places it, together with Ostra, in the district of the Senones, and it was therefore situated on the northern declivity of the Apennines. Its site is clearly identified at a spot between S. Lorenzo and Castel Leone in the valley of the Corno, about 18 miles from the sea. Considerable ruins were still extant on the spot in the time of Cluver, including the remains of the walls, gates, a theatre, &c.; and inscriptions found there left no doubt of their identification. (Cluver, Ital. p. 620). [E. H. B.]

SUASTENE (Σωοαστήνη, Ptol. vii. 1. § 42), a district in the NW. of India, beyond the Panjub, and above the junction of the Kabul river and the

SUBUS.

Jalus. It derives its name from the small river Suastus (the Souatia or Souac), which is one of the tributaries of the Kabul river. [Gorya.] [V.]

SUASTUS. [Sulancestes.]

SUBANECTI. [Sulancestes.]

SUBATHI. [Turbantes.]

SUBIDIXNUM. [Cenomani.]

SUBERTUM, another reading of Subertum.

SULI, a river on the E. coast of Hispania Tarraconensis, which entered the sea near the town of Subur. (Plin. iii. 3. s. 4.) Probably the modern Francoli. [T. H. D.]

SUBLAQUEUM (Sublacum), a place in the Ptolemaic view of the Axios about 24 miles above Tibur (Tivoli). It derived its name from its situation below the lake or lakes formed by the waters of the Axios in this part of its course, and called the Simbrina.

SULIGA or SEMICIVI LACUS. These lakes have now entirely disappeared; they were evidently in great part artificial, formed as reservoirs for the Aquæ Marcia and Aquæ Claudia, both of which were derived from the Axios in this part of its course. There is no mention of Sublacum before the time of Sael, who had a villa there called from its "Villa Neorouiana Sublacensis;" and Tacitus mentions the name as if it was one not familiar to every one. (Tac. xiv. 22; Frontin. de Agr. 93.) It seems certain therefore that there was no town of the name, and it would appear from Tacitus (l. c.) that the place was included for municipal purposes within the territory of Tibur. Pliny also notices the name of Sublaucum in the 4th Book of Augustus, but it is not among the municipal towns; as well as the lakes ("lacus tres ascenraentis nobiles") from which it was derived. (Plin. iii. 12. s. 17.) It appears from mediæval records that these lakes continued to exist down to the middle ages, and the last of them did not disappear till the year 1305. (Nibby, Dict. n. 1. p. 129.) [E. H. B.]

SUBLAVIO (It. Ant. p. 280) or SUBLABIO (Tah. Penta), a place in Phœacia, on the site of the modern convent of Söben, near the town of Caesarea. Some suppose the correct name to be Sublavenio, which occurs in a middle age document of the reign of the emperor Conrad II. [L. S.]

SUBUR (Suburgo, Ptol. ii. 6. § 17), a town of the Lacitani in Hispania Tarraconensis lying E. of Tarraco. (Mela, ii. 6.) Ptolemy (l. c.) ascribes it to the Caestani, and Pliny (iii. 3. s. 4) to the Bergeti. It is mentioned in an inscription. (Grinter, p. 414.) Variously identified with Siger and Villa-

SUBUR (Suburgorum, Ptol. iv. 1. § 13). 1. A town in the interior of Mauretania Tingitana, near the river of the same name. 2. (Ptol. iv. 1. § 2), a river of Mauretania Tingitana. Pliny (v. 1. s. 1) calls it a fine navigable river. It fell into the Atlantic near Colonia Baussa, 50 miles S. of Lixus. It is still called Subor or Cobun, and rises among the forests of Mount Saibo in the province of Sciures (Graberg of Hemsch, Das Kaiser-

SUBUS (Subus, Ptol. iv. 6. § 8), a river on the
SUBZUPARA.

W. coast of Libya Interior, which had its source in Mount Sagapola, and discharged itself to the S. of the point of Atlantis Major; now the Suez. [T. H. D.]

SUBZUPARA, a place in Thracia, on the road from Philippopolis to Hadrianopolis (Itin. Ant. pp. 137, 231). It is called Castra curba or Castra barba in the Itin. Hieros. (p. 568), and Kastanosta by Procopius (de Aed. iv. 11, p. 305, ed. Bonn), and still retains the name of Castro Zurrri, or simply Zurrri. It has, however, also been called Hirranezi and Costanou in the Tab. Peut. it is called Castra Rubra. [T. H. D.]

SUCCEBAR (Sovyada), Plut. iv. 2. § 25, 3, § 20, xiiii. 13, § 11, a town in the interior of Macedonia Cassarigis, lying to the S. of the mouth of the Chalaph, and a Roman colony with the name of Colonia Augusta (Plin. v. 2. s. 1). It appears in Ammianus Marcellinus under the name of Oppidum Sagalbaritannum (xxix. 5). Mamert (z. 2. p. 451) would identify it with the present Mazuna, where Leo Africanus (Lorahbus, p. 382) found considerable remains of an ancient city, with inscriptions, &c. [T. H. D.]

SUCCEBAR is a SUCCORUM ANGUILLAE, the principal pass of Mount Haemon in Thrace, between Philippopolis and Serdica, with a town of the same name. (Amm. Marc. xxi. 10. § 2, xiiii. 2. § 2, xxvi. 10. § 4.) It is called Suvus by Sozomenus (ii. 22), and Suvouves by Nicephorus (ix 13). Now the pass of Solus Derdenak or Deniz Kapi (Comp. V. Hammer, Gesch. des Osman. Reiches, i. p. 175.) [T. H. D.]

SUCCO'SA (Sovndova), Plut. ii. 6. § 68, a town of the terrae in Hispania Tarraconensis [T. H. D.]

SUCRO (Sovnian), Plut. ii. 6. § 14, a river of Hispania Tarraconensis, which rose in the country of the Celtiberi in a s. shatt of Mount Idubea, and after a considerable bend to the E. discharged itself in the Suecroensis Scum, to the S. of Valentina. (Strab. iii. pp. 158, 159, 163, 167; Mela, ii. 6; Plin. iii. 3. ss. 4, 5, 11.) Now the Xucar. [T. H. D.]

SUCSON (Sovnion, Strab. iii. p. 158), a town of the Edetani in Hispania Tarraconensis, on the river of the same name, midway between Carthago Nova and the river Herus. (Itin. Ant. p. 400; cf. Cic. Batb. 2; Liv. xxxviii. 24, xxxix. 19; App. B. C. i. 110; Plut. Sent. 19, &c.) It was already destroyed in the 1st cent. A.D. at Alcira, Sueca, and Cullera. (Cf. Flores, Esp. Sagra. v. p. 35; Marc. Hisp. ii. 5.) [T. H. D.]

SUCRONCESIS SINUS, a bay on the E. coast of hispaniensis Tarraconensis, now the Gulf of Valencia. (Mela. ii. 6 and 7.) [T. H. D.]

SUDENI (Sovndoi), a tribe in the east of Germany, about the Gauberta Sivas, and in close proximity to the Marcomanni. (Plut. ii. 11. § 13; comp. SUDENI.) [L. S.]

SUDETEN (Sovndron: Eth. Suderpon), a town in the southern part of Etruria, apparently situated between Voluini and the sea-coast, but we have no clue to its precise situation. The name itself is uncertain. The MSS. of Pliny, who enumerates it among the municipal towns of Etruria, vary between Sudertani and Subertani; and the same variation is found in Livy (xxvi. 23), who mentions a prodigy as occurring ‘in foro Sudetana,” Ptolemy on the other hand writes the name Suv- (Scuv—) for which we should probably use Su- (Scu—) (Plut. ii. 1. § 50). Cluver would identify it, without any apparent reason, with the Maternum of the Itineraries, and place it at Farnese, Sorona, a few miles N. of Sorvava (Sorana), which would seem to have a more plausible claim, but both identifications are merely conjectural. (Cluver, Ital. p. 517; Dennis’s Etruria, vol. i. p. 478.) [E. H. B.]

SUDETI MONTES (Sovndron ortn), a range of mountains in the S. E. of Germany, on the N. of the Gauberta Sivas, thus forming the western part of the range still called the Sudeten, in the NW. of Bohemia. (Plut. ii. 11. §§ 7, 23.) [L. S.]

SUEBUS (Sovdias), a river on the north coast of Germany, between the Albis and Viadus, which flows into the Baltic at a distance of 850 to the west of the mouth of the Viadus (Marci an p. 53), and which, according to Ptolemy (ii. 11. § 1), divided at its mouth into several branches. Notwithstanding these explicit statements, it is extremely difficult to identify the river, whereas some regard it as the Peven, others as the Harne, and others again as the Viadus or Oder itself, or rather the central branch of it, which is called the Seine or Schweneve. [L. S.]

SUEL (Sovné, Plut. ii. 4. § 7), a town of hispaniensis Baetica, on the road from Malaca to Gades.
by Suessa to Teanum, from which it was continued to Beneventum. (Hoeare's Class. Tour. vol. i. p. 145. This is evidently the same line given in the Hist. Ant. p. 121, though the name of Suessa is not there mentioned.)

Suesa Aurunca was the birthplace of the celebrated satirical poet Lucilius, whence he is called by Juvenal "Auruncae alumnus." (Auson. Epist. 15. 9; Juv. i. 20.)

The modern city of Sessa undoubtedly occupies the ancient site; and considerable ruins are still visible, including, besides numerous inscriptions and other fragments, the remains of a temple incorporated into the church of the Sessaovada, a remarkable cryptoporicus, and several extensive subterranean vaults under the church of S. Benedetto, constructed of reticulated masonry. Some remains of an amphitheatre are also visible, and an ancient bridge of 21 arches, constructed for the support of the road which leads into the town at the modern Porta del Borgo. It is still called Ponte di Romano, supposed to be a corruption of Ponte Aurunca (Hoeare, l. c. pp. 143—147; Giustiiniani, Dis. Topograph. vol. i. pp. 28, 30.)

The fertile plain which extends from the foot of the hills of Sessa to the Liris and the sea, now known as the Demanio di Sessa, is the ancient "Ager Vescinum," so called from the Ausonian city of Vescia, which seems to have ceased to exist at an early period (Vesccia). The district in question was probably afterwards divided between the Roman colonies of Suessa and Sussa.

SUESA POMETIA (Σύωσια Πομητίαν, Dionys.: Εθν. Πομητίαν), an ancient city of Latium, which had ceased to exist in historical times, and the position of which is entirely unknown, except that it bordered on the "Pomptinum ager" or Pomptinae Paludes, to which it was supposed to have given name. Virgil reckons it among the colonies of Alba, and must therefore have considered it as a Latin city (Aen. vi. 776); it is found also in the list of the same colonies given by Diodorus (vii. Fr. 3); but it seems certain that it had at a very early period become a Volscian city. It was taken from that people by Tarquinius Superbus, the first of the Roman kings who is mentioned as having made war on the Volsciens (Liv. i. 53; Strab. v. p. 231: Vict. Vit. Ill. 8): Strabo indeed calls it the metropolis of the Volsciens, for which we have no other authority; and it is probable that this is a mere inference from the statements as to its great wealth and power. These represent it as a place of such opulence, that it was with the booty derived from thence that Tarquinius was able to commence and carry on the construction of the Capitoline temple at Rome. (Liv. i. c.; Dionys. iv. 50: Cic. de Rep. ii. 24; Plin. vii. 16. s. 15.) This was indeed related by some writers of Aplola, another city taken by Tarquin (Val. Antias, ap. Plin. iii. 5. s. 9), but the current tradition seems to have been
SUESSETANI.

The name of Suessa Pometia is only once mentioned before this time, as the place where the sons of Ancus Marcius retired into exile on the accession of Servius. (Liv. ii. 41). It is clear also that it survived its capture by Tarquin, and even appears again in the wars of the Republic with the Volscians, as a place of great power and importance. Livy indeed calls it a "Colonia Latina," but we have no account of its having become such. It, however, reverted (according to his account) in B.c. 503, and was not taken till the following year, by Sp. Cassius, when the city was destroyed and the inhabitants sold as slaves. (Liv. ii. 16, 17). It is, therefore, appears again a few years afterwards (B.C. 495) in the hands of the Volscians, but was again taken and pillaged by the consul P. Servilius (B.C. 257). (Dionys. vi. 29). This time the blow seems to have been decisive; for the name of Suessa Pometia is never again mentioned in history, and all trace of it disappears. Pliny notices it among the cities which were in his time utterly extinct (Plin. iii. 5. s. 9) and no record seems to have been preserved even of its site. We are, however, distinctly told that the Volscians ager and the Pontine tribe derived their appellation from this city (Fast. s. a. Pontinia, p. 233), and there can therefore be no doubt that it stood on the site of it; but the body and this all attempts to determine its locality must be purely conjectural. [E. H. B.]

SUESSETANI, a people of Hispania Tarraconensis, mentioned only by Livy (xxiv. 33. xxvii. 24. xxxiv. 20, xxxix. 42) and especially in connection with the Sesterani (or Edestani). Marca (Hisp. ii. 9. 4) takes them for a branch of the Sesterani; and Uberti (ii. p.t. i. p. 318) seeks them near the Celtiberi, Edestani, and Heretices. [T.H.D.]

SUESSIONES, or SUESSONES. (Ov. Met. vii. 343. Dionys. vi. 29). A town of Gallia Belgica. The Roman told Caesar (B. G. ii. 3) in B.C. 57 that the Sueessiones were their brothers and kinsmen, had the same political constitution and the same laws, named one political body with them, and had the same head or chief: their territory bordered on the territory of the Remi, and was extensive and fertile; within the memory of man the Sueessiones had a king, Divitaeus, the most powerful prince in Gaul, who even had the dominion of Britannia at this time (B.C. 57) they had a king named Gallus, a very just and wise man, to whom the Belgae who were combing against Caesar unanimously gave the direction of the war. The Sueessiones had twelve towns, and promised a contingent of 50,000 men for the war with Caesar.

Caesar (B. G. ii. 12) took Noviodumum, a town of the Suecessiones, and the people submitted [Noviodumum; Augusta Suesstonum]. The Suecessiones led the rich country between the Oise and the Marne, and the town of Sueessiones on the Avre preserves their name unchanged. The Suecessiones are mentioned (B. G. viii. 5. 5) among the people who sent their contingent to attack Caesar at Aissia, B.C. 52; but their force was only 5000 men. Caesar part the Suecessiones for their pains by subjecting them to their brothers the Remi (B. G. viii. 6: qui Remis - - - erant - - - - - tibus), a passage the word "attributae" denotes a political dependence, and in Gallia itself it denotes a condition of slavery. The Remi took care of themselves [Remi].

Play many the Suecessioni Liberi (iv. 17), which, if it means anything, may mean that they were relations in his time from their dependence on the Remi. In Pliny's text the name "Suessones" stands between the name Vernomannii and Suecessiones; but nobody has yet found out what it means.

The orthography of this name is not quite certain: and the present name Suessones is as near the truth by either form. In Strabo (iv. p. 193) it is Suassetenites, and Lucan (i. 423) has—

"Et Bitumia, linguisque leves Sueissones in armis;"

Suessones is a corretion; but there is no doubt about it (ed. Oudemars). [6. L.]

SUSSULA (Sussovamia; Etb. Suessulianus: Sussula), a city of Campania, situated in the interior of that country, near the frontiers of Samnium, between Capua and Nola, and about 4 miles N.E. of Avella. It is repeatedly mentioned during the wars of the Romans with the Samnites, as well as in their campaigns against Hannibal. Thus in the First Samnite War (B.C. 343) it was the scene of a decisive victory by Valerius Corvus over the Samnites, who had gathered together the remains of their army which had been previously defeated at Mount Tifata, and not in B.C. 216, it was occupied by Marcellus with the view of protecting Nola, and watching the operations of Hannibal against that city (Liv. xxiv. 14. 17). From this time the Romans seem to have kept up a permanent camp there for some years, which was known as the Castra Claudiana, from the name of Marcellus who had first established it, and which is continually alluded to during the operations of the subsequent campaigns (Liv. xxviii. 51, xxxiv. 46. 47, xxv. 7. 22. xxvi. 9). But from this period the name of Sussula disappears from history. It continued to be a municipal town of Campania, though not one of a secondary class; and inscriptions attest its municipal rank under the Empire. It had received a body of veterans as colonists under Sulla, but did not attain the colonial rank (Strab. v. p. 249; Plin. iii. 5. s. 9; Orell. Inscr. 129. 130, 2333, Lib. Col. p. 237).

The Tabula places it on a line of road from Capua to Nola, at a distance of 9 miles from each of those cities (Tab. Pont). It was an esiscopal see in the first ages of Christianity, and its destruction is ascribed to Saracens in the 9th century. Its ruins are still visible in a spot now occupied by a marly forest about 4 miles S. of Maialdolone, and an adjacent castle is still called Torre di Sessa. Inscriptions, as well as capitals of columns and other architectural fragments, have been found there (Prattilis Vit. Appia, iii. 3. 347; Romanelli, vol. iii. p. 505).

SUTRI (Sutriamia, Prot. iii. 1. § 42. written Sutriamiam Sutriasiam), a Ligurian people, placed by Pliney (ii. 4) above the Oxyili, who were on the coast between Fregia and Antheus. The Sutri are the people last named in the Tablet of the Alps. If the position of their town Salinum [Salius] is
properly fixed, the Suevi were in the northern part of the province of Fenicia. [G. L.]

SUEVI (Suebii or Suebii), is the designation for a very large portion of the population of ancient Germany, and comprised a great number of separate tribes with distinctive names of their own, such as the Semones. German authors generally connect the name Suevi with Suebion, i.e. to sway, move unstaidly, and take it as a designation of the unsteady and migratory habits of the people, to distinguish them from the Ingenienses, who dwelt in villages or fixed habitations (Zeuss, Die Deutschen, p. 55, fol.); hence, however, and unanimously with good reason, the name as of Celtic or even Slavonic origin; for the Romans no doubt employed the name, not because indigenous in Germany, but because they heard it from the Celts in Gaul. We must, however, from the first distinguish between the Suevi of Caesar (B. G. c. 37, 31, 54, iii. 7, iv. 1, &c.) and those of Tacitus (German. 58, &c.); the Suevi in Caesar occupied the eastern banks of the Rhine, in what is now the country to which the tribe was now called Raedon, while Tacitus describes this territory as occupying the country to the north and east of the Suevi of Caesar, so that the two writers assign to them quite a different area of country. Strabo (vii. p. 290) again states that in his time the Suevi extended from the Rhenus to the Albis, and that some of them, such as the Hermunduri and Longobardi, had advanced even to the north of the Albis. Whether the nations called Suevi by Caesar and Tacitus are the same, and if so, what causes induced them in later times to migrate to the north and east, are questions to which history furnishes no answers. It is possible, however, that these whom Caesar encountered were only a branch of the great body, perhaps Clatti and Longobardi. That these latter were pure Germans cannot be doubted; but the Suevi of Tacitus, extending from the Batet to the Danube, and occupying the greater part of Germany, no doubt contained many Celtic and still more Slavonic elements. It has in fact been conjectured, with considerable probability, that the name Suevi was applied to those tribes which were not pure Germans, but more or less mixed with Slavonians; for thus we can understand how it happened that in their habits and mode of life they differed so widely from the other Germans, as we see from Tacitus; and it would also account for the fact that in later times we find Slavonians peaceably established in countries previously occupied by Suevi. (Comp. Pint. iv. 28; Ptol. ii. 15, § 15; Oros. i. 2.) It deserves to be noticed that Tacitus (German. 2, 45) calls all the country inhabited by Suebian tribes by the name Suevia. The name Suevi appears to have been known to the Romans as early as u. c. 123 (Sisenna, op. Non s. n. lancea), and they were at all times regarded as a powerful and warlike people. Their country was covered by mighty forests, but towns (oppida) also are spoken of. (Caes. B. G. iv. 19.) As Germany became better known to the Romans, the generic name Suevi fell more and more into disuse, and the separate tribes were called by their own names, although Ptolemy still applies the name of Suevi to the Semones, Longobardi, and Angli.

In the second half of the third century we again find the name Suevi limited to the country to which it had been applied by Caesar. (Anm. Mare, xvi. 10; Jornand. Get. 55; Tib. Pent.) These Suevi, from whom the modern Sabaud and the Sabians derive their names, seem to have been a body ofad

venturers from various German tribes, who assumed the ancient and illustrious name, which was as applicable to them as it was to the Suevi of old. These later Suevi appeared in alliance with the Alamans and Burgundians, and in possession of the German side of Gaul, and Switzerland, and even in Italy and Spain, where they joined the Visigoths. Ricimer, who acts so prominently a part in the history of the Roman empire, was a Suevian. (Comp. Zeuss, l. c.; Wilhem, Germanien, p. 101, &c.; Grimm, Deutsche Gramm. i. pp. 8, 60, ii. p. 25, Gesch. der Deutschen Spr. i. p. 494; Latham, on Tacit. Germ. Eijo. p. 40, &c.)

SUEVICUM MARIT., is the name given by Tacitus (German. 43) to the Baltic Sea, which Ptolemy calls the Συμπερασμένος Κελλαρίος (vii. 5. 2, viii. 10. 2) [L. S.]

SUFETULA a town of Byzacena, 25 miles S. of Sufes. In its origin it seems to have been a later and smaller place than the latter, whence its name was a diminutive—little Sufes. In process of time, however, it became a very considerable town, as it appears to have been the centre whence all the roads leading into the interior radiated. Some vast and magnificent ruins, consisting of the remains of three temples, a triumphal arch, &c., at the present Syafata, which is seated on a lofty plateau on the right bank of the Wad Dschmila, 80 kilometres SW. of Kairwan, attest its ancient importance. (See Shaw's Travels, p. 107; Pellicer, in Revue Archéol. July 1847.) [T. H. D.]

SULA (Σολο), one of the Euboean towns, situated near Carthage, and in the territory of Συταί, Σελήν, Στάδιοι, Σελίδα, Συμφέλος; Σύροι, Stadium, §§ 331, 332), the harbour of Elyrus in Crete, 50 stadia to the W. of Poecilassus, situated on a plain. It probably existed as late as the time of Hierocles, though now entirely uninhabited. Mr. Pulley (Travels, vol. ii. p. 100) found remains of the city walls as well as other public buildings, but not more ancient than the time of the Roman Empire. Several tombs exist resembling those of Ηῖόπα Κύκριο; an aqueduct is also remaining. [E. B. J.]

SULILUM [Helvillum].

SUNDINUM. [Cesomani].

SUIONESE, are mentioned only by Tacitus (German. 44) as the most northern of the German tribes, dwelling on an island in the ocean. He made no doubt thinking of Scania or Scandinavian; and Suiones unquestionably contains the root of the modern name Sweden and Swedes.

SUINSA, a town in Armenia Minor (Hist. Ant. pp. 207, 216), where, according to the Notitia Imperii (p. 27), the Ala I. Ulpius Ducaenus was stationed; but its site is now unknown. [L. S.]

SUINSTAMILUM (in Ptol. Suardatolos, ii. 6. § 65), a town of the Caristi in Hispania Tarraconensis. The Geogr. Eav. (iv. 45) calls it Sestatamium. It is the modern Vittoria. [T. H. D.]

SULCI (Σολοις, Stephan. B. c. 160; Σολωαί, Strab.; Σολός, Paus.; Eth. Sabatinus; S. Antico)., one of the most considerable cities by the Sardina, situated in the SW. corner of the island, on a small island, now called Imda di S. Antico), which is, however, joined to the mainland by a narrow isthmus or neck of sand. S. of this isthmus, between the island and the mainland, is an extensive bay, now called the Golfo di Palmas, which was known in ancient times as the Salatinus Portus (Ptol.). The foundation of Sulei is expressly attributed to the Carthala.
SULMAS.

SULMO.

SULMO (Συλμον: Ecb. Sublomanessis; Συλμών), a city of the Peligni, situated in the valley of the Crisio, in a spacious basin formed by the junction of that river with several minor streams. There is no doubt that it was one of the principal cities of the Peligni, as an independent tribe, but no notice of it is found in history before the Roman conquest. A tradition alluded to by Ovid and Silus Italicus, which ascribed its foundation to Salmus, a Phrygian and one of the companions of Paris, is evidently a mere etymological fiction (Ovid, Fast. iv. 79; Sil. Ital. i. 70—76). The first mention of Sulmo occurs in the Second Punic War, when its territory was ravaged by Hannibal in n. c. 211, but without attacking the city itself. (Liv. xxvi. 11.) Its name is not noticed during the Social War, in which the Peligni took so prominent a part; but according to Florus, it suffered severely in the subsequent civil war between Sulla and Marius, having been burnt by Marius, and its inhabitants and its attachment to his rival. (Flor. iii. 21.) The expressions of that rhetorical writer are not, however, to be construed literally, and it is more probable that Sulmo was confiscated and its lands assigned by Sulla to a body of his soldiers, (Zumpt, de Colon. p. 261.) At all events it is certain that Sulmo was a well-peopled and considerable town in n. c. 49, when it was occupied by Domitius with a garrison of seven cohorts; but the citizens, who were favourably connected to Caesar, opened their gates to him and his lieutenant M. Antonius, who assumed the title of senator before the place. (Caes. B. C. i. 18; Cic. ad Att. VIII. 4. 12 a.) Nothing more is known historically of Sulmo, which, however, appears to have always continued to be a considerable provincial town. Ovid speaks of it as one of the three municipal towns whose districts composed the territory of the Peligni ("Peligni pars terra turris," Amor. ii. 16.1); and this is confirmed both by Pliny and the Liber Colonarum; yet it does not seem to have ever been a large town. It is well called its own city, which must not be confounded with the more celebrated city of the name. (Itin. Ant. p. 89.) It was probably situated at Tirassol, near Tortoli. (De la Marmona, p. 443.)

SULGAS, river. (Gallia, p. 934; Vindalium.]

SULIA, SULENA (Σουλία, Σουλενά, Stadium. §§ 324, 325), a promontory of Crete, 65 stadia from Matara, where there was a harbour and good water, identified by Mr. Rusby (Travels, vol. i. p. 304) with Higgis Gable, the chief port of Amari, on the S. coast of the island. (E. B. J.)

SULIS, in Gallia, is placed in the Table on a route from Durtoritum, which is Daurigorium (Doumontum) the capital of the Veneti, to Gesoricrate the western extremity of Bretagne. The distance from Daurigorium to Sulis is xx. By following the direction of the route we come to the junction of a small river named Sowel with the river of Blaret. The name and distance, as D'Anville supposes, indicate the position of Sulis. (G.f.)

SULONIAEAE, a town in Britannia Romana (Itin. Ant. p. 471), now Brookley Hill in Hertfordshire. (Camden, p. 359.)

SULMO (Συλμόντα), an ancient city of Lutian, mentioned only by Pliny (iii. 5. 9) among those which were extinct in his time, and incidentally noticed by Virgil. (Aen. x. 317.) It is in all probability the same place with the modern Sermoneta, which stands on a hill between Norba and Setia, looking over the Pontine Marshes. (T. H. ii.)

SULMO (Σουλίονα), a city of the Peligni, situated in the valley of the Crisio, in a spacious basin formed by the junction of that river with several minor streams. There is no doubt that it was one of the principal cities of the Peligni, as an independent tribe, but no notice of it is found in history before the Roman conquest. A tradition alluded to by Ovid and Silus Italicus, which ascribed its foundation to Salmus, a Phrygian and one of the companions of Paris, is evidently a mere etymological fiction (Ovid, Fast. iv. 79; Sil. Ital. i. 70—76). The first mention of Sulmo occurs in the Second Punic War, when its territory was ravaged by Hannibal in n. c. 211, but without attacking the city itself. (Liv. xxvi. 11.) Its name is not noticed during the Social War, in which the Peligni took so prominent a part; but according to Florus, it suffered severely in the subsequent civil war between Sulla and Marius, having been burnt by Marius, and its inhabitants and its attachment to his rival. (Flor. iii. 21.) The expressions of that rhetorical writer are not, however, to be construed literally, and it is more probable that Sulmo was confiscated and its lands assigned by Sulla to a body of his soldiers, (Zumpt, de Colon. p. 261.) At all events it is certain that Sulmo was a well-peopled and considerable town in n. c. 49, when it was occupied by Domitius with a garrison of seven cohorts; but the citizens, who were favourably connected to Caesar, opened their gates to him and his lieutenant M. Antonius, who assumed the title of senator before the place. (Caes. B. C. i. 18; Cic. ad Att. VIII. 4. 12 a.) Nothing more is known historically of Sulmo, which, however, appears to have always continued to be a considerable provincial town. Ovid speaks of it as one of the three municipal towns whose districts composed the territory of the Peligni ("Peligni pars terra turris," Amor. ii. 16.1); and this is confirmed both by Pliny and the Liber Colonarum; yet it does not seem to have ever been a large town, and is well called its own city, which must not be confounded with the more celebrated city of the name. (Itin. Ant. p. 89.) It was probably situated at Tirassol, near Tortoli. (De la Marmona, p. 443.)

E. B. B.

SULGAS, river. (Gallia, p. 934; Vindalium.)

SULIA, SULENA (Σουλία, Σουλενά, Stadium. §§ 324, 325), a promontory of Crete, 65 stadia from Matara, where there was a harbour and good water, identified by Mr. Rusby (Travels, vol. i. p. 304) with Higgis Gable, the chief port of Amari, on the S. coast of the island. (E. B. J.)

SULIS, in Gallia, is placed in the Table on a route from Durtoritum, which is Daurigorium (Doumontum) the capital of the Veneti, to Gesoricrate the western extremity of Bretagne. The distance from Daurigorium to Sulis is xx. By following the direction of the route we come to the junction of a small river named Sowel with the river of Blaret. The name and distance, as D'Anville supposes, indicate the position of Sulis. (G.f.)

SULONIAEAE, a town in Britannia Romana (Itin. Ant. p. 471), now Brookley Hill in Hertfordshire. (Camden, p. 359.)

T. H. ii.

SULMO (Συλμόντα), an ancient city of Lutian,
Salmo" (Ovid, Fast. iv. 81, Trist. iv. 10. 3, Amor. ii. 16; Sili. Ital. vii. 511.) Its territory was fertile, both in corn and wine, and one district of it, the Pagus Fabianus, is particularly mentioned by Pliny (xxvii. 26. s. 43) for the care bestowed on the irrigation of the vineyards.

The remains of the ancient city are of little interest as ruins, but indicate the existence of a considerable town; among them are the vestiges of an amphitheatre, a theatre, and thermae, all of them without the gates of the modern city. About 2 miles from the town is the Monte Morenne, where are some ruins of reticulated masonry, probably those of a Roman villa, which has been called, without the slightest reason or authority, that of Ovid. (Romaneelli, vol. iii. pp. 159, 161; Craven's Abruzzi, vol. ii. p. 32.)

Salmo was distant seven miles from Corfinium, as we learn both from the Tabula and from Cæsar. (Caes. B. C. ii. 16; Tab. Peut.) Ovid tells us that it was 90 miles from Rome (Trist. iv. 10. 4), a statement evidently meant to be precise. The actual distance by the highroad would be 94 miles; viz. 70 to Cerfennia, 17 from thence to Corfinium, and 7 from Corfinium to Salmo. (D'Arville, Anál. Géogr. de l'Italie, pp. 175, 179.) There was, however, probably a branch road to Salmo, after passing the Mons Imenus, avoiding the détour by Corfinium. [E. H. B.]

SUNATIA (Σουναία), Paus. viii. 3: 4; Steph. B. s. r. Σουναία, Paus. viii. 36. § 7; Σουναίτων, Paus. viii. 27: § 3; Σουνάεια, Steph. B. s. r.), a town of Arcadia in the district Meanias, on the southern slope of Mt. Meanias. It was probably on the summit of the hill now called Syllína, where there are some remains of polygonal walls. (Leake, Morea, vol. ii. p. 51; Ross, Peloponnes, p. 120.)

SUMMONTORIUM, a place in Vindelicia (H. Ant. p. 277), where, according to the Notitia Imperii, the commander of the 3rd legion was stationed. Its exact site is uncertain. [L. S.]

SUMMUS PYRENEAEUS. One of the passes of this name mentioned in the Antonine Itin. and the Table was on the road from Narbo (Narbonne) to Janacra (Junquera) in Spain. The road passed from Narbo through Ad Centuriones and Ad Stabulum; but the distances in the Itin. are not correct; nor is the distance in the Itin. correct from Summus Pyreneaeus to Juncara. The pass, however, is well marked; and it is the Col de Pertus, which is commanded by the fort of Belle-garde. This is the road by which Hauväil entered Gallia, and the Roman armies marched from Gallia into Spain. A second pass named Summus Pyreneaeus in the Antonine Itin. was on the road from Beneharnum [Beneharnum] in Aquitania to Caeretangusta (Saragos) in Spain. The road went through Ilaro (Oleron) and Aspa Luca [Aspa Luca] and Forum Ligneum [Forum Ligneum], which is 5 from Summus Pyreneaeus. This road follows the Gave d'Aspe from Oleron; and on reaching the head of the valley there are two roads, one to the right and the other to the left. That to the right called Port de Béarn must be the old road, because it leads into the valley of Arques and to Bello in Spain, which is the Ebilinium of the Itin. on the road from Summus Pyreneaeus to Saragossa.

There is a third pass the most western of all named Summus Pyreneaeus on the road from Aiguë Tarbellicae [Dax] in Aquitania to Pampelus (Pamplona) in Spain. The Summus Pyreneaeus is the Sommet de Castel-Foin, from which we descend into the valley of Roncesvalles on the road to Pamplona [Imus Pyreneaeus]. (D'Arville, Notice, &c.) [G. L.]

SUNA [Aborigines.] SUNICI. Tacitus (Hist. iv. 66) mentions the Sunici in the history of the war with Civilis. Civilis having made an alliance with the Agrippinenses (Coli) resolved to try to gain over the nearest people to Coli, and he first secured the Sunici. Claudius Labo opposed him with a force hastily raised among the Betaci, Tungri and Servii, and he was confident in his position by having possession of the bridge over the Massa. [Pons Moses]. No certain conclusion as to the position of the Sunici can be derived from this; but perhaps they were between Coli and the Massa. Pliny (iv. 17) mentions the Sunici between the Tungri and the Frisian-bones. [G. L.]

SUNIUM (Σουνιον: Eth. Σουνιεύς), the name of a promontory and demus on the southern coast of Attica. The promontory, which forms the most southerly point in the country, rises almost perpendicularly from the sea to a great height, and was crowned with a temple of Athena, the tutelary goddess of Attica. (Paus. i. 1. § 1; Σουνιαίος ιός, Hom. Od. iii. 278; Soph. Aj. 1235; Eurip. Cyc. 292; Virr. iv. 17.) Sunium was fortified in the nineteenth year of the Peloponnesian War (b.c. 413) for the purpose of protecting the passage of the cornships to Athens (Thuc. viii. 4), and was regarded from that time as one of the principal fortresses of Attica (Comp. Dem. pro Corr, p. 228; Liv. xxxi. 25; SylvaX, p. 21.) Its proximity to the silver mines of Laurium probably contributed to its prosperity, which passed into a proverb (Aautaxand. ap. Athen. vi. p. 263, c); but even in the time of Cicero it had sunk into decay (ad Att. xii. 10). The circuit of the walls may still be traced, except where the precipitous nature of the rocks afforded a natural defence. The walls which are fortified with square towers, are of the most regular Hellenic masonry, and enclose a space of a little more than half a mile in circumference. The southern part of Attica, extending northwards from the promontory of Sunium as far as Thoricus on the east, and Anaphylus on the west, is called by Herodotus the Suniac angle (τὸν γυμνὸν τῷ Σουνιακῷ, iv. 99). Though Sunium was especially sacred to Athena, we learn from Aristophanes (Esquit. 537, Arca, 869) that Poseidon also was worshipped there.

The promontory of Sunium is now called Cape Kolonna, from the ruins of the temple of Athena which still crown its summit. Leake observes that "the temple was a Doric hexastyle; but none of the columns of the fronts remain. The original number of those in the flanks is uncertain; but there are still standing nine columns of the southern, and three of the northern side, with their architraves, together with the two columns and one of the autes of the pronaos, also bearing their architraves. The columns of the peristyle were 3 feet 4 inches in diameter at the base, and 2 feet 7 inches under the capital, with an intercolumniation below of 4 feet 11 inches. The height, including the capital, was 19 feet 3 inches. The exposed situation of the building has caused a great corrosion in the surface of the marble, which was probably brought from the neighbouring mountains; for it is less homogeneous, and of a coarser grain, than the marble of Peutæle. The walls of the fortresses were faced with the same kind of stone. The embran-
SUNNESIA

SURIUS

Sura (τὰ Σουρα; Etr. Σουρρύπος), a city of Syria, situated on the Euphrates, in the district of Palmyra, long. 37° 20', lat. 35° 40' of Palmyra, which places four miles between Abilis and Abamata (v. 13, § 25); apparently the Sure of the Punic Table, according to which it was 105 M.P. distant from Palmyra. It is called in the Notitiae Imperii (§ 24) flavia Turina Sura (ap. Mannert, p. 408). It is probably identical with the Ura of Pliny, where, according to him, the Euphrates turns to the east from the deserts of Palmyra (v. 24. s. 87). He, however, mentions Sura (26. s. 89) as the nearest town to Philiscus, a town of the Parthians on the Euphrates. It was 26 stadia distant from Babylon, which was situated in what was called "Barbaricus campum." It was a Roman garrison of some importance in the Persian campaigns of Belisarius; and a full account is given of the circumstances under which it was taken and burnt by Choreses I. (a. d. 532), who, having marched three long days' journey from Ctesiphon to Zobedia, along the course of the Euphrates, thence proceeded an equal distance up the river to Sura. Incidental mention of the Persian proves that it was called Sura (Procop. Hist. 18. ii. 5). Its walls were so weak that it did not hold out more than half an hour; but it was afterwards more substantially fortified, by order of the emperor Justinian. (Id. de Aedificiis Justiniani, ii. 9.) "About 36 miles below Balis (the Abils of the Itolemy), following the course of the river, are the ruins of Sura; and about 6 miles lower is the find of El-Humamid" which Col. Chesney identifies with the Zeugma of Thapsacus, where, according to local tradition, the army of Alexander crossed the Euphrates (Expedition for Survey, p. 416). In the Chart (iii.) it is called Soorah, and marked as "brick ruins," and it is probable that the extensive brick ruins a little below this site, between it and Phœniss (Thapsacus), may be the remains of Abamata, mentioned in connection with the Sura of Palmyra. Anawus is certainly wrong in identifying the modern Sarigeh with the ancient Thapsacus (p. 72).

SULIA, a branch of the Moesia in Gallia. Ausonius (Moesia, v. 354.):—

"Xanque et Pronaiae Nemesacae adjutâ mentu Sura tuis propernet non degener ire sub undas."

The Sura (Sour or Sura), comes from Luxembourgh, and after receiving the Pronaie (Pronus) and Nemusa (Nuria), joins the Our, which falls into the Moselle on the left bank above Augusta Trevirorum. (G. L.)

SULAE. [Sorae.]

SULAE NAE (Σουλαϊνα, Arrian, Ind. c. 8), an Indian, the army notified by Arrian, who appear to have dwelt along the banks of the Jumna. They were famous for the worship of the Indian Hercules, and had two principal cities, Methora (Mandura) and Clasisora. The name is, pure Sanscrit, Sarisamahas.

SURIMOS, a people of Hispania Tarraconensis, seated near Herda, and probably belonging to the Lortenses. (Plin. iii. 3. 4.)

SURUSI (Σουρσιός, Philol. v. 10, § 6), a place in Colchis, at the mouth of the Surus. (Plin. vi. 4. 4.) There is still at this place a plain or salt lake (Ritter, Erdkunde, ii. p. 509.)

SURUSI a small tributary river of the Ister in Colchis. (Plin. vi. 4. 4.) According to the same authority, its water had a petrifying power (ii. 103. s. 106.)

[S. T. H. D.]

SUNNESIA, a small island on the S. coast of Spain (S. J. M. Rev. v. 27). [T. H. D.]

SUNNEXIS, or LUCUS, a lake in Bithymia between the Assuan Locus and the river Sungarius. (Aen. Mar. xxxi. 8.) It is probably the same lake which is mentioned by Evagrius (Hist. Eccl. ii. 14) under the name of Baorion in the neighborhood of Nicomedia, and which is at present known by the name of Sekhepyga. It seems also, to be the same lake from which the younger Pliny (x. 50) proposed to cut a canal to the sea. [L. S.]

SUPERAEQUUM or SUPEREAQUUM (Etr. Superaesquum; Castel Vecchio Subequo, in older documents Subrequo or Subalveo), where the inscriptions alluded to are still extant. It is situated on a hill on the right bank of the Atarne, and about 4 miles on the left of the Via Valeria. Its territory probably comprised the whole district between that road and the Atarne. (Cicero, Inst. p. 78; Holenstein, Not. in Caesar, p. 145; Romance Sabo, iii. pp. 124—125; Mommsen, loc. cit. R. N. p. 293.) [E. H. B.]

SUPERATH. [Antaeus.]

SUPERUM MARE. [Abraham Mere.]

STIPARA (Στιπαρα, Pediol. M. E. c. 52, ed. Mull.), a place on the western coast of Hindostan, at no great distance from Barapara or Borauch. Pliny calls it Zuporpa (vii. 1. § 6). In Lassen's map it is placed on the left bank of the Tapti or Bangoura, not far to the N. of Surat. This place has also been mentioned by Freyn (p. 171), and by Cosmas Indicopleustes under the term of Ophos (p. 437, ed. Montfaucon). It has been suspected, with some reason, by Bentey, that this is the "Ophir" of the Bible,—the name in Sanscrit and Hebrew respectively offering some verbal analogies. (Bentey,茁. Indica, in Jcryk and Graber, i. 28.) [V.]
SURRENTINUM PROM.

SURRENTINUM PROM. [MINERVAE PROM.]

SURRENTUM (Soppevros, Strab.; Soppevros, Ptol.: Eth. Surrentinus: Sorrento), a city on the coast of Campania, on the southern side of the beautiful gulf called the Crater or Bay of Naples, about 7 miles from the headland called Minervae Promontorium, which forms the southern boundary of that bay. We have very little information as to its early history; its name is never mentioned till after the Roman conquest of Campania. Tradition indeed ascribed the foundation of Surrentum to the Greeks, but whether it was a colony from Cumae, or an earlier Greek settlement, we have no account: and there does not appear any evidence that it had, like many places in this part of Italy, a distinctly Greek character in historical times. Strabo calls it a Campanian city (Strab. v. p. 247), but this may possibly refer to its not being one of those occupied by the Picentines. According to the Liber Colonarum a great part of its territory, and perhaps the town itself, was considered in a certain sense as con-ceatted to Minerva, on account of its proximity to her celebrated temple on the adjoining promontory, and was for that reason occupied by Greek settlers (Lib. Col. p. 236). It nevertheless received a partial colony under Augustus (16), but without attaining the rank or character of a Colony. Numerous inscriptions have been found in a municipal town under the Roman Empire, and it is noticed by all the geographers: but its name is rarely mentioned in history (Strab. l. c. Ptol. iii. 5. r. 9; Mel. ii. 4. § 9, Ptol. iii. 1. 7; Orell. Jusc. 3742; Mommsen, Jusc. R. K. x. 2111—2125). It was, however, resorted to by wealthy Romans on account of its beautiful scenery and delightful climate; among others Pollus Felix, the friend of Statius, had a villa there, which the poet has celebrated at considerable length in one of his minor poems (Silv. ii. 2). We are told also that Agrippa Postumus, when he first incurred the displeasure of Augustus, was ordered to retire to Surrentum, before he was consigned to more complete banishment in the island of Planasia (Suet. Aug. 65).

But the chief celebrity of Surrentum was derived from its wine, which enjoyed a high reputation at Rome, and is repeatedly alluded to by the poets of the Empire. It was considered very wholesome, and was in consequence prolonged by physicians to cure or alleviate many invalids. Tiberius indeed is said to have declared that it owed its reputation entirely to the physicians, and in reality was no better than vinegar. It did not attain its maturity till it had been kept 25 years (Plin. xiv. 6. s. 8; Athenae. i. p. 126; Ovid. Met. xv. 710; Martial, xiii. 110; Stat. Silv. iii. 5. 102; Strab. v. p. 243; Colum. R. R. iii. 2. § 10). We learn from Martial also (xiii. 110, xiv. 102) that Surrentum was noted for its pottery. The hills which produced the celebrated wine were those which encircle the plain in which the city was situated ("Sorrentinum colles," Ovid. Met. l. c.), and separate it from the gulf of Posidonia on the other side. These hills form a part of the ridge which descends from the lofty mountain group of the Monte S. Angelo between Castellamare and Amalfi, and is continued as far as the headland opposite Oppido. This point, now called the Punto della Campanella, the ancient Promontorium Minervae, was known also by the name of Surrentum Promontorium, from its close connection with the town of Surrentum (Tac. Ann. iv. 67; Stat. Silv. v. 3. 165). The celebrated sanctuary of the Sirens, from which Surrentum itself was supposed to have derived its name, seems to have been situated (though the expressions of Strabo are not very clear) between this headland and the town (Strab. v. p. 247). But the islands of the Sirens (Sirenae Insulæ) were certainly the rocks now called Li Galli, on the opposite side of the promontory. The villa of Pollus, which is described by Statius as looking down upon the deep Gulf of Portici, stood upon the headland now called Capo di Sorrento, on the W. of the town, separating the Bay of Sorrento from that of Massa: extensive ruins of it are still visible, and attest the accuracy of the poet's description. (Stat. Silv. ii. 2; Swinburne's Traveles, vol. i. pp. 88—90.)

The other ruins still visible at Sorrento and in its neighbourhood are of no great interest: they present numerous fragments of buildings of imperial times, to some of which the names of a temple of Hercules, temple of Neptune, &c. have been applied by local antiquarians, with no other foundation than the fact that we learn from Statius the existence of temples to these divinities at Surrentum. The most considerable relic of antiquity is a Piscina of large dimensions, which is in such good preservation that it still serves to supply the inhabitants with water. The modern town of Sorrento is a populous place with a population of above 6000 souls; it is much resorted to by strangers on account of its mild and delicious climate, for which it is already extolled by Silicus Italicus ("Zephyro Surrenti- tum molle salutari," Sil. Ital. v. 466.) [E. H. B.]

SUSA (θξαηια, Aeschyl. Pers. 535, 730; Herod. l. 188; Xen. Cyr. vi. 6. § 8, &c., &c. in O. T. StruSSlan, Esther l. 2; Nehemiah l. 1. Daniel, vii. 2), the chief city of the province of Susiana, on the eastern bank of the Chiospes (Kerkebas). There was considerable doubt among the ancient writers as to the exact position of this celebrated city. Thus Arrian (vii. 7), Pliny (vi. 27. s. 51), and Daniel (viii. 2) place it on the Eulcains (Llai in Daniel); while from other authors (Strab. xiv. p. 728) it may be gathered that it was situated on the Chiospes. (For the probable cause of this confusion, see CHOSPES.) We may add, however, that, according to Carinus, Alexander on his way from Babylon had to cross the Chiospes before he reached Sinis (xv. 2), and that the same inference may be drawn from the account of Aristobulus of the relative position of the places in Persia in his address to Cleomenes. (Herod. v. 52.) It appears to have been an early tradition of the country that Susa was founded by Dareius the son of Hystaspes (Plin. l. c.) and it is described by Aeschylus as μέγας λαύνον Σουλιες (Pers. 119). By others it is termed Μεγαβιδων λαύνο (Herod. v. 54), and its origin is attributed to Memnon, the son of Tithonus. (Strab. l. c.; Steph. B. s. r.) The name is said to have been derived from a native Persian word Susana (meaning δίγη), from the great abundance of these plants in that neighbourhood. (Steph. B. s. r.; Athen. xii. p. 513, ed. Cassaub.) Athenaeus also confirms the account of the excellence of the climate of Susa (I. c.). It may be remarked that the word Σουλιες was well known as applied to an unguent extracted from lilies. (Dioscor. iii. v. de lilio; Athen. xiv. p. 609; Eryth. M. s. v. Σολιες). The city was said to have been 120 stadia in circumference (Strab. l. c.), and to have been surrounded by a wall, built like that of Babylon of burnt brick. (Strab. l. c.; Paus. iv. 31.)
Diodorus (ix. 16, xvii. 65) and Cassiodorus (vii. 15) speak of the strength and splendour of its citadel; and the latter writer affirms that there was a splendid palace there, built for Cyrus by Memon. Besides this structure, Pliny speaks of a celebrated temple of Diana (l. c.; see also Mart. Capella, vi. de Indis, p. 225, ed. Grotrius), in all probability that of the Syrian goddess Amatis; while St. Jerome adds, that Daniel erected a town there (Hieronym. in Dan.), a story which Josephus narrates, with less probability, of Ecbatana (Ant. xiv. 11.) Susa was one of the capitals at which the kings of Persia were wont to spend a portion of the year. Thus Cyrus, according to Xenophon, lived there during the three months of the spring. (Cyrop. viii. 6, § 22.) Strabo offers the most probable reason for this custom, where he states that Susiana was peculiarly well suited for the royal residence from its central position with respect to the rest of the empire, and from the quiet and orderly character of its government (l. c.) From these and other reasons, Susa appears to have been the chief treasury of the Persian empire (Hered. v. 49); and how vast were the treasures laid up there by successive kings, may be gathered from the narrative in Arrian, of the sums paid by Alexander to his soldiers, and of the presents made by him to his leading generals, on the occasion of his marriage at Susa with Barine and Parysatis (Curt. vii. 4, 5): even long after Alexander’s death, Antigonus found a great amount of plunder still at Susa. (Diod. xix. 48.)

With regard to the modern site to be identified as that of the ruins of Susa, there has been considerable difference of opinion in modern times. This has, however, chiefly arisen from the scarcity of travellers who have examined the localities with any sufficient accuracy. The first who did so, Mr. Kinney, at once decided that the modern Sus, situated at the junction of Kerkhah and river of Dic, must represent the Shushan of Daniel, the Susa of profane authors. (Travels, p. 99; comp. Malcolm, Hist. Persis, i. p. 256.) Bennell had indeed suspected as much long before (Geogr. Herodot. i. p. 302); but Vincent and others had advanced the rival claim of Shusher. (Anc. Commerce, i. p. 439.) The question has been now completely set at rest, by the careful excavations which have been made during the last few years, first by Colonel (now Sir W. F.) Williams, and secondly by Mr. Loftus. The results of their researches are given by Mr. Loftus in a paper read to the Royal Society of Literature in November, 1855. (Transactions, vol. v. new series.) Mr. Loftus found three great mounds, measuring together more than 3½ miles in circumference, and above 100 feet in height; and, on excavating, laid bare the remains of a gigantic colonnade, having a frontage of 343 feet, and a depth of 244, consisting of a central square of 36 columns, flanked to the N., E., and W. by a similar number—the whole arrangement being nearly the same as that of the Great Hall of Xerxes at Persepolis. A great number of other curious discoveries were made, the most important being numerous inscriptions in the cuneiform character. Enough of these has been already deciphered to show, that some of the works on the mound belong to the most remote antiquity. Among other important but later records is an inscription,—the only memorial yet discovered of Artaxerxes Memon, the conqueror of the Greeks at Cunaxa,—which describes the completion of a palace, commenced by Darius the son of Hystaspes and dedicated to the goddesses Tanitis and Mithra. A Greek inscription was also met with, carved on the base of a column, and stating that Arrenesides was the governor of Susiana. The natives exhibit a monument in the neighbourhood, which they call and believe to be the tomb of Daniel. There is no question, however, that it is a modern structure of the Mohammadan times.

SUSIANA. (Σωσιανής, Phot. vi. 3; Polyb. v. 46; Strab. xv. 729, &c.; Zosimus, Strab. xv. 731; Xerxes, p. 184.) An extensive province in the southern part of Asia, consisting in great measure of plain country, but traversed by some ranges of mountains. Its boundaries are variously given by different writers according as it was imagined to include more or less of the adjacent district of Persis. Generally, its limits may be stated to have been, to the N., Media with the mountains Charbans and Cambaldis; to the right, the onlying spur of the Parach-Athras and the river Oroasis; to the S., the Persian gulf from the mouth of the Oroasis to that of the Tigris; and to the W., the plains of Mesopotamia and Babylonina. (Cf. Ptol. l. c. with Strab. l. c., who, however, treats Susiana as part of Persis.) As a province it appears to have been very fertile, especially in grain, but exposed along the coasts to intense heat. (Strab. xv. p. 731.) The vine, the Macedonians are said to have introduced. (Strab. l. c.) Its principal mountains are those on the N., called by Pliny Charbans and Cambaldis (v. 27. s. 31), while a portion of the Montes Uxii probably belonged to this province, as in them is a pass called Vrsh. Zor圮s. (Polyaen. iv. 3. 27.)

Susiana was intersected by numerous rivers which flowed either to the Tigris or Persian gulf, from the high mountain watershed whereby it was surrounded. Of these the principal were the Euheus (Karun), the Chosanes (Kerkhah), the Coprates (river of Dic), the Helphyon or Hedyphus (Jerra), and the Oroasis (Tab.). The inhabitants of the district appear to have borne indifferently the names of Susi or Susian, and, as inhabitants of the plain country, to have been devoted to agricultural employments; in the mountains, however, were tribes of robbers, who, from time to time, were strong enough to levy black mail even on their kings when traversing their passes. (Strab. xv. p. 728.) Another name, whereby the people were known, at least in early times, was Cissia (Aesch. Persa. 16), and the land itself Cissia (Strab. xv. p. 728; Herod. v. 49). This name is clearly connected with that of one of the chief tribes of the people, the Coessaei, who are repeatedly mentioned in ancient authors. (Strab. xi. p. 522; Att. Ins. 40; Polyb. v. 54, &c.) There were many different tribes settled in different parts of Susiana; but it is hardly possible now to determine to what different races they may have belonged. Among these, the most prominent were the Uxii, a robber tribe on the mountain borders of Media; the Mesesuna, who occupied a valley district, probably now that known as Mahabad; the Coessaei, in the direction along the Median mountains; and the Elymaei, inhabitants of Elymais, the remnant, in all probability, of the earliest dwellers in this province—Elam being the name whereby this whole district is known in the sacred records. (Isaiah, xxi. 2; Jeremiah, xxxii. 2.) Besides these, several smaller districts are noticed in different authors, as Cabandene, Corbinia, Gabiene, and Characene. Though Pliny has preserved the names of several small
towns, there seems to have been no city of importance in Susiana, excepting Susa itself. [V.]

SUSUDATA (Σουσουδάτα), a place in the south-east of Germany, probably in the country inhabited by the Silingae, at the foot of the Vandalic Montes. (Ptol. ii. 11. § 28.) Its exact site cannot be ascertained. [L. S.]

SUTHUL, a town and fortress in the interior of Namaqua, where Jugurtha had a treasury. (Sall. Juv. 87.)

[Σύριον (Σύριον: Εθν. Συριτείων: Σύρτη), a city of Etruria, situated in the southern part of that country, 32 miles from Rome, on the line of the Via Cassia. There is no doubt that it was an ancient Etruscan site, but apparently a small town, and in all probability a mere dependency of one of its more powerful neighbours. It was not till after the fall of Veii that the Romans carried their arms as far as Sutrium, which they first attacked in B.C. 591, with what success is uncertain (Diod. xiv. 98); but it must have fallen into their hands either in that or the following year, as we find it in a state of dependence on Rome immediately after the Gaulish invasion. (Liv. vi. 3.) The very year after that event (B.C. 390) the neighbouring Etruscans laid siege to Sutrium with a large force; the city fell into their hands, but was recovered (as the tradition related) by the dictator Camillus on the same day. (Liv. vi. 30. vol. ii. 117.) Very nearly the same story is told again in B.C. 385, when the city was half taken by the Etruscans, but recovered by Camillus and Varinius. (Liv. vi. 9.) It was doubtless with a view to guard against the repetition of these surprises that two years afterwards Sutrium received a Roman colony, n. c. 383 (Vell. Pat. i. 14), and henceforth became, in conjunction with the neighbouring Nepete, one of the principal frontier fortresses of the Roman territory on this side; hence Livy terms it "castra Etruriae." (Liv. ix. 32.) We do not find any subsequent mention of it in history till n. c. 311, when the Etruscans again laid siege to Sutrium in a great battle under its walls by Aemilius Barbula. (Liv. l. c.) The next year (B.C. 310) they were able to renew the siege at the opening of the campaign, but were once more defeated by the consul Q. Fabius Maximus, and took refuge in the Cimino mountains, which lay only a few miles distant. (H. 33, 35.) But this barrier was now for the first time passed by the Roman arms, and henceforth the wars with the Etruscans were transferred to a more northerly region. From this time, therefore, we hear but little of Sutrium, which was, however, still for a time the outpost of the Roman power on the side of Etruria. (Liv. x. 14.) Its name is next mentioned after a long interval during the Second Punic War, as one of the Coloniae Laetiae, which, in B.C. 204, declared their inability to bear any longer the burdens of the war. It was in consequence punished at a later period by the imposition of still heavier contributions. (Liv. xxvii. 9, xxix. 15.) Its territory was one of those in which permission was given to the exiled citizens of Capua to settle. (Id. xxvi. 34.)

Sutrium continued under the Roman government to be a small and unimportant country town; it is only once again mentioned in history, at the outbreak of the Persian War (B.C. 41), when it was occupied by Agrippa, in order to cut off the communications of Lucius Antonius with Rome. (Appian, B. C. v. 31.) But its position on the Cassian Way preserved it from falling into decay, like so many of the Etruscan cities, under the Roman Empire; it is noticed by all the geographers, and its continued existence down to the close of the Western Empire is proved by inscriptions as well as the Itineraries. We learn that it received a fresh colony under Augustus, in consequence of which it bears in inscriptions the name of "Cassian Julia." (Suet. Titi. p. 226; Plin. iii. 5. s. 8; Plut. iii. 1. § 50; Hblm. Ant. p. 256; Tab. Peut. Lib. col. p. 217; Gruter, Inscr. p. 302; 1; Zumpt, de Col. p. 551.)

The modern town of Sutri is "out a poor place with only about 2000 inhabitants, but retains its episcopal see, which it has preserved throughout the middle ages. It occupies the site of the ancient city, as is shown by many fragments of columns and other architectural ornaments built into the modern houses, as well as by some portions of the ancient walls, which resemble in their style of construction those of Nepe and Falerii. The situation is, like that of most of the towns in this part of Etruria, on a nearly isolated hill bounded by precipitous cliffs or banks of tufo rock, of no great elevation, and surrounded by small glens or ravines on all sides. In the cliffs which bound these are excavated numerous tombs, of no great interest. But the most remarkable relic of antiquity at Sutri is its amphitheatre, which is excavated in the tufo rock, and is in this respect unique of its kind. It is, however, of small size, and, though irregular in construction, its architectural details are all of a late character: hence it is probable that it is really of Roman and Imperial times, though great importance has been sometimes attached to it as a specimen of an original Etruscan amphitheatre. Its anomalies and irregularities of structure are probably owing only to the fact that it was worked out of a previously existing stone-quarry. (Deana's Etrurii, vol. i. pp. 94—97; Nibby, Dinorni, vol. iii. pp. 142, 143.)

SUZAEI (Σουζαϊον), a tribe of ancient Persis, noticed by Ptolemy (vi. 4. § 8). Lassen considers from this name that they were connected with the people of Susa, and that they were of the same race as the Uxii, one of the mountain races of Susiana. (Ersch. u. Grüber's Encycl. iii. sect. vol. xviii. p. 452.)

SYAGROS PROMONTORIUM (Συαγρός πρόμοντοριον), a promontory of the S. coast of Arabia, at the eastern extremity of the Adramitea, the westernmost of the gulf of the Saschalitae, placed by Ptolemy in long. 90°, lat. 14° (vi. 7. § 11). He comments on an error of his predecessor, Marinus, who, he says, places the gulf Saschalitae on the W. of Cape Syagros, while all who had navigated those seas distinctly asserted that the country Sachalitis and its synonymous bay were to the E. of Syagros (1. 17. §§ 2, 3) Marinus (p. 23, ep. Hudson Geogr. Min. tom. i.) agrees with Ptolemy. The author of the Periplius ascribed to Arrian seems, however, to confirm the testimony of Marinus, by placing the Sinus Sachalites next to Cape Emporium, between that and Syagros Promontorium, and naming the bay to the E. of Syagros, Oman, which he reckons as 600 stadia in width; but as he mentions still further to the E. Mosch Portus, as a magazine for the sloop of Sachalitis, which he there more fully describes, it is possible that he may have included all the country as far E. as Mosca under this name. It is at least clear that the Oman Sinus could be part of the present
SYBARIS.

district of Oscan. The maps give today to the W. of Sygros, where the Tretus Portus was situated. The Periplus says that the cape extended eastward, places a castle with a harbour and magazine at Sygros, and describes, in connection with it, the Dioscoridis Insula (Secotona), which Pliny places at a distance of 2240 stadia.

There is no difficulty in identifying this promontory Sygros with the modern Ras Furkuh, which derives its designation from the sound of the animal commemorated in its Greek name, which was properly the less arbitrary translation of its native appellation. The Periplus describes Sygros as the largest promontory in the world,—an hyperbolic expression, no doubt, but better suited to this cape than to any other on the coast, since the isolated mountain that forms Ras Furkuh reaches an elevation of 2500 feet, and is visible at a distance of 60 miles; while those of Ras Swayga (al. Sambira), further to the E., sometimes identified with Sygros on account of the similarity of name, do not exceed 600 feet. The subject, it must be admitted, is not free from difficulty, mainly owing to the fact that Ptolemy places Moscha Portus,—which is usually supposed to be the same as the Moscha Portus of the Periplus, and is identified with Dyzer or Sphakr.—W. of Sygros; in which case Ras Nou (al. Noua), or Ras Swayga (al. Sambira), must be his Sygros, and the Naxiades Squins still further E. But since the distance between S-ostra and the coast at Ras Furkuh, about 2900 stadia, approximately the same as the distance of Sygros to Ras Swayga, from which it is supposed that the Cape from the same island and either of the other capes,—for Ras Nou is 3600 stadia distant, and Ras Swayga considerably more,—the most probable solution of the difficulty is found in the hypothesis adopted above, of two ports called Moscha on the same coast. [Moschica.] (See Miller's Notes to Dio's ed. of the Geog. Græc. Min. vol. i. pp. 279, 280.) The question has been examined by Dvo Vincent, who was the first to fix correctly this important point in Arabian geography, and his main conclusions are acquiesced in by Mr. Forster, who has corroborated them by fresh evidence from the researches of modern travellers; and it is an interesting fact, that while the Greek geographers appear to have translated the native name of the cape, which it retains to this day, the natives would appear to have adopted a modification of that Greek translation as the name of the town situated, then as now, under the cape, which still bears the name of Sygros. (Vincent, Periplus, vol. ii. pp. 331—335; Forster, Abhild, vol. ii. pp. 166—177.) [G. W.]

SYBARIS (Συβάρις: Eth. Συβόρις, Sybarita), a celebrated city of Maena Graecia, situated on the W. shore of the Tarentine gulf, but a short distance from the sea, between the rivers Crathis and Sybaris. (Strab. vi. p. 263; Diod. xii. 9.) The last of these, from which it derived its name, was the stream now called the Coeliu, which at the present day falls into the Tauris about 3 miles from its mouth, but in ancient times undoubtedly furnished an independent course to the sea. Sybaris was apparently the earliest of all the Greek colonies in this part of Italy, being founded, according to the statement of Scymnus Chios, as early as B. C. 720. (Scymn. Ch. 350; Clinton. F. I. vol. i. p. 174.) It was an Achaean colony, and its Oiski was a citizen of Heine in Achaia; but with the Achaean colonists were mingled a number of Troezenian citizens. The Achaeans, however, eventually ob-
circumstances of which we are very imperfectly acquainted. It appears that the government had previously been in the hands of an oligarchy, to which such persons as Simondrides and Alcimenes naturally belonged; but the democratic party, headed by a demagogue named Telys, succeeded in overthrowing their power, and drove a considerable number of the leading citizens into exile. Telys hereupon seems to have raised himself to the position of despot or tyrant of the city. The exiled citizens took refuge at Crotona; but not content with their victory, Telys and his partisans called upon the Crotonians to surrender the fugitives. This they refused to do, and the Sybarites hereupon declared war on them, and marched upon Crotona with an army said to have amounted to 300,000 men. They were met at the river Tares by the Crotonians, whose army did not amount to more than a third of their numbers; notwithstanding which they obtained a complete victory, and put the greater part of the Sybarites to the sword, continuing the pursuit to the very gates of the city, of which they easily made themselves masters, and which they determined to destroy so entirely that it should never again be inhabited. For this purpose they turned the course of the river Crathis, so that it inundated the site of the city and buried the ruins under the deposits that it brought down. (Diod. xii. 9, 10; Strabo, vi. p. 263; Herod. v. 44; Athenae. xii. p. 521). Sycom. Ch. 537—540.) This catastrophe occurred in B.C. 510, and seems to have been viewed by many of the Greeks as a divine vengeance upon the Sybarites for their pride and arrogance, caused by their excessive prosperity, more especially for the contempt they had shown for the great festival of the Olympic Games, which they are said to have attempted to supplant by attracting the principal artists, athletes, &c., to their own public games. (Sycom. Ch. 535—540; Athen. c. c.)

It is certain that Sybaris was never restored. The surviving inhabitants took refuge at Lais and Scidrus, on the shores of the Tyrrenian sea. An attempt was indeed made, 58 years after the destruction of the city, to establish them anew on the ancient site, but they were quickly driven out by the Crotonians, and the fugitives afterwards combined with the Athenian colonists in the foundation of Thurii. [Thurii.] At the present day the site is utterly desolate, and even the exact position of the ancient city cannot be determined. The whole plain watered by the rivers Concile and Cratis (the ancient Sybaris and Crathis), so renowned in ancient times for its fertility, is now a desolate swampy tract, pestilential from malaria, and frequented only by vast herds of buffaloes, the usual accomplishment in Southern Italy of all such pestiferous regions. The circumstance mentioned by Strabo that the river Crathis had been turned from its course to inundate the city, is confirmed by the accidental mention in Herodotus of the dry channel of the Cratis (φακα των έγγορ Κράθης, Herod. v. 44); and this would sufficiently account for the disappearance of all traces of the city. Swinburne indeed tells us that some "degraded fragments of aqueducts and tombs" were still visible on the peninsula formed by the two rivers, and were pointed out as the ruins of Sybaris, but these, as he justly observes, being built of brick, are probably of Roman times and have no connection with the ancient city. Keay [Craven, on the other hand, speaks of "a wall sometimes visible in the bed of the Crathis when the water is very low" as being the only remaining relic of the ancient Sybaris. (Swinburne's Travels, vol. i. pp. 290—292; Craven's Southern Tour, pp. 217, 218.) The ruins marked on Zamani's large map as Παλαία Σύβαρι are probably those of Thurii [Thurii]. But it is certain that the locality has never yet been thoroughly examined, and it is probable that some light may even yet be thrown upon the site of the city of Sybaris; especially if the river of which it is the situation should ever be reclaimed and cultivated. There is no doubt that if this were done, it would again be a tract of surpassing fertility; it is cited as such by Varro, who tells us that "in Sybaritan" wheat was said to produce a hundred-fold. (Var. R. R. i. 44.) Even at the present day the drier spots produce very rich crops of corn. (Swinburne, l. c.)

The river Sybaris was said to be so named by the Greek colonists from a fountain of that name at Bura in Achaia (Strab. viii. p. 386); it had the property, according to some authors, of making horses shy that drank of its waters. (Paus. Arist. Mi-rab. 169; Strabo. vi. p. 265.) It is a considerable stream, and has its sources in the Apennines near Murano, flows beneath Castravillari, and receives several minor tributary streams before it joins the Crathis. [E. H. B.]

COIN OF SYBARIS.

SYBOTA. [Corcyra, p. 670.]

SYBHTIA (Σύβητα, Scyl. p. 18; Συβητα, Pol. iii. 17, § 10; Συβηταρ, Hierocles; Συβηταρ, Polyb. ap. Steph. B. s. v.: Eth. Συβηταρ, E. Sch., Corp. Inscr. vol. ii. p. 657), a town of Crete, S. M. from Eleutherna (Pent. Tab.), and famous for its numerous and beautiful silver coins, which, though some of them belong to a very early period, are the finest specimens of the Cretan mint; the types are always connected with the worship of Dionysus or Hermes. (Eckel, vol. ii. p. 320.) [E. B. J.]

SYCAMINA (Συκαμίνη νόλας), a city of Palestine, placed by Strabo between Acre (Ἀκρα) and Caesarea Palestine (Στράτατος θύρας), the name of which alone remained in his time. There were, he says, many such: of which he specifies this and En-colon (Βοσκόλαν) and Crocodium (Κροκόκλατον). (Strab. xvii. p. 758.) It was here that Ptolemy La-thyrus, son of Cleopatra, landed the army of 30,000 men whom he had brought from Cyprus to besiege Ptolemais, which would imply that it was not far distant from Acre (Ἰολείπιος, lib. xiii. 13. § 3). The Itinerary of Antoninus makes it xxiv. M. from Ptolemais, xx. M. from Caesarea; the Jerusalem Itinerary xv. M. P. from Ptolemais, xvi. from Caesarea. (Wesseling, pp. 149, 584.) The best-named authority places it at Mount Carmel, thereby justifying its identification with the modern Kafra or Heifa, followed by Reichard, Mannert, and Kiepert, rather than with Attil, suggested by Lapie. Indeed the testimony of Eusebius would seem to be conclusive on this point,
as he speaks of a village of this name (Συμαοθός) on the coast between Ptolemais and Caesarea, near Mount Carmel, called also Hepha (Ἡφα) in his day. (Onomast. s. m. Λαφέθ.) Dr. Wilson, however, thinks that the modern Haifa “more probably occupies the site of the ‘Mutatio Calamon’, given in the Jerusalem Itinerary as 12 Roman miles from Ptolemais, while the ‘Manio Serramone’ of the same work was 3 miles further on. Ruins have been discovered along the shore, about 2 Roman miles to the W. of Haifa;...these ruins may have been those of Sycamene.” (Lauds of the Bible, vol. ii. p. 241.) Haifa is a small walled town to the S. of the Bay of Acre, at the northern base of the promontory of Mount Carmel, distant about 10 miles from Ptolemais (Acre); a distance far too small to satisfy the statement of the Itinerary of Antoninus, or even that of the Jerusalem Itinerary. But, notwithstanding this, its identity with Sycamene seems to be sufficiently established by the testimony of Eusebius, joined to the historical fact recorded by Josephus, which better suits this than any other place on the coast, being in fact the very place where Ibrahim Pasha, when engaged in a similar enterprise against Acre, landed some of his troops and concentrated his army, in 1831, preparatory to forming the siege of the town. (Aderson, Notes on Acre, 191.)

SYCE (Σιέη), a town of Cilicia, which according to the Ravenna Geographer, who calls it Syce (i. 17), was situated between Arsinos and Celeridias. (Athen. iii. 5; Steph. B. s. v. Σιέη;) Leake (Asia Minor, p. 202) looks for its site near the modern Kiicman. [L. S.]

SYCEON, a town of Galatia, situated at the point where the river Sibesis flowed into the Sangarius. (Procop. de Aed. v. 4; Vit. Theod. Sycobas, 2; Wessal. ad Hieroc. p. 697.) [L. S.]

SYCERIUM, a town of Thessaly in the district Pelasgicis, at the foot of Mt. Ossa, which Leake identifies with Marmariaium. (Liv. xiii. 54; Leake, Northern Greece, vol. iii. p. 374.)

SYBÉI MONTES (Συβεια βρόχος, Ptol. vi. 14, § 8), a mountain chain in Scythia, running from the Tapir mountains in a NE. direction towards Imaus. [T. H. D.]

SYELOA (Συειλος; Eth. Συελισα), a coast-town in the west of Cilicia, between Coraisium and Selenus (Strab. xiv. p. 660), where the common but erroneous reading is Arsinos; Steph. B. s. v.; Ptol. vi. 8, § 1; Hieroc. p. 683; Lucan, viii. 259; Flor. iv. 2.) It should, however, be observed that Stephanus B. calls it a town of Isauria, and that Hecules assigns it to Pamphylia. Beaufort (Karamania, p. 178) observed some ruins on a steep hill in that district, which he thinks may mark the site of Syeda; and Mr. Hamilton, in his map of Asia Minor, also marks the ruins of Sydea on the same hill, a little to the south-east of Agya, the ancient Coreseum. [L. S.]

SYER (Σιεηρ, Herod. ii. 30; Strab. ii. p. 133, xvii. p. 797, seq.; Steph. B. s. v.; Ptol. vii. 5, § 15, viii. 15, § 15; Pinn. ii. 73, s. 75, v. 10. s. 11, vi. 29. s. 34; Il. Ant. p. 164), the modern Assum, was the frontier town of Aegypt to the S. Syene stood upon a peninsula on the right bank of the Nile, immediately below the Great Falls, which extend to it from Philæ. It is supposed to have derived its name from Soan, an Egyptian goddess, the Ithya of the Greeks, and of which the import is the “opener;” and at Syene Upper Aegypt was in all ages, conceived to open or begin. The quarries of Syene were celebrated for their stone, and especially for the marble called Syenite. They furnished the colossal statues, obelisks, and monolithic shrines which are found throughout Aegypt; and the tracts of the quarrymen who wrought in these 3000 years ago are still visible in the native rock. They cut off the right bank of the Nile, and a road, 4 miles in length, was cut beside them from Syene to Philæ. Syene was equally important as a military station and as a place of traffic. Under every dynasty it was a garrison town; and here were levied toll and custom on all boats passing southward and northward. The latitude of Syene—24° 5' 23"—was an object of great interest to the ancient geographers. They believed that it was seated immediately under the tropic, and that on the day of the summer solstice a vertical staff cast no shadow, and the sun's disc was reflected in a well at noonday. This statement is indeed incorrect; the ancients were not acquainted with the true tropic: yet at the summer-solstice the length of the shadow, or of the staff, could scarcely be discerned, and the northern limb of the sun's disc would be nearly vertical. The Nile is nearly 3000 yards wide above Syene. From this frontier town to the northern extremity of Aegypt it flows for more than 750 miles, but is very little navigable. The voyage from Syene to Alexandria usually occupied between 21 and 28 days in favourable weather. [W. B. D.]

SYGAMBRI. [Nicambr.]

SYLLIUM (Συλλιος), a fortified town of Pamphylia, situated on a lofty height between Aspendus and Side, and between the rivers Euremend and Cedros, at a distance of 40 stadia from the coast. (Strab. xiv. p. 667; Arrian, Asat. i. 95; Suda, p. 40; Ptol. v. 5, § 1; Hieroc. p. 679; Polyb. xxii. 17; Steph. B. mentions it under the name Ζηλασιον, while in other passages it is called Συλλιον, Ζηλασιον, and Σιλλυμον.) Sir C. Fellows (Asia Minor, p. 200) thinks that the remains of a Greek town which he found in a wood on the side of a rocky hill near Bocalascovo belong to the ancient Syllium; but from his description they do not appear to exist on a lofty height. [L. S.]

SYMAETHUS (Συμανθος; Simeoto), one of the most considerable towns of Sicily, which rises in the chain of Mons Nebrodes, in the great forest now called the Bosco di Caronia, and flows from thence in a southerly direction, skirting the base of Aetna, till it turns to the E. and flows into the sea about 8 miles S. of Catania. In the lower part of its course it formed the boundary between the territory of Leonini and that of Catana. (Thuc. vi. 63.) It receives in its course many tributaries, of which the most considerable are, the Fiume Salso, flowing from the neighborhood of Nicotia and Trajano; probably the Cyamoneus of Polybius (i. 9), which he describes as flowing near Centuria (Centobri), and the Dittaino, which rises in the hills near Asero, the ancient Asellus. This is undoubtedly the stream called in ancient times Συμαεθος. Stephens of Byzantium apparently gives the name of Adamus to the upper part or main branch of the Syncarius itself, which flows under the walls of Adamus (Adam.). This part of the river is still called the Simeo; but in the lower part of its course, where it approaches the sea, it is now known as the Giaretta. Such differences of name are common in modern, as well as in ancient times. The Syncar-
PLAN

of

SYRACUS

1. Temple of Minerva
2. Theatre
3. Amphitheater
4. Labyrinth or Quarries
5. Fountain of Arethusa
6. Site of Apollo Tempus
7. Entrance to the Catacombs
8. Ancient bridge over the Aepheus.
SYMBOLON PORTUS.

thus it is much the most considerable river on the E. coast of Sicily, and is in consequence noticed by all the geographers (Scul. p. 4, § 13; Strab. vi. p. 272; Plin. iii. 8. s. 14; Ptol. iii. 4. § 9). It is also repeatedly alluded to by the Roman poets (Virg. Aen. ix. 534; Ovid, Fast. iv. 472; Sil. Ital. xiv. 282.)

SYMBOLON PORTUS (Συμβόλων), Ptol. iii. 6. § 2; Σωμβόλων λαός, Artian, Per. Pont. Eux. p. 29), a harbour with a narrow entrance on the N. coast of the Chersonese Tantria, between the town of Chersonese and the port of Ciusus. In ancient times it was the chief station for the pirates of the Tantrie peninsula. (Strab. vii. p. 309; Plin. iv. 12. s. 26; Anon. Per. Pont. Eux. p. 6.) Now the port of Balakaltra. (Comp. Clarke’s Travels, ii. p. 359; Pallad. ii. p. 128.)

SYMBOLUM (Συμβολομ, Dios Cass. xvi. 35), a place in the Theracian district of Eolius, in the north of the island of Eginthus. (Comp. Leake, North. Gr. iii. p. 217.)

SYMBRA (Συμβρα), a small town in Baetocina mentioned by Zosimus (iii. 27). It is probably the same as that called by Ammianus, Hucumbra (xiv. 8.)

SYME (Σύμη), an island off the coast of Caria, to the west of Cape Cynoessa, between the Cynoessa peninsula and Rhodes, at the entrance of the Sinus Schoenaus. (Hered. i. 174; Thuc. viii. 41; Strab. xiv. p. 656; Scylax, p. 38; Athen. vi. p. 262.) The island is described as 37 Roman miles in circumference, and as possessing eight harbours (Plin. v. 31, 133) and a town of the same name as the island. The island itself is very high but barren. According to Stephanius B. (s. v.; comp. Athen. vii. p. 296) Syme was formerly called Metapontus and Aegie, and obtained its latter name from Syma, a daughter of Iulcians, who, together with Chthomians, a son of Poseidon, is said to have first peopled the island. In the story of the Trojan war, Syme enjoys a kind of celebrity, for the hero Nereus is said to have gone with three ships to assist Agamemnon. (Harm. ii. ii. 671; Dictys, Cret. iv. 17; Dares Phryg. 21.) The first historical population of the island consisted of Dorians; but subsequently it fell into the hands of the Carians, and when they, in consequence of frequent droughts, abandoned it, it was for a long time uninhabited, until it was finally and permanently occupied by Argives and Lacedaemonians, mixed with Cariocines and Rhodians. (Diod. Sic. v. 33; Raoul-Rochette, Hist. des Colon. Grecques, i. p. 337, iii. p. 72.)

There are still a few but unimportant remains of the acropolis of Syme, which, however, are constantly diminished, the stones being used to erect modern buildings. (Comp. Ross, Reisen auf den Griech. Inseln, vol. iii. p. 121, foll.)

SYMPLEGEDES. [Bosporus, p. 424.]

SYNCA (Σύνκα), a small village of Babyionia noticed by Zosimus (iii. c. 23.)

SYNADNA (Συνάδνα; Eth. Συναδένα), a town of Phrygia Salutaris, at the extremity of a plain about 60 stadia in length, and covered with olive plantations. It is first noticed during the march of the census! Manlius against the Gallicaei (Liv. xviii. 17. § 24) and Cicero, (ad Att. v. 44. 5) mentions it. But a passage in Symandra on his way from Ephesus to Cilicia. In Strabo’s time (xii. p. 577) it was still a small town, but when Pliny wrote (v. 29) it was an important place, being the conventus juridicus for the whole of the surrounding country. It was very celebrated among the Romans for a beautiful kind of marble furnished by the neighbouring quarries, and which was commonly called Symadic marble, though it came properly from a place in the neighbourhood, Dokinia, whence it was more correctly called Dokiminia lapis. This marble was of a light colour, interspersed with purple veins. (Strab. l. c. Ptol. v. 2. § 24; Martial, iv. 75; Symmach. ii. 246.) There still are appearances of extensive quarries between Karon-Khan and Babekulhan, which Col. Leake (Asia Minor, p. 36) is inclined to identify with those of Symodia or Dokinia. Remains of the town of Symnda still exist under the name Eski-Tara-bissar about 3 miles to the north-west of these quarries, where they were discovered by Texier. Earlier travellers imagined they had found them at Surminda or Surmenech, or in the plain of Sandakhel. (Comp. Hamilton, Researches, i. p. 466, ii. 177; Journal of the K. Geogr. Society, vii. p. 58, viii. p. 144; Eckhel, Doctr. Num. iii. p. 172; Sestini, Num. Tet. p. 127.)

SYNNAUS (Σύνναους), a town in Phrygia Pisatacium, not far from the sources of the Maeacus, probably on the site of the modern Sinomos. (Ptol. v. 2. § 22; Secret. Hist. Ecd. vii. 3; Niepce, Hist. Ecles. xiv. 11; Concil. Chald. p. 67.)

SYRACUSA (Συρακούσα), a town in the province of Sicily, situated in a deep gorge between two hills, where Gabinius was defeated, and to which the Damatians retreated in the campaign of B.C. 34. Octavius, suspecting their intentions, sent skirmishers over the high ground while he advanced through the valley and burnt Synonidum. [E. B. J.]

SYRACUSÆ (Συρακοῦσαι; Eth. Σύρακοσοείσ), a town of Sicily, situated on a small island about midway between Catana and Cape Pachybum. Its situation exercised so important an influence upon its history and progress, that it will be desirable to describe this somewhat more fully before proceeding to the history of the city, reserving, at the same time, the topographical details for subsequent discussion.

I. Situation.

Syracuse was situated on a table-land or tabular hill, forming the prolongation of a ridge which branches off from the more elevated table-land of the interior, and projects quite down to the sea, between the bay known as the Great Harbour of Syracuse, and the more extensive bay which stretches on the N. as far as the peninsula of Thapsus or Mogrini. The broad end of the island of Ventotene, which projects from the base of the Platanius and Cape Phalium, its situation excelled so much in importance the ancient site of Eryx, as was already stated, by a narrow ridge with the table-land of the interior, but is still a marked point of separation, and was the highest point of
the ancient city, from whence the table-land slopes very gradually to the sea. Though of small elevation, this plateau is bounded on all sides by precipitous banks or cliffs, varying in height, but only accessible at a few points. It may be considered as naturally divided into two portions by a slight valley or depression running across it from N. to S., about a mile from the sea: of these the upper or triangular portion was known as Epipolae, the eastern portion adjoining the sea bore the name of Achradina, which thus forms in some degree a distinct and separate plateau, though belonging, in fact, to the same mass with Epipolae. The SE. angle of the plateau is separated from the Great Harbour by a small tract of low and level ground, opposite to which lies the island of Ortigia, a low islet about a mile in length, extending across the mouth of the Great Harbour, and originally divided by only a narrow strait from the continent, whilst its southern extremity was separated from the nearest point of the headland of Plemmyrium by an interval of about 1200 yards, forming the entrance into the Great Harbour. This last was a spacious bay, of about 5 miles in circumference; thus greatly exceeding the dimensions of what the ancients usually understood by a port, but forming a very nearly land-locked basin of a somewhat oval form, which afforded a secure shelter to shipping in all weathers; and is even at the present day one of the best harbours in Sicily. But between the island of Ortigia and the mainland to the N. of it, was a deep right-or islet, forming what was called the Lesser Port or Portus Lacris, which, though very inferior to the other, was still equal to the ordinary requirements of ancient commerce.

S. of the Great Harbour again rose the peculiar promontory of Plemmyrium, forming a table-land bounded, like that on the N. of the bay, by precipitous escarpments and cliffs, though of no great elevation. This table-land was prolonged by another plateau at a somewhat lower level, bounding the southern side of the Great Harbour, and extending from thence towards the interior. On its SE. angle and opposite to the heights of Epipolae, stood the temple of Jupiter Olympus, or the Olympum, overlooking the low marshy tract which intervenes between the two table-lands, and through which the river Anapus flows its way to the sea. The beautiful straight of the Ortygia rises in a southerly direction about 1 mile to the N. of the Olympum, and joins its waters with those of the Anapus almost immediately below the temple. From the boat of the hill crowned by the latter extends a broad tract of very low marshy ground, extending along the inner side of the Great Harbour quite to the walls of the city itself. A portion of this marsh, which seems to have formed in ancient times a shallow pool or lagoon, was known by the name of Lysimelos (Aust. Graecen. Thuc. viii. 53; Theor. Id. xii. 84) through the ancient occupation would seem to have been Syracuse (Scymn.), from whence the city itself was supposed to derive its name.

(Steph. B. s. v. Zapanes; Scymn. Ch. 284.) It is, however, uncertain whether the names of Syrako and Lysimelos may not originally have belonged to different portions of these marshes. This marshy tract, which is above a mile in breadth, extends towards the interior for a considerable distance, till it is met by the precipitous escarpments of the great table-land of the interior. The proximity of these marshes must always have been prejudicial to the healthiness of the situation; and the legend, that when Archias and Mycelles were about to found Syracuse and Catana, the latter chose health while the former preferred wealth (Steph. B. L. c.), points to the acknowledged insalubriety of the site even in its most flourishing days. But in every other respect the situation was admirable; and the prosperity of Syracuse was doubtless owing in a great degree to natural as well as political motives. It was, moreover, celebrated for the mildness and serenity of its climate, it being generally asserted that there was no day on which the sun was not visible at Syracuse (Cic. Terr. v. 10), an advantage which it is said still to retain at the present day.

II. History.

Syracuse was, with the single exception of Naxos, the most ancient of the Greek colonies in Sicily. It was a Corinthian colony, sent out from that city under a leader named Archias, son of Eugetes, who belonged to the powerful family of the Barcidae, but had been compelled to expatriate himself. According to some accounts the colony was strengthened by an admixture of Dorian or Locrian colonists with the original Carthaginian settlers; but it is certain that the Syracusans regarded themselves in all ages as of pure Carthaginian origin (Theor. Id. xv. 91), and maintained relations of the closest amity with their parent city. The colony was founded in r.c. 734, and the first settlers established themselves in the island of Ortigia, to which it is probable that the city was confined for a considerable period. (Thuc. vi. 2; Strab. vi. 299; Scymn. Ch. 279-292; Marm. Par.; concerning the date, see Clinton, F. H. vol. i. p. 164.) The name of Ortigia is evidently Greek, and derived from the well-known epithet of Dema, to whom the island was regarded as consecrated (Diod. v. 3); but the city seems to have assumed from the very beginning the name of Syrako, which was derived, as already mentioned, from the name of the adjoining marsh or lake, Syracco, doubtless an indigenous name, as it has no signification in Greek. It appears indeed that the form Syraco was used by Epicurus for the name of the city itself, but this was evidently a mere poetic license. (Strab. viii. p. 364.)

As in the case of most of the Greek colonies in Sicily, we have very little information concerning the early history and progress of Syracuse; but we may infer that it rose steadily, if not rapidly, to prosperity, from the circumstance that it continued to extend its power by the foundation of new colonies: that of Argea within 70 years after its own establishment (r. c. 664), Camarina 20 years later (r. c. 644), and Camarina 45 years afterwards, or r. c. 599. None of these colonies, however, rose to any considerable power: it was obviously the policy of Syracuse to keep them in the position of mere dependencies; and Camarina, having been made a military garrison to the parent city, was destroyed only 46 years after its foundation. (Thuc. vi. 5; Scymn. Ch. 294-296.) Syracuse was not, however, free from internal dissensions and revolutions. An obscure notice preserved to us by Thucydides indicates the occurrence of these as early as r. c. 648, which led to the expulsion of a party or clan called the Mykleis, who withdrew into exile and joined in the foundation of Himera. (Thuc. vi. 5.) Another indication of such disputes is found in Aristotele (Pol. vi. 4), and we are unable
to assign any definite place in chronology to the occurrence there alluded to. At a later period we find the government in the hands of an exclusive oligarchy called the Geomori or Gamori, who, from their name, would appear to have been the descendants of the original colonists, around whom there naturally grew up a democracy or plebs, composed of the citizens derived from other sources. At length, about the year 431 B.C., a revolution (Thuc. i. 147—148), as well as that of Hiero the younger of Hieron (c. 475—467), who, notwithstanding the more despotic character of his government, was in many respects a liberal and enlightened ruler. His patronage of letters and the arts especially rendered Syracuse one of the chief resorts of men of letters, and his court afforded shelter and protection to Archilochus, Pindar, and Bacchylides. Nor was Syracuse itself deficient in literary distinction. Epicharmus, though not a native of the city, spent all the latter years of his life there, and Sophron, the celebrated writer of minae, was a native of Syracuse, and exhibited all his principal works there. The care bestowed upon the arts is sufficiently attested by the still extant coins of the city, as well as by the accounts transmitted to us of other monuments; and there is every probability that the distinction of Syracuse in this respect commenced from the reign of Hiero. The tranquil reign of that monarch was followed by a brief period of revolution and disturbance; his brother Thrasylus having, after a short but tyrannical and violent reign, been expelled by the Syracusans, who established a popular government, B. c. 466. This was for a time agitated by fresh tumults, arising out of disputes between the new citizens who had been introduced by Gelon and the older citizens, who claimed the exclusive possession of political power; but after some time these disputes were terminated by a compromise, and the new citizens withdrew to Messana. (Diod. xi. 67, 68, 72, 73, 76.)

The civil dissensions connected with the expulsion of Thrasylus, which on more than one occasion broke out into actual hostilities, show how great was the extent which the city had already attained. Thrasylus himself, and afterwards the discontented citizens, are mentioned as occupying the Island and Achradina, both of which were strongly fortified, and had their own separate walls (Diod. xi. 68, 73); while the popular party held the rest of the city. It is evident, therefore, that there were already considerable spaces occupied by buildings outside the walls of these two quarters, which are distinctly mentioned on one occasion as "the suburbs" (τὰ προαυλία, Íb. 68). Of these, one quarter called Tyucha, which lay to the W. of Achradina, adjoining the N. slope of the table-land, is now first mentioned by name (Diod.); but there can be no doubt that the plain between the heights of Achradina and the narthexes was already occupied with buildings, and formed part of the city, though it apparently was not as yet comprised within the fortifications.

The final establishment of the democracy at Syracuse was followed by a period of about sixty years of free government, during which we are expressly told that the city, in common with the other Greek colonies in Sicily, developed its resources with great rapidity, and probably attained to its maximum of wealth and power. (Diod. xi. 68, 72.) Before the close of this period it had to encounter the severest danger it had yet experienced, and gave abundant proof of its great resources by coming off victorious in a contest with Athens, then at the very height of

VOL. II.

the article Sicily, and which are more fully detailed by all the general historians of Greece. The following summary will, therefore, be confined to those historical events which more immediately affected the city itself, as distinguished from the political vicissitudes of the state.

There can be no doubt that Syracuse continued to flourish extremely throughout the reign of Gelo and Hieron. (Thuc. i. 148—149, 485—487) as well as that of his successor Hieron (c. 475—467), who, notwithstanding the more despotic character of his government, was in many respects a liberal and enlightened ruler. His patronage of letters and the arts especially rendered Syracuse one of the chief resorts of men of letters, and his court afforded shelter and protection to Archilochus, Pindar, and Bacchylides. Nor was Syracuse itself deficient in literary distinction. Epicharmus, though not a native of the city, spent all the latter years of his life there, and Sophron, the celebrated writer of minae, was a native of Syracuse, and exhibited all his principal works there. The care bestowed upon the arts is sufficiently attested by the still extant coins of the city, as well as by the accounts transmitted to us of other monuments; and there is every probability that the distinction of Syracuse in this respect commenced from the reign of Hieron. The tranquil reign of that monarch was followed by a brief period of revolution and disturbance; his brother Thrasylus having, after a short but tyrannical and violent reign, been expelled by the Syracusans, who established a popular government, B. c. 466. This was for a time agitated by fresh tumults, arising out of disputes between the new citizens who had been introduced by Gelo and the older citizens, who claimed the exclusive possession of political power; but after some time these disputes were terminated by a compromise, and the new citizens withdrew to Messana. (Diod. xi. 67, 68, 72, 73, 76.)

The civil dissensions connected with the expulsion of Thrasylus, which on more than one occasion broke out into actual hostilities, show how great was the extent which the city had already attained. Thrasylus himself, and afterwards the discontented citizens, are mentioned as occupying the Island and Achradina, both of which were strongly fortified, and had their own separate walls (Diod. xi. 68, 73); while the popular party held the rest of the city. It is evident, therefore, that there were already considerable spaces occupied by buildings outside the walls of these two quarters, which are distinctly mentioned on one occasion as "the suburbs" (τὰ προαυλία, Íb. 68). Of these, one quarter called Tyucha, which lay to the W. of Achradina, adjoining the N. slope of the table-land, is now first mentioned by name (Diod.); but there can be no doubt that the plain between the heights of Achradina and the narthexes was already occupied with buildings, and formed part of the city, though it apparently was not as yet comprised within the fortifications.

The final establishment of the democracy at Syracuse was followed by a period of about sixty years of free government, during which we are expressly told that the city, in common with the other Greek colonies in Sicily, developed its resources with great rapidity, and probably attained to its maximum of wealth and power. (Diod. xi. 68, 72.) Before the close of this period it had to encounter the severest danger it had yet experienced, and gave abundant proof of its great resources by coming off victorious in a contest with Athens, then at the very height of 3 y
its power. The circumstances of the siege of Syracuse by the Athenians must here be related in some detail, on account of their important bearing on all questions connected with the topography of the city, and the interest they confer on its localities. At the same time it will obviously be impossible to do more than give a very brief sketch of that memorable contest, for the details of which the reader must refer to the narrative of Thucydides, with the copious illustrations of Arnold, Grote, and Col. Leake.

It was not till the spring of B.C. 414 that the siege of Syracuse was regularly commenced. But in the autumn of 415, the Athenians had already made a demonstration against the city, and sailing into the Great Harbour, effected a landing without opposition near the Olympeium, where they established their camp on the shore, and erected a temporary fort at a place called Dascon (Thuc. vi. 66; Dig. xiii. 6), apparently on the inner bank of the harbour, between the mouth of the Anapus and the bay now called the Bay of Moddala. But though successful in the battle that ensued, Nicias did not attempt to follow up his advantage, and withdrew to winter at Catana. The next spring the Athenians landed to the N. of Syracuse, at a place called Leon, about 6 or 7 stadia from the heights of Epipolae, while they established their naval station at the adjoining peninsula of Thapsus (Magna). The land troops advanced at once to occupy Epipolae, the military importance of which was felt by both parties, and succeeded in establishing themselves there, before the Syracusans could dispute them. They then proceeded to build a fort at a place called Labdaun, which is described by Thucydides as situated "on the top of the cliffs of Epipolae, looking towards Megara" (Thuc. vi. 97), and having occupied this with a garrison, so as to secure their communications with their fleet, they advanced to a place called Syce (§ 256), where they established themselves, and began to construct such a great work as a line of circumvallation across the plateau of Epipolae.* The construction of such a line was the customary mode of proceeding in Greek sieges, and it was with the special object of guarding against it that the Syracusans had in the preceding winter extended their fortifications by running a new line of wall so as to enclose the temple of Apollo Temenites (Thuc. vi. 75), which probably extended from thence down to the Great Harbour. Nevertheless the Athenian line of circumvallation was carried on so rapidly as to excite in them the greatest alarm. Its northern extremity was made to rest on the sea at a point called Trogilus (probably near the Scala Greca), and it was from thence carried across the table-land of the Epipolae, to the point nearest to the Great Harbour. Alarmed at the rapid progress of this wall, the Syracusans endeavoured to interrupt it by constructing a counter or cross wall (λειστήματα ή εγκαίνια τεῖχος), directed apparently from the wall recently erected around the temple of Apollo Temenites towards the southern cliff of Epipolae. (Thuc. vi. 99.) This wall was, however, carried by the Athenians by a sudden attack and destroyed, whereupon the Syracusans attempted a second counterwork, carried through the marshes and low ground, so as to prevent the Athenians from connecting their works on Epipolae with the Great Harbour. But this work was, like the preceding one, taken and destroyed; and the Athenians, whose fleet had meanwhile entered the Great Harbour, and established itself there, were able to construct a strong double line of wall, extending from the cliffs of Epipolae quite down to the harbour. (Ib. 100—103.) On the table-land above, on the contrary, their works were still incomplete, and especially that part of the line of circumvallation near Trogilus was still in an unfinished state when Gylippus landed in Sicily, so that that commander was able to force his passage through the lines at this point, and effect an entry into Syracuse. (Ib. vii. 2.) It is remarkable that the hill of Eurypalus, though in fact the key of the position on the Epipolae, seems to have been neglected by Nicias, and was still undefended by any fortifications.

Gylippus immediately directed his efforts to prevent the completion of the Athenian lines across the table-land, and obtained in the first instance an important advantage by surprising the Athenian fort at Labdaun. He next began to erect another cross wall, running out from the walls of the city across the plateau, so as to cross and intersect the Athenian lines; and notwithstanding repeated efforts on the part of the Athenians, succeeded in carrying this on so far as completely to cut off their line of circumvallation, and render it impossible for them to complete it. (Ib. vii. 4—6.) Both parties seem to have looked on the completion of this line as the decisive point of the siege; Nicias finding himself unable to capture the outwork of the Syracusans, almost despaired of success, and wrote to Athens for strong reinforcements. Meanwhile he sought to strengthen his position on the Great Harbour by occupying and fortifying the headland of Plemmynium, which had been completely encompassed by the Athenian lines. (Ib. 4.) The Syracusans, however, still occupied the Olympieum (or Polichne, as it was sometimes called) with a strong body of troops, and having, under the guidance of Gylippus, attacked the Athenians both by sea and land, though foiled in the former attempt, they took the forts which had been recently erected on the Plemmynium. (Ib. 4, 22—24.) This was a most important advantage, as it rendered it henceforth very difficult for the Athenians to supply their fleet and camp with provisions; and it is probable that it was so regarded by both parties (Ib. 25, 31): the Syracusans also subsequently gained a decisive success in a sea-fight within the Great Harbour, and were preparing to push their advantage further, when the arrival of Demostenes and Eurymemon from Athens with a powerful fleet restored for a time the superiority of the Athenians. Demostenes immediately directed all his efforts to the capture of the Syracusan counterwork on Epipolae; but meanwhile Gylippus had not neglected to strengthen his position there, by constructing three
rebuilt or forts, each of them occupied with a strong garrison, at intervals along the sloping plain of Epipolae, while a fort had been also erected at the important post of Euryalus, at the extreme angle of the heights. (Thuc. vii. 43.) So strong indeed was their position that Demosthenes despaired of carrying it by day, and resolved upon a night attack, in which he succeeded in carrying the fort at Euryalus, but was killed in his attempt upon the other outworks, and repulsed with heavy loss. (Th. 43—45.)

The failure of this attack was considered by Demosthenes himself as decisive, and he advised the immediate abandonment of the siege. But the contrary advice of Nicias prevailed; and even when increasing sickness in the Athenian camp had induced him also to consent to a retreat, his superstitious fears, excited by an eclipse of the moon, again caused them to postpone the departure. The consequences were fatal. The Syracusans now became rather the besiegers than the besieged, attacked the Athenian fleet in the Great Harbour, and cut off and destroyed the whole of their right wing under Eury- medon, in the bay of Dason. Elated with this success, they sought nothing less than the capture of the whole armament, and began to block up the mouth of the Great Harbour, from Ortygia across to Dismayryrium, by moving vessels across it. The Athenians were now compelled to abandon all their outposts and lines on the heights, and draw together their troops as close to the naval camp as possible; while they made a final effort to break through the barrier at the entrance of the harbour. But this attempt proved unsuccessful, and led to a complete defeat of the Athenian fleet. There was now no course but to retreat. The army under Nicias and Demosthenes broke up from its camp, and at first directed their course along the valley of the Anapus, till they came to a narrow pass, commanded by a precipitous ridge called the Aegean Rock (Aκρων Λίβας, Thuc. vii. 78), which had been occupied in force by the Syracusans. Failing in forcing this defile, the Athenians changed their line of retreat, and followed the road to Helorus, but after forcing in succession, though not without heavy loss, the passage of the two rivers Cymeraris and Erines, and reaching the banks of the Asinaraus, the last survivors of the Athenian fleet were compelled to lay down their arms. The whole number of pri- soners was said to amount to 7000. A trophy was erected by the Syracusans on the bank of the As-inarus, and a festival called the Asinaria instituted to commemorate their victory. (Thuc. vii. 78—87; Diod. xiii. 18, 19.)

The failure of the Athenian expedition against Syracuse seemed likely to secure to that city the unquestionable superiority among the Greek colonies in Sicily. But a new and formidable power now appeared—the Carthaginians, who were invited by the Segestans to support them against the Sicilians, but who, not content with the destruction of Selinus and Himera (n. c. 410), and with that of Agrigentum (n. c. 406), pushed forward their conquests with a view of making themselves masters of the whole island. Dionysius, then a young man, took advantage of the alarm and excitement caused by this danger to raise himself to des- potic power at Syracuse (n. c. 403), and he soon after concluded a peace with the Carthaginians, whose career of victory had been checked by a pesti- lence. The history of the reign of Dionysius at Syracuse, which continued for a period of 38 years (n. c. 405—387), cannot be here related; it is briefly given in the Eitogr. Dict., art. Dionysius, and very fully in Grote's History of Greece, vols. x. and xi.; but its influence and effects upon the city itself must be here noticed. From a very early period he turned his attention to the strengthening and fortification of the city, and exclusively to that work partly with a view to the defence of the city against external inva- sion, partly for the security of his own power. One of his first operations was to convert the island of Ortygia into a strong fortress, by surrounding it with a lofty wall, fortified with numerous towers, especially on the side where it adjoined the land, where he raised a strongly fortified front, called the Pentap- yla; while, for still further security, he constructed an interior fort or citadel within the island, which became the acropolis of Syracuse, and at the same time the residence of Dionysius and his successors in the despotism. Adjoining this he constructed within the lesser port, or Portus Laccenus, docks for his ships of war on a large scale, so as to be capable of receiving 60 triremes: while they were enclosed with a wall, and accessible only by a narrow en- trance. But not content with this, he a few years afterwards added docks for 160 more ships, within the Great Port, in the recess or bight of it which approaches most nearly to the Poines, Laccenus, and opened a channel of communication between the two. At the same time he adorned the part of the city immediately outside the island with porticoes and public buildings for the convenience of the citizens. (Diod. xiv. 7.) But his greatest work of all was the line of walls with which he fortified the heights of Epipolae. The events of the Athenian siege had sufficiently proved the vital importance of these to the safety of the city; and hence before Dionysius engaged in his great war with Carthage he deter- mined to secure their possession by a line of perma- nent fortifications. The walls erected for this pur- pose along the northern edge of the cliffs of Epipolae (extending from near Sta Fanagia to the hill of Euryalus, or Mongibellus) were 30 stadia in length, and are said to have been erected by the labour of the whole body of the citizens in the short space of 20 days. (Diod. xiv. 18.) It is remarkable that we hear nothing of the construction of a similar wall along the southern edge of the plateau of Epip- polae; though the table-land is at least as accessible on this side as on the other; and a considerable suburb called Neapolis had already grown up on this side (Diod. xiv. 9), outside of the wall of Achradina, and extending over a considerable part of the slope, which descends from the Temenitis towards the marshy plain of the Anapus. But whatever may have been the cause, it seems certain that Syracuse continued till a later period to be but imperfectly fortified on this side.

The importance of the additional defences erected by Dionysius was sufficiently shown in the course of the war with Carthage which began in b. c. 397. In that war Dionysius at first carried his arms successfully to the western extremity of Sicily, but fortune soon turned against him, and he was compelled in his turn to shut himself up within the walls of Syracuse, and trust to the strength of his fortifications. The Carthaginian general Himilco entered the Great Port with his fleet, and established his head-quarters at the Olympieum, while he not only ravaged the country outside the walls, but made himself master of one of the suburbs,
SYRACUSAE.

in which were situated the temples of Ceres and Proserpine, both of which he gave up to plunder. But the anger of the goddesses, brought on by this act of sacrilege, was believed to be the source of all the calamities that soon befell him. A pestilence broke out in the Carthaginian camp, from which they sustained very heavy losses, and Dionysius took advantage of their enfeebled state to make a general attack on their camp both by sea and land. The position occupied by the Carthaginians was very much the same as that which had been held by the Athenians. Dionysius occupied the headland of Plemnymium, on which they had erected a fort, while they had also fortified the Olympium, or Polichne, and constructed a third fort close to the edge of the Great Harbour for the protection of their fleet, which lay within the inner bay or harbour of Dacson. But Dionysius, by a sudden attack from the land side, carried both the last forts, and at the same time succeeded in burning a great part of the Carthaginian fleet, so that Himilco was compelled to abandon the enterprise, and by a secret capitulation secured a safe retreat for himself and the native Carthaginians in his army, abandoning his allies and mercenaries to their fate. (Plut. Dion. 20; Diod. xvi. 62, 63, 70–75.)

The defeat of the Carthaginian armament left Dionysius undisputed master of Syracuse, while that city held as unquestioned a pre-eminence over the other cities of Sicily; and it is probable that the city itself continued to increase in extent and population. The impregnable citadel in the island of Ortysia, constructed by the elder Dionysius continued to be the bulwark of his power, as well as that of his son and successor. Even when the citizens, in B.C. 357, opened their gates to Dion, who made a triumphal entry into Achradina, and made himself master with little difficulty of the fort on the summit of Eupolaeus, the island still held out, and Dion was compelled to resort to a blockade, having erected a line or wall of contravallation across from the lesser port to the greater, so as effectually to cut off the garrison from all communication with the interior. (Plut. Dion. 21; Diod. xvi. 12.) It was not till after the blockade had been continued for above a year that Apollon克拉ates was compelled by scarcity of provisions to surrender this stronghold, and Dion thus became complete master of Syracuse, B.C. 356. But that event did not, as had been expected, restore liberty to Syracuse, and the island citadel still remained the stronghold of the despots who successively ruled over the city. When at length Timoleon landed in Sicily (B.C. 344) Ortysia was once more in the possession of Dionysius, while the rest of the city was in the hands of Hierocles, who was supported by a Carthaginian fleet and army, with which he closely blockaded the island fortress. But the arrival of Timoleon quickly changed the face of affairs: Ortysia was voluntarily surrendered to him by Dionysius and Nean, whom he left there as commander of the garrison, by a sudden sally made himself master of Achradina also. Soon after Timoleon carried the heights of Eupolaeus by assault, and thus found himself master of the whole of Syracuse. One of the first measures he took after his success was to demolish the fortress erected by Dionysius within the island, as well as the palace of the despot himself, and the splendid monument that had been erected to him by his son and successor. On the site were erected the new courts of justice. (Plut. Timol. 22.)

Syracuse had suffered severely from the long period of civil dissensions and almost constant hostilities which had preceded its liberation by Timoleon; and one of the first cares of its deliverer was to recruit its exhausted population, not only by recalling from all quarters the fugitive or exiled citizens, but by summoning from Corinth and other parts of Greece a large body of new colonists. Such was the success of his invitation that we are assured the total number of immigrants (including of course the restored exiles) amounted to not less than 60,000. (Plut. Timol. 22, 23.) The democratic form of government was restored, and the code of laws which had been introduced by Diodes after the Athenian expedition, but had speedily fallen into neglect under the long despotism of the two Dionysii, was now revived and restored to its full vigour. (Diod. xiii. 33, xvi. 70.) At the same time a new annual magistracy was established, with the title of Amphipolis of the Olympian Jove, who was thenceforth destined, like the Archon at Athens, to give name to the year. The office was apparently a merely honorary one, but the years continued to be designated by the names of the Amphipolii down to the time of Augustus. (Diod. xvi. 70; Cic. terr. ii. 51, iv. 61.)

There can be no doubt that the period following the restoration of liberty by Timoleon was one of great prosperity for Syracuse, as well as for Sicily in general. Unfortunately it did not last long. Less than 30 years after the capture of Syracuse by Timoleon, the city fell under the despotism of Agathocles (B.C. 317), which continued without interruption till B.C. 289. We hear very little of the fortunes of the city itself under his government, but it appears that, like his predecessor Dionysius, Agathocles devoted his attention to the construction of great works and public buildings, so that the city continued to increase in magnificence. We are told, among other things, that he fortified the entrance of the lesser port, or Portus Laceums, with towers, the remains of one of which are still visible. During the absence of Agathocles in Africa, Syracuse was indeed exposed to the assaults of the Carthaginian general Hamilcar, who encamped, as Himiklo had formerly done, at Polichne, and from thence made desultory attacks upon the city, but without any important result; and having at length made a night attack upon the fort of Euryalus, he was defeated, and himself taken prisoner. (Diod. xx. 29.) After the death of Agathocles, Syracuse for a short time recovered its liberty, but soon fell again under the virtual despotism of Hierocles, and subsequently passed into the hands of successive military adventurers, till in B.C. 275, the government became vested in Hieron, the son of Hierocles, who, at first with the title of general autocrat, and afterwards with that of king, continued to reign over the city till B.C. 216. His wisdom and moderation proved a striking contrast to the despotism of several of the former rulers of Syracuse, and while his subjects flourished under his liberal and enlightened rule, external tranquillity was secured by the steadiness with which he adhered to the alliance of Rome, after having once measured his strength against that formidable power. By the treaty concluded between him and the Romans in B.C. 263, he was recognised as king of Syracuse, with the dependent towns of Acrae, Heloræ, Nactum, Megara, and Locuntia, to which was annexed Taras orium also, as an auxiliary dependency. (Diod. xxiii. Ex. H. p. 502.) Notwithstanding the small extent of his territory,
Hieron was undoubtedly a powerful prince, and Syracuse seems to have risen, during this long period of peace and tranquillity, to a high state of wealth and prosperity. He frequented the courts of foreign countries, especially with Egypt, were assiduously cultivated and extended, while the natural resources of its fertile territory were developed to the utmost by the wise and judicious regulations of Hieron, which, under the name of the Lex Hieronica, were subsequently introduced into all parts of Sicily, and continued to be observed by the Romans, in their administration of that province. At the same time the monarch had a large number of public works and buildings, including temples, gymnasiums, &c., while he displayed his wealth and magnificence by splendid offerings, both at Rome and the most noted sanctuaries of Greece. On the whole it may probably be assumed that the reiign of Hieron II. was the period when Syracuse attained its highest degree of splendour and magnificence, as well as of wealth and population.

But this state of things was abruptly changed after the death of Hieron. His grandson, Hieronimus, who succeeded him, deserted the alliance of Rome for that of Carthage, and though the young king was shortly after assassinated, the Carthaginian party continued to maintain its ascendancy at Syracuse under two leaders named Hippocrates and Epicydes, who were appointed generals with supreme power. They shut the gates against Marcellus, who was in command of the Roman armies in Sicily, and having refused all terms of accommodation, compelled him to form the siege of Syracuse, b. c. 214. (Liv. xxvi. 21—33.) The enterprise proved far more arduous than the Roman General seems to have anticipated. He established his camp, as the Carthaginians had repeatedly done, on the height of the Olympieum; but his principal attacks were directed against the northern walls, in the neighbourhood of Hexapylum (the outlet of the city towards Leontini and Megara), as well as against the defences of Acharadina from the sea. His powerful fleet gave Marcellus the complete command of the sea, and he availed himself of this to bring up his ships with powerful battering-engines under the very walls which bordered the rocks of Acharadina; but all his efforts were baffled by the superior skill and science of Archimedes; his engines and ships were destroyed or sunk, and after repeated attempts, both by sea and land, he found himself compelled to abandon all active assaults and convert the siege into a blockade. (Liv. xxvi. 33, 34.)

During the winter he left the camp and army at the Olympieum, under the command of T. Quinctius Crispinus, while he himself took up his winter-quarters and established a fortified camp at Leon, on the N. side of the city. But he was unable to maintain a strict blockade by sea, and the Carthaginians succeeded in frequently throwing in supplies, so that the blockade was prolonged for more than two years, and Marcellus began to entertain little prospect of success, when in the spring of b. c. 212 an accident threw in his way the opportunity of scaling the walls by night, at a place called by Livy the Portus Trogilorum (evidently the little cove called Scuda Greco); and having thus surprised the walls he made himself master of the gate at Hexapylum, as well as of a great part of the slope of Epipolae. But the strong fort of Euryalus, at the angle of Epipolae, defied his efforts, and the walls of Acharadina, which still retained its separate fortifications, enabled the Syracusans to hold possession of that important part of the city, as well as of the island and fortress of Ortygia. The two quarters of Tyca and Neapolis were, however, surrendered to him, and given up to plunder, the citizens having hidden much money for their lives; and shortly after Philomedes, who commanded the garrison of Euryalus, having no hopes of relief, surrendered that important post also into the hands of Marcellus. (Liv. xxvi. 23—25.)

The Roman general was now in possession of the whole heights of Epipolae, and being secured from attacks in the rear by the possession of Euryalus, he divided his forces into three camps, and endeavoured wholly to block up Acharadina. At the same time Crispinus still held the old camp on the hill of the Olympieum. (Jb. 26.) In this state of things a vigorous effort was made by the Carthaginians to raise the siege; they advanced with a large army under Himilco and Hippocrates, and attacked the camp of Crispinus; while Bomilcar, with a fleet of 150 ships, occupied the Great Harbour, and took possession of the shore between the city and the mouth of the Anapus, at the same time that Epicydes made a vigorous sally from Acharadina against the lines of Marcellus. But they were repulsed at all points, and though they continued for some time to maintain their army in the immediate neighbourhood of the city, it was soon attacked by a pestilence, arising from the marshy nature of the low grounds in which they were encamped, to which both Hippocrates and Himilco fell victims, with a great part of their troops. Bomilcar, also, who had quitted the port with the view of obtaining reinforcements from Carthage, never returned, and Epicydes, who had gone out to meet him, abandoned the city to its fate, and withdrew to Agrigentum. The defence of Syracuse was now entrusted to the leaders of the mercenary troops, and one of these, a Spaniard named Mericus, betrayed his post to Marcellus. A body of Roman troops was landed in the night at the extremity of the island, near the fountain of Arethusa, and quickly made themselves masters of the whole of Ortygia; while Marcellus, having at the same time made a general assault on Acharadina, succeeded in carrying a portion of that quarter also. The remaining part of the city was now voluntarily surrendered by the inhabitants; and Marcellus, after taking precautions to secure the royal treasures, and the houses of those citizens who had been favourable to the Romans, gave up the whole city to be pillaged by his soldiers. Archimedes, who had contributed so much to the defence of the city, was accidentally slain in the confusion. The plunder was said to be enormous; and the magnificent statues, pictures, and other works of art which were carried by Marcellus to Rome, to adorn his own triumph, are said to have given the first impulse to that love of Greek art which afterwards became so prevalent among the Romans. (Liv. xxvi. 26—31, 40; Plut. Marc. 14—19; Diod. xxxvi. 15—20.)

From this time Syracuse sank into the ordinary condition of a Roman provincial town; but it continued to be the unquestionable capital of Sicily, and was the custos residence of the Roman praetors who were sent to govern the island, as well as of one of the two quaestors who were charged with its financial administration. Even in the days of Cicero it is spoken of by that orator as "the greatest of Greek cities, and the most beautiful of all cities." (Cic. Verr. iv. 52.) Its public buildings had apparently suffered little, if at all, from its capture by
Marcellus, and were evidently still extant in the days of the orator, who enumerates most of them by name. All the four quarters of the city, the Island, Achradina, Tycha, and Neapolis, were still well inhabited; though as a measure of precaution no persons of native Syracusan extraction were permitted to dwell in the Island. (v. 40.) But the wretchedness of the town had not suffered a severe shock in the time of Sextus Pompeius, who, according to Strabo, inflicted upon it injuries, from which it appears never to have recovered. Such was its decayed condition that Augustus endeavoured to recruit it by sending thither a Roman colony (n. c. 21). But the new settlers were confined to the Island and to the part of the city immediately adjoining it, forming a portion only of Achradina and Neapolis. (Strab. p. 270; Dion. Cass. liv. 7; Plin. iii. S. a. 14.) It is in this part of the town that the amphitheatre and other edifices of Roman construction are still found.

But though greatly fallen from its former splendour, Syracuse continued throughout the Roman Empire to be one of the most considerable cities of Sicily, and still finds a place in the 4th century in the Ordo Nobilium Urbium of Ausonius. The natural strength of the Island as a fortress rendered it always a post of the utmost importance. After the fall of the Western Empire, it fell with the empire under the dominion of the Goths, but was recovered by Belisarius in A. D. 535, and annexed to the dominions of the Byzantine emperors, in whose hands it continued till the 9th century, when it was finally wrested from them by the Arabs or Saracens. Syracuse was, with the single exception of Tarannonium, the last place in Sicily that fell into the hands of these invaders: it was still a very strong fortress, and it was not till 878, more than fifty years after the Saracens first landed, that it was compelled to surrender, after a siege of nine months' duration. The inhabitants were put to the sword, the fortifications destroyed, and the city given up to the flames. Nor did it ever recover from this calamity, though the Island seems to have always continued to be inhabited. Its fortifications were strengthened by Charles V. and assumed very much their present appearance. The modern city, which is still confined to the narrow limits of the Island, contains about 14,000 inhabitants. On the whole width of the expanse on the opposite side of the strait, as well as the broad table-land of Achradina and Epipale, are now wholly bare and desolate, being in great part uncultivated as well as uninhabited.

III. Topography.

The topographical description of Syracuse as it existed in Syria is of course a subject of great interest which Cicero, who has described it in unusual detail, "You have often heard (says he) that Syracuse was the largest of all Greek cities, and the most beautiful of all cities. And it is so indeed. For it is both strong by its natural situation and striking to behold, from whatever side it is approached, whether by land or sea. It has two ports, as it were, enclosed within the buildings of the city itself, so as to combine with it from every point of view, which have different and separate entrances, but are united and conjunct together at the opposite extremity. The junction of these separates from the mainland the part of the town which is called the I-land, but this is reunited to the continent by a bridge across the nar-
for the purpose of facilitating the communication with "the outer city," as that on the mainland was then called. At a later period it was again severed from the land, probably by the elder Dionysius, when he constructed his great docks in the two harbors. It was, however, undoubtedly always connected with the mainland by a bridge, or series of bridges, as it is at the present day. The citadel or castle, con-
structed by Dionysius, stood within the island, but immediately fronting the mainland, and closely ad-
joining the docks or navaieis in the Lesser Port. Its front towards the mainland, which appears to have been strongly fortified, was known as the Pen-
tagon. Hence, as we learn from Cicero, it appears that this has been destroyed and the place where it stood by John Maiaceus now stands, was situ-
ted a temple of the Olympian Jove, with an altar from which it was the custom for departing sailors to take a cup with certain offerings, which they flung into the sea when they lost sight of the shield on the temple of Minerva (Polemon, ap. Athen. l. c.). Of the other edifices in the island the most remarkable were the Hexenteuchais (όδος ἐν ἥξεντεκαίνοις καλαύητος, Diod. xii. 80), built, or rather finished, by Agathocles, but the purpose and nature of which are uncertain; the public granaries, a building of so massive and lofty a construction as to serve the pur-
poses of a fortress (Liv. xxiv. 21); and the palace of king Hieron, which was afterwards made the residence of the Roman praetors (Cic. Verg. iv. 52).

The site of this is uncertain; the palace of Diony-
sius, which had been situated in the citadel con-
structed by him, was destroyed together with that
fortress by Timoleon, and a building for the courts of justice erected on the site. Hence it is probable
that Hieron, who was always desirous to court popu-
larity, would avoid establishing himself anew upon
the same site. No trace now remains of the ancient
walls or works on this side of the island, which
have been wholly covered and concealed by the mo-
dern fortifications. The remains of a tower are,
however, visible on a small or rock near the N. angle
of the modern city, which are probably those of one
of the towers built by Agathocles to guard the en-
trance of the Lesser Harbour, or Portus Lacerius
(Diod. xvi. 83): but no traces have been discovered of
the corresponding tower on the other side.

2. AChRADDMA (Ἀχραδίνα, Diod., and this seems to be the more correct form of the name, though it is frequently written Acradina; both Livy and Cicero, however, give Achradia), or "the outer city," as it is termed by Timocides, was the most important and extensive of the quarters of Syracuse. It con-
sisted of two portions, comprising the eastern part
of the great triangular plateau already described, which extended from the angle of Eipopolae to
the sea, as well as the lower and more level space which extends from the foot of this table-land to the Great Harbour, and borders on the marshes of Lyamelea. This level plain, which is immediately opposite to the island of Ortgyia, is not, like the tract beyond it
extending to the Anapus, low and marshy ground, but has a rocky soil, of the same limestone with
the table-land above, of which it is as it were a lower step. Hence the city, as soon as it extended itself
beyond the limits of the island, spread at once over
this area; but not content with this, the inhabitants
occupied the part of the table-land above it nearest
the sea, which, as already mentioned in the general
description, is partly separated by a cross valley or
depression from the upper part of the plateau, or the
heights of Eipopolae. Hence this part of the city

3 y 4
was of considerable natural strength, and seems to have been early fortified by a wall. It is not improbable that, in the first instance, the name of Acharnides was given exclusively to the heights, and that these, as well as the island, had originally their own separate defences; but as the city spread itself out in the plain below, this must also have been protected by an outer wall on the side towards the marshes. It has indeed been supposed (Dio's 'Graecia antiqua,' vol. viii. p. 556) that no defence existed on this side till the time of the Athenian expedition, when the Syracuse, for the first time, surrounded the suburb of Thymistae with a wall; but no mention is found in Thucydides of so important a fact as the construction of this new line of defence down to the Great Harbour, and it seems impossible to believe that this part of the city should so long have remained unprotected.† It is probable indeed (though not certain) that the Agera was already in this part of the city, as we know it to have been in later times; and it is highly improbable that so important a part of the city would have been placed in an unfortified suburb. But still more necessary would be some such defence for the protection of the naval arsenals or dockyards in the inner bight of the Great Harbour, which certainly existed before the Athenian invasion. It seems, therefore, far more natural to suppose that, though the separate defences of Ortygia and the heights of Acharnides (Diod. xi. 67, 73) were not destroyed, the two were from an early period, probably from the reign of Gelon, united by a common line of defence, which ran down from the heights to some point near that where the island of Ortygia most closely adjoined the mainland. The existence of such a boundary wall from the time of the Athenian War is certain; and there seems little doubt that the name of Acharnides, supposing it to have originally belonged to the heights or table-land, soon came to be extended to the lower area also. Thus Dio's 'Antiqua' describes Dionysus on his return from Gela as arriving at the gate of Acharnides, where the outer gate of the city is certainly meant. (Diod. xii. 113.) It is probable that this gate which was that leading to Gela, is the same as the one called by Cicero the Portae Aegrianae, immediately outside of which he had discovered the tomb of Archimedes. (Cic. 'Tuscul. Quaest., v. 23.) But its situation cannot be determined; no distinct traces of the ancient walls remain on this side of Syracuse, and we know not how they may have been modified when the suburb of Neapolis was included in the city. It is probable, however, that the wall (as suggested by Coll. Lacce) ran from the brow of the hill near the amphitheatre in a direct line to the Great Harbour.

* These still abound in the wild pear-trees (cypris), from which the name, as suggested by Leake, was probably derived.
† The argument against this, urged by Cavallari, and derived from the existence of numerous tombs, especially the great necropolis of the catacombs, in this part of the city, which, as he contends, must have been without the walls, would prove too much, as it is certain that these tombs were ultimately included in the city; and if the ordinary custom of the Greeks was deviated from at all, it may have been so at an earlier period. In fact we know that in other cases also, as at Agrigentum and Tarentum, the custom was violated, and persons habitually buried within the walls.

SYRACUSAE.

Of the buildings noticed by Cicero as still adorning Acharnides in his day there are scarcely any vestiges; but the greater part of them were certainly situated in the lower quarter, nearest to the island and the two ports. The Forum or Agora was apparently directly opposite to the Pentaptyla or fortified entrance of the island; it was surrounded with porticoes by the elder Dionysius (Diod. xiv. 7), which are obviously these alluded to by Cicero (‘pulcherissime porticus,’ Verr. iv. 53). The temple of Jupiter Olympos, noticed by the orator, also adjoined the Agora; it was built by Heron H. (Diod. xvi. 89), and must not be confounded with the celebrated temple of the same divinity on a hill at some distance from the city. The pnytaean, which was most richly adorned, and among its chief ornaments possessed a celebrated statue of Sappho, which fell a prey to the cupidity of Verres (Cic. "Verr. iv. 53, 57), was probably also situated in the neighbourhood of the Agora; as was certainly the Timoleonteum, or monument erected to the memory of Timoleon. (Plut. Timol. 39.) The splendid sepulchral monument which had been erected by the younger Dionysius for his father, and which was destroyed after his own expulsion, seems to have stood in front of the Pentaptyla, opposite the entrance of the citadel. (Diod. xiv. 74.) A single column is still standing on this site, and the bases of a few others have been discovered, but it is uncertain to what edifice they belonged. The only other ruins now visible in this quarter of the city are some remains of Roman baths of little importance. But beneath the surface of the soil there exist extensive catacombs, constituting a complete necropolis; these tombs, as in most similar cases, are probably the work of successive ages, and can hardly be referred to any particular period. There exist, also, at two points on the slope of the hill of Acharnides, extensive quarries hewn in the rock, similar to those found in Neapolis near the theatre, of which we shall presently speak.

Traces of the ancient walls of Acharnides, crowning the low cliffs which bound it towards the sea, may be found from distance to distance along the whole line extending from the quarries of the Cuppucenii round to the little bay or cove of Sta Panagia at the NW. angle of the plateau. Recent researches have also discovered the line of the western wall of Acharnides, which appears to have run nearly in a straight line from the cove of Sta Panagia, to the steep and narrow pass or hollow way that leads up from the lower quarter to the heights above, thus taking advantage of the partial depression or valley already noticed. The cove of Sta Panagia may perhaps be the portes tropiliares of Livy (xxv. 23), though the similar cove of the Scala Greca, about half a mile further W., would seem to have the better claim to that designation. The name is evidently the same with that of Trogillus, mentioned by Thucyides as the point on the N. side of the heights towards which the Athenians directed their lines of circumvallation, but without succeeding in reaching it. (Thuc. vi. 99, vii. 2.)

3. TYCHIA (TCCY), so called, as we are told by Cicero, from its containing an ancient and celebrated temple of Fortune, was situated on the plateau or table-land W. of Acharnides, and adjoining the northern face of the cliffs looking towards Megara. Though it became one of the most populous quarters of Syracuse, no trace of its existence is found at the period of the Athenian siege; and it may fairly be assumed that there was as yet no considerable
suburb on the site, which must otherwise have materially interfered with the Athenian lines of circumvallation, while the Syracusans would naturally have attempted to protect it, as they did that of Temenitis, by a special outwork. Yet it is remarkable that Diodorus notices the name, and even speaks of it as a distinct quarter of the city, as early as B.C. 466, during the troubles which led to the expulsion of Thrasybulus (Diod. xi. 68). It is difficult to reconcile this with the entire silence of Thucydides. Tyche probably grew up after the great wall erected by Dionysius along the northern edge of the plateau, but had completed itself before it from attack. Its position is clearly shown by the statement of Livy, that Marcellus, after he had forced the Hexapyrum and scaled the heights, established his camp between Tyche and Neapolis, with the view of carrying on his assaults upon Achradina. (Liv. xxv. 25.) It is evident therefore that the two quarters were not contiguous, but that a considerable extent of the table-land W. of Achradina was still unoccupied.

4. Neapolis (Νεάπολις), or the New City, was, as its name implied, the last quarter of Syracuse which was inhabited, though, as is often the case, the New Town seems to have eventually grown up into one of the most splendid portions of the city. It may, however, well be doubted whether it was in fact more recent than Tyche; at least it appears that some portion of Neapolis was already inhabited at the time of the Athenian invasion, when, as already mentioned, we have no trace of the existence of a suburb at Tyche. But there was then already a suburb called Temenitis, which had grown up around the sanctuary of Apollo Temenites. The statue of Apollo, who was worshipped under this name, stood as we learn from Cicero, within the precincts of the quarter subsequently called Neapolis; it was placed, as we may infer from Thucydides, on the height above the theatre (which he calls ἄρεα Τηνεμίτεις), forming a part of the table-land, and probably not far from the southern escarpment of the plateau. A suburb had apparently grown up around it, which was surrounded by the Syracusans with a wall just before the commencement of the siege, and this outwork bears a conspicuous part in the operations that followed. (Thuc. vi. 75.) But this extension of the fortifications does not appear to have been permanent, for we find in B.C. 396 the temples of Ceres and the Cora, which also stood on the heights not far from the statue of Apollo, described as situated in a suburb of Achradina, which was taken and the temples plundered by the Carthaginian general Hilmico. (Diod. xiv. 65.) The name of Neapolis (ΣΥς Νεάπολις) is indeed already mentioned some years before (Id. xiv. 9), and it appears probable therefore that the city had already begun to extend itself over this quarter, though it as yet formed only an unfortified suburb. In the time of Cicero, as is evident from his description, as well as from existing remains, Neapolis had spread itself over the whole of the southern slope of the table-land, which here forms a kind of second step or underfall, rising considerably above the low grounds beneath, though still separated from the heights of Temenitis by a second line of cliff or abrupt declivity. The name of Temenitis for the district on the height seems to have been lost, or merged in that of Neapolis, which was gradually applied to the whole of this quarter of the city. But the name was retained by the adjoining gate, which was called the Temenitid Gate (Plut. Dion. 29, where there seems no doubt that we should read Τηνεμίτηρας for Μετεμίτηρας), and seems to have been one of the principal entrances to the city.

Of the buildings described by Cicero as existing in Neapolis, the only one still extant is the theatre, which he justly extols for its large size ("theatrum maximum," Verr. iv. 53). Diodorus also alludes to it as the largest in Sicily (xvi. 83), a remark which is fully borne out by the existing remains. It is not less than 440 feet in diameter, and appears to have had sixty rows of seats, so that it could have accommodated no less than 24,000 persons. The lower rows of seats were covered with slabs of white marble, and the several cunei are marked by inscriptions in large letters, bearing the name of king Hieron, of two queens, Philistis and Nereis, both of them historically unknown, and of two deities, the Olympian Zeus and Hercules, with the epithet of Εὐφραῖος. These inscriptions evidently belong to the time of Hieron II, who probably decorated and adorned this theatre, but the edifice itself is certainly referable to a much earlier period, probably as early as the reign of the elder Hieron. It was used not merely for theatrical exhibitions, but for the assemblies of the people, which are repeatedly alluded to as being held in it (Diod. xiii. 94; Plut. Dion. 38, Timol. 34, 38, &c.), as was frequently the case in other cities of Greece. The theatre, as originally constructed, must have been outside the walls of the city, but this was not an unusual arrangement.

Near the theatre have been discovered the remains of another monument, expressly mentioned by Diodorus as constructed by king Hieron in that situation, an altar raised on steps and a platform not less than 640 feet in length by 60 in breadth (Diod. xiv. 83). A little lower down are the remains of an amphitheatre, a structure which undoubtedly belongs to the Roman colony, and was probably constructed soon after its establishment by Augustus, as we find incidental mention of gladiatorial exhibitions taking place there in the reigns of Tiberius and Nero (Tac. Ann. xiii. 49; Val. Max. i. 7, § 8). It was of considerable size, the arena, which is the only part of which the dimensions can be distinctly traced, being somewhat larger than that of Verona. No traces have been discovered of the temples of Ceres and Libera or Proserpine on the height above: the colossal statue of Apollo Temenites had apparently no temple in connection with it, though it had of course its altar, as well as its sacred enclosure or τεμενος. The statue itself, which Verres was unable to remove on account of its large size, was afterwards transported to Rome by Tiberius (Suet. Tib. 74).

Immediately adjoining the theatre are extensive quarries, similar in character to those already mentioned in the cliffs of Achradina. The quarries of Syracuse (Latomiae or Latumine) are indeed frequently mentioned by ancient authors, and especially noticed by Cicero among the most remarkable objects in the city. (Cic. Verr. v. 27; Aelian, V. H. xii. 44.) There can be no doubt that they were originally designed merely as quarries for the extraction of the soft limestone of which the whole table-land consists, and which makes an excellent building stone; but from the manner in which they were worked, being sunk to a considerable depth, without any outlet on a level, they were found places of such security, that from an early period they were en-
ployed as prisons. Thus, after the Athenian expedition, the whole number of the captives, more than 7000 in number, were confined in these quarries (Thuc. vii. 86, 87; Diod. xiii. 33); and they continued to be used for the same purpose under successive despots and tyrants. In the days of Cicero they were used as a general prison for criminals from all parts of Sicily. (Cic. Verr. v. 27.) The orator in one passage speaks of them as constructed expressly for a prison by the tyrant Dionysius (15. 55), which is a palpable mistake if it refers to the Launtumia in general, though it is not unlikely that the despots may have made some special additions to them with that view. But there is certainly no authority for the popular tradition which has given the name of the Ear of Dionysius to a peculiar excavation of singular form in the part of the quarries nearest to the theatre. This notion, like many similar ones now become traditional, is derived only from the suggestion of a man of letters of the 16th century.

5. Eupoloe (Εὐπολει), was the name originally given to the upper part of the table-land which, as already described, slopes gradually from its highest point towards the sea. Its form is that of a tolerably regular triangle, having its vertex at Euryalus, and its base formed by the western wall of Achradina. The name is always used by Thucydides in this sense, as including the whole upper part of the plateau, and was doubtless so employed as long as the space was uninhabited; but as the suburbs of Tyche and Temenitis gradually spread themselves over a considerable part of the heights, the name of Eupoloe came to be applied in a more restricted sense to that portion only which was nearest to the vertex of the triangle. It is generally assumed that there subsequently arose a considerable town near this angle of the walls, and that this is the fifth quarter of the city alluded to by Strabo and those who spoke of Syracuse as a Pentapolis or aggregate of five cities. But there is no allusion to it as such in the passage of Cicero already quoted, or in the description of the capture of Syracuse by Marcellus; and it seems very doubtful whether there was ever any considerable population at this remote point. No vestiges of any ancient buildings remain within the walls; but the line of these may be distinctly traced along the top of the cliffs which bound the table-land both towards the N. and the S.; in many places two or three courses of the masonry remain; but the most important ruins are those at the angle or vertex of the triangle, where a spot named Mongibellius is still crowned by the ruins of the ancient castle or fort of Eupoloe (Εὐπολεῖον, Thuc., but the Doric form was Εὐπολεῖον, which was adopted by the Romans). The ruins in question afford one of the best examples extant of an ancient fortress or castle, designed at once to serve as a species of citadel and to secure the approach to Eupoloe from this quarter. The annexed plan will give a good idea of its general

PLAN OF THE FORT EURYALUS.

form and arrangement. The main entrance to the city was by a double gate (A.), flanked on both sides by walls and towers, with a smaller postern or sally-port a little to the right of it. The fortress itself was an irregular quadrangle, projecting about 200 yards beyond the approach to the gate, and fortified by strong towers of solid masonry with a deep ditch cut in the rock in front of it, to which a number of subterraneous passages gave access from within. These passages communicating with the fort above by narrow openings and stairs, were evidently designed to facilitate the sallies of the besieged without exposing the fortress itself to peril. As the whole arrangement is an unique specimen of ancient fortification a view is added of the external, or N. front of the fort, with the subterranean openings.

There can be no doubt that the fortress at Mon-
was repulsed by means of a strong garrison posted at Euryalus, who attacked his army in flank, while advancing to the attack of Epipolae. (Diod. xx. 29.)

Some writers on the topography of Syracuse have supposed the fortress of Mongibellus to be the ancient Hexanium, and that Euryalus occupied the site of Belvedere, a knoll or hill on the ridge which is continued from Mongibellus inland, and forms a communication with the table-land of the interior. But the hill of Belvedere, which is a mile distant from Mongibellus, though somewhat more elevated than the latter point, is connected with it only by a narrow ridge, and is altogether too far from the table-land of Epipolae to have been of any importance in connection with it; while the heights of Mongibellus, as already observed, form the key of that position. Moreover, all the passages that relate to Hexanium, when attentively considered, point to its position on the N. front of the heights, looking towards Megara and Thapsus; and Colonel Leake has satisfactorily shown that it was a fort constructed for the defence of the main approach to Syracuse on this side; a road which then, as now, ascended the heights at a point a short distance W. of the Scala Greca, where a depression or break in the line of cliffs affords a natural approach. (Leake, Notes on Syracuse, pp. 258, 342, &c.)

The gate at Hexanium thus led, in the first instance, into the suburb or quarter of Tychn, a circumstance completely in accordance with, if not necessarily required by, a passage in Livy (xxv. 24), where the two are mentioned in close connection.

It is more difficult to determine the exact position of Labdalem, where the Athenians erected a fort during the siege of Syracuse. The name is not subsequently mentioned in history, so that we have no knowledge of its relation to the fortifications as they existed in later times; and our only clue to its position is the description of Thucydides, that it stood "on the summit of the cliffs of Epipolae, looking towards Megara." It was probably situated (as placed by Goller and Mr. Great) on the point of those heights which forms a slightly projecting angle near the farmhouse now called Turgia. Its purpose was, doubtless, to secure the communications of the Athenians with their fleet which lay at Thapsus, as well as with the landing-place at Leon.

It was not till the reign of the elder Dionysius (as we have already seen) that the heights of Epipolae were included within the walls or fortifications of Syracuse. Nor are we to suppose that even after that time they became people like the rest of the city. The object of the walls then erected was merely to secure the heights against military occupation by an enemy. For that purpose he in b.c. 402 constructed a line of wall 30 stadia in length, fortified with numerous towers, and extending along the whole N. front of the plateau, from the NW. angle of Achradina to the hill of Euryalus. (Diod. xiv. 18.) The latter point must at the same time have been occupied with a strong fort. The north side of Epipolae was thus securely guarded; but it is singular that we hear of no similar defence for the S. side. There is no doubt that this was ultimately protected by a wall of the same character, as the remains of it may be traced all around the edge of the plateau; but the period of its construction is uncertain. The portion of the cliffs extending from Euryalus to Neapolis may have been thought sufficiently strong by nature; but this was not the case with the slope towards Neapolis, which was easily accessible. Yet this appears to have continued the weakest side of the city, as in b.c. 396 Himilco was able to plunder the temples in the suburb of Temenitis with apparently little difficulty. At a later period, however, it is certain from existing remains, that not only was there a line of fortifications carried along the upper escarpment as far as Neapolis, but an outer line of walls was carried round that suburb, which was now included for all purposes as part of the city. Strabo reckons the whole circuit of the walls of Syracuse, including the fortifications of Epipolae, at 180 stadia (Strab. vi. p. 270); but this statement exceeds the truth, the actual circuit being about 14 English miles, or 129 stadia. (Leake, p. 279.)

It only remains to notice briefly the different localities in the immediate neighbourhood of Syracuse, which are noticed by ancient writers in connection with that city. Of these the most important

* This must have been the fort on Epipolae taken by Dion, which was then evidently held by a separate garrison. (Plut. Dion. 29.)
is the OLYMPIUM, or Temple of Jupiter Olympus, which stood, as already mentioned, on a height, facing the southern front of Epipole and Neapolis, from which it was about a mile and a half distant (Liv. xxiv. 39), the interval being occupied by the marina plain on the banks of the Anapus. The sanctuary seems to have early attained great celebrity; even at the time of the Athenian expedition there had already grown up around it a small town, which was known as POLICHNE (ἡ Πολύχνη, Diod.), or the Little City. The military importance of the post, as commanding the bridge over the Anapus and the road to Helorus, as well as overlooking the marshes, the Great Harbour, and the lower part of the city, caused the Syracusans to fortify and secure it with a garrison before the arrival of the Athenians. (Thuc. vi. 75.) For the same reason it was occupied by all subsequent invaders who threatened Syracuse; by Himilco in B.C. 396, by Hamilcar in B.C. 309, and by Marcellus in B.C. 214. The remains of the temple are still visible: in the days of Claverius, indeed, seven columns were still standing, with a considerable part of the substructure (Cluer. Sicil. p. 179), but now only two remain, as these have long since fallen. They are of an ancient style, and belong probably to the original temple, which appears to have been built by the Geomorii as early as the 6th century B.C.

The adjoining promontory of Plemmyrium does not appear to have been ever inhabited, though it presents a table-land of considerable height, nor was it ever permanently fortified. It is evident also, from the account of the operations of successive Carthaginian fleets, as well as that of the Athenians, that the Syracusans had not attempted to occupy, or even to guard with forts, the more distant parts of the Great Harbour, though the docks or arsenal, which were situated in the inner bight or recess of the bay, between Ortygia and the lower part of Achradina, were strongly fortified. The southern height of the bay, which forms an inner bay or gulf, now known as the bay of STA MACHABAENA, is evidently that noticed both during the Athenian siege and that by the Carthaginians as the gulf of DASCOX. (Caes., Thuc. vi. 66; Diod. iii. 13.) The fort erected by the Athenians for the protection of their fleet apparently stood on the adjacent height, which is connected with that of the Olympium.

Almost immediately at the foot of the Olympium was the ancient bridge across the Anapus, some remains of which may still be seen, as well as of the ancient road which led from it towards Helorus, memorable on account of the disastrous retreat of the Athenians. They did not, however, on that occasion cross the bridge, but after a fruitless attempt to penetrate into the interior by following the valley of the Anapus, struck across into the Helorine Way, which they rejoined some distance beyond the Olympium. Not far from the bridge over the Anapus stood the monument of Gelon and his wife Demaret, a sumptuous structure, where the Syracusans were in the habit of paying heroic honours to their great ruler. It was adorned with nine towers of a very massive construction; but the monument itself was destroyed by Himilco, when he encamped at the adjacent Olympium, and the towers were afterwards demolished by Agathocles. (Diod. xi. 38, xiv. 63.)

About a mile and a half SW. of the Olympium is the fountain of CYANE, a copious and clear stream rising in the midst of a marsh: the sanctuary of the nymph to whom it was consecrated (τὸ τῆς Καυδής λείψον, Diod.), must have stood on the heights above, as we are told that Dionysius led his troops round to this spot with a view to attack the Carthaginian camp at the Olympium (Diod. xiv. 72); and the marsh itself must always have been impassable for troops. Some ruins on the slope of the hill to the W. of the source are probably those of the temple in question. [CYANE.] The fountain of Cyane is now called LA PISCIA: near it is another smaller source called Piamotta, and a third, known as IL CETALINO, rises between the Cyane and the Anapus. The number of these fountains of clear water, proceeding no doubt from distant sources among the limestone hills, is characteristic of the neighbourhood of Syracuse, and is noticed by Pliny, who mentions the names of four other noted sources besides the Cyane and the more celebrated Arethusa. These he calls Temenitis, Archidemia, Magaea, and Milicia, but they cannot be now identified. (Phin. iii. 8. 14.) None of these springs, however, was well adapted to supply the city itself with water, and hence an aqueduct was in early times carried along the heights from the interior of the city. The existence of this is already noticed at the time of the Athenian siege (Thuc. vi. 100); and the channel, which is in great part subterraneous, is still visible at the present day, and conveys a stream sufficient to turn a mill situated on the steps of the great theatre.

A few localities remain to be noticed to the N. of Syracuse, which, though not included in the city, are repeatedly alluded to in its history. LEON, the spot where the Athenians first landed at the commencement of the siege of Syracuse (Thuc. vi. 97), and where Marcellus established his winter quarters when he found himself unable to carry the city by assault (Liv. xxiv. 59), is probably the little cove or bay about 2 miles N. of the Scala Greca: this is not more than a mile from the nearest point of Epipole, which would agree with the statement of Thucydides, who calls it 6 or 7 stadia from thence: Livy, on the contrary, says it was 5 miles from Hexapylum, but this must certainly be a mistake. About 3 miles further N. of the promontory of Taormina (ἡ Ιδαιος, now called Mornium), a low but rocky peninsula, united to the mainland by a sandy isthmus, so that it formed a tolerably secure port on its S. side. On this account it was selected, in the first instance, by the Athenians for their naval camp and the station of their fleet, previous to their taking possession of the Great Harbour. (Thuc. vi. 97.) It had been one of the first points on the Sicilian coast occupied by Greek colonists, but these speedily removed to Megara (Thuc. vi. 4); and the site seems to have subsequently always remained uninhabited, at least there was never a town upon it. It was a low promontory, whence Virgil appropriately calls it 'Thapsus jacens.' (Virg. Aen. iii. 689; Ovid, Fast. iv. 477.) About a mile inland, and directly opposite to the entrance of the isthmus, are the remains of an ancient monument of large size, built of massive blocks of stone, and of a quadrangular form. The portion now remaining is above 20 feet in height, but it was formerly an temple, as evidenced by a column, whence the name by which it is still known of L'Aquiglia, or 'the Needle.' This monument is popularly believed to have been erected by Marcellus to commemorate the capture of Syracuse; but this is a mere conjecture, for which there is no foundation. It is probably in reality a sepulchral
SYRACUSAE.

(Syracuse) and the leading features are so clearly marked by nature that they could not fail to be recognised. But the earlier descriptions by Fazello, Bonanni, and Mirabella, are of little value. Cluverius, as usual, investigated the subject with learning and diligence; and the ground has been carefully examined by several modern travellers. An excellent survey of it was also made by British engineers in 1808; and the researches and excavations carried on by the duke of Serra di Falco, and by a commission appointed by the Neapolitan government in 1839 have thrown considerable light upon the extant remains of antiquity, as well as upon some points of the topography. These have been discussed in a separate memoir by the architect employed, Savoreto Cavallari, and the whole subject has been fully investigated, with constant reference to the ancient authors, in an elaborate and excellent memoir by Col. Lenke. The above article is based mainly upon the researches of the last author, and the local details given in the great work of the duke of Serra di Falco, the fourth volume of which is devoted wholly to the antiquities of Syracuse. (Fazello, de Reb. Sic. iv. 1; Bonanni, Le Antiche Sirausse, 2 vols. fol. Palermo, 1717; Mirabella, Dedicazione della Pianta dell’antiche Siracusa, reprinted with the preceding work; Cluver, Sicil. i, 12; D’Orville, Sicula, pp. 175—202; Smyth’s Sicily, pp. 162—176; Swinburne, Travels in the Two Sicilies, vol. ii. pp. 318—346; I. Haare, Classical Tour, vol. ii. pp. 140—176; Leake, Notes on Syracuse, in the Transactions of the Royal Society of Literature, 2nd series, vol. iii. pp. 239—354; Serra di Falco, Antichità della Sicilia, iv. vol.; Cavallari, Zur Topographie von Syrakus, 8vo. Göttingen, 1845.)

SYRACUSE (Σyracusa, Herod. iv. 123), a considerable river of European Sarmatia, which flowed from the country of the Thyssagetae through the territory of the Maeotae, and discharged itself into the Palus Maeotis. Modern geographers have variously attempted to identify it. Romell (Geogr. of Herod. p. 90) considers it to be one of the tributaries of the Wolga. Gatterer (Comment. Soc. Göt. xiv. p. 36) takes it to be the Donetz, whilst Reichard identifies it with the Irritz, and Linder (Syrthien, p. 66) with the Don itself. (T. H. D.)

SYRIA (Συρία: Eth. Σύροι), the classical name for the country whose ancient native appellation was Aram, its modern Est-Slam.

I. Name.—The name Aram (אaram), more comprehensive than the limits of Syria Proper, extends, with several qualifying adjuncts, over Mesopotamia and Chaldæa. Thus we read (1) of Aram of the two rivers, or Aram Naharaim (אaram נחרaim, LXX. τὴν Μεσοποταμίαν, Gen. xxiv. 10), equivalent to Pulu-Aram, or the Phœnic of Aram (אaram פניק, LXX. τῆς Μεσοποταμίας Συρίας, Gen. xxiv. 20, xxvii. 2, 5, 6, 7, xxxi. 18), but comprehended also a mountain district called "the mountains of the east" (Num. xxii. 5, xxxii. 7; Deut. xxiii. 4).

(2.) Aram Sobah (אaram שבף, LXX. Σαβάθ, 1 Sam. xiv. 47; 2 Sam. viii. 3, x. 6, 8). (3.) Aram of Damascus (אaram דמשק, LXX. Συρία Δαμασκοῦ, 2 Sam. viii. 5). (4.) Aram Beth-Rehob (אaram בתי-רほう, LXX. Ποιεθ, 2 Sam. x. 6, 8).

(5.) Aram Maacah (אaram מכה, LXX. Μακάχ, 1 Chron. xix. 6). Of these five districts thus distinguished, the first has no connection with this article. With regard to the second, fourth, and fifth, it is doubtful whether Sobah and Rehob were in Mesopotamia or in Syria Proper. Gesenius supposes the empire of Sobah to have been situated north-east of Damascus; but places the town, which he identifies with Nesebin, Nisibis, and Antiochia Mygdoniae, in Mesopotamia (Lex. s. v.; and Μακάχ, 2 Sam. x. 6, 8) seems rather to imply that Rehob was in Mesopotamia, Soba and Maacha in Syria Proper; for, in
the former passage, we have the Aramites of Beth-Rehob, and the Aramites of Sela, and the king of Maacah,—in the latter, Arama Naharin = Mesopotamia, and Aram Maacah and Zobah; from which we may infer the identity of Beth-Rehob and Mesopotamia, and the distinction between this latter and Maacah and Zobah: and again, the alliance between Hadadezer, king of Zobah, and the Aramites of Damascus (2 Sam. viii. 3—6; 1 Chron. xix. 3—6) would imply the contiguity of the two states; while the expedition of the former "to recover his border," on which he was urged upon at the triumph of David (ver. 3), during which David attacked him, would suggest a march from west to east through Syria, rather than in the opposite direction through Mesopotamia.

With regard to the origin of the name Aram, there are two Patriarchs in the early genealogies from whom it has been derived; one the son of Shem, the progenitor of the Hebrew race, whose other children Us, Assur, Arphaxad, and Lud, is represented by the king's races or races contiguous to Syria; while Us, the first-born son of Aram, apparently gave his name to the native land of Job, at a very early period of the world's history. (Gen. x. 22, 23.) The other Aram was the grandson of Naor, the brother of Abraham, by Keturah, whose brother Haz is by some supposed to have given his name to the country of Job, as it can scarcely admit of a doubt that the third brother, Res, was the patriarch from whom the neighbouring district took its name. (Gen. xxii. 20, 21; Job i. 1, xxii. 2.) But as we find the name Aram already applied to describe the country of Bethuel and Laban, the uncle and cousin of the later Aram, it is obvious that the country must have derived its name from the earlier, not from the later patriarch. (Gen. xxvi. 5, xxvii. 5, &c.)

The classical name Syria is commonly supposed to be an abbreviation or modification of Assyria, and to date from the period of the Assyrian subjugation of the ancient Aram; and this account of its origin is supported by the fact that the name Syria does not occur in Homer or Hesiod, who speak of the inhabitants of the country under the name of Arimi, (eir 'Apaious, Hom. II. ii. 378, Hes. Theog. v. 304.), in connection with the myth of Typhon, recorded by Strabo in describing the Orontes [Orontes]; and this writer informs us that the Syrians were called Aramari or Arimi (i. p. 42, xii. p. 627, xvi. pp. 784, 785), which name was, however, extended too far to the west or north by other writers, so as to comprehend Cilicia, and the Sarc of Scythia. (See Bochart, Geog. Sac. lib. ii. cap. 6.) Hereodes, the earliest extant writer who distinctly names the Syrians, declares the people to be identical with the Assyrians, where he is obviously speaking of the latter, making the former to be the Greek, the latter the barbarian name (vi. 63); and this name he extends as far south as the confines of Egypt,—placing Sidon, Azotus, Caditya, and, in short, the Phoenicians in general, in Syria (ii. 12, 158, 159), calling the Jews the Syrians in Palestine (i. 104); and as far west as Asia Minor, for the Cappadocians, he says, are called Syrians by the Greeks (i. 72), and speaks of the Syrians about the Thermodon and Parthenius, rivers of Bithynia (i. 104). Consistently with this early notice, Strabo, at a much later period, states that the name of Syria formerly extended from Babylonia as far as the gulf of Issus, and thence as far as the Euxine (xvi. p. 767); and in this wider sense

the name is used by other classical writers, and thus includes a tract of country on the west which was not comprehended within the widest range of the ancient Aram.

II. Natural boundaries and divisions. — The limits of Syria proper, which is now to be considered, are clearly defined by the Mediterranean on the west, the Euphrates on the east, the range of Aram and Taurus on the north, and the great Desert of Arabia on the south. On the west, however, a long and narrow strip of coast, commencing at Maacah into the road of the Tyrians, and running through the mountains of Lower Carmel, was reckoned to Phoenicia, and has been described under that name. In compensation for this deduction on the south-west, a much more ample space is gained towards the south-east, by the rapid trend away of the Euphrates eastward, between the 36th and 34th degree north lat., from near the 38th to the 41st degree of east longitude, thereby increasing its distance from the Mediterranean sea, from about 100 miles at Zaugna (6iir), to 250 miles at the boundary of Syria, so that the whole area of this part of the northern extremity of the Iasian Seas (Gulf of Iskanderun), near Issus itself, the Aramans Mora (Arama Dugh), a branch of the Taurus, runs off first in a northern direction for 18 miles, then north-east for 30 more, until it joins the main chain (Dardan Dugh), a little westward of Maacah, from whence it runs due eastward to the Euphrates. The southern line cannot be accurately described, as being marked only by an imaginary line drawn through an interminable waste of sand. This irregular trapezium may now be subdivided.

For the purposes of a physical description, the ranges of Lebanon and AntiLibanus may be assumed as landmarks towards the south, while the river Orontes affords a convenient division in the geography of the country towards the north; for the valley of the Orontes may be regarded as a continuation northward of the great cvoee of Cossyria, the watershed being in the vicinity of Bsalbek, so that "this depression extends along the whole western side of the country, having on its north and south ends, nearly 6 degrees of latitude, an almost continuous chain of mountains, from which numerous offsets strike into the interior in different directions." (Col. Chesney, Expedition for the Survey of the Euphrates and Tigris, vol. i. p. 384.)

1. The western range.—Where the range of Aramans meets the coast at the Gulf of Iskanderus, near the river Issus, it leaves only a narrow pass between its base and the sea, formerly occupied by the Armenian, Syrian, or Aonianian gates of the various geographers, which will be again referred to below. This range then advances southwards under various names, approaching or receding from the coast, and occasionally throwing out bold headlands into the sea, as at Ras Khanzer, Ras Bosot (Posidium Prom.), Ras-esh-Shakeh, &c. The part of the chain north of the Orontes is thus described by Col. Chesney (p. 384): "The base of the chain consists of masses of serpentine and shaggy rocks, rising abruptly from plains on each side, and supporting a tertiary formation, terminating with bold rugged peaks and conical summits, having at the crest an elevation of 5387 feet. The sides of this mass are occasionally furrowed by rocky fissures, or broken into valleys, between which there is a succession of rounded shoulders, either protruding through forests of pines, oaks, and larches, or diversified by the arbutus, the myrtle, oleander, and other shrubs. Some basalt
appears near Ayas, and again in larger masses at some little distance from the NE. side of the chain. . .Southward of Baalbek the chain becomes remarkable for its serrated sides and numerous summits, of which the Akkama Tagh shows about fifteen between that place and the valley of the Orontes." The sharp ridge of Jebel Khoms terminates in the rugged and serrated peak of Jebel Anfar which overlooks the sea, and separates the Gulf of Iskenderun from the Gulf of Antioch. South of this is Jebel Musa, the Mona Piersia of classic writers, a limestone escarpment from Mount Khoms, and itself imperfectly connected with the other classical mountain, Caesar, by the lower range of Jebel Sima. A little to the south of the embouchure of the Orontes, Mount Casius reaches an elevation of 5699 feet, composed of supra-cretaceous limestone, on the skirts of which, among the birch and larch woods, are still to be seen the ruins of the temple, said to have been consecrated by Cronus or Ham (Ammiannus Marcell. xxii. 14), while the upper part of its cone is entirely a naked rock, justifying its native modern name Jebel-el-Akra (the bald mountain). From this point the mountain chain continues southward, at a much lower elevation, and receding further from the coast, throws out its roots both east and west, towards the Orontes on the one side and the Mediterrenean on the other. The general name of Jebel Anfar from the tribe that inhabits it, is distinguished in its various parts and branches by local names, chiefly derived from the towns and villages on its sides or base. The southern termination of this range must be the intervening plains which Pliny places between Libanus and Bagylus ("interairesentes campi"), on the north of the former. (Thn. v. 20.) These plains Shaw finds in the Jeeme (fruitful), as the Arabs call a comparatively level tract, which "commences a small lake of Muggezul, and ends at Sunnahrah, extending itself all the way from the sea to the eastward, sometimes five, sometimes six or seven leagues, till it is terminated by a long chain of mountains. These seem to be the Mons Bargsyls of Pliny." Sunnahrah he identifies with Sinyra,—which Pliny places in Cœle-syria at the northern extremity of Mount Libanus,—but remarks that, as Sunnahrah is in the Jeeme, 2 leagues distant from that mountain, this circumstance may have misled other writers. We fall in with Area, where Mount Libanus is remarkably broken off and discontinued. (Shaw, *Travels in Syria*, pp. 268, 269, 4to ed.) We here reach the confines of Phœnicia, to which a separate article has been devoted, as also to Mount Lebanon, which continues the coast-line to the southern extremity of Syria.

2. Cœle-syria, and the valley of the Orontes. — Although the name of Cœle-syria (Hollow Syria) is sometimes extended so as to include even the coast of the Mediterranean—as in the passage above cited from Pliny—from Seleucia to Egypt and Arabia (Strabo, *ubi infra*), and especially the prolongation of the southern valley along the crevass of the Jordan to the Dead Sea (see *Ireland, Palæstina*, pp. 103, 458, 607, 774), yet, according to Strabo, the name properly describes the valley between Libanus and Anti-libanus *(xxi. 2. § 21)*, now known among the natives as El-Bâkîa *(the deep plain)*. "Under this name is embraced the valley between Lebanon and Anti-Lebanon, from El-Bâkîa southward; including the villages on the declivities of both mountains, or rather at their foot: for the eastern declivity of Lebanon is so steep as to have very few villages much above its base; and the western side of Anti-Lebanon is not more inhabited. Between Zelah and its suburb, Mœlloha, a stream called El-Bârdâny descends from Lebanon and runs into the plain to join the Litâny. The latter river divides the Bâkîa from north to south; and at its southern end passes out through a narrow gorge, between precipices in some places of great height, and finally enters the Litâny, where it is called Kishineyeh." *(Leonettes)*. To the north of the Bâkîa is the Merj *Agûn,* *(meadow of the springs)*, "between Belâb Belâbêrah and Wady-et-Teim, on the left of the Litâny. Here Lebanon and Anti-Lebanon come together, but in such a manner that this district may be said to separate rather than to unite them. It consists of a beautiful fertile plain, surrounded by hills, in some parts high, but almost everywhere arable, until you begin to descend towards the Litâny. The mountains further south are much more properly a continuation of Lebanon than of Anti-Lebanon." *(Dr. Eli Smith, in *Biblical Researches*, vol. iii. Appendix B. pp. 136, 140.)* This then is the proper termination to the south of Cœle-syria. The Merj *Agûn* terminates in the Erdî-et-Halek, which is traversed by the several tributaries of the Jordan, and extends as far south as the Bahir-et-Halek. *(Samachonites Laco; Palæstina*, pp. 521, 522.)* This range now to the watershed. Baalbek gives its name to the remainder of the Bâkîa, from the village of Zelah northward *(Smith, *ut sup. p. 143.)*, in which direction, as has been stated, the remotest sources of the Orontes are found, not far from Baalbek, which lies in the plain nearer to the range of Anti-libanus than to Lebanon. *(Orontes; Helipolises).* The copious fountain of Labeb is about 10 miles north-east of Baalbek; and this village gives its name to the stream which runs for 12 miles through a rocky desert, until it falls into the basin of a much larger stream at the village of Er-Rus or Ain Zerka, where is the proper source of the Orontes, now El-Aci. The body of water now "becomes at least threefold greater than before, and continues in its rugged chasm generally in a north-easterly course for a considerable distance, until it passes near Ribeck," then runs north through the valley of Homs, having been fed on its way by numerous streams from the ranges of Lebanon, Anti-libanus, and Anti-libanus, drawing the slopes of Jebel Anfar from it, and forming as it approaches Homs the Bahir-et-Kadès, which is 6 miles long by about 2 wide. *(Chesney, *ut sup. p. 394; Robinson, *Journal of the R. G. S.* vol. xxiv. p. 32.)* Emerging from the lake, it waters the gardens of Homs about a mile and a half to the west of the town, then running north to Er-Rustan, where is a bridge of ten arches, it is turned from its direct course by Jebel Arboln on its left bank, round the roots of which it sweeps almost in a semicircle, and enters Hamak, where it is crossed by a bridge of thirteen arches. It now continues its course north-west for about 15 miles to Kulaat-es-Sejar (Larissa), then due west for 8 miles, when it turns due north, and so continues to the Jîar Hâlid mentioned below. About 20 miles below Larissa it passes Kulaat-em-Medâlik (Apa-meia) on its right bank, distant about 2 miles; a little to the north of which it receives an affluent from the small lake El-Tel, remarkable for its abundance of black-fish and carp (Burchhardt, *Syria*, p. 143; Chesney, p. 395), then, running through Wady-et-Ghab, enters the Birket-el-Houash, 8 miles
north of Aqurnia, where its impetuosity is curbed and its waters dissipated in the mora-sea, so that it flows off in a diminished stream to Jisr Shaykh, to be again replenished in its course through the plain of 'Unuk by other affluents, until it reaches its northernmost point at Jisr Hadid (the Iron Bridge), a little below which it winds round to the west, and about 5 miles above Antioch receives from Bahir-el-Abiad (the White Sea) the Naher-el-Kovshit, a navigable river, containing a greater volume of water than the Orontes itself. It now flows to the north of Antioch and the famous groves of Daphne, through an exceedingly picturesque valley, in a south-west course to the sea, which it enters a little to the south of Solicia, after a circuitous course of about 200 miles, between 34° and 36° 15' of north latitude, 36° and 37° of east longitude.

3. Anti LIBANUS AND THE EASTERN RANGE. — The mountain chain which confines Coele Syria on the east is properly designated Anti Libanus, but it is far from being the most striking of the north and south declivities, which confine the valley of the Orontes and the Jordan valley respectively. Anti Libanus itself, now called Jebel-et-Shurkheh (Eastern Mountain), which is vastly inferior to Libanah both in majesty and fertility, has been already described, as has also its southern prolongation in Mount Hermon, now Jebel-et-Sheikh, sometimes Jebel-et-Telye (the Snow Mountain). [ANTI LIBANUS ] The northern chain, on the east of the Orontes valley, has not been sufficiently surveyed to admit of an accurate description, but there is nothing striking in the height or general aspect of the range, which throws out branches into the great desert, of which it forms the western boundary.

4. THE EASTERN DESERT. — Although for the purposes of a geographical description the whole country east of the mountain chains above described may be regarded as one region, and the insufficient materials for a minute and accurate survey make it convenient so to regard it, yet it is far from being an uniform flat, presenting throughout the same face and soil, but is diversified bysuccessions of hills and valleys, which often present large fertile tracts of arable land, cultivated in many parts by a hardy and industrious race of inhabitants. By far the richest of these is the plain of Damascus (El-Ghlatah), at the foot of the east declivity of Anti Libanus, the most excellent of the four earthly paradises of the Arabian geographers. (Dr. Eli Smith, in Bib. Rev. vol. iii. Appendix. P. 147.) It owes its beauty, not less than its fertility, to the abundance of water conveyed to it in the united streams of the Barada and the Phegh, which, issuing together from the eastern roots of Anti Libanus, and distributed into numerous rivulets, permeate the city and its thousands of gardens, and finally lose themselves in the sea of the Plain, Bahir-el-Merj, which the exploration of a recent traveller has found to consist of two lakes instead of one, as has been hitherto represented in all modern maps. (Porter, Five Years in Damascus, 1853, vol. i. pp. 377–382, and map.) Indeed, so much fresh light has been thrown on the south-west of Syria by Mr. Porter's careful surveys, that the geography of the whole country will have to be greatly modified in all future maps, as we are now, for the first time, in a position to define with some degree of accuracy the limits of several districts mentioned both by sacred and classical writers, whose relative position even has hitherto been only matter of doubtful conjecture. The statements of Burckhardt, who has hitherto been the sole authority, require considerable correction.

The Barada, the ancient Abana, from its rise in Anti Libanus, near the plain of Zebdany to its termination in the Sonth and East Lakes, is computed to traverse a distance of 42 miles, and to water a tract equal to 311 square miles, inhabited by a population of 150,000 souls, or an average of 452 to every square mile, including Damascus and its suburbs. "The prevailing rock of the mountains through which it flows is limestone. In the higher regions it is hard and compact, but near Damascus soft and chalky, with large nodules of flint intermixed. Fossil shells and corals in great variety are found along the central chain of Anti Libanus, through which the river first cuts. In the white hills near Damascus are large quantities of ammonites. At Suk Handi Barada (near its source) is a vast bed of organic Trachonites, round which they are grouped [Trachonites], particularly as this part of the country may be regarded as debatable ground between Syria, Arabia, and Palestine.

Turning now to the north of Damascus and the east of the mountain range, the country between this city and Aleppo offers nothing worthy of particular notice; indeed its geography is still a blank in the map of Syria, except its western side, which is traversed by the Huj road, the most northern part
of which has been described by Burckhardt, and its southern by the less enterprising and more accurate Porter, in more recent times. (Burckhardt, Syria, p. 121, &c.; Porter, Damascus, vol. ii. p. 350, &c.)

The northern part of Syria is now comprehended in the pushaeh of Aleppo. It is bounded on the east by the Euphrates, and on the north and west by the mountain chains of Taurus and Antaeus, the former of which throws off other diverging branches to the south, until they ultimately flank the valley of the Orontes on the east, so continuing the connection between Antilbamus and its parent stock. Aleppo itself is situated in a rich and extensive plain, separated on the east by undulating hills from the almost unoccupied country, which consists of a level sheep-track, extending from thence to the Euphrates. The sandy level of this Syrian desert is, however, diversified by occasional ranges of hills, and the plateaus are of various elevation, rising a little west of the town of Aleppo to a height of 1500 feet above the Mediterranean, and thence descending suddenly to the east and much more gradually to the west. It is on one of these ranges in the heart of the desert, northeast of Damascus, that Palmyra is situated, the only noticeable point in all the dreary waste, which has been described in an article of its own [Palmyra].

The tract between Damascus and Palmyra has been frequently explored by modern travellers, as well as the ruins themselves; but there is no better account to be found of them than in Mr. Porter's book, already so frequently referred to (vol. i. pp. 149-254; compare Irby and Mangles, pp. 257-276).

III. Ancient geographical divisions.—The earliest classical notice of Syria, which could be expected to enter into any detail, is that of Xenophon in his Anabasis. Unhappily, however, this writer's account of the march of Cyrus through the north of Syria is very brief. The following notes are all that he offers for the illustration of his ancient geography. In the ancient geographical division, Syria he mentions as the last city of Cilicia, towards Syria. One day's March of 5 parasangs brought the army to the gates of Cilicia and Syria; two walls, 3 stadia apart, the river Ceros (Keporus) flowing between, drawn from the sea to the precipitous rocks, fitted with gates, allowing a very narrow approach along the coast, and so difficult to force, even against inferior numbers, that Cyrus had thought it necessary to send for the fleet in order to enable him to turn the flank of the position, which was abandoned by the general of Artaxerxes. One day's march of 5 parasangs brought them to Myriandrus (Myriandros), a mercantile city of the Phoenicians, on the sea. Four days' march, or 20 parasangs, to the river Chalus (Xalasse), abounding in a fish held sacred by the Syrians. Six days, or 30 parasangs, to the fountains of the Daradax (al. Darles, Adamant), where were palaces and parks of Belus, governor of Syria. Three days, 15 parasangs, to the city Thapsacus on the Euphrates (Anab. i. 4. §§ 4-18). It is to be remarked that the 9 days' march of 50 parasangs beyond this is said by Xenophon to have led through Syria, where he uses that term of the Aram Naharin, of the Scriptures, equivalent to Mesopotamia. Of the places named by the historian in Syria Proper, Issus has been fully described [Issa'h]. The position of the Cilician and Syrian gates is marked by the narrow passage left between the base of the Aramus and the sea, where the ruins of the town are separated by an interval of about 600 yards, still preserve the tradition of the fortifications mentioned in the narrative. The Cerus, however, now called the Merkez-su, appears to have been diverted from its ancient channel, and runs to the sea in two small streams, one to the north of the northern wall, the other to the south of the southern. The site of Myriandrus has not yet been positively determined, but it must have been situated about half-way between Iskanderin (Alexandria) and Arvad (Rho- sus), as Strabo also intimates (see below). From this point the army must have passed the Aramus by the Belbain pass, and have marched through the plain of 'Umk, north of the lake of Antioch, where three fordable rivers, the Labatosis (Kura-su), the Oeno- parus (Aswidual), and the Arceansus (Afrin), must have been crossed on their march; which, however, are unnoticed by the historian. The river Chalus, with its sacred fish, is identified with the Chalib or Komeik; the river of Aleppo, the principal tributary to which in the mountains is still called Bobaklu- su, or Fish-river. The veneration of fish by the Syrians is mentioned also by Diodorus, Lucian, and other ancient writers. (Aipsworth, Travels in the Track of the Ten Thousand, pp. 57-65.) The source of the river Daradax, with the palaces and parks of Belesus, 30 parasangs, or 90 geographical miles, from Chalus, is marked by an ancient site called to the present day Bullis, peculiarly positioned with regard to the Euphrates, and at a point where that river would be first approached on coming across Northern Syria in a direct line trending a little southward, and corresponding at the same time with the distances given by Xenophon. (Ainsworth, l. c. p. 66.) The ruins of a Roman castle, built upon a mound of ruins of greater antiquity, doubtless preserve the site of the satrap's palace; while the rich and productive alluvial soil of the plain around, covered with grasses, flowering plants, jungle, and shrubs, and abounding in game, such as wild boars, francolins, quails, hounds, &c., represents the very large and beautiful paradise; the river Daradax, however, is reduced to a canal cut from the Euphrates, about a mile distant, which separated the large park from the mainland; and Mr. Ainsworth thinks that the fact of the fountain being 100 feet wide at its source, "tends to show that the origin of a canal is meant, rather than the source of a river" (p. 67. n. 1). Thapsacus is described in a separate article. [Thapsacus.]

For more full, but still unsatisfactory, is the description of Syria given by Strabo, a comparison of which with the later notices of Pliny and Ptolomy, illustrated by earlier histories and subsequent Itineraries, will furnish as complete a view of the classical geography of the country as the existing materials allow. The notices of Phoenicia, necessarily intermingled with those of Syria, are here omitted as having been considered in a separate article [Phoe- nicia]. On the north Syria was separated from Cilicia by Mons Ammonis. From the sea at the gulf of Issus to the bridge of the Euphrates in Commagene was a distance of 1400 stadia. On the east of the Euphrates, it was bounded by the Scenite Arabs, on the south by Arabia Felix and Egypt, on the west by the Egyptian sea as far as Issus (xvi. p. 749). He divides it into the following districts, commencing on the north: Commagene; Scona of Syria; Cilicia; Syria; Phoenice on the coast; Judaea inland. Commagene was a small ter- ritory, having Samosata for its capital, surrounded by a rich country. Scona, the fortress of Mesopo-
SYRIA.

tamia, was situated at the bridge of the Euphrates in this district, and was assigned to Commagene by Pompey. Seleucus, otherwise called Tetrapolis, the best of the before-named districts, was subdivided according to the number of its four principal cities, Seleucia of Pieria, Antioch, Antiochis, and Labois. The Orontes flowed from Coele-syria through this district, having to the east the cities of Bambycye, Beroea, and Heraclea, and the river Euphrates. Heraclea was 20 miles distant from the temple of Athena at Cyrene. This gave its name to Cyrene, which extended as far as Antiochis to the south, touched the Ammon on the north, and was subdivided with Commagenus on the east. In Cyrene were situated Gindarus and its capital, and near it Heraclea. Contiguous to Gindarus lay Pagrace of Antiochis, on the Ammon, above the plain of Antioch, which was watered by the Arcethus, the Orontes, the Labotes, and the Oenopara, in which was also the camp of Meneager; above these lay the table mount, Tripaze. On the coast were Seleucia and Mount Pithia, attached to the Ammon, and Rhosus (Porthous), between Issus and Seleucia. South of Antiochis was Apsa, lying inland; south of Seleucia Mount Caracrites and the former was divided from Seleucia by the embouchure of the Orontes and the rock-temple of the Orontes; then Posidum a small town, Heraclea, Labois, &c. The mountains east of Libanus, sloping gradually on their west side, had a steeper inclination on the east towards Apsa (named by the Macedonian Pheii) and the Chersonese, as the rich valley of the Orontes about that city was called, Conterminous with the district of Apamene, on the east, was the country of the Plain of the Armenian Parapotamia, and Chaloes, extending from the Masyas; while the Sceute Arabs also occupied the southern part, less wild and less distinctively Arab in proportion as they were brought nearer by position to the influences of Syrian civilization. (Ibid. pp. 749—753.) Then follows the description of the east, which belongs to Phœnicia (sup. p. 606). and his extraordinary mis-statement about Libanus and Antilibanus (p. 753) alluded to under those articles. According to this historian, the western termination of Libanus was on the coast, a little to the south of Tripoli, at a place called Πε ντάρων, while Antilibanus commenced at Solot. The two ranges then run parallel towards the east, until they terminated in the mountains of the Arabsians, above Damascus, and in the two Trachonitis. Between these two ranges lay the great plain of Coele-syria, divided into several districts, the width at the sea 200 stadia, the length inland about double the width; fertilized by rivers, the largest of which was the Jordan, and having a lake called Gennascusus. (The Chrysorhoas, which rises near Damascus, was almost wholly absorbed in irrigation. The Lybes and Jordan were navigated by the Arabsians. The westernmost of the plains, along the sea-board, was called Macra (Μακρα παρα), next to which was Masaas, with a hilly district in which Chelcis was situated as a kind of acropolis of the district, which commenced at Lassion and Libania. This hilly formation of the coast was held by the Ineaurus and Arabs (Πυθωρα). Above Masaas was the famed Plain (Ανάδου Βασάλας) and the country of Damascus, followed by the Trachonitis, &c. (pp. 755, 756). This very confused and inaccurate description has been sufficiently corrected in the account above given of the Physial Geo-
of the monstros Atarcati, the Derecto of the Greeks); Chalcois ad Belum, which gave its name to the region of Chalcedene, the most fertile in Syria; then Cyrrhus, named from Cyrrhus; the Gazatae, Gilead, Gabini; two Archaei, the named Grumus-
comnus; the Eunoches; Hylatia, the Iunianus and their kindred Bastarveri; the Mariamitani, the
tetarchy of Mammises, Paradisus, Paphes, Pinarites; two other Seleuciae, the one at the Ephrates, the
other at Belus; the Cardytenses. All these he places in Coele-syria: the towns and peoples enumerated
in the rest of Syria, omitting those on the Ephrates, which are separately described, are the
Arethnsii, their eonatae: Gindareni. Greeks); Commagene, w Antiochia

not intend to say that all these towns were on the river. The castle of Oromus, now called Birbec-Jik and Port William, is Urma (No. 1 in the list), to the west of which, not far from Aín Tab, is the small village of Aral, Aralitis (No. 2). (Cheesney, p. 419.)

vi. Seleucia (§ 15). 1. Gephyra. 2. Gindarua. 3. Imma. The Selene of Belqensu comprehended a small part only of that district described under the same name by Strabo, probably that tract of coast to the north of the Orontes, in which Seleucia of Pieria was situated. [Seleucia; Seleucia Piera].

vii. Causioitis (§ 16). 1. Antioch. and the Orontes. 2. Daphne. 3. Echalle. 4. Andea (al. Lydia). 5. Selene ad Blemum. 6. Lareina. 7. Eipheneia. 8. Raphaneae. 9. Antaradus. 10. Maranua. 11. Mariane. 12. Mannaga. This district comprehended the coast from the mouth of the Orontes to Aradas, so including part of Phoenicia, while to the east it extended as far as the Orontes; thus corresponding nearly with the pastoral of Tripoli in the modern division of the country. This also was part of Belqensu's Seleucia, in which he places Antioch. Of the towns cited, 7, 6, 5, 1, 2 were situated at or near the Orontes; 8, 9, and 10 on the coast (see under the names) 3, 4, 11, and 12 have not been identified.

viii. Chaldonitis (§ 17). 1. Thuru. 2. Acrarua (al. Acraria). 3. Derbiana. 4. Chalbion. 5. Selene, and, by the Ephrathae, 6. Barbarissus. 7. Aith. Chaldonitis received its name from No. 4 in the list of cities, afterwards called Beroco by Belqensu Nicater, and so designated by Strabo, situated about half-way between Antioch and Herapolis. [Beroco, No. 3.] This fixes the district to the east of Causioitis, in the pastoral of Aleppo, whose renowned capital called in Arabic Chalk, is the modern representative of Chalbion, which had resumed its ancient name as early as the time of Belqensu, unless it had rather retained it throughout among the natives. The district extended from the Orontes to the Ephrathae. The sites have not been identified.

ix. Chaldei (§ 18). 1. Chalde. 2. Asaphelidarea. 3. Tolumbeza. 4. Maronias. 5. Corea. This district lay south of Aleppo, and therefore of Chaldonitis, according to Peacock (Observations on Syria, p. 149), which is confirmed by the existence of Kannahin, which he takes to be identical in situation with Chalde, and which, among Arab writers, gives its name to this part of Syria, and to the gate of Aleppo, which leads in this direction. [Chaldei, No.1].

xi. Laodimene (§ 20). 1. Schemia Laodicea. 2. Pamodas. 3. Jarada. To the south of the town r, higher up the Orontes, also comprehended in the Seleucia of Strabo. No. 1 is identical with Strabo and Pliney's Laodicea ad Libanum, placed by Mr. Porter and Dr. Robinson at Tell Nihy Minidum on the left bank of the Orontes, near Lake Homs, Parabiass (2), still marked by a pyramid, on which are represented hunting scenes. (See above, p. 495, §1. Orontes.) Dr. Robinson so nearly agrees with this identification as to place Parabiass at Jauel-el-Kudim, which is only a few miles distant from the pyramid of Harmal to the east. (Robinson, Bib. Res. 1832, p. 556; Porter, Five Years in Damascus, vol. ii. p. 339.) Jabalos (3) is distinctly marked by Yabraud on the coast of Antihbarn. A town mentioned by writers of sacred geography as an episcopal city in the fourth century, a distinction which it still retains.

xii. Phoenicia, inland cities (§ 21). 1. Areza. 2. Palsuphobias. 3. Gaba. 4. Caesarea Pamis. These have been noticed under the articles Pho-

nath. The statement of the geographer that these were the cities of the Decapolis, preceding, as it does, the enumeration of eighteen cities, can only be taken to mean that the ten cities of the Decapolis were comprehended in the list, to it by the geographer, might be regarded as situated in that region. It is remarkable, too, that the name Coele-Syria is here used in a more restricted and proper sense than at the heading of the chapter under consideration, where it is equivalent to Syria in its widest acceptation. According to Flinn the nine cities marked by italics in the above list, with the addition of Raphana, apparently the Raphanae of Belqensu in Causioitis, properly constituted the cities of the Decapolis, according to most authorities. These and the remaining cities require a very large district to be assigned to this division of the country, comprehending the whole length of the Euphrates, i.e. Coele-Syria Proper, from Heliopolis (1) (Baalbek) to Philadelphia (17) (Ammon), and in width from Damascus almost to the Mediterranean. Abila of Lyssanna (2), has only lately been identified, and attracted the notice which it deserves, as the capital of the tetrarchy of Abila, mentioned by St. Luke, in connection perhaps with this same Lyssanna, whose name seems attached to it by the geographer. (St. Luke, iii. 1.) It is situated in the heart of Antihbarn, on the north side of the river Larcada, where the remnants of antiquity and some inscriptions leave no doubt of the identity of the site. (De Sauny, Voyage autour de la Mer Morte, vol. ii. pp. 593–604; Porter, Damascus, vol. i. pp. 13. 102, 261–273; Robinson, Bib. Res. 1832, pp. 479–484.)

myra is situated, but which is almost a blank on the map, so as to defy all attempts to identify the sites. (Robinson, Bib. Res. 1832, § 26.) 1. Germa. 2. Elera. 3. Nelea. 4. Arauma. This district will be best considered in connection with Trachonitis. [G.W.]

IV. History.—The earliest accounts which we possess of Syria represent it as consisting of a number of independent kingdoms. Thus we hear of the kings of Manæa in the time of David (2 Sam. x. 6), of the kings of the neighboring town of Gesher in the time of Solomon (19. iii. 3, xii. 37), &c. But of all the Aramean monarchies the most
powerful in the time of Saul and David was Zobah, as appears from the number of men which they brought into the field against David (Ib. viii. 4), and from the rich booty of which they were spoiled by the Israelites (Ib. v. 7). Even after sustaining a signal defeat, they were able in a little time to take the field again with a considerable force (Ib. x. 6). David nevertheless subdued all Syria, which, however, recovered its independence after the death of Solomon, n. c. 975. From this period Damascus, the history of which has been already given [DA-
MASCUS, Vol. I. p. 748], became the most con-
visible of the Syrian kingdoms. Syria was conquered by Tigrath-Pileser, king of Assyria, about the year 737 B.C., and was annexed to that kingdom. Hence it successively formed part of the Babylonian and Persian empires; but its history presents nothing remarkable down to the time of its conquest by Alexander the Great. After the death of that con-
querror in B.C. 323, Syria and Mesopotamia fell to the share of his general Seleucus Nicator. The so-
vereignty of Seleucus, however, was disputed by Antigonus, and was not established till after the battle of Ipsus, in 301 B.C., when he founded Ant-
ioch on the Orontes, as the new capital of his king-
dom. [ANTIOCHEA, Vol. I. p. 142.] From this period the descendants of Seleucus, known by the appellation of Seleucidae, occupied the throne of Syria down to the year 65 B.C., when Antiochus XIII. Asiaticus was dethroned by Pompée, and Syria became a Roman province. (Plut. Pomp. 39; Ap-
pian, Syr. 46; Entrop. vi. 14.) Into the history of Syria under the Seleucidae it is unnecessary to enter, since a table of that dynasty is given in the Dictionary of Biography [Vol. III. p. 769], and the public events will be found described in the lives of the re-
spective monarchs.
The tract of which Pompée took possession under the name of Syria comprised the whole country from the gulf of Issus and the Euphrates to Egypt and the deserts of Arabia. (Appian, Syr. 50; Mitch. 106.) The province, however, did not at first comprehend the whole of this tract, but consisted merely of a strip of land along the sea-coast, which, from the gulf of Issus to Damascus, was of slender breadth, but which to the S. of that city spread itself out as far as the town of Canatha. The rest was parcelled out in such a manner that part con-
stituted of the territories of a great number of free cities, and the rest was assigned to various petty princes, whose absolute dependence upon Rome led to their dominions being gradually incorporated into the pro-
vince. (Appian, Syr. 50.) The extent of the pro-
vince was thus continually increased during the first century of the Empire; and in the time of Ha-
drian it had become so large, that a partition of it was deemed advisable. Commagene, the most northern of the ten districts into which, according to Ptolemy (v. 15), the upper or northern Syria was divided, had become an independent kingdom before the time of Pompée's conquest, and therefore did not form part of the province established by him. [COM-
MAGENE, Vol. I. p. 651.] The extent of this pro-
vince may be determined by the free cities into which it was divided by Pompée; the names of which are known partly from their being mentioned by Josephus (Ant. xiv. 4, § 4) and partly from the era which they used, namely that of n. c. 63, the year in which they received their freedom. In this way we are enabled to determine the following cities in the original province of Syria: Antiochus, Sc-
luceia in Peria, Epiphania, between Arethusa and Eumesa, Apaneta; near all the towns of the Pho-
polis, as Abila (near Gadara), Antiochus ad Hipp.
num or Hippo, Canatha, Dima, Gadara, Pella, and Philadelphea; in Phoenicia, Tripolis, Sidon, Tyros, Dor.; in the north of Palestine, Scythopolis and Samaria; on the coast, Turris Stratonis (Caesarea), Joppe, Limnea, Azotus, Gaza; and in the south, Marissa. The gift of freedom to so many cities is not to be attributed to the generosity of the Romans, but must be regarded as a necessary measure of policy. All these towns had their special jurisdiction, and administered their own revenues; but they were tributary to the Romans, and their taxes were levied according to the Roman system established on the organisation of the province. ("Syria tum primum facta est stipendiaria," Vell. Pat. ii. 37.) The first

The same political reasons which dictated the es-
stablishment of these free cities, where it was possible to do so, rendered the continuance of dynasty governments necessary in the eastern and southern districts of the provinces, where either the nomadic character of the population, or its obstinate adherence to ancient institutions was adverse to the intro-
duction of new and regular forms of government.
These dynasties, however, like the free cities, were used as the responsible organs of the Roman ad-
ministration, and were tributaries of Rome. Thus, in the histories of Commagene and Judaea, we find instances in which their sovereigns were cited to ap-
pear at Rome, were tried, condemned, and punished. The Roman idea of a province is essentially a fin-
cial one. A province was considered as a "præsidium papitii Romani" (Cic. Terr. ii. 3); and hence the dynasties of Syria may be considered as belonging to the province just as much as the free towns, since, like them, they were merely instruments for the collection of revenue. (Cit. Hirschle, Ueber den zo-
Zeit der gahrten Jesu Christi gehaltenen Caesars, pp. 100—112.) Thus we find these petty sovereigns in other parts of the world regarding themselves merely as the agents, or procurators, of the Roman people (Sall. Jug. 14; Maffe, Mus. Terr. p. 234); nor were they allowed to subsist longer than was necessary to prepare their subjects for incorporation with the province of which they were merely ad-
juncts.
The Syrian dynasties were as follows: 1. Chaleis ad Belumn. 2. The dynasty of Arethusa and Eumesa. 3. Abila. 4. Damascus. 5. Judaea. 6. Palmyra. These states have been treated of under their re-
spective names, and we shall here only add a few particulars that may serve further to illustrate the history of some of them during the time that they were under the Roman sway. All that is essential to be known respecting the first three dynasties has been already recorded. With regard to Damascus, it may be added that M. Aurelius Saurus, the first
The governor of Syria appointed by Pompey, after having punished its ruler, the Arabian prince Aretas, for the attacks which he had made upon the province before it had been reduced to order, concluded a treaty with him in B. C. 62. It is to this event that the coins of Scæneus refer, bearing the inscrip-
tion ΞΕΝ ΑΡΕΤΑΣ.

(Eckhel, vol. v. p. 131; cf. Dion Cass. xxxvii. 15; Appian. Syr. 51; Joseph. Ant. xiv. 4. § 5, § 11.) Damascus was dependent on the Romans, and sometimes had a Roman garrison (Hieron, in Int. c. 17; Joseph. Ant. xiv. 11. § 7), though it cannot be doubted that the Arabian kings were in possession of it, on the condition of paying a tribute. It has already been remarked, that the city was in the possession of an etharch of Aretas in A.D. 39; and it was not till the year 105, when Arabia Petraea became a province, that Damascus was united with Syria, in the proconsulship of Cor-
nelius Pulfia. (Eckhel, vol. iii. p. 330.)

On the other hand, Judaea appears to have been annexed to the province of Syria immediately after its conquest by Pompey in B. C. 63 (Dion Cass. xxxvii. 15, 16; Eutrop. vi. 14; Liv. Epit. 102; Strab. xvi. p. 762, sq.; Joseph. B. J. i. 7. § 7; Ann. M. v. 14. xiii. 8. § 12; cf. Appian, Syr. 69). The capture of Jerusalem, carried to Rome to adorn his triumph (Appian, Syr. 50; Dion Cass. xxxvii. 16; Plut. Pomp. 45; Joseph. Ant. xiv. 4, &c.) Hy-
camus, the brother of Aratus, was left in Judæa as chief priest and etharch, in which office he was confirmed by Caesar; but his dignity was only that of a priest and judge. (Dion Cass. l. c.; and Joseph. l. c. and xiv. 7. § 2, 10. § 2.) The land, like the province of Syria, was divided for the con-
vincement of administration into districts or circles of an aristocratic constitution (Joseph. B. J. i. 8. § 5); and during the constant state of war in which it was kept either by internal disorders, or by the incursions of the Arabsians and Parthians, the presence of Roman troops, and of the governor of the province himself, was almost always necessary. (Joseph. Ant. xiv. 8. § 12.)

It has been already remarked [Jerusalem, Vol. i. p. 26] that Antigonus, the son of Aratus, ob-
tained possession of the throne with the assistance of the Parthians in B. C. 40. In the following year the Parthians were expelled from Syria by Ven-
tidius (Dion Cass. xlvii. 39—41; Liv. Epit. 127); and in B. C. 38 Judæa was conquered by So-
lius, Antony’s legates, Antigonus was captured and execut-
ed, and Herod, summoned the Great, was placed upon the throne, which had been promised to him two years previously. (Dion Cass. xlix. 19—
22; Plut. Anton. 34, sqq.; Tac. Hist. v. 9; App-
ian, B. C. v. 75; Strab. xvi. p. 765.) From this time, Judæa again became a kingdom. With re-
gard to the relations of Herod to the Romans we may remark, that a Roman legion was stationed at Jer-
salem to uphold his sovereignty, that the oath of fealty was taken to the emperor, as he dealt paramount, as well as to the king, and that the absolute de-
pendence of the latter was necessarily recognized by the pay-
ment of a tribute and the providing of subsidiary troops. (Joseph. Ant. xiv. 3. § 7, xvii. 2. § 4; Appian, B. C. v. 75.) Herod, therefore, is to be regarded only as a procurator of the emperor, with the title of king. Antony assigned part of the re-
venues of Judæa to Cleopatra. (Joseph. Ant. xv. 4. §§ 2, 4.) According to an ordinance of Caesar, the places in the jurisdiction of Jerusalem, with the excep-
tion of Joppa, had to pay a yearly tribute of a fourth of all agricultural produce, which was to be delivered the following year in Sicily. The emperor then had to pay to Hyrcanus. (Ibid. xiv. 10. § 6.) In the seventh or Sabbath year, however, the tribute was interrupted. Besides this tribute, there was a captitation tax; and it was for the organising of this tax that the census mentioned in the Gospel of St. Luke (ii. 1, 2) was taken in the year of our Saviour’s birth, which appears to have been conducted by Herod’s officers according to a Roman form, cent-
nings, but without the assistance of the sons of Herod, and its subsequent history till it was incor-
porated in the province of Syria by the emperor Claudius, A. D. 44 (Tac. Ann. xiii. 23, Hist. v. 9), have been already narrated [Vol. II. p. 532], as well as the fate of Jerusalem under the emperors Titus and Hadrian. [Vol. II. p. 26, seq.]

With regard to Palmyra, the sixth of the dynasties before enumerated, we need here only add what has been already said [Vol. II. p. 336] that it was annexed to Syria by the province of Syria by the emperor Claudius, A. D. 44; and that from the name of ‘Ammon, added to it, it was incorporated in the province of Syria by the emperor Claudius, A. D. 44 (Tac. Ann. xiii. 23, Hist. v. 9), have been already narrated [Vol. II. p. 532], as well as the fate of Jerusalem under the emperors Titus and Hadrian. [Vol. II. p. 26, seq.]

Respecting the administration of the province of Syria, it may be mentioned that the series of Roman governors commences with M. Scænus, who was left there by Pompey in the year 62 B. C. with the title of quaestor pro praetore. Scænus was suc-
ceeded by two praetors, L. Bassus and P. Vestianus, 61—60, and L. Eutropius, 59—58; when, on account of the war with the Arabs, Gabinius was sent there as proconsul, with an army (Appian, Syr. 51; cf. Joseph. xiv. 4, seq., B. Jud. i. 6—8; Eckhel, vol. v. p. 131). We then find the following names: Cassius, 55—53; Cassius, his quaestor, 53—51; M. Calpurnius Bibulus, proconsul. (Dum-
man, Gesch. Rom., vol. ii. pp. 101, 118—120.) After the battle of Pharsalus, Caesar gave Syrie to Lucius Caesar, B.C. 47, who was put to death in the following year by Caecilius Bassus, proconsul of Syria at Pompey. (Ib. p. 125, iii. p. 768.) Bassus re-
tained possession of the province till the end of 44, when Cassius seized it, and assumed the title of proconsul. (Cic. ad Fam. xii. 11.) After the battle of Philippi, Antony appointed to it his lie-
utenant, L. Decius Saxa, B.C. 41, whose overthrown by the Parthians in the following year occasioned the loss of the whole province. (Dion Cass. xlvii. 24; Liv. Epit. 127.) The Parthians, however, were driven out by Verridius, another of Antony’s lieutenants, in the autumn of 39. (Dion Cass. xiv. 39—43; Liv. iv. 39; Plut. Ant. 33.) Syria continued to be governed by Antony’s officers till his defeat at Actium in 31, namely, C. Sosius, B. C. 38 (by whom, as we have said, the throne of Judæa was given to Herod), L. Munatius Plancus, B. C. 35, and L. Bibulus, B. C. 31. In B. C. 30, Octavius intrusted Syria to his legate, Q. Deltius. After the division of the provinces between the emperor and senate in B. C. 27, Syria continued to have two governors legati Augusti pro praetore, who were always consulars. (Suet. Tiber. 41; Appian, Syr. 51.) The most ac-
curate account of the governors of Syria, from B. C. 47 to A. D. 69, will be found in Norisius, Consta-
noplia Piscana. (Opp. vol. iii. pp. 424—531.) Their
residence was Antioch, which, as the metropolis of the province, reached its highest pitch of prosperity. It was principally this circumstance that induced the emperor Hadrian to divide Syria into three parts (Spart. Hadr. 14), namely: 1. Syria, which by way of distinction from the other two provinces was called Syria Cœle, Magna Syria, Syria Major, and sometimes simply Syria. (Gruter, under Syria, 1. 16; Orell. Inscr. no. 5185, 4997; Galen, de Antioch. i. 2.) Antiochium remained the capital till the time of Septimius Severus, who deprived it of that privilege on account of its having sided with Pescennius Niger, and substituted Laodicea. (25; Aedil. Cass. 9; Ulp. Dig. 50. tit. 13. s. 1. § 3); and although Caracalla procured that its rights should be restored to Antioch, yet Laodicea retained its title of metropolis, together with a small territory comprising four dependent cities, whilst Antioch, which had also been made a colony by Caracalla, was likewise called Metropolitana. (Corp. Inscr. Gr. no. 4472; Paul. Dig. 50. tit. 15. s. 5. § 5; Eckhel, ii. p. 302, sqq., 319, sq.)

II. Syria Phœnícia, or Syria Phœnicienck, under a legatus Augusti pro praetore (Morat. 2009. 1. 2; Marin. Att. &c. p. 744), consisted of three parts, with three metropolitans cities, namely: 1. Tyre, which first obtained the title of metropolis, with relation to the Roman province of Syria (Strab. xvi. p. 756; Eckhel, vol. iii. p. 356). 2. Damascus, which from the time of Hadrian it became a metropolis, with a small territory comprising five towns. (Just. Mart. Dial. c. Tyrephoen. c. 78; Tertull. adv. Marcianus, iii. 13; Eckhel, vol. iii. pp. 351—353.) 3. Palmyra, which appears to have been the residence of a procurator Cæsarea; whence we may infer that it was the centre of a fiscal circle (Notit. Diet. i. p. 82; Ulpian, Dig. 50. tit. 15. s. 1. § 5; Procop. de Aed. ii. 11; Corp. Inscr. Gr. no. 4455. 4496—4499.) A fourth metropolis, Emesa, was added under Hadriagalbus (Eckhel, iii. p. 311; Ulpian, Dig. 50. tit. 15. s. 1. § 4). Chrotontis also formed a separate circle at this time, with the village of Phama as its metropolis (Corp. Inscr. Gr. 4531; Orell. Inscr. vol. ii. p. 537, no. 5040). III. Syria Palaestina, from the time of Hadrian administered by a legatus Augusti pro praetore. (Corp. Inscr. Gr. 5143; Ulpian, Dig. 50. tit. 15. s. 1. § 1; Tact. Diet. ib. 345; cf. Ar. Ar. Diod. 10. 470; Dion. Hal. de Simpl. Medici. iv. 19; Just. Mart. Apol. i. 1; Corp. Inscr. Gr. no. 4029, 4151, &c.) Its metropolis was Caesarea, anciently Territius Stratonis (Eckhel, iii. p. 432).

This division of the province of Syria was connected with an alteration in the quarters of the three legions usually stationed in Syria. In the time of Domitian (29 B.C.) the Legio VI. Scythica was cantonized in Syria, the Legio III. Galliaca in Phœnicia, and the Legio VI. Ferrata in Syria Palaestina. The system of colonisation which was begun by Augustus, and continued into the third century of our era, was also adapted to insure the security of the province. The first of these colonies was Berenice, where Augustus settled the veterans of the Legio V. Macedonica and VII. Augusta. It was also named Julia Traiana. (Eckhel, iii. p. 565; Orell. Inscr. no. 5143; Ulpian, Dig. 50. tit. 15. s. 1. § 1; Enseh. Chron. p. 135. Secl.) Augustus also founded Heliospolis (Raadluck), which received the jus Italicum under Septimius Severus (Ulpian, l. c.; Eckhel, iii. p. 334). Under Claudius was founded Polemonis (Aege), which did not possess the jus Italicum (Ulpian, ib. § 3; Plin. v. 1.; Eckhel, iii. p. 424). Vespasian planted two colonies, Caesarea (Turris Stratonicis) and Nicopolis (Emmanua) (Paul. Dig. 50. tit. 15. s. 8. § 7); Eckhel, iii. p. 430; which latter, however, though originally a military colony, appears to have possessed neither the right, nor the name of a colony (Eckhel, iii. p. 454; Joseph. Bell. Jud. vii. 6; Sozomen, Hist. Ecclesi. v. 21.) The chief colony founded by Hadrian was Aelia Capitolina (Jerusalem), whose colonists, however, were Greeks, and therefore it did not possess the jus Italium. (Dion. Cass. Ixix. 12; Euseb. Hist. Ecclesi. vi. 6; Malalas, vi. p. 279, ed. Bonn; Ulpian, l. c. § 6.) Hadrian also probably founded Palmyra. Under Septimius Severus we have Laodicea, Tyros, and Sebastha (Samaria), of which the first two possessed the jus Italium. (Ulpian, ib. §§ 3 and 7; Eckhel, iii. p. 319, 387, seqq., 440, seqq.) Caracalla founded Antioch and Emesa (Ulpian, ib. §§ 4; Paul. ib. §§ 5; Eckhel, iii. 302, 311). Elagabalus Solon (Eckhel, iii. p. 371), and Philippus, apparently, Damascus (ib. p. 331). To these must be added two colonies whose foundation is unknown, Callipolis, of whose name we are ignorant (Paul. Dig. 50. tit. 15. s. 8. § 7; Eckhel, iii. p. 328, seqq.), and Caesarea ad Libanum (Area). (Eckhel, ib. p. 361.)

At the end of the fourth century of our era, Syria was divided into still smaller portions, namely: 1. Syria prima, governed by a consularis, with the metropolis of Antioch and the following cities: Seleucia, Laodicea, Gabala, Palto, Beroea, Chalceis. 2. Syria Secunda, under a praeses, with Apameia for its chief city, and the dependent towns of Ephesius, Arethusa, Larissa, Mariamme, Balania, Ephiphanes, and Seleucia ad Delum. Malalas (iv. 265, ed. Bonn) ascribes its separation from Syria Prima to the reign of Theodosius II., which, however, may be doubted. Böcking attributes the division to Theodosius the Great (ad Not. Dignit. i. p. 129). 3. Phœnicia Prima, under a consularis, with the metropolis of Tyros and the cities Polemonis, Sidon, Berytus, Byblos, Lydus, Tripolis, Arave, Ethina, Aradus, Antiarus, Caesarea Palaestina. 4. Phœnicia Secunda, or Phœnicia ad Libanum, under a praeses, having Damascus for its capital, and embracing the cities of Emesa, Laodicea ad Libanum, Heliopolis, Abila, Palmyra. It was first separated by Theodosius the Great. 5. Palæstina Prima, administered by a consularis, and in the years 383—385 by a proconsul. Its chief city was Caesarea, and it comprehended the towns of Dora, Antipatris, Diospolis, Azotos ad Mare, Azotos Mediterranea, Eleutheropolis, Aelia Capitolina (Jerusalem), Neapolis, Livias, Sebastha, Antiochenus, Dicoletianopolis, Zoppa, Gaza, Raphia, Ascalon, &c. 6. Palæstina Secunda, under a praeses, having the capital of Scythopolis, and the towns of Gadara, Abila, Capitoæ, Hippo, Tiberias, Dio Caesarea, and Gabal. 7. Palæstina Terra. This was formed out of the former province of Arabia. (Procop. de Aed. v. 8.) It was governed by a praeses, and its chief city was Petra. (Cf. Palæstina, Vol. i. p. 533.)

With respect to these later subdivisions of Syria, the reader may consult Hierocles, p. 397, ed. Bonn, with the notes of M. Witting, 518 seqq.; the Auctor Dignit. i. p. 5, seq., and the commentary of Böcking, pp. 128—140, 511; Bingham, Orig. Ecc. vol. iii. p. 434, seq.; Norius, de Epoch. Syrconnas. in Opp. vol. ii. p. 374, seq., p. 419, seq. 3 4
In the year 632, Syria was invaded by the Saracens, nominally under the command of Abn Obeidah, one of the "companions" of Mahomet, but really led by Chahel, "the sword of God." The easy conquest of Basra inspired the Moslems to attack Damascus; but here the resistance of the inhabitants more determined, and, though invested in 633, the city was not captured till the following year. Heraclius had been able to collect a large force, which, however, under the command of his general Werdan, was completely defeated at the battle of Aisunad; and Damascus, after that decisive engagement, though it still held out for seventy days, was compelled to yield. Heliopolis and Emesa speedily shared the fate of Basra and Damascus. The last efforts of Heraclius in defence of Syria, which of extraordinary magnitude were frustrated by the battle of the Vernich. Jerusalem, Alepia, and Damascus successively yielded to the Saracen arms, and Heraclius abandoned a province which he could no longer hope to retain. Thus in six campaigns (632-639) Syria was entirely wrested from the Roman empire. (Gibbon, Decline and Fall, ch. 51; Marquardt, Rom. Alterth. vol. iii.) [T. H. L.]

SYRIA PONTAE (Συρία πόντας), a pass between Mount Ammus and the coast of the bay of El-Tan, by which a passage from Cilicia into Syria was 3 stadia in length, and only broad enough to allow an army to pass in columns. (Xenoph. Anab. i. 4. § 4; Arrian, Anab. ii. 8; Plim. v. 18.; Ptol. v. 15. ; § 12; Strab. xiv. p. 676.) This mountain pass had formerly been closed up by both ends with walls leading from the rocks into the sea; but in the time of Alexander they seem to have existed no longer, as they are not mentioned by any of his historians. Through the midst of this pass, which is now called the pass of Berytus, flowed a small stream, which is still known under the name of Merekos, its ancient name being Cerasus. [L. S.]

SYRIA (Συρία), a headland in the Euxine, on the coast of Paphlagonia, which, to distinguish it from the larger promontory of Carambics in its vicinity, was also called ἄρησα κατήρησης. (Marcellus, p. 72; Arrian, Peripil. P. E. p. 15; Anonym. Peripil. P. E. p. 7.) Its modern name is Cape Imbrie. [L. S.]

SYKESIAN (Συκεσίαν), a town in the north-western part of Thrace, between Philippiopolis and Parembrole. [J. R.]

SYRO-PHoenice (Συρια Φοινικης). [Syria, p. 1079.]

SYROS or SYLUS (Σύρος, also Σύρης, Hom. Od. xxvi. 403, and Σύρια, Dey. Lect. i. 115; Hesych.; Suil.: Σύρης, Σύρης; Σύρης (Σύρης), and the present inhabitants call themselves Συριανος or Συριανος, not Σύροις), an island in the Armenian sea, one of the Cyclades, lying between Rheneia and Cythus, and 20 miles in circumference, according to some ancient authorities. (Plin. iv. 12. s. 22.) Syros produces good wine, but is upon the whole not fertile, and does not deserve the praises bestowed upon it by Homer (I. c.), who describes it as rich in pastures, cattle, wine, and wheat. It is usually stated upon the authority of Pliny (xxxi. 12. s. 56) that Syros produced Sil or yellow ochre; but in Silius' edition of Pliny, Syros is substituted for Syros.

Syros had two cities even in the time of Homer (Hom. Od. xxvi. 412), one on the eastern, and the other on the western side of the island. The one on the eastern side, which was called Syros (Ptol. iii. 15. § 30), stood on the same site as the modern capital of the island, which is now one of the most flourishing cities in Greece, containing 11,000 inhabitants, and the centre of a flourishing trade. In consequence of the numerous new buildings almost all traces of the ancient city have disappeared; but there were considerable remains of it when Tournefort visited the island. At that time the ancient town was abandoned, and the inhabitants had built a town upon a lofty and steep hill about a mile from the shore: this town is now called Old Syros, to distinguish it from the modern town, which has arisen upon the site of the ancient city. The inhabitants of Old Syros, who are about 6000 in number, are chiefly Catholics, and, being under the protection of France and the Pope, they took no part in the Greek revolution during its earlier years. Their neutrality was the chief cause of the modern prosperity of the island, since numerous merchants settled there in consequence of the disturbed condition of the other parts of Greece.

There are ruins of the second ancient city on the western coast, at the harbour of Maria della Grazia. Ross conjectures that its name may have been Gryne or Gryneira, since we find the Τρογρης, who are otherwise unknown, mentioned three times in the inscriptions of the town, containing lists of the tributary allies of Athens. There was also an ancient city in the island, named Eschatia. (Bieckh, Inscr. no. 2347, c.) Pherecydes, one of the early Greek philosophers, was a native of Syros. (Comp. Strab. x. pp. 485, 487; Scylax, p. 22; Steph. B. s. v.; Tournefort, Voyages, vol. i. p. 245, seq. Engl. tr.; Proskoses, Erinnerungen, vol. i. p. 53, seq.; Ross, Reisen auf den Griech. Inseln, vol. i. p. 5, seq., vol. ii. p. 24, seq.; Fießler, Reisen, vol. ii. p. 164, seq.)

SYRIA REGIO (Συρία Ρεχίον, Ptol. iv. 3), a tract on the coast of N. Africa, between the Syrtes Major and Minor, about 100 miles in length. (Strab. xvii. p. 834, sq.; Mela, i. 7.; Pim. v. 8. 4.) After the third century it obtained the name of the Region Tripolitana, from the three principal cities, which were allied together, whence the modern name of Tripoli (Not. Imp. Occid. c. 45; Procop. de Aed. iv. 3; cf. Solinus, c. 27). Mamert conjectures (x. pt. ii. p. 153) that the emperor Septimius Severus, who was a native of Leptis, was the founder of this province Tripolitana, which, according to the Not. Imp. (l. c.), was governed by its own duke (Dux) (Comp. Amm. Marc. xxviii. 6). The district was attributed to Ptolemy, Mela, and Pliny to Africa Propria; but in reality it formed a separate district, which at first belonged to the Byzantines, but was subsequently wrested from them and annexed to Carthage, and, when the whole kingdom of the latter was subjected to the Romans, formed a part of the Roman province of Africa. For the most part the soil was sandy and little capable of cultivation, as it still remains to the present day (Della Cella, Teggio, p. 50); yet on the borders of the river Cynipus and in the neighbourhood of the town of Leptis, there was some rich and productive land. (Herod. iv. 198; Scylax, p. 47; Strab. xvii. p. 835; Ovid, in Fast. ii. 7. 25.) Ptolemy mentions several mountains in the district, as Mount Gigillis or Gigius (το Υγηλός Ήγιος, iv. 3. § 20), Mount Thizibil (το Θδιζίβιλ Ήγιος, ib.) Mount Zachahari or Channahari (το Ζαχαρή Ήγιος Χανάθαρι, ib.) and Mount Vassactum or Vassacetum (το Βασακτόνος ή Βασακτονος Ήγιος, th. § 18). The more important montanies were Cephalis (Κεφαλή Ήγιος, Ptol. iv. 3. § 13), near which also, on the W., the same author
mentions another prominent, Trionon (Τριόνον or Τριώνον Δέρου, i.b.) and Zethna (τὰ Ζήθνα, i.b., § 12). The principal rivers were the Cyappa or Cydnus (Ptol. i.b., § 20), in the eastern part of the district, and the Triton, which formed its western boundary, and by which the three lakes called Tritonis, Pallas, and Libya were supplied (ib. § 19).

Besides these waters there were extensive salt lakes and marshes along the coast (Strab. l. c.; Toph. Punt. tab. vii.). The lotus is mentioned among the scantly products of this unfertile land (Plin. xxiv. 1. s. 1), and a peculiar kind of precious stones, called after the country Syrtaides gemmae, was found on the coast (vol. xxxix. 10, § 67). The tribes that inhabited the country besides the Naxamines, Pythii, and Maceae, who in the earlier times at least spread themselves over this district, were the Lotophagi (Vol. ii. p. 205), who dwelt about Syrtis Minor, and the Gindanes (Vol. i. p. 1002), who were situated to the W. of the former. Ptolemy, however, in place of these more ancient tribes, mentions others that are heard of nowhere else, as the Nigittini, Samanucyi, Nygetii, Nygeni, Elasemes, Damiotes, &c. (iv. 3, §§ 23—27). But Egyptian and Phoenician colonists had been established in a very early period with these aboriginal Libyan tribes, whom the Greeks found there when they settled upon the coast, and with whom, probably, they had for some time previously had connections. The most important towns of the Regio Syrta were the three from which it subsequently derived its name of Tripolitana, that is, Leptis Magna, Oea, and Sabrata; besides which we find Tacape and other places mentioned by Ptolemy. Opposite to the coast lay the islands of Melumix and Cerenna. [T. H. D.]

SYRTIS MAJOR and MINOR (Σεριτες μεγαλιν και μικρα, Ptol. iv. 3), two broad and deep gulfs in the Libyan sea on the N. coast of Africa, and in the district called after them Regio Syrta. The name is derived from the Arabic, Surt, a desert from the desertal and sandy shore by which the neighbourhood of the Syrtes is still characterised. The navigation of them was very dangerous because of their shallow and quicksandy bottoms. The island of Cythera was considered in ancient times as altogether uncontrollable, and even into the larger one only small ships ventured. (Strab. xxviii. p. 835; Scylax, p. 48; Polyb. i. 39; Mela. i. 7; Plin. v. 4. s. 4; Procop. de Aed. vi. 3.) The reports of modern travellers, however, do not tend to establish these dangers. (Lautheir, Relazione in Della Cella's Ηπιογγο, p. 214, sqq.) The Greater Syrtis, which was the eastern one, now the Gulf of Sirte, extended from the promontory of Barcaum on the E. side to that of Cephalon on the W. (Scyl. 46, sq.; Polyb. iii. 29; Strab. l. c. and ii. p. 123; Mela and Plin. l. c.) According to Strabo it was from 4000 to 5000 stadia in circumference (l. c.); but in another place (xvii. p. 835) he puts down the measurement more accurately at 3930 stadia. Its depth, or landward recess, was from 1500 to 1800 stadia, and its diameter 1500 stadia. (Comp. Agathem. i. 3, and ii. 14.) The smaller, or more western Syrtis (now Gulf of Cebras), was founded on the E. by the promontory of Zethna and on the W. by that of Brachides. (Scyl. p. 48; Polyb. l. c., ii. 23, xii. 1; Strab. ii. p. 123, iii. p. 157, xvii. p. 834, &c.) According to Strabo it had a circumference of 1600 stadia and a diameter of 600 (comp. Agathem. l. c.). Particulars respecting the size of both will likewise be found in Mela i. 7; and Plin. Nat. p. 64, sqq. The shores of both were inhospitable, and sandy to such a degree that men and even ships were often overwhelmed by the huge cloud-like masses lifted by the wind (Diod. xx. 41; Suid. Jug. 79; Hesod. iii. 25, 26, iv. 173; Lucan, ix. 294, sqq.); and it is affirmed by modern travellers that these descriptions of the ancients are not exaggerated. (See Brown's Travels, p. 292; Bruce, Travels, iv. p. 458; Beechey, Expedition, &c. ch. 10; Ritter, Erdekanale, i. p. 1030) [T. H. D.]

SYSPHRITIS (Συσφρητίς, Strab. xi. p. 505), a district in Armenia Major. [T. H. D.]

SYTHIAS. [Achila, p. 13, b.]

T.

TAANACH (Τανάχ and Θανάχ), a town in Palestine, not far from Megiddo, with which it is generally mentioned, was originally one of the royal cities of the Canaanites. (Jos. xii. 21; Judges, v. 19; 1 Kings, iv. 12.) It was assigned to Manasseh (Jos. xvii. 11), but was afterwards one of the cities given to the Levites. (Jos. xxi. 25.) "Taannach by the waters of Megiddo" was the scene of the great battle of Deborah and Barak. (Judges, v. 19.) In the time of the Judges the Canaanitish inhabitants still remained in Taanach (Judges, i. 27), but in the reign of Solomon it appears as an Israelitish town. (1 Kings, iv. 12.) Eusebius describes it as 3 Roman miles, and Jerome as 4 Roman miles from Legio, which is undoubtedly the Megiddo of Scripture. [Legio.] Taanach is still called Taanaweck, a village standing on the slope of the hills which skirt the plain of Esdraelon towards the south. (Robinson, Bibb. Res. vol. ii. p. 516, vol. iii. p. 117, 2nd ed.; Stanley, Sinai and Palestine, p. 331.)

TABAE (Γαταια, Euth. Θαινώρι), a town which, according to Strabo (xii. p. 576), was situated on the confines between Phrygia and Caria, and which, in another passage (p. 576), he evidently includes in Phrygia. The country was situated in a plain which derived from the town the name Τανανώρι (Strab. xii. p. 576). Scylax calls Eunna (τὰ Ευννά) on the other hand calls Tabae a Lydian town, though he at the same time mentions another in Caria; but it is highly probable that not only both are one and the same town, but also the same one assigned by Strabo to Phrygia, and that in point of fact the town was in Caria near the confines of Phrygia. Mythically the name of the place was derived from a hero Tabæus, while others connected it with an Asiatic term θρακ, which signified a rock. (Steph. l. c.) The latter etymology is not inconsistent with Strabo's account, for though the town is described as being in a plain, it, or at least a part of it, may have been built on a rock. The plain contained several other little towns besides Tabæ. Livy (xxxviii. 13), in his account of the expedition of Manlius, states that he marched in three days from Gordiathches to Tabæ. It must then have been a considerable place, for, having provoked the hostility of the Romans, it was ordered to pay 20 talents of silver and furnish 10,000 medimni of wheat. Livy remarks that it stood on the borders of Pisidia towards the shore of the Pamphyliaean sea. There can be no doubt that D' Anville is correct in identifying the modern Theos or Daras, a place of some note north-east of Mégale, with the ancient Tabæ. Col. Leake (Asia Minor, p. 153), relying too implicitly on Strabo, looks too far east for its site; for Hierocles
TAIiAI. (p. 689) distinctly enumerates it among the Carian towns. Duraz is a large and well-built town; the governor's residence stands on a height overlooking the town, and commanding a most magnificent view. (Richer, "Weltfahrten," p. 543; Franz, "Fünf Inschriften," p. 30.)

It should be observed that Pline (v. 27) mentions another town in the name of Tabae, of which, however, nothing is known. [L. S.]

COIN OF TABAE.

TABALA (Tēbaλa), a town of Lydia near the river Hermus, is known only from coins found in the country; but it is no doubt the same as the one mentioned by Hierocles (p. 670) under the name of Gabala, which is perhaps only miswritten for Tabala. It is even possible that it may be the town of Tabara, which Stephanus Byz. assigns to Lydia. Some trace of the ancient town seems to be preserved in the name of the village Tabulait on the left bank of the Hermus, between Adala and Kula. [L. S.]

TABANA (Tēbana, Ptol. iii. 6, § 6), a place in the interior of the Chersonesus Taurica. [T.H.D.]

TABASSI (Tēbaσσος, Ptol. vii. 1, § 65), a tribe of Lydians who occupied the interior of the southern part of Ímbosthia, in the neighbourhood of the present province of Magnesia. Their exact position cannot be determined, but they were not far distant from M. Bettigo, the most S. of the W. Ghita. They derived their name from the Sanscrit Tapasajj, "woods." (Lassen, "Ind. Alterth., vol. i. p. 243.) [V.]

TABERNAE, in Gallia, is placed by the Itineraries between Noviomagus (Spicer) and Saletio (Saltc). The position of Taberna is supposed to correspond to that of Rheinabern. Tabernae is mentioned by Ausonius Marcellinus (xvi. 2), unless in this passage be meant another place (No. 2) which has the same name.

2. Between Argentoratum (Strasburg) and Divodurum (Motz) is Elsatz-Zabern, or Sauverne as the French call it, which is about 21 miles from Strasbourg. This seems to be the place which Ausonius (xvi. 11) calls Tres Tabernae. When Julian was marching against the Alamanni, who were encamped near Argentoratum, he repaired Tres Tabernae, for the purpose of preventing the Germans from entering Gallia by this pass in the Poiges. Ausonius (xvi. 12) also gives the distance from Tres Tabernae to the German camp at Argentoratum at 14 "leagues," which is 21 Roman miles, and agrees very well with the distance between Sauverne and Strasbourg (D'Anville, "Notice," etc.).

3. Tabernae is mentioned by Ausonius (Musella, v. 8) on the road between Bingium (Bingen) and Noviomagus (Nimwegen); but the geographers are not agreed about the position, whether it is Berzabern, a place which is out of the way, Bublenuen, or Bernorentzel on the Mosel. Ausonius says there is a spring there:

"Præterea arenon silicelibus unlique terris
Dumissamum rigasique perenni fonte Tabernas." [G. L.]

TACEAPE.

TABCENA (Tab-clnou, Ptol. iv. 14, § 11), a people in the N. part of Sylhia, on this side of the Rhone. [T.H.D.]

TABANIA (Tabapau), an Atessaian tribe, situated NW of the Regio Troglodyatiae, near the headland of Basium (Rais-el-Nacshe), mentioned by Ptolemy alone (iv. 27, § 28). [W. B. D.]

TABLAE, in Gallia, is marked in the Table between Lugdunum Batavorum (Leiden) and Noviomagus (Nymegen). D'Auville and others suppose it to be Albaso, a little above the junction of the Lura and the Mars, and opposite to Dort. [G. L.]

TABROR, a celebrated mountain in Gallice, called by the Greeks Atrabrytus, under which name it is described. [Atrabrytus.]

TABRACA. [Tabiraca.]

TABUDA, or TABULAS in some editions of Ptolemy (ii. 9, § 3), a river of North Gallia. The mouth of this river is placed by Ptolemy between Gessorarium (Boulogne) and the mouth of the Moso (Mosa). In another passage (ii. 9, § 9), after fixing the position of the Murini, whose towns were Gessorarium and Tarantum, he adds, "Then after the Tabulars are the Tungri." All these indications seem to show that the Tabula or Tabularus is the Schelde, which would be correctly placed between the Merini and the Tungri. Oertelius, cited by D'Auville and others, is said to have produced evidence from writings of the middle ages, that the Schelde was named Tabul and Tabula. [G. L.]

TABURNUS MONS (Monte Taburno), was the name given in ancient times to one of the most important mountain groups of the Apennines of Samnium. It is situated near the mouth of the river Calore and that of the smaller stream of the Isecone. Like the still more elevated mass of the Monte Matare, which fronts it on the N., it forms no part of the main chain of the Apennines (if that be reckoned, as usual, by the line of water-shed), but is considerably advanced towards the W., and its W. and NW. slopes consequently descend at once to the broad valley or plain of the Vulture, where that river receives its tributary the Calore. It is evidently these slopes and underfalls to which Virgil alludes as affording a favourable field for the cultivation of olives (Virgil, "Georg., ii. 38; Vib. Sequest., p. 533), with which they are covered at this day. But in another passage he alludes to the "foxy Tabarnus" as covered with forests, which afforded pasture to extensive herds of cattle. (Id. "Aen., xii. 713.") Gratius Falsus also speaks of it as a rugged and rocky group of mountains ("Symm. 510." We learn from that writer that it was included in the territory of the Camidne Summites [Caudini], and indeed the celebrated pass of the Camidane Forks was at a very short distance from the foot of Mount Taburnus. The name of Monte Taburno or Taburro is still commonly applied to the whole group, though the different summits, like those of the Matare, have each their peculiar name.

There is no ground for reading (as has been suggested) "Taburnum" (as for Liburnum, in Polybius, iii. 100); the mountains of which that author is speaking must have been situated in quite a different part of Italy. [E. H. B.]

TACAPEC (Takarn or Kartu, Ptol. iv. 3, § 11), a town in the Roman province of Africa, in the Regio Syrria and in the innermost part of the Syris Minor. The surrounding country is represented by Pline (xvi. 27, s. 50, xviii. 22, s. 51) as exceedingly poor.
fruitful, but its harbour was bad. (Geogr. Nah. Clm. iii. pt. ii. p. 87.) In early times it was subject to Byzantium; but subsequently, as a Roman colony, belonged to the Regio Tripolitania. It was the westerly town. In its neighbourhood were warm mineral springs called the Aqaa Tacapitanae (Itin. Ant. p. 78), now Ed Hamam. (Cf. Plin. v. 4. s. 3; Itin. Ant. pp. 48, 50, 59, &c., where it is called Tacapae.) Now Gaba, Cabebs, or Qubes. [T. H. D.]

TACABAEI (TaKapaois, Ptol. vii. 2. § 15), a mountain tribe of India extra Gangem, who lived in the extreme NW. near the junction of the Imaus and Emus. They were tributaries of the Masa Gyptar. They must have occupied part of the district now called Assam. [V.]

TACHOMPSO (Tachompos, Herod. ii. 29; Tacapae, Plin. vi. 29. s. 33; Mela. i. 9. § 2), a town in the Regio Decaschoenois, S. of Aegypt and the Cataracta. It stood upon an island of the Nile, and was inhabited by a mixed colony of Aegyptians and Actiopolians. The Captive word Tachompos signifies the place of many crocodiles." Tachompos was seated on the E. bank of the river, lat. 23° 12' N., nearly opposite the town of Pselae. As Pselae increased, Tachompos declined, so that it lasted was regarded as merely a suburb of that town, and went by the name of Contru-Pselae. Though supposed by some to have been near the modern village of Conza in Lower Nubia, it is impossible to reconcile any known locality with the ancient descriptions of this place. Heren (African National, vol. i. pp. 346, 383) supposes it to have been either at the island Kedelaio (Talens) or 20 miles further S. as Glyurghe, Herenius (l.c.) describes the island on which Tachompos stood as a plain contiguous to a vast lake. But neither such a lake nor island now appear in this part of the Nile's course. The lake may have been the result of a temporary inundation, and the island gradually undermined and carried away by the periodical floods. [W. B. D.]

TACOULA (TaKula, Ptol. vii. 2. § 5), a place on the west coast of the Auran Chersonesus, in India extra Gangem, which Ptolemy calls an emporium. There can be no doubt that it is represented now by Tavros or Tamascoiron. [V.]

TACUBIS (Takaebis, Ptol. ii. 5. § 7), a place in Lusitania. [T. H. D.]

TADER, a river on the S. coast of His-paia Tarracoenosis, (Plin. iii. 3. s. 4.) It is probably indicated by Ptolemy (ii. 6. § 14) under Triepsos to-papou kardaliai. Now the Segura. [T. H. D.]

TADINUM (Eth. Tadinis: En. near Gualdo), a town of Umbria, mentioned by Pliny among the municipal towns of that region. (Plin. iii. 14. s. 19.) It is not noticed by any other ancient author previous to the fall of the Western Empire; but its name is repeatedly found in the epistles of Gregory the Great, and it is evidently the same place called by Procopius Tagmaci (Taphra, Procop. B. G. iv. 29), near which the Gothic king Totila was defeated by Narses in a great battle, in which he was mortally wounded, 6. d. 552. The site is clearly fixed by the discovery of some ruins and other ancient monuments in 1750 at a place about a mile and a half from Gualdo, where there is an old church consecrated in the middle ages to Sta Maria di Tadinia. Gualdo is about 9 miles N. of Nocera (Nucera), close to the line of the Flaminian Way; hence there is little doubt that we should substitute Tadins for "Itanis," a name obviously corrupt, given in the Jerusalem Itinerary as standing on the Flaminian Way. (Itin. Hier. p. 614; Wesseling, ad loc.; Cranmer, Italy, vol. i. p. 267.) [E. B. J.]

TADMOIR (Plin. vi. 29. s. 35; comp. Strab. xvii. p. 786), a small island of the Nile that formed the harbour of the city of Meroe. Bruce (Travels, vol. iv. p. 618) supposes Tad to have been the modern Cargu, N. of Schenti As, however, the site of Meroe is much disputed, that of Tad is equally uncertain (Ritter, Erdkund. vol. i. p. 567). [W. B. J.]

TAENARUM (Taenarap, Herod. Strab. et alii; Ἱεροδωνία ἡ ἀμφιάτον, Ptol. iii. 16. § 9), a promontory at the extremity of Lecania, and at the most southerly point of Europe, now called C. Matapans. The name of Taenarum, however, was not confined to the extreme point bearing the name of Matapans. It has been shown by Leake that it was the name given to the peninsula of circular form about seven miles in circumference, which is connected with the end of the great Tygetic promontory by an isthmus about half a mile wide in a direct distance. Hence Taenarum is correctly described by Strabo as an κατά ηενονίαν (vii. p. 563). Leake conjectures with great probability that Matapans is merely another form of Ματαπανς, which may have been the name given by the ancients to the southern extremity of the peninsula. (Mores, vol. i. p. 303.) On either side of the isthmus, which connects the promontory of Taenarum with that of Tygotis, is a bay, of which the one on the east is called Porto Quaglio, corrupted into Keo, and the one on the west Marmari or Mammour. The name of Quaglio was given to the eastern bay by the Venetians, because it was the last place in Europe at which the quails rested in the autumn before crossing over to Crete and Cyrena. Porto Quaglio is one of the best harbours in Lucania, being sheltered from the S. and SE.; it is nearly circular, with a narrow entrance, a fine sandy bottom, and depth of water for large ships. Porto Marmari is described as only a dangerous creek. In the Taenarum peninsula there are also two pents on its eastern side, of which the northern, called Vathy, is a long narrow inlet of the sea, while the southern, called Asinato or Kisternes, is very small and ill sheltered. A quarter of a mile southward of the inner extremity of the last-mentioned port, a low point of rock projects from the sea from the foot of the mountain, which, according to the inhabitants of the peninsula, is the real C. Matapans. The western side of the peninsula is rocky and unserviceable. The whole of the Taenarum peninsula was sacred to Poseidon, who appears to have succeeded to the place of Helios, the more ancient god of the locality. (Horn. Hymn. in Apoll. 411.) At the extremity of this peninsula was the temple of Poseidon, with an asylum, which enjoyed great celebrity down to a late period. It seems to have been an ancient Achaean sanctuary before the Doric conquest, and to have continued to be the chief sacred place of the Perioeci and Helots. The great earthquakes, which reduced Sparta to a heap of ruins in B.C. 464, was supposed to have been owing to the Lucidaemonians having torn away some suppliant Helots from this sanctuary. (Thuc. i. 128, 133; Paus. iii. 25. § 4; Strab. vii. p. 363; Eurip. Cyc. 292.) Near the sanctuary was a cavern, through which Herakles is said to have drugged Cercerns to the upper regions. (Paus. Strab. ii. ec.; Pind. Pyth. iv. 77; Taenarumiae sanctae, Virg. Georg. iv. 467;
TAEANUM.

Tæanurus aperta umbra, Lucan, ix, 36.) There is a slight difference between Strabo and Pausanias in the position of the cave; for the former placing it near the temple, which agrees with present appearances (see below); the latter describing the cave itself as the temple, before which stood a statue of Poseidon. Among many dedicatory offerings to Poseidon the most celebrated was the beauteous statue of Arius seated on a dolphin, which was still extant in the time of Pausanias. (Herod. i. 23, 24.) The temple was plundered for the first time by the Athenians. (Polyc. ix. 34.)

Tæanurus is said to have taken its name from Tæana, daughter of Zeus or Icarus or Eileius. (Paus. iii. 14. § 2; Steph. B. s. v.; Schol. ad Apoll. Rhod. i. 102.) Bochart derives the word from the Phoenician tinas "rupee," (Geograph. Sacra, p. 459); and it is not improbable that the Phoenicians may have had a settlement on the promontory at an early period.

Pausanias (iii. 25. § 4) mentions two harbours in connection with the Tæanuran promontory, called respectively Isalmathus (Iassemblus) and the Harbour of Achilles. (Stab. B. s. v.: Pausanias. xiii. 24. § 4.) Scylax (p. 17) also mentions these two harbours, and describes them as situated back to back (ἀπεξωρίζοντας). Strabo (vii. p. 373) speaks of the former of these two harbours under the name of Amathus (Areas), but omits to mention the Harbour of Achilles. It would appear that these two harbours are the Porto Quaglio and the port of Vathy mentioned above, as these are the two most important in the peninsula. Leake identifies Isalmathus with Quaglio, and the Harbour of Achilles with Vathy, but the French Commission reverse these positions. We have, however, no doubt that Leake is correct; for the ancient remains above the Porto Quaglio, the monastery on the heights, and the cultivated slopes and levels, show that the Tæanuran population has in all ages been chiefly collected here. Moreover, no ancient writers speak of a town in connection with the Harbour of Achilles, while Strabo and others describe Amathus or Pousmahus as a πόλις. (Steph. B. s. v. Pousmahus, Ep. i. P. 32; Pseud. ii. 18. § 38.) If we were to take the description of Scylax literally, Pousmahus would be Porto Quaglio, and the Harbour of Achilles Porto Marmarò; and accordingly, they are so identified by Curtius; but it is impossible to believe that the dangerous creek of Marmarò is one of the two harbours so specifically mentioned both by Scylax and Pausanias.

The remains of the celebrated temple of Poseidon still exist at Asosouno, or Kistron, close to C. Mastusian on the eastern side. They now form part of a ruined church; and the ancient Hellene wall may be traced on one side of the church. Leake observes that the church, instead of facing to the east, as Greek churches usually do, faces south-eastward, towards the head of the port, which is likely to have been the aspect of the temple. No remains of columns have been found. A few pieces north-east of the church is a large grotto in the rock, which appears to be the cave through which Heracles was supposed to have dragged Cerberus; but there is no appearance of any subterranean descent, as had been already remarked by Pausanias. In the neighbourhood there are several ancient cisterns and other remains of antiquity.

There were celebrated marble quarries in the Tæanuran peninsula. (Strab. viii. p. 367.) Tiny describes the Tæanuran marble as black (xxxi. 18. s. 29, 22. s. 43); but Sextus Empiricus (Pyrrh. Hypot. i. 130) speaks of a species that was white when broken to pieces, though it appeared yellow in the masses. Leake inquired in vain for these quarries.

At the distance of 40 stadia, or 5 English miles, north of the isthmus of the Tæanuran peninsula, was the town Tæanurus or Tæanuris, subsequently called Callenepolis. (Kallenepest, Catonic, iii. 25. § 9; Strabo, Pol. iii. 16. § 9; Paus. iv. 15. s. 16; Steph. B. s. v. Tæanurus; the same town is probably mentioned by Strab. viii. p. 569, under the corrupt form Konsinow.) It contained a temple of Hera and another of Achaisty, the latter near the sea. The modern village of Kyparissos stands on the site of this town. Some ancient remains and inscriptions of the time of the Antonines and their successors have been found here. On the door-posts of a small ruined church are two inscribed quadrangular στάθμα, decorated with moldings above and below. One of the inscriptions is a decree of the Tæanuris, and the other is by the community of the Eutheoros-Lacones (τὸ κωστὸ τῶν Εὐτευθρόπων). We have the testimony of Pausanias (ii. 21. § 7) that Callenepolis was one of the Eutheoros-Laconian cities; and it would appear from the above-mentioned inscription that the maritime Laconians, when they were delivered from the Spartan yoke, formed a confederation and founded as their capital a city in the neighbourhood of the revered sanctuary of Poseidon. The place was called the New Town (Callenepolis); but, as we learn from the inscription, it continued to be also called by its ancient name. For the inscriptions relating to Tæanorum, see Bickel, Interc. no. 1315 —1317, 1321, 1322, 1329, 1393, 1483. (On the topography of the Tæanuran peninsula, see Leake, Morea, vol. i. p. 290, seq., Pelopeumasia, p. 175, seq.; Boiâye, Recherches, &c., p. 89, seq.; Curtius, Pelopeumasia, vol. ii. p. 277, seq.)

TAEZALL (Ταϊκαλλος or Ταικαλλος, Pol. ii. 3. § 15), a people on the eastern coast of Britannia Barcara. In their territory was the promontory called Ταϊκαλλος χερως (ib. § 5), now Sir John's Head. (T. H. D.)

TAGAE (Taryi, Polh. x. 29. § 3), a town in the northern part of Parthia, situated in the defiles of the chain of Labatus, visited by Aiustochus in his war against Arsaces. It has been conjectured by Forbiger that it is the same place as Tape, mentioned by Strabo (xi. p. 508) as a royal palace in the adjacent province of Hyrcania; but this conjecture seems unnecessary. Perhaps it may be represented by the present Damaughian.

TAGARA (Ταγάρα, Peripl. M. Eratrh. § 51, ed. Mühler; Pol. vii. 1. § 82), one of the two principal caperiola of the interior of the Jccean, according to the author of the Periplus. It is not certain what modern town now represents this ancient site, but there is a fair presumption in favour of Deoghir, which was the seat of government down to A.D. 1293, and which is now in ruins, close to Borastabad. (Vincent, Voyage de l'asie, ii. p. 413; Mannert, v. 1. p. 85; Fetter, Erdt. v. p. 513; Bergman's Map.) Ptolomy, who places the town in Arracæ, probably copied from the author of the Periplus. It may be remarked that the distance given between Barygaza (Horæchos), Penthæa (Puthan), and Tagara (Deoghir), are not reconcileable with the actual position of these places.

[V.]
TAGASTE.

TAGASTE, or TAGESTENSE OPP. (Plin. v. 4. s. 4), a town of Numidia, whose spot is now marked by the ruins at Tajjil on the Oued Hamise or Sugerast, a tributary of the river Mejeda. (Itin. Ant. p. 44.) Tagaste is particularly distinguished by having been the birthplace of St. Augustine. (Ang. Conf. ii. 3.)

TAGONIUS (Tageons, Plut. Scrvt. 17), a tributary of the Tagus in Hispania Tarraconensis, either the Tajmania or Hemarca. (Cf.학생, Esp. Supgr. v. p. 40; Ubert, ii. pt. i. p. 389.) [T. H. D.]

TAGORI. [TAGRI.

TAGRI (Tegra, Plut. iii. 5. § 25), a people of European Sarmatia, on the borders of Dacia, and probably identical with the Tagori of Phiny (vi. 7. s. 7) and Jannames (Get. 4). [T. H. D.]

TAGUS (Tηςα, Plut. ii. 5. § 4), one of the principal rivers of Spain, being considerably larger than the Axus and having its sources between Monta Orosepla and Ilibeda, in the country of the Celtiberi. (Strab. iii. pp. 139, 152, 162.) After a tolerably straight course of upwards of 300 miles in a westerly direction, it falls into the Atlantic ocean below Olisippo, where it is 20 stadia broad, and capable of bearing the largest ships. It was navigable as far up as Moron for smaller vessels. According to Strabo, at flood tides it overflowed its banks with a circumference of 150 stadia. It was celebrated as the home of its fish and oysters (Strab. ib.; Mart. x. 78), and likewise for its gold sand (Plin. iv. 22. s. 35; Mela, iii. 1.; Catull. xx. 30; Ov. Met. ii. 231, &c.), of which last, however, so little is now found to be sure that it hardly repays the amphibious puffers who earn a precarious living by seeking for it. (Field's Handbook of Spain, p. 457; Dillon, i. p. 257.) The Tagus alone, is named as a tributary. The Tagus is still called Tajo in Spain, Tejo in Portugal. (Cf. Liv. xxi. 5. xxvii. 19; Plin. iii. 3. s. 4, viii. 42. s. 67; Suet. Theog. 552, &c.) [T. H. D.]

TAIPANIS or TEPHAPHENES (Jerem. xliii. 7, xliv. 1; Ezek. xxx. 18; &c. Tepfanes, IXX.), is supposed to be the same place with the Daphne of Pelusium in the Greeks. It was the seat of a garrison under the native and the Persian kings of Assyria (Herod. ii. 30), and was probably a place of considerable strength and importance, since it commanded the high road to Syria (Strab. xvi. p. 802). According to the Hebrew writers, Taiphanis was also occasionally a royal residence in Pharaonic times. In the reign of Psammithchus (n. c. 670, B.C.) the troops quartered at Taiphanis, in common with the rest of the native Assyrian army, offended by the king's favour to his Carian and Greek mercenaries, abandoned their country, and established themselves in the Regio Dodecascemion S. of Syene (Diodor. i. 57). From the itineraries it appears that Daphne or Taiphanis was 16 Roman miles from Pelusium. Tel dejenneh, lying nearly in a direct line between the modern Salaa-khich and Pelusium, is supposed to be on the site of Taiphanis. [W. B. D.]

TALABRIGA (ταλαβρίγ, App. Hisp. 73), a town of Lusitania, between Eumimion and Lamagra. (Itin. Ant. p. 421; Plin. ii. 5. s. 7; iv. 21. s. 35.) Variously identified with Cucia, Arcivo, Turobro, Regina, and Villarinho. [T. H. D.]

TALABROCA (Ταλαβρόκα, Strab. iv. 2. p. 508), one of the four principal towns of Hyrcania noticed by Strabo. It is perhaps the same place that is called Tamebrax by Polybius (x. 31). Its site cannot now be identified. [V.]

TALACORY (Ταλάκωρυ, Plut. vii. 4. § 7), a port on the north-western side of the island of Taopobane or Ceylon. It is described as an emporium, and has, probably, derived its name from the promontory of Cory, which was opposite to it, on the mainland. It appears to have been also called Ausote (Αουςότη). [V.]

TALADUSII (Taladoseus, Plut. iv. 2. § 17), a people in the north part of Marretania Cæsariensis. [T. H. D.]

TALAEUS MONS. [TALAEUS.]

TALADIMA (Ταλάδιμα, Plut. ii. 6. § 27), a town of the Saurii in Gallaecia. [T. H. D.]

TALAIIRES (Ταλαιρές), a Molossian people of Epirus, extinct in the time of Strabo (ix. p. 434). TALÀRA (Ταλάρα), a mountain fortress in Pontus to which Mithridates withdrew with his most precious treasures, which were afterwards found there by Lucullus. (Dum. Cass. xxxv. 14; Appian, Mithr. 115.) As the place is not mentioned by other writers, some suppose it to have been the same as Gaziura, the modern Tourkhel which is perched upon a lofty isolated rock. (Hamil. Researches, vol. i. p. 360.) [L. S.]

TALBENDA (Ταλμενία or Ταλμώνια), a town in the interior of Pisidia, noticed only by Ptolemy (v. 5. § 8). [L. S.]

TALÈFUM. [LAIGNIA, p. 108, b.]

TALLA (Itin. Ant. p. 218), or TALLATA (Not. Imp.), erroneously called Tarutis by Ptolemy (iii. 9. § 4), Tabata by the Geogr. Rav. (iv. 7), and Faliata in the Tab. Pent. A place in Upper Moesia, between Novae and Egeta. Variously identified with Taulalia, Gogerdaunik, and a place near Alt Porces. [T. H. D.]

TALICUS, a river of Scythia intra Imaum. (Amm. Mar. xxiii. 6. § 63.) [T. H. D.]

TALAIÆUS or TALAEUS MONS (Talbend, Corp. Inscr. Graec. vol. ii. p. 423; Hesych. s. v.), the station of Talus, the mythical man of bronze, and the guardian of the island of Crete. The well-known inscription which deposes the loss of Artemis, the chaste wife of Salvins Menas, is now buried by the mass of earth and stones heaped up at the entrance of the stalactitic cavern of Melaidon. This grotto, memorable in modern times for the massacre of the Cretan Christians by the Mahomedans, is identified from the inscription with the spot where in ancient times human victims were presented before the statue of Talus. (Pashley, Travels, vol. i. pp. 126—139.) [E. B. J.]

TALMEN (Ταλμέν, Arrian, Indic. c. 29), a port of Gedrosia at which the fleet of Nearchus found a secure harbour. It is not clear what place now may be identified with it, and different geographers have held different opinions. Vincent (Voyage of Nearchus, i. p. 271) thinks it is the bay formed by the mouth of a small river called by Ptolemy Candracies or Hydricas (vi. 8. § 8). It was probably close to the modern town, Chonbar Tez and Purig. (Cf. Goscellin, iii. p. 148.) [V.]

TALMIS (It. Anton. p. 161; Olympiodor. ap. Pliotiun, p. 62, ed. Bekker), a town in the Regio Dodecascemion S. of Phœae, from which it was five days' journey distant, situated in lat. 23° 30' N., and consequently immediately under the tropic of Cancer. Talmis stood on the western bank of the Nile, and is represented by the modern Kalabache. The Libyan hills which rise immediately behind the town afforded an inexhaustible supply of materials for building, and the ancient monuments are still visible.
TALUBATH.

In their sides. The ruins of Talmis are of surpassing interest, and comparatively in good preservation, probably because, being excavated in the Sandstone, they escaped mutilation or destruction by the Persians. The principal structure was a rock-temple at the foot of the hills, dedicated, as appears both from a hieroglyphical and a Greek inscription, to a deity named Mandulis or Malniis, a son of Isis. His mythical history is exhibited on bas-reliefs. But the sculptures at Talmis are of the highest interest, both as works of art and as historical monuments. Their execution is the work of various ages; some, as appears by their rude form and finish, are the work of artificers, others, as those in the temple of Mandulis, being of the best days of Egyptian art. The temple was founded by Ammonoph II., was rebuilt by one of the Ptolemies, and repaired in the reigns of the Caesars, Augustus, Caligula, and Trajan. The subjects of these sculptures represent partly the triumphs of the Pharaohs, and partly the tributes exacted by them from the conquered. On one wall is the warrior in his chariot putting to flight bearded men in short garments, armed with bows and arrows, and a sickle-shaped knife or sword. In another compartment the conqueror is in the act of putting his captives to death. Another represents the body obtained after a victory, and, besides the captives, exhibits the spoils taken, e.g. lion-headed and lion-clawed chairs, knives, leaves, sandals, skins of animals, &c. These sculptures illustrate also the natural history of S. Aethiopia. They contain figures of lions, antelopes, and bulls, greyhounds, giraffes, ostriches and monkeys. The giraffes and ostriches point clearly to a country south of the utmost limit of Egyptian dominion, and seem to indicate wars with the Garamantes and the kingdom of Baroua. Herodotus (iii. 97) mentions ebony wood among the articles of tribute which every three years Aethiopia offered to the Persian king. Ebony as well as ivory, a product of the interior of Libya, appears on the walls of the temple of Mandulis. A coloured facsimile of these sculptures is displayed in one of the rooms of the British Museum. At a short distance from Talmis stood another temple of scarcely inferior interest, and the space between is covered with heaps of earth and fragments of pottery, mixed with human bones and bandages that have been steeped in bitumen — the evident traces of a large necropolis. At Talmis has been also discovered an inscription in the Greek language, supposed to be of the age of Dioctetan, in which Silco, king of Aethiopia and Nubia, commemorates his victories over the Blemmyes. The wealth of Talmis, apparent in its sculptures, was doubled in great measure owing to its position as a commercial station between Aegypt and Aethiopia, but partly also to the emerald mines in its neighbourhood. In the fifth century A.D., the town and its neighbourhood were occupied by the Blemmyes, who had a regular government, since they had chiefs of tribes (φυλακτός) and were celebrated for their skill in divination. (Olympiodorus, op. posthum. p. 62.)

TALUCETAE (Talacceda, Ptol. iv. 6. § 29), a town of Guattia, in the NW. of Libya Interior, perhaps the modern Tuyelt.

TALUCETAE. [T.H.D.]

TALUCETAE, a tribe of India extra Gangae, mentioned by Pliny (vi. 19. s. 22). They were probably seated beyond the Brahmaputra, in the mountains of Birma. Siliog, in his recent edition of Pliny, has given the name as Thalaceta. [V.]

TAMARA (Tamareph, Ptol. ii. 3. § 30), a town of the Dumonni, at the SW. extremity of Britannia Romania, at the mouth of the Tamara. Now Tamerton near Plymouth. (Camden, p. 25.) [T.H.D.]

TAMARICHI, a Gallician tribe on the river Tamaris in Hispania Tarraconensis. (Plin. iv. 20. s. 34; Mela, i. 1.) According to Pliny (xxx. 2. 18) there were certain noted springs in their territory, which are undoubtedly the same described by Florus (Contabria, p. 4) near the hermitage of S. Juan de suaves divinas. 12 Spanish miles E. of Leon, and 5 N. of Saldanha. (Cf. Uberti, ii. p. i. p. 352.) [T.H.D.]

TAMARICUS (called by Ptolemy, Tamara, Ptol. ii. 6. § 2), a small river of Gallaecia in Hispania Tarraconensis, which falls into the Atlantic ocean by the port of Eora, between the Minius and the promontory Nerium. (Mela, iii. 1.) Now the Tambre. [T.H.D.]

TAMARUS (Tamara), a river of Sannium, which falls into the Calor (Calore), about five miles above Beneventum. Its name is known only from the Itinerary of Antoninus, which places a station "super Tamarum flumnum" on the road from Boiaventura to Eques Taticus. (Itin. Anti. p. 106.) The line of this road is not very clear, but the modern name of the Tamaro leaves no doubt of the river meant. It rises in the mountains near Sannium, only a few miles from Boiaventura, and flows with a general direction from N. to S. till it joins the Calor as above indicated. [E. H. B.]

TAMARUS (Tamaris, Ptol. iii. 3. § 4), a small river on the S. coast of Britannia Romania, now the Tamere. [T.H.D.]

TAMASSUS (Tamosus, Ptol. vi. 14. § 6; called also Tamosus by Pliny, xvi. 31. s. 35, Tambrax by Constantine Porphy. de Them. i. p. 39, and Tamesis by Statius, Achill, i. 413; cf. coins in Eckiel, i. 3. p. 88), a town in the interior of the island of Cyprus, 29 miles SW. of Soke, and on the road from that place to Tremithus. It lay in a fruitful neighbourhood (Ovid, M. x. 644), and in the vicinity of some extensive copper mines, which yielded a kind of rust used in medicine (Strabo, xiv. p. 884). It is very probably the Tauris of Homer (Od. i. 184; Nitzch, ad loc.; cf. Mammert, vi. 1. p. 452), in which case it would appear to have been the principal market for the copper trade of the island in those early times. Hence some derive its name from the Phoenician word themes, signifying smelting. [T.H.D.]

TAMBRAI. [Talbroca.]

TAMESA or TAMESIS (Tamasa, Dion Cass. xil. 3), a river on the E. coast of Britannia Romania, on which Londinium lay; the Thames. (Cass. B. G. v. 11; Tac. Ann. xiv. 32.) [T.H.D.]

TAMESIS. [Tamesa.]

TAMIA (Tamia, Ptol. ii. 3. § 13), a town of the Vaconagi on the E. coast of Britannia Barba, probably on Loch Tay. [T.H.D.]

TAMIAITH (Tamaiathis, Steph. B. s. e. v.), was a considerable town in Lower Egypt, situated in the valley of the Phanitic arm of the Nile. It is less celebrated in history than its representative, the modern Damiet or Danietta, which, since the era of the Crusades, has always been, until the rise of Alexandria in the present century, one of the most populous and commercial places in the Delta. Many antique columns and blosks from the ancient town are built into the walls of the mosques in the modern one. The present Danietta, indeed, does not occupy the site of Tamiathis, since, according to Abulfeda, the original town of that name was destroyed;
TAMNA.

account of its exposed situation, and rebuilt higher up the Nile, about 5 miles further from the sea. The date of this change of position is fixed by Abulfeda in the year of the Hegira 648 (A.D. 1251). [W.R.D.]

TAMNA (Táma), Strab. xvi. p. 768; Stepb. B. s. v.; Tamna, Plin. v. 28. s. 52; Codex, Ptol. vi. 7. § 57; Thuan. Plin. xii. 14. s. 32; Eth. Támaírēs), a city of Arabia, and the chief town of the Cattsbahenei (Catabani), according to Strabo, or of the Gebanite, according to Piny. It is described by Piny as a large commercial town with 65 temples, to which caravans from Gaza in Palestine resorted. It is probably Souda, the present capital of Yemen.

TAMNUM, in Gallia, is placed by the Itineraries on a road from Burdigala (Bordeaux) to Mediolanum Santonum (Sèteur); but in the Table the name is written Lamann. The distance from Blavia or Blaviun (Blaye) to Tamnum is xxxi. in the Ædes, but the distance xxxii. in the Table is nearer the truth, if Talamont or Talamun is the site of Tamnum. Tamon is below Blaye on the right bank of the Garonne. [G.L.]

TAMUGADIS, a town in Numidia, on the E. side of Mount Aurinas, and 14 miles NE. of Lambese. (It. Ant. pp. 34, 40; Thamugaidas, Tab. Peut.) it still retains the name of Tamenoudi. (Bruce.)

Lapie identifies it with Agor Soudah. [T. H. D.]

TAMYNAE (Tamnā, Strab. et ali; Támva, Stepb. B. s. v; Eth. Tamnawvou, Támvēro, a town of Eubea in the territory of Eretria, at the foot of Mt. Cotylaean, with a temple of Apollo, said to have been built by Admetus. (Strab. x. p. 447; Stepb. B. s. v. re. Tämva, Kómabuo.) It was taken by the Persians, when they attacked Eretria in n. c. 490 (Herod. vi. 101), but it is chiefly memorable for the victory which the Athenians, under Phocion, gained here over Callias of Choles, n. c. 350. (Aesch. c. Æge. §§ 85—88, de Fals. Leg. 190; Dem. de Pac. 5: Plat. Phoc. 12.)

Leake places Tamyneae at the village of Glymnos, at the foot of a high mountain, which he supposes to be the ancient Cotylaean, (Ancient Greece, vol. ii. p. 439;) but Ullrich regards Alkiviadis, where there are several ancient remains, as the site of Tamyneae. (Italienisches Museum, for 1847. p. 512.)

TAMYRACA (Tamyroc, Ptol. iii. 5. § 8, viii. 10. § 3), a town and promontory of European Sarmatia in the neighbourhood of a lake (Arian, Per. P. Euz. p. 20). and in the innermost part of the gulf of Carcinus, now gulf of Achaenides or Peri-
kop. Hence, according to Strabo, the Sinus Carcinites was also called the gulf of Tamyrac (vii. p. 308). But the coast has undergone such excessive alterations at this part, that all attempts to determine the site of the town are unavailing. Some, indeed, have doubted its existence, as it is mentioned only by Ptolomy. (Cf. Neumann, Die Hel lenen in Skythien-lande, p. 375; Uchiti, ii. p. 457; Gall, Geogr. M. iii. p. 127.)

TAMYRACES SINUS. [CARCINA; TAM-
YRACA.]

TAMYRAS or DAMYRAS (Tamyowers, Strab. xvi. p. 756; Athénaïs, Ptol. y. 63), a river of Phoci-

a between Sidon and Berytus, the modern Nahrid-

TANAGER or TANAGRUS (Tanagro), a river of Lucania, a tributary of the Stilaris. It rises in the mountains near Lago Negro, flows for about

30 miles in a NNE. direction, through a broad and level upland valley called the Valle di Diaro, near La Folla, it sinks into the earth, and emerges again through a cavern at a place thence called La Pertusa in the territory of Tanagra, and from thence to Pliny, who calls it “fluvius in Atinane campo,” with some mention of its name (Plin. ii. 103. s. 106, with Harduin’s note); but this is known to us from Virgil, who notices it in connection with Mount Albumuns, which rises immediately to the W. of it, and the epithet “siccus” which he applies to it (“sicci ripa Tanagrae”) doubtless refers to this same peculiarity. (Verg. Georg. iii. 131; Serv. ad loc.; Vib. Seq. p. 19.) There is no doubt, also, that in the Itinerary we should read “Al Tamanum” for “Ad Tamanum,” a station which it places on the road from Salernum to Neapelum. (Itin. Ant. p. 109.) The same Itinerary gives a station “Ad Calorem,” as this is the next on this line of route, which seems to show that the river was then, as now, called in the upper part of its course Calor or Calore, while in the lower part it assumes the name of Tanagro or Negro. This part of the route, however, is very confused. [E. H. B.]

TANAGRA (Tanagras; Eth. Tanagrapoik). the territory Tanagra, Pan. ix. 22. § 1, and Tanagrapoik or Tanagrapoth, Strab. ix. p. 404; Adj. Tanagrapikoi: Griuvdála or Griuvdala, a town of Boeotia, situated upon the left bank of the Asopus, in a fertile plain, at the distance of 130 stadia from Oropus and 200 from Platæae (Dioscor. Stat. Gr. pp. 12, 14, ed. Hudson.) Several ancient writers identified Tanagra with the Homeric Graia (Paus. Hom. II. ii. 498; Plin. vii. 154), but others supposed them to be distinct places, and Aristot. remarks on Oropus as the ancient Graia. (Stepb. B. s. v. Táma). Strab. ix. p. 404; Pan. ix. 20. § 2.) It is possible, as Leake has remarked, that Tanagra, sometimes written Tanagra, may be connected with the ancient name Graia, Tan, being an Aeolic suffix, and that the modern name Grauva or Grauvala may retain traces of the Homeric name. Tanagra was also called Poomandros, and its territory Poomandris, from the fertile meadows which surrounded the city. (Stepb. B. s. v.; Strab. ix. p. 404.) The most ancient inhabitants of Tanagra are said to have been the Gephyraei, who came from Phocicia with Cadmus, and from thence emigrated to Athens. (Herod. v. 57; Strab. ix. p. 404.) From its vicinity to Attica the territory of Tanagra was the scene of more than one battle. In n. c. 457 the Lacedaemonians on their return from an expedition to Doris, took up a position at Tanagra, near the borders of Attica, with the view of assisting the oligarchical party at Athens to overthrow the democracy. The Athenians, with a thousand Argives and some Thessalian horse, crossed Mount Parnes and advanced against the Lacedaemonians. Both sides fought with great bravery; but the Lacedaemonians gained the victory, chiefly through the treacherous desertion of the Thessalians in the very heat of the engagement. (Thuc. i. 107, 108; Dipl. xi. 80.) At the beginning of the following year (n. c. 456) and only sixty-two days after their defeat at Tanagra, the Athenians under Myronikes again invaded Boeotia, and gained at Oenohipya, in the territory of Tanagra, a brilliant and decisive victory over the Boeotians, which made them masters of the whole country. The walls of Tanagra were now razed to the ground. (Thuc. i. 108; Dipl. xi. 81, 82.) In n. c. 426 the Athenians made an incursion into the territory of Tanagra, and
on their return defeated the Tanagreans and Boeotians. (Thuc. iii. 91.) Dicaearchus, who visited Tanagra in the time of Cassander, says that the city stands on a rugged and lofty height, and has a white chalky appearance. The houses are adorned with handsome porticoes and encaustic paintings. The surrounding country is mostly covered with corn, but produces the best wine in Boeotia. Dicaearchus adds that the inhabitants are wealthy but frugal, being for the most part landholders, not manufacturers: and he praises them for their justice, good faith, and hospitality. (De Statu Graec. p. 12.) In the time of Augustus, Tanagra and Thespiae were the two most prosperous cities in Boeotia. (Strab. iv. p. 408.) Tanagra is called by Pliney (iv. 7. s. 12) a free state; it is mentioned by Ptolemy (iii. 15. § 29); and it continued to flourish in the sixth century. (Hieroc. p. 645.) Its public buildings are described at some length by Pausanias (ix. 20. § 3, seq.). The principal temple was that of Dionysus, which contained a celebrated statue of Parian marble, by Calamis, and a remarkable Triton. Near it were temples of Themis, Aphrodite and Apollo, and two of Hermeis, in one of which he was worshipped as Criophorus, and in the other as Pronaexus. Near the latter was the theatre, and probably at no great distance the gymnasium, which was a picture of Corinna, who was a native of Tanagra. There was also a monument of this poetess in a conspicuous part of the city. Pausanias remarks as a peculiarity in Tanagra, that all their sacred buildings were placed by themselves, apart from the houses of the town (ix. 22. § 2.) He likewise notices (ix. 2. § 4) that Tanagra was famous for its breed of fighting-cocks, a circumstance which is mentioned by other writers. (Varr. de Re Rast. iii. 9. § 6; Hesych. s. v. Kokoipis; Suidas, s. v. Tanagyn, εκτροπίσεως.) Tanagra possessed a considerable territory, and Strabo (ix. p. 405) mentions four villages belonging to it, Eleon or Helen, Harmo, Mycaleus, and Pharae. (Plineus, Plin. iv. 7. s. 12.)

The ruins of Tanagra are situated at an uninhabited spot, called GrJimmyrk or Grimirata, situated 3 miles south of the village of Skimnatari. The site is a large bill nearly circular, rising from the nath bank of the Asopas. The upper part of the site is rocky and abrupt, looking down upon the town beneath; and it was probably upon this upper height that the sacred edifices stood apart from the other buildings of the town. The walls of the city which enclosed a circuit of about two miles, may still be traced, but they are a mere heap of ruins. About 100 yards below the height already described are the remains of the theatre, hollowed out of the slope. On the terrace below the theatre to the NE. are the foundations of a public building, formed of marble of a very dark colour with a green cast. The ground is thickly strewn in every direction with remains of earthenware, betokening the existence of a numerous population in former times. (Leake, Northern Greece, vol. ii. p. 454. seq.; Wordsworth, Athens and Attica, p. 14, seq.; comp. K. O. Müller, Recensiones, p. 20.)

TANAIIS (Tanais, Potl. iii. 5. § 14. v. 9. §§ 1. 2, &c.), a famous river, which in the course of time was universally a.Danaus as the boundary between Europe and Asia. (Strab. vii. 310. xi. 490. Mel. i. 3: Syl. p. 30. &c.) The older writers of antiquity thought that it rose from a large lake (He-rod. iv. 57; Ephor. ap. Aen. Per. P. Eut. p. 4), which is really the case, its source being in the lake Iven Özoro, in the government of Toulia; whilst writers held that it had its sources either in the Caucasus (Strab. xi. 493; Ammian. xxii. 8), or in the Ephicaean mountains. (Mela. i. 19; Lucan, iii. 272; Procop. B. G. iv. 6. &c.) The lost of these hypotheses was most generally accepted, for there was likewise a fourth which made it a branch of the Ister (Strab. l. c.). Whilst Strabo, however, advances these different opinions, he himself holds that its source was entirely unknown (ii. 107). It is represented as flowing in so rapid a stream that it never froze. (Mela. l. c.; cf. Nonnus, Dionys. xxii. 85.) It flows first in a NE. and then in a SW. direction; and after receiving the Hyris (or Sorgus) as a tributary, empties itself into the Palus Maesitis (Sea of Aspis) by two mouths. (Strab. iv. 100.) These mouths, which are at the most northern point of the Palus Maesitis, Strabo places at the distance of 60 stadia from one another (vi. 310), whilst Ardemusor (ap. Eustath. ad Dion. 14) makes them only 7 stadia distant. At present, however, the Don has 18 mouths. (Clarke, Trav. i. p. 423.) The etymology of the name is discussed by Plutarch (de Flam. 14) and Eustathius (l. c.); but its true derivation is from the Scythian word Don or Doni, signifying water, which occurs in the names of other rivers as Danubius, Eridanus. (Forbiger, Handb. des Alt. Geogr. p. 325, n. 16.)

The Tanais is frequently alluded to by the Latin poets. (Hor. Od. iii. 10. 1; Virg. G. iv. 517; Ov. Ex. Pont. iv. 10. 55, &c.) Clarke (Travels. i. pp. 339, 448, note) would identify it with the Damazic, from the similarity of the name, an hypothesis also accepted by Lindner (Sythien, p. 66); but there can scarcely be a doubt that it should be identified with the D. Don. (H. D. Macqulin.)

TANAVIS (Tanais, Potl. iii. 5. §§ 26, vii. 1. 2, &c.), a town of Asiatic Sarmania, lying on the most southern and north of both mouths of the river of the same name. It may also be described as situated at the northernmost point of the Palus Maesitis, and not far from the sea. It was a flourishing colony of the Milesians, enjoying an extensive commerce, and being the principal market of the surrounding tribes, both of Europe and Asia, who here bartered slaves and skins for the wine, apparel, and other articles of more civilised nations. (Strab. xi. p. 487.) The inhabitants soon reduced a considerable part of the neighbouring coasts to subjection, but were in turn themselves subdued by the kings of the Boeotians (Id. vii. p. 310. xi. p. 485). An attempt to regain their independence only ended in the destruction of their city by Polemon 1. (Id. p. 483), a little before the time when Strabo wrote. Pliney (vii. 7. s. 7) speaks of Tanais as no longer existing in his time; but it appears to have been subsequently restored (Potl. ii. ec.; Steph. B. p. 623), though it never recovered its former prosperity. Clarke (i. p. 415) could discover no trace of it, nor even a probable site; but its ruins are said to exist near the modern Nedriyoksa. A coin of Tanagra.
TANAITAE.

TANARUS (Tanaro), a river of Liguria, the most important of all the southern tributaries of the Padus. It rises in the Maritime Alps above Ceva (Ceba), flows at first due N., receives near Cherasco the waters of the Stura, a stream as considerable as itself, then turns to the NE., passes within a few miles of Pollentia (Palermo) flows under the walls of Alba Pomptina and Asta (Asti), and discharges its waters into the Po about 15 miles below Valenza (Forum Fulvii). It receives many considerable tributaries besides the Stura already mentioned, of which the most important is the Bormida, the ancient name of which has not been preserved to us; but the Orbca, a minor stream which falls into it a few miles above its junction with the Tanaro, is evidently the river Ursus, mentioned by Claudian (B. Got. 555), the name of which had given rise to an ambiguous prophecy, that had misled the Gothic king Alaric. The Belbo, which falls into the Tanaro a few miles above the Bormida, has been identified with the Fernus of the Tabula; but the names of rivers given in that document in this part of Italy are so corrupt, and their positions so strangely misplaced, that it is idle to attempt their determination. Although the Tanaruns is one of the most important rivers of Northern Italy, its name is not mentioned by any of the geographers except Pliny; nor does it occur in history until long after the fall of the Western Empire. (Plin. iii. 16. s. 20; P. Dac. Hist. Lang. vi. 58.) [E. H. B.]

TANATIS, according to Solinus (c. 12), an island in the neighbourhood of Britain. It is undoubtedly the same which Beela (Hist. Eccl. i. 25) calls Tanatos, and which still bears the name of Thanet. [T. H. D.]

TANATIS. [Talla.]

TANAXUS. [Augus, Vol. I. p. 201, n.]

TANETUM or TANETUM (Tatrav), Potl.: Eth. Tanetanos, Phool.; S. Ilario), a small town of Galia Cispadana, on the Via Aemilia, between Regium Lepidum and Parma, and distant 10 miles from the former and 8 from the latter city. (Itin. Ant. p. 287; Itin. Hier. p. 616; Tab. Peut.) It is mentioned in history before the Roman conquest of this part of Italy, as a Gaulish village, to which the praetor L. Manlius retired after his defeat by the Boii in B.C. 218, when he was surrounded and besieged by that people. (Pol. iii. 40; Liv. xxxii. 24.) Its name is not again noticed in history, but it is mentioned both by Pliny and Ptolemy as a municipal town of Galia Cispadana, though it appears to have never risen to a place of importance. (Plin. iii. 15. s. 20; Pol. iii. 1. § 46; Ptolemaeus, Macrob. 1.) Livy calls the Gaulish town "vicus Padus propinquus," an expression which may lead to an erroneous idea of its position; for we learn from the Itineraries that it certainly stood on the Via Aemilia, at a distance of more than 10 miles from the Padus. The site is still occupied by a large village, which is now called, from the name of its principal church, Santi Ilario; but a hamlet or village about half a mile to the N. still retains the name of Taneto. It is distant about 2 miles from the river Enza, the Nicia of Pliny (iii. 16. s. 20), which flows into the Po, about 12 miles from the point where it crosses the Aeumilian Way. [E. H. B.]

TANIS. (Tavros, Herod. ii. 166; Strab. xvii. p. 592; Ptolemaeus, § 52; Joseph. B. Jud. iii. 33; the Coptic Taney, or Athneus Tanis and the modern San), was a city of Lower Aegypt, situated, in lat. 30° 59' on the Tanitic arm of the Nile. [Niles, Ostium Taniticum.] It was the capital of the Tanitic Nome. Although the name of Tanis does not appear in Egyptian annals earlier than the xxi-st dynasty, which consisted of 21 Tanitic kings, it had long previously been among the most important cities of the Delta. The branch of the Nile on which it stood, was, with the exception of the Florae, Lusia, the most easterly, and the nearest to Palestine and Arabia. It is described in the Book of Numbers (J. c.) as founded only seven years later than Hebron; and Hebron, being extant in the time of Abraham, was one of the oldest towns in Palestine. Tanis owed its importance partly to its vicinity to the seas, and partly to its situation among the Deloic marshes. It was probably never occupied by the Hyksos, but, during their usurpation, afforded refuge to the expelled kings and nobles of Memphis. It was a place of strength during the wars of the early kings of the New Monarchy—the xvii-st dynasty— with the shepherds; and when the Egyptians, in their turn, invaded Western Asia, the position of Tanis became of the more value to them. For after Aegypt became a maritime power, in its wars with Cyprus and Phoenicia, a city at no great distance from the coast would be indispensable for its naval armaments. To these purposes Tanis was better adapted than the more exposed and easterly Pelusium. The eastern arms of the Nile were the first that silted up, and the Pelusiac mouth of the river was at a very early period too shallow for ships of war. The greatness of Tanis is attested in many passages of the Hebrew writers. In the 78th Psalm the wonders that attended the departure of the Israelites from Aegypt are said to have been "wrought in the plain of Zaan." This Psalm, indeed, is somewhat later than David (B.C. 1055—1015); but it proves the tradition that Tanis was the capital of that Pharaoh who oppressed the Hebrew people. In the age of Isaiah (xxix. 11, foll.), about 258 years later, Tanis was still reckoned the capital of the Delta, since the prophet speaks of the princes of Zaan and the princes of Noph (Memphis) as equivalent to the nobles of Aegypt. Again, Isaiah (xxx. 4) describes the ambassadors who were sent to Aegypt, to form an alliance with its king as repairing to Zaan and Hanes, or Heracleopolis; and the desolation of Zaan is threatened by Ezekiel as the consequence of Nebuchadnezzar's invasion. Tanis probably declined as Sa3 and Memphis rose into importance; yet twenty years before the Christian era it was still a large town (Strab. xvii. p. 592); nor did it shrink into insignificance until nearly 80 A.D. (Joseph. B. Jud. iv. 11, § 4.) Its linen manufacture probably long sustained it. The marly grounds in its environs were well suited to the cultivation of flax; and Pliny (ix. 1) speaks of the Tanitic linen as among the finest in Aegypt.

No city in the Delta presents so many monuments of interest as Tanis. The extensive plain of Sa3 is indeed thinly inhabited, and no village exists in the immediate vicinity of the buried city. A canal passes through, without being able to fertilize, the field of Zaan, and wild beasts

Vol. II.
TANTUS.

and marsh fever prevent all but a few fishermen from inhabiting it. The mounds which cover the site of Tanis are very high and of great extent, being upwards of a mile from north to south, and nearly three quarters of a mile from east to west. The arm in which the sacred enclosure of the temple of Ptah is about 1500 feet in length by 1250 broad. The enclosure, which is of crude brick, is 1000 feet long and about 700 wide. A gateway of granite or fine gristone, bearing the name of Rameses the Great, stands on the northern side of this enclosure. The numerous obelisks and the greater part of the sculptures of the temple were contributed by Rameses. His name is also inscribed on two granite columns outside the enclosure, and apparently unconnected with the temple. Though in a very ruinous condition, the fragments of walls, columns, and obelisks sufficiently attest the former splendour of this building. The architecture is generally in the best style of Egyptian art, and the beauty of the lotus-bud and palm caps- tions of the columns is much celebrated by vist- vellers. Among the deities worshiped at Tanis were Ptah (Hephaestus), Mast, Is, Horus, &c. The Pharaohs who raised these monuments were of various dynasties, ranging from the kings of the xvith dynasty to the Aethiopian Tirhaka. The numerous remains of glass and pottery found here, and the huge mounds of brick, prove that the civil portions of Tanis were commensurate in extent and population with the religions. The modern village of Sou consisits of mere huts. Early in the present century an attempt was made to establish nitre-works there; but they have been long abandoned: and the only occupation of the few inhabitants of this once flourishing city is fishing. North of the town, and between it and the coast of the Medi- terranean, was the lake Tanis, the present Menza- beh. (Wilkinson, Mod. Egypt and Thebes, vol. i. pp. 407, 449, foll.; Kennic, Ancient Egypt, vol. ii. p. 341.)

TANUS. (Téfros, Artemidorus, op. Steph. B. s. a.) a town in Crete of which there is a coin with the gra- phic TANIGN. (Eckhel, vol. ii p. 321.) [E.B.J.] TANUS. [Argos, Vol. I. p. 201, a.] TAOCHE (Tóben, Arrian, Ind. c. 39; Strab. xv. p. 728), a town or fortress of the district of Tae- cero, in Persia. It was, according to Strabo, the seat of one of the three treasuries of the kings of Persia. It is not certain from Arrian's statement whether he means the town or the district, but probably the former. The town appears to have been placed near the river Grains. Polynky speaks of a promontory and a town of this name (vi. 4. §§ 2 and 7). It is probable that it is the same place as that called by Al-Edrisi, Toudj or Touj (ib. p. 391, &c.). Where Dicynus (1069), em-umerating the three palaces, speaks of the Tadnol, we ought most likely to read Tawel or Tawel, with reference to the people of this district. The Grains is the river of Abakah. [GARINUS.] [V.] TADNOL (Táxos), a tribe in the interior of Pontus (Steph. B. s. r.), which is frequently noticed by Xenophon in the Anabasis (iv. 4. § 18). They lived in mountain fortresses in which they kept all their possessions (iv. 7. § 1, comp. 6. § 5, v. 15. § 17). They occupied the country near the frontiers of Armenia. [L. S.] TAPANTAP (Táwadhr, Ptol. iv. 5. § 21), a people in the interior of Mararmica. [T. H. D.] TAPIE. [TAGAE.] TAPFRI, and more anciently TELEBODIDES, a number of small islands off the western coast of Greece, between Leucades and Acrarnania (Plin. iv. 12. s. 19), also called the islands of the Taphri or Telebodes (Táphro, Tálebedón vóro, Strab. x. p. 459), who are frequently mentioned in the Homeric poems as pirates. (Od. xv. 427, xvi. 426.) When Athena visited Telemachus at Ithaca, she assumed the form of Mentor, the leader of the Taphrians. (Od. i. 105.) The Taphrians or Telebodes are celebrated in the legend of Ampyryton, and are said to have been subdued by them here. (Herod. v. 59; Apollod. ii. 4. §§ 6, 7; Strab. L. c.; Of. of the Reign of B. art. AMPYRTON.) The principal island is called Taphos (Táphros) by Homer (Od. i. 417), and by later writers Taphphios, Taphhiass, or Taphos (Táphros, Ta- phuos, Taphías, Taphiós, Strab. L. c.; Ptol. L. c.; Steph. B. s. v. Táphros), now Meganisi. The next largest island of the Taphri was Carnus, now Kalamos. (Sylax, p. 13; Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 16; Dodwell, vol. i. p. 60.) Stephanus B. men- tioned a town called Taphos, situated by Strabo and Taphius, re- presented by the modern Táphi, where many ancient sepulchres are found. (Leake, Northern Greece, vol. iii. p. 67.)

TAPIHASSUS. [AEOLIA, p. 63.] TAPHIR (Itin. Anton. p. 161; Tábis, Ptol. iv. 4. § 17; Táphi, Olymp. op. Phot. p. 62, ed. Bekker), a town situated on the western bank of the Nile, in the Regio Dodecachoeum, s. of Philae and the Lesser Caracatu. The ruins of an ancient city have been discovered at Tébhis in Lower Nubia, which are supposed to correspond with the ancient Táphi. It was in the neighbourhood of large stone-qua- rries. On the opposite side of the river was a suburb called Contra-Taphis. Both towns in the 5th century A. D. were occupied by the Ebennoys. [W. B. D.]

TAPIOS. [TAPHI.] TAPIHRE or TAPIHROS (Táphi, Steph. B. p. 642; cf. Mela, ii. 1; Ptol. iv. 12. s. 26; Táphiros, Ptol. iii. 6. § 5), that part of the neck of the Chuer- sosocus Taurius which was cut through by a dyke and a town (Herod. iv. 150). Pliny and Ptolomy (ii. cc.) mention a town called Taphros; and Strabo (vii. 308) also notices at this spot a people called Táphiros. (Cf. D'Arville, Mém de l'Ac. d. Insacr. xxxvii. p. 581; Rennell, Geogr. of Herod. p. 96; Man- nert, iv. p. 291.) Perceeop or Perseceop, the modern name of the isthmus, also signifies in Russian a ditch or entrenchment. (Clarke, Trav. ii. p. 316.)

TAPIROSI. [TARIUS.] TAPORIS, a people of Lissitania. (Ptol. iv. 22. s. 25.) [T. H. D.]

TAPISTORIS (Tápsotere, Strab. xvii. p. 799; Tàpsotere, Ptol. iv. 5. § 34; Dioscorides, Mater. Med. iii. 24; Táphiros, Steph. B. s. v.; Tapostrope, Tab. Pent. : the Baotir of Leo Africanus), was a town in the Libyan Nome, west of the Delta, and about 25 miles distant from Alexandria. There were probably several places of this name in Aegypt, since each Nome would be disposed to possess a "tomb of Osiris." Abubak mentions a Baotir near Sebenu- nytis, another in the Arsinoite Nome, the Fayum; a third at Gishe, close to the Pyramids. The town, however, in the Libyan Nome appears to have been the most considerable of all, insomuch as it was the place where the prefect of Alexandria held the pe- riodical census of the Libyan Nome. Its market, indeed, was so much frequented that the emperor Justinian (A. D. 527, foll.) constructed at Tapostoris
of TAPROBANE.

A town-hall, and public baths. (Procop. de Aedif. vi. 1.) Nearer Alexandria was a smaller town of this name. (Plin. n. h. 5. 18.)

TAPROBANE or BETH-TAPROBANE, a city in Ceylon, upon the monastery of Judah, not far from Nebata, which Robinson identifies with the ancient village of Teffaft, lying in the midst of olives and vineyards. (Josh. xv. 53; Robinson, Bibl. Res. vol. ii. p. 71, 2nd ed.)

There was another Tappuah in the plain of Judah (Josh. xv. 34); but which of these was the place conquered by Joshua, cannot be determined. (Josh. xii. 17.)

TAPROBANE or (Γαλακτομηρια, Strab. i. 63, xx. 690, Sc.; Steph. B. s. v.; Ptol. iv. 7.; Strabo's first ed. i. 5. 80), a very large islet, now Ceylon. It is situated at the SE. of the peninsula of Hindostan, and is all but joined to the continent by a reef now called Adam's Bridge, and by an island called Kaminvar or Ramasicercum Cor, the Kāηψ of Ptolemy (vii. 1. § 11) and the Insula Solis of Pliny (vi. 22. s. 24). (Comp. Dunsce, As. Res. v. p. 39; Ritter, Erdk. vi. p. 63.)

Tappuah was not known to the writers of classical antiquity before the time of Alexander the Great, and the various narratives which have reached the West subsequent to his invasion of the Punjab, though often correct as to their natural productions, are singularly erroneous as to its position, its size, and its shape. Thus Onesiocrates estimates it at 5000 stadia, though whether this number implies length, breadth, or circumference, is not stated by Strabo (xv. p. 690).

If the last, he is nearly correct, Rennell considering this to be about 660 miles. (See Map, and Memoir of India.) Strabo adds that it was twenty days' sail from the continent, and constructed and unfit for sailing; a view remarkably confirmed by Pliny, who notices the change in the length of the voyage owing to the improved kind of vessels, and the shallow character of the intervening strait (vi. 22. s. 24).

Erastosthenes reduces the distance to a navigation of seven days — the same time as Pliny states (l. c.); but this is far too great (Strab. xvi. p. 691), as it is really little more than 50 miles from its nearest shores to the mainland of Hindostan. (Vincent, Voy. of Recheaux, l. p. 695; Boyd, in Ind. Ann. Regist. 1779.) Erastosthenes is still more erroneous in the position he assigns to the island, for he extends it 8000 stadia in the direction of Africa (Strab. l. c.), while the author of the Periplus M. Erigir, makes it reach almost to the coast of Azania (c. 61, ed. Müller) — an error which has probably led to that of Edrisi, who has confounded C. Comoros with Madagascar; and in his map has even placed this island to the E. of Ceylon. Strabo supposes that Ceylon is not less than Britain (ii. p. 130), and Ptolemy gives it a length of more than 1000 miles, and a breadth of more than 700 (1. 14. § 9, viii. 28. § 3). (Compare with this the statement of Marco Polo, which is, as to circumference, identical with Ptolemy, l. c.; and Caesar Frederick, ap. Haccklot's Vet. ii. pp. 223—227.)

The history of ancient Ceylon falls naturally into three heads: 1. What may be gathered from the writers who followed the taking of Ceylon. 2. What we may learn from the Roman writers. 3. What may be obtained from the Byzantines.

Of the times preceding the invasion of India by Alexander we have no distinct notice in classical history; yet it may be inferred from Pliny that some report of its existence had reached the West, where he states that it had long been the opinion that Tappuah was another world, and bore the name of Antichthonus, but that it was determined to be an island about the acra of Alexander (vi. 22. s. 24): while it is not impossible that Herodotus may have heard some tradition on the subject, since he states that cinnamon is produced in those countries in which Dioscorides (Lan. R. 111) from which passage, however, it cannot be determined whether the true cinnamon, that is the bark of the shrub, is intended, or some other kind of cassia.

To the first class of writers belong Onesiocrates, the companion of Alexander, Megasthenes and Daimachus, who were sent as ambassadors by Seleucus to Samsungotous (Chandragupta) and his son Amintochates (Amritrag Earth), from whose memorials almost all that is preserved in Strabo and in the earlier portion of the notice in Pliny has been taken. There is no reason to suppose that either Onesiocrates or Megasthenes themselves visited this island; they probably collected, while in India, the narratives they subsequently compiled.

The second class of writers are of the period when the vast commerce of Alexandria had extended to India subsequent to the death of Strabo, p. 24. (Graukurd, Proleg. in Strab. l. p. 16.)

Previous to this period, some few ships may have reached India from Egypt; but, from Strabo's own statement, they appear to have been those only of private individuals (l. c.). Pliny, the writer of the Periplus of the Erythraean Sea, Marcin of Heralda, Mela, and Ptolemy, belong to this class, and, in the fulness of their narratives, show clearly how much additional knowledge had been acquired during the extension of the power of the early emperors of Rome.

Lastly, under the head of Byzantine writers, we have the remarkable account of the island in Cosmas Indicopleustes, the latest which belongs to the period of ancient or classical history.

The most important notice is that of Pliny (l. c.), who states that ambassadors from the island were received at Rome by the emperor Claudius, through the instrumentality of the freedman of a certain Ammius Plocamus, who, after having been driven out of his course when returning from the island, remained with the six months, and became intimate with the people and their rulers. He states that Plocamus landed at a port he calls Hippares, which may be identified with the modern Kudremat, which means the same in Sanscrit; and that the name of the king was Racha, evidently the Indian Rejih: he adds that the island contained 500 towns, the chief of which was called Pahesimmerum, and a vast lake Megisa, from which flowed two rivers, one called Cydan (Kemrara or Kadambo in the Annals, now Aripo). It is not possible accurately to determine what modern place is to be identified with Megisa, but the Mahasano speaks of enormous works of this nature attributed to Vasabha and other early kings. (Mah. pp. 65, 210, 221, 215.)

Pliny adds some astronomical facts, which are not equally coincident with the truth; and remarks on the richness of the island in precious stones and metals, and on the fineness of the climate, which extended the life of man beyond its usual limits.

We may mention also, that Diodorus tells a remarkable story, which has been generally held to refer to Ceylon, though this is not capable of proof. According to him Iambulus, the son of a merchant, on his way to the spice countries, was taken prisoner
by the Aethiopians, and, after a time, with one other companion, placed in a boat and left to his fate. After a long voyage, he came to an island, rich in all kinds of natural productions and 5000 studia round όστε όποιον μέν οπωροφόρον το χρώματι. Lamblinus stayed there seven years, and thence went to Palibostra, where he was well received by the king, who is said to have been φιλάττα (Poth. ii. 55, &c.). That the details of this voyage are fabulous no one can doubt, yet the narrative is probably founded on fact, and points to an early intercourse between the shores of Eastern Africa and India.

The fullest and by far the most interesting account of Ceylon is that preserved by Cosmas Indicopleustes, which was published by Montfaucon (Coll. Nov. Patr. ii. p. 356). Cosmas, who flourished in the reign of Justinian, about a.d. 535, states that he obtained his information from a Greek named So- pratnus, whom he met at Abulis. According to this writer, the Taprobane of the Greeks is the Siedeliba of the Hindus, an island lying beyond the Pequor Coast, or Malabar, and having near it a great number of small islands (i.e. the Maldives). He reckons it about 900 miles in length and breadth, a measure he deduces from a native measure called Gindula (still said to be known in the island, and the same as the Tamil nalgulai, Vincent, ii. p. 506). There were, at the time he received his information, two kings in the island, one the possessor of the Hyacinth (i.e. of the mountain districts which abound in precious stones), and the other of the plain country and coast, where in later times the Arabians, Portuguese, Dutch, and English, have in succession established factories. A Christian church, he adds, was established there εν ιεροίς άγιοις και έστησε γενικλαίοις και μετακόμισε with a priest and deacon ordained in Persia. There is no doubt that these were Nestorians, whose Catholics resided at Ctesiphon, and who, on the Makabian coast, are often called Christians of St. Thomas. He determines the position of Siedeliba, by stating that it is as far from it to China, as from the Persian Gulf to the island (p. 138). Again, he says, which is less correct, that Siedeliba is five days sail from the continent; and that on the continent he placed Malabar (Theequer), which produces the pearl oysters; and adds, that the king of Ceylon sells elephants for their height; and that in India elephants are trained for war, while in Africa they are captured for their ivory. Horses imported from Persia pay no tax. It is remarkable that this notice of the elephants is in strict accordance with that of Aelian, who asserts that they were bred in Ceylon and transported in large native vessels to the opposite continent, and sold to the king of Calinga (Hist. An. xxvi. 18). Pliny (i. e.), on the authority of Oesocri- tus, affirms, that larger and more warlike elephants are reared in this island than anywhere else in India, and that the hunting of them was a constant sport: and Podemus places under the Maika M. (Adam's Peak) ·his ἐλέφαντων royal, in the exact position in which they were, till lately, most abundant (vii. § 8). The testimony of all modern travellers on the subject of the Ceylon elephant is, that those bearing great tusks and hence valuable for ivory, are extremely rare in the island. (Compare also Dionys. Perieg. v. 593, who calls Ceylon μέτρα Ἀσιαίων ἑλέφαντων; Alex. Lycian, in Steph. B., who speaks of ἐκλεξάνθεις as the product of the island; Solin. c. 56; and Tacites Claud. viii. Hist. 215.) Cosmas concludes his remarkable story with a notice of a conference between the king of Ceylon and So- pratnus, in which the latter convinced the king that the Romans were a greater people than the Persians, by exhibiting some gold coins of Byzantium. It confirms the veracity of the narrator that we know from other sources that the Roman princes of the sixth century had only silver money, while at the capital of the Eastern Empire gold coin was not rare. There were many temples in the island, one of them famous for a hyacinth of extraordinary size.

Few islands have borne, at different times, so large a number of names; as many of these have considerable interest, we shall notice them in succession.

The first, as we have stated, by which it was known to the Greeks was Taprobane. Several explanations have been given of this name: the best is probably Ταμπραμπάν (Sanscrit for red-leaved; cf. Burnouf, Journ. Asiat. viii. p. 147; Mahavanso, ed. Tourneur, p. 50; Lassen, Inst. Ling. Pracrit. p. 246), a form slightly changed from the Pali Tilambapōnī, the spot where the first king Vijaya is said to have landed (Mahavanso, i. c.). This name is not unknown in other Indian writings; thus we find so named a place on the adjoining continent of Hindu- stan, and a river of the same district which flows from the Ganges into the sea near Tissavelly (Wilson, Visvihara Parana, p. 176); and a pearl-fishery at the mouth of this stream is noticed in the Koghu-vansa (iv. p. 59; cf. also Visvih Parana, p. 175, and Asiat. Research. viii. p. 330). Other interpretations of Taprobane may be found in Bochart (Geog. Sacra, p. 692), who, after the fashion of the scholars of his day, derives it from two Hebrew words, and imagines it the Οαξίρ of the Bible; Wald (Erdbesch. v. Ost-Indien, ii. 682, 683), and Mannert (v. p. 289), Duncan (Asiat. Research. v. p. 39), Gladwin (Ayia Akbari, iii. 36), Bohler (Altes Indien, i. 27). Vincent (Peripitus, ii. p. 493), none of which are, however, free from objection. There can be no doubt that the early use of Ceylon approximated very closely to that of the adjoining continent, and was, in fact, a form of Tam. (I.e. Isk, Cinual. Skript. p. 1, Colombo, 1821; Buchanan Hamilton, ap. M. Martin’s East India, ii. p. 795; cf. also Poth. ii. § 8). So strongly does the name Timbampānī is found in the Giravu inscription of Asoka (p. c. 280), and would therefore natur- ally be known to the Sceluncian Greeks. (Z. Journ. Beng. vii. p. 159.)

We may add that Pliny states that the ancient inhabitants were called Megasthenes Palaeogom (i. c.), doubtless the translation into Greek of some Indian name. It is not impossible that Megasthenes may have been acquainted with the Indian fable, which made the Rikkhans, or Giants, the children of the Earth, the earliest inhabitants of this island.

The next name we find applied to Ceylon was that of Simunad or Palaeasanada, which is found after the time of Strabo, but had, nevertheless, gone out of use before Podemus. (I.Pot. l; Steph. B. s. v. Taprobane; Peripl. M. E., ed. Hudson, p. 2; Marcian, ed. Hudson, p. 26, and pp. 2, 9.) There is a difficulty at first sight about these names, as to which form is the correct one; on the whole, we find, in general, that of Podemus (Παλασάιος), on the authority of Marcian (i. c.) and of the Peripius (§ 61, ed. Müller). Pliny, too, in his account of the embassy to Rome, calls the city, where the royal palace was, Palaisanuma. There can be little doubt that this word is the Graecised form of the Sanscrit Pali-Simante, the
TAPROBANE.

Head of the Holy Law, which is confirmed by another name of analogous character, Andrassimandu (Ptol. vii. 4), a promontory now called Culpentey (Mannert, l.c. p. 211). The ancient city noticed by Phipy, which the royal palace, must be that elsewhere called Anuragogramma, and by the natives "Taprobane," the royal seat of empire from n. c. 267 to a.D. 769 (Mahavansa, Intr. p. xlii.). (For other derivations of Palasimandu, see Dotwell, Dissert. de Geogr. Min. p. 95; Wall, Erdbeob. ii. p. 684; Renaudot, Anc. Relat. des Indes, p. 133; Malte-Bran, Précis de Geogr. iv. 113; Mannert, l. c. p. 210; Paolina-a-St. Barth, Voyage aux Indes, p. 452.) The conjecture of Willford (As. Res. x. p. 148) that it may be Suggatra, and of Heeren (Soc. Reg. Götting. vol. vii. p. 32) that it is the town of "Pontgomeil," do not meet refutation.

The other names which this island has borne appear to have been as follows: Saluie, with its inhabitants, the Salai, Senendivas, Sielidieha, Serendib, Zeilan, Ceylon. These are all closely connected and in reality eponymous modifications of one original form. The first, Saluie,—perhaps more correctly Saluine,—which seems to have been in use when Ptolomy wrote the common name of Taprobane (l. c.), is certainly derivable from Sinaola, the Pali form of Sinhala (Mahav. exp. vii. p. 50): from this would naturally come the Σιάο of Cosmas (Cosm. Ind. I. c.), the termination of this name, Σά, being nothing more than the Sanscrit d'après, an island. (Of in the same neighbourhood the Lakkadive and Maldives islands.) The slight and common interchange of the L and G gives the Senendivas of Ammianus (xxii. 7). From this again, we obtain the more modern forms of the Arabic, Dutch, and English. Sinhala would mean the abode of monks; the form Sengkalo, in the narrative of the Chinese travelers who visited Ceylon in a. D. 412. (Foskovek-i, p. xii., cf. p. 328, Annot. p. 336.) Besides these names there is one other whereby alone this island is known in the sacred Brahminical writings. This is Landu (see Mahabh. ii. 30, v. 117, vi. c. 278, &c.). It is not very likely that this name has passed out of use before the time of Alexander, as it is not mentioned by any of the classical writers: it has been, however, preserved by the Buddhists, as may be seen from the notices in the Mahavansa (pp. 2, 3, 49, &c.). (Comp. also Colebrooke, Ess. ii. p. 427; Davis in As. Res. ii. p. 229.)

Ceylon is a very mountainous island, the greater masses being grouped towards the southern end, and the ancient inhabitants therefore the watered for most of its rivers. The rivers flow and become the land antecedent to the arrival of Vignay and his Indian followers. In physiognomy and colour they bear a striking resemblance to the earliest inhabitants of the S provinces of Hindostan and are, most likely, of similarly Scythic origin. (Knox, Account of Ceylon, Lond. 1677; Perceval, Account of Ceylon, Lond. 1803; Gardner, Deser. of Ceylon, Lond. 1807; Darcy, Ceylon and its Inhabitants, Lond. 1821; W. Hamilton, India, ii. 524; Ritter, iv. p. 226: Lassen, Indische Alterth. i. p. 198: Dissert. de Taprobane, Bonn, 1832; Turnour, Mahavawso, Ceylon, 1836; Jour. Asi. Beng. vi. 856; Chapman, Anc. City of Anuripiyaru, in Tr. R. As. Soc. iii. 463; Chitty, Ruins of Tangalama Nuweera, in R. As. Soc. vi. 242: Brooke, Mahavella-Gang, K. Geogr. Soc. iii. 223.) [V.]

Adam's Peak is the pre-eminent mountain (Brooke on Mahavella-Gang, Roy. Geog. Journ. iii. p. 223), and whose course is nearly N.E.; the Barages, which rose in the M. Malea, and flowed SE. and the Soanas, which flows from the same source in a westerly direction. Besides these rivers was the celebrated Meghaka, the size of which has been extravagantly overstated by Phipy (vi. 22. a. 24). It is probable that this lake was formed by the connecting together of several great tanks, many remains of which still exist; and thus Forbiger suggests that it may be near the mouths of the Mahavelli-Gang, in which neighbourhood there are still extraordinary remains of canals, earthworks, &c. (Brooke, l. c.). It was on the shores of this lake that Phipy placed the capital Palasimandu, with a population of 200,000 souls. The island was rich in towns and peoples, which are not clearly distinguished by ancient writers; of these the Anurogrammi with the town Anuragogramma (now Anuripiyuru) is the most great. The greatness of this place, which was the royal residence of the kings from n. c. 267 to a. D. 769 (Mahavansa, Intrs. introd. p. xlii.), is shown by the vast remains which still exist on the spot. (Chapman, Ancient Anuripiyaru, in Trans. Roy. As. Soc. ii. pl. ii. p. 463.)

Other less known peoples and places were the Soani, Sandancades, Bhogandani, Dame (now Tangalle), the Mendulis with their seaport Mor-dulanee, the Nagalibhi, Spartana (now Trincumoll), Maarammon (probably Tammankadave), and the Modutti. For these and many more we are indebted to Ptolomy, who from his own account (i. 17. § 4), examined the journals and canvassed with several persons who had visited the island. It is a strong confirmation of what he states, that a considerable number of the names preserved can be reproduced in the native Indian form.

The people who inhabited the island were for the most part of Indian descent, their language being very nearly connected with the Pali, one of the most widely spread Indian dialects. To this race belong all the monuments which remain of its former greatness, together with a very curious and authentic series of annals which have been of late brought to light by the exertions of Sir Alexander Johnston and the critical acumen of Mr. Turner (Mahavansa) and Upham (Soc. Hist. Books). There are, however, still existing in the island some few specimens of a wholly different race, locally known by the name of the Teddaha. These wild and uncivilised people are found in the valleys and woods to the E. and S. of the Mahaveli-Gang; and are, in all probability, the remains of the aboriginal race who dwelt in the land antecedent to the arrival of Vignay and his Indian followers. In physiognomy and colour they bear a striking resemblance to the earliest inhabitants of the S provinces of Hindostan and are, most likely, of similarly Scythic origin.
TAPSUS FLUVIUS, [TAPSUS.]

TAPUS (Tapsus), a town of uncertain site in Africa Minor, is mentioned only by Polybeny (v. 7, § 3).

TAPUR (Taranto), a tribe in Scythia intra Imaum. [T. H. D.]

TAPURI (Tarpeia or Tarpoia, Strab. xi. p. 520; Plin. vi. 16, s. 18), a tribe whose name and probable habitats appear, at different periods of history, to have been extended along a wide space of country from Armenia to the eastern side of the Ousus. Strabo places them along this side of the Caspian Gates and Bagae in Parthia (vi. p. 514), or between the Derbises and Hyrcanian (xi. p. 520), or in company with the Amardi and other people along the southern shores of the Caspian (xi. p. 523); in which last view Curtius (vi. 4. § 24, viii. 1. § 13), Dionysius (de Sutu Orbis, 733), and Pliny (vi. 16. s. 18) may be considered to coincide. Polybeny in one place reckons them among the tribes of Media (vi. 2. § 6), and in another ascribes them to Margiana (vi. 10. § 2). Their name is written with some differences in different authors. Thus Tapsus and Tarbo occur in Strabo; Tapsus in Pliny and Curtius; Tarpob in Steph. B. There can be no doubt that the present district of Taboristan derives its name from them. Adrian (V. H. iii. 13) gives a peculiar description of the Tapsus who dwelt in Media. (Wilson, Africa p. 157.)

TAPURI MONTES, a chain of mountains, in Scythia, to the N. of the Jaxartes, apparently a portion of the Alai range, towards its western extremity (Plut. vi. 14. § 7). It may, however, be doubted whether this view of Polybeny is really correct. It would seem more likely that they are connected with the Tapsus, a tribe who nearly adjoined the Hyrcanian [Tarus]; and this a notice in Polybius would appear clearly to imply (v. 44.)

TARACHI (Tarachi, Plut. vii. 4. § 8), a tribe of Tapsus or Ceylon, who occupied the SE. corner of the island below the Males mountains (Adams' Peak). They appear to have had a port called 'Kioiu Ampir, probably in the neighbourhood of the present Kotam. Near to them was a river called the Barace (Plut. vii. 4. § 5). It is not unlikely that the river and the people had once the same name, which has since been modified by the change of the initial letters.

TARBANDIUS (Tarbandou; Eth. Tarbandous), a place in Phrygia of unknown site, is mentioned only by Stephanus Byz. (s. v.)

TARANEI, a people in Arabia Deserta of unknown site. (Plin. vi. 28. s. 82.)

TARSAS. [TARENTUM.]

TARASCON (Tarascon), a town in the Provence Narbonensis, on the east side of the Rhone, between Arles and Arégon. The railway from Arégon to Marseilles passes through Tarascon, and there is a branch from Tarascon to Nimes. Polybeny (in whose text the name is written Tauru- scen) enumerates Tarascon among the towns of the Salyes [Salve]. Strabo (iv. p. 178) says that the road from Nemausus (Nimes) to Aquae Sextiae passes through Ugerum (Beaucaire) and Tarascon, and that the distance from Nemausus to Aquae Sextiae is 53 Roman miles; which, as D'Anville observes, is not correct. In another passage (iv. p. 187) Strabo makes the distance from Nimes to the bank of the Rhone opposite to Tarascon about 100 stadia, which is exact enough. [TARUSCOMINIENSIS.]

TAREBN. [TARBES.]

TARBELLI (Tarbelloi, Tarbello) are mentioned by many authors among the Aquitanian peoples (E. G. iii. 27). They lived on the shores of the Ocean, on the Gallic bay (Strab. iv. p. 190), of which they were masters. Gold was found abundantly in their country, and at little depth. Some pieces were a handful, and required little purification. The Tarbeli extended southwards to the Aturis (Adur) and the Pyrenees, as the passages cited from Tibullus (i. 7. 9) and Lucan (Pharsal. i. 421) show, so far as they are evidence:—

"Qui texet et ripas Aturi, quo litore curvo
Molilier admissum caduit Tarbellicus sequor." Aussoinis (Parent. iv. 11) gives the name "Tarbellos" to the Ocean in these parts. Polybeny (ii. 7. § 9) places the Tarbeli south of the Bituriges Viisci, and makes their limits extend to the Pyrenees. He names their city "Tota Agrioberta, or Aquae Tarbellicae. [AQUAE TARBBILLICAEB]

Pliny (iv. 19) gives to the Tarbeli the epithet of Querciifrons, from which it is supposed the establishment of some Roman soldiers in this country, as in the case of the Cossaces, whom Pliny names Sexignani. [COCCOSATEAEB.] The country of the Tarbeli contained hot and cold springs, which were near one another.

TARILESUS (Tarphoros), a town of Pisidia, mentioned only by Strabo (xii. p. 570). [L. S.]

TARENITUS SINUS (Tarattinos kóutos; Gofio di Toranto) was the name given in ancient as well as in modern times to the extensive gulfs comprised between the two great promontories or peninsulas of Southern Italy. It was bounded by the Iapygian promontory (Cappa della Luncsa) on the N., and by the Lucian promontory (Cappa dol Colonne) on the S.; and these natural limits being clearly marked, appear to have been generally recognised by ancient geographers. (Strab. vi. pp. 261, 262; Mel. ii. 4. § 8; Plin. iii. ii. 16; Plin. iii. 1. § 12.) Strabo tells us it was 240 miles in extent, following the circuit of the shores, and 700 stadia (874 miles) across from headland to headland. Pliny reckons it 250 miles in circuit, and 100 miles across the opening. The latter statement considerably exceeds the truth, while Strabo's estimate is a very fair approximation. This extensive gulf derived its name from the celebrated city of Tarentum, situated at its N.E. extremity, and which enjoyed the advantage of a good port, almost the only one throughout the whole extent of the gulf. (Strab. vi. p. 278.) But notwithstanding this disadvantage, its western shores were lined by a succession of Greek colonies, which rose into flourishing cities. Crotona, Sybaris, Metapontum, and, at a later period, Heraclea and Thurii, all adorned this line of coast; the great fertility of the territory compensating for the want of natural harbours. On the northern or Iapygian shore, on the contrary, the only city was Callipolis, which never rose above a subordinate condition. [E. L.]

TARENTUM (Táapos, -artos; Eth. Tàropíons, Tarentinos ; Taranto), one of the most powerful and celebrated cities of Southern Italy, situated on the N. shore of the extensive bay, which derived from it, both in ancient and modern times, the name of the gulf of Tarentum. (TARENTINUS SINUS; Tàropíon kóutos; Gofio di Toranto.) It was included within the limits of the province of Calabria, as that term was used by the Romans; but the Greeks
would generally have reckoned it a city of Magna Graecia, and not have regarded it as included in Italy. Its situation is peculiar, occupying a promontory or peninsula at the entrance of a very extensive but shallow bay, now called the Morea Piccolo, but in ancient times known as the Port of Tarentum, an inlet of above 6 miles in length, and from 2 to 3 in breadth, but which was so nearly closed at its mouth by the peninsula occupied by the city, that the latter is now connected by a bridge with the opposite side of the harbour. There can be no doubt that the ancient city originally occupied only the same space to which the modern one is now confined, that of the low but rocky islet which lies directly across the mouth of the harbour, and is now separated from the mainland at its E. extremity by an artificial fosse or ditch, but was previously joined to it by a narrow neck of sand. This may probably have been itself a later accumulation; and it is not unlikely that the city was originally founded on an island, somewhat resembling that of Ortygia at Syracuse, which afterwards became joined to the mainland, and has again been artificially separated from it. As in the case of Syracuse, this island or peninsula afterwards became the Acropolis of the enlarged city, which extended itself widely over the adjoining plain.

Tarentum was a Greek city, a colony of Sparta, founded within a few years after the two Achaean colonies of Sybaris and Crotona. The circumstances that led to its foundation are related with some variation by Antiochus and Ephorus (both cited by Strabo), but both authors agree in the main fact that the colonists were a body of young men, born during the First Messenian War under circumstances which threw over their birth a taint of illegitimacy, on which account they were treated with contempt by the other citizens; and after an abortive attempt at creating a revolution at Sparta, they determined to emigrate in a body under a leader named Phalanthus. They were distinguished by the epithet of Parthenians, in allusion to their origin. Phalanthus, who was apparently himself one of the dispargel class, and had been the chief of the conspirators at Sparta, after consulting the oracle at Delphi, became the leader and founder of the new colony. (Antiochus, ap. Strab. vi. p. 278; Ephorus, Ib. p. 279; Serv. ad Aen. iii. 551; Dio. xvi. 66; Justin, iii. 4; Sacyjm. Ch. 332.) Both Antiochus and Ephorus represent them as establishing themselves without difficulty on the spot, and received in a friendly manner by the natives; and this is far more probable than the statement of Pausanias, according to which they found themselves in constant warfare; and it was not till after a long struggle that they were able to make themselves masters of Tarentum. (Paus. x. 10. § 6.) The same author represents that city as previously occupied by the indigenous tribes, and already a great and powerful city, but this is highly improbable. The name, however, is probably of native origin, and seems to have been derived from that of the small river or stream which always continued to be known as the Tars; though, as usual, the Greeks derived it from an eponymous hero named Taras, who was represented as a son of Neptune and a nymph of the country. (Paus. Ib. § 8.) It is certain that the hero Taras continued to be an object of special worship at Tarentum, while Phalanthus, who was revered as their Orakel, was frequently associated with him, and gradually became the subject of many legends of a very mythical character, in some of which he appears to have been confounded with Tanus himself. (Paus. x. 10. §§ 6, 8, 13, § 10; Serv. ad Aen. I.c.) Nevertheless, there is no reason to doubt the historical character of Phalanthus, or that Lacedaemonian origin of Tarentum, which was confirmed by numerous local names and religious observances still retained there down to a very late period. (Pol. viii. 30, 35.) The Roman poets also abound in allusions to this origin of the Tarentines. (Her. Corm. iii. 5. 56, ii. 6. 11; Ovid. Met. xv. 50, &c.) The date of the foundation of Tarentum is given by Hieronymus as n. c. 768, and this, which in accordance with the circumstances related in connection with it, is probably correct, though no other author has mentioned the precise date. (Hieron. Chron. ad ol. xviii.)

The history of Tarentum, for the first two centuries of its existence, is, like that of most other cities of Magna Graecia, almost wholly unknown. But the main fact is well attested that it attained to great power and prosperity, though apparently at first overshadowed by the superior power of the Achaean cities, so that it was not till a later period that it assumed the predominant position among the cities of Magna Graecia, which it ultimately attained. There can be no doubt that it owed this prosperity mainly to the natural advantages of its situation. (Sacyym. Ch. 332—336; Strab. vi. p. 278.) Though its territory was not so fertile, or so well adapted for the growth of grain as those of Metapontum and Siris, it was admirably suited for the growth of olives, and its pastures produced wool of the finest quality, while it lay very near the Tyrrhene sea as it was called, abounded in shell-fish of all descriptions, among which the Murex, which produced the celebrated purple dye, was the most important and valuable. But it was especially the excellence of its port to which Tarentum owed its rapid rise to opulence and power. This was not only landlocked and secure, but was the only safe harbour of any extent on the whole shores of the Tarantine gulf; and as neither Brundisium nor Hydruntum, on the opposite side of the Messapian peninsula, had as yet attained to any eminence, or fallen into the hands of a seafaring people, the port of Tarentum became the chief emporium for the commerce of all this part of Italy. (Pol. x. 1; Fl. i. 18. § 3.) The story of Arion, as related by Herodotus (i. 24) indicates the existence of extensive commercial relations with Corinth and other cities of Greece as early as the reign of Periander, n. c. 625—585.

As the Tarentines gradually extended their power over the adjoining territories, they naturally came into frequent collision with the native tribes of the interior,—the Messapians and Peucetians; and the first events of their history recorded to us relate to their wars with these nations. Their offerings at Delphi noticed by Pausanias (x. 10. § 6, 13, § 10), recorded victories over both these nations, in one of which it appears that Opis, a king of the Hyagnians, who had come to the assistance of the Peucetians, was slain; but we have no knowledge of the dates or circumstances of these battles. It would appear, however, that the Tarentines were continually gaining ground, and making themselves masters of the Messapian towns one after the other, until their progress was checked by a great disaster, their own forces, together with those of the Rhegians, who had been sent to their assistance, being totally defeated by the barbarians with great slaughter. (Herod. vii. 170; Dio. x. 52.) So heavy was their
loss that Herodotus, without stating the number, says was the greatest slaughter of Greeks that had occurred up to his time. The loss seems to have fallen especially upon the nobles and wealthier citizens, so that it became the occasion of a political revolution, and the government, which had previously been an aristocracy, became therefore a pure democracy. (Arist. Pol. v. 3.) Of the internal condition and constitution of Tarentum previously to this time, we know scarcely anything, but it seems probable that its institutions were at first copied from those of the parent city of Sparta. Aristotle speaks of its government as a συμφωνία, in the sense of a mixed government or commonwealth; while Herodotus incidentally notices a king of Tar- rentum (iii. 156), not long before the Persian War, who was doubtless a king after the Spartan model. The institutions of a democratic tendency noticed with commendation by Aristotle (Pol. vi. 5) probably belong to the later and democratic period of the constitution. We hear but little also of Tarentum in connection with the revolutions arising out of the influence exercised by the Pythagoreans; that sect had apparently not established itself so strongly there as in the Aeolian cities; though many Tarentines are enumerated among the disciples of Pythagoras, and it is clear that the city had not altogether escaped their influence. (Tamb. Vit. Pyth. 262, 266, her. Phys. Vit. Pyth. 56.)

The defeat of the Tarentines by the Messapians, which is referred by Diodorus to c. 473 (Diod. xii. 52), is the first event in the history of Tarentum to which we can assign a definite date. Great as that blow may have been, it did not produce any permanent effect in checking the progress of the city, which still appears as one of the most flourishing in Magna Graecia. We next hear of the Tarentines as interfering to prevent the Thurians, who had been recently established in Italy, from making themselves masters of the district of the Sciritis. On what grounds the Tarentines could lay claim to this district, which was separated from them by the intervening territory of Metapontum, we are not informed; but they carried on war for some time against the Thurians, who were supported by the Spartan exile Cleomidas; until at length the dispute was terminated by a compromise, and a new colony named Hecaleia was founded in the contested territory (n. c. 492), in which the citizens of both states participated, but it was agreed that it should be considered as a colony of Tarentum. (Ant. ch. op. Strab. vi. p. 264; Diod. xii. 24, 36.) At the time of the Athenian expedition to Sicily, the Tarentines kept aloof from the contest, and contented themselves with refusing all supplies and assistance to the Athenian fleet (Thuc. vi. 44), while they afforded shelter to the Corinthian and Lucanian ships under Gyllippus (Ib. 104), but they did not even prevent the second fleet under Demosthenes and Eurymedon from touching at the islands of the Choremades, immediately opposite to the entrance of their harbour, and taking on board some auxiliaries furnished by the Messapians. (Id. vi. 33.)

Another long interval now elapsed, during which the history of Tarentum is to us almost a blank; yet the few notices we hear of the city represent it as in a state of great prosperity. We are told that at one time (apparently about 380—360 n. c.) Archytas, the Pythagorean philosopher, exercised a paramount influence over the government, and filled the office of Strategus or general no less than seven times, though it was prohibited by law to hold it more than once; and was successful in every campaign. (Dio. Laec. viii. 4, §§ 79—82.) It is evident, therefore, that the Tarentines were far from enjoying unbroken peace. The hostilities alluded to were probably but a renewal of their old warfare with the Messapians; but the security of the Greek cities in Italy was now menaced by two more formidable foes, Dionysus of Syracuse in the south, and the Lucanians on the north and west. The Tarentines, indeed, seem to have at first looked upon both dangers with comparative indifference; their remote position secured them from the immediate brunt of the attack, and it is even doubtful whether they at first joined in the general league of the Greek cities to resist the danger which threatened them. Meanwhile, the calamities which befell the more southern cities, the destruction of some by Dionysus, and the humiliation of others, tended only to raise Tarentum in comparison, while that city itself enjoyed an immunity from all hostile attacks; and it seems certain that it was at this period that Tar- rentum first rose to the preponderating position among the Greek cities in Italy, which it thenceforth enjoyed without a rival. It was apparently as an acknowledgment of that superiority, that when Tarentum had joined the confederacy of the Greek cities, the place of meeting of their congress was fixed at the Tarentine colony of Hecaleia. (Strab. vi. p. 288.)

It was impossible for the Tarentines any longer to keep aloof from the contest with the Lucanians, whose formidable power was now beginning to threaten all the cities in Magna Graecia; and they now appear as taking a leading part in opposing the progress of these barbarians. But they were not content with their own resources, and called in successively to their assistance several foreign leaders and generals of renown. The first of these was the Spartan king Archidamus, who crossed over into Italy with a considerable force. Of his operations there we have no account, but he appears to have carried on the war for some years, as Diodorus places his first landing in Italy in B. C. 346, while the battle in which he was defeated and slain was not fought till the same year as that of Chaeroneia, B. C. 338. (Diod. xvi. 63, 88.) This action, in which Archidamus himself, and almost all the troops which he had brought with him from Greece perished, was fought (as we are told), not with the Lucanians, but with the Messapians, in the neighbour- hood of Manduria, only 24 miles from Tarentum (Plut. Aigis. 3; Paus. iii. 10, § 5; Diod. l. c.), but there can be no doubt, however, that both nations were united, and that the Lucanians lent their sup- port to the Messapians, as the old enemies of Taren- tum. Henceforth, indeed, we find both names continually united. A few years after the death of Archidamus, Alexander, king of Epirus, was invited by the Tarentines, and landed in Italy, n. c. 332. The operations of his successive campaigns, which were continued till n. c. 326, are very imperfectly known to us, but he appears to have first turned his arms against the Messapians, and compelled them to conclude a peace with the Tarentines, before he proceeded to make war upon the Lucanians and Brittanians. But his arms were attended with con- siderable success in this quarter also: he defeated the Samnites and Lucanians in a great battle near Paestum, and penetrated into the heart of the Brit-
Liv. Oros. i. 12

Justin, i. 26. Justin, i. 34: Justin, xii. 2.

Diodorus, b. c. 226, only liberated the Tarentines from an enemy instead of depriving them of an ally. They appear from this time to have either remained tranquil or carried on the contest single-handed, till b. c. 303, when we find them again invoking foreign assistance, and, as on a former occasion, sending to Sparta for aid. But this time they were again furnished, and a large army of mercenaries landed at Tarentum under Cleonymus, the uncle of the Spartan king. But though he compelled the Messapians and Lucanians to sue for peace, Cleonymus soon alienated the minds of his Greek allies by his arrogance and luxuriously habits, and became the object of general hatred before he quitted Italy. (Diod. xx. 104.) According to Strabo, the Tarentines subsequently called in the assistance of Agathocles (Strab. vi. p. 204); but we find no mention of this elsewhere, and Dio tells us that he concluded an alliance with the Lucilians and Peucetians, which could hardly have been done with favourable intentions towards Tarentum. (Diod. xxii. p. 490.)

Not long after this the Tarentines first came into collision with a more formidable foe than their neighbours, the Messapians and Lucanians. The wars of the Romans with the Samnites, in which the descendants of the latter people, the Apulians and Lucanians, were from time to time involved, had rendered the name and power of Rome familiar to the Greek cities on the Tarentine gulf and coast of the Adriatic, though their arms were not carried into that part of Italy till about b. c. 283, when they rendered assistance to the Thurians against the Lucanians [Thurii]. But long before this, as early as the commencement of the Second Samnite War (b. c. 326), the Tarentines are mentioned in Roman history as supporting the Neapolitans with promises of succour, which, however, they never sent; and afterwards exciting the Lucanians to war against the Romans. (Liv. viii. 27.) Again, in b. c. 321 we are told that they sent a haughty embassy to command the Samnites and Romans to desist from hostilities, and threatened to declare war on whichever party refused to obey. (Id. ix. 14.) But on this occasion also they did not put their threat in execution. At a subsequent period, probably about b. c. 303 (Arnold's Rome, vol. ii. p. 315), the Tarentines concluded a treaty with Rome, by which it was stipulated that no Roman ships of war should pass the Lucanian cape. (Appian, Summa. 7.) It was therefore a direct breach of this treaty when, in b. c. 302, a Roman squadron of ten ships under L. Cornelius, which had been sent to the assistance of the Thurians, entered the Tarentine gulf, and even approached within sight of the city. The Tarentines, whose hostile disposition was already only half concealed, and who are said to have been the prime movers in organising the confederacy against Rome which led to the Fourth Samnite War (Zonar. viii. 2.), immediately attacked the Roman ships, sunk four of them, and took one. After this they proceeded to attack the Thurians on account of their having called in the Romans, expelled the Roman garrison, and made themselves masters of the city. (Appian, Summa. 7. § 1; Zonar. viii. 2.) The Romans sent an embassy to Tarentum to complain of these outrages; but their demands being refused, and their ambassador treated with contumely, they had now no choice but to declare war on the Tarentines on the 28th of December, B.C. 302 (Appian, i. 28; Zonar. l. c.; Dion Cass. Fr. 145.) Nevertheless, the war was at first carried on with little energy; but meanwhile the Tarentines, following their usual policy, had invited Pyrrhus, king of Epirus, to their assistance. That monarch readily accepted the overture, and sent over his general Milo to occupy the citadel of Tarentum with 3000 men, while he himself followed in the winter. (Zonar. viii. 2.; Plut. Pyrrh. 15, 16.)

It is usual to represent the Tarentines as at this period sunk in luxury and effeminacy, so that they were unable to defend themselves, and hence compelled to have recourse to the assistance of Pyrrhus. But there is certainly much exaggeration in this view. They were no doubt accustomed to rely much upon the arms of mercenaries, but so were all the more wealthy cities of Greece; and it is certain that the Tarentines themselves (apart from their allies and mercenaries) furnished not only a considerable body of cavalry, but a large force or phalanx of heavy-armed infantry, called the Leucaspids, from their white shields, who are especially mentioned as serving under Pyrrhus at the battle of Asculum. (Dionys. xx. Fr. Didot. 1, 5.) It is unnecessary here to repeat the history of the campaigns of that monarch. His first successes for a time saved Tarentum itself from the brunt of the war; but when he at length, after his final defeat by Carthage, withdrew from Italy (n. c. 274), it was evident that the full weight of the Roman arms would fall upon Tarentum. Pyrrhus, indeed, left Milo with a garrison to defend the city, but the Tarentines themselves were divided into two parties, the one of which was disposed to submit to Rome, while the other applied for assistance to Carthage. A Carthaginian fleet was actually sent to Tarentum, but it arrived too late, for Milo had already capitulated and surrendered the citadel into the hands of the Roman consul Papirius, b. c. 272. (Zonar. viii. 6; Oros. iv. 3.)

From this time Tarentum continued subject to Rome. The inhabitants were indeed left in possession of their own laws and nominal independence, but the city was jealously watched; and a Roman legion seems to have been commonly stationed there. (Pol. ii. 24.) During the First Punic War the Tarentines are mentioned as furnishing ships to the Romans (Pol. i. 20): but with this exception we hear no more of it till the Second Punic War, when it became a military post of great importance. Hannibal was from an early period desirous to make himself master of the city, which, with its excellent port, would at once have secured his communications with Africa. It is evident also that there was a strong Carthaginian party in the city, who shortly after the battle of Cannae, espoused negotiations with Hannibal, and renewed them upon a subsequent occasion (Liv. xxxii. 61, xxvi. 13); but they were kept down by the presence of the Roman garrison, and it was not till b. c. 212 that Nico and Philenmus, two of the leaders of this party, found an opportunity to betray the city into his hands. (Liv. xxv. 8—10; Pol. viii. 26—33.) Even then the Roman garrison still held the citadel; and Hannibal having failed in his attempts to carry this fortress by assault, was compelled to resort to a blockade. He cut it off on
the land side by drawing a double line of fortifica-
tions across the isthmus, and made himself master of
the sea by dragging a part of the fleet which was
shot up within the inner port (or Mare Piccolo),
across the narrowest part of the isthmus, and
hurrying it again in the outer bay. (Pol. viii.
34—36; Liv. xxv. 11.) This state of things con-
tinued for more than two years, during the whole of
which time the Carthaginians continued masters of
the city, while the Roman garrison still maintained
possession of the citadel, and the besiegers were
unable altogether to prevent them from receiving sup-
plies or from sending help between their two camps.
Romans, having sent a considerable fleet under D.
Qcontinus to attempt the relief of the place, this was
met by the Tarentines, and after an obstinate con-
lict the Roman fleet was defeated and destroyed.
(Liv. xxv. 13, xxvi. 39, xxvii. 3.) At length in
b. c. 209 Fabius determined it possible to wrest
from Hannibal the possession of this important port;
and laid siege to Tarentum while the Carthaginian
general was opposed to Marcellus at Acragas. He him-
self entered by the right wing of the port, close to the entrance,
so that he readily put himself in communication with M. Livius, the commander of the citadel.
But while he was preparing his ships and engines for the
assault, an accident threw in the way the oppor-
tunity of surprising the city, of which he made
himself master with little difficulty. The Cartha-
ginian garrison was put to the sword, as well as a
large part of the inhabitants, and the whole city
was given up to plunder. (Id. xxvii. 12, 15, 16; Plut. Fab. 21—23.) Livy praises the magni-
}
bridge of seven arches. This was already the case in Strabo's time, though no mention of it is found at the time of the siege by Hannibal. The form and arrangement of the city cannot be described better than they are by Strabo. He says: "While the whole of the rest of the Tarentine gulf is destitute of ports, there is here a very large and fair port, closed at the entrance by a large bridge, and not less than 100 statia in circumference. [This is beneath the truth: the Mare Piccolo is more than 16 miles (128 stadia) in circuit.] On the side towards the inner recess of the port it forms an isthmus with the exterior sea, so that there are no inlets. The breadth of the isthmus is so low that ships can easily be drawn over the land from one side to the other. The whole city also lies low, but rises a little towards the citadel. The ancient wall comprises a circuit of great extent; but now the greater part of the space adjoining the isthmus is deserted, and only that part still subsists which adjoins the mouth of the port, where also the Acropolis is situated. The position still remaining is such as to make up a considerable city. It has a splendid Gymnasium, and a good-sized Agora, in which stands the bronze colossal statue of Jupiter, the largest in existence next to that at Rhodes. In the interval between the Agora and the mouth of the port is the Acropolis, which retains only a few remnants of the splendid monuments with which it was adorned in ancient times. For the greater part were either destroyed by the Carthaginians when they took the city, or carried off as booty by the Romans, when they made themselves masters of it by assault. Among these is the colossal bronze statue of Hercules in the Capitol, a work of Lysippus, which was dedicated there as an offering by Fabius Maximus, who took the city." (Strab. vi. p. 278.)

In the absence of all extant remains there is very little to be added to the above description. But Polybius, in his detailed narrative of the capture of the city by Hannibal, supplies us with some local names and details. The principal gate on the E. side of the city, opposite one of walls, seems to have been that called the Temenid Gate (αἱ πέλαγοι Τεμένιδες, Pol. viii. 30); outside of which was a tumulus or mound called the tomb of Hyacinthus, whose worship had obviously been brought from Sparta. A broad street called the Bathsea, or Low Street, led apparently from this gate towards the interior of the city. This from its name may be conjectured to have lain close to the port and the water's edge, while another broad street led from thence to the Agora. (Ib. 51.) Another street called the Soteira (Σωτείρα) was apparently on the opposite side of the city from the Bathsea, and must therefore have adjoined the outer sea. (Ib. 36.) Immediately adjoining the Agora was the Museum (Μουσείον), a public building which seems to have served for festivals and public banquets, rather than for any purposes connected with its name. (Ib. 27. 29.) There is nothing to indicate the site of the theatre, alluded to by Polybius on the same occasion, except that it was decidedly within the city, which was not always the case. Strabo does not notice it, but it must have been a building of large size, so as to be adapted for the general assemblies of the people, which were generally held in it, as was the case also at Syracuse and in other Greek cities. This is particularly mentioned on several occasions; it was there that the Roman ambassadors received the insult which finally led to the ruin of the city. (Flor. i. 18. § 3; Val. Max. ii. 2. § 5; Appian, Syrac. 7.)

Livy inaccurate describes the citadel as standing on lofty cliffs ("praecitis rupibus," xxv. 11): the peninsula on which it stood rises indeed (as observed by Strabo) a little above the rest of the city, and it is composed of a rocky soil; but the whole site is low, and no part of it rises to any considerable elevation. The hills also that surround the Mare Piccolo are of trifling height, and slope very gradually to its banks, as well as to the shore of the outer sea. There can be no doubt that the port of Tarentum, properly so called, was the inlet now called the Mare Piccolo or "Little Sea," but outside this the sea on the S. side of the city forms a bay or roadstead, which affords good shelter to shipping, being partially sheltered from the SW. by the two small islands of S. Pietro and S. Paolo, apparently the same which were known in ancient times as the Choradies. (Titt. vii. 38.)

Tarentum was celebrated in ancient times for the salubrity of its climate and the fertility of its territory. Its advantages in both respects are extolled by Horace in a well-known ode (Carm. ii. 6), who says that its honey was equal to that of Hymettus, and its olives to those of Venafrum. Varro also praised its honey as the best in Italy (ap. Macrob. Sat. i. 12). Its oil and wines enjoyed a nearly equal reputation; the choicest quality of the latter seems to have been that produced at Akon (Hor. l. c.; Martial, xiii. 125; Plin. xiv. 6. 8), a valley in the neighbourhood, on the slope of a hill still called Monte Melove (Attic.). But the choicest production of the neighbourhood of Tarentum was its wool, which appears to have enjoyed an acknowledged supremacy over that of all parts of Italy. (Plin. xxix. 2. 9; Martial, l. c.; Varr. R. R. ii. 2. § 18; Strab. vi. p. 224; Colum. vii. 2. § 3.) Nor was this owing solely to natural advantages, as we learn that the Tarentines bestowed the greatest care upon the preservation and improvement of the breed of sheep. (Colum. vii. 4.) Tarentum was noted likewise for its breed of horses, which supplied the famous Tarentine cavalry, which was long noted among the Greeks. Their territory abounded also in various kinds of fruits of the choicest quality, especially pears, figs, and chestnuts, and though not as fertile in corn as the western shores of the Tarentine gulf, was nevertheless well adapted to its cultivation. At the same time its shores produced abundance of shell-fish of all descriptions, which formed in ancient times a favourite article of diet. Even at the present day the inhabitants of Taranto subsist to a great extent upon the shell-fish produced in the Mare Piccolo in a profusion almost incredible. Its Pectens or scallops enjoyed a special reputation with the Roman epigraphic antiquities. (Hor. Sat. ii. 4. 34.) But by far the most valuable production of this class was the Munex, which furnished the celebrated purple dye. The Tarentine purple was considered second only to the Tyrian, and for a long time was the most valuable known to the Romans. (Corn. Nep. ap. Plin. ix. 39. s. 63.) Even in the time of Augustus it continued to enjoy a high reputation. (Hor. Ep. ii. 1, 207.) So extensive were the manufactories of this dye at Tarentum that considerable mounds are still visible on the shore of the Mare Piccolo, composed wholly of broken shells of this species. (Swinburne's Travels, vol. i. p. 239.)
The decline of Tarentum, though truly proved in history for its mildness, was generally reckoned a catastrophe, and was considered as in some way the cause of the luxurious and effeminate tastes ascribed to the inhabitants ("telle Tarentum," Hor. Sat. ii. 4. 34, "in bellic Tarentum," Id. Ep. i. 7. 45.) It is probable that this charge, as in many other cases, was greatly exaggerated; but there is no reason to doubt that the Tarentines, like almost all the other Greeks which became a manufacturing and commercial people, indulged in a degree of luxury far exceeding that of the ruder nations of Central Italy. The wealth and opulence, to which they attained in the 4th century B.C., naturally tended to aggravate these evils, and the Tarentines are represented as at the time of the arrival of Pyrrhus embittered and degraded by luxurious indulgences, and devoted almost exclusively to the pursuit of pleasure. To such an excess was this carried that we are told the number of their annual festivals exceeded that of the days of the year.

(Thesopomp. op. Athen. iv. p. 166; Clearch. op. Athen. xii. p. 522; Strab. vi. p. 280; Aelian, V. H. xii. 30.) Juvenal alludes to their love of feasting and pleasure when he calls it "coronatum ac petulantiam maudumque Tarentum" (vi. 297). But it is certain, as already observed, that they were not incapable of war: they furnished a considerable body of troops to the army of Pyrrhus; and in the sea-battle with the Roman fleet off the entrance of the harbour, during the Second Punic War, they displayed both courage and skill in naval combat. (Liv. xxxvi. 39.) In the time of their greatest power, according to Strabo, they could send into the field an army of 30,000 foot and 3000 horse, besides a body of 1000 select cavalry called Hipparchs. (Strab. vi. p. 280.) The Tarentine light cavalry was indeed celebrated throughout Greece, so that they gave name to a particular description of cavalry, which are mentioned under the name of Tarentines (Tarentinoi), in the armies of Alexander the Great and his successors; and the appellation continued in use down to the period of the Roman Empire. (Arrian, Anab.; Id. Tact. 4; Pol. iv. 77, xi. 12; Liv. xxxvi. 28; Aelian, Tact. 2, p. 14; Suidas, s. v. Tarentinoi.) It is probable, however, that these may have been always recruited in great part among the neighbouring Messapians and Salentine, who also excelled as light horsemen.

With their habits of luxury the Tarentines undoubtedly combined the refinements of the arts usually associated with it, and were diligent cultivators of the fine arts. The great variety and beauty of their coins is, even at the present day, a sufficient proof of this, while the extraordinary numbers of them which are still found in the S. of Italy attest the wealth of the city. Ancient writers also speak of the numbers of pictures, statues, and other works of art with which the city was adorned, and of which a considerable number were transported to Rome. ( Flor. i. 18; Strab. vi. p. 278; Liv. xxxvi. 16.) Among these the most remarkable were those of Jupiter, meintioned by Strabo (L. c.), and which was apparently still standing in the Agora in his time: the bronze statue of Heracles by Lysippus already noticed; and a statue of Victory, which was also carried to Rome, where it became one of the chief ornaments of the Curia Julia. (Dion Cass. li. 22.) Nor were the Tarentines deficient in the cultivation of literature. In addition to Archytas, the Pythagorean philosopher, celebrated for his mathematical attainments and discoveries, who long held at Tarentum a place somewhat similar to that of Pericles at Athens (Diog. Laert. viii. 4; Suid. s. v. \textit{Aréxétra} ; Athen. xii. p. 543), Aristocles, the celebrated musician and disciple of Aristocles, was a native of Tarentum; as well as Rhinthon, the dramatic poet, who became the founder of a new species of burlesque drama which was subsequently cultivated by Sophocles and other authors. (Suid. s. v. \textit{Páthov}.) It was from Tarentum also that the Romans received the first frufruits of the regular drama, Livius Andronicus, their earliest dramatic poet, having been a Greek of Tarentum, who was taken prisoner when the city fell into their hands.

(Cic. Brut. 18.) Polybius tells us that Tarentum retained many traces of its Laconid essian origin in local names and customs, which still subsisted in his day. Such was the tomb of Hyacinthus already mentioned (Pol. viii. 50). the river Galesus also was called by them the Eurates (ib. 38.), though the native name ultimately prevailed. Another custom which he notices as peculiar was that of burying their dead within the walls of the city, so that a considerable space within the walls was occupied by a necropolis. (ib. 30.) This custom he ascribes to an oracle, but it may have arisen (as was the case at Agrigentum and Syracuse) from the increase of the city having led to the original necropolis being inclosed within the walls.

The name of Tarentum (Taras) was supposed to be derived from a river of the name of Taras (Tápas), which is noticed by several ancient writers. (Steph. B. s. v. Tdás; Paus. x. 10. § 8.) This is commonly identified with a deep, but singnell, stream, which flows into the sea about 4 miles W. of the entrance of the harbour of Tarentum, and is still called Tara, though corrupted by the peasants into Fiume di Terra. (Romellani, vol. i. p. 281; Swinburne, vol. i. p. 271.) The more celebrated stream of the Galaeus flowed into the Mare Piccola or harbour of Tarentum on its N. shore: it is commonly identified with the small stream called Le Civrecce, an old church near which still remains the name of Sta Maria di Galeso. (Galaesús.) Another locality in the immediate neighborhood of Tarentum, the name of which is associated with that of the city by Horace, is Aulon, a hill or ridge celebrated for the excellence of its vines. This is identified by local topographers, though on very slight grounds, with a sloping ridge on the seashore about 8 miles S.E. of Tarentum, a part of which bears the name of Monte Melone, supposed to be a corruption of Aulon (Aulon). A more obscure name, which is repeatedly mentioned in connection with Tarentum, is that of Satrium (Satrío-

pow). From the introduction of this name in the oracle alleged to have been given to Phalanthus (Strab. vi. p. 279), it seems probable that it was an old native name, but it is not clear that there ever was a town or even village of the name. It is more probable that local traditions of a mountain or district in the neighborhood of Tarentum, Stephen of Byzantium distinctly calls it χώρα πάλησσας Τάρατος (c. e. \textit{Satrionos}); and the authority of Servius, who calls it a city (citivs) near Tarentum, is not worth much in comparison. There was certainly no city of the name in historical times. Virgil applies the epithet "Saturium" (as an adjective) to Tarentum itself (Georg. ii. 197; Serv. ad loc.: many commentators, however, consider "saturi" from "satur"
TARETICA.

to be the true reading), and Horace speaks of "Sa-
turiam cabellus" as equivalent to Tarentine.  
(Sat, i. 6. 59.) The memory of the locality is pre-
served by a watch-tower on the coast, about seven  
miles S.E. of Tarentum, which is still called Torre  
di Satoello (Romanelli, vol. i. p. 294; Zannoni Carta  
del Regno di Napoli).

(Concerning the history and ancient institutions  
of Tarentum, see Heyne, Opusc., vol. i. pp.  
217—232; and Lorenz, de Civitate Veterum Tar-
entinorum, 4to. Lips. 1833. The present state  
and localities are described by Swibodure, vol. i.  
pp. 225—270; Keppel Craven, Southern Tour,  
pp. 174—190; and Romanelli, vol. i. pp. 282—289;  
but from the absence of existing remains, the  
antiquities of Tarentum have scarcely received as much  
attention as they deserve.)

[E. H. B.]

TOARQVNI.

44), and after him by Strabo (ix. p. 413), as a town  
in Asia Minor; but Phiny (v. 30) knows Tarne only as  
a fountain of Mount Timus in Lydia.  
[L. S.]

TARNIS (Tarne), a river in Gallia, a branch of  
the Garonne. It rises near Mount Losive, in the  
Cévennes, and flows in the upper part of its course  
in a deep valley. After running near 200 miles it  
joins the Garonne below Molissac. Sidonius Apollin-  
aris (24. 44) calls it "citus Tarinis." [Lesor.]  
Ansonius (Mosella, v. 465) speaks of the gold found  
in the bed of the Tarn:—

"Et auriferum post quem Gallia Tarreem."  

[6. L.]

TARDOUNUM (TaposSamos), a town in  
the south-west of Germany, between Mons Aboca  
and the Rhenu. (Ptol. ii. 11. § 30.) It is universally  
identified with Mark Zarten near Freiburg in  
the Breisgau, which, down to the 8th century, bore  
the name of Zarduns, a name which is formed from  
Tarodunum in the same way in which Zabern is  
formed from Tabernae.

TARXOA (Tarpaia, Ptol. iii. 6. § 3.) a place in  
the interior of the Chersonese Tar.Joinis. [T. H. D.]

TARPIHE (Taprpy: Eth. Taiparpiras), a town of  
the Locri Epicenemii, mentioned by Homer (Ill. ii. 533).  
It was situated upon a height in a fertile and woody  
country, and was said to have derived its name from  
the thicket in which it stood. In the time of  
Strabo it had changed its name into that of Pharygae  
(Taphyge), and was said to have received a colony  
from Argo. It contained a temple of Hera Phary-
gaca. It is probably the modern Pandontina. (Strab.  
ix. p. 426; Grokland and Kramer, ad loc.; Swinh.  
B. s. v.; Leake, Northern Greece, vol. iv. p. 179.)

TARPODIZUS (It. Ant. p. 239; It. Histor. p. 569;  
in Geog. Rav. iv. 6, Tarpadzoun), a town in the  
E. of Thrace, on the road from Byzantium to  
Aschalon. According to Kiepert, its site answers  
to that of the modern Boguk-Derbend; according to  
Reichard, to that of Kouje-Tarla; according to  
Lapié, to that of Desvet-Agatch. But in some  
maps it is placed nearly due south of Saldane, and  
it stands near the Tor. Artes, which Lapié  
reckons as part of the modern Boguk-Derbend.  
Tarpodizus must have been in the neighbourhood  
of Erekli.  

[J. R.]

TARQUINII (Tapoxusia, Strab. Dionys.;  
Tapouvia, Ptol. Eth. Tarquiniiensis: Corneto), one  
of the most ancient and important cities of Etruria;  
situated about 4 miles from the Tyrrhenian sea, and  
14 miles from Centumcellae (Ciuita Vecchia),  
near the left bank of the river Marta. All  
ancient writers represent it as one of the most  
ancient of the cities of Etruria; indeed according  
to a tradition generally prevalent it was the parent  
or metropolis of the twelve cities which composed  
the Etruscan League, in the same manner as Aila  
was represented as the metropolis of the Latin  
League. Its own reputed founder was Tarchon, who  
according to some accounts was the son, according  
to others the brother, of the Lydian Tyrrhenus;  
while both versions represented him as subsequently  
foundning all the other  
cities of the league. (Strab. v. p. 219; Serv. ad Aen.  
x. 179, 198.) The same superiority of Tarquinii  
may be considered as implied in the legends that  
represented the divine being Tares, from whom all  
the sacred traditions and religious rites of  
the Etruscans were considered to emanate, as  
springing out of the soil at Tarquinii (Cic. de Div. ii. 23;  
Censorin, de Die Nat. 4; Jean. Lyd. de Ost. 3.)  
Indeed it seems certain that there was a close connec-

COINS OF TARUNTUM.

TARETICA (Tarenthia, or Taretica Æsia, Ptol.  
v. 9. § 9), a headland of Asiatic Sarmatia in the  
Pontus Euxinus, and in the neighbourhood of the  
modern town of Swidzki.  

[T. H. D.]

TARGINES (Taexio), a small river of Bruttium,  
mentioned only by Pliny (iii. 10. s. 13) among the  
rivers on the E. coast of that peninsula. It is  
probably the stream now called the Taexio, which  
rises in the mountains of the Sila, and falls into  
the Gulf of Squillace (Sinus Squileus).  

[E. H. B.]

TARIChEAE or TARICHEAÆ (Taptexia,  
Strab. xvi. p. 764; Joseph. Vita, 32, 54, 73;  
Taptexia, Joseph. B. J. iii. § 1, et alibi;  
Tapoxia, Steph. B. s. v.; Taricheae, Suet. Tit. 4;  
Tarachea, Plin. v. 15; Eth. Tapoxiæs), a city in  
Lower Gallia situated below a mountain at the  
southern end of the lake of Tiberius, and 30 stadia  
from the city of Tiberius itself (Joseph. B. J. iii.  
10. § 1.) It derived its name from its extensive  
manufactories for salting fish. (Strab. l. c.) It was  
strongly fortified by Josephus, who made it his  
headquarters in the Jewish war; and it was taken by  
Titus with great slaughter. (Joseph. B. J. iii.  
§s 1—6.) Its ruins stand upon a rising ground,  
called Kerak, where at present there is a Muslim  
village, at the southern end of the lake. The river  
Jordan, in issuing from the lake, runs at first south  
for about a furlong, and then turns west for half a  
mile. The rising ground Kerak stands in the  
space between the river and lake, and was a place  
easily defensible according to the ancient mode of  
warfare. (Robinson, Bibl. Res. vol. ii. p. 387, 2nd  
ed.)

TARNE (Taen), is mentioned by Homer (Il. v
tion considered as subsisting between this Tages and Tarquini himself, the eponymous hero of Tarquinii. (Miller, Etrusker, vol. i. p. 73.) It is impossible here to discuss the historical bearings of these traditions, which seem to point to Tarquinii as the point from whence the power and civilization of the Etruscans emanated as from a centre, while on the other hand there is another body of traditions which seems to represent that people as gradually extending themselves from the north, and Cortona as the first centre and stronghold of their power. [Etruria, Vol. i. p. 859.] A somewhat different version is given by Justin, who states that Tarquinii was founded by the Thessalians, probably meaning the Pelasgians from Thessaly, to whom Hellanicus ascribed the colonisation of Etruria in general. (Justin, xx. 1; Hel- lanic, ap Dionys. i. 28.)

But whatever value may be attached to these traditions, they may at least be admitted as proving the reputed high antiquity and early power of Tarquinii as compared with the other cities of Southern Etruria; and this is confirmed by the important position it appears to have held, when its name first appears in connection with the Roman history. Cicero calls it "urbem Etruriae furentissimam" at the time when Demaratus, the father of Tarquinii Priscus, was said to have established himself there. (Cic. de rep. ii. 19.) It is remarkable indeed that the story which derived the origin of the Roman king Tarquinii from Corinth represented his father Demaratus as bringing with him Greek artists, and thus appears to ascribe the first origin or introduction of the arts into Etruria, as well as its religious institutions, to Tarquinii. (Plin. xxxv. 12. s. 43; Strab. v. p. 220.) It is unnecessary to repeat here the well-known story of the emigration of an Etruscan Lucumon from Tarquinii to Rome, where he became king under the name of Lucius Tarquinius. (Liv. iii. 34; Dionys. iii. 46—48; Cic. de rep. ii. 19, 20; Strab. v. p. 219.) The connexion with Tarquinii is rejected by Niebuhr, as a mere etymological fable, but it is not easy to say on what grounds. The name of Tarquinii, as that of a city or family, as well as that of the city, is undoubtedly Etruscan; the native form being "Tarcas:" and the strong infusion of Etruscan influence into the Roman state before the close of the regal period is a fact which cannot reasonably be questioned. It is remarkable also that the Roman traditions represented the Tarquinii as joining with the Velites in the first attempt to restore the exiled Tarquins, B.c. 509, though from this time forth we do not again hear of their name for more than a century. (Liv. ii. 6, 7; Dionys. v. 14.) The story of the emigration of the elder Tarquin to Rome, as well as that of his father Demaratus from Corinth, may fairly be deemed unworthy of belief in its present form; but it is probable that in both cases there was a historical foundation for the fiction.

After the war already mentioned, in the first year of the Republic, no subsequent mention of Tarquinii occurs in Roman history till B.c. 396, when the Tarquinians took up arms, and ravaged the Roman territories, while their army was engaged in the siege of Veii. They were, however, intercepted on their march home, and all their booty taken from them. (Liv. v. 16.) Livy distinctly calls them on this occasion "movi hostes:" but from this time they took an active part in the wars of the Etruscans with Rome. The conquest of Veii in B.C. 396, had indeed the effect of bringing the Romans into immediate collision with the cities which lay next beyond it, and among these Tarquinii and Volatini seem to have taken the lead. Already in B.C. 389, we find the Tarquinians joining with the other cities of Southern Etruria in an attempt to recover Sutrium: the next year their territory was in its turn invaded by the Romans, who took the towns of Cortonisa and Contenebra, both places otherwise unknown, but which appear to have had dependencies of Tarquinii. (Liv. vi. 3, 4.)

From this time we hear no more of them till B.C. 359, when the Tarquinians, having ravaged the Roman territories, the next year Falerii marched against them, but was defeated in a pitched battle, and 307 of the prisoners taken on the occasion were put to death in the Forum of Tarquinii, as a sacrifice to the Etruscan deities. (Liv. viii. 12, 15.) Shortly after, we find the Tarquinians and Faliscians again in arms, and in the first battle which occurred between them and the Romans they are said to have obtained the victory by putting forward their priests with flaming torches and serpents in their hands, to strike terror into their assailants. (Liv. vii. 16, 17.) But the Etruscans were defeated in their turn by C. Marcus Rutulius, who was named dictator to oppose them; and two years later (B.c. 354) the Romans took a sanguinary revenge for the massacre of their prisoners, by putting to death, in the Forum at Rome, 358 of the captives taken from the Tarquinians, chiefly of noble birth. (ib. 18.) But the spirit of the Tarquinians was not yet subdued, and with the support of the Faliscians and Caeretii, who now for a short time took part against Rome, they continued the war till B.C. 351, when they sued for peace, and obtained a truce for forty years. (ib. 19—22.)

This truce appears to have been faithfully observed, for we hear nothing more of hostilities with Tarquinii till B.C. 311, when the Tarquinians appear to have united with the other confederate cities of Etruria in attacking the Roman colony of Sutrium. They were, however, defeated by the Roman consul Aemilius Barba, and again the next year by Q. Falius, who followed up his victory by passing the Ciminian forest, and carrying his arms for the first time into Northern Etruria. There is no doubt that the Tarquinians, though not mentioned by name, bore a part in this contest as well as in the great battle at the Vadimonian lake in the following year (B.C. 309), as we find them soon after making their submission to Rome, and purchasing the favour of the consul Decius by sending him supplies of corn. (Liv. ix. 32, 33—39, 41.) They now obtained a fresh truce for forty years (ib. 41); and from this time we hear no more of them as an independent nation. Whether this long truce, like the last, was faithfully observed, or the Tarquinians once more joined in the final struggles of the Etruscans for independence, we know not; but it is certain that they passed, in common with the other chief cities of Etruria, gradually into the condition of dependent allies of Rome, which they retained till the Social War (B.C. 90), when they as well as all the other Etruscans obtained the full Roman franchise. (Appian, B. C. i. 49.) The only mention of Tarquinii that occurs in this interval is during the Second Punic War, when the citizens came forward to furnish the expedition of Scipio with sail-cloth for his fleet. (Liv. xxvii. 45.) According to the Liber Coloniarum a body of colonists was sent thither by
Gracchus; but though it is there termed "Colonia Tarquinia," it is certain that it did not retain the title of a colony; Cicero distinctly speaks of it as a "municipium," and the Tarquinienses are ranked by Pliny among the ordinary municipia of Etruria. The principal ruin is further confirmed by inscriptions recently discovered on the site. (Lib. Cod. p. 219; Cic. pro Cat. 4; Plin. iii. 5. 8; Ptol. iii. 1 § 50; Inscri. in Bullet. d. Inst. Arch. 1830, pp. 198, 199.) From these last records we learn that it was apparently still a flourishing town in the time of the Antonines, and its name is still found in the Tabula near three centuries later (Teb. Pont.). It is probable, therefore, that it survived the fall of the Western Empire, and owed its final desolation to the Saracens.

At the present day the site of the ancient city is wholly desolate and uninhabited; but on a hill about a mile and a half distant stands the modern city of Corneto, the origin of which does not date further back than the eighth or ninth century. It was probably peopled with the surviving inhabitants of Tarquinii. The site of the latter is clearly marked: it occupied, like most Etruscan cities, the level summit of a hill, bounded on all sides by steep, though not precipitous escarpments, and occupying a space of about a mile and a half in length, by half a mile in its greatest breadth. It is still known as Tarquinia, though called also the Pianu di Cieuta. Hardly any ruins are now visible, but the outline of the walls may be traced around the brow of the hill, partly by foundations still in situ, partly by fallen blocks. The highest point of the hill (farthest to the W. and nearest to the Erecta) seems to have served as the Arx or citadel, and here the foundations of some buildings, supposed to be temples, may be traced. Numerous fragments of buildings of Roman date are also visible, and though insignificant in themselves, prove, in conjunction with the inscriptions already mentioned, that the site was well inhabited in Roman times. (Dennis's Etruria, vol. i. pp. 371—385.)

But by far the most interesting remains now visible at Tarquinii are those of the Necropolis, which occupied almost the whole of the hill opposite to the city, at the W. extremity of which stands the modern town of Corneto. The whole surface of the hill (says Dennis) "is rugged with tumuli, or what have once been such," whence the appellation by which it is now known of Montaurozzi. Vast numbers of these tombs have been opened, and have yielded a rich harrest of vases, ornaments, and other objects of antiquity. But the most important are those of which the walls are adored with paintings, which possess a double interest, both as works of art and from the light they throw upon Etruscan manners. It may indeed be asserted in general of the paintings in these tombs that while the influence of Greek art is unquestionably to be traced in their design and execution, the subjects represented and the manners they exhibit are purely Etruscan. The number of these painted tombs found at Tarquinii greatly exceeds those which have been discovered on the site of any other city of Etruria; but they still bear only a very small proportion to the whole number of tombs opened, so that it is evident this mode of decoration was far from general. The paintings in many of those first opened, which are figured in the works of Micheiand Inghirami, have since been allowed to fall into decay, and have in great measure disappeared. Detailed descriptions of all the most interesting of them, as well as these more recently discovered, will be found in Dennis's Etruria (vol. i. pp. 281—364.) [E. H. B.]

**TARRACINA.** (Ταρρακινα, Strab.; Τάρακινα, Step. B.; Eth. Ταρρακινάεις, Tarracinienses; Ter- racini, Ovid.) It is probably also at the mouth of the Tiber, on the Tyrrhenian sea, about 10 miles from Circii, and at the extremity of the Pontine Marshes. It was also known by the name of Anxur, and we learn from Pliny and Livy that this was its Volscian name, while Tarraacina was that by which it was known to the Latins and Romans. (Plin. iii. 5. 9; Ennius ap. Varr. s. v. Anxur; Liv. iv. 59.) The name of Anxur is frequently used at a much later period by the Roman poets (Hor. Sat. i. 5. 26; Lucan. iii. 84; Martial, v. 1. 6, &c.), obviously because Tarraacina could not be introduced in verse; but Cicero, Livy, and all other prose writers, where they are speaking of the Roman town, universally call it Tarracina. The Greek derivation of the latter name suggested by Strabo (v. p. 233), who says it was originally called Τράκιανα, from its rugged situation, is probably a mere etymological fancy. The first mention of it in history occurs in the treaty between Rome and Carthage concluded in B.C. 304, in which the people of Tarracina are mentioned in common with those of Circii, Antium, &c., among the subjects or dependencies of Rome. (Vell. ii. 22.) It seems certain therefore that Tarracina, as well as Circii, was included in the Roman dominions before the fall of the monarchy. But it is clear that it must have again fallen under the dominion of the Volscians, probably not long after this period. It was certainly in the possession of that people, when its name next appears in history, in B.C. 406. On that occasion it was attacked by N. Fabius Ambustus, and taken by a sudden assault, while the attention of the Volscian armies was drawn off in another direction. (Liv. iv. 57; Diod. xiv. 16.) Livy speaks of it as having at this time enjoyed a long period of power and prosperity, and still possessing great wealth, which was plundered by the Roman armies. A few years afterwards (B.C. 402) it again fell into the hands of the Romans, through the negligence of the Roman garrison (Liv. v. 8). In B.C. 400, it was again besieged by the Roman arms under Valerius Potitus, and though his first assaults were repulsed, and he was compelled to have recourse to a blockade, it soon after fell into his hands. (Ib. 12, 13.) An attempt of the Volscians to recover it in 397 proved unsuccessful (Ib. 16). and from this time the city continued subject to Rome. Nearly 70 years later, after the conquest of Perneraum, it was thought advisable to secure Tarracina with a Roman colony, which was established there in B.C. 329. (Liv. viii. 21; Vell. Pat. i. 14.)

The condition of Tarracina as a Roman colony is not quite clear, for Velleius notices it as if it had been one of the "Coloniae Latinae," while Livy certainly does not consider it as such, for he omits its name among the thirty Latin colonies in the time of the Second Punic War, while he on two occasions mentions it in connection with the other maritime colonies, Antium, Minturnae, &c. In common with these, the citizens of Tarracina in vain contended for exemption from military service during the Second Punic War, and at a later period claimed exemption from naval service also. (Liv. xxviii. 38, xxi. 3.) There can, therefore, be no doubt that Tarracina was a "colonia maritima civium," and it seems to have early become one of
TARRACINA.

the most important of the maritime towns subject to Rome. Its position on the Appian Way, which here first touched on the sea (Strab. v. p. 233; Hor. Sat. i. 5. 26), doubtless contributed to its prosperity; and an artificial port seems to have been constructed, in some degree supplied the want of a natural harbour. (Liv. xxvii. 4.) In a military point of view also its position was important, as commanding the passage of the Appian Way, and the narrow defile of Lantuhe, which was situated a short distance from the city on the side of Fundi. (Liv. xxi. 15.) [Lau.

Under the Roman Republic Tarracina seems to have continued to be a considerable and flourishing town. Cicero repeatedly notices it as one of the customary halting-places on the Appian Way, and for the same reason it is mentioned by Horace on his journey to Brundisium. (Cic. de Orat. ii. 59, ad Fam. vii. 23, ad Att. viii. 5; Hor. Sat. i. 5. 26; Appian. B. C. ii. 12; Val. Max. viii. 1. § 13.) At the outbreak of the civil war between Caesar and Pompey, Tarracina was occupied by the latter with three cohorts under the praetor Butilius Lupus, but they abandoned their post, when Pompey withdrew to Brundisium. (Cam. B. C. i. 24; Cic. ad Att. viii. 11, b.) Again, during the civil war between Vespasian and Vitellius, Tarracina was evidently regarded as a place of importance in a military point of view, and was occupied by the partisans of Vespasian, but was wrested from them by L. Vitellius just before the death of his brother. (Tac. Hist. iii. 57, 76, 77.) It was at Tarracina also that the funeral convey of Germanicus was met by his cousin Drusus and the chief personages of Rome. (I. Liv. viii. 12.) The neighbourhood seems to have been a favourite site for villas under the Roman Empire; among others the Emperor Domitian had a villa there (Martial. v. 1. 6); and it was at another villa near the town, on the road to Fundi, that the emperor Galba was born. (Suet. Galb. 4.) In addition to the other natural advantages of the situation, there existed mineral springs in the neighbourhood, which seem to have been much frequented. (Martial. v. 1. 6, z. 51. 8.) The important position of Tarracina doubtless prevented its falling into decay as long as the Western Empire subsisted. Its name is found in the Itineraries as a "visitas" (Itin. Ant. p. 187; Itin. Hier. p. 611), and even after the fall of the Roman dominion it appears as a fortress of importance during the Gothic wars. (Procop. B. G. ii. 2. 4, &c.)

The position of Tarracina at the extremity of the Pompine Marshes, just where a projecting ridge of the volcanic mountains runs down to the sea, and separates the marshy tract on the W. from a similar but much smaller tract on the E., which extends from thence towards Fundi, must in all ages have rendered it a place of importance. The ancient city stood on the hill above the marshes. Horace distinctly describes it as standing on lofty rocks, which were conspicuous afar, from their white colour:—

"Impositum saxis late candidetimus Anxur".

(Her. Sat. i. 5. 26;) and the same circumstance is alluded to by other Latin poets. (Lucan, iii. 84; Sid. Ital. viii. 392;) Livy also describes the original Volscian town as "locus alio situm" (v. 12), though it extended also down the slope of the hill towards the marshes ("urbs praebi in paludibus," iv. 59). At a later period it not only spread itself down the hill, but occupied a considerable level at the foot of it (as the modern city still does), in the neighbourhood of the port. This last must always have been in great part artificial, but the existence of a regular port at Tarracina is noticed by Livy as early as B.C. 210 (Livy. xviii. 4. 1). It was subsequently enlarged and reconstructed under the Roman Empire, probably by Trajan, and again restored by Antoninus Pius. (Capit. Ant. P. 8.) Its remains are still distinctly visible, and the whole circuit of the ancient basin, surrounded by a massive mole, may be clearly traced, though the greater part or it is now filled with sand. Considerable portions of the ancient walls also still remain, constructed partly in the polygonal style, partly in the more recent style known to the Romans as "opus incertum." Several ancient tombs and ruins of various buildings of Roman date are still extant in the modern city and along the line of the Via Appia. The modern cathedral stands on the site of an ancient temple, of which only the substructions and two columns remain. This is generally called, though on very uncertain authority, a temple of Apollo. The most celebrated of the temples at Tarracina was, however, that of Jupiter, which is noticed by Livy (xxvii. 71), and the especial worship of this deity in the Volscian city under the title of Jupiter Anxurus is alluded to by Virgil (Aen. vii. 793). He was represented (as we are told by Servius) as a beautiful youth, and the figure of the deity corresponding to this description is found on a Roman coin of the Vibian family. (Eckhel, vol. v. p. 340.) It is probable that this temple was situated in the highest part of the city, very probably in the ancient citadel, which occupied the summit of a hill above the ancient temple, where remains of its walls and substructions are still extant.

Tarracina was distant by the Via Appia 62 miles from Rome, and 18 from the Forum Appii. (Itin. Ant. p. 107; Itin. Hier. p. 611; Westphal, Röm. Kamp. p. 68.) Three miles from the city, at the side of the Via Appia, as well as of the canal which was frequently used by travellers, was the fountain of Feronia, celebrated by Horace, together with the sacred grove attached to it. (I. ivii. 43;) and the name of Tarracina is derived from the sacred grove. (E.H.B.)

TARRACO (Tarraco, Titol. ii. 6, § 17), an ancient city of Spain, probably founded by the Phœcicians, who called it Tarchon, which, according to Bœhnet, means "a citadel." This name was probably derived from its situation on a high rock, between 700 and 800 feet above the sea; whence we had it characterised as "saepe potens Tarraeo." (Auson. Cher. Urb. 9; cf. Mart. x. 104.) It was situated on the river Sulcis, on a bay of the Mare Internum, between the Pyrenees and the river Iberus. (Mela. ii. 6; Plin. iii. 3. s. 4.) Livy xxii. 22 mentions a "portus Tarracensis; and according to Eratosthenes (op. Strab. iii. p. 159) it had a naval station or roads (ναυσταταριον); but Artemid-rus (op. Strab. l. c.; Polyb. iii. 76) says with more probability that it had none, and scarcely even an anchoring place; and Strabo himself calls it άναβαταν. This answers better to its present condition; for though a mole was constructed in the 15th century with the materials of the ancient amphitheatre, and another subsequently by an Englishman named John Smith, it still affords but little protection for shipping. (Ford's Handbook of Spain, p. 222.) Tarraco lay on the main road along the S. coast of Spain. (Itin. Ant. pp. 391, 396, 399, 448, 452.) It was fortified and much co-
TARRACONENSIS PROVINCIA.

larged by the brothers Publius and Cneus Scipio, who converted it into a fortress and arsenal against the Carthaginians. Subsequently the capital of the province named after it, a Roman colony, and "conventus juridicus." (Plin. i. c.; Tac. Ann. i. 78; Solin. 23, 26; Polyb. x. 34; Liv. xxxi. 61; Steph. B. p. 637) Augustus wintered at Tarraco after his Cantabrian campaign, and bestowed many marks of honour on the city, among which were its honorary titles of "Colonia Victor Togata" and "Colonia Julia Victor Tarracensis." (Grat. Inscr. p. 382; Orell. no. 9127; coins in Eckhel, p. 277; Friis, Med. Hist. ii. p. 579; Monnet, i. p. 51, Suppl. i. p. 104; Sestini, p. 202.) According to Mela (i. c.) it was the richest town on that coast, and Strabo (i. c.) represents its population as equal to that of Carthago Nova. Its fertile plain and sandy shores are celebrated by Martial and other poets; and its neighbourhood is described as producing good wine and flax. (Mart. x. 104, xiii. 118; Sil. Ital. iii. 369, xv. 177; Plin. xiv. 6. 6 s, xix. i. 2.) There are still many important ancient remains at Tarragona, the present name of the city. Part of the bases of large Cyclopean walls near the Quartel de Pilatos are thought to be anterior to the Romans. The building just mentioned, now a prison, is said to have been the palace of Augustus. But Tarraco, like most other ancient towns which have continued to be inhabited, has been pulled to pieces by its own citizens for the purpose of obtaining building materials. The amphitheatre near the sea-shore has been used as a quarry, and but few vestiges of it now remain. A circus, 1500 feet long, is now built over it, though portions of it are still to be traced. Throughout the town Latin, and even apparently Phoenician, inscriptions on the stones of the houses proclaim the desecration that has been perpetrated. Two ancient monuments, at some little distance from the town, have, however, fared rather better. The first of these is a magnificent aqueduct, which spans a valley about a mile from the gates. It is 700 feet in length, and the loftiest arches, of which there are two tiers, are 96 feet high. The monument on the NW. of the city, and also about a mile distant, is a Roman sepulchre, vulgarly called the "Tower of the Scipios;" but there is no authority for assuming that they were buried here. (Cf. Ford, Handbook, p. 219, seq.; Florus, Exp. Sgr. xxix. p. 68, seq.; Mínano, Diccion. viii. p. 398.)

TARRACONENSIS PROVINCIA (called by the Greeks Τάρακωνσις, Plut. ii. 6, viii. 4 § 5, &c.; and Τήρακωνσις τω Τάρακωνσι, Dion Cass. iii. 3), at first constituted, as already remarked [Vol. i. p. 1081], the province of Hispania Citerior. It obtained its new appellation in the time of Augustus from its chief city Tarraco, where the Romans had established themselves, and erected the tribunal of a praetor. The Tarracensis was larger than the other two provinces put together. Its boundaries were, on the E. the Mare Internum; on the N. the Pyrenees, which separated it from Galicia, and further westward the Mare Cantabriacum; on the W., as far southward as the Durins, the Atlantic ocean, and below that point the province of Lusitania; and on the S. the province of Lusitania and the province of Baetica, the boundaries of which have been already laid down. (Mela, ii. 6; comp. Strab. iii. p. 166; Plin. iv. 21. s. 35; Marclian, p. 34.) Thus it embraced the modern provinces of Murcia, Valencia, Murcia, Asturias, and Galicia, the N. part of Portugal as far down as the Duero, the N. part of Leon, nearly all the Castile, and part of Andalucia. The nature of its climate and productions may be gathered from what has been already said [Hispania, Vol. i. p. 1086. ] A summary of the different tribes, according to the various authorities that have treated upon the subject, has also been given in the same article [p. 1083], as well as the particulars respecting its government and administration [p. 1081. ]

TARRAGA (Ταρράγα, Plut. ii. 6 § 67), called by the Geogr. Bay. (vol. ii. 184) TERRACATA, a town of the Vacones in Hispamia Tarracensis (Plin. iii. 3. s. 4). Now Larraga. (Cf. Cellarius, Orb. Ant. i. p. 91.)

[TH. D.]

TARRHA (Ταρρά, Pausan. ix. 16 § 13; Theophr. H. P. ii. 2; Steph. B. s. v.; Orac. ap. Euseb. P. E. p. 133, ed. Stephan.; Ταρράς, Stadtnm, §§ 329, 330), a town on the SW. coast of Crete between Phoenice and Pecchinos, one of the earliest sites of the Apollo-worship, and the native country of the writer Lucasius. For Tarba (Ταρβά, Plut. iii. 17. § 8) Meursius proposes to read Tarrha There can be little or no doubt that its position should be fixed on the SW. coast of the I. and, at the very entrance of the gulf of Ἡθια Ρυμέλ, where the bold hanging mountains bend in the rocky bed of the river. (Pashley, Travels, vol. ii. p. 270.) The Florentine traveller Boudelmoniti, who visited Crete a. d. 1415, describes considerable remains of an ancient city and other buildings as existing on the site of the ancient city (opus. Cornelius, Creta Sacra, vol. i. p. 85.)

[E. B. J.]

TARSSATICA (Ταρςατικά, Plut. iii. 17. § 2), called in the Itin. Ant. p. 273, Thrasiatium, a place in Illyricum, on the road from Aquileia to Siscia through Liburnia, now Tseret, to the E of Fimne. (Cf. Pliny, iii. 21. 25; Tab. Peut.)

[T. H. D.]

TARSHISH. [Ταρσησώ.] TARSIA (Ταρσία, Arrian, Ind. c. 37), a promontory on the coast of Carmania, visited by the fleet of Nearchus. The conjecture of Vincent (Voyage of Nearchus, i. p. 362) that it is represented by the present Ῥάς-άλ-Πύρα appears well founded. It is perhaps the same as the Themistias Promontorium of Pliny (vi. 25) as suggested by Müller. (Geog. Grac. p. 360.)

[T. A.]

TARSIUM (Ταρσίου, Plut. iii. 16 § 8), a place in Pannonia Inferior, now Tarsos. (Cf. Tarx.) TARSUS (Ταρσός), a river of Myria in the neighbourhood of the town of Zela, which had its source in Mount Taurus, and flowed in a north-eastern direction through the lake of Miletopolis, and, issuing from it, continued its north-eastern course till it joined the Maeotus. (Strab. xiii. p. 587.) Strabo indeed states that the river flowed in numerous windings not far from Zela; but he can scarcely mean any other river than the one now bearing the name Bolbisa, and which the Turks still call Tarsa. (Hamilton, Researches, vol. ii. p. 106) identifies it with the Kora Su or Kora Dere Su, which flows into Lake Manias. [L. S.]

TARUSAS (Ταρύσας, Arrian, Per. P. Eur. p. 10), a river of Colchis falling into the sea between the Singames and the Hippus. (Cf. Plin. vi. 4. s. 4.) It is probably the same river called Tassarius in the Tab. Peut. [T. H. D.]

TARSUS (Ταρσός, Leb. Tarsos, or Tarsian). Sometimes also called Tarus (Ταρύσας), Terras (Τεράς), Tharsos (Θαρσός), or Tarsos προς τῷ Κύπρῳ, to distinguish it from other places of the same name.
TARTESSUS.

was the chief city of Cilicia, and one of the most important places in all Asia Minor. It was situated in a most fertile and productive plain, on both sides of the river Cydnus, which, at a distance of 70 stadia from the city, flowed into a lagoon called Rhenum or Rheneum. This lagoon formed the port of Tarsus, and was connected with the sea. The situation of the city was most favourable, for the river was navigable up to Tarsus, and several of the most important roads of Cilicia met there. Its foundation is ascribed to Sardanapalus, the Assyrian king, and the very name of the city seems to indicate its Semitic origin. But the Greeks claimed the honour of having colonised the place at a very early period; and, among the many stories related by them about the colonists in other parts, the one adopted by Strabo (xiv. p. 673; comp. Steph. B. s. v.) ascribes the foundation to Argives who with Triptolemus arrived there in search of Io. The first really historical mention of Tarsus occurs in the Anabasis of Xenophon, who describes it as a great and wealthy city, situated in an extensive and fertile plain at the foot of the passes of Mount Taurus leading into Cappadocia and Lycaonia. (Anab. i. 2. § 23, &c.) The city then contained the palace of Syennesis, king of Cilicia, and a virtual satrap of Persia, and an equivalent ally of Cyrus when he marched against his brother Artaxerxes. When Cyrus arrived at Tarsus, the city was for a time given up to plunder, the troops of Cyrus being exasperated at the loss sustained by a detachment of Cilicians in crossing the mountains. Cyrus then concluded a treaty with Syennesis, and remained at Tarsus for 20 days. In the time of Alexander we no longer hear of kings; but a Persian satrap resided at Tarsus, who fled before the young conqueror and left the city, which surrendered to the Macedonians without resistance. Alexander himself was detained there in consequence of a dangerous fever brought on by bathing in the Cydnus. (Arrian, Anab. ii. 4; Curt. iii. 5.) After the time of Alexander, Tarsus with the rest of Cilicia belonged to the empire of the Seleucidae, except during the short period when it was connected with Egypt under the second and third Ptolemy. Pompey delivered Tarsus and Cilicia from the dominion of the eastern despots, by making the country a Roman province. Notwithstanding this, Tarsus in the war between Caesar and Pompey sided with the former, who on this account honoured it with a personal visit, in consequence of which the Tarsians changed the name of their city into Juliiopas. (Cass. B. Alex. 66; Dion Cass. xiv. 24; Flor. iv. 2.) Cassius afterwards punished the city for this attachment to Caesar by ordering it to be plundered, but M. Antony rewarded it with municipal freedom and exemption from taxes. It is well known how Antony received Cleopatra at Tarsus when that queen sailed up the Cydnus in a magnificent vessel in the disguise of Aphrodite. Augustus subsequently increased the favours previously bestowed upon Tarsus, which on coins is called "libera civitas." During the first centuries of the empire Tarsus was a place of great importance to the Romans in their campaigns against the Parthians and Persians. The emperor Tiberius, his brother Florian, and Maximinus and Julian died at Tarsus, and Julian was buried in one of its suburbs. It continued to be an opulent town until it fell into the hands of the Saracens. It was, however, taken from them in the second half of the 10th century by the emperor Nicephorus, but was soon after again restored to them, and has remained in their hands ever since. The town still exists under the name of Tarsus, and though greatly reduced, it is still the chief town of that part of Karamania. Few important remains of antiquity are now to be seen there, but the country around it is as delightful and as productive as ever.

Tarsus was not only a great commercial city, but at the same time a great seat of learning and philosophy, and Strabo (xiv. p. 673, &c.) gives a long list of eminent men in philosophy and literature who added to its lustre; but none of them is more illustrious than the Apostle Paul, who belonged to one of the many Jewish families settled at Tarsus. (Acts, x. 30, xi. 30, xii. 22; 41, xxi. 30; comp. Pol. v. 8. § 7; Herod. xiv. 20; Hieroc. p. 704; Stadium. Mar. M. § 156; Leake, Asia Minor, p. 214; Ruessegger, Reisen in Asien, i. p. 395, foll., 2. p. 639, foll.)

Another town of the name of Tarsus is said to have existed in Bithynia (Steph. B. s. v.), but nothing is known about it.

[1. S.]

COIN OF TARTESSUS.

TARTARUS (Tartaro), a river of Venetia, near the borders of Galilia Transpadana. It is intermediate between the Athesis (Adige) and the Padus (Po); and its waters are now led aside by artificial canals partly into the one river and partly into the other, so that it may be called indifferently a tributary of either. In ancient times it seems to have had a recognised mouth of its own, though this was then wholly artificial, so that Pliny calls it the "fossiones Philistinae, quod ali Tartarum vocant." (Plin. iii. 16. s. 20.) In the upper part of its course it formed, as it still does, extensive marshes, of which Casicia, the general of Vitellius, skilfully availed himself to cover his position near Hostilia. (Tac. Hist. iii. 9.) The river is here still called the Tartaro: lower down it assumes the name of Canal Bianco, and after passing the town of Adria, and sending off part of its waters right and left into the Po and Adige, discharges the rest by the channel now known as the Po di Levante. The river Alpinus (Arpinus portus), mentioned by Ptolemy (iii. 16. § 20), could be no other than the mouth of the Tartars, so called from its flowing by the city of Adria; but the channels of these waters have in all ages been changing.

[1. E. H. B.]

TARTESSUS (Ταρτήσσως, Herod. i. 163; Ταρτησσός και Ταρτησσοί, Diodor, Siculus, Frag. lib. xxv.), a district in the south of Spain, lying to the west of the Columns of Hercules. It is now the prevailing opinion among biblical critics that the Tarshish of Scripture indicates certain localities in the south of Spain, and that its name is equivalent to the Tarcessi of the Greek and Roman writers. The connection in which the name of Tarshish occurs in the Old Testament with those of other places, points to the most western limits of the world, as known to the Hebrews (Genes. x. 4; 1 Chron. i. 7; Deut. lixxii. 10; Isaiah, ixi. 19):
in and like manner does the word Taruntius, and its derivative adjectives, are employed by Latin writers as synonymous with the West (Ovid, Met. xiv. 416; Sid. Ital. iii. 176; Strabo iii. 3); which appears in Scripture as a celebrated emporium, rich in iron, tin, lead, silver, and other commodities; and the Phoenicians are represented as sailing thither in large ships (Ezek. xxvii. 12; xviii 13; Jerem. x. 9). Isaiah speaks of it as one of the finest colonies of Tyre, and describes the Tyrians as bringing its products to their market (xxiii. 1, 6, 10). Among profane writers the antiquity of Taruntius is indicated by many myths connected with it (Strab. iii. p. 145; Justin. xiv. 4). But the name is used by them in a very loose and indefinite way. Sometimes it stands for the whole of Spain, and the Tagus is represented as belonging to it (Rutilius, Itin. i. 356; Claud. in Rufia. i. 101; Sil. Ital. xiii. 674, &c.). But in general it appears, either as the name of the river Baetis, or of a town situated near its mouth, or thirdly of the country south of the middle and lower course of the Baetis, which, in the time of Strabo, was inhabited by the Tarutii. The Baetis was called Taruntius by Stesichorus, quoted by Strabo (iii. p. 143) and by Avienus (Ora Marit. i. 224), as well as the town situated between two of its mouths; and Miot (ad Herod. iv. 152) is of opinion that the modern town of S. Lucar de Barrameda stands on its site. The country near the lower course of the Baetis was called Tarcessis or Tartessa, either from the river or from the town; and as well as others in Spain, was occupied by Phoenician settlers, which in Strabo's time, and even later, preserved their national customs. (Strab. iii. p. 149, xviii. p. 832; Arch. Alex. i. 16; App. Hisp. 2; Const. Porphyrog. de Them. i. p. 107, ed. Bonn.) There was a temple of Hercules, the Phoenician Melcarth, at Taruntius, whose worship was also spread amongst the neighbouring Iberians. (Arr. Le.) About the middle of the seventh century n. c. some Samnite sailors were driven thither by stress of weather; and this is the first account we have of the intercourse of the Greeks with this distant Phoenician colony (Herod. iv. 152). About a century later, some Greeks from Phocaea likewise visited it, and formed an alliance with Arganthonius, king of the Tarantii, renowned in antiquity for the great age which he attained. (Herod. i. 163; Strab. iii. p. 151.) These connections and the vast commerce of Taruntus, raised it to a great pitch of prosperity. It traded not only with the mother country, but also with Africa and the distant Casiterides, and bartered the manufactures of Phoenicia for the productions of these countries (Strab. i. p. 33; Herod. iv. 196; cf. Heron, Idenon, i. 2, 3, 2, 3). Its riches and prosperity had become proverbial, and we find them alluded to in the verses of Anacreon (op. Strab. iii. p. 151). The neighbouring sea (Fretum Taruntiun, Avien. Or. Marc. 64) yielded the lamprey, one of the delicacies of the Roman table (Gell. viii. 16) and on a cape of Taruntius are represented a fox and an ear of grain (Miromont, Med. Ant. i. p. 26). We are acquainted with the circumstances which led to the fall of Taruntius; but it may probably have been by the hand of Hamilcar, the Carthaginian general. It must at all events have disappeared at an early period, since Strabo (iii. pp. 148, 151), Pliny (iii. i. 22, vii. 48), Mela (ii. 9), Sallust (Hist. Fr. ii.), and others, confounded it with more recent Phoenician colonies, or took its name to be an ancient appellation of them. [T. H. D.]
Arrige, a branch of the Garonne. This Tarascum is in the Days de Foix, and in a valley at the foot of the Pyrenees, which circumstance seems to indicate more probably the position of a small tribe or people than that of Tarascum on the Rhone. This Tarascum on the Arrige is mentioned in middle age documents under the name of Castren Taraceo. Pline's Taunusenses, or whatever may be the true name, are enumerated among the Oppida Latina of Narbonensis. [G. L.]

TASCIACA, a town in Gallia, placed by the Table between Avaricum (Bourges) and Caesaro- dnum (Tours). The first station from Avaricum is supposed to be Caesari on the Cher, and the next is Tasciaca, supposed to be Tesci, also on the Cher. But the number xxiii. placed in the Table at the name of Tasciaca, which number should represent the distance from Chabri to Tesci, is nearly the distance between Tesci and Tours, and accordingly there is some error here. The Table gives no distance between Tasciaca and Cesarodnum. (D'Anville, Notice; Ubert, Galli- Ric.) [G. L.]

TASCONI is the name of a Gallic people in the Narbonensis, mentioned by Pline (iii. 4), as the name is read in five MSS. There is a small river Tescun or Tesccun, which flows into the Tarn, near Montaubon. D'Anville quotes a life of S. Tho- dard, archbishop of Narbone, which speaks of this river as called Tesco by the people of that part and as the limit between the territories of the Tolosani, or people of Toulouse, and the Caturcenses, or people of Cahors. This is a valuable passage, for it shows how far north the Narbonensis, to which the territory of Toulouse belonged, extended in this part of its frontier; and it also confirms the conjecture about the northern limits of the Tuteni Provinciales (Tuteni), who were also included in the Narbonensis. [G. L.]

TASTA. [DATH.]

TATTA LACUS (q. Tatta), a large salt lake on the frontiers between Lyconia and Galatia; it had originally belonged to Phrygia, but was afterwards annexed to Lyconia. Its waters were so impregnated with brine, that any substance dipped into it, was immediately incrusted with a thick coat of salt; even birds flying near the surface had their wings moistened with the saline particles, so as to become incapable of rising into the air, and to be easily caught. (Stab. xii. p. 50; Plin. xxxi. 41, 45; Dioscor. v. 126.) Stephanus Byz. (s. v. Borlaow) speaks of a salt lake in Phrygia, which he calls Attacu ('Arraca), near which there was a town called Botium, and which is probably the same as Lake Tatta. The Turks now call the lake Tnchla, and it still provides all the surrounding country with salt. (Leake, Asia Min. p. 70.) [L. S.]

TAUA. [TAUM.]

TAUA (Tasc, Steph. B. s. v.; Teœva, Ptol. iv. 5, § 50; Tab, Ann. Ant. p. 155), a town in Lower Assyri, situated on the left bank of the Cagopic arm of the Nile, 8. of the city of Naukratis. It was the capital of the small Pithomphalic Nome (Plin. v. 9, s. 9), and is supposed to be represented by the present Thernak. (D'Anville, Memoire sur l'Égypte, vol. i. p. 82.) [W. B. D.]

TAUCHIRA or TEUCHIRA (Taœçepa, Hier. d. iv. 171, et ali.; Taœçepa, Hieroc. p. 732; Plin. v. 5. s. 5, &c.), a town on the coast of Cyrene, founded by Clemy. It lay 200 stadia W. of Pto- lemais. Under the Ptolemies it obtained the name of Arsinoë. (Strab. xvii. p. 836; Mela, i. 8; Plin. l. c.) At a later period it became a Roman colony (Tab. Peut.,) and was fortified by Justinian. (Pro- cop. de Aed. vi. 3.) Tauchira was particularly noted for the worship of Cybele, in honour of whom an annual festival was celebrated. (Synes. Ep. 3.) It is the same town erroneously written Tapaia by Dio crucius (xxvii. 20). It is still called Tochira. (Cf. Delia Celia, Piigg. p. 198; Pacho, Voyage, p. 184.) [T. H. D.]

TAVIUM (Tavoū, Tavow) or TAVIA, a town in the central part of eastern Gallatia, at some distance from the eastern bank of the river Hayes, was the capital of the Galatian kingdom, and at the same time an important commercial station, and a place of considerable commercial importance, being the point at which five or six of the great roads met. (Plin. v. 42; Strab. xii. p. 567; Ptol. v. 4. § 9; Steph. B. s. v. 'Aycoupa; Hieroc. p. 696; It. Ant. pp. 201, 203.) It contained a temple with a colossal bronze statue of Zeus. Leake (Asia Minor, p. 311) is strongly inclined to believe that Tavorum occupies the site of ancient Tavium; but Hamilton (Researches, i. p. 379, &c.) and most other geogra- phers, with more probability, regard the ruins of Beghaz Kieni, 6 leagues to the north-west of Jazgat or Jueghat, as the remains of Tavium. They are situated on the slopes of lofty and steep rocks of limestone, some of which are adorned with sculptures in relief. There are also the foundations of an immense building, which are believed to be remains of the temple of Zeus. (Comp. Hamilton in the Journal of the Roy. Geogr. Soc. vol. vii. p. 73, Eoll.; Cramer, Asia Minor, ii. p. 98.) [L. S.]

TAULANTI (Taœ̄væœv, Ptol. iii. 13, § 9), a people of Roman Illyria, in the neighbourhood of Epidamnum and Dyrrachium. In ancient times they were a powerful tribe, possessing several cities, and governed by their own kings, but subsequently they were reduced to subject by the kings of Illyria, and at the time when the Romans waged war with Teuta they had sunk into insignificance. (Cf. Thucyd. i. 24; Arrian, Anab. i. 5; Mela, ii. 3; Liv. xiv. 26; Plin. iii. 22, s. 26.) Aristotle relates that Teuta had a method of preparing a sort of honey. (Mir. Ausc. t. ii. p. 716.) [T. H. D.]

TAUM, TAUS, or TAVA (Tavoūa, Ταυα, Ptol. ii. 3, § 5), a bay on the E. coast of Britannia Barbara. (Tac. Agr. 22.) Now Erith of Taz. [T. H. D.]

TAUM (AD), a place in the S.E. of Britannia Romana, in the territory of the Iceni (Tab. Peut.). Probably Yarmouth. [T. H. D.]

TAUNUS MOnS, a range of hills in western Germany, beginning near the river Neckar, and running northward till they reach the point where the Meuse (Main) joins the Rhine. (Pomp. Mela. iii. 3; Tac. Ann. i. 56, xii. 28.) This range of hills still bears its ancient name, though it is sometimes simply called the Hohe, that is, the Height, Taunus being probably the Celtic word Dun or Dium, which signifies a height. In various places along this range of hills Roman inscriptions have been found, in which Gises Taunenses are mentioned, from which it may be inferred that there once existed a town of the name of Taunus. (Orelli, Inspect. nos. 181, 4281, 4982; Wilhelm, Germanien, p. 44.) [L. S.]

TAURA'NIA, a town of Campania, mentioned only by Pline (iii. 5. s. 9) as having in his time entirely disappeared, like Stabiae. He affords no clue to its position. The name of Taurania (Taupasia) is found also in the older editions of Stephanus of

Taurania.
TAURANITIUM

Byzantium; but it appears that the true reading is
Taurasia. (Steph. B. s. v. ed. Min.) [E. H. B.]

TAURANITIUM, a district of Armenia Major
lying N. of Tigranocerta, in the direction of Ar-
taxata. (Tac. Ann. siv. 24; Cf. Moses Chor. l. 5; 
Eur. et Eryth. ii. 1.)

Taurasia (Taurasi), an ancient city of Sam-
nium, in the country of the Hirpini situated on
the right bank of the river Calor, about 16 miles above its
junction with the Taurus. The name of the city is
called Mela, and is mentioned only from the inscription on
the tomb of L. Scipio Barbatus, which records it among
the cities of Samnium taken by him during the Third
Samnite War. (Orell. Inscr. 550.) It was probably
taken by assault, and suffered severely, for no sub-
sequent mention of the town occurs in history; but
its territory ("ager, qui Taurastorum fuerat"),
which was doubtless confiscated at the same time,
is mentioned long afterwards, as a part of the "ager
publicus populi Romani," on which the Appian Li-
gurians who had been removed from their own
abodes were established by order of the senate.
(Liv. xl. 38.) These Ligurians appear to have
settled in the plain on the banks of the Ta-
marus near its junction with the Calor; but there
are no traces that the modern village of Taur-
as, though 16 miles further S., retains the name,
and marks (approximately at least) the site of the
ancient Taurasia.

Several modern writers identify these Taurasini
Campa with the Arusini Campi near Beneventum,
which were the scene of the defeat of Pyrrhus by M.
Curius Dentatus (Flor. I. 18; Oros. iv. 2.), and
the suggestion is probable enough, though unsupported
by any authority. [Beneventum.] [E. H. B.]

TAURANTINAE, [Bagradanenses.

TAURESIUM (Taurispor, Procop. de Aed. iv. 1.
p. 266), a place in Moesia Superior, near Scupi or
justina Prima. It was situated in the Haemus,
not far from the borders, and was the birthplace of the
Smith.) [T. H. D.]

TAURI (Tarpis, Strab. vii. p. 308), the inhabitants
of the Chersonese were called Cimmerians.

They were probably the remains of the Cimmurrians,
who were driven out of the Chersonese by the Scy-
thians. (Herod. iv. 11, 12; Heeren, Iusen, i. 2.
p. 271; Manett. iv. p. 278.) They seem to have
been divided into several tribes; but the two main
divisions of them were the nomad Tauri and the
agricultural. (Strab. vii. p. 311.) The former pos-
sessed the northern part of the country, and lived
on meat, mare's milk, and cheese prepared from it.
The agricultural Tauri were somewhat more civili-
zed; yet altogether they were a rude and savage
people, delighting in war and plunder, and particu-
larly addicted to piracy. (Herod. iv. 103; Strab.
iv. p. 308; Mela, ii. 1; Tac. Ann. xii. 17.) Never-
theless, in early times at least, they appear to have
been united under a monarchical government
(Herod. iv. 119). Their religion was particularly
gloomy and horrible, consisting of human sacrifices
to a virgin goddess, who, according to Ammianus
Marcellinus (xxii. 8. s. 34), was named Orekeche,
though the Greeks regarded her as identical with
their Artemis, and called her Tauropolis. (Soph.
Ajr 172; Eur. Iph. Taur. 1457; Dod. iv. 44;
Ach. Tat. viii. 2; Strab. xiii. 535; Bckh. Inscr.
ii. p. 89.) These victims consisted of shipwrecked
persons, or Greeks that fell into their hands. After
killing them, they stuck their heads upon poles, or,

accordingly to Ammianus (l. c.), affixed them to
the wall of the temple, whilst they cast down the bodies
from the rocks on which the temple stood. (Herod.
iv. 163; Ov. ex Pont. lll. 2 43, seq., Trist. iv. 4.
63.) According to a tradition among the Tauri
in their own country, the daughter of Acarnaeus,
the daughter of Acarnaeus (Herod. l. c.). They
had the custom of cutting off the heads of prisoners of war,
and setting them on poles above the chimneys of their
houses, which usage they regarded as a protection of
their dwellings (?). If the king died, all his
dearest friends were buried with him. On the
decease of a friend of the king's, he either cut
off the whole or part of the deceased person's ear,
according to his dignity. (Nic. Damase. p. 160, Orell.
Tr. H. D.)

TARIAIUM (Tarasia), a town on the W.
coast of Bruttium, near the mouth of the river Me-
taurus (Marro). Its name is mentioned by Mela,
who places it between Seylla and Metaratum. It
was probably, therefore, situated to the S. of the
river, while the town of Metaratum was on its N.
bank. Subsequently all trace of the latter dis-
appears; but the name of Taurasia is still found in
the Tabula, which places it 23 miles S. of Vibo
Valentia. (Mel. ii. 4. § 8; Tab. Pent.) It became
the see of a bishop in the later ages of the Roman
empire, and retained that dignity down to the time
of Gregory VII., when the town had fallen into
complete decay. Its ruins, however, still exist, and
the site is said to retain the name of Tarasino.
(Hohen. Not. ad Clar. p. 293; Romanelli, vol. i.
p. 70.)

There can be no doubt that the "Taurasium equinum"
of Pliny (iii. 5. s. 10), which he mentions
immediately after the "Metaurus minus," is the same
place that is called by Mela Taurasianum. [E. H. B.]

TAURICA CHERSONESUS (ι Ταυρικον Χρη-
σινον, Ptol. iii. 4. 2, &c.), a peninsula stretch-
ing into the Pontus Euxinus from Sarmatia, or
the country of the nomad Scythians, with which it is
connected by a narrow isthmus, anciently called
Taphius, or Taphare, now the isthmus of Pepeo-

The peninsula does not bear the name of the Chersonese
Scythica, and was sometimes styled simply Taurica.
(Plin. iv. 12. s. 26; Sclavus, i. p. 29, Huds.) It is
now called the Crimea, from the once famous city
of Eski-Krim; but since its incorporation with
the Russian empire, the name of Tarica has been
again applied to it.

The isthmus which connects the peninsula with
Sarmatia is so slender, being in some parts scarcely
40 stadia or 5 miles across (Strab. vii. p. 308;
Clarke, Trav. ii. p. 314, 4th ed. 1816), as to
make it probable that in a very remote period
Tarica was an island. (Plin. l. c.; cf. Pallas, Voyages,
&c., ii. p. 2, Fr. Transl. 4to.) The

ancestors compared it with the Peloponnese, both as to
size and shape (Strab. vii. p. 310; cf. Herod.
iv. 99); and this comparison is sufficiently happy, ex-
cept that Tarica throws out another smaller penin-
sula on its E. side, the Bospharian peninsula, or penin-
sula of Kertch, which helps to form the S. boundary,
or coast, of the Palus Maced. The Chersonese is
about 200 miles across in a direct line from Cape
Tarchan, its extreme W. point, to the Straita of
Kertch, and 125 miles from N. to S., from Pepeo
to Cape Kikinias. It contains an area of about
10,050 square miles. Nearly three-fourths of
Tarica consist of flat plains little elevated above the
sea; the remainder towards the S. is mount-

4 b 3
TAURICA CHERSONesus.

The NW. portion of the low country, or that which would lie to the W. of a line drawn from the isthmus to the mouth of the river Alma, consists of a sandy soil interspersed with salt lakes, an evidence that it was at one time covered by the sea (Pallas, Ib. p. 605, &c.); but the E. and S. part has a fertile mould. The mountain chain (Taurici Montes) begins to rise towards the centre of the peninsula, gently at first on the N., but increasing in height as the chain approaches the sea, until it sinks steeply and abruptly. Hence the coast at this part presents huge cliffs and precipices, and the sea is so deep that the lead often finds no bottom at the distance of a mile or two from the shore. From these mountains, which extend from Symbolon, or Balaklava, on the W., to Theodosia, or Caffa, on the E., many bold promontories are projected into the sea, enclosing between them deep and warm valleys open to the S., and sheltered from the N. wind, where the olive and vine flourish, the apricot and almond ripen, and the laurel creeps among the dark and frowning cliffs.

The most remarkable mountains of this chain are that anciently called the Cimmerium at the N. extremity, and the Trapaeus at the S. (Strab. vii. p. 309.) The former, which is said to have derived its name from the Cimmerians, once dominated in the Bosporus, is now called Kichirisch-Daghli. It lies nearly in the centre of the peninsula, to the NW. of the ancient Theodosia, and near the town of Eski-Krim, or Old Crime. Some writers, however, identify Cimmerium with Mount Oponk, on the S. coast of the peninsula of Kertch. (Köbler, Mém. de l'Acad. de St. Petersb. 1824, p. 649, seq.; Dubois de Montperreau, Voyages, &c. v. p. 253, seq.) But Trapaeus is by far the highest mountain of Taurica. Kohl estimates its height at 5000 German feet (Heissen in Südrussland, i. p. 204); other authorities make it rather less, or 4740 feet. (Neumann, Die Hellenen im Seithundende, p. 448.) According to Mr. Seymour, it is 5125 English feet high. (Russian on the Black Sea, p. 146.) Its form justifies its ancient name, and is said to resemble that of the Table Mountain at the Cape of Good Hope (Kohl, Ib.). A good idea of it may be obtained from the vignette in Pallas (ii. p. 196). As it stands somewhat isolated from the rest of the chain, it presents a very striking and remarkable object, especially at sunset. At present it is called Tschagir-Daghli, or the Tsent Mountain. The other mountains seldom exceed 1200 feet. Their geological structure presents many striking deviations from the usual arrangement, especially in the absence of granite. These anomalies are fully described by Pallas in his second volume of travels. That part of Taurica which lay to the E. of them was called the Rugged, or Rocky, Chersonesus (ρωγριχ, Heral. L. C.) It is in these mountains that the rivers which water the peninsula have their sources, none of which, however, are considerable. They flow principally from the northern side, from which they descend in picturesque cascades. Only two are mentioned by the ancients, the Triaps and the Iastrians. At present the most fertile districts of Taurica are the calcareous valleys among the mountains, which, though often covered with only a thin layer of mould, produce excellent wheat. The nature of the country, however, does not now correspond with the descriptions of the ancients. Strabo (L. C.) praises its fertility in produc-

TAURICA CHERSONesus.

ing corn, especially in that part which lies between the Panticapaeum (Kertch) and Theodosia (Caffa), which at present is a desolate and monotonous steppe. But this may probably be accounted for by the physical and political revolutions which the country has undergone. Taurica yielded a large tribute of wheat to Mithridates Eupator, King of Bospors. That sovereign took much interest in promoting the cultivation of the country, especially by the planting of trees; but all his care to rear the laurel and the myrtle in the neighbourhood of Panticapaeum is said to have been vain, though other trees grew there which required a mild temperature. (Plin. xvi. s. 59.) Wine was produced in abundance, as at the present day, and the custom mentioned by Strabo (p. 307), of covering the vines with earth during the winter, is still observed, though Pallas considers it unnecessary (Voyages, &c. ii. p. 444.)

The interest connected with the ancient history of the Tauric Chersonesus is chiefly derived from the maritime settlements of the Greeks, and our attention is thus principally directed to the coasts. An account of the barbarous people who inhabited the peninsula at the time when these settlements were made is given in a separate article [TAURI]. Its coasts, like those of the Euxine in general, were early visited by the Milesians, who planted some flourishing colonies upon it. Besides these we find a Dorian colony established near the site of the present Sebastopol; and, if we may believe Aschines (Contra Oecatip. p. 141, sq.), the Athenians once possessed the town of Nyphaeum on the Cammernian Bosphorus, which, according to him, was betrayed to the Bosporan kings by Gylon, the maternal grandfather of Demosthenes (Ct. Cratero in Harpocratin, s. v. Nyphaiam.) The interior of the peninsula was but little known to the ancients, and we shall therefore best explain their connection with it by taking a survey of the coasts.

We shall begin on the NW. side, after the bay of Carcina or Tamyra, which has been already described [CARCINA; TAMYRACA]. From this bay the peninsula stretches to its most westerly point, Cape Tarchan, which presents some high land; but to the S. of Tarchan the coast sinks to a dead level as far as the river Alma, to the S. of which it again begins to rise in high cliffs. All the W. coast, however, presents no place of note in ancient history till we come to its extreme southern point, where the sea enters the Black Sea in a westerly direction into the sea. On the E. this tract is divided from the rest of the peninsula by a deep and broad valley, into which it falls by steep declivities. The harbour of Sebastopol (or Roads of Aktion) on the N., which bites into the land for about 4 miles in a SE. direction, and that of Balaklava on the S. coast of the peninsula, which runs up towards the N., form an isthmus having a breadth, according to Strabo (p. 309), of 40 stadia, or 5 miles. This measurement is confirmed by Clarke (Trav. ii. p. 219), who, however, seems only to have been guided by his eye; for in reality it is rather more, or about 6 miles. The S. coast of the little peninsula formed by this isthmus presents several promontories and small bays, with cliffs of from 500 to 700 feet in height.

So barren a spot presented no attractions to the Milesians, the chief colonisers of the Euxine; but a more hardy race of emigrants, from the Dorian city of Ithaca, where a brother of Nestor lived on Mount Ithaca, and founded there the town of Chersonesus (Strab. l. c.). We learn from Pliny (iv. 12. s. 26) that it
TAURICA CHERSONESUS.

was at first called Megarice, apparently from the circumstance that Megara was the mother city of the Pantic Helenists. From these settlers the little peninsula we have just described obtained the name of the CHERSONESUS HERACLEOTICUS, or Heracleotic Chersonese, sometimes also called "the small Chersonesus" (§ μυκητ., Strab. l.c.), by way of distinction from the great, or Tauric, peninsula.

The original city of Chersonesus seems to have been founded at the westernmost point of the peninsula, close to the present Cape Fornax. The date and occasion of its foundation are not ascertained; but Neumann conjectures that it may have been built about the middle of the fifth century B.C. (Die Hellenen, § c. p. 320). Considerable remains of the ancient city were visible so late as the end of the last century (Clarke, Trav. ii. pp. 292, seq.; Pallis, ii. pp. 70, seq.); but every trace of them had vanished when Marawieh Apostol visited the spot (Reise durch Taurien, p. 62). They were destroyed by a certain Lueit. Kruse, who used the stones for building and converted the ground into a vineyard (Du- dois de Montperreux, i. voyages, c. vi. p. 133). The ancient Chersonesus, however, had fallen into decay before the time of Strabo; and the first hearth appears from the ruins to have been seated on the W. side of what is now the Quarrantine Harbour of Sebastopol (Neumann, p. 392). The place was much damaged towards the end of the fourteenth century by Ostrog, sovereign of Lithuania, since which time it has been gradually falling into ruins (Karamzin, Russ. Gesch. v. 13. Germ. tr.). The Turks carried away many of its sculptures and columns to adorn Constantinople. Nevertheless, the town, although almost entirely deserted, remains for three centuries, in so perfect a state, that a plan might have been drawn of it at the time when it came into the possession of the Russians; but its ruin was soon completed by its new masters, who blew up the walls and destroyed the graves and temples. (Clarke, ii. p. 207.)

Pliny (iv. 12. s. 26) gives the circumference of its walls at 5 miles; but their outline could still be traced in 1820, and according to Dubois de Montperreux (vi. 138), was only about a quarter of that size. It is probable that the town walls with the wall or rampart which extended across the isthmus, which, as we have already seen, Strabo describes as being 40 stadia, or 5 miles, broad. The same writer speaks of it in another place (p. 312) as being fortified with a wall. This wall ran from Ctenus, at the E. extremity of the harbour of Sebastopol to Symbolon (Balaklava) on the S. coast, and appears to have been made by the Bos- perian kings as a defence against the Scythians. An account of its remaining vestiges is given by Clarke (i. p. 285, seq.; cf. Seymour, p. 149.). The whole enclosure was anciently covered with gardens and villas, and the foundations of houses and of the boundary walls of fields and gardens may still be traced, as well as many remains of the town on the promontory between Quarantine Bay and Streletska Bay. Vestiges of the principal street show it to have been 20 feet broad. The town wall on the land side was near 2 miles long, built of limestone, and 5 or 6 feet thick. (ib. 150.)

Many antiquities and coins have been found in the ruins of Chersonesus. In the neighbourhood are graves of the most simple kind, hewn in the rock. They are easy of access, and present in this respect a remarkable contrast to those at Panticeapeum; but, from this cause, nothing but bones have been found in them, whilst those at Panticeapeum have yielded valuable antiquities. According to Clarke (ii. 201, 210), the town of Eupatoria stood close to Chersonesus, though others have identified it with Iskerman. About a mile to the E. of ancient Ctenus, the rock is pierced all over with the subter- ranean dwellings of the ancient Tauri. On the top are the ruins of the castle built by Diophantes, general of Mithridates, to defend the Chersonesus against the Tauro-Scythians. These caverns or crypts are now rapidly falling in. (Seymour, p. 140.) Similar caves are found in other parts of the peninsula.

The Heracleotic Chersonesus was noted as the seat of the savage worship of Diana Tauropes. The natives, or Tauri, themselves had a worship of a similar kind (TAURI); but whether it was indigenous among them, or whether they borrowed it from the Dorian Heracleots who settled here, cannot be ascertained. The account of the Tauri themselves, that their virgin goddess was Iphigenia, the daughter of Agamemnon, would seem to lead to the latter conclusion; though it is well known that the nations of pagan antiquity readily adopted one another's deities when any similarity was observable in their rights and attributes; and from the account of Herodotus (iv. 103) it might perhaps be inferred that this horrible worship existed among the Tauri before the arrival of the Greeks. Artemis was a peculiarly Dorian deity, and was worshipped in several parts of Greece with human sacrifices. There was a tradition that the town of Chersonesus was founded by Artemis herself. The Heracleot Chersonesites erected a famous temple on a headland which took the name of Strabo. Strabo however merely calls the Parthenium "the temple of the virgin, a certain daemon" (p. 308), and does not mention Artemis. Opinions vary as to which is the real promontory of Parthenium. Many seek it at Cape Fornax or Chersonesus, which seems too near the town of Chersonesus, as Strabo places the temple at the distance of 100 stadia from the town, though Fornax answers to his description in other respects. Clarke and Pallis identify it with the Acta Barrum or Sacred Promontory (Clarke, ii. p. 286, and note), between Cape Fiolente and Balaklava, which, besides its name, has also a ruin to recommend it; though the latter claim to notice is shared by C. Fiolente. Dubois de Montperreux (vi. p. 194, sq.) thinks that the temple may have stood on the spot now occupied by the monastery of St. George; whilst Neumann, again places it on the headland a little to the NW. of C. Fiolente. It will be seen that these opinions rest on little more than conjecture. On the coins of the Heracleotic Chersonesus the image of Artemis occurs by far the most frequently. She sometimes appears with Apollo, sometimes with Hercules, the patron hero of the mother city, but more generally alone, and always as the goddess of the chase, never as Selene (Von Kühne, in the Memoirs of the Ar- chaeolog. and Numism. Society of St. Peterbory, vol. ii. ap. Neumann, p. 420). On other coins a fish is frequently seen; and one may have a dove, and an ear of corn between two fishes on the reverse (ib.). The bays of the Heracleotic peninsula abound with fish, which formed a great part of the riches of the country.

Of the history of the Heracleotic Chersonesus we know but little, but it may perhaps be inferred from the Inscription of Agasicles that its constitution was republican. It was impon-
TAURICA CHERSONESUS.

Taut enough to take a part in political affairs as an independent city, at least as late as about the middle of the 2nd century B.C., when, like its mother city, Heracleia, it was a party to the alliance against Pharnaces I., king of Pontus, and Mithridates, satrap of Armenia. (Polyb. IV. 325, sqq. ed. Sveigh.) Soon afterwards, however, we find it struggling with the Taurians and their allies the Sarmatians for existence (Polyaen. Strat. viii. c. 56), and it was ultimately compelled to place itself under the protection of Mithridates. Subject to the Parthian tax, it regained its independence, through the Romans, and under the name of Cherson or Chersones flourished till a late period of the middle ages, and even overthrown the Bosporan kingdom. (Const. Porphyry de Adm. Imp. c. 53.)

Leaving the Heracleotian Chersonese, we now proceed to describe the remainder of the coast of the Tauric peninsula, which may be soon despatched, as an account of its different cities is given in separate articles. From the haven of Symbolon (Dolichovon) to Taceodesia (Cofin) the coast is correctly described by Strabo as craggy, mountainous, and stormy, and marked with many headlands (p. 309). The distance, however, which he assigns to this tract of 1000 stadia, or 125 miles, is rather too small. In both the Periphs of the Euinike the distance given is 1320 stadia, but this must include all the indentures of the coast. The most remarkable promontory in this part was the Cria-metopon, or Ram's Head, which has been variously identified. Some writers have taken it for the premonitory of Lapsi, which is in reality the most southern point of the peninsula. Some again have identified it with Al Petrei, and a still greater number with the Aja-dagh. But the account given by Arrian and the anonymous agrees better with Cape Althinkor. These writers say that the Cria-metopon lay 220 stadia to the W. of Lamap. (Arrian, Perip. p. 20; Anon. Perip. p. 6.) Now Lamaps is undoubtedly the present Bijd Lampat, the distance between which and Cape Althinkor agrees very accurately with the preceding measurement. Seymours indeed (ii. 320, Gall) states the distance at only 120 stadia; but this is evidently an error, as it is too short by half even for Aja-dagh. Cape Althinkor is not much N. of Lapsi, and from its position might easily have been taken by the Greeks for the southernmost point of the peninsula. (See Neumann, 415, sq.)

From the traces of Greek names, ruins, remains of marble columns, &c., it may be inferred that the whole of this tract was once in the hands of the Greeks. But these relics probably belong to the Byzantine times, since the older geographers mention only four places on this part of the coast, namely, Charax, Lagyr, Lamaps, and Atheneon. To the E. of Taceodesia the coast of the Euinike trends into a large bay, which, approaching the Palus Maecotis on the N., forms an isthmus about 12 miles broad, to the E. of which, as far as the Cimmerian Bosporus, extends the Bosporan peninsula, or that of Kertch, which swells out to double the breadth of the isthmus. The western half of this peninsula is flat; but the eastern portion rises into hills, which surround the bay in which Particaeapum was situated. It possessed several flourishing maritime towns, as Cazecka and Cimmerium on the S. coast, Euphorbio Panticapaeum, the Bosporan capital, on the Cimmerian Bosporus; with some others of less note, as Myrmecium, Pothemon, and Hermision. There were also probably towns in the interior; but we know the names of only one, namely, Huratam. (Pol. iii. 6. § 6.) Beyond the Bosporan straits we have little to guide us but the accounts of Ptolemy. From those straits, the N. coast of the peninsula, which is high and chalky, proceeds in a westerly direction to the modern Arabat. Somewhere on this tract lay the Greek colony of Heraclea.

On the E. side of the Tauric peninsula the Tongue of Arabat, a narrow slip of land scarcely raised above the level of the sea, 52 miles long and about half a mile broad, running out into the whole coast, dividing the Maeotis from the Tauric Mere, or Putorid Sea. But though Strabo knew that the latter formed the western portion of the Maeotis (p. 208), he nowhere mentions the Tongue of Arabat. The Putorid Sea seems to be the Lacus Buges of Phiny (iv. 12. s. 26); but his description is not very intelligible. According to the accounts of recent travellers the Putorid Sea, now called the Shishtah, does not appear to deserve its name, as it has neither an unpleasant smell nor are its shores unhealthy (Seymour, p. 335); yet in the times of Clarke and Pallis it seems to have possessed both these offensive qualities. (Clarke, Trav. vol. ii. p. 314, note.)

The chief feature in the history of the Chersonese Taurica, is that of the kingdom of the Bosporus, a sketch of which has been already given. [BOSPORUS CIMMERIUS, Vol. i. p. 421, seq.] After the extinction of that dynasty, towards the end of the 4th century of our era, the peninsula fell into the hands of the Huns, of which race remanants still existed between Panticapaeum and Cherson in the 6th century. (Procop. Goth. iv. 5.) It was subsequently overrun by the Goths and other nations who followed the great stream of emigration. Justinian reunited the kingdom of the Bosporus to the Greek Empire; and the Byzantine emperors, till the fall of Constantinople, always regarded the Tauric peninsula as part of their dominions. But the Tatars had made themselves the actual masters of it before the middle of the 14th century. Under these possessors, the Goths, who settled on the coasts towards the end of the same century, played the same part as the Greeks did when the country was possessed by the Tauri, and planted several flourishing colonies. (Neumann, Die Halbinsel im Sythotlande; Georgii, Alte Geographie, vol. ii; Clarke's Travels, vol. ii.; Danby Seymour, Russia on the Black Sea; Forbiger, Handb. der alt. Geogr. vol. iii.)

TAURICI MONTES. [TAURICA CHERSONESUHS.]

TAURINI (Tauropoi), a Ligurian tribe, who occupied the country on the E. slope of the Alps, down to the left bank of the Pains, in the upper part of its course. They were the most northerly of the Ligurian tribes, and from their geographical position would more naturally have been regarded as belonging to Cisalpine Gaul than to Liguria; but both Strabo and Phiny distinctly say they were a Ligurian tribe, and the same thing may be inferred from the omission of their name by Polybius where he is relating the successive settlements of the Gaulish tribes in the N. of Italy (Vol. ii. 17; Strab. iv. p. 204; Plin. iii. 175. s. 21). Their territory adjoined that of the Vagienni on the S., and that of the Insubres on the NE.; though the Lacavi and Lebeeci, tribes of which we know very little, must also have bordered on their NE. frontier (Pol. 1. c.) The first mention of the Taurini in history is at the time of Hannibal's passage of the Alps (n. c. 218), when that genial,
TAURIS.  

TAUROBENEUM.  

on descending into the plains of Italy, the Taurini on hostile terms with the Insubres, and, in consequence, turned his arms against the town which they had taken, and put the inhabitants to the sword. (Pol. iii. 60; Liv. xxi. 38, 39.) Neither Polybius nor Livy mention the name of this city, but Appian calls it Taurasia (Annih. 5): it was probably situated on the same site which was afterwards occupied by the Roman colony. The name of the Taurini is not once mentioned during the long wars of the Romans with the Cisalpine Gauls and Ligurians, and we are ignorant of the time when they finally passed under the dominion of Rome. We have no precise account of the foundation of the Roman colony in their territory which assumed the name of Augusta Taurinorum, though it is certain that this took place under Augustus, and it was doubtless connected with his final subjugation of the Alpine tribes in B.C. 8. From this time the name of the Taurini never again appears in history as that of a people; but during the latter ages of the Roman Empire the city of Augusta Taurinorum seems to have been commonly known as the case was in many instances in Transalpine Gaul) by the name of the tribe to which it belonged, and is called simply Taurini in the Itineraries, as well as by other writers. (Itin. Ant. p. 341; Itin. Hier. p. 556; Tab. Pent.; Ammian. xv. 8. § 18.) Hence its modern name of Torino or Turin. This is the only city that we can assign with any certainty to the Taurini. On the W. their territory was bounded (at least in the days of Augustus) by the Segusiani and the other tribes subject to Cetius; and their limit in this direction is doubtless marked by the station Ad FINES, situated 18 miles from Augusta, on the road to Segusio (Itin. Ant. l.c.). But it appears probable that at an earlier period the nation of the Taurini was much more widely spread, or their name used in a more comprehensive sense, so as to comprise the adjoining passes of the Alps; for Livy speaks of the Insubrians Gauls who crossed into Italy, "per Taurinum saltusque incolae Alpes transiendam" (Liv. v. 54), and Strabo, in enumerating, after Polybius, the passes across the Alps, designates one of them as τάπεων Εὐρώπατον (Strab. iv. p. 209). Whether the pass here meant is the Mont Genèvre or the Mont Cenis (a much disputed point), it would stand to reason that the territory of the Taurini in the more restricted sense.  

[E. H. B.]

TAURUS, an island of the Ionian sea, between Pharos and Corcyra, opposite to the NW. point of the peninsula of Hylis and the mouth of the Naxos. (Auct. B. A. 47.) Now Tarcoko. [T. II. D.]

TAURUSCI. [Novich, Vol. II. p. 447.]

TAUROE'NTIUM (Ταυρόεντιον, Tauroentium: Eth. Tauroen'tios). Steph. B. (s. v. Taurōe'n'tios), who calls it a Celtic town and a colony of the Massaliots, quotes the first book of Ar'temidorus' geography for a foolish explanation of the origin of the name. The place is mentioned by Celsus (Bat. ii. 4), who says "Tauroenta quod est castellum Massaliumum vigernetium," by Strabo (iv. pp. 180, 184), by Scymnus China, and by Polyeni (iv. 10. § 8), who places it between Massilia and Citharistes Promontorium. D'Anville erroneously supposes that Caesar uses Tauroenta for the plural number; but it is the accusative of Tauroenis. Strabo (iv. p. 184) enumerates the Massaliot settlements between Massilia and the Varus in this order: Taurentium, Oliba, Antipolis, Nixeia. Melia (ii. 5) enumerates the places on this coast in a different order from cast to west: Athenopolis, Obia, Tauroëntis, Citharistes, and "Lacitaban Massaliensium portus." Polyeni, as we have seen, places Tauroentia between Massilia and Corcyra. We may infer from the positions between Telo Martius (Toulon) and Insubria seem to be out of order [SIMBADAI]; and they are to be placed thus — Aquincum (Bembia), Tauroentia (Taurenti), Citharistes [Citharistus], Car-sici (Cassii), Immundus, Massilia. Geographers have been much divided in opinion on the site of Tauroentia, but the modern name seems to determine the place to be at the right of the entry of the bay of Ciotat.  

TAUROE'NTIUM (Ταυρόεντιον: Eth. Tau- roen'tios, Tauroentium: Taurousa). A Greek city of Sicily, situated on the E. coast of Sicily, about midway between Messana and Catania. It was only about 3 miles from the site of the ancient Naxos, and there is no doubt that Tauroentium did not exist as a city till after the destruction of Naxos by Dionysius of Syracuse, n. c. 403; but the circumstances connected with its foundation are somewhat confused and uncertain. [NAXOS.] It appears, however, from Diodorus that after the destruction of Naxos, the remaining inhabitants of that city were driven into exile, and its territory was assigned by Dionysius to the neighbouring Siculi. These, however, did not re-occupy the site of the ancient city, but established themselves on a hill to the N. of it, which was called the hill of Taurus (δ λόφος οι σκαλιστοίς Σεβάνοις). Here they at first constructed only a temporary camp (in n. c. 396), but afterwards erected walls and converted it into a regular fortress or town, to which they gave the name of Tauroentum. (Diod. xiv. 58, 59.) The place was still in the hands of the Siculi in n. c. 394, and they held it against the efforts of Dionysius, who besieged the city in vain for great part of the winter, and though he on one occasion forced his way within the walls by a nocturnal surprise, was again driven out and repulsed with heavy loss. (Ib. 87, 88.) But by the peace concluded in n. c. 392, it was expressly stipulated that Tauroentum should be subject to Dionysius, who expelled the greater part of the Siculi that had settled there, and supplied their place with his own mercenaries. (Ib. 96.) From this time we hear no more of Tauroentum till n. c. 358, when we are told that Andromachus, the father of the historian Timaeus, brought together all the remains of the exiled Naxians, who were still scattered about in different parts of Sicily, and established them all at Tauroentum. (Id. xvi. 7.) This is related by Diodorus as if it were a new foundation, and even as if the name had then first been applied to the city, which is in direct contradiction with his former statements. What had become of the former inhabitants we know not, but there is little doubt that the account of this resettlement of the city is substantially correct, and that Tauroentum now for the first time became a Greek city, which was considered as taking the place of Naxos, though it did not occupy the same site. (Wesseling, ad Diod. xiv. 59.) Hence Pliny's expression, that Tauroentum had formerly been called Naxos (Plin. iii. 8. s. 14) is nearly, though not strictly, correct. 

The new settlement seems to have risen rapidly to prosperity, and was apparently already a considerable town at the time of the expedition of Timoleon in n. c. 345. It was the first place in Sicily where that leader landed, having eluded the vigilance of
the Carthaginians, who were guarding the straits of Messana, and crossed direct from Eleeum to Tauromenium. (Diod. xvi. 68; Plut. Timol. 10.) The city was at that time born, and it is probable that it was named in honour of Andromachus, whose mild and equitable administration is said to have presented a strong contrast with that of the despots and tyrants of the other Sicilian cities. He welcomed Timoleon with open arms, and afforded him a secure resting place until he was enabled to carry out his plans in other parts of Sicily. (Diod. l. c.; Plut. l. c.) It is certain that Andromachus was not deprived of the chief power, when all the other tyrants were expelled by Timoleon, but was permitted to retain in him undisturbed (Strab. vi. Th. § 27). When he died, however, very little of Tauromenium for some time after this. It is probable that it passed under the authority of Acaciodo, who drove the historian Timaeus into exile; and some time after this it was subject to a domestic despot of the name of Tyrsarion, who was contemporary with Hieretas of Syracuse and Phintias of Agrigentum. (Diod. xxii. Exc. H. p. 495.) Tyrsarion was one of those who concurred in inviting Pyrrhus into Sicily (n.c. 278), and when that monarch landed with his army at Tauromenium, joined him with all his forces, and supported him in his march upon Syracuse. (Diod. l. c. pp. 493, 496.) A few years later we find that Tauromenium had fallen into the power of Hieron of Syracuse, and was employed by him as a stronghold in the war against the Mamertines. (Ib. p. 497.) It was also one of the cities which was left under his dominion by the treaty concluded with him by the Romans in n.c. 263. (Diod. xxiii. p. 502.) This is doubtless the reason which makes it not again mentioned during the First Punic War.

There is no doubt that Tauromenium continued to form a part of the kingdom of Syracuse till the death of Hieron, and that it only passed under the government of Rome when the whole island of Sicily was reduced to a Roman province; but we have scarcely any account of the part it took during the Second Punic War, though it would appear, from a hint in Appian (Sic. 5), that it submitted to Marcellus on favourable terms; and when that general landed there it obtained the peculiarly favoured position it enjoyed under the Roman dominion. For we learn from Cicero that Tauromenium was one of the three cities in Sicily which enjoyed the privileges of a "civitas foederata" or allied city, thus retaining a nominal independence, and was not even subject, like Messana, to the obligation of furnishing ships of war when called upon. (Cic. Ferr. ii. 66, iii. 6, v. 19.) But the city suffered severe calamities during the Servile War in Sicily, n.c. 134—132, having fallen into the hands of the insurgent slaves, who, on account of the great strength of its position, made it one of their chief posts, and were able for a long time to defy the arms of the consul Rutilius. They held out until they were reduced to the most fearful extremities by famine, when the citadel was at length betrayed into the hands of the consul by one of their leaders named Sarapon, and the whole of the survivors put to the sword. (Diod. xxxiv. Exc. Phot. p. 528; Oros. v. 9.) Tauromenium again bore a conspicuous part during the wars of Sextus Pompeius in Sicily, and, from its strength as a fortress, was one of the principal points of the position which he took up in n.c. 36, for defence against Octavian. It became the scene also of a sea-fight between a part of the fleet of Octavian, commanded by the triumvir in person, and that of Pompeius, which terminated in the defeat and almost total destruction of the former. (Appian, B.C. v. 103, is repeatedly alluded to by ancient writers. [Juv. v. 5.) In the settlement of Sicily after the defeat of Pompey, Tauromenium was one of the places selected by Augustus to receive a Roman colony, probably as a measure of precaution, on account of the strength of its situation, as we are told that he expelled the former inhabitants to make room for his new colonists. (Diod. xvi. 7.) Strabo speaks of it as one of the cities on the E. coast of Sicily that was still subsisting in his time, though inferior in population both in size and number. (S. 1031, 37; 267, 268.) Both Pliny and Ptolemy assign it the rank of a "colonia" (Plin. iii. 8. s. 14; Ptol. iii. 4. § 9), and it seems to have been one of the few cities of Sicily that continued under the Roman Empire to be a place of some consideration. Its territory was noted for the excellence of its wine (Plin. xiv. 6. 8), and produced also a kind of marble which seems to have been highly valued. ( Athen. v. p. 207.) Juvénal also speaks of the sea off its rocky coast, and the ancient town of Tauroremenianum, "a very poor place, with about 3500 inhabitants; but it still occupies the ancient site, on a lofty hill which forms the last projecting point of the mountain ridge that extends along the coast from Cape Pelorus to this point. The site of the town is about 900 feet above the sea, while a very steep and almost isolated rock, crowned by a Saracen castle, rises about 500 feet higher: this is undoubtedly the site of the ancient Arx or citadel, the inaccessible position of which is rendered still more secure by the fact that it was constructed on a cliff, and was adopted by the ancient fortifications at intervals all round the brow of the hill, the whole of the summit of which was evidently occupied by the ancient city. Numerous fragments of ancient buildings are scattered over its whole surface, including extensive reservoirs of water, sepulchres, tesselated pavements, &c., and the remains of a spacious edifice, commonly called a Naumachia, but the real destination of which it is difficult to determine. But by far the most remarkable monument remaining at Tauroremenianum is the ancient theatre, which is one of the most celebrated ruins in Sicily, on account both of its remarkable preservation and of the surpassing beauty of its situation. It is built for the most part of brick, and is therefore probably of Roman date, though the plan and arrangement are in accordance with those of Greek, rather than Roman, theatres; whence it is supposed that the present structure was rebuilt upon the foundations of an older theatre of the Greek period. The greater part of the seats have disappeared, but the wall which surrounded the whole area is preserved, and the prosenium with the back wall of the scene and its appendages, of which only traces remain in most ancient theatres, are here preserved in singular integrity, and contribute much to the picturesque
TAUROSCYTHA.
effect, as well as to the interest, of the ruin. From the fragments of architectural decorations still extant we learn that it was of the Corinthian order, and richly ornamented. In size it ranks next to the theatre of Syracuse, among those of Sicily. Some portions of a temple are also visible, converted into the church of S. Fancorazio, but the edifice is of small size and of little interest. The ruins at Taormina are described in detail by the Duke of Serra di Falcò (Antichità della Sicilia, vol. v. part iv.), as well as by most travellers in Sicily. (Swinburne's Travels, vol. ii. p. 380; Sayth's Sicily, p.129, &c.)

[E. H. B.]

COIN OF TAUCROMENIUM.

TAUROSCYTHA (Ταυροσκήθα, Pol. iii. 5. § 25), called by Pliney Tauri Scythea (iv. 12. s. 26), a people of European Sarmatia, composed of a mixture of Taurians and Scythians. They were seated to the W. of the Jazages, and the district which they inhabited appears to have been called Tauroscythea. (Cf. Strab. ap Hudson, p. 89, 'Capit. M. Ant. 9'; Procop. de Aed. ii. fin.)

TAURUS (Τεινόνος), a strong fortress in Lower Pannonia, at the point where the Savus joins the Danubius, on the road from Sirmium to Sallonzum. It was the station of a small fleet of the Danubians. (Pline. iii. 28; Pol. ii. 16. § 4; R. Ant. pp. 131, 241; Tab. Pout.; Geogr. Rav. iv. 19, where it is called Taurnuny.) Its site is now occupied by the fortress of Semlin, opposite to Delfinradac.

TAURUS MONS (Ταύρονος), one of the great mountain ranges of Asia, the name of which is believed to be derived from the Aramaic Tur or Tura, i. e., a high mountain or Ap, and accordingly is in reality a common noun applied to all the high mountains of Asia. The name has even been transferred to Europe, for the Taurian Chersonesus in Sarmatia and the Taurisci in the Norican Alps appear to owe their name to the same origin. We cannot wonder therefore when we find that Eratonius (ap. Strab. xv. 689) and Strabo (ii. pp. 68, 129, x. p. 490) apply the name to the whole range of mountains extending from the Mediterranean to the eastern ocean, although their connection is often broken. This extent of mountains is, according to Strabo's calculation (xii. p. 490), 45,000 stadia in length, and 3000 in breadth. But in the narrower and common acceptance Mount Taurus is the range of mountains in Asia Minor which begins at Cape Scramus or Chelidonion on the coast of Lycaonia, which for this reason is called by Mela (i. 15) and Pliney (v. 28) Promontorium Tauri. It was, however, well known to the ancients that this promontory was not the real commencement, but that in fact the range extended to the south-western extremity of Asia Minor. (Strab. ii. p. 129, xi. p. 520, xiv. pp. 651, 666.) This range rises in the W. as a lofty and precipitous mountain, and runs without any interruptions, first in a northern direction between Lydia and Pamphylia, then in an eastern direction through Pisidia and Ionia as far as the frontiers of Cilicia and Lycaonia. There it separates into two main branches. The one proceeds north-eastward under the name of Antaiaurus (Arreoinous) and surpasses the other in height. It runs through Cappadocia, where it forms Mount Argeaem (Agryaem), and Armenia, where it is called Mons Capotes, and through the Montes Moschici it is connected with the Caucasus, while a more southerly branch, under the names of Atus and Macias or Massis, runs through Armenia towards the Caspian sea. The second branch, which separates itself on the frontiers of Cilicia and Lycaonia, retains the name of Taurus, and proceeds from Cilicia, where it forms the Coptae Ciliciæ, and sends forth Mons Amatus in a southern direction, while the main branch proceeds through Cappadocia. After being broken through by the Euphrates, it again sends forth a southern branch under the name of Mons Massius. The name Taurus ceases in the neighbourhood of Lake Arassa, the mountains further east having other names, such as Niphates, Zagrus, &c. Most parts of Mount Taurus, which still bears its ancient name, were well wooded, and furnished abundance of timber to the maritime cities on the south coast of Asia Minor. [L. S.]

TAURUS PALUS, an étang on the coast of Narbonensis, west of the delta of the Rhone. It is named in the verses of Avienus, quoted in the article FECCI JECUM; and to the verses there cited may be added the following verse:—

"Taurus paludem namque gentici (gentilii) vocant."

But I. Vossius in his edition of Mele (ii. 5, note) writes the verses of Avienus thus:—

"In usque Taphrum pertinet, Taphron paludem namque gentili vocant; an alteration or corruption which D'Avnile justly condemns, for the étang is still named Taur, or vulgarly Tnus.

TAXGAEIUM (Ταξγαείου), a place assigned by Ptelemy (ii. 12. § 5) to Bithynia, but which more properly belonged to Wendelicia, was situated on the northern shore of the Lacus Böintunius, and probably on the site of the modern Linderan. [L. S.]

TAXILA (Ταξίλα, Arrian. Anat. v. 8; Ταξιλά, Pol. vii. i. § 45), a place of great importance in the Upper Pontis, between the Indus and Hydaspes, which was visited by Alexander the Great. It is said to have been ruled at that time by a chief named Tazik, who behaved in a friendly manner to the Greek king. The country around was said to be very fertile, and more abundant than even Egypt. (Strab. xv. pp. 698—714). There can be little doubt that it is represented by the vast ruins of Manigada, which has in modern times been the scene of some very remarkable researches (Elphinstone, Cabul, p. 79;Burnes, Travels, i. p. 65, ii. p. 470.) The famous Topes of Manigaya, which were examined by General Ventura and others (Asiatic Res. xvii. p. 563), lie to the eastward of Ravellipinjii. Wilson considers Taxila to be the same as the Takhassailing of the Hindus (Ariana, p. 196).

TAYGETUS (Ταγητος, Pol. iii. 6. § 6). 1. A town in the SE. part of the Chersonesus Taurica.

TEANUM (Τεινονος), a town in Lucania, sometimes also called TEANUM APULIAE (Cic. pro Cluent. 9; Te invo Aratov, Strab.; Eth. Teanusses Apuli), to distinguish it from the Campanian city of the
same name, was a city of Apulia, situated on the right bank of the river Frenate (Fortore), about 12 miles from its mouth. It appears to have been one of the most considerable cities of Apulia before its conquest by the Romans; but its name is first mentioned in B. C. 318, when, in conjunction with Caesarius, it submitted to the Roman consuls M. Furius Flacci- nator and L. Plautius Vettius. (Liv. i. 20.) It is again noticed during the Second Punic War, when it was selected by the dictator M. Junius Pera as the place of his winter-quarters in Apulia. (Id. xxii. 24.) Cicero incidentally notices it as a municipal town at the distance of 18 miles from Larinum (Cic. pro Cluent. 9), and its name is found in all the geographers among the municipal towns of Apul- ia. (Strab. vi. p. 283; Mel. ii. 4. § 6; Plin. iii. 11. s. 16; Ptol. iii. 1. § 72.) Its municipal rank is confirmed also by an inscription, as well as by the Liber Coloniarum, and it is clear that it never at- tained the rank of a colony. (Orell. Inscr. 140; Lib. Col. p. 210.) Its ruins still exist at a place called Civitate, near the remains of a Roman bridge (now called the Ponte di Civitate), over the Fortore, by which the ancient road from Larinum to Luceria crossed that river. The distance from the site of Larinum agrees with that stated by Cicero of 18 miles (the Tabula erroneously gives only 12), and the discovery of inscriptions on the spot leaves no doubt of the identification. Considerable remains of the walls still exist, as well as fragments of other buildings. From these, as well as from an inscription in which we find mention of the "Ordo splendidissimae Civitates Theasennia," it seems probable that it continued to be a flourishing town under the Roman Empire. The period of its final decay is uncertain, but it retained its episcopal see down to modern times. (Holsen. Not. ad Chlor. p. 279; Romanelli, vol. ii. p. 291; Mommsen, Inscr. R. N. p. 271.)

Strabo speaks of Teanum as situated at some distance inland from the lake, the name of which he does not mention, but which is clearly the Lacus Punctum of Pliny, now called the Lago di Liscia. From an inscription found on its banks it appears that this was comprised within the territory of Teanum, which thus extended down to the sea (Roma- nelli, l. c.), though about 12 miles distant from the coast.

Several Italian topographers have assumed the existence of a city in Apulia of the name of Teate, distinct from Teanum (Giovenazzi, Sito di Areja, p. 13; Romanelli, vol. ii. p. 286); but there seems no doubt that the two names are only different forms of the same, and that the Teates Apuli of Livy (ix. 20) are in reality the people of Teanum. It is true that that writer mentions them as if they were distinct from the Teanenses whom he had mentioned just before; but it is probable that this arises merely from his having followed different annalists, and that both statements refer in fact to the same people, and are a repetition of the same occurrence. (Mommsen, Unter-Ital. Dissert. p. 301.) In like manner the Teate mentioned in the Liber Coloniarum (p. 261) is evidently the same place cited in an earlier part of the same document (p. 210) Teanum, [E. H. B.]

TEANUM (Teano: Eth. Teanensis; Teano), sometimes called for distinction's sake Teanum Sindicum (Liv. xxii. 57; Cit. ad Att. viii. 11; Plin. iii. 5. s. 9; Teano X λικων, Strab. v. p. 237), an important city of Campania, situated in the interior of that province, on the Via Latina, between Cales and Cassinium. (Strab. v. p. 257.) It was therefore the frontier city of Campania, as that term was understood under the Roman Em- pire; but originally Teanum was not reckoned a Campanian city at all, but was the capital of the small independent tribe of the Silicini. (Sicinii.) It was indeed the only place of importance that they possessed, so that Livy in more than one instance alludes to it, where he is speaking of that people, merely as "their city," without mentioning its name. (Liv. vii. 4, 17.) Hence its history before the Roman conquest is identical with that of the people, which will be found in the article Sicinii.

The first mention of Teanum after the Roman conquest, is in B. C. 216, immediately after the battle of Cannae, when Marcellus sent forward a legion from Rome thither, evidently with the view of securing the line of the Via Latina. (Liv. xxii. 57.) A few years later, B. C. 211, it was selected as a place of confinement for a part of the senators of Capua, while they were awaiting their sentence from Rome; but the consul Fulvius, contrary to the opinion of his colleague App. Claudius, caused them all to be put to death without waiting for the decree of the senate. (Liv. xxx. 15.) From this time Teanum became an ordinary municipal town: it is incidentally men- tioned as such on several occasions, and its position on the Via Latina doubtless contributed to its prosperity. A cross outrage offered to one of its munici- pal magistrates by the Roman consul, was noticed in one of the orations of C. Gracchus (ep. A. C.elli p. 9), and we learn from Cicero that it was in his time a flourishing and populous town. (Cic. de Leg. Agr. ii. 31, 35, ad. Att. viii. 11, d.) Its name repeatedly occurs in the Social War and the con- test between Sulla and Marius (Appian, B. C. i. 43, 85); and at a later period it was the place where the commanders of the legions in Italy held a kind of congress, with a view to bring about a reconci- liation between Octavian and L. Antonius (ib. v. 20). It was one of the cities whose territory the triumvir Bulbus proposed by his law to divide among the Ro- man people (Cic. l. c.); but this misfortune was averted. It subsequently, however, received a colony under Augustus (Lib. Col. p. 238; Plin. iii. 5. s. 9), and seems to have retained its colonial rank under the Empire. (Mommsen, Inscr. R. N. 3989, 3999.)

Strabo tells us that it was the largest and most populous town on the Via Latina, and the most considerable of the inland cities of Campania after Capua. (Strab. v. pp. 257, 248.) Inscriptions and existing remains confirm this account of its impor- tance, but we hear little more of it under the Roman Empire. The Itineraries place it 16 miles from Ca- ssinium, and from Venafro; a cross road also struck off from Teanum to Allia, Telesia, and Be- neventum. (Itin. Ant. pp. 121, 304; Tab. Peut.) Another branch also communicated with Suessa and Minturnae.

Teanum was not more than 5 miles from Cales: the point where the territories of the two cities joined was marked by two shrines or aedicules of Fortune, mentioned by Strabo, under the name of Άλεξ Τέανα (v. p. 249).

Teanum appears to have declined during the middle ages, and the modern city of Teano is a poor place, with only about 4000 inhabitants, though retain- ing its episcopal see. Many ruins of the ancient city are visible, though none of them of any great interest. They are situated below the modern city, which stands on a hill, and considerably nearer to
Catuli. [Cales]. The most important are those of an amphitheatre and a theatre, situated near the Via Latina; but numerous remains of other buildings are found scattered over a considerable space, though for the most part in imperfect preservation. They are all constructed of brick, and in the reticulated style, and may therefore probably be all referred to the period of the Roman Empire. Numerous inscriptions have also been found, as well as coins, vases, intaglios, &c., all tending to confirm the account given by Strabo of its ancient prosperity. (Romanelli, vol. iii. p. 456; Heare's Class. Tour, vol. i. pp. 249—264; Mommsen, Inscr. R. N. pp. 208, 409.)

At a short distance from Teano are some mineral springs, now called Le Caldarelli, which are evidently the same with the "aqua acidae," mentioned both by Pliny and Vitruvius as existing near Teanum. (Plin. xxxii. 25. 5; Vitruv. viii. 3. § 17.) The remains of some ancient buildings, called Il Bagno Nuovo, are still visible on the spot. [E.H.B.]

**COIN OF TEANUM SIDICINUM.**

**TEARI JULIENSES.** The inhabitants of a town of the Heraceans in Hispania Tarraconensis (Plin. iii. 3. § 4). It is called by Ptolemy Tapavovia, and is probably the modern Troyugna. [T. H. D.]

**TEARUS** (Plin. iv. 11. s. 18; Trajan, Herod. iv. 90), now Teare, Descra, or Dove, a river in the SE. of Tarraco, flowing in a SW. direction, until it joins the Cantabres, their united waters falling into the Argres, one of the principal eastern tributaries of the Ebro. Herodotus (l. c.) states that the sources of the Tarracos are equidistant from Heracleum on the Propontis and Apollonia on the Exuxia; that they are thirty-eight in number; and that, though they all issue from the same rock, some of them are cold, others warm. Their waters had the reputation, among the neighbouring people, of being pre-eminent medicinal, especially in cases of itch or mange (<?62>). On his march towards the Danale, Diocletian halted his army for three days at the sources of the Tarracos, and erected a pillar there, with an inscription commemorative of their virtues, and of his own. [J. R.]

**TEA'TE (Tearea, Strab. Ptol.: Eth. Teatinus: Chietae),** the chief city of the Marrucini, was situated on a hill about 3 miles from the river Aternum, and 8 from the Adriatic. All the ancient geographers concur in representing it as the metropolis or capital city of the tribe (Strab. v. p. 241; Plin. iii. 12. s. 17; Ptol. iii. 1. § 60); and Silvius Italus repeatedly notices it with the epithets "great" and "illustrious" ("magnum Teate.") Sil. Ital. viii. 520; Clarum Teate, Id. xvii. 453); but, notwithstanding this, we find no mention of it in history. Inscriptions, however, as well as existing remains, concur in proving it to have been a flourishing and important town under the Roman dominion. It was apparently the only municipal town in the land of the Marrucini, and hence the limits of its municipal district seem to have coincided with those of that people. We learn from the Liber Coloniarum that it received a body of colonists under Augustus, but it did not bear the title of a colony, and is uniformly styled in inscriptions a municipium. (Lich. Colon. p. 258; Orell. Inscr. 2175, 3853; Mommsen, Inscr. R. N. pp. 278, 279.) It derived additional splendour in the early days of the Empire from being the native place of Asinus Pollio, the celebrated statesman and orator; indeed the whole family of the Asini seem to have derived their origin from Teate. Herius Asinus was the leader of the Marrucini in the Social War, and a brother of the orator is called by Catullus "Marrucina Asini." (Liv. Epit. lxxii.; Catall. 12. 1.) The family of the Vettii also, to which belonged the Vettius Marcellus mentioned by Pliny (ii. 83. s. 85), appears to have belonged to Teate. (Mommsen, l. c. 3511.)

The Itineraries place Teate on the Via Valeria, though from the position of the town, on a hill to the right of the valley of the Aternum, the road must have made a considerable détour in order to reach it. (Itin. Ant. p. 310; Tuch. Post.) Its name is also noticed by P. Dionysius (ii. 20), and there seems no doubt that it continued throughout the middle ages to be a place of importance, and the capital of the surrounding district. Chieti is still one of the most considerable cities in this part of Italy, with above 14,000 inhabitants, and is the see of an archbishop. Still existing remains prove that the ancient city occupied the same site as the modern Chieti; on a long ridge of hill stretching from N. to S., though it must have been considerably more extensive. Of these the most important are the ruins of a theatre, which must have been of large size; those of a large edifice supposed to have been a reservoir for water, and two temples, now converted into churches. One of these, now the church of S. Paolo, and considered, but without any authority, as a temple of Hercules, was erected by the Vettii Marcellus above noticed; the other, from the name of Sts. Maria del Trisoglio which it bears, has been conjectured to have been dedicated to Diara Trivia. All these edifices, from the style of their construction, belong to the early period of the Roman Empire. Besides these, numerous mosaics and other works of art have been discovered on the site, which attest the flourishing condition of Teate during the first two centuries of the Christian era. (Romanelli, vol. iii. pp. 109—109; Craven, Abruzzi, vol. ii. pp. 8, 9.) [E.H.B.]

TECMON. (ii. 11. § 27) in the north of Germany, perhaps in the country of the Chauci, on the left bank of the Visturg (Wesser). Its site must probably be looked for near or at the village of Zetel, about 3 miles from the western bank of the Wesser. (Reichard, Germanien, p. 245.)

TECMON (Τέκμον: Eth. Tεκμώνοι), a city of Molossia in Epeirus, incorrectly called by Stephanus B. a city of Thessprolia, taken by L. Aemilius, the Roman commander, in b. c. 167. Leake supposes that Gerasidna, near Kereuda, about 20 miles to the W. of Jouanna, may have been the site of Tecmen or Horreum, which Livy mentions in connection with Tecom. (Liv. xlv. 26; Steph. B. s. v.; Leake, Northern Greece, vol. iv. p. 83.)

TECTOSAGES (Τεκτόσαγες, Iul. vi. 14. § 9), a people of Syria within Iraus. [T. H. D.]

TECTOSAGES. [Volcae.]

TECTOSAGES, TECTOSAGAE, or TECTO-SAGI (Τεκτόσαγης, Τεκτόσαγην), one of the three great tribes of the Celts or Gallo-Romans in Asia Minor, of which they occupied the central parts. For particulars about their history, see Galatia. These Tectosages were probably the same tribe as the one mentioned by Polybius under the names of Aegosages or Bigoses. (Polyb. v. 33, 77, 78, 111.) [L. S.]

TECUM. [Τεχίνως.]

TENATUS (Τεθάδων), a small river of Illyricum (Pol. ii. 16. § 3), on the frontier of the Chersonesians (Curt. iii. 23), is in all probability the modern Zaramanga. [L. S.]

TEGEA (Τεγέα, Stephan. B. s. v.) a town of Crete, which, according to legend, was founded by Arcaimenon. (Vell. Pat. i. 1.) The coins which Scatin and Pellerin attributed to the Cretan Tegea have been restored by Eckhel (vol. ii. p. 321) to the Arcadian city of that name. [E. B. J.]

TEGEA (Τεγέα, Iul. Τεγέη: Eth. Τεγέωνη, Tegea), one of the most ancient and powerful towns of Arcadia, situated in the SE. of the country. Its territory, called TEGEATIS (Τεγεατίς), was bounded by Cynaria and Argois on the E., from which it was separated by Mt. Parthenium, by Lacaonia on the S., by the Arcadian district of Macaonia on the W., and by the territory of Mantinea on the N. The Tegeatae are said to have derived their name from Tegea, a son of Lycaon, and to have dwelt originally in eight, afterwards nine, demes or townships, the inhabitants of which were incorporated by Ajax in the city of Tegea, of which this hero was the reputed founder. The names of these nine townships, which are preserved by Pausanias, are: Garateia (Γαρατία), Phloeocis (Φλοιακή), Corumede (Κορυμάδα), Corphoeis (Κορφοίς), Potachikida (Ποταχικίδα), Ouaito (Οιαίτα), Mantypeis (Μαντύπης), Exceuthes (Εχσεύθης), to which Apheloudes (Αψιλοκέας) was added as the ninth in the reign of king Aphelous. (Paus. viii. 3. § 4, viii. 45. § 1; Strab. viii. p. 637.) The Tegeatae were early divided into 4 tribes (φωλαί), called respectively Chlaitai (Χλαίται, in inscriptions Κρηστάτοι), Hippothodai (Ηπιθοθόδαι), Apofoiowitai (Αποφοιωιταί), and Ateusaeatai (Αθευσαται), to each of which belonged a certain number of metoeci (αἰτωκοι) or resident aliens. (Paus. viii. 53. § 6; Eckhel, Corp. Inscr. no. 1513.)

Tegae is mentioned in the IIiad (ii. 607), and was probably the most celebrated of all the Arcadian towns in the earliest times. This appears from its heroic renown, since its king Echecles is said to have slain Hyllus, the son of Hercules, in single combat. (Herod. ix. 26; Paus. viii. 43. § 3.) The Tegeatae offered a long-continued and successful resistance to the Spartans, when the latter attempted to extend their dominion over Arcadia. In one of the wars between the two people, Chari-lius or Charillus, king of Sparta, deceived by an oracle which appeared to promise victory to the Spartans, invaded Tegea, and was not only defeated, but was taken prisoner with all his men who had survived the battle. (Herod. i. 66; Paus. iii. 7. § 3, viii. 5. § 9, viii. 45. § 3, 47. § 2, 48. § 4.) More than two centuries afterwards, in the reign of Leon and Agesicles, the Spartans again fought unsuccessfully against the Tegeatae; but in the following generation, in the time of their king Anaxandrides, the Spartans, having obtained possession of the bones of Orestes in accordance with an oracle, defeated the Tegeatae and compelled them to acknowledge the supremacy of Sparta, about B.C. 560. (Herod. i. 63, 67, seq.; Paus. iii. 3. § 5, seq.) Tegea, however, still retained its independence, though its military force was at the disposal of Sparta; and in the Persian War it appears as the second military power in the Peloponnesus, having the place of honour on the left wing of the allied army. Five hundred of the Tegeatae fought at Thermopylae, and 3000 at the battle of Plataea, half of their force consisting of hoplites and half of light-armed troops. (Herod. vii. 292, 29b, seq., 61.) As it was not usual to send the whole force of a state upon a distant march, we may probably estimate, with Clinton, the force of the Tegeatae on this occasion as not more than three-fourths of their whole number. This would give 4000 for the military population of Tegea, and about 17,400 for the whole free population. (Clinton, F. H. vol. ii. p. 417.)

Soon after the battle of Plataea, the Tegeatae were again at war with the Spartans, of the causes of which, however, we have no information. We only know that the Tegeatae fought twice against the Spartans between B.C. 479 and 464, and were each time defeated; first in conjunction with the Argives, and a second time together with the other Arcadians, except the Mantinacians at Dipaes, in the Macaonian district. (Herod. ix. 57; Paus. iii. 11. § 7.) About this time, and also at a subsequent period, Tegea, and especially the temple of Athena Alea in the city, was a frequent place of residence for persons who had rendered themselves obnoxious to the Spartan government. Either fled the seer Hegesistratus (Herod. ix. 37) and the kings Leotychides, and Piansias, son of Plieotoumas. (Herod. vi. 72; Xen. Hell. iii. 5. § 25; Paus. iii. 5. § 6.)

In the Peloponnesian War the Tegeatae were the firm allies of the Spartans, to whom they remained faithful both on account of their possessing an aristocratical constitution, and from their jealousy of the neighbouring democratical city of Mantinea with which they were frequently at war. [For details see Mantinella.] Thus the Tegeatae not only refused to join the Argives in the alliance formed against Sparta in B.C. 421, but they accompanied the Laconians in their expedition against Argos in 418. (Thuc. vi. 32, 57.) They also fought on the side of the Spartans in the Corinthian War, 394. (Xen. Hell. iv. 2. § 13.) After the battle of Leuctra, however (371), the Spartan party in Tegae was expelled, and the city joined the other Arcadian towns in the foundation of Megalopolis and
in the formation of the Arcadian confederacy. (Xen. Hell. vi. 5. § 6, seq.) When Mantinea a few years afterwards quarrelled with the supreme Arcadian government, and formed an alliance with its old enemy Sparta, Tegea remained faithful to the new confederacy, and fought under Epaminondas against the Spartans at the great battle of Mantinea, 362.

(Xen. Hell. vii. iv. § 56, seq., vili. 5. § 5, seq.) Tegea at a later period joined the Aetolian League, but soon after the accession of Cleomenes III. to the Spartan throne it formed an alliance with Sparta, together with Mantinea and Orchomenus. It thus became involved in hostilities with the Spartans, and in the war which followed, called the Cenomian War, it was taken by Antigonus Doson, the ally of the Achaean, and annexed to the Achaean League, b.c. 222. (Pol. i. 46, 54, seq.) In 218 Tegea was attacked by Lycurgus, the tyrant of Sparta, who obtained possession of the whole city with the exception of the acropolis. It subsequently fell into the hands of Machanidas, but was recovered by the Achaeans after the defeat of the latter tyrant, who was slain in battle by Philopoemen. (Pol. v. 17, xi. 18.) In the time of Strabo Tegea was the only one of the Arcadian towns which continued to be inhabited (Strab. viii. p. 388), and it was still a place of importance in the time of Pausanias, who has given us a minute account of its public buildings. (Paus. viii. 45-48, 53.) Tegea was entirely destroyed by Ataric towards the end of the 4th century after Christ. (Cland. B. Göt. 576; comp. Zosim. v. 6.)

The territory of Tegea formed the southern part of the plain of Tripolitida, of which a description and a map are given under MANTINEA. Tegea was about 10 miles S. of the latter city, in a direct line, and about 3 miles S.E. of the modern town of Tripolitida. Being situated in the lowest part of the plain, it was exposed to inundations caused by the waters flowing down from the surrounding mountains; and in the course of ages the soil has been considerably raised by the deposits brought down by the waters. Hence there are scarcely any remains of the city visible, and its site can only be conjectured from the broken pieces of stone and other fragments scattered on the plain, and from the foundations of walls and buildings discovered by the peasants working in the fields. It appears, however, that the ancient city extended from the hill of Aio Sostis (St. Suvior) on the N., over the hamlets Ibrahim-Efendi and Peloo-Episkopi, at least as far as Akhouri and Piali. This would make the city at least 4 miles in circumference. The principal remains are at Piali. Near the principal church of this village Leake found the foundations of an ancient building, of fine squared stones, among which were two pieces of some large column of marble, and there can be little doubt that these are the remains of the ancient temple of Athena Alca. This temple was said to have been originally built by Alcides, the founder of Tegea; it was burnt down in b.c. 394, and the new building, which was erected by Scopas, is said by Pausanias to have been the largest and most magnificent temple in the Peloponnesus (Paus. viii. 45. § 4, seq.; for details see Dict. of Biogr. art. SCOPAS.) Pausanias entered the city through the gate leading to Pattara, consequently the south-western gate, which must have been near Piali. He begins his description with the temple of Athena Alca, and then goes across the great agora to the theatre, the remains of which Ross traces in the ancient foundations of the ruined church of Peloo-Episkopi. Perhaps this theatre was the splendid marble one built by Antiochus IV. Epiphanes in b.c. 175. (Liv. xii. 20.) Pausanias ends his description with the mention of a height (χωρὶς βοσκίων, viii. 53. § 9), probably the hill Aio Sostis in the N. of the town, and apparently the same as that which Pausanias elsewhere calls the Watch-Hill (᾿Αὶδις Πνευμόνεις, viii. 48. § 4), and Polybius the acropolis (Λογοκατηγορία, v. 17). None of the other public buildings of Tegea mentioned by Pausanias can be identified with certainty; but there can be no doubt if excavations were made on its site many interesting remains would be discovered, since the deep alluvial soil is favourable to their preservation.

The territory of Tegea N. of the city, towards Mantinea, is a plain of considerable size, and is usually called the Tegeatic plain (Τεγατικὸν πέδαμον). There was a smaller plain, separated from the former by a low range of mountains S. of Tripolitida, and lying between Tegea and Pallantium: it was called the Mantyric plain (Μανθυρικὸν πέδαμον), from Mantyrea, one of the ancient demes of Tegea, the ruins of which are situated SW. of Tegea, on a slope of Mt. Boreinum. (Paus. viii. 44. § 7, comp. viii. 45. § 1, 47. § 1; Steph. B. s. v. Μανθύρα.) The remainder of the TegeaticS on the E., and S. is occupied by the mountains separating it from Arcadia and Sparta respectively, with the exception of a small plain running eastward from the Tegeatic plain to the foot of Mt. Parthenium, and probably called the Corythis plain, from Corytheis, one of the ancient deme of Tegea, which was situated in this plain. (Paus. viii. 54. § 1, 54. § 4.)

The plain of Tegea having no natural outlet for its waters is drained by natural chasms through the limestone mountains, called katavdhra. Of these the two most important are at the modern village of Persovia and at the marsh of Taki. The former is situated in the Corythiac plain above mentioned, at the foot of Mt. Parthenium, and the latter is the marsh in the Mantyric plain, SW. of Tegea. The chief river in the district is now called the Saranta-pomatmos, which is undoubtedly the Alpheus of Pausanias (viii. 54. § 1, seq.). The Alpheus rose on the S. frontiers of Tegea and Sparta, at a place called Phyllace (Φυλάκι, near Κύρια Τέγεας), one of the ancient demes of Tegea, and, as we may infer from its name, a fortified watch-tower for the protection of the pass. A little beyond Phyllace the Alpheus receives a stream composed of several mountain torrents at a place named Symmelia (Συμμέλεια); but upon entering the plain of Tegea its course was different in ancient times. It now flows in a north-easterly direction through the plain, receives the river of Dhimianak (the ancient Garates, Γαράτις, Paus. viii. 54. § 4), flows through the Corythic plain, and enters the katavdhra at Persovia. Pausanias, on the other hand, says (viii. 54. § 2) that the Alpheus descends into the earth in the Tegeatic plain, reappears near Asen (SW. of Tegea), where, after joining the Eurotas, it sinks a second time into the earth, and again appears at Asen. Hence it would seem that the Alpheus anciently flowed in a north-westerly direction, and entered the katavdhra at the marsh of Taki, in the Mantyric plain. There is a tradition among the peasants that the course of the river was changed by a Turk, who acquired property in the neighbourhood, because the
TEGIANUM.

katavócha at the Taki did not absorb quickly enough the waters of the marsh. The Garæae therefore anciently flowed into the katavócha at Periòs then without having any connection with the Alpheion. It probably derived its name from Garæ or Garæae, one of the ancient demi of Tegea, which may have been situated at the village of Dihiatæn. (Ross, Pelopones, p. 70, seq.; Leake, Peloponesiaca, p. 112, seq.)

There were five roads leading from Tegea. One led due N. across the Tegeatic plain to Mantinea. [MANTINEA.] A second led due S. by the valley of the Alpheion to Sparta, following the same turni as the present road from Tripolitza to Mistri. A third led west to Paliántium. It first passed by the small mountain Cressium (Kráctos), and then ran across the Manthynic plain along the side of the Taki Mount Cressium is probably the small isolated hill on which the modern village of Iuno stands, and not the high mountain at the end of the plain, according to the French map. Upon reaching the Chomía (χώμια), the road divided leading direct to Paliántium, and the other S. to Megalopolis through Atea. (Paus. viii. 44. § 1, seq.; Xen. Hell. vi. 5. § 9, at εἰς τῷ Παλαῖστρων φιώσων πόλις.) This chomía separated the territories of Paliántium and Tegea, and extended as far south as Mount Boreium (Χρώμιο), where it touched the territory of Megalopolis. There are still remains of this chomía running N.E. to S.W. by the side of the marsh of Taki. These remains consist of large blocks of stone, and must be regarded as the foundations of the chomía, which cannot have been a chaussee or causeway, as the French geographers call it, since χώμια always signifies in Greek writers an artificial heap of earth, a tumulus, mound, or dyke. (Ross, p. 59.) A fourth road led SE. from Tegea, by the sources of the Garæae to Thyreantús. (Paus. viii. 54. § 4.) A fifth road led NE. to Ibydæe and Argos, across the Cerythian plain, and then across Mt. Partulium, where was a temple of Pan, erected on the spot at which the god appeared to the courier Phædippidés. This road was practicable for carriages, and was much frequented. (Paus. viii. 54. § 5, seq.; Herod. vi. 105, 106; Dict. of Biogr. art. Pheidippides.) (Leake, Morea, vol. i. p. 88, seq., vol. ii. p. 333, Peloponesiaca, pp. 112, seq., 369; Ross, Pelopones, p. 66, seq.; Curtius, Peloponesos, vol. i. p. 247, seq.; Kouter, Com. de Rébus Tegnutariam, Berol. 1843.)

The Roman poets use the adjective Tegèus or Tegaean as equivalent to Arcadian: thus it is given as an epithet to Pan (Virg. Georg. i. 18). Calisto, daughter of Lycon (Ov. Am. ii. 55. Fasti. ii. 167). Atlánta (Ov. Met. viii. 317, 380), Carmenta (Ov. Fast. i. 627), and Mercury (Stat. Silv. i. 54).

The Roman poets use the adjective Tegèus or Tegaean as equivalent to Arcadian: thus it is given as an epithet to Pan (Virg. Georg. i. 18). Calisto, daughter of Lycon (Ov. Am. ii. 55. Fasti. ii. 167). Atlánta (Ov. Met. viii. 317, 380), Carmenta (Ov. Fast. i. 627), and Mercury (Stat. Silv. i. 54).

COIN OF TEGEA.

TEGYNUM (Eth. Tegynias; Diunon), a municipal town of Lucania, situated in the interior of that country, on the left bank of the river Tamaris. Its name is found only in a corrupt form in Pliny, who enumerates the Tergilani among the "populi" in the interior of Lucania (Plin. iii. 11. s. 15); but the Liber Colonarius mentions the "Prefectura Tegynensis" among the Prefectures of Lucania (Lib. Col. p. 209), and the correct form of the name is preserved by inscriptions. From the same source we learn that it was a town of municipal rank, while the discovery of them in the neighbourhood of Díon leaves no doubt that that place represents the ancient Tegynum. (Romanieli, vol. i. pp. 415, 416; Mommsen, Inschr. R. N., pp. 18, 19.) The modern city of Díon is a considerable place situated on a hill about 4 miles west of La Sola, and preserves the name of Valle di Díone to the whole of the extensive upland valley which is traversed by the river Ta-nagro in the upper part of its course. Some remains of the ancient city are still visible in the plain at the foot of the hill (Romanieli, l. c.). [E. H. B.]

TEGLIACUM (Itin. Ant. p. 223), Teglugicium (Tub. Pent.), and Tegulalità (Geogr. Rav. iv. 7.), a place in Moesia Inferior, on the road between Cambodunum and Draconia (Thrace). This town is supposed to be erected by Philip of Macedon on a site occupied by the Not. Imp., a garrison of Illyrian origin, which was placed near Veterica and Tataritsa. Some modern writers identify it with the fortress in Moesia called Saltopyrgus by Procopius (de Aedif. iv. 7.) [T. H. D.]

TEGNA, in Gallia Narbonensis, was on the Roman road on the east bank of the Rhine between Vienna (Vienne) and Valéncia (Valence). The name occurs in the Table, in which the place is fixed at xii. from Valéncia. Tegna is Tein, the name of which in the writings of a later date is Tinetum. A milestone at Tein marks the distance to Vienna almost exactly. Tein is right opposite to Touron, which is on the west side of the river. Touron is well situated, and the mountains there approach close to the Rhone. (D’Anville, Notice, &c.; Ubert, Gallien.)

TEGROMA. [Tegra.]

TEGLULATA, in Gallia Narbonensis, is placed in the Rhins, east of Aquæ Sextiae (Aise) on the road to Ad Turrim (Tournon). The distance from Aquæ Sextiae to Tegulalata is xvi. or xvii., and from Tegulata to Ad Turrim xvi. The distance measured along the road between Aquæ Sextiae and Ad Turrim is said to exceed the direct distance between these two places, which is not more than 28 Roman miles. Tegulata is supposed to be La Grande Pèigue, near the bourg of Povières ou Poirières, perhaps somewhere about the place where C. Marius defeated the Teutones c. 102, and where a pyramid was erected to commemorate the great victory. This monument is said to have existed to the fifteenth century (A. Thierry, Hist des Gaules, Deux. Partie, e. 3); and the tradition of this great battle is not yet effaced. Poirières is said to be a corruption of Purtidi Campi. (D’Anville, Notice, &c.) [G. L.]

TEGULICUM [Teglicium].

TEGVARA (Tegvra; Eth. Tegyropès), a village of Bossot, near Orchoemenus, and situated above the marshes of the river Melas. It was celebrated for the marble temple of Apollo, who was said to have been born there. In its neighbourhood was a mountain named Delos. Leake places Tegyra at Xerójygro, situated 3 miles NE. of Strijkó (Orchoemenus), on the heights which bound the marshes. (Plut. Ptol. 16, de Deff. Or. v. 5 and 8; Lycothr. 646; Steph. B. s. v.; Leake, Northern Greece, vol. ii. pp. 155, 159; comp. Ulrichs, Upper, vol. i. p. 196.)
and there are no relics of Etruscan antiquity. (Dennis's Etruria, vol. ii. p. 258.)

TELCHINES. [RhoDIS, p. 713.]

TELEBOAE. [TAFHAE.]

TELE'BOAS (τ ῥ τρας πορας, Χεν. Anat. iv. § 3), a river of Armenia Major, a tributary of the Enphrates. Probably identical with the Aran. sians. [T. H. D.]

TELEPHRUS MONS. [EBEOBA.]

TELEPE. [TELEPE.]

TELEŚIA (Τ ελές, Εθ. Telesimus; Teleas), a considerable city of Samnia, situated in the valley of the Calor, a short distance from its right bank, and about 3 miles above its confluence with the Volturmus. It is remarkable that its name is never mentioned among the Romans mentioned during the wars of the Romans with the Samnites, though the valley in which it was situated was often the theatre of hostilities. Its name first occurs in the Second Punic War, when it was taken by Hannibal on his first irruption into Samnia, n. c. 211 (Liv. xxii. 13); but was recovered by Fabius in n. c. 214. (Id. xxiv. 20.) From this time we hear no more of it till it became an ordinary Roman municipal town. Strabo speaks of it as having in his time fallen into almost complete decay, in common with most of the cities of Samnia. (Strab. v. p. 250.) But we learn that it received a colony in the time of the Trium- viate (Lib. Colon. p. 128); and, though not mentioned by Pline as a colony (the name is altogether omitted by him), it is certain, from inscriptions, that it retained its colonial rank, and appears to have continued under the Roman Empire to have been a flourishing and considerable town. (Orell. Juscr. 2626; Rancanelli, vol. ii. p. 423; Mommsen, Juscr. R. N. 1840—4915.) It was situated on the line of the Via Latina, or rather of a branch of that road which was carried from Teanum in Campania through Alliae and Telesia to Beneventum (Itin. Ant. pp. 122, 304: Tab. Pent.), and this probably contributed to preserve it from decay.

The ruins of the ancient city are still visible about a mile to the NW. of the village still called Telese: the circuit of the walls is complete, inclosing a space of octagonal shape, not exceeding 1/4 mile in circumference, with several gates, flanked by massive towers. The masonry is of reticulated work, and therefore probably not earlier than the time of the Roman Empire. The only ruins within the circuit of the walls are mere shapeless mounds of brick; but outside the walls may be traced the vestiges of a circus, and some remains of an amphitheatre. All these remains undoubtedly belong to the Roman colony, and there are no vestiges of the ancient Samnite city. The present village of Telese is a very small and poor place, rendered desolate by malaria; but in the middle ages it was an episcopal see, and its principal church is still dignified by the name of a cathedral. Its walls contain many Latin inscriptions, brought from the ancient city, the inhabitants of which migrated to the later site in the ninth century. (Craven, Abruzzi, vol. ii. pp. 173—175; Gisimtani, Dictum. Topogr. vol. ix. pp. 149, 150.) Telesia was remarkable as being the birthplace of the celebrated Samnite leader, during the Social War, Pontius Telesinus; and it is probable (though there is no distinct authority for the fact) that it was also that of the still more celebrated C. Pontius, who defeated the Romans at the Catuline Forks. [E. H. B.]

TELIS. [RESCENT.]
TELLENAE (Τηλεναια; Dion. Hal.; Τελεναια; Strab.; Eit. Τελεναια, Tellennae), an ancient city, which figures in early Roman history. According to Dionysius it was one of the cities founded by the Aborigines soon after their settlement in Latium (Dionys. i. 16), a proof at least that it was regarded as a place of great antiquity. Livy also reckons it as one of the cities of the Prisci Latini (i. 33), which may perhaps point to the same result, while Iulianus includes it in his list of the colonies of Alba. (Diod. vii. ap. Euseb. Arm. p. 185.) It was attacked by the Roman king Marcus Tullius, who took the city, and transported the inhabitants to Rome, where he settled them on the Aventine, together with those of Poltoriium and Picena. (Liv. i. 33; Dionys. iii. 38, 43.)

Telleneae, however, does not seem, like the other two places just mentioned, to have been hereby reduced to insignificance; for its name appears again in b. c. 493 among the confederate cities of the Latin League (Dionys. v. 61); and though this is the last mention that we find of it in history, it is noticed both by Strabo and Dionysius as a place still in existence in their time. (Dionys. i. 16; Strab. v. p. 231.) It is probable, however, that it had at that time fallen into complete decay, like Antenae and Collatia; as it is only mentioned by Pliny among the once celebrated cities of Latium, which had left no traces of their existence in his day (Plin. iii. 5. s. 9), and from this time its name wholly disappears. The notices of Telleneae affect scarcely any clue to its position; though the circumstance that it continued to be inhabited, however slightly, down to the days of Augustus, would afford us more hope of being able to identify its site than is the case with Poltoriium, Apiole, and other places, which ceased to exist at a very early period. It is this reason that has led Nibby to identify the ruins of an ancient city at La Giastra, as those of Telleneae, rather than Poltoriium, as supposed by Cull. [Poltoriurn.] The site in question is a narrow ridge, bounded by two ravines of no great depth, but with abrupt and precipitous banks, in places artificially scarped, and still presenting extensive remains of the ancient walls, constructed in an irregular style of massive quadrangular blocks of tufo. No doubt can exist that these indicate the site of an ancient city; but whether of Poltoriium or Telleneae, it is impossible to determine; though the remains of a Roman villa, which indicate that the spot must have been inhabited in the early ages of the Empire, give some additional probability to the latter attribution. La Giastra is situated on the right of the Via Appia, about 2 miles from a farm-house called Fioreno, immediately adjoining the line of the ancient high-road. It is distant 10 miles from Rome, and 3 from Le Frattocchie, on the Via Appia, adjoining the ruins of Bovillae. (Gell, Top. of Rome, pp. 280—283; Nibby, Dintorni, vol. iii. pp. 146—155.)

Whether the proverbial expression of "true Teleneae" has any reference to the ancient city of Latium or not, can hardly be determined, the origin and meaning of the phrase being involved in complete obscurity. (Varro, ap. Non. i. p. 8; Arnob. adv. Gentes, v. p. 28, with Oehler's note.) [E. H. B.]

TELMESSUS, or TELEMUSUS (Τηλεμοσσυς, Τελεμοσσυς, ΤελΜοσσυς; Eik. Τελεμοσσυς). 1. A flourishing and prosperous city in the west of Lyca, was situated near Cape Telmessus (Strab. xiv. p. 665), or Tellenae (Steph. Byz. s. v. Τελλεναιας), on a bay which derived from it the name of Sinus Telmissiacus. (Liv. xxxvii. 16; Lucan, viii. 248.) On the south-west of it was Cape Pedulum, at a distance of 200 stadia. Its inhabitants were celebrated in ancient times for their skill as divers, and were often consulted by the Lydian kings. (Herod. i. 78; comp. Arrian, Anab. ii. 3, § 4.) In the time of Strabo, however, who calls it a small town (τολμήτης), it seems to have fallen into decay; though at a later period it appears to have been an episcopal see. (Herod. p. 684; comp. Topp. Mav. i. 15; Plin. v. 28; Ptol. v. 3, § 2; Polyb. xxiv. 27; Stephanus, Mem. M. § 255; Strab. vi. 29, 39, where it is miswritten Θεοφρασς.) Considerable remains of Telmessus still exist at Mygè and Meis; and those of a theatre, porticoes, and sepulchral chambers in the living rock, are among the most remarkable in all Asia Minor. (Leake, Asia Minor, p. 128; Fellows, Asia Minor, p. 245, where some representations of the remains of Telmessus are figured; Lynch, p. 106, fol.)

2. A small town of Caria, at a distance of 60 stadia from Halicarnassus, is likewise sometimes called Telmessus, and sometimes Telmessus. (Suid. s. v.; Etym. Mag. s. v.; Arrian, Anab. i. 25, § 8; Cie. de Div. i. 41; Plin. v. 29, xxx. 2.) The Carian Telmessus has often been confounded with the Lycean, and it is even somewhat doubtful whether the famous Tellmessian soothsayers belonged to the Carian or the Lycean town. But the former must at all events have been an obscure place; and that it cannot have been the same as the latter is clear from the statement of Pausanias in Suidas, that it was only 60 stadia from Halicarnassus. [L. S.]

TELMESSUS, according to Pliny (v. 29), a tributary of the river Glaucus in Caria, but it flowed in all probability near the town of Telmessus, which derived its name from it. [L. S.]

TELMISSICUS SINUS, a bay between Lycia and Caria, which derived its name from the Lycean town of Telmessus (Liv. xxxvii. 16; Lucan, viii. 248); but it is more commonly known by the name Glauclus Sinus, and is at present called the Bay of Macri. [L. S.]

TELMISSUS PICTUM, or Telmessus pictus, a town in Cilicia, where a "procurator Baphae Telmessiae Galliarum" is mentioned, which indicates the existence of a dyeing establishment there. In Lucian (iii. 592) Telb is the name of a pilot or helmsman, and Oudendorp supposes that the poet gave the name this town because he was of the town Telb; which seems a strange conjecture. And again Sillius (vii. 443) is supposed to allude to the same town, when he says—

"It Neptunolea transversberat ora Telison."
TELOS. [Temple.]—It presents (v. 2. § 1.) a small rocky island in the Carpathian sea, between Rhodes and Naxos, from the latter of which its distance is only 60 stadia (x x xx 23; Jer. xxv. 14; Jos. vi. 19). It was celebrated for a species of ointment, and was in ancient times called Azathussa. (Steph. B. v. s. v. Τέλασα; Seyxas, p. 38; Stadiasmus. Mar. Magni, § 272.) The town of Telos was situated on the north coast, and remains of it are still seen above the modern village of Episcopi. The houses, it appears, were all built in terraces rising above one another, and supported by strong walls of uneven stone. The acropolis, of which likewise a few remains exist, was at the top, which is now occupied by a mediæval castle. Inscriptions have been found in Telos in great numbers, but, owing to the nature of the stone, many of them are now illegible. (Comp. Ross, Hellenica, i. p. 59, vol. Reisen auf den Griech. Inseln, iv. p. 42, fol.)

TELESIUS. [Thelusi.]—Tema, a tribe and district in Arabia, which took their name from Tema, one of the twelve sons of Ishmael. (Gen. xxxvi. 15, 18; Jer. xxv. 15; Job, vi. 19.) Ptolemy mentions in Arabia Deserta a town Themmis (Θημμής, v. 19. § 6). Tema is distinguished in the Old Testament from Teman, a tribe and district in the land of the Edomites (Idumæa), which derived their name from Teman, a grandson of Esam. (Gen. xxxvi. 11, 15, 42; Jer. xix. 7, 20; Ezek. xxxv. 13; Avos, i. 12; Inth. ii. 5; Obad. iv.) The Tenamites, like the other Edomites, are celebrated in the Old Testament for their wisdom (Jerem. xlix. 7; Obad. 8; Baruch, iii. 22, seq.), and hence we find that Eliphas, in the book of Job, is a Tenamite. (Job, ii. 11, iv. 1.) Jerome (Onomast. s. v.) represents Tema as distant 5 miles (Eusebius says 15 miles) from Petra, and possessing a Roman garrison.

TEMALA (Τημαλα, Ptol. vii. 2. § 52), a river in the Aurea Regio, in the district of India extra Ganges, probably now represented by the great river of Pegus, the Euphrates. Near it was a town which bore the same name. (V.)

TEMATHIA. [Messenia, p. 341, b.]

TEMENIUM (Τημενίον), a town in the Argolis, at the upper end of the Argolic gulf, built by Temenus, the son of Aristocles. It was distant 50 stadia from Nauplia (Paus. ii. 38. § 2), and 26 from ArgoS. (Strab. viii. 368). The river Phirtra flowed into the sea between Temenium and Lerna. (Paus. ii. 36, § 6, ii. 38, § 1.) Pausanias saw at Temenium two temples of Poseidon and Aphrodite and the tomb of Temenus (ii. 38. § 1). Owing to the marshy nature of the plain, Leake was unable to explore the site of Temenium; but Ross identifies it with a mound of earth, at the foot of which, in the sea, are remains of a dam forming a harbour, and upon the shore foundations of buildings, fragments of pottery, &c. (Leake, Morea, vol. ii. p. 476; Ross, Reisen im Peloponnes, p. 149; Curtius, Peloponnesos, vol. ii. p. 383.)

TEMENOTHEUS (Τημενοθεύς, Paus. i. 35. § 7: Æth. Τημενοθώρες, Coins), a small city of Lydia, according to Pausanias (l. c.), or of Phrygia, according to Hierocles (p. 668, ed. Wess.). It would seem to have been situated upon the borders of Mystis since the Temenothaurion (Τημενοθωριον) — which name is probably another form of the Temenothirtes — are placed by Ptolemy (v. 2. § 13) in Mystis. (Eckhel, vol. iii. p. 119.)

COIN OF TEMENOTHYRIA.

TEMESA. or TEMPSA (Τέμεσα and Τέμπα, Strab.; Temis, Steph. B.; Τέμπα, Ptol.; Æth. Τεμεσας, Tempsaumus), an ancient city on the W. coast of Bruttium, a little to the S. of the Gulf of Himera, or Golfo di St Eufemia. Strabo tells us that it was originally an Ausanian city, but subsequently occupied by a colony of Aetolians who had accompanied Thoas to the Trojan War. (Strab. vi. p. 255.) Many writers appear to have supposed this to be the Temesa mentioned by Homer in the Odyssey on account of its mines of copper (Odys. i. 184); and this view is adopted by Strabo though it is much more probable that the place alluded to by the poet was Temesa in Cyprus, otherwise called Tamasas. (Strab. l.c.; Steph. B. v. s. v.; Schol. ad Hom. Odys. l. c.) We have no account of Temesa having received a Greek colony in historical times though it seems to have become to a great extent Hellenised, like so many other cities in this part of Italy. At one period, indeed, we learn that it was conquered by the Locrians (about 400—400 n. c.); but we know not how long it continued subject to their rule. (Strab. l.c.) Neither Seyxas nor Scymnus Chits mention it among the Greek cities in this part of Italy; but Livy says expressly that it was a Greek city before it fell into the hands of the Bruttians (Liv. xxxiv. 43). That people apparently made themselves masters of it at an early period of their career, and it remained in their hands till the whole country became subject to the dominion of Rome. (Strab. l.c.) During the Second Punie War it suffered severely at the hands, first of Hannibal, and then of the Romans; but some years after the close of the war it was one of the places selected by the Romans for the establishment of a colony, which was sent thither at the same time with that to Crotone, n. c. 194. (Livy. xxxiv. 45.) But this colony, the members of which had the privileges of Roman citizens, does not appear to have been numerous, and the town never rose to be a place of importance. Its copper mines, which are alluded to by several writers (Ovid, Met. xx. 706; Stat. Silv. i. 1. 42), had ceased to be productive in the days of Strabo (Strab. vi. p. 256). The only mention of Tempes which occurs in Roman history is in connection with the great servile insurrection under Spartacus, when a remnant of the servile force seem to have established themselves at Tempes, and for a time maintained possession of the town. (Cic. ltrr. 462.)
TEMISDIA.

v. 15, 16,) Its name is afterwards found in all the geographers, as well as in the Tabula, so that it must have subsisted as a town throughout the Roman Empire. (Strab. L.; Plin. iii. 5. s. 10; Ptol. iii. 1, § 9; Tab. Peut.) Pausanias expressly tells us it was still inhabited in his day, and Pliny also notices it for the excellence of its wine. (Paus. vi. 6. § 10; Plin. xiv. 6. s. 8.) The period of its destruction is unknown; but after the fall of the Roman Empire the name wholly disappears, and its exact site has never been determined. The best clue is that afforded by the Tabula (which accords well with the statements of Pliny and Strabo), that it was situated 10 miles S. of Clamptia. If this last town be correctly placed at Amanteia [CLAMPTIA], the site of Temesia must be looked for on the coast near the Torre del Fino del Casale, about 2 miles S. of the river Saruto, and 3 from Nocera. Unfortunately none of the towns along this line of coast can be fixed with anything like certainty. (Clover, Ital. p. 1286; Romanelli, vol. i. p. 35.)

Near Temesa was a sacred grove, with a shrine or sanctuary of the hero Polites, one of the companions of Ulysses, who was said to have been slain on the spot, and his sanctuary continued to trouble the inhabitants, until at length Euthymus, the celebrated Lucian athlete, ventured to wrestle with the spirit, and having vanquished it, freed the city from all further molestation. (Strab. vi. p. 253; Paus. vi. 6. §§ 7—11; Suid. v. εὐθύμους.)

[TEMISDIA (ἡ Τεμισδία, Ptol. vi. 4. § 3), one of the districts into which ancient Persia was divided. It cannot now be determined exactly what its position was, though it is supposed to have included the district between the Oxus and the Caspian Sea, and to have been of great importance; for besides the site of Tashka, a large lake, situated near the confluence of the Oxus and the Helmand, it probably was part of a long narrow plain which extends through that province in a direction north-west and south-east. (Lassen, in Ersch und Gruber’s Encycl. vol. xvii. p. 438.)]

TEMIMIES. [ΒΟΕΩΤΙΑ, p. 414.]

TEMNUS (Τήμνος ὄρος), a mountain range of Mysea, extending from Mount Ida eastward into Phrygia, and dividing Mysea into two halves, a northern and a southern one. It contained the sources of the Maeander, Marus, and Myus, the Cucusus and Eusmus. (Strab. xiii. p. 616; Ptol. v. 2. § 13.)

Hamilton (Researches, ii. p. 125) is inclined to believe that Mons Temmus is the same as the Ak Dagh, or, as it is commonly called in maps, Morad Dagh. [V.

TEMNUS (Τήμνος: Eth. Τήμνης), a town of Aeois in Asia Minor, not far from the river Hermus, situated on a height, from which a commanding view was obtained over the territories of Cyne, Phocaea, and Smyrna. (Strab. xiii. p. 621.) From a passage in Pausanias (v. 13. § 4), it might be inferred that the town was situated on the northern bank of the Hermus. But this is irreconcilable with the statement that Temmus was 30 miles south of Cyne, and with the remarks of all other writers alluding to the place. Pliny (v. 29) also seems to be mistaken in placing Temmus at the mouth of the Hermus, for although the deposits of the river have formed an extensive alluvial tract of land, it is evident that the sea never extended as far as the site of Temmus. The town had already much decayed in the time of Strabo, though it never appears to have been very large. (Xenoph. Hell. iv. 8. § 5; Herod. i. 149; Polyb. v. 77, xx. 25; Cic. pro Flacc. 18.) In the reign of Tiberius it was much injured by an earthquake (Tac. Ann. ii. 47), and in the time of Pliny it had ceased to be inhabited altogether. Its site is commonly identified with the modern Mennimen, though Texier, in his Description de l’Asie Mineure, looks for it at the site of the village of Gucal-Hissar. [L. S.]

TEMPE.

TEMPE. (τὰ Τέμπη, contr. of Τήμης), a celebrated valley in the NE. of Thessaly, is a gorge between Mount Olympus and Ossa, through which the waters of the Peneius force their way into the sea. The beauties of Tempe were a favourite subject with the ancient poets, and have been described at great length in a well-known passage of Aelian, and more briefly by Pliny; but none of these writers appear to have drawn their pictures from actual observation; and the scenery is distinguished rather by savage grandeur than by the skillful beauty which Aelian and others attribute to it. (Catull. xiv. 285; Or. Met. i. 568; Virg. Georg. ii. 469; Aelian, P. H. iii. 1; Plin. iv. 8. s. 15.) The account of Livy, who copies from Polybius, an eye-witnes, is more in accordance with reality. This writer says, "Tempe is a defile, difficult of access, even though not guarded by an enemy; for besides the narrowness of the pass for 3 miles, where there is scarcely room for a beast of burden, the rocks on both sides are so high and inaccessible that the midday sun never reaches the ground on either side. Their terror is also increased by the depth and roar of the Peneius rushing through the midst of the valley." (Livy xiv. 6.) He adds that this pass, so inaccessible by nature, was defended by four fortresses, one at the western entrance at Gonnus, a second at Condyain, a third at Charax, and a fourth in the road itself, in the middle and narrowest part of the valley, which could be easily defended by ten men. The pass is now called Lykistatras, or the Wolf’s Mouth. Col. Leake gives about four miles and a half as the distance of the road through the valley. In this space the width of the gorge is in some parts less than 100 yards, comprehending in fact no more than the breadth of the road in addition to that of the river. The modern road fellows in the track of the ancient military road made by the Romans, which ran along the right bank of the river. Leake remarks that even Livy in his description of Tempe seems to have added embellishments to the authority from which he borrowed; for, instead of the Peneius flowing rapidly and with a loud noise, nothing can be more tranquil and steady than its ordinary course. The remains of the fourth castle mentioned by Livy are noticed by Leake as standing on one side of an immense fissure in the precipices of Ossa, which afford an extremely rocky, though not impracticable descent from the heights into the vale; while between the castle and the river space only was left for the road. About half a mile beyond this fort there still remains an inscription engraved upon the rock, on the right-hand side of the road, where it ascends the hill: "L. Cassius Longinus Pro Cos. Tempe munivit." It is probable from the position of this inscription that it relates to the making of the road, though some refer it to defensive works erected
by Longinus in Tempe. This Longinus appears to have been the L. Cassius Longinus who was sent by Caesar from Illyria into Thessaly. (Caes. B. C. iii. 34.) When Xerxes invaded Greece, c. 480, the Greek sent a force of 10,000 men to Tempe, with the intention of defending the pass against the Persians; but having learnt from Alexander, the king of Macedonia, that there was another pass across Mt. Olympus, which entered Thessaly near Gomma, where the gorge of Tempe commenced, the Greeks withdrew to Thermopylae. (Herod. vii. 175.)

It was believed by the ancient historians and geographers that the gorge of Tempe had been produced by an earthquake which rent asunder the mountains, and afforded the waters of the Peneius an egress to the sea. (Herod. vii. 129; Strab. iv. p. 430.) But the Thessalians maintained that it was the god Poseidon who had split the mountains (Herod. L. c.); while others supposed that this had been the work of Hercules. (Diod. iv. 58; Lucan, vi. 345.)

The pass of Tempe was connected with the worship of Apollo. This belief was to have gone thither to receive expiation after the slaughter of the serpent Pytho, and afterwards to have returned to Delphi, bearing in his hand a branch of laurel plucked in the valley. Every ninth year the Delphians sent a procession to Tempe consisting of well-born youths, of which the chief youth plucked a branch of laurel and brought it back to Delphi. On this occasion a solemn festival, in which the inhabitants of the neighboring region took part, was celebrated at Tempe in honor of Apollo Tempeites. The procession was accompanied by a flute-player. (Aelian, F. H. iii. 11; Plut. Quoest. Graec. c. 11. p. 292, de Musica, c. 14. p. 1136; Böckh, Inschr. No. 1767, quoted by Grote, Hist. of Greece, vol. ii. p. 365.)

The name of Tempe was applied to other beautiful valleys. Thus the valley, through which the Hebrus flows in Sicily, is called "Heloria Tempe." (Ov. Fast. iv. 477.) and Cicero gives the name of Tempe to the valley of the Veins, near Reate (Att. iv. 15). In the same way Ovid speaks of the "Heliconia Tempe" (Am. i. 15.)

TEMP'ISA. [TEMPISA.]

TEMPYRA (Ov. Trist. i. 10, 21; in Geogr. Rer. iv. 6. Tympira; in It. Ant. p. 332, Timprum; and in It.Hier, p. 602. Ad Unumpyra), a town in the S. of Thrace, on the Egrian Way, between Tragania-polis and Maximia-polis. It was situated in a defile, which rendered it a convenient spot for the operations of the predatory tribes in its neighbourhood. Here the Thraeci attacked the Roman army under Cr. Manlius, on its return, loaded with booty, through Thrace from Asia Minor (c. 158); but the Great of shelter exposed their movements to the Romans, who were thus enabled to defeat them. (Liv. xxxviii. 41.) The defile is question is probably the same as the Kopinakos or the Kopinakos river, mentioned by Appian (B. C. iv. 102), and through which, he states, Brutus and Cassius marched on their way to Philippa (Tafel, de Vio Egnatiae Parte orient. p. 34). Paul Lucas (Trois Voe. pp. 25, 27) regards it as corresponding to the modern Gir-ein.

TENCTERI or TENCHTERI (Τένχτεραι)
Tenea. Stephanus describes Tenea as living between Corinith and Mycenae. (s. v. Tenea.) The Teneatae claimed descent from the inhabitants of Tenedos, who were brought over from Troy as prisoners, and settled by Achaeans in this part of the Corinthia, and they said that it was in consequence of their Trojan origin that they worshipped Apollo above all the other gods. (Paus. ii. § 5.) Strabo also mentions here the temple of Apollo Teneates, and says that Tenea and Tenedos had a common origin in Tenmus, the son of Clymenus. (Strab. viii. p. 380.) According to Dionysius, however, Tenea was of late foundation. (Cic. ad Att. vi. 2. § 3.) It was at Tenea that Oedipus was said to have passed his childhood. It was also from this place that Archelaus took the greater number of the colonists with whom he founded Syracuse. After the destruction of Corinith by Mummus, Tenea had the good fortune to continue undisturbed, because it is said to have assisted the Romans against Corinith. (Strab. l. c.) We cannot, however, suppose that an insignificant place like Tenea could have acted in opposition to Corinith and the Achaeans League; and it is more probable that the Teneatae were spared by Mummus in consequence of their pretended Trojan descent and consequent affinity with the Romans themselves. However this may be, their good fortune gave rise to the line:

εδιναίων ὣς Κόρμοσι, ἐγὼ δ' εἶμι Τενεάτης.

Tenea lay in the mountain valley through which flows the river that falls into the Corinthian gulf to the east of Corinith. In this valley are three places at which coves and other antiquities have been discovered, namely, at the two villages of Chilimodi and the Chononi on the road to Xanthia, and the latter at the very foot of the ancient road Corinthia [see Vol. I. p. 201, b.], and at the village of Athiki, an hour east of Chilimodi, on the road to Sophiloi. In the fields of Athiki there was found an ancient statue of Apollo, a striking confirmation of the prevalence of the worship of this god in the district. The Teneatae would therefore appear to have dwelt in scattered abodes at these three spots and in the intervening country, but the village of Tenea, properly so called, was probably at Chilimodi, since the distance from this place to Corinith corresponds to the 60 stadia of Sosicenus.

Since one of the passes from the Argaeia into the Corinthia runs by Kleina and Chilimodi, there can be little doubt that it was by this road that Achaenians marched from the Argaeia to Corinith in n. c. 391. (Xen. Hell. iv. 5. § 19.) In the text of Xenophon the words are ἐκεῖνος οὐρανοίδος καὶ πέφυκεν ὁ Κόρμος ὡς Κόρμον, but Tenea ought to be substituted for Terean, since it is impossible to believe that Achaeans could have marched from the Argaeia to Corinith by way of Tenea. Moreover, we learn from Strabo (vii. p. 380) that the well-known name of Terean was in other cases substituted for that of Tenea. In the parallel passage of the Aithalians of Xenophon (i. 17), the pass by Tenea is called κατὰ τὴν στέγανα. (Levke, Moret, vol. ii. p. 320, Peloponnesius, p. 400; Curtius, Peloponnesius, vol. ii. p. 549, f.)

TENEBRIO (Τενεβρίον ἄρχον, Ptol. ii. 6. § 16), a promontory on the E. coast of Spain, near the mouth of the Ibero. Stephanus B. (s. v.) also mentions a district called Tenebra, and Polenon a harbour called Tenebrion, which Marco (Hep. ii. 8) takes to be Alcide near Tarraconam, but which must be looked for to the SW. [II. D.]
TENEDOS.

Denkwürdigeiten, i. p. 111, foll.; Hemmer, Republiken Tenedorum, Hafniae, 1753. (L. S.)

COIN OF TENEDOS.

TENEDOS (Τενέδος; Eth. Τενέδετος), a fortified coast-town in the west of Pamphylia, 20 stadia to the west of Attalia. (Steph. B. s. r.; Studioan, Mar. M. §§ 224, 225.) It has been conjectured that this town is the same as Obia, the remains of which are exactly 20 stadia from Attalia, and that one of the two names was Lycian and the other Greek. ( Müller, ed Studioan, p. 490.)

TENERICUS CAMPUS. (Borotia, p. 413, b.)

TENESIS REGIO (Τενησις, Strab. xvi. p. 770), was, according to Strabo, who alone mentions it, an island province of Aethiopia, lying due E. of the Salamis, and not far distant from the kingdom or city of Meroe. Tenesis was governed, at least when Strabo wrote, by a queen, who was also the sovereign of Meroe. This was one of the many districts of Aethiopia assigned by rumour to the Automoloi, Sembritae, or Egyptian war-caste, who abandoned their native country in the reign of Ptolemy Metochus. (Sembritae.) The lake Cobe and the sources of the Astapus are by some geographers placed in Tenesis. It was an alluvial plain bounded on the E. by the Abyssinian Highlands, and frequented by elephants, rhinoceroses, &c.

[Hot. B. D.]

TENOS (Τένος; Eth. Τήνος; Τένω), an island in the Aegean sea, and one of the Cyclades, lying between Andros and Delos, distant from the former 1 mile and from the latter 15 miles. (Plin. iv. 12. s. 22.) It stretches from NW. to SE., and is 15 miles long according to Pinyx (l. c.), or 150 stadia according to Sacyx (p. 55). It was also called Hydraea (Ὑδρυαια, Ὑδρυαια) from the number of its springs, and Ophiussa because it abounded in snakes. (Plin. l. c.; Meis, ii. 7, § 11; Steph. B. s. c.) The sons of Boreas are said to have been slain in this island by Hercules. (Apoll. Rhod. i. 1304, with Schol.) In the invasion of Greece by Xerxes, the Tenians were compelled to serve in the Persian fleet; but a Tenian trireme deserted to the Greeks immediately before the battle of Salamis (n. c. 480), and accordingly the name of the Tenians was inscribed upon the tripod at Delphi in the list of Greek states which had overthrown the Persians. (Herod. viii. 82.) Panassius relates that the name of the Tenians was also inscribed on the statue of Zeus at Olympia among the Greeks who had fought at the battle of Plataea (v. 23, § 2). The Tenians afterwards formed part of the Athenian maritime empire, and are mentioned among the subject allies of Athens at the time of the Sicilian expedition (Thuc. vii. 57). They paid a yearly tribute of 3600 drachmae, from which it may be inferred that they enjoyed a considerable share of prosperity. (Fr. Elem. Epigr. Gr. No. 40.) Alexander of Thebes took possession of Tenes for a time (Dem. c. Polyb. p. 1207); and the island was afterwards granted by M. Antonius to the Rhodians (Ajacian, B. C. v. 7.) After the conquest of Constantinople by the Latins, Tenes fell to the share of the Venetians, and remained in their hands long after their other possessions in the Aegean had been taken by the Turks. It was ceded by Venice to the Sultan by the peace of Passarowitz, 1718. It is still one of the most prosperous islands in the Aegean, and the inhabitants are remarkable for their industry and good conduct. The present population is about 15,000 souls, of whom more than half are Catholics,—a circumstance which, by bringing them into closer connection with western Europe, has contributed to their prosperity.

The ancient city of Tenes, of the same name as the island, stood at the south-western end upon the same site as St. Nicholas, the present capital. Scylax says that it possessed a harbour, and Strabo describes it as a small town. (Scyl. p. 22; Strab. x. p. 487; Ptol. iii. 14, § 30.) In the neighbourhood of the city there was a celebrated temple of Poseidon situated in a grove, where festivals were celebrated, which were much frequented by all the neighbouring people. (Strab. l. c.; Tac. Ann. iii. 63; Clem. Protr. p. 18; Bickh, Inscri. No. 2329, 2331.) The attributes of Poseidon appear on the coins of Tenes. There was another town in the island named Erison (Ἐρισόν; Bickh, Inscri. 2336, 2337), which was situated in the interior of the village of Kosi. Among the curiosities of Tenes was mentioned a fountain, the water of which would not mix with wine. (Athien. ii. p. 43, c.) The island was celebrated in antiquity for its fine garlic. (Aristoph. Plut. 18.) The chief modern production of the island is wine, of which the best kind is the celebrated Malvasia, which now grows only at Tenos and no longer at Monembasia in Peloponnesus, from which place it derived its name. (Tourn.ert, Voyage, i. 35, vol. i. p. 271, trans.; Exped. Scientif. vol. iii. p. 2; Fièler, Récie, vol. ii. p. 241, seq.; Finlay, Hist. of Greece under Ottoman and Venetian Dominion, pp. 276, 287; and especially Ross, Récie auf den Griech. Inseln, vol. i. p. 11, seq., who cites a monograph, Marcky Zaibony, Voyage à Tine, l'île des îles de l'Archipel de la Grèce, Paris, 1809.)

TENTYRA.

Tenytira or Tentyriris (τή Τέντυρις, Strab. xvii. p. 814; Polv. iv. 3. §§ 6, 8; Steph. B. s. c.; Eth. Tentyriris), the Capit Teneturi and the modern Denverah, was the capital of the Tentyrira Nome in Upper Aegypt (Agatharch. ap. Phot. p. 447, ed. Beekk.). It was situated in lat. 26° 9' N., on the western bank of the Nile, about 38 miles N. of Thebes. The name of the city was probably derived from the principal object of worship there—the goddess Athor (Aphrodite), being a contracted form of Thy-ê-Athor or abode of Athor. The hieroglyphic legend of the genius of the place contains

COIN OF TENOS.

TENTYRA or TENTYRIS (τή Τέντυρις, Strab. xvii. p. 814; Polv. iv. 3. §§ 6, 8; Steph. B. s. c.; Eth. Tentyriris), the Capit Teneturi and the modern Denverah, was the capital of the Tentyrira Nome in Upper Aegypt (Agatharch. ap. Phot. p. 447, ed. Beekk.). It was situated in lat. 26° 9' N., on the western bank of the Nile, about 38 miles N. of Thebes. The name of the city was probably derived from the principal object of worship there—the goddess Athor (Aphrodite), being a contracted form of Thy-ê-Athor or abode of Athor. The hieroglyphic legend of the genius of the place contains
TENTYRA.

128

the name of the town, and is generally attached to
the head-dress of Athor, accompanied by the sign
Kali on the land. The Tentyrite Athor has a
long face, with the ears large (Boselliini, Monum. del Callo, pl. 29, 3), and her attributes so
closely resemble those of Isis, that it is long
doubtful to which of the two goddesses the great
temple at Tentyra was dedicated. Like Isis, Athor
is delineated nursing a young child named Ebhôu,
said, in hieroglyphics, to be her son. He is the
third member of the Tentyrite triad of deities.

The principal fabrics and produce of Tentyra
were flux and linen. (Plin. x, 1. 3.) Its inhabit-
ants held the crocodile in abhorrence, and engaged
in sanguinary conflicts with its worshippers, es-
specially with those of the Omnibte Nome (Ombos).
Juvenal appears to have witnessed one of these
contests, in which the Omnibtes had the worst of it, and
one of them, falling in his flight, was torn to pieces
and devoured by the Tentyrites. Juvenal, indeed,
describes this fight as between the inhabitants of
contiguous nomes ("inter finitimos"); but this is
incorrect, since Omnibes and Tentyra are now more than 50
miles apart. As, however, Coptos and Tentyra were
nearly opposite to each other, and the crocodile was
worshipped by the Coptites also, we should probably
read Coptos for Ombos in Juvenal. (Sat. xiv.)
The latter were so expert in the chase of this animal in
its native element, that they were wont to follow it
into the Nile, and drag it to shore. (Aelian, Hist. Ani-
mal. ii. 24; Plin. viii. 25. s. 38.) Seneca (Nat.
Quaest. ii). says that it was their presence of mind
that gave the Tentyrites the advantage over the cro-
dodile, for the men themselves were small sinewy
fellows. Strabo (xvii, pp. 814. 815) saw at Rome
the exhibition of a battle between the crocodile and
men purposely imported from Tentyra. They plunged
boldly into the tides, and, entangling the crocodiles in
nets, haled them backwards and forwards in and out
of the water, to the great amazement of the beholders.

So long as Egypt was comparatively unexplored,
no ruins attracted more admiration from travellers
than those of Tentyra. They are the first in
acceptable preservation, and of conspicuous magnitude
which meet the eyes of those who ascend the Nile.
They are remote from the highways and habitations of
men, standing at the foot of the Libyan hills,
aml the sands of the western desert. But though
long regarded as works of a remote era, Egyptian
art was already on the decline when the temples of
Tentyra were erected. The architecture, indeed,
reflects the grandeur of earlier periods; but the
sculptures are ungraceful, and the hieroglyphics un-
skilfully crowded upon its monuments. The most
ancient of the inscriptions do not go farther back
than the reign of the latter Ptolemies; but the names
of the Caesars, from Tiberius to Antoninus
Pius (A. D. 14—161), are of frequent occurrence.
Tentyra, in common with Upper Egypt generally,
appears to have profited by the peace and security it
enjoyed under the imperial government to enlarge or
restore its monuments, which, since the Persian oc-
cupation of the country, had mostly fallen into de-
cay. The principal structures at Tentyra are the
great temple dedicated to Athor; a temple of Isis;
a Typhonium; and an isolated building without a
roof, of which the object has not been discovered.
With the exception of the latter, these structures are
inclined by a crude brick wall, forming a square,
each side of which occupies 1000 feet, and which is
in some parts 35 feet high and 15 feet thick. Full
descriptions of the remains of Tentyra may be found
in the following works: Nelson's Herculaneum's
Aegyptica; and Richardson's Trav's along the Medi-
terranean and Parts adjacent, in 1816—1817. Here it must suffice to notice briefly
the three principal edifices:

1. The Temple of Athor.—The approach to this
temple is through a dromos, commencing at a soli-
dary stone pylon, inscribed with the names of
Dumittha and Trojan, and extending to the portico, a
tance of about 110 paces. The portico is open at the
top, and supported by columns, ranging in four rows with quadrangular capitals, having on
each side a colossal head of Athor, surmounted by a
quadrangular block, on each side of which is carved
a temple doorway with two winged globes above it.
These heads of the goddess, looking down upon
the dromos, were doubtless the most imposing de-
corations of the temple. To the portico succeeds
a hall supported by six columns, and flanked by
three chambers on either side of it. Next comes a
central chamber, opening on one side upon a
stairs, on the other into two small chambers.
This is followed by a similar chamber, also with
lateral rooms; and, lastly, comes the naos or sanctu-
ary, which is small, surrounded by a corridor, and
flanked on either side by three chambers. The hie-
roglyphics and picturesque decorations are so nu-
umeros, that nowhere on the walls, columns, archi-
traves, or ceiling of the temple, is there a space of
two feet unoccupied by them. They represent men
and women engaged in various religious or secular
employments; animals, plants, public ceremonies and
processions, and the emblems of agriculture or manu-
factures. Occasionally also, occur historical por-
traits of great interest, such as those of Cleopatra
and her son Caesarion. The effect of this wilder-
ness of highly-coloured baso-relieves was greatly
enhanced by the mode by which the temple itself
was lighted. The sanctuary itself is quite dark; the
light is admitted into the chambers through small
perforations in their walls. Yet the entire structure
displays wealth and labour rather than skill or good
taste, and, although so elaborately ornamented, was
never completed. The emperor Tiberius finished the
naos, erected the portico, and added much to the
decoration of the exterior walls; but some of the
carvings designed for royal or imperial names
have never been filled up.

On the ceiling of the portico is the famous zodiac of
Tentyra, long imagined to be a work of the Pha-
monic times, but now ascertained to have been ex-
cuted within the Christian era. Though denomi-
nated a zodiac, however by the French savants,
it is doubtful whether this drawing be not merely
mythological, or at most astrological, in its object.
In the first place the number of the supposed signs
is incomplete. The crab is wanting, and the order of
the other zodiacal signs is not strictly observed.
Indeed, if any astral signification at all be intended
in the picture, it refers to astrology, the zodiac, as
we know it, being unknown to the Egyptians.
Archaeologists are now pretty well agreed that a
paganism or procession of the Tentyrite triad with
their cognate deities is here represented. The Greek
inscription, which, long overlooked, determines the
recent date of this portion of the temple, runs along
the projecting summit of the cornice of the portico:
It was engraved in the twenty-first year of Tiberius,
A. D. 35 (Leitremus, Inscrip. p. 97). Upon the

TENTYRA.
ceiling of one of the lateral chambers, behind the portico, and on the right side of the temple, was a smaller group of figures, and the ceiling has also been styled a planisphere or zodiac. This being sculptured on a kind of sandstone, was removable, and by the permission of Mehemet Ali, in 1821, was cut out of the ceiling by M. Lelièvre, and brought to Paris. It was purchased by the French government, and is now in the Imperial Museum. It is probably a few years older than the larger zodiac.

2. The Iserion. — "The chapel of Isis is behind the temple of Atheta." (Strab. viii. p. 814.) It stands, indeed, immediately behind its SW. angle. It consists of one central and two lateral chambers, with a corridor in front. Among its hieroglyphics appear the names of Augustus, Claudius, and Nero. About 170 paces E. of this chapel stands a pylon, with a Greek inscription, importing that in the thirty-first year of Caesar (Augustus) it was dedicated to Isis. (Letronne, i. b. pp. 82, 84.)

3. The Typhonium, as it is denominated from the emblems of Typhon on its walls, stands about 90 paces N. of the great temple. It comprises two outer passage-chambers and a central and lateral adytum. A peristyle of twenty-two columns surrounds the sides and the rear of the building. On its walls are inscribed the names of Trajan, Hadrian, and Antoninus Pius. But although the symbols of the principle of destruction are found on its walls, Typhon can hardly have been the presiding deity of this temple. From the circumstance that all the other sculptures refer to the birth of Ephon, Champollion (Lettres sur l'Egypte, vol. ii. p. 67) suggests that this was one of the chapels styled "Mammisii," or "lying-in places," and that it commemorated the acquaintance of Atheta, mother of Ephon. Typhon is here accordingly in a subordinate character, and symbolises not destruction, but darkness, chaos, or the "night primordial," which precedes creation and birth.

For the monuments of Tentyra, besides the works already enumerated, Wilkinson's Ancient Egyptians and Modern Egypt and Thebes, and the volumes in the Library of Entertaining Knowledge, entitled British Museum, Egyptian Antiquities, may be consulted; and for the ziscus, Visconti, Oeuvres tom. iv.; Letronne, Observations sur l'Objet des Representations Zodiacaus de l'Antiquite', Svo. Paris, 1824; or Halma, Examen sur les Explanations des Zodiacaus Egyptianus, Svo. 1822. [W. B. D.]

TENURCIO. [TINURCUM.]

TEOS (Tios: Eth. Tios), an Ionian city on the coast of Asia Minor, on the south side of the isthmus connecting the Ionian peninsula of Mount Mimas with the mainland. It was originally a colony of the Minyae of Orchomenos led out by Athamas, but during the Ionian migration the inhabitants were joined by numerous colonists from Athens under Nausius, a son of Codrus, Apocles, and Damason; and afterwards their number was further increased by Boeotians under Geres. (Strab. xiv. p. 633; Paus. vii. 3. § 3; Herod. i. 142; Scylax, p. 37; Steph. B. s. v.) The city had two good harbours, one of which is mentioned even by Scylax, and the second, 30 stadia distant from the former, is called by Strabo Tephathus (xiv. p. 644), and by Livy (xxvii. 27) Geraneaicus. Teos became a flourishing commercial town, and enjoyed its prosperity until the time of the Persian dominion, when its inhabitants, unable to bear the insolence of the barbarians, abandoned their city and removed to Abydra in Thrace. (Herod. i. 169; Strab. L c.) But though deserted by the greater part of its inhabitants, it still continued to be one of the Ionian cities, and in alliance with Athens. (Thucyd. iii. 32.) After the Sicilian disaster, Teos revolted from Athens, but was speedily reduced (Thucyd. viii. 16, 19, 20). In the war against Antiochus, the fleet of the Romans and Rhodians gained a victory over that of the Syrian king to the neighbourhood of this city. (Liv. l. c.; comp. Polyb. v. 17.) The vicinity of Teos produced excellent wine, whence Bacchus was one of the chief divinities of the place. Pliny (v. 35) erroneously calls Teos an island, for at most it could only be termed a peninsula. (Comp. Pomp. Mela, i. 17; Ptol. v. 2. § 6.) There still exist considerable remains of Teos at a place called Sighajit, which seems to have been one of the ports of the ancient city, and the walls of which are constructed of the ruins of Teos, so that they are covered with a number of Greek inscriptions of considerable interest, referring, as they do, to treaties made between the Teians and other states, such as the Romans, Aetolians, and several cities of Crete, by all of whom the inviolability of the Terian territory, the worship of Bacchus, and the right of asylum are confirmed. The most interesting among the ruins of Teos are those of the theatre and of the great and splendid temple of Bacchus; the massive walls of the city also may still be traced along their whole extent. The theatre commands a magnificent view, overlooking the site of the ancient city and the bay as far as the bold promontory of Myonnaeus and the distant island of Samos. For a detailed description of these remains, see Hamilton, Researches, ii. p. 11, foll.; comp. Lucae, Asia Minor, p. 350. [L. S.]

COIN OF TEOS.

TERACATRIAE (Terakatraiæ), a German tribe in Noricum, on the banks of the Danube, probably on the south of the territory occupied by the Boeni (Ptol. ii. 11. § 26). [L. S.]

TEREDON. [EUPHRATES.]

Terenuthis (Tepenuthis, Not. Imp.), the modern Terunich, a town in Lower Aegypt, was situated on the left bank of the Canopic arm of the Nile. At this point a pass through the hills conducted to the Natrix Lakes, about 30 miles to the W. of the town. The people of Terenuthis formed the government of the country for collecting and exporting niter. (Niter.ken.) Ruins at the modern hamlet of Abus-Belbelu represent the ancient Terenuthis. (Soniniti, Voyage, vol. i. p. 228.) [W. B. D.]

TEREUS FLUVIUS. [TADER.]

Tereus Fortunals, a place in the W. of Hispania Baetica (Flinn. iii. 1. s. 3). [T. H. D.]

TERGES. [Terges.]

TERGESIO (Tergesio, Strab. Tergesio, Ptol.: Eth. Tergesio, Tergesia), a city of Venetia or Istria, situated on a bay to which it gave the name of Tergesianus Sinus, which forms the inner bay or extremity of the Adriatic sea towards the N. It
TERGESTE.

was very near the confines of Istria and Venetia, so that there is considerable discrepancy between ancient authors as to which of the two provinces it belonged, both Strabo and Ptolemy reckoning it a city of Istria, while Pliny includes it in the region of the Carni, which was comprised in Venetia. (Strab. v. p. 215, vii. p. 314; Plin. iii. 18. s. 23; Pol. iii. 1 § 27.) Meli on the contrary calls it the boundary of Illyricum (ii. 4. § 3). From the time that the Forum, a river which falls into the sea 6 miles S. of Trieste, became fixed as the boundary of the provinces (Plat.), there can be no doubt that Pliny's attribution is incorrect. It is probable that Tergeste was originally a native town either of the Carni or Istrians, but no mention is found of its name till after the Roman conquest, nor does it appear to have risen into a place of importance until a later period. The first historical mention of it is in n. c. 51, when we learn that it was taken and plundered by a sudden incursion of the neighbouring barbarian tribes (Cass. B. G. viii. 24; Appian, IIygr. 18); but from the terms in which it is there noticed it is evident that it was already a Roman town, and apparently had already received a Roman colony. It was afterwards restored, and, to protect it for the future against similar disasters, was fortified with a wall and towers by Octavian in n. c. 32. (Gruter, Ins. p. 266. 6.) It is certain that it enjoyed the rank of a Colonia from the time of Augustus, and is styled such both by Pliny and Ptolemy. (Plin. iii. 18. s. 22; Pol. iii. 1. § 57.) That emperor also placed under the protection and authority of the city the neighbouring barbarian tribes of the Carni and Catali, and, by reducing to subjection their more formidable neighbours, the Iapodes, laid the foundations of the prosperity of Tergeste. The growth of this was mainly promoted by the advantages of its port, which is the only good harbour in this part of the Adriatic; but it was apparently overshadowed by the greatness of the neighbouring Aquilina, and Tergeste, though a considerable municipal town, never rose in ancient times to a commanding position. We even learn that in the reign of Antoninus Pius the citizens obtained the admission of the Carni and Catali—who had previously been mere subjects or dependents—to the Roman "civitas," in order that they might share the hitherto some honours of the local magistracy. (Orell. Ins. 4040.) The inscription from which we learn this fact is one of the most interesting municipal records preserved to us from ancient times, and has been repeatedly published, especially with notes and illustrations by C. T. Zumpt (Decezium Municipale Tergestinum, 4to. Berol., 1837) and by Götting (Fuss- Johni Konische Urkunden, p. 73). No subsequent mention of Tergeste is found in history under the Roman Empire; but it is certain that it continued to exist, and retained its position as a considerable town throughout the middle ages. But it is only within the last century that it has risen to the position that it now occupies of one of the most populous and flourishing cities on the Adriatic. The only remains of antiquity extant at Trieste are some portions of a Roman temple, built into the modern cathedral, together with several inscriptions (including the celebrated one already noticed) and some fragments of friezes, bas-reliefs, &c.

Tergeste is placed by the Itineraries at a distance of 24 miles from Aquilina, on the line of road which followed the coast from that city into Istria. (Itin. Ant. p. 270; Tab. Peut.) Pliny, less correctly,

TERINA.

calls it 33 miles from that city (Plin. L. c.). The spacious gulf on which it was situated, called by Pliny the Antipaxus Sinus, is still known as the Gulf of Trieste. [E. H. B.]

TERGOLAPE, a town in Noricum, on the road from Orilaba to Juvarum; was situated in all probability near Launbach. (Tab. Peut.; Muchar, Noricum, vol. i. p. 266.)

TERIA (Tripae), is mentioned in Homer (H. ii. 829) in connection with a lofty mountain, or as a mountain itself (Tripelos epes ares), and, according to Strab. (xii. p. 563, comp. xviii. p. 589), ought to be regarded as a height in the neighbourhood of Grzien; although others pointed out, at a distance of 40 stadia from Stalpana, a hill with a temple of the Mother of the Gods, named Terenia. [L. S.]

TERIAS (Tripae; Fiume di S. Leonardo), a river of Sicily, on the E. coast of the island, flowing into the sea between Catana and Syracuse. It is mentioned by Pliny (iii. 8. 14) immediately after the Symetthus; and Scylax tells us it was navigable for the distance of 20 stadia up to Leontini. (Scl. p. 4. § 13.) Though this last statement is not quite accurate, it seems that Leontini is at least 60 stadia from the sea; it leaves little doubt that the river meant is that now called the Fiume di S. Leonardo, which flows from the Lake of Lentini (which is not mentioned by any ancient author) to the sea. It has its outlet in a small bay or cove, which affords a tolerable shelter for shipping. Hence we find the mouth of the Terias twice selected by the Athenians as a landing-place, while proceeding with their fleet along the E. coast of Sicily. (Thuc. vi. 50. 96.) The connection of the Terias with Lentini is confirmed by Diodorus, who tells us that Dionysius encamped on the banks of that river near the city of Leontini. (Diod. xiv. 14.) [E. H. B.]

TERCIAE. [TICIAE.]

TERINA (Tepira, but Tepea, or Lyceoph.; Eth. Teparon, Terimacca), a city on the W. coast of the Bruttian peninsula, near the Gulf of St. Eugenius, to which it gave the name of Terminacius Sinus. All writers agree in representing it as a Greek city and a colony of Crotona (Sicyn. Ch. 307; Stephan. B. s. e.; Scyl. p. 4. § 12; Strab. vi. p. 256; Plin. iii. 5. s. 10; Solin. 2. § 10), but we have no account of the time or circumstances of its foundation. It was regarded as the burial-place of the Siren Ligeia, a tradition which evidently pointed to the existence of a more ancient town on the spot than the Greek colony. (Lycoth. Alc. 726; Stephan. B. s. e.) The name of Terina is scarcely mentioned in history during the flourishing period of Magna Graecia; but we learn from an accidental notice that it was engaged in war with the Thuriams under Chendaris (Polyaen, Strat. ii. 10. § 1)—a proof that it was at that time no inconsiderable city; and the number, beauty, and variety of its coins sufficiently attest the fact that it must have been a place of wealth and importance. (Milzinger, Numis. de Italia, p. 80.) Almost the first notice of Terina is that of its conquest by the Bruttians, an event which appears to have taken place soon after the rise of that people in n. c. 356, as, according to Diodorus, it was the first Greek city which fell into their hands. (Diod. xvi. 15.) It was recovered from them by Alexander, king of Epirus, about 327 n. c. (Iuv. viii. 24), but probably fell again under their yoke after the death of that monarch. It was one of the cities which declared in favour of Hannibal during the Second Punic
TERINAEUS SINUS. [Hypsoniates Sinus.]

TERFOLA CASTRA or TERFOLIS, a fortress in Bithynia, mentioned only in the Notitia Dignitatum, but generally identified with the castle near Merun, near which many Roman remains are found. (Comp. Palliander, Beschreibung der Röm. Heerstrasse von Verona nach Augsburg, p. 86.)

TERMINIA. [Termes.]

TERMINA (τερμίνα or Termen; Eth. Terme-pons), a maritime town of Caria, on the south coast of the peninsula of Halicarnassus, near Cape Termum. (Herod. v. 37; Strab. xiv. p. 657; Plin. v. 29; Steph. B. s. r., who erroneously assigns the town to Lydia.) Under the Romans this Dorian town was a free city. According to Suidas (s.v.) the place gave rise to the proverbial expression Τερμίνια κάσα, it being used as a prison by the rulers of Caria; but his remark that it was situated between Melos and Halicarnassus is unintelligible. Cramer supposes its site to be marked by the modern Garboglar or Gunibida. [L. S.]

TERMERE (Τερμέρη), a place of uncertain site, mentioned only by Ptolemy (v. 2, § 16) as situated on the extreme north of Lydia, in the district of Laconeum, near the two sources of the river Hermus. [L. S.]

TERMERUM. [Termera.]

TERMES (Termes, Pot. ii. 6, § 56), a town of the Areovisci in Hispania Tarraconensis. It is probably the same town called Tereon (or Terma) by Appian (vi. 76 and 99). The inhabitants are called Termessini in Livy (Epit. iv.) and Tacitus (Ann. iv. 45; cf. coins in Sestini, p. 208).

Termes was seated on a steep hill, and was often besieged without success by the Romans, till at last the inhabitants, on account of their hostile disposition towards Rome, were compelled in B.C. 97 to build a new city on the plain and without walls (App. vi. 99). It lay undoubtedly on the site of the present Ermita de nuestra Señora de Termes, 9 leagues W. of Numantia. [F. H. D.]

TERMUS (Τερμός, Τερμώρως, Τερμωρός, Τερμωρός, Τερμωρίας; Eth. Termepeon), a town of Pisidia, celebrated for its natural strength no less than for its artificial fortifications, was situated on a height of Mount Taurus, at the entrance of the defiles which are traversed by the river Catarrahtes, and formed the means of communication between Pisidia, Pamphylia, and Lycaon. (Strab. xiii. p. 630, xiv. p. 666; Prot. v. 5, § 6; viii. 17, § 34; Polyb. xxxv. 18; Steph. B. s. r.; Dion. Per. 859.) A peak of the mountain rising above the acropolis bore the name of Selinus; and the inhabitants of the town itself were, as Strabo says, called Seluini. They were certainly not Greeks, for Arrian (i. 27) distinctly calls them Pisidians and barbarians. Their town stood on a lofty height, precipices on all sides; and the road running close by the place was very difficult, passing through a narrow gorge, which could be defended by a small force. Alexander the Great succeeded in forcing his way through, but despairing of the possibility of taking Termessus, he continued his march. (Strabo xiv. p. 666) therefore seems to be mistaken in stating that Alexander conquered the place. The consul Manlius, after relieving Isaura, passed along the same road. (Liv. xxxviii. 15.)

The town of Termessus continued to exist down to a late period, when it was the see of a Christian bishop, who also had the administration of two neighbouring places, Dory and Euboea. (Herod. iii. p. 680.) The site of ancient Termessus has not been difficult to discover by modern travellers, and considerable remains still exist at Karaburnar Kını, at the foot of the height on which the ancient fortress was situated. (Lencre, Asia Minor, pp. 133—135.) As to the coins of Termessus, which come down as far as the reign of the emperor Severus, see Sestini, p. 96. On some of these coins we read μεσοφωρ in addition to the name of the Termessians, a circumstance which confirms the
TERMETIS, a mountain of Lydia between Mounts Olympus and Tmolus, is mentioned only by Pliny (v. 31).

TERMILAE (Τερμίλαι) is said to have been the ancient name of the inhabitants of Lydia, before the name Lydi came into use. These Termilae were believed to have come from Crete; and even in the time of Herodotus the Lydians were often called Termilae by the neighbouring nations. (Herod. i. 173, vii. 92; Paus. i. 19. § 4.)

TERPO'ONUS (Τέρφωνος), a town of the Iapodes in Ilium, of uncertain site. (Appian, B. Lybr. 18.)

TESA'RIUS, a town of the Treti in Tripoli, of uncertain site. (Appian, B. Lybr. 18.)

TESABARICE (Τεσαβαρίς, σ. χώρα, Peripl. Mar. Ephgr. p. 1, ap. Hudson, Geogr. Min.). is supposed to have been a portion of the district inhabited by the Troglydites. The modern Persian name *Tres-u-Barek* closely resembles the ancient one, and is said to mean, when applied to a country, "low and flat," which designation would accord with the 8. portion of the region Troglyditica in the level region of Aethiopia near the mouth of the Red Sea. (Vincent, Commerce and Navigation of the Ancients, vol. ii. p. 89. [TROGLODYTAE] [W.B.D.]

TESTRINA. [Aorogenices.]

TE'ITUUS (Τείτους, Ptol. v. 14. § 2), a river on the S. coast of Cyprus, probably the Tisus. [T.H.D.]

TE'RIADUM. [Tyrhaium.]

TE'IHALOCHOUS. [Naallochus, No. 3.]

TE'ITAPHILIA, a town of Attalasia in Epeirus, where the royal treasuries were kept. (Liv. xxxvii. 1.)

TETRAPOLIS, I. Of Attica. [MARATHON.]

2. Of Doris. [DOMUS.]

TETRAP'EGIA (Τετραπέγια). 1. A town in the Cyrenaica, of uncertain site, situated above the harbour Pirus. (Strab. xvii. p. 583; Polyb. xxi. 26.)

2. A town of Cappadocia in the district Gar-samnia. (Ptol. v. 6 § 14.)

TETRICA MONS, a mountain in the central range of the Apennines, adjoining the territory of the Sabines. Virgil enumerates the "Tetricae horrentes rupes" among the localities of that people, and Julius Italicus in like manner closely associates the "Tetrica rupes" with Nursia. Varro also speaks of the Montes Fiscellus and Tetrica as abounding in wild goats. (Virg. Aen. vii. 713; Sili. Ital. viii. 417; Varr. R. R. ii. 1. § 5.) From all these passages it is evident that it was one of the lofty and rugged chain of the Central Apennines, which extend from the Monti della Sibilla, southwards as far as the Gran Sasso, separating Picenum from the country of the Sabines; and this position is confirmed by Servius and Vibius Sequester, of whom the former calls it "Mons in Piceno a-perrinum," while the latter terms it "Mons Sabinorum." (Serv. ad Aen. i. c.; Vib. Seq. p. 33.) It cannot be identified with more accuracy. The two grammarians just quoted write the name "Tetricus Mons;" but Varro, as well as Virgil and Silius, adopts the feminine form, which is not therefore one merely poetical.

TETRISUS [Tinazis].

TETUS (Τέτος), a river on the Atlantic coast of Gallia, which Ptolemy (ii. 8. § 2) places between the Staliocanus Portus and Argenus, or the outlet of the river Argenus, if that is the true reading. It is impossible to determine what river is the Tetus. D'Anville assumes the place to be the bay of Sena, which receives the rivers Sée and Sélune. Others take the Tetus to be the Tryxur or Tricuras, near Cert, (Ptol. ii. 14.)

TEUCERA, in North Gallia, is placed by the Table about halfway between Nemetacum (Arras) and Samarobriva (Amiens). Tiree, on the road from Amiens to Arras, represents Teuncra. (D'Anville, Notice, &c.)

TEUCH. [TROAS.]

TEUDE'RIUM (Τευδερίου), a place in the country of the Chauci Minors, on the river Amasia, in Germany (Ptol. ii. 11. § 22). Its site is commonly identified with that of the village of Düngen, near Meppen. (L. S.)

TEUDURUM, in North Gallia, is placed in the Antonine Itinerary on a route from Colonia Trajana (Colonia Trajana) through Juliaca (Julieta) to Colonia Agrippina (Cologne). The place is Tuddurn. The distance from Tuddurn to the supposed site of Curtavallum is marked viii. [COTOVALLUM.]

TEUGLASSA (Τευγλάς), an island mentioned by Thucydides (viii. 42, where some read Τευγλάς), which, from the manner he speaks of it, must have been situated between Syne and Haliarnassos. Stephanus B also mentions the islet on the authority of Thucydides, but calls it Ten-tlussa and an island of Ionia. There can be no doubt that the Scutulsa mentioned by Pliny (v. 36) is the same as the Teuglussa or Tentlussa of Thucy-
dides. (L. S.)

TEUMESSUS (Τευμέσσος; Ebh. Teymessa), a village in Boeotia, situated in the plain of Thebes, upon a low rocky hill of the same name. The name of this hill appears to have been also given to the range of mountains separating the plain of Thebes from the valley of the Asopus. [BOEOTIA, pp. 413, 414.]

Teumessus was upon the road from Thebes to Chalcis (Paus. ix. 19. § 1), at the distance of 100 stadia from the former. (Schol. ad Eurip. Phoen. 1103.) It is mentioned in one of the Homeric hymns (Hymn. to Apollo, 228) with the epithet Λεγερίταις grays, an epithet justified by the rich plain which surrounds the town. Teumessus is celebrated in the epic legends, especially on account of the Teumessian fox, which ravaged the territory of Thebes. (Paus. i. c.; Anton. Lib. 41; Palaeph. de Incrdb. 8; see Dict. of Biogr. Vol. I. p. 667.) The only building at Teumessus mentioned by Pausanias was a temple of Athena Telchinia, without any statue. (Besides the authorities already quoted, see Strab.)
TEURIOCHAEAE.

TEURIOCHAEAE (Teuroplykmia), a German tribe, occupying the country south of the Obernach, on the confluence of the Moselle, in the modern Eifel- 

birge and Voigtland. (Ptol. ii. 11. § 23.) [L.S.]

TEURISCI (Teuropis), Ptol. iii. 8, § 5), a Da-

ician tribe near the sources of the Tyras. [T. H. D.]

TEUTENIA (Teuropia), a Celtic town in Noricum, on the left bank of the upper part of the river Draus (Plin. iii. 27; Ptol. ii. 14, § 3). Its site is still marked by considerable ruins not far from the little town of Spital. (Comp. Orelli, Inscrip. Nos. 498 and 501; Gauthier, Vit. S. Severi, 17, 21, where it is called Tiburna.) [L. S.]

TEUTHEA. [Dyme.]

TEUTHEAS. [Achaea, p. 14, s.]

TEUTHIS (Teuchos; Eth. Teuchos), a town in the centre of Arcadia, which together with Thebais and Methydrium belonged to the confederation (evrē-

kion) of Orchomenus. Its inhabitants were re-

moved to Megalopolis upon the foundation of the latter. The Palaeastron of Galatia probably re-

resents Teuthis. (Paus. vii. 27. §§ 4, 7, 28. § 4; Steph. B. s. v.; Ross, Reisen in Peloponnes, vol. i. P. 114.)

TEUTHRANIA (Teuropia), the name of the western part of Mycia about the river Caicus, which was believed to be derived from an ancient Mycian

king Teuthras. This king is said to have adopted, as his son and successor, Telephus, a son of Heracles; and Eurybylus, the son of Telephus, appears in the Odyssey as the ruler of the Cetii. (Strab. iii. p. 613; Histor. Gr. iii. 1. § 6), but no other particulars are known about it.

TEUThRAS (Teuchos), the south-western part of

Mt. Teneum in Teuthris (Ostias, op.Stob. Scrm. p. 213, ed. Baill.), is perhaps the mountain now called Donnach, which the caravans proceeding from Sagra to Bursa have to traverse. (Lucas, Trois-Voyage, p. 183.)

TEUTHERONE (Teuroplyd), a town of Locris, situated upon the western side of the Locolician gulf, 150 stadia from Cape Taenarum. It was said to have been founded by the Athenian Teuthras. The chief deity worshipped here was Artemis Issoria. It had a fountain called Naias. Its ruins exist at the village of Krotas, and its citadel occupied a small peninsula, called Skopou, Skopia or Skopodi-

polis. The distance assigned by Pausanias of 150 stadia from Teuthe on Cape Taenarum is, ac-

cording to the French Commission, only from 8 to 10 stadia in excess. Augustus made Teuthe on one of the Eleuther-Locian towns. (Paus. iii. 21.

§ 7, iii. 25. § 4; Ptol. iii. 16. § 9; Bobiliay, Re-

cherches, g. 89; Curtius, Peloponnesos, vol. ii.

p. 276.)

TEUTUBURGIIUM or TEUTOBURGIIUM (Teu-

toburjum), a town in Lower Pannonia, near the confluence of the Dravus and Danubius, on the road from Mursa to Corcensis, was the station of the prince foot of the sixth legion and a corps of Dalmatian horsemen. (It. Ant. p. 243; Ptol. ii. 16. § 5: Notit. Imp.; Tab. Peut., where it is misspelled Tittoburgium.) The name seems to indicate that it was originally a settlement of the Teutones, which may have been founded at the time when they roamed over those countries, about B. C. 113. No remains are now extant, and its exact site is only matter of conjecture. (Mosen, Noricum, vol. ii. p. 265.) [L. S.]

TEUTOBERGENSIUS SALTUS, a mountain forest in Western Germany, where in a.D. 9 the Roman legion under Varus suffered the memorable

defeat, and where, six years later, their unburied remains were found by Drusus. (Tac. Ann. i. 60.) A general description of the locality without the mention of the name is found in Dion Cassius (Vï. 20, 21; comp. Vell. Pat. ii. 105, 118, foll.)

This locality has in modern times been the subject of much discussion among German antiquaries; but the words of Tacitus seem to imply clearly that he was thinking of the range of hills between the sources of the Luapia and Amanea; that is, the range between Lippespringe and Hausenbeck. (Gievers, De Allione Castello deique Varianae Claudi Loca Commentatio, p. 47, foll.) [L. S.]

TEUTONES or TEUTONI (Teupovia), the name of a powerful German tribe, which about B. C. 113 appeared on the frontier of Gaul at the same time when the Cimbri, probably a Celtic people, after defeating the Romans in several battles, traversed Gaul and invaded Spain. The Teutones, however, remained behind ravaging Gaul, and were joined by the Onabones. At length, in B. C. 102, they were defeated by C. Marius in a great battle near Aque Sextiae, where, according to the most moderate accounts, 100,000 of them were slain, while 80,000 or 90,000 are said to have been taken prisoners.

A body of 6000 men, who survived that terrible day, are said to have established themselves in Gaul between the Meos and Schelede, where they became the ancestors of the Aonatici. (Liv. Epit. lib. lxvii.; Vell. Pat. ii. 12; Flor. iii. 3; Flut. Mer. 36, foll.; Oros. v. 16; Caes. B. G. ii. 4, 29.)

After this great defeat, the Teutones are for a long time not heard of in history, while during the preceding two years they are described as wandering about the Upper Rhine, and eastward as far as Pannonia. In later times a tribe bearing the name of Teutones is mentioned by Pom. Mel. (iii. 3), Pliny (xxvii. 11), and Ptolemy (ii. 11. § 17) as inhabiting a district in the north-west of Ger-

many, on the north of the river Albis, where according to Pliny, they dwelt even as early as the time of Pytheas of Massilia. The question here naturally presents itself whether these Teutones in the north of Germany were the name as those who in the time of Marius invaded Gaul in con-

junction with the Cimbri, who in fact came from the same quarters. This question must be an-

swered in the affirmative; or in other words, the Teutones who appeared in the south were a branch of those in the north-west of Germany, having been induced to migrate southward either by inundations or other calamities. The numerous body of emigrants so much reduced the number of those remaining behind, that thereafter they were a tribe of no great importance.

That the name of Teutones was never employed, either by the Germans them-

selves or by the Romans, as a general name for the whole German nation, has already been explained in the article GERMANY. Some writers even regard the Teutones as not Germans at all, but either as Slavens or Celts. (Latham, Epileg. ad Tac. Germ. p. ca.) The fact that the country between the lower Elbe and the Baltic was once inhabited by the
Teutonoi.]

Teutones seems to be attested by the names of Textowinkel, a village near Rostock, and Tentowenzel, between Travecumnum and Schwartau. [L.S.]

Teutonoari (Teutonoar), a German tribe mentioned by Ptolemy (ii. 11, § 17) in close proximity to the Teutones, whence it may be inferred that they were only a branch of the Teutones. (Lithau, Episk. ad Tac. Germ. p. cml.) [L.S.]

THABOR. [AYLIAMEM.]

THABRACA (Θαβρακα) ἱλας, Ptol. vi. 3, §§ 5, 21, 28, viii. 14, § 3; Meis, i. 7), also called Tabrak (Plin. v. 3, s. 2, 6), a maritime city of Numidia, seated at the mouth of the Tessa. It was the border city opposite Zezulis, and the Roman colony. (Ptol. v. 3, 8. cc.) The surrounding country was covered with thick woods. (Juv. s. 189.) Tabraca was the scene of the death of Gilda. (Claud. Land. Sitl. i. 359.) It still retains the name of Tabarka. (Cf. Rian. Ant. pp. 21, 495, 514; Aug. deo. Donat. v. 32.) [T. H. D.]

THABRASTA, a place in the Libyan Nomos (Rian. Ant. p. 72), identified by Lape with Anaxi Assadib, v. 3, 2. [T. H. D.]

THADNUS, a fortress on the river Indus in Cina, not far from Cyphans. (Liv. xxxvii. 14.)

THAGULUS (Θαγολος, Ptol. iv. 3, § 43), or Tagulis (Rian. Ant. p. 63), a town in Africa Triparis, on the Syrtis Major, according to Lape near Al M. Called Tagulis in Tab. Peut. [T. H. D.]

THAGURUM (Θαγορομ ς, Ptol. iv. 16, § 2), a mountain in Aphiara, stretching from the Black Sea and covering a northerly direction towards the Arabian mountains. It is in the S. part of the Magnéa territory, and N. of the Haung-ho. [T. H. D.]

THALA (Θαλα, Strab. xiv. p. 831), an important town of Numidia, with a treasury and arsenal. (Sall. J. 75, 77, 80, 89; Tac. Ann. iii. 21; Flor. iii. 1.) It is probably identical with Telepte (Telety, Plin. de Aek. vi. 6), a fortified town of Numidia, lying to the N.W. of Cepsa, and from which there was a road to Tynaca on the Sytiris Minor (Ptol. ii. 72, 77; Strab. Peut, vol. i. p. 288, seq.) takes Forcenamab, both from its mines and its situation, to have been the ancient Thala or Telepte (cf. Mannert, 2, x. p. 321), but Lape fixes it at Hanoch-el-Kiham. [T. H. D.]

THALA (τοΘαλα ς, Ptol. iv. 6, §§ 12, 11, 16), a mountain in the interior of Libya, near which dwelt a tribe of the same name (Θαλά, Ptol. iv. 6, § 21). [T. H. D.]

THALAMAE (Θαλαμαι). 1. A town of Elia, situated above Pylos on the borders of Achaea, and in the rocky recesses of Mount Scollis, probably near the modern village of Samosviri, at the head of a narrow valley. It was here that the Elii took refuge with their property and flocks, when their country was invaded by Philip in v. c. 219. (Xen. Hell. viii. 4, § 26; Polyb. iv. 75; Lape, Morl. vol. ii. p. 204, Polybomnaica, p. 220; Curtius, Polybomaeum, vol. iii. p. 35.)

2. (C. Ann. 45) (cf. Ptol. iii. 16, § 22; 1 Th. Θαλαμας, a town of Ionia, distant 80 stadia north of Ostylias, and 20 stadia from Pholippos. (Paus. iii. 26, §§ 1, 2.) Pholippos was on the coast, on the eastern side of the Messenian gulf, and Thalamus was situated inland, probably at or near Plata, upon the river Midas, the minor Parnassus of Strabo (viii. p. 361). Ptolemy (I. C.) also calls it one of the inland towns of Laconia. Theopompus called Thalamae a Messenian town (Steph. B. s. v., Θαλαμαι), and we know that the Messenians said that their territory originally extended as far as the minor Parnassus [Laconia, p. 114, B.] Thalamae was said to have been founded by Pelops, and was called in the time of Strabo the Boeotian Thalamae, as if it had received a Boeotian colony, (Strab. viii. p. 560.) Thalamae is mentioned by Polybius (xvi. 16). It was subsequently one of the Echearesian Laconian towns, (Paus. iii. 21, § 7.) In the territory of Thalamae, on the road to Ostylas was a temple and oracle of Ioo or Pasiphae, in which the young swains, before the future war with the Persians, passed the night. Even the Spartan kings sometimes slept in the temple for this purpose. The temple probably stood upon the promontory Trachela, where there are some ancient remains. (Paus. iii. 26, § 1; Plut. Ages. 9; Cie de Diein. i. 43; Hermann, Gotted. Altereh. § 41, 7.) (Leake, Tephronaschnca, p. 178; Boblave, Recerheves, c. p. 92; Curtius, Tephronaschn, vol. iii. p. 284.) [T. H. D.]

THALADIES. [Aycada, p. 193, No. 15.]

THANA, the people of Asiatic Sarumna, E. of the mouth of the Ela. (Plin. vi. 5, s. 5.) [T. H. D.]

THAMANALIA, a people in central Asia, belonging to the fifth suffracty of Darius Hystaspis. Their exact position is uncertain. (Herod. iii. 93, 117; Steph. B. s. v.)

THAMARA (Θαμαρα, Euseb. and Onom. s. v. Θαμαρα, Thamara, Ptol. v. 16, § 8; Tab. Peut.; Iannar, Euseb. xiv. 19, xvi. 29), a town in Palestine, and one of the most southerly points in the country according to Eusebius. According to Eschylus and Jerome it was a town and fortress one day's journey from Malath on the way from Hebron to Alath, and in their time was held by a Roman garrison. Robinson fixes it at Keroub, the site with ruins 6 miles S. of Milh towards the pass es-Safolah. (Bibl. Res. vol. ii. p. 202, 2nd ed.)

THAMES (Θαμης, Θαμως, or Θαμως, Ptol. iv. 3, §§ 16, 25), a mountain in the eastern part of Numidia, in which the river Rubr, discharges its source. [T. H. D.]

THAMNA (Θαμνα; Χθ. Θαμνως), a large village of Palestine near Lydda, on the way to Jerusalem, which gave its name to the Tapharchia Thamynnica. (Ptol. v. 16, § 8; Joseph. B. J. iii. 3, 4; Pln. v. 14, s. 15; Euseb. Onom. s. v.; Steph. B. s. v.; Robinson, Bibl. Res. vol. ii. p. 239, seq., 2nd ed.)

THAMONDACA. [Niger, p. 418, b.]

THAMDUNCI (Θμδουκης), a people of Arabia, dwelling upon the coast of the Arabian gulf, for more than 1000 stadia from about Mousah to Wadagh. (Ptol. iii. 44; Acatharch. p. 59, Hudson, § 92, with Miller's note.) Ptolemy mentions the Thamidenei (Θαμιδηνοι) among the inland tribes of Arabia (vi. 7 § 21), but in another passage he places them upon the coast, under the slightly altered name of Tamiditiddie (Θαμιδιταίης, v. 7, § 4.) In Pliny they are called Thamudenei (vi. 28, s. 32). Stephens, B. makes Thamudel (Θαμουδελ) a neighbour of the Nabataeans. The name is evidently the same as Thamud, a celebrated tribe in early Arabic history.

THANA or THAONAI (Θανα, Θαναι, Ptol. vii. 17, § 5; Thurra, Tab. Peut.), a town of Arabia Petraea, probably corresponds to Dunia, a village visited by Eusebius, on the declivity of a mountain N. of
THAPSUS. 1175

THAPSUS. [RUSCABAE.]

THAPSUS (?@j@3j@3}, a town of considerable importance on the right bank of the Euphrates, in lat. 35° 15' N. It is mentioned very early in ancient history, and is almost certainly the same as the Tiphlash, of the Old Testament (1 Kings, iv. 24; in the LXX. written 3α3α), which is mentioned as the eastern boundary of the kingdom of Solomon. There is some difference among ancient writers as to the province in which it should be included. Thus, Pliny (v. 24, s. 21) and Stephanus B. (s. r.) place it in Syria; Ptolemy states that it is still visible, though half buried in sand, and numerous minor antiquities have been discovered. From its position there can be little doubt that it was a Phoenician or Carthaginian settlement; but continued to be a considerable town under the Romans, and an inscription records the repair of the road from Tharsus to Corinna as late as the reign of the emperor Philip. (De in Marmon, leg. in Sardigniae, vol. ii. pp. 359, 477.) The Antonine Itinerary correctly places it 18 miles from Corinna and 12 from Othoca (Oriantia). (Nil. Ant. p. 84; Ptol. iii. 3, § 2.)

THARSUS (Osij@3), Ptol.: Jau. at Capo del Sevo), a city of Sardinia, mentioned only by Ptolemy (where the name is written in many MSS. and editions Tarac or Tarrac) and in the Itineraries, but which seems to have been one of the most considerable places in the island. It was situated on the W. coast, on a projecting point of land at the N. extremity of the Gulf of Otranto, where its ruins are still visible. The reason of this is, that it was a frontier town, and might therefore be claimed as belonging to one or more provinces. At Thapsacus was the most important passage of the Euphrates in the northern portion of that river's course. As such, we read it was used by Cyrus the younger, whose army forded it, the water reaching up to their breasts, there being probably at that time no bridge. (Xen. Anab. i. p. 81.) Some 50 years later Dareius crossed it to meet Alexander in Cilicia, and recrossed it in haste after his defeat at Issus. (Arrian, ii. 13.) Alexander, pursuing Dareius, crossed the river also at the same spot, as the historian especially notices, on two bridges (probably of boats), which were joined together (ii. 7). Strabo, who makes frequent mention of Thapsacus, considers it, on the authority of Eratosthenes, as distant from Babylon about 4800 stadia, and from Cammages 2000 (ii. pp. 77, 78, 81, xvi. p. 11); and states that it was situated just at that spot where Mesopotamia is the widest (l. c.). There is no doubt that it derived its name from a Semitic verb, meaning to pass over (Winer, Bibl. Worterb. s. v.); hence another passage-place of the same name, which is mentioned in 2 Kings, xv. 16, but which is really in Palestine, has been often confounded with Tiphlash on the Euphrates. Many states that the name was changed by the Macedonian Greeks to Amphilochia (v. 24, s. 21), and Stephanus calls the Amphilochia of Selenei Tourna. No trace of any of these names is now found in the country (Kitter, x. p. 1114), nor any ruins that can certainly be identified with its site. It was, however, probably near the present Deir. [V.]

THAPSIS (8@3@3, Diilor. xx. 23), a deep river of the Ctenoanese Taurica, on which lay a royal castle. Ubert (iii. 2, p. 193) identifies it with the S抵j@3. But Kohler seeks the castle on Mount Qup, 450 yards south of Kertsch. (Acis. de l'Ac. de St. Peterbar. ib. p. 649, seq.) [T. H. D.]

THAPSUS (8@3@3, Ptol. iv. 3, § 10), a maritime city of Byzantium, in Africa Propria. It lay on a salt lake, which, according to Shaw (Tav. p. 99), still exists, and on a point of land 60 stadia distant from the opposite island of Lopadissus. Thapsus was strongly fortified and celebrated for Caesar's victory over the Pompianins, n. c. 46. (Hirt. B. Af. 288, seq. Shaw (l. c.) identifies it with the present Demusa, where its ruins are still visible. (Cf. Strabo, xvii. pp. 831, 834; Liv. xxxiii. 48; Plin. v. 4, s. 3, &c.) [T. H. D.]

THAPSUS, a river of Numidia, falling into the sea near the town of Ruscibe, probably the present Oued Rezou (Vib. Sequest. [T. H. D.]

THAPSUS [SYRACUSEAE].

THARBAN, a place on the great line of road which led across the desert from the Euphrates to Tarra (Alt-Hadra). It is marked on the Tabula Peutingeriana. It has been conjectured by Manuert (v. 2, p. 233) that the name is a mistake for Charra, another form of Charra; but this hypothesis seems hardly tenable. (Buchh.) It is represented by the present Ararun. [V.]

THARRAS (8@3@3, Ptol.: Jau. at Capo del Sevo), a city of Sardinia, mentioned only by Ptolemy (where the name is written in many MSS. and editions Tarac or Tarrac) and in the Itineraries, but which seems to have been one of the most considerable places in the island. It was situated on the W. coast, on a projecting point of land at the N. extremity of the Gulf of Otranto, where its ruins are still visible. (Cf. Arch. Frang., 5, ed. Schneidewin; Aristoph. Luc. 1298, with the schol.) The Greek colony rapidly rose in power, and obtained valuable possessions on the adjoining mainland, which contained even richer mines than those in the island. Shortly before the Persian invasion, the clear surplus revenue of the Thaerns was 200, and sometimes even 300 talents yearly (46,660l., 66,600l.), of which Sapeii Hyle produced 80 talents, and the mines in the island rather less. (Herod. II. 105.) Besides Sapeii Hyle the Thaerns also possessed upon the mainland Galeaeeus and Oeaea (Thuc. iv.
THASOS.

107; Diod. xii. 68), Strype (Herod. vii. 118; Suid. s. v. Στυμον), Dattin, and at a later period Crenides. (Bickh, *Publ. Econ. of Athens*, p. 312, Engl. tr.) Herodotus, who visited Thasos, says that the most remarkable mines were those worked by the Phoenicians on the eastern side of the island between Aenysta and Conynra opposite Samothrace, where a large mountain had been overthrown in search of the gold. (Herod. vi. 47.) The Thasians appear to have been the only Greeks who worked the valuable mines in Thrace, till Histiaeus, the Milesean, settled upon the Strymon and built the town of Myrcenia, about b.c. 511. (Herod. vi. 11, 25; Diod. v. 49; Plut. vii. 494.) Histiaeus made an unsuccessful attempt to subdue Thasos (Herod. vi. 28), but the growing power of the Thasians excited the suspicions of Darius, who commanded them in b.c. 492 to pull down their fortifications and remove their ships of war to Abydus, — an order which they did not venture to disobey. (Herod. vi. 46.) When Xerxes marched through Thasos on his way to Greece, the Thasians, on account of their possessions on the mainland, had to provide for the Persian army as it marched through their territories, the cost of which amounted to 400 talents (92,300£). (Herod. vii. 118.) After the defeat of the Persians, Thasos became a member of the confederacy of Delos; but disputes having arisen between the Thasians and Athenians respecting the mines upon the mainland, a war ensued, and the Athenians sent a powerful force against the island under the command of Oimon, b.c. 465. After defeating the Thasians at sea, the Athenians disembarked, and laid siege to the city both by land and sea. The Thasians held out more than two years, and only surrendered in the third continental season. They were compelled to raze their fortifications; to surrender their ships of war; to give up their continental possessions; and to pay an immediate contribution in money, in addition to their annual tribute. (Thuc. i. 100, 101; Diod. xii. 70; Plut. Cim. 14.) In b.c. 411 the democracy in Thasos was overthrown, and an oligarchical government established by Peisander and the Four Hundred at Athens; but as soon as the oligarchy had possessed of the power they revolted from Athens, and received a Laconidemanian garrison and harrmest. (Thuc. viii. 64.) Much internal dissension followed, till at length in b.c. 408 a party of the citizens, headed by Ecphantus, expelled the Laconidemanian harrmest Ecphantus with his garrison and admitted Thasylains, the Athenian commander. (Xen. Hell. i. 1, §§ 12, 32, i. 4, § 9; Dem. c. Lept. p. 474.) After the battle of Aegospotamai, Thasos passed into the hands of the Laconidemanians; but it was subsequently again dependent upon Athens, as we see from the disputes between Philip and the Athenians. (Dem. de Helon, p. 80; Philipp. Epist. p. 159.) In the Roman wars in Greece Thasos was submitted to Philip V. (Polyb. xv. 24), but it received its freedom from the Romans after the battle of Cynoscephalai, b.c. 197 (Polyb. xiii. 27, 51; Liv. xxxiii. 30, 35), and continued to be a free (libera) town in the time of Pliny (iv. 12, 23).

The city of Thasos was situated in the northern part of the island, and possessed two ports, of which one was closed. (Scylax, p. 27; Plut. iii. 11, § 14.) It stood on three eminences; and several remains of the ancient walls exist, intermixed with towers built by the Venetians, who obtained possession of the island after the capture of Constantinople by the Turks. In the neighbourhood is a large statue of Pan cut in the rocks. No remains have been discovered of Aenysta and Conynra; and the mines have long ceased to be worked.

Archilochus describes Thasos as an "ass's backborne overspread with wild wood" (.... ἀριθμὸν ἔπειτα ἰδίων ἀργυρῶν ἀρχίων ἑτοιμεῖν, ἐπαρχίας ἐπτερεῖσθαι, *Erat. 17*, 18, ed. Schneiderin), a description which is still strikingly applicable to the island after the lapse of 2500 years, as it is composed entirely of naked or woody mountains, with only scanty patches of cultivable soil, nearly all of which is close to the seashore. (Grote, *Hist. of Greece*, vol. iv. p. 34.) The highest mountain, called Mount Iparis, is 3428 feet above the sea, and is thickly covered with fir-trees. There is not enough corn grown in the island for its present population, which consists only of 6000 Greek inhabitants, dispersed in twelve small villages. Hence we are surprised to find it called by Dionysius of Perieges (532) ἀναχύρας ἄρτη; but the praises of its fertility cannot have been written from personal observation, and must have arisen simply from the abundance possessed by its inhabitants in consequence of their wealth. Thasos produced marble and wine, both of which enjoyed considerable reputation in antiquity. (Athen. i. pp. 28, 32, iv. p. 129; Xen. Symp. 4. § 41; Virg. Georg. ii. 91.) The chief produce of the island at present is oil, maize, honey, and timber; the latter, which is mostly fir, is the principal article of export.

**COIN OF THASOS.**

**THAUBA'SIUM (Itin. Ant. p. 171; Thasateum, *Not. Imp.*), was a frontier town of Lower Egypt, situated on the Canopic arm of the Nile, about 8 miles N. of Serapeum and the Natron Lakes. In Roman times Thauba'sium was the head-quarters of a company of light auxiliary troops "II Aia Ulpa Afrorum." (Orelli, *Inscript. no. 2552.*) It is supposed to be at the modern Cheych-el-Nefy. (Champollion, *Égypte*, vol. ii. p. 71.)

**THAUMACL.** (Θαυμακλῆς; Euth. Θαυμακλῆς), a town of Phthiotis in Thessaly, was situated on the pass called Cela, on the road from Thermopylae and the Macedon pass passing through Lamia. At this place, says Livy, the traveller, after traversing rugged mountains and intricate valleys, comes suddenly in sight of an immense plain like a vast sea, the extremity of which is scarcely visible. From the astonishment which it excited in the traveller, the city was supposed to have derived its name. It stood upon a lofty and precipitous rock. It was
THAUMACIA.

besieged by Philip in b.c. 199; but a reinforcement of
Aetolians having made their way into the town,
the king was obliged to abandon the siege. (Liv.
xxxvii. 1.) Thauamai was taken by the consul
Aecilius in the war with Antoninus, n. c. 191. (Liv.
xxxvi. 14; comp. Strab. ix. p. 434; Steph. B. s. e.
Θαυμακίας.) Dhomokos occupies the site of Thau-
maici, and at this place inscriptions are found con-
taining the ancient name. Its situation and prospect
are in exact accordance with the description of Livy,
who copied from Polybius, an eye-witness. Dodwell
says that "the view from this place is the most
wonderful and most picturesque"; and Leake observes
that "at the southern end of the town a rocky
point, overtopping the other heights, commands
a magnificent prospect of the immense plain watered
by the Peneius and its branches." (Dodwell, vol.
ii. p. 122; Leake, Northern Greece, vol. i. p. 438.)

THAUMACIA (Θαυμακίας; Eth. Θαυμακιατός), a
town of Magnesia in Thessaly, one of the four cities
whose ships in the Trojan War were commanded by
Philoctetes. It was said to have been founded by
Thaumace, the son of Peas. Leake supposes it to
be represented by the palaestra of Askiti, one
of the villages on the Magnesian coast. This Thau-
maia must not be confounded with Thauamace in
Pithitiis mentioned above. (Hom. H. ii. 716;
Strab. ix. p. 436; Steph. B. s. v.; Eustath. ad
Hom. p. 329, 6; Plin. iv. 9. s. 16; Leake, Northern
Greece, vol. iv. p. 416.)

THEANGELA (Θεανγέλα; Eth. Θαυμαγελός), a
town of Caria, which Alexander placed under the
jurisdiction of Halicarnassus, is known as the birth-
place of Philip, the historian of Carin. (Plin. v.
29; Athen. vi. p. 271; Steph. B. s. e.)

THABAE (Θηβαί, Herod. i. 152, ii. 42; Strab.
xvii. pp. 895, 815, foll.; Thebe, Plin. v. 9. s. 11),
the No (Essex), xxx. 14) or No-AMMON (Nabam, vv.
5, 8) of the Hebrew Scriptures; at a later period
Dios-
polies the Great of the Greeks and Romans (Διο-
πολής μεγάς, Plut. iv. 5. § 73; Steph. B. s. c.),
was one of the most ancient cities of Egypt, and even,
according to Diodorus (i. 50, comp. xv. 45), of the
world. Its foundation, like that of Memphis, was
attributed to Menes, the first mortal king of Egypt,
i.e. it went back to the mythical period of Egyptian
history. By some writers, however, Memphis was
reported to have been a colony of Thebes. It was
the capital of the nome formed by the city itself
and its environs, though Polycrates (i. c.) describes
it as pertaining to the Nome of Coptos. In all Upper
Egypt no spot is so adapted for the site of a great
capital as the plain occupied by ancient Thebes.
The mountain chains, the Libyan on the western,
and the Arabian on the eastern, side of the Nile,
sweep boldly from the river, and leave on both banks
a spacious area, whose breadth, including the river,
amounts to nearly 4 leagues, and the length from N.
to S. is nearly as much. Towards the N. the plain
is again closed in by the return of the hills to the
Nile; but on the S., where the western chain con-
tinues distant, it remains open. The ground, there-
fore, on which Thebes stood was large enough to
contain a city of at least equal extent with ancient
Rome or modern Paris; and, according to Strabo,
ancient Thebes covered the entire plain. Only a
portion of it, however, was available for population.
An immense area was covered with the tem-
ple grounds, and exedrae and obelisks on the eastern
side, as far as the Libyan hills, lay the monuments of
the dead. On the eastern bank, therefore, the population
was generally collected; and there it was probably
densely crowded, since ancient writers assign to Thebes
an almost incredible number of inhabitants, and
Diodorus (i. 43) mentions the prominence of many
stories. The extent of the city is very
differently stated by ancient authors. Ruins of its
greatness had reached the Greeks of Homer's age,
who (H. ix. 381) speaks of its "hundred gates" and
its 20,000 war-chariots, just as the Arabic
story-tellers speak of the glory of Bagdad or Dam-
mascus under the Caliphs. Before the Persian in-
rision (B. C. 529) no Greek writer had visited
Thebes; and after that catastrophe its dimensions
had considerably shrunk, since Cambyses is said to
have burnt all such portions of Thebes as fire would
destroy, i.e. all the private buildings; and under
the Persian vicennia no Egyptian city was likely
to regain its original proportions. It does not appear
that Herodotus ever visited Upper Egypt, and his
account of Thebes is extremely vague and meagre.
Diodorus, on the contrary, who saw it after its
capture by Ptolemy Lathyrus, about B. C. 57,
helped Thebes in the second period of its decay, and
after Alexander had diverted much of its commerce
to Byzantium and the Ainsoite bay. He estimates its
circuit at 140 stadia or about 17 miles. Strabo,
again, who went thither with the expedition of
Aelius Gallus in n. c. 24, helped Thebes at a still
lower stage of decadence, and assigns it a compass
of about 10 miles. But at that time the continuity
of its parts was broken up, and it was divided into
certain large hamlets (συμβάντα) detached from one
another. Neither of these writers, accordingly, was
in a position to state accurately the real dimensions
of the city in its flourishing estate, i.e. between
1600 and 800 n. c. Modern travellers, again, have
still further reduced its extent; for example, Sir
Gardner Wilkinson supposes the area of Thebes not
to have exceeded 53 English miles. As, however,
during the space of 2600 years (800 n. c.--1500
A.D.) there have been very material changes in the
soil from the contraction of the habitable ground,
partly by the depopulations of the Nile, and partly
by the drifting of the sands, it is scarcely pos-
sible for modern travellers to determine how far
Egyptian labour and art may once have extended
their capital. An author quoted by Stephanus
of Byzantium, probably Hecataeus, runs into the oppo-
site extreme to Thebes, who states that its dimensions
(7,000,000) hardly possible for the entire Nile
valley, and an extent (400 stadia, or 50 miles)
larger than the Theban plain itself. (Steph. B. s. v.
Διόσπολις.) The name of Thebes is formed from
the Tāp or of the ancient Egyptian language, pro-
nommed Theba in the Memphitic dialect of Coptic,
and thence easily converted into Θῆβαι, Thebê, or
Thebes. In hieroglyphics it is written τατ or τάτ, with
the feminine article, τάτος, the meaning of which
is said to be “head.” Thebes being the “ head”
or capital of the Upper Kingdom. His later appli-
cation of Diospolis Magna (Διοσπολις ἡ μεγάλη)
answers also to the Egyptian title Ammeni or
"abode of Annu," -Amen or Zeus, the ram-headed
god, being the principal object of worship at Thebes.
The name Tarpe or Thebes applied to the entire city
on either bank of the Nile; but the western quarter
had the distinct name of Pathyra, transferred to Ptolemy
(iv. 5. § 69), Tathyris, as being under the special protection of Athor, who is sometimes
called the President of the West. The necropolis, indeed,
the Libyan side was appropriately placed under

VOL. II.
the guardianship of this deity, since she was believed to receive the sun in her arms as he sank behind the western hills. This quarter, again, in the age of the Ptolemies, was termed "the Libyan suburb," which was subdivided also into particular districts, such as the Memnonia (râ Menaouéié, Ymns, Hieroglyph. Literatur., pp. 69, 73) and Thynanum, where the priests of Osiris were interred. (Wilkinson, Anc. Egyptians, vol. v. p. 387.)

The power and prosperity of Thebes arose from three sources — trade, manufactures, and religion. Its position on the Nile, near the great avenues through the Arabian hills to the Red Sea, and to the interior of Libya through the western desert, rendering it a common entrepôt for the Indian trade on the one side, and the caravan trade with the gold, ivory, and aromatic districts on the other, and its comparative vicinity to the mines which intersect the limestone borders of the Red Sea, combined to make Thebes the greatest emporium in Eastern Africa, until Alexandria turned the stream of commerce into another channel. It was also celebrated for its linen manufacture — an important fabric in a country where a numerous priesthood was interdicted from the use of woollen garments (Pīn. ix. 1. 4). The glass, pottery, and intaglios of Thebes were also to high repute, and generally the number and magnitude of its edifices, sacred and secular, must have attracted to the city a multitude of artisans, who were employed in constructing, decorating, or repairing them. The priests alone and their attendants doubtless constituted an enormous population.

Thebes stood in the relation occupied by Rome in medieval Christendom, — it was the sacerdotal capital of all who worshipped Ammon from Pelusium to Axum, and from the Oases of Libya to the Red Sea.

The history of Thebes is not entirely the same with that of Egypt itself, since the predominance of the Upper kingdom implies a very different era in Egyptian annals from that of the lower, or the Delta. It may perhaps be divided into three epochs: 1. The period which preceded the occupation of Lower Egypt by the Assyrian nomades, when it is doubtful whether Memphis or Thebes were the capital of the entire country, or whether indeed both the Thebaid and the Delta were not divided into several smaller states, such as that of Heliopolis in the N., and Abydos in the S., the rivals respectively of Memphis and Thebes. 2. The interval between the expulsion of the Assyrians by Thothmes, and the 21st dynasty of Tanite kings. During all this period, Thebes was unquestionably the capital of all the Nile-valley, from the Mediterranean to the island of Argo in lat. 19° 31' N. 3. The period of decadence, when the government of Aegypt was centered in the Delta, and Thebes was probably little more than the head-quarters of the sacerdotal caste and the principal refuge of old Egyptian life and manners. And this threefold division is rendered the more probable by the consideration that, until the Assyrian empire became formidable, and Phoenicia important from its maritime power, Aethiopia, rather than Arabia or Syria, was the formidable neighbour of Aegypt.

Under the Old Monarchy there is no trace of Egyptian dominion extending beyond the peninsula of Sinai, the northern shores of the Red Sea, or the Libyan tribes adjoining the Delta. During this period invasion was apprehended almost exclusively from the S. The Aethiopians were no less war-like, and perhaps as civilised, as the Aegyptians; they had crossed the Soudan in their progress, and in regions north of the Cataracts, and they were then, as the Syrians and north-eastern states became after wards, the immediate objects of war, treaties, or intermarriages with the Pharaohs of Thebes. When the Theban state was powerful enough to expel the Assyrian nomades, it must have already secured the alliance or the subjection of Aethiopia; and the attention of its rulers was therefore directed to the recent threatened power of the Babylonian Kingdom. Accordingly we find that while only one name in the Thebaid and one in Middle Egypt were assigned to the native militia, the bulk of the Calasarians and Hermopolitans was permanently quartered in the Delta.

The greatness of Thebes commences with the 18th dynasty of the Pharaohs, and the immediate cause of it appears to have been the collective efforts of the Upper Country to expel the Assyrian shepherds from the Delta. The Thebaid and its capital were, probably, at no period occupied by these invaders; since, according to Manetho's account of the 17th dynasty, there were then two contemporaneous kingdoms in Aegypt — the Delta governed by the Hyksos, and the Thebaid by native monarchs. Thoutmosis, king of Thebes, was the principal agent in the expulsion of the intruders, and his exploits against them are commemorated on the temples at Karnak. Memphis and the Delta, together with the lesser states, such as Xais, delivered from the invaders, therefore pushed under the dominion of the kings of Thebes. Its flourishing era lasted nearly eight centuries, i. e. from about 1600 to 800 B.C.

During this period the most conspicuous monarchs were Amonemnius I., who appears, from the monuments, to have received divine honours after his decease, and to have been regarded as the second founder of the monarchy. He probably carried his arms beyond the north-eastern frontier of the Delta into Syria, and his presence in Aethiopia is recorded in a grotto at Ibrin near Abou-simbil. The victories or conquests of Amonemnius in the N. and S. are inferred from the circumstance that in the sculptures he is represented as destroying or leading captive Asiatic and Aethiopian tribes. Next in succession is Thothmes I., with whose reign appears to have begun the series of Theban edifices which excite the wonder of the Greeks, who beheld them almost in their original magnificence, and of all subsequent travellers. The foundations, at least, of the palace of the kings were laid by this monarch. Thothmes also, like his predecessors, appears, from the monuments, to have made war with Assyria, and to have extended his dominion as high up the Nile as the island of Argo in upper Nubia. Thothmes II. maintained or even enlarged the realm which he inherited, since his name has been found at Gebel-Birkel, the Napata of the Romans, lat. 18° 30' N. At this period Aethiopia was apparently an appendage of the Theban kingdom, and its rulers or viceroys seem to have been of the blood royal of Aegypt, since now for the first time, and until the reign of Seti I, Mesnephthah (Rosellini, Mon. Reg. tab. xxii. — iv.), we meet with the title of the royal son or prince of Aethiopia. The records of this reign have nearly perished; the great obelisks of Karnak, however, attest the flourishing condition of contemporary art. They were erected by Amen, the sister of Thothmes II., who appears, like the Nitocris of the
Old Monarchy, to have exercised the functions of royalty. The reign of Thothmes III. is one of the most splendid in the annals of the 18th dynasty. The frontiers of Aegypt extended S. a little beyond the second cataract, and E. nearly to Mount Sinai. Thothmes III. c. 1500 B.C. erected in itself many of the structures begun by his predecessors, e.g. the palace of the kings,—and generally enriched the cities of the Thebaid with sumptuous buildings. He commenced the temple at Amada, which was completed by Amenophis II. and Thothmes IV; and his name was inscribed on the monuments of Ombi, Apollonopolis Magna, and Edfitha. Thebes, however, was the centre of his architectural labours, and even the ruins of his great works there have served to adorn other capital cities. In the Hippodrome of Constantinople is a mutilated obelisk of the reign of Thothmes III., which was brought from Aegypt by one of the Byzantine emperors, and which originally adorned the central court of Karnak. Again the obelisk which Pope Sixtus V. set up in front of the church of St. John Lateran at Rome, the loftiest and most perfect structure of its kind, was first raised in this reign, and bears its founder's titles on the central column of its hieroglyphics. The records of this reign are inscribed on two interesting monuments,—a painting in a tomb at Gournah (Hoskins, Travels in Aethiopia, p. 437, foll.; Wilkinson, Mod. Egypt and Thebes, vol. ii. p. 234), and the great Tablet of Karnak, which is strictly an historical and statistical document, and which, there can be little doubt, is the very Tablet which the priests of Thebes exhibited and expounded to Cæsar, Gergamennius, B.C. 16 (Tac. Ann. ii. 60). From the paintings and the hieroglyphics, so far as the latter have been read, on these monuments, it appears that in this reign tribute was paid into the Theban treasury by nations dwelling on the borders of the Caspian sea, on the banks of the Tigris, in the kingdom of Meroe or Aethiopia, and by the more savage tribes who wandered over the eastern flank of the great Sahara. Thirteen expeditions, indeed, of Thothmes III. are distinctly registered, and the 35th year of his reign, according to Lepsius, is recorded. At this period the kingdom of Thebes must have been the most powerful and opulent in the world. Of the son of Thothmes, Amenophis II., little is known; but he also added to the erections of Thebes, and reared other monuments in Nubia. Inscriptions found at Surabéth-Kaundin, in the peninsula of Sinai, record his name, and at Prinias (Horion) he appears in a stele, or excavated chapel, seated with two principal officers, and receiving the account of a great chase of wild beasts.

Next in importance, though not in succession, of the Theban kings of the 18th dynasty, is Amunoph, or Amenophis III. His name is found at Toenbois, near the third Cataract, and he permanently extended the frontiers of the Theban kingdom to Soloth, a degree further to S. than it had hitherto reached. These extensions are not only geographically, but commercially important, inasmuch as the farther southward the boundaries extended, the nearer did the Aegyptians approach to the regions which produced gold, ivory, gems, and aromatics, and the more considerable, therefore, was the trade of Thebes itself. Only on the supposition that it was for many generations one of the greatest emporiums in the world can we understand the lavish expenditure of its monarchs, and its fame among northern nations as the greatest and richest of cities.

And this consideration is the more important towards a correct estimate of the resources of the Theban kingdom, since its proper territory barely sufficed for the support of its dense population, and there is no evidence of it having any remarkable commerce or traffic by sea. It is probably that the monuments of Amenophis III. stretched to within five days' journey of Azume on the Red Sea; for a scarabaeus inscribed with his name and that of his wife Taia mentions the land of Karioi or Kabori, supposed to be Coloe (Rosellini, Mon. Stor. iii. 1, 261; Birch, Gall. Brit. Mus. p. 283), as their southern limit. Thebes was enriched by this monarch with two vast palaces, one on the eastern, the other on the western bank of the Nile. He also commenced and erected the greater portion of the buildings at luxor. On the walls of their chambers Amenophis was designated "the vassal of the Memnlonian," an unknown people, and the "facilitator of Aegypt." From the fragment of a monolithic granite statue now in the Louvre, it may be inferred that his victories were obtained over negro races, and consequently were the results of campaigns in the eastern desert. Theorer of Abydos, is a large city which has a further claim to notice, since he was probably the Monnion, son of Aurora, whom Achilles slew at the siege of Troy. Of all the Aethiopian works the Memnonian statues, from their real magnitude and from the fabulous stories related of them, have attracted the largest share of attention. By the word Memnon the Greeks understood an Aethiopian or man of dark complexion (Steph. B. s. c; Agathem. ep. Gr. Geograpli. Min. or rather, perhaps, a dark-cumplexioned warrior (comp. Jnhstath, ad ii. v. 639); and the term may very properly have been applied to the conqueror of the southern land, who was also hereditary prince of Aethiopia. The statues of Memnon, which now stand alone on the plain of Thebes, originally may have been the figures at the entrance of the huge dromos of cino-sphinxes which led up to the Memnonian or palace of Amenophis. Of the eastern and northern limits of the Theban kingdom under the third Amenophis, we have no evidence similar to that afforded by the tablet of Karnak; yet from the monuments of his battles we may infer that he levied tribute from the Arabsians on the Red Sea and in the peninsula of Sinai, and at one time pushed his conquests as far as Mesopotamia. According to Manetho he reigned 31 years: his tomb is the most ancient of the sepulchres in the Bib-el-Melook; and even so late as the Ptolemaic age he had divine honours paid him by a special priest-college called "The pantophori of Amenophis in the Memnonia." (Kenrick, Anciant Aegypt, vol. ii. p. 246.)

Setei Menephtihus is the next monarch of the 18th dynasty who, in connection with Thebes, deserves mention. Besides the temples which he constructed at Amada in Nubia and at Sisilis (Siseleb), he began the great palace called Memnephthion in that city, although he left it to be completed by his successors Ramessus II. and III. From the paintings and inscriptions on the ruins at Karnak and Luxor it appears that this monarch triumphed over five Asiatic nations as well as over races whose position cannot be ascertained, but whose features and dress point to the interior of Libya. The tomb and sarcophagus of Setei Menephtihus were discovered by Belzoni in the Bib-el-Melook. (Travels, vol. i. p. 167.) If he be the same with the Sethon of the lists, he reigned 50 or 51 years. When he came to
the name of Rameses II. and III., the latter of whom is the Sesostris of Herodotus, and who may therefore be regarded as a clearly historical personage. There can be no doubt of the greatness of Thebes under these kings. In this, as in many other in-
stances where Egypt is concerned, the monuments of the country enable us to approach the truth, while the credulity of the Greek travellers and his-
torians in accepting the narratives of the Egyptian priests — naturally eager, after their subjection by the Persians, to exalt their earlier condition — only tends to bewildermis and misleading. Thus, for example, Diodorus (i. 54) was informed that Sesostris led into the field 600,000 infantry and 50,000 cavalry; and that, with 27,000 chariots; and he appeals to the passage already cited from Homer to show that Thebes sent so many chariots out of its hundred gates. There is no evidence that the Egyptians then possessed a fleet in the Mediterranean; yet Diodorus numbers among his conquests the Cyclades, and Dicaearchus (Schol. in Apoll. Rhod. iv. 272) assigns to him "the greater part of Europe." The monuments, on the contrary, record nothing so incredible of this monarch; although if we may infer the extent of his conquests and the number of his victories from the space occupied on the monuments by their pictorial records, he carried the armies of Egypt beyond any previous boundaries, and united among his subjects races as various as those which, nearly 17 centuries later, were ruled by Trajan and the Antonines. The reign of Rameses was of 60 years' duration, that is nearly of equal length with his life, for the first of his victories—that recorded on the propylaeum of the temple of Luxor, and much more fully on those of Abousimbel — was gained in his fifth year. We must refer to works professedly dealing with Eg-
ypian annals for his history: here it will be sufficient to observe of Rameses or Sesostris that he added to Thebes the Ramesseum, now generally admitted to be the "monument of Osyman-
dyus," upon the western bank of the Nile; that he was distinguished from all his predecessors by the extent of his conquests and the wisdom of his laws; and among his subjects for his strength, cunning, and valour. The very pre-emience of Rameses III. has, indeed, obscured his historic value. To him we ascribed many works of earlier and of later monarchs,—such as the canal of the Pharaohs, be-
tween the Nile and the Red Sea; the dykes and embankments which rendered the Delta inhabitable; the great wall, 1,500 stadia in length, between Pes-
thosium and Heliopolis, raised as a barrier against the Syrians and Assyrians; a re-partition of the land of Egypt; the law of hereditary occupation (Aratot. Pol. vii. 10); and foreign conquests, or at least expeditions into Western Asia, which rendered tributary to him even the Celchian and the Bac-
trians. (Tact. Ann. ii. 60.)
With the 21st dynasty appear the traces of a revolution affecting the Upper Kingdom. Taute and Babastis Pharaohs are now lords of the Nile-valley; and these are succeeded by an Aethiopian dynasty, mak-
ing invasion and occupation of the Thebaid by a foreigner. Perhaps, as Egypt became more in-
volved with the affairs of Asia—a result of the con-
quests of the house of Rameses—it may have proved expedient to remove the seat of government nearer to the Syrian frontier. The dynasty of Sethos, the Aethiopian, however, indicates a revolt of the pro-
vinces S. of the cataracts; and even after the A-
ethiopians had withdrawn, the Lower Kingdom re-

THEBAE AEGYPTI.

of the kings,"— whose sculptures so copiously illustrate the history, the arts, and the social life of Aegypt. On this side there are also the remains of temples, palaces, and halls of assembly or judicature, with their vast enclosures of walls and their long avenues of sphinxes. But the western quarter of the town was the more important, for the court to a great extent, and for the service of religion and the state, while the mass of the population was contained in the eastern. Yet the numbers who inhabited the western side of the city must have been considerable, since each temple had its own establishment of priests, and each palace or public edifice its proper officers and servants. Still we shall probably be correct in describing the eastern quarter as the civil, and the western as the royal and ecclesiastical, portion of Thebes. At present zo obelisks have been discovered in the western quarter, but, with this exception, the monuments of Goerrhe and Medinet-Aboo yield little in grandeur, beauty, or interest to those of Luxor and Karnak, and in one respect indeed are the more important of the two, since they afford the best existing specimens of Aegyptian colossal or portrait statues.

Beginning then with the western quarter,—the Memnonia of the Ptolemic times,—we find at the northern limit of the plain, about three quarters of a mile from the river, the remains of a building to which Champollion has given the name of Menephteion, because the name of Setei-Menepthah is inscribed upon its walls. It appears to have been both a temple and a palace, and was approached by a drone of 128 feet in length. Its pillars belong to the oldest style of Aegyptian architecture, and its bas-reliefs are singularly fine and well preserved.

The next remarkable ruin is the Memnonium of Strabo (xvii. p. 728), the tomb of Osymandyas of Diodorus, now commonly called the Ramessium on the authority of its sculptures. The situation, the extent, and the beauty of this relic of Thebes are all equally striking. It occupies the first base of the hills, as they rise from the plain; and before the alluvial soil had encroached on the lower ground, it must have been an even more imposing object from the hill than it now appears. The inequalities of the ground on which it was erected were overcome by flights of steps from one court to another, and the Ramessium actually stood on a succession of natural terraces improved by art. The main entrance from the city is flanked by two pyramidal towers: the first court is open to the sky, surrounded by a double colonnade, and 140 feet in length and 18 in breadth. On the left of the staircase that ascends to the second court still stands the pedestal of the statue of Ramses, the largest, according to Diodorus (i. 49), of the colossal of Aegypt. From the dimensions of its foot, parts of which still remain, it is calculated that this statue was 54 feet in height and 22 feet 4 inches in breadth across the shoulders. The court is strewed with its fragments. How it was erected, or how overthrown in a land not liable to earthquakes, are alike subjects of wonder; since, without mechanical aids wholly beyond the reach of barbarians, it must have been almost as difficult to cast it down from its pedestal as to transport it originally from the quarries. The walls of the second court are covered with sculptures representing the wars of Rameses III., a continuation and complement of the historical groups upon the interior walls of the pylon. Diodorus (i. 47) speaks of "monolithic figures, 16 cubits high, supplying the place of columns," and these are probably the pillars of this second court. He also mentions the attack of a city surrounded by a river; and this group of sculpture, still extant, identifies the Memnonium with the monument of Osymandyas. A third flight of stairs conducts from the court to a nucleus, according to the plan, was used for public assemblies. A sitting statue of Rameses flanked each side of the steps, and the head of one of them, now called the young Memnon adorns the British Museum. The columns and walls of the court are covered with sculptures partly of a religious, partly of a civil character, representing the homage of the 23 sons of Rameses to their parent and his offerings to the gods. Nine smaller apartments succeed to the hall. One of these was doubtless the library or "Dispersary of the Mind" (\(\text{φυς} \text{λατρεων}\) of which Diodorus (i. 49) speaks, since in it are found sculptures of Thoth, the inventor of letters, and his companion Saf, the "lady of letters" and "President of the Hall of Books." This chamber had also at one time an astronomical ceiling adorned with the figures or symbols of the Aegyptian months; but it was carried off by the Persians, and the Greek traveller Hecataeus &c., knew of it only from hearsay. Of the nine original chambers, two only remain, the one just described, and a second, in which Rameses is depicted sacrificing to various deities of the Theban Pantheon. Beneath the upper portion of the Memnonium rock-septuplures and brick graves have been discovered, both coeval with the Ramsesean dynasty (Lepsius, Ren. Arch. Jan. 1845). The entire area of the Memnonium was enclosed by a brick wall, in the double arches of which are occasionally imbedded fragments of still more ancient structures, the remains probably of the Thebes which the 18th dynasty of the Pharaohs enlarged and adorned. A dronos NW. of the Memnonium, formed of not less than 300 sphinxes, and at least 1600 feet in length, led to a very ancient temple in a recess of the Libyan hills. This was probably a place of strength before the lowlands on each side of the Nile were commonly converted by drainage and masonry into the solid area upon which Thebes was built. The next object which meets the traveller's eye is a mound of rubbish, the fragments of a building once occupying the ground. It is called by the Arabs <i>KAAM-EL-HATTAM</i>, or mountain of sandstone, and is composed of the ruins of the Amonophenion, the palace or temple of Amonoph III.—the Memnon of the Greeks. About a quarter of a mile distant from the Amonophenion, and nearer to the Nile, are the two colossal statues called <i>Tama</i> and <i>Chama</i> by the natives, standing isolated on the plain and eminent above it. The most northerly of these statues is the celebrated vocal Memnon. Their present isolation, however, is probably accidental, and arises from the subsidence or destruction of an intermediate dromos, of which they formed the portals, and which led to the Amonophenion. These statues have already been described in the Dictionary of Biography, s. v. Memnon [Vol. II, p. 1028.] It may be added here that the present height of these colossal figures, inclusive of the pedestal, is 60 feet. The alluvial soil, however, rises to nearly one half of the pedestal, and as there is an inscription of the age of Antoninus Pius, A. D. 139, foll., i. e. about 1720 years old, we obtain some measure of the amount of deposition in so many centuries. The blocks from which
THEBÆ AEGYPTI.

the statues are formed of composed of a coarse, hard breccia, intermixed with a scoriaceous pebbles. (Hassægger, Relaen, vol. ii. pt. 1. p. 410.) The village of Medinet-Aboo stands about one third of a mile SW. of Komos-el-Bartima, upon a lofty mound formed by the ruins of the most splendid structure in western Thebes. It consisted of two portions, a temple and a palace, connected with each other by a pylon and a dromos. The temple was the work of successive monarchs of the name of Thothmes, and hence has received the name of the Thothmesion. Apparently this site found favour with the sovereigns of Aegypt in all ages, since, either on the main building or on its numerous outworks, which extend towards the river, are inscribed the names of Tuthahk, the Aethiopian, of Nectanebus, the last independent king of Aegypt, of Ptolemy Soter II., and of Antoninus Pius. The original Thothmesion comprises merely a sanctuary surrounded by galleries and eight chambers; the additions to it represent the different periods of its patrons and architects. The palace of Ramses—the southern Ramesion of Champollion—for exceeds in dimensions and the splendour of its decorations the Thothmesion. It stands a little S. of the temple, nearer the foot of the hills. The dromos which connects it is 265 feet in length. The sculptures on the pylon relate to the coronation of Rameses IV., and his victories over the Aethiopians. A portion of the southern Ramesion seems to have been appropriated to the private uses of the king. The mural decorations of this portion are of singular interest, inasmuch as they represent Ramses in his hour of privacy and recreation.

The walls of the southern Ramesion generally are covered both on the inside and the out with representations of battles, sacrifices, religious processions and ceremonies, relating to the 18th dynasty. A plain succeeds, bounded by sand-hills and heaps of Nile-mud. It is variously described by modern travellers as the site of a race-course, of a camp or barrack, or an artificial lake, over which, according to Sir Gardner Wilkinson, the dead were carried to the neighboring necropolis. Whatever may have been its purpose, this plain is of considerable extent, being somewhat less than a mile and half in length, and more than half a mile in breadth.

The contrast between the portion of Thebes once crowded with the living, and that which was equally thronged with the dead, is less striking now, when the whole city is a desert or occupied only by a few straggling villages. But under the Phœnicians the vicinity of life and death must have been must solemn and expressive. From Gurnumh to Medinet-Aboo the Linian hills, along a curve of nearly 6 miles, are honey-combed with sepulchres, and conspicuous among them are the Tombs of the Kings, situated in the valley of Pablo-el-Melook. The Theban necropolis is excavated in the native calcareous rock. The meaner dead were interred in the lower ground, where the limestone is of a softer gran, and more exposed to decomposition by wind and water. This portion of the cemetery has, accordingly, fallen into decay. But the upper and harder strata of the hills are of finer and more durable texture, and here the priest-caste and nobles were interred. The tombs of the lower orders are generally without sculpture, but filled with mummies of animals accounted sacred by the Aegyptians. A favourite companion in death appears to have been the ape; and such numbers of this animal have been found in one portion of the necropolis that the valley containing their mummies bears the name of the "Apes' Burial Place." Upon the graves of the upper classes painting and sculpture were lavished in a measure hardly inferior to that which marks the sepulchres of the kings. The entire rock is tunnelled by them, and by the galleries and staircases which led to the various chambers. The entrances to these tombs are rectangular, and open into passages which either pierce the rock in straight lines, or wind through it by ascending and descending shafts. Where the limestone is of a crumbling nature, it was supported by brick arches, and drains were provided for carrying off standing or casual water. The walls of these passages and chambers were carefully prepared for the artist. Rough or circular portions were cut out, and their place filled up with bricks and plaster. Their entire surface was then covered with stucco, upon which the paintings were designed and highly coloured. The decorations are rarely in relief, but either drawn on the flat surface, or cut into the stucco. They are mostly framed in squares of cheeker and arabesque work. The subjects portrayed within these frames or niches are very various,—ranging through religious ceremonies and the incidents of public or private life. The ornaments of these tombs may indeed be termed the miniature painting of the Aegyptians. Within a space of between 40 and 50 feet no less than 1200 hieroglyphics are often traced, and finished with a minute delicacy unsurpassed even in buildings above ground, which were meant for the eyes of the living.

The Royal Sepulchres, however, form the most striking feature of the Theban necropolis. They stand in a lonely and barren valley, seemingly a natural chasm in the limestone, and resembling in its perpendicular sides and oblong shape a sarcophagus. At the lower end of this basin an entrance has been cut—there seems to be no natural mode of ingress—in the rock. Forty-seven tombs were, at one time, known to the ancients. (Diodor. i. 46.) Of these twenty or twenty-one have been counted by modern explorers. Here reposed the Theban Pharaohs from the 18th to the 21st dynasty. The only tombs, hitherto discovered, complete are those of Amenoph III., Ramses Mennam, and Ramesses III. To prepare a grave seems to have been one of the duties or pleasures of Aegyptian royalty; and since the longest survivor of these monarchs rests in the most sumptuous tomb, it may be inferred that the majority of them died before they had completed their last habitation.

The queens of Aegypt were buried apart from the kings, in a spot about three-fourths of a mile NW. of the temple of Medinet-Aboo. Each of them bears the title of "Wife of Amun," indicating either that their consorts combined with their proper names that also of the great Theban deity, or that, after death, they were dignified by apotheosis. Twenty-four tombs have at present been discovered in this cemetery, twelve of which are ascertained to be those of the queens. The least injured of them by time or violence bears the name of Taia, wife of Amenoph III. On the eastern bank of the Nile, the monuments are even more magnificent. The villages of Luxor and Karanack occupy a small portion only of the true Delta. The ruins at Luxor stand close to the river. The ancient landing place was a jetty of stone, which
Thebes Aegypti

also served to break the current of the stream. The most remarkable monuments are two obelisks of Rameses III., respectively 70 and 60 feet high, one of which still stands there, while the other has been removed to the Place de la Concorde at Paris. Their unequal height was partially concealed from the spectator by the lower obelisk being placed upon the higher pedestal. Behind them were two monolithic statues of that monarch, in red Syenite granite. These are now covered from the breeze downwards with rubbish and fluvial deposit, but were, originally, including their chairs or bases, 30 feet high. Next succeeds a court, surrounded by a corridor of double columns, 190 feet long and 170 broad. It is entered through a portal 51 feet in height, whose pyramidal wings are inscribed with the battles of Rameses. On the opposite side of the court a second portal, erected by Amnom III., opens upon a colonnade which leads to a smaller court, and this again terminates with a portico composed of four rows of columns, eight in each row. Beyond the third portico follows a considerable number of apartments, flanking a sanctuary on the walls of which are represented the birth of Amnom, and his presentation to Ammn.

A dromos of andro-sphinxes, and various buildings now covered with sand and dried mud, formerly connected the quarter of eastern Thebes, represented by Luxor, with that represented by Karkam. Near to the latter place a portion of the dromos still exists, and a little to the right of it a second dromos of cary-sphinxes branches off, which must have been one of the most remarkable structures in the city. It led up to the palace of the kings, and consisted of a double row of statues, sixty or seventy in number, each 11 feet distant from the next, and each having a lion's body and a ram's head. The SW. entrance of the palace is a lofty portal, followed by four spacious courts with intervening gateways. The grandeur of the palace is, in some degree, lessened by later additions to its plan, for on the right side of the great court was a cluster of small chambers, while on its left were only two apartments. Their object is unknown, but they probably served as lodgings or offices for the royal attendants. In the first of the two main courts stand two obelisks of Thothmes I., one in fragments, the other still erect and uninjured. In a second court to the right of the first, there were two obelisks also; the one which remains is 92 feet high. The oldest portion of the palace of Karkam appears to be a few chambers, and some polygonal columns bearing the shield of Sesostris I. To these—the nucleus of the later structures—Thothmes III. made considerable additions; among them a chamber whose sculptures compose the great Karkam Tablet, so important a document for Aegyptian chronology.

But the Great Court is surpassed in magnificence by the Great Hall. This is 80 feet in height, and 329 feet long by 179 broad. The roof is supported by 154 columns, 12 in the centre and 122 in the aisles. The central columns are each 66 feet high, clear of their pedestals, and each 11 feet in diameter. The pedestals were 10 feet high, and the abaci over their capitals, on which rested the architraves of the ceiling, was 4 feet in depth. The columns were each about 27 feet apart from one another. The aisle-columns stood in 7 rows, were each 41 feet high, and 9 feet in girth. Light and air were admitted into the building through openings in the side walls. The founder of the palace was Seti-Menepthah, of the 18th dynasty; but one reign cannot have sufficed for building so gigantic a court, and we know indeed not only that many of the historical bas-reliefs which cover the walls were contributed by his son, Rameses II., but also that the latter added to the Great Hall, on its NW. side, a vast hypethral court, 275 feet in breadth, by 329 in length. This, like the hall, had a double row of columns down its centre, and a covered corridor round its sides. Four gateways opening to the four quarters gave admission into this court: and to the principal one which fronted the Nile an avenue of cary-sphinxes led up, headed by two granite statues of Rameses.

The purpose for which these spacious courts and their annexed halls and esplanades were erected was perhaps partly religious, and partly secular. Though the kings of the 18th and succeeding dynasties had ceased to be chief-priests, they still retained many ceremonial functions, and the sacred calendar of Aegypt abounded in days of periodical meetings for religious objects. At such panegyrics the priests alone were a host, and the people were not excluded. From the sculptures also it appears that the Court of Royal Palaces was the place where troops were reviewed, embassies received, captives executed or distributed, and the spoils or honours of victory apportioned. Both temples and palaces also served occasionally for the encampment of soldiers and the administration of justice. The temperature of the Thebaid rendered vast spaces indispensable for the congregation of numbers, and utility as well as pomp may have combined in giving their colossal scale to the structures of the Pharaohs.

In the Great Hall a great number of the columns are still erect. The many which have fallen have been undermined by water loosening the soil below; and they fall the more easily, because the architraves of the roof no longer hold them upright. The most costly materials were employed in some parts of the palace. Cornices of the finest marble were inlaid with ivory mouldings or sheathed with beaten gold.

These were the principal structures of the eastern moiety of Thebes; but other dromoi and gateways stand within the circuit of its walls, and by their sculptures or inscriptions attest that the Macedonian as well as the native rulers extended, renovated, or adorned, the capital of the Upper Country. The eastern branch of the dromos which connected Luxor with Karkam appears from its remains to have been originally 500 feet in length, and composed of a double row of ram-headed lions 50 in number. The lofliest of Aegyptian portals stands at its SW. extremity. It is 64 feet high, but without the usual pyramidal propyla. It is indeed a work of the Greek era, and was raised by Ptolemy Euergetes I. Rameses V. and Rameses VIII. added temples and a dromos to the city. Nor was Thebes without its benefactors even so late as the era of Roman Caesars. The name of Tiberius was inscribed on one of its temples; and Hadrian, while engaged in his general survey of the Empire, directed some repairs or additions to be made to the temple of Zena-Amon. That Thebes, as Herodotus and Diodorus saw it, stood upon the site and incorporated the remains of a yet more ancient city, is rendered probable by its sudden expansion under the 18th dynasty of the Pharaohs, as well as by vast apertures of its architecture, more in affinity with the monuments S. of the cataracts than with the proper Aegyptian style. It seems hardly questionable that...
Thebes was indebted for its greatness originally to its being the principal centre of Ammon-worship,—a worship which, on the one hand, connected it with Meroe, and, on the other, with the islands of the Libyan desert. The strength which the Thebaid and its capital thus acquired not only enabled it to rise superior to Abydus in the earlier period, but also to expel the Assyrian invaders from the Delta. It becomes then an interesting question which quarter of Thebes was its cradle? Did it spread itself from the eastern or the western shore of the Nile? Both Diodorus and Strabo are agreed in placing the "old town," with its Ammonian temple, on the eastern bank of the river; and this site too was the more accessible of the two, whether its population came from the left or, as it is more likely they did, from the right shore. Between Luxor and Karnak lies the claim to be considered as the site of the earliest Thebopolis. Now in the former place there is no conspicuous trace of Ammon-worship, whereas the latter, in its ram-headed dromos, abounds with symbols of it. At Karnak, every monument attests the presence of Ammon. Osiris indeed appears as his son or companion on the sculptures, and in some of the temple-legends they were represented as joint founders of the shrine. But Ammon was without doubt the elder of the two. We may accordingly infer that the first Thebes stood nearly on the site of the present Karnak, at a period anterior to all record; that it expanded towards the river, and was separated by the whole breadth of the stream and of the plain to the foot of the Libyan hills from the necropolis. Finally, that as its population became too large for the precincts of the eastern plain, a suburb, which grew into a second city, arose on the opposite bank of the Nile; and thus the original distinction between eastern and western Thebes partially disappeared, and the river, having thenceforward habitations on both its banks, no longer parted by a broad barrier the city of the living from the city of the dead.

(Kenrick, Ancient Egypt under the Pharohs, vol. i. pp. 149-178; Heren, Historical Researches, Thebes and its Monuments, vol. ii. pp. 201—342; Champollion, Lettres sur l'Egypte: Hamilton, Aegyptiaca; Belzoni, Travels, etc.)

The territory of Thebes was named Thebais (ἡ Θηβαί), sc. Χώρα, or οἱ ἄνω τόποι, the Upper Country, Prov. iv. 5, & 62), the modern Sais or Fauth, and was one of the three principal divisions of Egypt. Its frontiers to the S. varied accordingly as Aegypt or Aethiopia preponderated, the Theban Pharohs at times ruling over the region above the Cataracts as far S. as Hiera Sycaminia lat. 23° 5' N.; while, at others, the kings of Meroe planted their garrisons N. of Syene, and, at one period, occupied the Thebais itself. But the ordinary limits of Upper Aegypt were Syene to S., lat. 24° 5' N., and Hermopolis Magna to N., lat. 25° 45' N. On the E. it was bounded by the Arabian, on the W. by the Libyan hills and desert. As rain seldom falls in the Thebais (Herod. iii. 10), and as its general surface is rocky or sandy, the breadth of cultivable land depends on the alluvial deposit of the Nile; and this again is regulated by the conformation of the banks on either side. For a similar cause the population of the Thebais was mostly gathered into towns and large villages, both of which are often dignified by ancient writers with the appellation of polis. But not only were they incompatible with the physical character of this region, and its population must have been considerably below the estimate of it by the Greeks and Romans. The Thebais was divided into ten nomes (Strab. xvi. p. 787), and consequently ten halls in the Labyrinth were appropriated to its Nomarchs. But this number apparently varied with the boundaries of Upper Aegypt, since Pliny (v. 9) enumerates eleven, and other writers mention fourteen Nomes. The physical aspect of the Thebais requires especial notice, since it differed, both geologically and in its Fauna and Flora, from that of Lower Aegypt.

For the most part it is a narrow valley, intersected by the river and bounded by a double line of hills, lofty and abrupt on the eastern or Arabian side, lower and interrupted by sandy plains and valleys on the Libyan or western. The desert on either side produces a stupefied vegetation of shrubs and herbs, which emit a slight aromatic odour. The cultivable soil is a narrow strip on each side of the Nile, forming, with its bright verdure, a strong contrast to the brown and arid hue of the surrounding district. The entire breadth of this valley, including the river, does not exceed 11 miles, and sometimes is contracted by the rocky banks of the Nile even to two.

Upper Aegypt belongs to Nubia rather than to the Heptanomis or the Delta. Herodotus (iii. 10) was mistaken in his statement that rain never falls in the Thebais. It is, however, of rare occurrence. Showers fall annually during four or five days in each year, and about once in eight or ten years heavy rains fill the torrent-beds of the mountains, and convert the valleys on either side of the Nile into temporary pools. That this was so even in the age of Hecataeus and Herodotus is proved by the circumstance that the lions on the cornices of the Theban temples have pipes in their mouths to let the water off.

But the fertility of the Thebais depends on the overflow of the Nile. From Syene nearly to Latopolis, lat. 25° 17' N., the cultivable soil is a narrow rim of alluvial deposit, bounded by steep walls of sandstone. On the Arabian shore were the quarries from which the great temples of Upper Aegypt were constructed. At Apollinopolis Magna (Edfu) the sandstone disappears from the W. bank of the river, and on the E. it extends but a little below that city. Four miles below Eilithya, the limestone region begins, and stretches down nearly to the apex of the Delta, and on the Libyan side in terraces to the Mediterranean. At this point a greater breadth of land is cultivable, and in the Arabian hills deep gorges open towards the Red Sea, the most considerable of which are the valleys that run from Eilithya in a S.E. direction to Berenice, and from Copotos, past the porphyry quarries, to Coseir on the Red Sea. The tanks and stations for the caravans which the Theban Pharohs or the Pharaohs constructed in these valleys are still occasionally found buried in the sand. At Lastomen the Nile-valley is nearly 5 miles wide, but it is again contracted by the rocks at Gebelein, where, owing to the precipitous character of the banks, the road quits the river and crosses the eastern desert to Hermomis.

The next material expansion of the Nile-valley is at the plain of Thebes. At this point both chains of hills curve boldly away from the river, and leave an area of more than 5 miles in length and 3 in breadth. At the northern extremity of this plain the Cataracts were numerous, and Gebelein are almost close to the Nile. Re-opening again, the
THEBAE AEGYPTI.

borders of the stream as far as Hermopolis Magna, the northern boundary of the Thebaid, generally extended south about a mile from the Nile, on the W. about two miles. They do not indeed ob-

serve an unbroken line, but the alluvial soil, where the months of the collateral valleys permit, occa-
sionally stretches much further into the country. Canals and dykes in the Pharaonic period admitted and retained the Nile's deposit to an extent unknown either in Grecian, Roman, or modern eras.

Seen from the river the Thebaid, in the flourishing periods of Egypt, presented a scene of splended and animated spectacle of cultivation and industry, wherever the banks admitted of room for cities or villages. Of the scenery of the Nile, its teeming population and mul-
titudinous river-craft, mention has already been made in the article NILE. Among many others, the fol-

lowing objects were beheld by those who travelled from Syene to Hermopolis. At first the general appearance of the shores is barren and dreary, Koum-Ombo, the ancient Omb, would first arrest attention by the brilliant colours of its temples, and, at certain seasons of the year, by the festivals held in honour of the crocodile-headed deity Nabak. At times also, if we may credit the Roman satirist (Juvenal, Sat. xv.), the shore at Ombi was the scene of bloody froats with the crocodile exterminators from Teantyra. Sixteen miles below Ombi was the seat of the special worship of the Nile, which at this point, owing to the escape of one mile of its sand-

stone banks, admits of a narrow road only on either side, and seems to occupy the whole breadth of Aegypt. Here too, and on the eastern bank especially are the vast quarries of stone which supplied the Theban architects with their durable and beautiful materials. Various landing-places from the river gave access to these quarries: the names of suc-

cessive sovereigns and princes of the xivith dynasty, their wars and triumphs, are recorded on the rocks; and blocks of stone and monolithic statues are still visible in their galleries. The temples of Apollino-

polis Magna (Delphi), the hypogae of Elitheya, Thebes occupying either bank, Copotos, long the seat of Aegyptian commerce with India, the temples of Athor and Isis at Teantyra, the month of the ancient branch of the Nile, the canal of Jusef at Desopolis Parva, the necropolis of Abydos, near which runs the highroad to the greater Oasis, the linen-works and stone-masons yard of the city, the Ompus (Ekkhain), the sepulchral chambers at Lyopolis, and, finally, the superb portico of Hermopolis Magna, all evince, within a compass of about 380 miles, the wealth, enterprise, and teeming population of Upper Aegypt.

The vegetation of this region announces the ap-

proach to the tropics. The productions of the desert, stunted shrubs and trees, resemble those of the Arabiand Libyan wastes. But wherever the Nile fer-

tines, the trees and plants belong rather to Ethiopia than to the lower country. The sycamore nearly dis-

appears: the Theban palm and the date-palm take its place. The lotus (Nympheoa Lotus and Nympheoa caerulea) is as abundant in the Thebais as the papyrus in the Delta. It is the symbol of the Upper Land: its blue and white cups enliven the pools and canals, and representations of them furnished a frequent and graceful ornament to architecture. Its lath adorned a plentiful and the rich parents to the poorer classes. The deserts of the Thebais, which in Christian times swarmed with monasteries and hermitages, contained the wolf, hyena, and jackal: but the larger carnivorous animals of Libya were rarely seen in Aegypt. (Hered. ii. 63.) In the Pharaonic times the hippopotamus was found in the Nile below the Cataracts: more recently it has sel-
dom been found N. of them. The crocodile, being an object of worship in several of the Theban tombs, was doubtless more abundant than it is now. From both papyri and sculptures we know that the The-

ban landowners possessed horned cattle and sheep in abundance, although they kept the latter for their wool and milk principally, and the chariots of Thebes attested the breeding and training of horses. From extant drawings on the monuments we know also that horticulture was a favourite occupation in Upper Aegypt.

The population of the Thebais was probably of a priper Aegyptian stamp than that of the Delta; at least its admixtures were derived from Arabia or Meroe rather than from Phoenician or Greece. Its revolutions, too, proceeded from the south, and it was comparatively unaffected by those of the Lower Country. Even as late as the age of Tiberius, A.D. 14-37, the land was prosperous, as is proved by the extension and restoration of so many of its pub-
lic monuments; and it was not until the reign of Diodochet that its ruin was commenrated by the in-

road of the Hemmyes, and other barbarous tribes from Nubia and the Arabian desert. (W. B. D.)

THEBAE (Θηβαι, orig. Θῆβαι, Dor. Θῆβα. Eth. Θηβαῖοι, fem. Θηβαῖα, Thēbaioi, Thēbains, fem. Thēbai, the chief city in Boeotia, was situated in the southern plain of the country, which is divided from the northern by the ridge of Orchestus. Both these plains are surrounded by mountains, and contained for a long time two separate confederacies, of which Orchomenus in the north and Thebes in the south were the two leading cities.

I. HISTORY.

No city in Greece possessed such long continued celebrity as Thebes. Athens and Sparta, which were the centres of Grecian political life in the historical period, were poor in mythical renown; while Argos and Mycenae, whose mythical annals are full of glorious recollections, sank into com-
parative insignificance in historical times, and My-

cene indeed was blotted out of the history of Persian wars. But in the mythical ages Thebes shone pre-eminent, while in later times she always maintained her place as the third city of Greece; and after the battle of Leuctra was for a short period the ruling city. The most cele-

brated Grecian legends cluster round Thebes as their centre; and her two sieges, and the fortunes of her royal houses, were the favourite subjects of the tragic muse. It was the native city of the great seer Teiresias and of the great musician Amphion. It was the reputed birthplace of the two deities Dryas and Herules, whence Thebes is said by Sophocles to be "the only city where mortal women are the mothers of gods (ον δη μείναι τιτωνων απι δηναλ

ς, Soph. in fragm. ap. Dacier, § 17, ed. Müller; Mure, Tour in Greece, vol. i. p. 233.)

According to the generally received tradition, Thebes was founded by Cadmus, the leader of a Phoenician colony, who called the city Cadmeia (Καδμεία), a name which was afterwards confined to the citadel. In the Odyssey, Amphion and Zen-

thus, the two sons of Antiope by Zeus, are repre-

sented as the first founders of Thebes and the first
builders of its walls. (Od. xi. 262.) But the logographers placed Amphion and Zethus lower down in the series, as we shall presently see. The legends connected with the foundation of the city by Cadmus are related elsewhere. [Dict. of Biogr. and Myth. art. CADMUS.] The five Sparti, who were the only survivors of the warriors sprung from the dragon's teeth, were the reputed ancestors of the noblest families in Thebes, which bore the name of Sparti down to the latest times. It is probable that the name of their families gave origin to the fable of the sowing of the dragon's teeth. It appears certain that the original inhabitants of Thebes were called Cadmei (Καδμειοι, II. iv. 388, 391, v. 867, x. 288, Od. xi. 276) or Cadmeiones (Καδμειοινες, II. iv. 385, v. 804, xxiii. 680), and that the southern plain of Boeotia was originally called the Cadmeian land (Καδμειανος γη, Thuc. i. 12). The origin of these Cadmeians has given rise to much dispute among modern scholars. K. O. Müller considers Cadmus a god of the Tyrrhenian Pelasgians, and maintains that the Cadmeians are the same as the Tyrrhenian Pelasgians; Welch endeavour to prove that the Cadmeians were a Cretan colony; while other writers adhere to the old traditions that the Cadmeians were Phoenicians who introduced the use of letters into Greece. (Müller, Orchomenos, p. 111, seq., 2nd ed.; Thirlwall, Hist. of Greece, vol. i. p. 111.) It is useless, however, to enter into the discussion of a subject respecting which we possess no materials for arriving at a satisfactory conclusion. It is certain that the Greeks were indebted to the Phoenicians for their alphabet; but whether the Cadmeians were a Phoenician colony or some other race must be left uncertain.

But we must return to the legendary history of Thebes. Cadmus had one son, Polydorus, and four daughters, Io, Semele, Antoës, and Agave, all of whom are celebrated in the mythical annals. The tales respecting them are given in the Dict. de Biogr. and Myth., and it is only necessary to mention here that Io became the wife of Athamas and the mother of Melicertes; Semele was beloved by Zeus and became the mother of the god Dionysus; Antoës was the mother of the celebrated hunter Actæon, who was torn to pieces by the dogs of Artemis; and Agave was the mother of Pentheus, who, when Cadmus became old, succeeded him as king of Thebes, and whose miserable end in attempting to resist the worship of Dionysus forms the subject of the Bacchae of Euripides. After the death of Pentheus, Cadmus retired to the Illyrians, and his son Polydorus became king of Thebes. Polydorus is succeeded by his son Labdacus, who leaves at his death an infant son Laius. The throne is usurped by Lycur, whose brother Nycteus is the father of Antiope, who becomes by Zeus the mother of the twin sons, Amphion and Zethus. Nycteus having died, Antiope is exposed to the persecutions of her uncle Lycur and his cruel wife Clyene, till at length her two sons, Amphion and Zethus, revenge her wrongs and become kings of Thebes. They fortify the city; and Amphion, who had been taught by Hermes, possessed such exquisitely skill on the lyre, that the stones, obedient to his strains, moved of their own accord, and formed the wall ("movit Amphion lapsides caucando," Hor. Car. iii. 11). The remainder of the legend of Amphion and Zethus need not be related; and there can be no doubt, as Mr. Grote has remarked, that the whole story was originally unconnected with the Cadmean family, as it still stands in the Odyssey, and has been interwoven by the logographers into the series of the Cadmean myths. In order to reconcile the Homer's account of the building of the city by Amphion and Zethus with the usually received legend of its foundation by Cadmus, it was represented by later writers that, while Cadmus founded the Cadmeia, Amphion and Zethus built the lower city (την πόλιν την κάτω), and gave to the united city the name of Thebes. (Paus. iii. 5. §§ 2, 6.) After Amphion and Zethus, Laius became king of Thebes; and with him commences the memorable and disastrous history of Thebes. Laius is too well known to need repetition here. When Oedipus was expelled from Thebes, after discovering that he had murdered his father Laius and married his mother Jocasta, his two sons Eteocles and Polynices quarrelled for their father's throne. Their disputes led to the two sieges of Thebes by the Argive Aineas, two of the most memorable events in the legendary history of Greece. They formed the subject of the two epic poems, called the Thebiad and the Aineid, which are considered only inferior to the Iliad and the Odyssey. Polynices, having been driven out of Thebes by Eteocles, retires to Argos and obtains the aid of Aineas, the king of the city, to re-establish him in his rights. Polynices and Aineas are joined by five other heroes, making the confederacy known under the name of the "Seven against Thebes." The names of these seven chiefs were Aineas, Amphiaras, Capaneus, Hippomedon, Parthenopeaus, Tydeus, and Polynices; but there are discrepancies in the lists, as we shall notice more fully below; and Aeschylus (Sept. c. Theb. 461) in particular omits Aineas, and inserts Eteocles in his place. The Seven Chiefs advanced against Thebes, and each attacked one of the celebrated gates of the city. Polynices and Eteocles fell by each other's hands; and in the general engagement which followed the combat of the two brothers, the Argives were defeated, and all their chiefs slain, with the exception of Aineas, who was saved by the swiftness of his horse Amykos, the offspring of Poseidon. A few years afterwards the sons of the Seven Chiefs undertook an expedition against Thebes, to avenge their fathers' fate, hence called the war of the Epigoni or Descendants. This expedition was also led by Aineas, and consisted of Aegeus, son of Aineas, Thersander, son of Polynices, Aneas, son of Amphiaras, and Parthenopeaus, son of Amphiaras, Aineas, son of Tydeus, Theneus, son of Capaneus, and Perimedes, son of Parthenopeaus. The Epigoni gained a victory over the Cadmeians at the river Glaes, and drove them within their walls. Upon the advice of the seer Teiresias, the Cadmeians abandoned the city, and retired to the Illyrians under the guidance of Laomedon, son of Aineas. (Apollod. iii. 7. § 4; Herod. v. 57—61; Paus. ix. 5. § 13; Diod. iv. 65, 66.) The Epigoni thus became masters of Thebes, and placed Thersander, son of Polynices, on the throne. (For a full account of the legends of Thebes, see Grote, Hist. of Greece, vol. i. c. xiv.) According to the mythical chronology, the war of the Seven against Thebes took place 20 years before the Trojan expedition and 30 years before the capture of Troy; and the war of the Epigoni was placed 14 years after the first expedition against Thebes, and consequently only 4 years before the departure of the Greeks against Troy. (Clinton, F. H. vol. i. p. 140.)
THERAE BOEOTIAE.

There is another important event in the mythical times of Thebes, which was not interwoven with the series of the legends already related. This is the birth of Hercules at Thebes, and the important ser-

vices which rendered to his native city by him in his war against Orichemus. It was stated that the Thebans were compelled to pay tribute to Erginus, king of Orichemus; but that they were delivered from the tribute by Hercules, who marched against Orichemus, and greatly reduced its power (Paus. ix. 37. § 2; Strab. ix. p. 414; Dod. iv. 18.).

This legend has probably arisen from the historical fact, that Orichemus was at one time the most powerful city in Boeotia, and held even Thebes in sub-

jection.

Thebes is frequently mentioned in Homer, who speaks of its celebrated seven gates (H. iv. 406, 6th. xi. 263); but its name does not occur in the catalogue of the Greek cities which fought against Troy, as it was probably supposed not to have re-

covered from its recent devastation by the Epigoni. Later writers, however, related that Thersander, the son of Polynices, accompanied Acaimemmon to Troy, and was slain in Mycen by Telephus, before the com-

mencement of the siege; and that upon his death the Thebans chose Penelope as their leader, in conse-

quence of the tender age of Tisamenus, the son of Thersander. (Paus. ix. 5. §§ 14, 15.) In the Iliad (ii. 494) Penelope is mentioned as one of the leaders of the Boeotians, but is not otherwise con-

nected with Thebes.

According to the chronology of Thucydides, the Cadmeians continued in possession of Thebes till 60 years after the Trojan War, when they were driven out of their city and country by the Boeotians, an Aeolian tribe, who migrated from Thessaly. (Thuc. i. 13; Strab. ix. p. 401.) This seems to have been the genuine tradition; but as Homer gives the name of Boeotians to the inhabitants of the country called Boeotia in later times, Thucydides endeavours to reconcile the authority of the poet with the other tradition, by the supposition that a portion of the Aeolic Boeotians had settled in Boeotia pre-

viously, and that these were the Boeotians who sailed against Troy. According to other accounts, Thebes was taken by the Thracians and Pelasgians during the Trojan War, and its inhabitants driven into exile in Thessaly, whence they returned at a later period. (Strab. ix. p. 401; Dod. xix. 53.)

Pausanias gives us a list of the kings of Thebes, the successors of Tisamenus, till the kingly dignity was abolished and a republic established in its place (ix. 5. § 16). But, with the exception of one event, we know absolutely nothing of Theban history, till the dispute between Thebes and Plataea in the latter end of the sixth century B.C.

The event to which we allude is the legislation of Philelus, the Corinthian, who was encomiumed by Diocles, also a Corinthian, and the victor in the Olympic games, n. c. 728. Both Philelus and Diocles left their native city and settled at Thebes, where the former drew up a code of laws for the Thebans, of which one or two particulars are men-

tioned by Aristotle. (Pol. ii. 9. §§ 6, 7.) At the time when Thebes first appears in history, we find it under an oligarchical form of government, and the head of a political confederation of some twelve or fourteen Boeotian cities. The greater cities of Boeotia were members of this confederation, and the smaller towns were attached to one or other of these cities in a state of dependence. [BOEOTIA, p. 415.]

The affairs of the confederation were managed by certain magistrates or generals, called Boeotarchs, of whom there were eleven at the time of the battle of Delium (n. c. 422); they being elected by Thebes, and one appointed by each of the other members of the confederation (Thuc. iv. 91). But the real authority was vested in the hands of the Thebans, who used the power of the confederation with an almost exclusive view to Theban interests, and kept the other states in virtual subjection.

The first well-known event in Grecian history is the dispute, already mentioned, between Thebes and Plataea. The Plataeans, disconsolate with the supremacy of Thebes, withdrew from the Boeotian confederation, and surrendered their city to the Athenians. This led to a war between the Thebans and Athenians, in which the Thebans were defeated and compelled to cede to the Plataeans the territory S. of the Asopps, which was made the boundary between the two states. (Herod. vi. 108; Thuc. iii. 68.) The interference of Athens upon this occasion was bitterly resented by Thebes, and was the commencement of the long enmity between the two states, which exercised an important influence upon the course of Grecian history. This event is usually placed in B.C. 519, upon the authority of Thucydides (l.c.); but Mr. Grove brings forward strong reasons for believing that it must have taken place after the expulsion of Hippia from Athens in B.C. 510. (Hist. of Greece, vol. iv. p. 222.) The hatred which the Thebans felt against the Athenians was probably one of the reasons which induced them to desert the cause of Grecian liberty in the great struggle against the Persian power. But in the Peloponnesian War (n. c. 427) the Theban orator pleaded that their alliance with Persia was not the fault of the nation, but of a few individuals who then exercised despotic power. (Thuc. iii. 62.) At the battle of Plataea, however, the Thebans showed no such reluctance, but fought resolutely against the Athenians, who were posted opposite to them. (Herod. ix. 67.) Eleven days after the battle the victorious Greeks appeared before Thebes, and compelled the inhabitants to surrender their mediating leaders, who were immediately put to death, without any trial or other investigation. (Herod. ix. 87, 88.) Thebes had lost so much credit by the part she had taken in the Persian invasion, that she was unable to assert her former supremacy over the other Boeotian towns, which were ready to enter into alliance with Athens, and would doubtless have established their complete independence, had not Sparta supported the Thebans in maintaining their ascendancy in the Boeotian confederation, as the only means of securing the Boeotian cities as the allies of Sparta against Athens. With this view the Spartans assisted the Thebans in strengthening the fortifications of their city, and compelled the Boeotian cities by force of arms to acknowledge the supremacy of Thebes. (Dod. xi. 81; Justin, iii. 6.) In n. c. 437 the Athenians sent an army into Boeotia to oppose the Lacedaemonian forces in that country, but they were defeated by the latter near Tanagra. Sixty-two days after this battle (n. c. 456), when the Lacedaemonians had returned home, the Athenians, under the command of Myronides, invaded Boeotia a second time. This time they met with the most signal success. At the battle of Pydna the Lacedaemonians were defeated by the combined forces of the Thebans and Boeotians, and obtained in consequence possession of Thebes and of
the other Boeotian towns. A democratic form of government was established in the different cities, and the oligarchical leaders were driven into exile. (Thuc. i. 108; Diod. xi. 81.) This state of things lasted for ten years; the democracy established at Thebes (Herod. ii. 79; Pol. vi. 23; Plut. viii. § 6); and in n. c. 447 the various Boeotian exiles, combining their forces, made themselves masters of Orchomenus, Chaeroneia, and some other places. The Athenians sent an army into Boeotia under the command of Tolmides; but this general was slain in battle, together with many of his men, while a still larger number were taken prisoners. To recover these prisoners, the Athenians agreed to relinquish their power over Thebes and the other Boeotian cities. The democratical governments were overthrown; the exiles were restored; and Thebes again became the bitter enemy of Athens. (Thuc. i. 113, iii. 62; Diod. xii. 6.) The Thebans were indeed more anti-Athenian than were the Spartans themselves, and were the first to commence the Peloponnesian War by their attempt to surprise Plataea in the night, b.c. 431. The history of this attempt, and of the subsequent siege and capture of the city, belongs to the history of Plataea. [PLATAEA.] Throughout the Peloponnesian War the Thebans continued the active and bitter enemies of the Athenians; and upon its close after the battle of Aegospotami they joined the Corinthians in urging the Lacedaemonians to destroy Athens, and sell its population into slavery. (Xen. Hell. ii. 2. § 19.) But soon after this event the feelings of the Thebans towards Athens became materially changed in consequence of their jealousy of Sparta, who had refused the allies all participation in Sparta, who was the war, and who now openly aspire to the supremacy of Greece. (Plut. Lyg. 27; Justin, vi. 10.) They consequently viewed with hostility the Thirty Tyrants at Athens as the supporters of the Spartan power, and gave a friendly welcome to the Athenian exiles. It was from Thebes that Thrasybulus and the other exiles started upon their enterprise of seizing the Pelopaeans; and they were supported upon this occasion by Isaeus and other Thebans, citizens. (Xen. Hell. ii. 4. § 2.) So important was the assistance rendered by the Thebans on this occasion that Thrasybulus, after his success, showed his gratitude by dedicating in the temple of Hercules colossal statues of this god and Athena. (Paus. ix. 11. § 6.)

The hostile feelings of Thebes towards Sparta continued to increase, and soon produced the most important results. When Agis was crossing over into Asia in b.c. 397, in order to carry on war against the Persians, the Thebans refused to take any part in the expedition, and they rudely interrupted Agis when he was in the act of offering sacrifices at Atlas, in imitation of Agamemnon; an insult which the Spartan king never forgave. (Xen. Hell. iii. 5. § 5; Plut. Ages. 6; Paus. iii. 9. §§ 3—5.) During the absence of Agis in Asia, Tithraustes, the satrap of Asia Minor, sent an envoy to Greece to distribute large sums of money among the leading men in the Greek cities, in order to persuade them to make war against Sparta. But before a coalition could be formed for this purpose, a separate war broke out between Thebes and Sparta, called by Diodorus (xiv. 81) the Boeotian war. A quarrel having arisen between the Opuntian Locrians and the Phocians respecting a strip of border land, the Thebans espoused the cause of the former and invaded Phocias. Thereupon the Phocians invoked the aid of the Lacedaemonians, who were delighted to have an opportunity of avenging the affronts they had received from the Thebans. (Xen. Hell. iii. 5. §§ 3—5; Paus. iii. 9. § 9.) The Lacedaemonians, with preparations to invade Boeotia, Lysander, who had been forewarned that during the war, was to lay siege to Haliartus, under the walls of which town Pausanias was to join him on a given day with the united Lacedaemonian and Peloponnesian forces. Thus menaced, the Thebans applied for assistance to their ancient enemies, the Athenians, who readily responded to their appeal, though their city was still undefended by walls, and they had neither to resist the maritime power of Sparta. (Xen. Hell. iii. 5. § 16; Dem. de Cor. p. 278.) Orchomenus, however, seized the opportunity to revolt from Thebes, and joined Lysander in his attack upon Haliartus. (Xen. Hell. iii. 5. § 17; Plut. Lyg. 28.) The death of Lysander under the walls of Haliartus, which was followed by the retreat of Pausanias from Boeotia, emboldened the enemies of Sparta; and not only Athens, but Corinth, Argos, and some of the other Grecian states joined Thebes in a league against Sparta. In the following year (n. c. 394) the war was transferred to the territory of Corinth; and so powerful were the confederates that the Lacedaemonians recalled Agisians from Asia. In the month of August Agisians reached Boeotia on his homeward march, and found the confederate army drawn up in the plain of Coronea to oppose him. The right wing and centre of his army were victorious, but the Thebans completely defeated the Orchenmarians, who turned the battle; the latter of which the war was about to begin, in order to regain the rest of their army, which had retreated to Mount Helicon. Agisians advanced to meet them; and the conflict which ensued was one of the most terrible that had yet taken place in Grecian warfare. The Thebans at length succeeded in forcing their way through, but not without great loss. This was the first time that the Thebans had fought a pitched battle with the Spartans; and the valor which they showed on this occasion was a prelude to the victories which were soon to overthrow the Spartan Supremacy in Greece. (Xen. Hell. iv. 3. §§ 15—21.)

We have dwelt upon these events somewhat at length in order to explain the rise of the Theban power; but the subsequent history must be related more briefly. After the battle of Coronea the course of events appeared at first to deprive Thebes of the ascendency she had lately acquired. The peace of Antalcidas (n. c. 387), which was concluded under the influence of Sparta, guaranteed the independence of all the Grecian cities; and though the Thebans at first claimed to take the oath, not in their own behalf alone, but for the Boeotian confederacy in general, they were compelled by their enemy Agisians to swear to the treaty for their own city alone, since otherwise they would have had to contend single-handed with the whole power of Sparta and her allies. (Xen. Hell. v. 1. §§ 32, 33.) By this oath the Thebans virtually renounced their supremacy over the Boeotian cities; and Agisians hastened to exert all the Spartan power for the purpose of weakening Thebes. Not only was the independence of the Boeotian cities proclaimed, and a legal oligarchy organised in each city hostile to Thebes and favourable to Sparta, but Lacedaemonian garrisons were
THEBAE BOEOTIAE.

stationed in Orchemonens and The-pisae for the purpose of overawing Boeotia and the city of Platea, was built to serve as an outpost of the Spartan power. (Paus. ix. 1. § 4.) A more direct blow was aimed at the independence of Thebes in n. c. 382 by the seizure of the Cadmeia, the citadel of the city, by the Spartan commander, Phoebidas, assisted by Leontiades and a party in Thebes favorable to Sparta. Though Phoebidas appears to have acted under secret orders from the Ephors (Diod. xvi. 20; Plat. Agr. i. 13), the Peloponnesians, having thus been excited throughout Greece by this treachery act in time of peace, that the Ephors found it necessary to disavow Phoebidas and to remove him from his command; but they took care to reap the fruits of his crime by retaining their garrison in the Cadmeia. (Xen. Hell. v. 2. § 25.) Many of the leading citizens at Thebes took refuge at Athens, and were received with the same kindness which the Athenian exiles experienced at Thebes after the close of the Peloponnesian War. Thebes remained in the hands of the Spartan party for three years; but in n. c. 379 the Spartan garrison was expelled from the Cadmeia, and the party of Leontiades overthrown by Pelopidas and the other exiles. The history of these events is too well known to be repeated here. In the following year (n. c. 378) Thebes formed an alliance with Athens, and with the assistance of this state resisted with success the attempts of the Leontiadians to reduce them to submission; but the continued increase of the power of the Thebans, and their destruction of the city of Plataea [PLATAEA] provoked the jealousy of the Athenians, and finally induced them to conclude a treaty of peace with Sparta, n. c. 371. This treaty, usually called the peace of Callias from the name of the leading Athenian negotiator, included all the parties in the late war with the exception of the Thebans, who were thus left to contend single-handed with the might of Sparta. It was universally believed that Thebes was doomed to destruction; but only twenty days after the signing of the treaty all Greece was astounded at the news that a Macedonian army had been utterly defeated, and their king Cleomenes slain, by the Thebans, under the command of Epaminondas, upon the fatal field of Leuctra (B.C. 371). This battle not only destroyed the prestige of Sparta and gave Thebes the ascendancy of Greece; but it also destroyed the power of the other states of the league, over whom she had exercised dominion for centuries, and led to the establishment of two new political powers in the Peloponnesus, which threatened her own independence. These were the Arcadian confederation and the restoration of the state of Messenia, both the work of Epaminondas, who conducted four expeditions into Peloponnesus, and elicted the councils of Thebes for the next 10 years. It was to the abilities and genius of this extraordinary man that Thebes owed her position at the head of the Greek states; and upon his death, at the battle of Mantinea (n. c. 362), she lost the pre-eminence she had enjoyed since the battle of Leuctra. During their supremacy in Greece, the Thebans were of course undisputed masters of Boeotia, and they availed themselves of their power to wreak their vengeance upon Orchomenos and Thebes, the two towns which had been the most active in the injury of their authority. They in the north and the other in the south of Boeotia. The Orchomenians had in n. c. 395 openly joined the Spartans and fought on their side; and the Thebans had withdrawn from the Theban army just before the battle of Leuctra, when Epaminondas gave permission to any Boeotians to retire who were opposed to the Thebans. (Paus. ix. 13. § 8.) The Thebans were expelled from their city and Boeotia soon after the battle of Leuctra [THESPISAI]; and Orchemonens in n. c. 368 was burnt to the ground by the Thebans; the male inhabitants were put to the sword, and all the women and children sold into slavery. (OCHOMENUS.)

This colony which Athens had felt towards Thebes before the peace of Callias had been greatly increased by her subsequent victories; and the two states appear henceforward in their old condition of hostility till they were persuaded by Demosthenes to unite their arms for the purpose of resisting Philip of Macedon. After the battle of Mantinea their first open war was for the possession of Euboea. After the battle of Leuctra this island had passed under the supremacy of Thebes; but, in n. c. 358, discontent having arisen against Thebes in several of the cities of Euboea, the Thebans sent a powerful force into the island. The discontented cities applied for aid to Athens, which was readily granted, and the Thebans were expelled from Euboea. (Diod. xvi. 7.: Dem. de Cherono, p. 108, de Cor, p. 259, c. Ctesiph. p. 397.) Shortly afterwards the Thebans commenced the war against the Phocians, usually known as the Sacred War, and in which almost all the leading states of Greece were eventually involved. Both Athens and Sparta supported the Phocians, as a counterpoise to Thebes, though they did not render them much effectual assistance. This war terminated, as is well known, by the intervention of Philip, who destroyed the Phocian towns, and restored to Boeotia Orchemonens and the other towns which the Phocians had taken away from them, n. c. 346. The Thebans were still the allies of Philip, when the latter seized Elateia in Phocis towards the close of n. c. 339, as preparatory to a march through Boeotia against Athens. The old feeling of ill-will between Thebes and Athens still continued; Philip calculated upon the good wishes, if not the active co-operation, of the Thebans against their old enemies; and probably never dreamt of a confederation between the two states as within the range of probability. This union, however, was brought about by the eloquence of Demosthenes, who was sent as ambassador to Thebes, and who persuaded the Thebans to form an alliance with the Athenians for the purpose of resisting the ambitious schemes of Philip. In the following year (n. c. 338) Philip defeated the combined forces of Thebes and Athens at the battle of Chaeroneia, which crushed the liberties of Greece, and made it in reality a province of the Macedonian monarchy. On this fatal field the Thebans maintained the reputation they had won in their battles with the Spartans; and their Sacred Band was cut to pieces in their ranks. The battle was followed by the surrender of Thebes, which Philip treated with great severity. Many of the leading citizens were either banished or put to death; a Macedonian garrison was stationed in the Cadmeia; and the government of the city was placed in the hands of 300 citizens, the partisans of Philip. The Thebans were also deprived of their sovereignty over the Boeotian towns, and Athens and Platea were restored, and again filled with a population hostile to Thebes. (Diodor. xvi. 87; Justin, ix. 4: Paus. iv. 27. § 10, ix. 1. § 8.) In the year after Philip's death (n. c. 335) the Theban exiles got possession of the city,
besieged the Macedonian garrison in the Cadmeia, and invited the other Greek states to declare their independence. But the rapidity of Alexander’s movements disconcerted all their plans. He appeared in Orchomenus to Boeotia before any intelligence had arrived of his quitting the north. He was willing to allow the Thebans an opportunity for repentance; but as his proposals of peace were rejected, he directed a general assault upon the city. The Theban troops outside the gates were driven back, and the Macedonians entered the town along with them. A dreadful carnage ensued; 6000 Thebans are said to have been slain, and 3000 taken prisoners. The doom of the conquered city was referred to the Greek allies in his army, Orchomenians, Plataeans, Phocians, and other inveterate enemies of Thebes. Their decision must have been known beforehand. They decreed that Thebes should be razed to the ground, with the exception of the Cadmeia, which was to be held by a Macedonian garrison; that the territory of the city should be divided among the allies; and that all the inhabitants, men, women, and children should be sold as slaves. This sentence was carried into execution by Alexander, who levelled the city to the ground, with the exception of the house of Pindar (Arrian, ii. 8. 9; Diodor. xvii. 12—14; Justin, xi. 4.) Thebes was thus blotted out of the map of Greece, and remained without inhabitants for the next 20 years. In n. c. 315, Cassander undertook the restoration of the city. He united the Theban exiles and their descendants from all parts of Greece, and was zealously assisted by the Athenians and other Greek states in the work of restoration. The new city occupied the same area as the one destroyed by Alexander; and the Cadmeia was held by a garrison of Cassander. (Diodor. xix. 52—54, 78; Paus. i. 7. § 4.) Thebes was twice taken by Demetrius, first in n. c. 293, and a second time in 290, but on each occasion he used his victory with moderation. (Plut. Demetr. 39, 40; Dod. xxii. p. 491, ed. Wess.)

Dicaearchus, who visited Thebes not long after its restoration by Cassander, has given a very interesting account of the city. "Thebes," he says (§ 12, ed. Müller), "is situated in the centre of Boeotia, and is about 70 stadia in circumference; its site is level, its shape circular, and its appearance gloomy. The city is ancient, but it has been lately rebuilt, having been three times destroyed, as history relates," on account of the insidious and haughtiness of its inhabitants. It is well adapted for rearing horses since it is plentifully provided with water, and abounds in green pastures and hills; it contains also better gardens than any other city in Greece. Two rivers flow through the town, and irrigate all the subjacent plain. There is also a subterraneous stream issuing from the Cadmeia, through pipes, said to be the work of Cadmus. Thebes is a most agreeable residence in the summer, in consequence of the abundance and coolness of the water, its large gardens, its agreeable breezes, its verdant appearance, and the quantity of summer and autumnal fruits. In the winter, however, it is a most disagreeable residence, from being destitute of fuel, and constantly exposed to floods and winds. It is then often covered with snow and very muddy." Although Dicaearchus,

in this passage gives to Thebes a circumference of 70 stadia, he assigns in his verses (Stat. Græc. 93) a much smaller extent to it, namely 43 stadia. The latter number is the more probable, and, being in metre, is more likely to be allowable; but if the number in prose is correct, it probably includes the suburbs and gardens outside the city walls. Dicaearchus also gives an account of the character of the inhabitants, which is too long to be extracted. He represents them as noble-minded and sanguine, but insolent and proud, and always ready to settle their disputes by fighting rather than by the ordinary course of justice.

Thebes now had a full share in the latter calamities of Greece. After the fall of Corinth, n. c. 146, Mummius is said to have destroyed Thebes (Liv. Epit. 52), by which we are probably to understand the walls of the city. In consequence of its having sided with Mithridates in the war against the Romans, Sulla deprived it of half its territory, which he dedicated to the gods, in order to make compensation for his having plundered the temples at Olympia, Epidaurus, and Delphi. Although the Romans afterwards restored the land to the Thebans, they never recovered from this blow (Paus. ix. 7. § 5-6); and so low was it reduced in the time of Augustus and Tiberius that Strabo says that it was little more than a village (ix. p. 403). In the time of the Antonines, Pausanias found the Cadmeia alone inhabited, and the lower part of the town destroyed, with the exception of the temples (ix. 7. § 6). In the decline of the Roman Empire, Thebes became the seat of a considerable population, probably in consequence of its inland situation, which afforded its inhabitants greater security than the maritime towns from hostile attacks. In the eleventh and twelfth centuries Thebes was one of the most flourishing cities in Greece, and was celebrated for its manufactures of silk. In a. d. 1040 the Thebans took the field to oppose the Bulgarian invaders of Greece, but were defeated with great loss. (Cedren, p. 747, ed. Paris., p. 529, ed. Bonn.) In a. d. 1146 the city was plundered by the Normans of Sicily, who carried off a large amount of plunder (Nicetas, p. 50, ed. Paris., p. 95, ed. Bonn.) Benjamin of Tudela, who visited Thebes about 20 years later, speaks of it as still a large city, possessing 2000 Jewish inhabitants, who were very skilful manufacturers of silk and purple cloth (i. 47, ed. Asher; Friehay, Byzantine Empire, vol. i. p. 493, vol. ii. p. 199). The silks of Thebes continued to be esteemed even at a later period, and were worn by the emperors of Constantinople. (Nicetas, p. 297, ed. Paris., p. 600, ed. Bonn.) They were, however, gradually supplanted by those of Sicily and Italy; and the loss of the silk trade was followed by the rapid decline of Thebes. Under the Turks the city was again reduced, as in the time of Pausanias, to the site of the Cadmea.

11. Topography.

Thebes stood on one of the hills of Mount Teumessos, which divide southern Boeotia into two distinct parts, the northern being the plain of Thebes and the southern the valley of the Asopus. The Greeks, in founding a city, took care to select a spot where there was an abundant supply of water, and a hill naturally defensible, which might be easily converted into an acropolis. They generally preferred a position which would command the adjacent plain, and which was neither immediately upon the coast nor
yet at a great distance from it. But as Boeotia lies between two seas, the founders of Thebes chose a spot in the midst of both; where water was very plentiful, and where the nature of the ground was admirably adapted for defence. The hill, upon which the town stands, rises about 150 feet above the plain, and lies about 2 miles northward of the highest part of the ridge. It is bounded on the east and west by two small rivers, distant from each other about 6 or 7 stadia, and which run in each deep ravine as to form a natural defence on either side of the city. These rivers, which flow a little south of the city, and flow northward into the plain of Thebes, are the celebrated streams of Ismenus and Dirce. Between them flows a smaller stream, which divided the city into two parts, the western division containing the Cadmeia*, and the southern the hill Ismenus and the Amphion. This middle torrent is called Chopus by Leake, but more correctly Strophius (Callim. Hymn. in Del. 76) by Forchhammer. The Chopus is a torrent flowing from the town Chopia, and contributing to form the Ismenus, whence it is correctly described by the Scholastus Nicander as the same as the Ismenus. (Strab. i. p. 404; Nicand. Thes. 889, with Schol.) The three streams of Ismenus, Dirce, and Strophius unite in the plain below the city, to which Callimachus (τ. c.) appears to allude:—

Δέκα τε Στροφίς τε μελαμφυρόδος ἔχουσιν Ἰσμενοῦ χίνα πατρός.

The middle torrent is rarely mentioned by the ancient writers; and the Ismenus and Dirce are the streams alluded to when Thebes is called Ἐντότασας πώλας. (Eurip. Suppl. 622; comp. Phoen. 825, Iph. in Taur. 5, Hec. 572.) Both the Ismenus and Dirce, though so celebrated in antiquity, are nothing but torrents, which are only full of water in the. winter after heavy rains. The Ismenus is the eastern stream, now called Λί Ισμαί, which rises from a clear and copious fountain, where the small church of St. John stands, from which the river derives its name. This fountain was called in antiquity Melia, who was represented as the mother of Ismenus and Teneus, the hero of the plain which the Ismenus inundates. It was sacred to Ares, who was said to have stationed a dragon to guard it. (Callimach. Πνευμ. in Del. 80; Spanheim, ad loc.; Pind. Pyth. xi. 6; Paus. ix. 10, § 5; Forchhammer, Hellenica, p. 113.) The Dirce is the western stream, now called Patl kotia, which rises from several fountains, and not from a single one, like the Ismenus. A considerable quantity of the water of the Platkotia is now diverted to supply the fountains of the town, and it is represented as the parent of the Theban streams; and it appears to have been so regarded in antiquity likewise, judging from the epithets bestowed upon it by the poets. (Ἀγαμ. ἱδρυ, Pind. Ἰσμ. vi. 109, καλλιφόρας, Ἰσμ., viii. 43; Ἱηαί δικαιώσεις εὐφράγεται παλαιότατοι, Aesch. Sept. c. Théb. 307; καλλιφόρας, Eurip. Phoen. 647; Δέκα τε Στροφίς πάνω Ισμενική, Hec. Furt. 578.)

Though the position of Thebes and of its celebrated streams is certain, almost every point connected with its topography is more or less doubtful. In the other cities of Greece, which have been inhabited continuously, most of the ancient buildings have disappeared; but nowhere has this taken place more completely than at Thebes. Not a single trace of an ancient building remains; and with the exception of a few scattered remains of architecture and sculpture, and some fragments of the ancient walls, there is nothing but the site to indicate where the ancient city stood. In the absence of all ancient monuments, there must necessarily be great uncertainty; and the three writers who have investigated the subject upon the spot, differ so widely, that Leake places the ancient city to the south of the Cadmeia, and Ulrici to the north of it, while Forchhammer supposes both the western heights between the Strophia and the Dirce to have been in a certain sense the Cadmeia, and the lower city to have stood eastward, between the Strophia and the Ismenus. In the great difficulty of arriving at any independent judgment upon the subject without a personal inspection of the site, we have adopted the hypothesis of Forchhammer, which seems consistent with the statements of the ancient writers.

The most interesting point in Theban topography is the position of the seven celebrated Theban gates. They are alluded to by Homer (Ὀθηνις ἔδος ἐπ' ἄτομοι, Od. xi. 263) and Heiiai (ἰππάμων Ὁθηνις, Op. 161); and their names are given by seven different authors, whose statements will be more easily compared by consulting the following table. The numeral represents the order in which the gates are mentioned by each writer. The first line gives the names of the gates, the second the names of the Argive chiefs, the third the emblems upon their shields, and the fourth the names of the Theban chiefs.

Nunnus designates five of the gates by the names of the gods and the planets, and to the other two, to which he gives the names of Electrae and Oncae, he also adds their position. Hygini calls the gates by the names of the daughters of Amphion; and that of Ogygia alone agrees with those in the other writers. But, dismissing the statements of Nunnus and Hygini, whose authority is of no value upon such a question, we find that the remaining five writers agree as to the names of all the seven gates, with two or three exceptions, which will be pointed out presently. The position of three of the gates is quite clear from the description of Pausanias alone. These are the Electiae, Proeitides, and Neitae. Pausanias says that Electaea is the gate by which a traveller from Platea enters Thebes (ix. 8, § 6); that there is a hill, on the right hand of the gate, sacred to Apollo, called the Isimene, since the river Ismenus runs in this direction (ix. 10, § 2); and that on the left hand of the gate are the ruins of a house, where it was said that Amphitryon lived, which is followed by an account of other ancient monuments on the Cadmeia (ix. 11, § 1). Hence it is evident that the gate Electaea was in the south of the city, between the hills Ismenus and Cadmeia. The gate Proeitides was on the north-eastern side of the city, since it led to Chalcis (ix. 18, § 5). The gate Neitae was on the north-western side of the city, since it led to Orchetus and Delphi; and the river which Pausanias crossed, could have been no other than the Dirce (ix. 23, §§ 1, 3, ix. 26, § 5). The names of these three gates are the same in all the five writers; the manuscripts of Apollodorus have the corrupt word Οὐσίβρατος, which has been supplied by the editors in Proeitides, instead of Νήσαρα, which was the reading suggested by Porson (ad Eurip. Phoen. 1150), and adopted by Valckenaer. (See Unger, Thebana Paradoxa, vol. i. p. 313.)
### Table of the Eight Gates of Athens According to Seven Writers

### Notes
- Of the other four gates, the Memphians also claim, and the statement of Heyson is the same in all the writers. Of the remaining, according to the other writers (G. Heyson, A. Myn., C. Ch.), the names are the same in all the writers. Of the remaining, according to the other writers (G. Heyson, A. Myn., C. Ch.), the names are the same in all the writers. Of the remaining, according to the other writers (G. Heyson, A. Myn., C. Ch.), the names are the same in all the writers. Of the remaining, according to the other writers (G. Heyson, A. Myn., C. Ch.), the names are the same in all the writers.
eastern side of the city, the gate Homoloides must have been on the southern side, as the Proctides lay towards the east. But this is mere conjecture; and Leake supposes, with quite as much probability, that the Homoloides was on the north-western side of the city, since the Thebans would re-enter the city in that direction on their return from Homole.

The divisions of the city, and its monuments, of which Pausanias has given a full description, must be treated more briefly. The city, as already remarked, was divided into two parts by the torrent Strophia, of which the western half between the Strophia and the Dirce was the Cadmeia, while the eastern half between the Strophia and the Ismenus

PLAN OF THEBES FROM FORCHHAMMER.
was the lower city (ιἱ κατω πόλις), said to have been divided by Amphion and Zethus. (Paus. ix. 5. §§ 2, 6.) The acropolis was again divided by a slight depression near the fountain of Dirce and the Cre- 
san gate into two hills, of which the larger and the 
higher one to the south was the acropolis proper, and was called the Cadmeia κατ’ ἑξοχήν, 
while the northern hill formed the agora of the 
acropolis (τίς ἀκρωτήτως ἁγόρα, Paus. ix. 12. 
§ 3). The eastern half of the city was also divided 
between the Strophia and the Ismenus into two parts, 
of which the southern consisted of the hill Ismenus, 
and the northern of several smaller eminences known 
under the general name of Amphion. (Ἀμφιόων, 
Arrian, Amb. i. 8.) Aeschylus describes the tomb of 
Amphion as standing near the northern gate. 
(Βορβάυαι πολαί τούμων κατ’ αὐτὸν Διογένους Ἀμφίωνος, Sept. c. Theb. 528.) Hence Thebes 
consisted of four parts, two belonging to the acropolis, 
and to the other city, the former being the acropolis 
proper and the agora of the acropolis, and 
the latter being the hill Ismenus and the Amphion. 
Pausanias, leaving Potniae, entered Thebes on the 
south by the gate Electae, before which he noticed 
the Polyantrium, or tomb of the Thebans who fell 
fighting against Alexander. (Paus. ix. 8. §§ 4, 7, 
ix. 10. § 1.) The explanation of Forchhammer that 
Alexander laid siege to the city on the south, and 
that he did not return from the gate Electae to the 
Proetidae, as Leake supposes, seems the most 
probable. Accordingly the double lines of cir-
cumvalation, which the Thebans erected against the 
Macedonian garrison in the Cadmeia, must have 
been to the south of the city around the chief gates 
of the Cadmeia. (See Arrian, i. 7. § 8.) Upon enter-
ing the city through the gate Electae, Pausanias 
notices the hill Ismenius sacred to Apollo, named 
from the river Ismenus flowing by it (ix. 10. § 2). 
Upon the hill was a temple of Apollo, containing 
several monuments enumerated by Pausanias. This 
temple is likewise mentioned by Pindar and Herod-
atus, both of whom speak of the tripods situated in 
its treasury. (Pind. Pyth. xi. 7. seq.; Herod. v. 59.) 
Above the Ismenium, Pausanias noticed the fountain 
of the Ismenus, sacred to Are, and guarded by a 
dragon, the name of which fountain was Melia, as 
we have already seen (ix. 10. § 5). 
Next Pausanias, beginning again from the gate 
Electae, turns to the left and enters the Cadmeia 
(ix. ii. § 1, seq.). He does not mention the acro-
polis by name, but it is evident from the list of the 
monuments which he gives that he was in the Cad-
meia. He enumerates the house of Amphitryon, 
containing the bedchamber of Alcmene, said to have 
been the work of Trophonius and Agamedes; a mo-
ument of the children of Hercules by Megara; the 
stone called Sophroniter: the temple of Hercules 
(Ὑπακείων, Arrian, Amb. i. 8); and, near it, a 
Gymnasion and stadium, both bearing the name of 
this God; and above the Sophroniter an altar of 
Apollo Speleus. 
Pausanias next came to the depression between the 
acropolis and the agora of the Cadmeia, where he 
noticed an altar and statue of Athena, bearing the 
Phoenician surname of Onqa (Οψα), or Onqa 
(Οὔσα) according to other authorities, and said to 
have been dedicated by Cadmea (ix. 12. § 2). We 
know from Aeschylus that there was originally a 
temple of Athena Onqa in this locality, which stood 
outside the city on one of the gates, whence this 
goddess was called ἄγχυτητθ. Some derived the 
name from a village named Onqa or Onca. (Aesch. 
Sept. c. Theb. 163, 487, 501, with schol.; Schol. in 
Eurip. Phoen. 1069; Steph. Byz. s. v. Olympis; 
Hesych. s. v. Ωὔσα; Schol. ad Pind. Ol. ii. 39, 
48; Tezze, ad Lycophr. 1225; Phavorinus, s. v. 
Οὔσα.) Sophocles also speaks of two temples of 
Athena at Thebes (πρὸς Παλλάδας Ὕλησις φαίνει, 
Oed. Tyr. 20) in which, in one of which, according to 
the Scholast, she was surnamed Onqa, and in the 
other Ismenia. In the valley between the two hills, 
there are still the remains of an aqueduct, partly 
under and partly above ground, to which Deussen 
refers (Πέρσης καὶ Καλλικρητῆς Ἀτείνια 
καὶ πολυνήμων ἄγαλμα, l. c.) 
In the agora of the Cadmeia the house of Cadmus 
is said to have stood; and in this place were shown 
ruins of the bedchamber of Harmonia and Semele; 
statues of Dionysus, of Pronyes, the celebrated 
musician, and of Epaminondas; a temple of 
Ammon; the place where Teiresias observed the flight 
of birds; a temple of Fortune; three wooden statues 
of Aphrodite, with the surnames of Urania, Pausin-
na, and Aepistroph; and a temple of Demeter 
Thesmophoros. (Paus. ix. 12. §§ 3-5, ix. 16. 
§§ 1-5.) 
Crossing the torrent Strophia, Pausanias saw near 
the gate Proetidae the theatre with the temple of 
Dionysus (ix. 16. § 6). In this part of the city, to 
which Forchhammer gives the name of Amphion, 
the following monuments are mentioned by Pausan-
ias (ix. 16. § 7, ix. 17. §§ 1-4): ruins of the 
temple of Lycus and a monument of Semele; mo-
ments of the children of Amphion; a temple of Ar-
temis Eucleia, and, near it, statues of Apollo Boc-
domnus and of Hermes Agoraenus; the funeral pie 
(ποιγόν) of the children of Amphion, distant half 
a stadium from their tombs; two statues of Athena 
Zeodera; and the monument of Zethus and Amphion, 
being a mound of earth. As the lower city was de-
serted in the time of Pausanias, he does not mention 
the agora; but there is no doubt that it contained 
one, if not more, since Sophocles speaks of several 
agoras (Oed. Tyr. 29). 
Outside the gate Proetidae, on the road to Chal-
cis, Pausanias names the monuments of Melanippus, 
Tydeus, and the sons of Oeidipus, and 15 stadia 
beyond the latter the monument of Teiresias. Pausa-
nias also mentions a tomb of Hector and one of As-
phiocides, at the fountain Oediopolea, which is perhaps 
the modern fountain of St. Theodore. On the same 
road was the village Teinemius. (Paus. ix. 15. 
ix. 19. § 1.) After describing the road to Chalics, 
Pausanias returns to the gate Proetidae, outside 
which, towards the X, was the gymnasion of Iolaus, 
a stadium, the heroon of Iolaus, and, beyond the 
stadion, the hippodrome, containing the monument 
of Pindar (ix. 23. §§ 1, 2). Pausanias then comes to 
the road leading from the Ogyian or Northern 
gate, to Areopagum, after which he re-
turns to the city, and enumerates the objects outside 
the gate Neois. Here, between the gate and the 
river Dirce, were the tomb of Menecles, the son of 
Creon, and a monument marking the spot where the 
two sons of Oeidipus slew each other. The whole 
of this locality was called the Syrma (Σύρμα) of 
Amphi-
cone, because, being unable to carry the dead body 
of her brother Polyneices, she dragged it to the 
fune-
ral pile of Exeleus. On the opposite side of the 
Dirce were the ruins of the house of Pindar, and a 
temple of Dinymene (ix. 25. §§ 1, 2). Pausanias 
then appears to have returned to the gate Neois and
followed the road which ran from this gate to Onchætus. He first mentions a temple of Themis, then temples of the Fates and of Zeus Agoræus, and, a little further, a statue of Hercules, named Rhinocélosus, because he here cut off the noses of the heralds. Twenty-five stadia beyond was the grove of Demeter Caberia and Persphone, and 7 stadia further a temple of the Cabeiri, to the

centre of the city, looking towards the sea. (Leake, *Northern Greece*, vol. iv. p. 358.)

**THEBAI.** [THEBAE ΑΞΕΥΠΤΩΝ.]

*THEBE (*Θήβη*), a famous ancient town in Arcadia, at the southern foot of Mount Pæius, which is often mentioned by Homer as governed by Agamemnon, the father of Andromache (*II. l. 366, vi. 357, xxxii. 470*). The town is said to have been destroyed during the Trojan War by Achilles (*II. ii. 691; Strab. xii. pp. 584, 585, 612, foll.*) It must have been restored after its first destruction, but it was decayed in the time of Strabo, and when Titinius (v. 32) wrote it had entirely disappeared. The belief of some of the ancient grammarians (Erym. M. s. v.; Didym. *ad Hom. H. l. 386; Diam. ed Heidet. Scut. 49; and Eustath. ad *Hom. H.* ii. 691) that Thebes was only another name for Adriamytum, is contradicted by the most express testimony of the best writers. Xenophon (*Anab.* viii. 8, § 7) places it between Antandra and Adriamytum, and Strabo, perhaps more correctly, between Adriamytum and Carina, about 80 stadia to the north-east of the former. (Comp. Pomp. Mela, i. 18; Steph. B. s. r.) Although this town par excellence at an early period, its name remained celebrated throughout antiquity, being attached to the neighbouring plain (Οἰνὸνα πεδίου, Campus Thebanus), which was famed for its fertility, and was often ravaged and plundered by the different armies, whom the events of war brought into this part of Asia. (Herod. vii. 42; Xenoph. l. c.; Strab. xii. p. 588; Liv. xxxvii. 19.) Stephanus B. (s. e. v.) mentions another town of this name as belonging to the territory of Milletos in Asia Minor. [L. S.]

**THECHES (Θηχης), one of the highest points of Mount Paryndes in Pontus, south-east of Trapanes, on the borders of the country inhabited by the Mærones. From it the Ten Thousand Greeks under Xenophon for the first time descried the distant Euxine. (*Xenoph. Anab.* iv. 7, § 21.) Diodorus Siculus (xiv. 29) calls the mountain Χάνων ἔρημος; but it still bears its ancient name *Thekich*. (Ritter, *Erdbau der., ii. p. 768.*) [L. S.]

**THECOA.** [ΤΕΚΟΑ.]

**THEGANUSA.** [ΜΗΣΕΝΙΑ, p. 342, b.]

**THEISOA (ΘΗΙΟΘΗ: Eθ. ΘΗΙΟΘΟΥ).** 1. A town of Arcadia, in the district Cynuria or Parrhasia, on the northern slope of Mt. Lycaeus, called after the nymph Thiasa, one of the nurses of Zeus. Its inhabitants were removed to Megalopolis upon the foundation of the latter city. Leake places it at the castle of *St. Ulens* above Lavrata. Ross discovered some ancient remains N. of Andritsaina, which he conjectures may be those of Theiosa. (Paus. viii. 38, §§ 3, 9, viii. 27, § 4; Steph. B. s. r.; Leake, *Morea*, vol. ii. p. 315, *Peloponnesica*, p. 154; Ross, *Reisen im Peloponnes*, vol. i. p. 101; Boblaye, *Recherches*, p. 151.)

2. A town of Arcadia, in the territory of Orchomenus, the inhabitants of which also removed to Megalopolis. It is mentioned along with Methydrium and Teuthis as belonging to the confederation (συντέλεια) of Orchomenus. It is probably represented by the ruins near Dimitzana. (Paus. viii. 27, §§ 4, 7, viii. 28, § 3; Ross, p. 115.)

**THEIUM, a town of Athamania in Epirus, of uncertain site.** (Liv. xxxviii. 2.)

**THELINE.** [ΑΡΕΛΑΤΕ.]

**THELPUUA (ΘΗΛΠΥΟΥΑ, Paus. and Coins: ΤΗΛΨΟΥΑ, Polyb. D. xii. 160; and Steph. B. s. r.: *Eθ. ΘΗΛΨΟΥΑ*, *ΤΕΛΨΟΥΑ*) , a town in the west of Arcadia.
situated upon the left or eastern bank of the river Ladon. Its territory was bounded on the north by that of Psophis, on the south by that of Heraea, on the west by the Eleia and Tisaris, and on the east by that of Cleitor, Tripolis, and Thesusa. The town is said to have derived its name from a nymph, the daughter of the river Ladon, which nymph probably the stream flowing through the lower part of the town into the Ladon. It is first mentioned in history in n. c. 322, when the Lacedaemonians were defeated in its neighbourhood by the Spartans. (Diod. xvi. 39.) In n. c. 222 it was taken by Antigonus Doson, in the war against Cleomenes, and it is also mentioned in the campaigns of Philip. (Porph. ii. 54, iv. 60, 73, 77; Steph. B. s. v. Τηλεφούσα; Plin. iv. 6. s. 20.) Its coins show that it belonged to the Achaean League. (Leake, Peloponnesiac, p. 206.) When Pansanas visited Thelpusa, the city was nearly deserted, so that the agora, which was formerly in the centre of the city, then stood at its extremity. He saw a temple of Asclepius, and another of the twelve gods, of which the latter was nearly levelled with the ground. (Paus. viii. 25 § 3.) Pansanas also mentions two temples of some celebrity in the neighbourhood of Thelpusa, one above and the other below the city. The one above was the temple of Demeter Elensinia, containing statues of Demeter, Persephone and Dionysus, made of stone, and which probably stood at the castle opposite to Spithari (viii. 25 §§ 2, 3). The temple below the city was also sacred to Demeter, whom the Thelpusians called Erinna. This temple is alluded to by Lycophron (1088) and Callimachus (Fr. 107). It was situated at a place called Ouraim, where Oenous, the son of Apollo, is said once to have reigned (viii. 25 § 4, seq.; Steph. B. s. v. Ὀργέας). Below this temple stood the temple of Apollo Oenaecates, on the left bank of the Ladon, and on the right bank that of the boy Asclepius, with the sepulchre of Trygon, said to have been the nurse of Asclepius (viii. 25 § 11). The ruins of Thelpusa stand upon the slope of a considerable hill near the village of Vιανενα (Βάβερα). There are only few traces of the walls of the city. At the ruined church of St. John, near the rivulet, are some Hellenic foundations and fragments of columns. The saint is probably the successor of Asclepius, whose temple, as we learn from Pansanas, stood longest in the city. There are likewise the remains of a Roman building, about 12 yards long and 6 wide, with the ruins of an arched roof. There are also near the Ladon some Hellenic foundations, and the lower parts of six columns. Below Viaenea there stands upon the right bank of the Ladon the ruined church of St. Athanasius the Mitraculas, where Leake found the remains of several columns. Half a mile below this church is the village of Tumbiki, where a monitory projects into the river, upon which there is a mound apparently artificial. This mound is probably the tomb of Trygon, and Tumbiki is the site of the temple of Asclepius.

Pansanas, in describing the route from Psophis to Thelpusa, after mentioning the boundaries between the territories of the two states (Psophis), first crosses the river Ariss, and then, at the distance of 25 statas, arrives at the ruins of a village Cams and a temple of Asclepius Camsia, erected upon the roadside. From this place the distance to Thelpusa was 40 stadia. (Leake, Morea, vol. ii. pp. 97, seq., 250, seq. Peloponnesiac, pp. 205, 222, 228; Ballay, Recherches, &c. p. 152; Ross, Reisen im Peloponnes, p. 111; Curtius, Peloponnesos, vol. i. p. 370, seq.)

THELUTHA, a fortress situated on an island in the Euphrates. It is mentioned by Ammianus (xxiv. 2), who states that it was used as a treasury by the Persians. It is unquestionably the same as the Thilabas of Isidorus (Stat. Tharth. I.), who gives a similar description of it, and places it at no great distance from another island in the same river, Anatho. Zosimus, speaking of the same region, notices a fortified island, which he calls φροιδιβος ἀρχαῖον (iii. 15); probably the same place. It is doubtless represented now by an island which Colonel Chesney calls Tellis, Tilbus, or Antelbos (i. p. 53 and Map).

THEMOTAE (Θημόται, Ptol. v. 9. § 17), a people of Asiatic Sarmatia. [T. H. D.]

THEMMA. [Tema].

THEMISCYRA (Θεμισκύρα), a plain in the north of Pontus, about the months of the rivers Iris and Themodromus, was a rich and beautiful district, ever verdant, and supplying food for numberless herds of oxen and horses. It also produced great abundance of grain, especially pannick and millet; and the southern parts near the mountains furnished a variety of fruits, such as grapes, apples, pears, and nuts in such quantities that they were suffered to waste on the trees. (Strab. ii. p. 126, xii. p. 547, foll.; Aeschyl. Prom. 722; comp. Apollod. ii. 5; Apollon. Rhod. ii. 570; Plin. vi. 3, xxiv. 102.) Mythology describes this plain as the native country of the Amazons.

A Greek town of the name of Themiscecyra, at a little distance from the coast and near the mouth of the Themodromus, is mentioned as early as the time of Herodotus (iv. 86; comp. Scylax, p. 83; Pans. i. 2. § 1). Polenay (v. 6. § 8) is undoubtedly mistaken in placing it further west, midway between the Iris and Cape Heracleum. Scylax calls it a Greek town; but Diodorus (ii. 44) states that it was built by the founder of the kingdom of the Amazons. After the retreat of Mithridates from Cyzicus, Themiscecyra was besieged by Lucullus. The inhabitants on that occasion defended themselves with great valour; and when their walls were undermined, they sent bears and other wild beasts, and even swarms of bees, against the workmen of Lucullus (Appian, Mithrid. 78). But notwithstanding their gallant defence, the town seems to have perished on that occasion, for Mela speaks of it as no longer existing (i. 19), and Strabo does not mention it at all. (Comp. Anon. Perip. P. E. p. 11; Steph. B. s. v. Xabola.) Some suppose that the town of Themone, at the mouth of the Themodromus, marks the site of ancient Themiscecyra; but Hamilton (Researches, i. p. 283) justly observes that it must have been situate a little further inland. Ruins of the place do not appear to exist, for those which Texier regards as indicating the site of Thémiscecyra, at a distance of two days' journey from the Haly's, on the borders of Galatia, cannot possibly have belonged to it, but are in all probability the remains of Tarium.
THEMISIUMON.

THEMISIUMON (Θημισιώνων: Eth. Θημισιῶν), a town of Phrygia, near the borders of Pisidia, whence in later times it was regarded as a town of Pisidia. (Strab. xii. p. 576; Paus. x. 32; Ptol. v. 2. § 26; Steph. B. s. v.; Plin. v. 29; Hieroc. p. 61.) George, p. 18.) Party reports that the Themisimonians showed a cave, about 30 rods from their town, in which, on the advice of Hercules, Apollo, and Hermes, they had concealed their wives and children during an invasion of the Celts, and in which afterwards they set up statues of these divinities. According to the Pecuting Table, Themisimonum was 34 miles from Laodicea. Arundell (Discoveries, ii. p. 196), guided by a coin of the place, fixed its site on the river Araxas, and believes that the ruins at Kat Iissious to be those of Themisimonum; but Kiepert (in Franz’s fünf Inschriften, p. 29) thinks that the ruins of Kised Issir, which Arundell takes to mark the site of Cibyra, are those of Themisimonium. [L. S.]

THENAE (Θηνάη, Callim. in Iov. 42; Steph. B. s. v. Θηνήδα), a town of Crete close on the Ophian plain, and near Cnossus. If not on the very spot, it must have been close to the Castello Tomemos of the Venetians, which was built A. D. 961, when the Cretans, under their Saracen leaders, were vanquished by Nicophorus Phocas and the forces of the Byzantine emperor. (Pasheley, Travels, vol. i. p. 224; comp. Finlay, Byzantine Empire, i. p. 377; Gibbon, c. lii.) [E. B. J.]

THENAE (Θηνάη), a maritime city of Byzantium in Africa Proper, at the mouth of a small river which fell into the Syrtis Minor, and 216 miles SE. of Carthage. (Plin. v. 4. s. 3.) By Strabo it is called Θηνή (xvi. p. 381), and by Ptolemy Θηνή, or Θεναία (i. 15, § 2, iv. 3. § 11). At a later period it became a Roman colony with the name of Aelia Augusta Mercenaria (Gruter, Inscr. p. 365; cf. Itin. Ant. p. 59, also pp. 46, 47, 48, 57). Now Thalassa, or Tény. [T. H. D.]

THEODORIAS. [VACCA.]

THEODOROLIS. (Θεοδώρολας, Procop. de Aed. iv. 6, 7), a town of Moesia Inferior, founded by the emperor Justinian. [T. H. D.]

THEODOSIA (Θεόδοσια, Ptol. iii. 6, § 3), a flourishing colony of the Milesians, on the coast of the Chersonesous Taurici, in European Sarmatia, with a harbour capable of containing 100 ships. (Strab. vii. 309; Arrian, Per. P. Eux. p. 20.) In the dialect of the natives, it was called Artabba (Αρτάββα, Amm. Per. P. Eux. p. 5), which is said to have signified, in the dialect of the Taurians, “seven gods” (Palladas, i. p. 416), and at a later period Kapia (Καπία, Const. Porphyry, de Adv. Imp. c. 53); whilst by the Geogr. Rev. (iv. 3. v. 11) we find it named Theodosiopolis. It enjoyed an extensive commerce, particularly in corn (Dem. adv. Lept. p. 255), but appears to have been ruined before the age of Arrian, in the beginning of the second century. (Arrian, l. c.) Yet it continues to be mentioned by later writers (Polyaen. v. 23; Amm. Marcellus, xxii. 8. § 26; Oros. i. 2; Steph. B. s. v. &c.) Yet we should not, perhaps, allow these writers much authority; at all events the very name of the Milesian colony appears to have vanished in the time of the emperor Constantine Porphyrogenitus, under whom the site on which it stood was already called Kallion (de Adv. Imp. c. 43; cf. Neumann, Die HELLENEN im SISYPHENLAND, p. 469.) Clarke imagined that he had discovered its ruins at Stara Crnion, where there are still some magnificent remains of a Greek city (Trav. ii. p. 154, sq.; cf. p. 150 and note); but the more general, and perhaps better founded opinion is, that it stood, near its namesake, the modern Coffa or Theodosia. (Cf. Raoul-Rochette, Ant. du Borpr. Cimm. p. 30; Dubois, v. p. 280.) For coins and inscriptions, see Köhler, Nov. Act. Acad. Petrop. xiv. p. 122, and Mem. de St. Petersb. ix. p. 649, sq.; Anacre. Trav. in Aeth. 148) [T. H. D.]

THEODOSIOPOLIS (also called Armpa), a town in the SE. of Thrace, on the road from Cypsela to Byzantium, a short distance to the E. of the source of the river Melas. Ammianus (xxxvi. 4. § 12) mentions it by the latter name as one of the two chief towns of Europa, the designation in his time of the SE. division of Thrace. [J. R.]

THEODOSIOPOLIS (Θεοδοσιόπολις, Procop. de Aed. iii. 5), a city in Armenia Major, founded by Theodosius II. to keep the Armenians in subjection which was enlarged by the emperor Anastasius, and its fortifications were much strengthened by Justinian. (Procop. B. P. i. 10.) It lay S. of the Araxes and 42 stadia S. of the mountain on which the Euphrates rises, the present Bingen. (Id. Ib. 17; cf. Ritter, Erdk, x. p. 79, seq.) Theodosiopolis enjoyed an extensive commerce. (Const. Porphyry, de Adv. Imp. 45.) Some were identified with (Ritter, Ib. pp. 80, 271, seq.; Zeune, p. 431); but according to D’Anville (Geogr. Anc. ii. p. 99, sq.) it lay by 35 miles E. of that place. (Cf. Chardin, ii. p. 173, sq.; Hamilton, Asia Minor, c. i. p. 178; Gibson, Decline and Fall, iv. p. 168, ed. Smith.) [T. H. D.]

THEODOSIOPOLIS, in Mysia. [PASPERENA.]

THIEN SCHEMA. [LIDIA, p. 179, h.]

THEODORIAEUS (Θεοδωραίος, Ptol. v. 9. § 9), a river of Asiatic Sarmatia, which fell into the Palus Maeotis, between the greater and less Rhomenes. (Cf. Ann. Marc. xxii. 8. § 29.) [T. H. D.]

THEOPOLIS. This place in Gallia, with a pure Greek name, was near Sigeron, in the department of Basse-Alpes, on the left bank of the Durance (Durancu). An inscription cut on the slope of a rock in honour of Dardanus, prefect of the Praetorium of Gallia, appears in his honour, and in honour of his mother, informs us that they united under one road for this town by cutting both sides of the mountains, and that they gave it walls and gates. The place is still called Théouzo, and there are said to be remains there. (D’Anville, Notice, &c.) [G. L.]

THERA (Θῆρα, Ion. Θῆρη: Eth. Θηράς: Santorini), an island in the Aegean sea, and the chief of the Sporades, as described by Strabo as 290 stadia in circumference, opposite the Cretan island of Dia, and 700 stadia from Crete itself. (Stur. p. 484.) Pliny places Thera 25 Roman miles S. of los (iv. 12. s. 23). Thera is said to have been formed by a cleft of earth thrown from the ship Argo, to have received the name of Calliste, when it first emerged from the sea, and to have been first inhabited by the Phoenicians, who were left there by Cadmus. Eight generations afterwards it was colonised by Lacedaemonians and Mycenae under the guidance of the Spartan Theras, the son of Aeus, who gave his name to the island. (Herod. iv. 147, seq.; Pud. Pyth. iv. 457; Callin. ap. Strab. viii. p. 347, x. p. 484; Apoll. Rhod. iv. 1762; Paus. ii. 1. § 7, iii. 15. § 6, vii. 2. § 2.) Its only importance in history is owing to its being the mother-city of Cyrene in Africa, which was founded by Battus of Thera in n. c. 631. (Herod. iv. 150, seq.) At this time Thera contained seven districts
Thera. (χάρτη, HeroId, iv. 153.) Ptolemy (iii. 15. § 26) has preserved the names of two places, Eleusis or Eleusis, and Oea; and a third, called Melanea, occurs in an inscription. (Bickh. Inscri. no. 2448.) Like Melos, Thera, and Leros, and in the same bay, it is called during the Roman period Koj'al (Thuc. ii. 9), but of its subsequent history we have no information.

Thera and the surrounding islands are remarkable as having been the scene of active volcanic operations in ancient as well as in modern times. In consequence of the survey made by command of the English Admiralty, we now possess precise information respecting these islands; the result of which, with additional particulars, is given by Lieutenant Leicester in a paper published in the Journal of the Royal Geographical Society, from which the following account is chiefly taken. Thera, now called Santorin, the largest of the group, has been likened in form to a horse-shoe; but a crescent with its two points elongated towards the west would be a more exact description. The distance round the inner curve is 12 miles, and round the outer 19, making the coast-line of the whole island 30 miles; its breadth is in no part more than 3 miles. Opposite to Thera westward is Therasia, which still bears the same name. (Strab. i. p. 57, v. p. 484; Steph. B. s. v. Ορναςia; Ptol. iii. 15, § 28; Plin. ii. 87. s. 89, iv. 12. s. 70.) Its circuit is 7½ miles, its length from N. to S. about 2½ miles, and its breadth a mile. About 1½ miles S. of Therasia, lies Aspronisi, or White Island, a mile in circuit, and so called from being capped with a deep layer of pumice; the name of this island is not mentioned by the ancient writers.

These three islands, Thera, Therasia, and Aspronisi, enclose an expanse of water nearly 18 miles in circumference, which is in reality the crater of a great volcano. The islands were originally united, and were subsequently separated by the eruption of the crater. In the centre of this basin three volcanic mountains rise, known by the name of Kamuieni or the Burnt, (καμνμίνι, i. e. καμισφή of καμιστήρ), and distinguished as the Polea or Old, the Neo or New, and the Mikra or Little. It was formerly asserted that the basin was unfathomable, but its depth and shape have been clearly ascertained by the soundings of the English Survey. Supposing the basin could be drained, a gigantic bowl-shaped cavity would appear, with walls 2449 feet high in some places, and nowhere less than 1200 feet high, while the Kamneni would be seen to form in the centre a huge mountain 5½ miles in circumference with three summits, the Polea Kammeni, the Neo Kammeni, and the Mikra Kammeni, rising severally from the bottom of the abyss to the height of 1606, 1629, and 1550 feet. The rim of the great crater thus exposed would appear in all parts unbroken, except at the northern point between Thera and Therasia, where there is a chasm or door into the crater about a mile in width, and 1170 feet in depth midway between the two islands. (See Map, B.) If we now suppose the waters of the Aegean let in, the edges of the crater, forming the inner curve of Thera and Therasia, rise above the sea from the height of 500 to 1200 feet, and present frightful precipices, of the colour of iron dress, except where their summits are capped with a deep layer of pumice. The Polea Kammeni is 328 feet above the water; the Neo Kammeni 351 feet; and the Mikra Kammeni 222 feet.

Thera, Therasia, and Aspronisi are all composed of volcanic matter, except the southern part of Thera, which contains Mount Elias, of limestone formation, the peak of which rises 1887 feet above the level of the sea. The islands are calcareous. This island. This mountain must have been originally a submarine eminence in the bed of the Mediterranean before the volcanic cone was formed (Lyell, Principles of Geology, p. 443, 9th ed.).

The first appearance of the three Kamneni belongs to historical times, and has been narrated by several writers. The Neo Kammeni, which is the largest of the group, did not emerge till the year 1550, and was not thrown up in ancient times. The exact time of their appearance, however, is differently related, and it is difficult, and in some cases impossible, to reconcile the conflicting statements of ancient writers upon the subject. It appears certain that the oldest of these islands is the most southerly one, still called the Polea or Old Kammeni. It burst out of the sea in the &c. 197, and received the name of Hieria, a name frequently given in antiquity to volcanic mountains. This fact is stated by Eusebius, Justin, Strabo, and Plutarch. It is related by Strabo that flames burst out of the sea for four days, and that an island was formed 13 stadia or 1½ English mile in circumference. (Euseb. Chron. p. 144, Olymp. 145. 4; Justin, xxx. 4; Strab. i. p. 57; Plat. de Pyth. Or. 11. p. 399.)

The unanimous statement of these four writers is, however, at variance with that of Pliny (ii. s. 89), who says "that in the 4th year of the 133th Olympiad [c. 337] there arose Thera and Therasia; between these islands, 130 stadia in diameter [c. 107], Hieria, also called Antonata; and 2 stadia from the latter, 110 years [A.D. 3] afterwards, in the consulship of M. Junius Silanus and L. Balbus, on the 8th of July, This." In another passage he says (iv. 12. s. 23): "Thera, when it first emerged from the sea, was called Calliste. Therasia was afterwards torn away from it; between the two there presently arose Automata, also called Hieria; and in our age This near Hieria," Seneca refers apparently to the Therasia mentioned by him, when he states (Qu. Nat. ii. 26), upon the authority of Posidonius, that an island arose in the Aegean sea "in the memory of our ancestors" (majorum nostrorum memoria), and that the same thing happened a second time "in our memory" (noster memoria) in the consulship of Valerius Aelius (A.D. 46). (Comp. Qu. Nat. vi. 21.)

According to the preceding statements there would have been five different eruptions of islands in the space of little more than 200 years. First Thera and Therasia themselves appeared in B.C. 237, according to Pliny; secondly Hieria, according to Eusebius, Justin, Strabo, and Plutarch, in B.C. 197; thirdly Hieria or Automata, according to Pliny, 130 years later than the first occurrence, consequently in B.C. 107; fourthly, according to Pliny, 110 years afterwards, This, that is in A.D. 3; fifthly, according to Seneca and other writers, who will be mentioned presently, an island in the reign of the emperor Claudius, A.D. 46.

Now it is evident that there is some gross error in the text of Pliny, or that he has made use of his authorities with a carelessness which is not unusual with him. The most surprising thing is, that he has omitted the eruptions of the islands in B.C. 197 and A.D. 46, which are guaranteed by several authorities. His statement that Thera and Therasia first appeared in the 4th year of the 135th Olympiad,
i.e. B.C. 237, is absurd, as they are mentioned by Callinus and Herodotus, and must have existed even long before the time of those writers; but if we suppose a slight error in the numerals in the text of Pliny (reading "Olympiadis cxxxv anno quarto" instead of "Olympiadis cxxxv anno quarto"), we have the very year (n.c. 197) in which Eusebius and Justin place the eruption of Thera. There can be little doubt, therefore, that Pliny's authorities referred to this event, and that it was only through carelessness that he spoke of the appearance of Thera and Therasia in that year. Thus the first statement of Pliny may be reconciled with the accounts of Eusebius, Justin, and the other writers. The appearance of the second island, to which he falsely transfers the name of Hiera from the earlier occurrence, must be placed in n.c. 67, according to the corrected chronology. This island no longer exists; and it must therefore either have been thrown up and disappeared again immediately, as was the case in the eruption of 1650, or it was simply an addition to the ancient Hiera, of which there are some instances at a later period. It is apparent to this eruption that the statement of Poseidonius quoted by Seneca, refers. The last statement of Pliny that a new island, named Thia, was thrown up 2 stadia from Thia, in the consulship of M. Junius Silanus and L. Balbus, on the 8th of July, is so exact that it seems hardly possible to reject it; but here again is an error in the date. If we take the numbers as they stand, this event would have happened in A.D. 3, or, according to the corrected numbers, in A.D. 45, whereas we know that M. Junius Silanus and L. Balbus were consuls in A.D. 19. No other writer, however, speaks of an eruption of an island in this year, which, if it actually happened, must again have disappeared. Moreover, it is strange that Pliny should have passed over the eruption of the real Thia, or Miler Kaméni, which occurred in his lifetime, in the consulship of Valerius Asiaticus, and in
the reign of Claudius, A.D. 46. This event, with
the difference of only a single year, is mentioned by
several writers. (Senee. De Nat. ii. 26, vi. 21; Deo Cas. in. 29; Amel. Vet. Comp. 4, Epit. 4; Oros. iv. 29, ed. Gud. i. p. 197, ed. Par.) Moreover Pinay himself, in
another passage (iv. 12. s. 23), says that this
appeared in our age ("in nostro seculo"), which
can hardly apply to the consularship of Suetonius and Balbus,
since he was not born till A.D. 23.
In A.D. 726, during the reign of Leo the Isaurian,
Hera, or the Palata Kamänei, received an augmenta-
tion on the NE. side. (Theoph. Chronogr. p. 398, ed. Marc. xvii. 7; Georg. Cuius, ed. Marc. p. 37, ed. Par.) There have been several eruptions
in modern times, of which a full account is given by
Liet. Leycester and Ross. Of these one of the most
important was in 1573, when the Mikra Kamämni
is said to have been formed. But as we have already
seen from several authorities that an island was
formed in the reign of Claudius, A.D. 46, we must
suppose either that the last-mentioned island sunk
into the sea at some unknown period, and made its
appearance a second time as the Mikra Kamämni in
1573, or that there was only an augmentation of
the Mikra Kamämni in this year. The latter sup-
position is the more probable, especially since Father
Richard, who records it, was not an eye-witness, but
derived his information from old people in the island.
There was another terrible eruption in 1650, which
Father Richard himself saw. It broke out at an
entirely different spot from all preceding eruptions,
outside the gulf, on the NE. coast of Theria, about
31 miles from C. Kolonos, in the direction of Joe
and Ayndros. This submarine outbreak lasted about
three months, covering the sea with pumice, and
giving rise to a shoal, which was found by the
English Survey to have 10 fathoms water over it. (See map, A.) At the same time the island of
Thera was violently shaken by earthquakes, in which
many houses were overturned, and a great number
of persons and animals were killed by the pestilential
vapours emitted from the volcano. The sea inundated
the flat eastern coast of the island to the extent of
two Italian miles inland. The ruins of two ancient
towns at Perissa and Kamari were disinterred,
the existence of which was previously unknown, and
which must have been overwhelmed by some previous
eruption of volcanic matter. The road also, which
took a new course round Cape Messa-Vouno, was sunk
beneath the waters.
For the next 50 years, or a little longer, the
volcanic fires slept; but in 1707 they burst forth with
redoubled fury, and produced the largest of the three
burnt islands, the Nea Kamämni. It originally con-
stituted two islands. The first which rose was called
the White Island, composed of a mass of pumice
extremely porous. A few days afterwards there ap-
apared a large chain of dark rocks, composed of
brown trachyte, to which the name of the Black
Island was given. These two islands were gradually
united; and in the course of the eruptions, the black
rocks became the centre of the actual island, the
Nea Kamämni. The White Island was first seen
on the 23rd of May, 1707, and for a year the dis-
charges of the volcano were incessant. After this
time the eruptions were less frequent; but they con-
tinued to occur at intervals in 1710 and 1711; and
it was not till 1712 that the fires of the volcano
became extinct. The island is now about 2½ miles
in circuit, and has a perfect cone at its SE. side,
which is 351 feet high. From 1712 down to the
present day there has been no further eruption.
There are several thermal and mineral springs at
Thera and the surrounding islands, of which Liet.
Leycester gives an account. They were fully
described by Lander in the treatise entitled
Περί τῶν ἐν Θήρα (Σατορύνη) θερμῶν ὕδατων,
Athens, 1835. The most important are the iron
springs in a bay on the SE. side of Nea Kamämni.
There are springs on the NE. side of Palata Kam-
ämni, likewise near Cape Ezoimiti in the south of
Thera, and at other places. Fresh water springs are
very rare at Thera, and are only found round Mount
Elis. These springs depend on the supply of water upon the rain which
they catch in the tanks during the winter.
The principal modern town of the island is now
called Theria, or Thira, and is situated in the centre
of the curve of the gulf. When Tournemort visited
Thera, the capital stood upon the promontory Skaro,
a little to the N. of the present capital, and imme-
diately under the town of Merovuoi. The pro-
montory Skaro projects about one third of a mile
into the sea and upon it are the remains of a castle
built by the dukes of Naxos. The chief town in the
island, after the capital, is Epanomerio, on the NW.
promontory, and directly opposite to Therassa. As
space is of the utmost value in this small island,
all the principal towns are built upon the very edge
of the cliffs, and present a very singular appearance,
perched in some cases more than 900 feet above the
sea. Wood being very scarce, the houses are
cut for the most part of the vast beds of poza-
mano. In order to reach the towns upon the
cliffs, the inhabitants have cut zigzag stairs or
roads in the sides of the precipices. The road
upon the summit runs along the edge of the precipi-
tes, and, in many cases, over the habitations, which
are built in the face of them. The population of the
island in 1848 was about 14,000, and, including
Therasia, about 14,350. In the time of Tournemort
there were 10,000 inhabitants, so that the increase
has been nearly a third in about 150 years. The
island is carefully cultivated; and the chief produc-
tion is wine, which is mostly exported to the Russian
ports in the Black Sea.
The antiquities of the island have been explained
at length by Ross and Liet. Leycester. There are
remains of an ancient city situated on the SE. point
of the island, upon the summit of Messa-Vouno, a
mountain about 1100 feet above the level of the
sea, connected with Mount Elus by the ridge of the
Sklados. The mountain of Messa-Vouno slopes sud-
denly off to the precipices on the NE. side, which
rise perpendicularly 600 feet above the water and
form the cape of the same name. The walls exhibit
massery of all ages, from the most ancient Cyclopean
to the regular masonry of later times. The walls
may still be traced, and enclose a circuit of only
seven-tenths of a mile; but the houses appear to
have been built terrace-fashion upon the side of the
hill. Several inscriptions, fragments of sculpture,
and other antiquities, have been discovered here.
The name of this city has been a subject of some
dispute. In an inscription found below Messa-Vouno,
at Kamari, in the church of St. Nicholas, the name
Oex occurs, which, as we have already seen, is one
of the two towns mentioned by Ptolemy. But in
an inscription upon some steps cut out of the rock of
Messa-Vouno we find Φίνα τόκος. Ross, how-
ever, does not consider this to be a proof that

THERA.
Thera was the name of the city, supposing that κόλος here signifies only the political community of the Theraeans. On the other hand, it was so usual for the islands of the Aegean to possess a capital of the same name that, in Thera, in the inscription last mentioned, it is probable, either that Polenys has accidentally omitted the name of the capital, or that in his time the Theraeans had removed from the lofty site at Messa-Vouno to Oea upon the sea-coast at Kamari, where submarine ruins still exist. Upon the other or S. side of the Cape Messa-Vouno, at Perissa, there are also so many ancient remains as to lead us to suppose that this was the site of an ancient city, though the inscription has been discovered to give a clue to its name. Upon either side of the mountain of Messa-Vouno there are numerous tombs.

South of Perissa is C. Eosmoti, and a little to the N. of this cape there are the remains of an ancient city, which is probably the Eleusis of Polenys. Here are the ruins of a mole under water, and upon the side of the mountain many curious tombs. There are likewise some ruins and tombs at C. Kolokombo, in the N.E. of the island, which Ross conjectures may be the site of Maleae. The island of Therasia possessed a town of the same name (Ptol. iii. 15, § 28), the ruins of which were discovered by Ross opposite Epaminomis in Therá.

(Besides the earlier writers, such as Torsenofrt and others, the reader is particularly referred to Ross, Reisen auf den Griechischen Inseln, vol. i. pp. 53, seq., 86, seq. 180, seq.; and L. Cayley, Some Account of the Volcanic Group of Santorin or Therá, in the Journal of the Royal Geographical Society, vol. xx. pp. 1-12.)

THERAMBOUS or THRAMBUS (Θράμβος, Herod. vii. 123; Θράμβος, Steph. Byz. s. v.; Θραμβίς, Scalax, p. 26; Θράμβωσις δείσως, Lycophr. 1404), a town of the peninsula Pallene, in Chalcedice in Macedonia, is called a promontory by Stephanus B., and is hence supposed by Leake (Northern Greece, vol. iii. p. 156) to have occupied a position very near the promontory Cannastraeuni, the most southerly point of Pallene; but from the order of the names in Scalax we would rather place it at the promontory upon the western side of the peninsula, called Fortress by Thucydides (iv. 129).

THERANDA, a town of Messia, now Trenonitis (Geog. Rav. iv. 15; Topb. Petr.). [T. H. D.]

THERAPNAE (Θεραπνα) : Eth. Θεραπναιον), a place in the territory of Thebes, between this city and the Aesopeus. (Eurip. Bacch. 1029; Strab. ib. p. 409; Leake, Northern Greece, vol. ii. p. 369.)

THERAPNÉ (Θεραπνή, p. 1029, b.)

THERASÍAS. [Thera.]

THERIODES SINUS (Θηριωδός κάλλος, Ptol. viii. 3, § 2), a gulf on the coast of the Sain, between the promontories Notium (Νότιος), and Satyron (Σατύρων). Perhaps the gulf of Tonkin, or that between the Cape St. James and the river of Campópia. [T. H. D.]

THERMA (Θερμα). [Thessalonica.]

THERMAE (Θερμα) was the name of two cities in Sicily, both of which derived their name from their position in the neighbourhood of hot springs.

1. The northern Thermæ, sometimes called for distinction's sake Thermæ Himerenses (now Termini), was situated on the N. coast of the island, in the immediate neighbourhood of the mere ancient city of Himera, to the place of which it may be considered as succeeding. Hence its history is given in the article Himera.

2. The southern Thermæ, or Thermæ Selinuntiae (Scicca), was situated on the SW. coast of the island, and, as its name imports, within the territory of Selinus, though at 3 a distance of 20 miles from that city in the direction of Agrigentum. There can be no doubt that it occupied the same site as the modern town of Scicca, about midway between the site of Selinus and the mouth of the river Halycus (Platani), where there still exist sulphurous waters, which are in constant use. (Smyth's Sicily, p. 217; Cluver, Sicilia, p. 223.) We have no account of the existence of a town on the site during the period of the independence of Selinus, though there is little doubt that the thermal waters would at that time have attracted some population to the spot. Not even under the Romans did the place attain to anything like the same importance with the northern Thermæ; and there is little doubt that Piny is mistaken in assigning the rank of a colony to the southern instead of the northern town of the name. [Himera.]

Strabo mentions the waters (τὰ δόστα τὰ Σαλινοτεία, Strab. vi. p. 275); and they are still in the inns in the Itinerary under the name of Aque Labodes or Labrodes (Itin. Ant. p. 59; Top. Pert.)

[É. H. B.]

THERMAICUS SINUS. [Thessalonica.]

THERMÓDON (Θέρμόδων) or Thermus, a river of Pontus, celebrated in the story about the Amazons, is described by Piny (vi. 3) as having its sources in the Amazonian mountains, which are not mentioned by any ancient writer, but are believed still to retain their ancient name in the form of Massen Dogh (Hamilton, Researches, i. p. 283.) Strabo (xii. p. 547) places its many sources near Pharnarco, and says that many streams combine to form the Thermus. Its course is not very long, but its breadth was nevertheless three plethra, and it was a navigable river (Xen. Arab. v. 6. § 9, vi. 2. § 1; Arrian, Peripl. P. E. p. 16.) It discharged itself into the Euxine near the town of Themiscyra, at a distance of 400 stadia to the north-east of the mouth of the Iris. This river is very often noticed by ancient writers. See Aeschyl. Prom. 274, Suppl. 290; Herod. ix. 27; Scalax, p. 33; Strab. i. p. 52, vii. p. 298; Athen. Peripl. P. E. p. 10; Ptol. v. 6. § 4; Pomp. Mela, i. 19; Plin. xi., xxvii. 37; Virg. Aen. vi. 659; Ov. fast. Prom. iv. 19, 51; Propr. iv. 4, 71, and many other passages. [L. S.]

THERMOPYLÆ (Θερμοπύλαι), or simply PYLÆ (Πυλα), that is, the Hot Gates or the Gates, a celebrated narrow pass, leading from Thessaly into Locris, and the only road by which an enemy can penetrate from northern into southern Greece. It lay between Mount Oeta and an inaccessible moors, forming the edge of the Maïastic gulf. In consequence of the change in the course of the rivers, and in the configuration of the coast, this pass is now very different from its condition in ancient times; and it is therefore necessary first to give the statement of Herodotus and other ancient writers respecting the locality, and then to compare it with its present state. In the time of Herodotus the river Spercheus flowed into the sea in an easterly direction at the town of Anticyra, considerably W. of the pass. Twenty stadia E. of the Spercheus was another river, called Dyras, and again, 20 stadia further, a third river, named Melus, 5 stadia from which was the city Trachis. Between the mountains where Trachis stood, and the sea the plain is widest. Still further E. was the Asopus, issuing from a rocky gorges (Βασιλικώτρις),

1161
and E. again is a small stream, named Phoenix, flowing into the Asopus. From the Phoenix to Thermopylae the distance, Herodotus says, is 15 stadia. (Herod. vii. 198—200.) Near the united streams of the Phoenix and the Asopus, Mt. Oeta approached so close to the merris of the gulf as to leave space for only a single carriage. In the immediate vicinity of the pass is the town of Anthela, celebrated for the temples of Aegyptian and of the Amphictyonic Demeter, containing seats for the members of the Amphictyonic council, who held here their annual meetings. At Anthela, Mount Oeta recedes a little from the sea, leaving a plain a little more than half a mile in breadth, but again contracts near Alpeni, the first town of the Locrians, where the space is again only sufficient for a single carriage. At this pass were some hot springs, which were consecrated to Hercules (Strab. ix. p. 428), and were called by the natives Chytri or the Pans, on account of the cells here prepared for the bathers. Across this pass the Phocians had in ancient times built a wall to defend their country against the attacks of the Thessalians, and had let loose the hot water, so as to render the pass impracticable. (Herod. vii. 200, 176.) It appears from this description that the proper Thermopylae was the narrow pass near the Locrian town of Alpeni; but the name was also applied in general to the whole passage from the mouth of the Asopus to Alpeni. Taking the term in this acception, Thermopylae consisted of the two narrow openings, with a plain between them rather more than a mile in length and about half a mile in breadth. That portion of Mt. Oeta, which rises immediately above Thermopylae is called Callidromen by Livy and Strabo, but both writers are mistaken in describing it as the highest part of the range. Livy says that the pass is 60 stadia in breadth. (Liv. xxxvi. 15; Strab. ix. p. 428.)

In consequence of the accumulation of soil brought down by the Spercheus and the other rivers, three or four miles of new land have been formed, and the mountain forming the gates of Thermopylae is no longer close to the sea. Moreover, the Spercheus, instead of flowing into the sea in an easterly direction, considerably W. of Thermopylae, now continues its course parallel to the pass and at the distance of a mile from it, falling into the sea lower down, to the E. of the pass. The rivers Ibyas, Melas, and Asopus, which formerly reached the sea by different mouths, now discharge their waters into the Spercheus. In addition to this there has been a copious deposit from the warm springs, and a consequent formation of new soil in the pass itself. The present condition of the pass has been described by Colonel Leake with his usual clearness and accuracy. Upon entering the western opening, Leake crossed a stream of warm mineral water, running with great rapidity towards the Spercheus, and leaving a great quantity of red deposit. This is undoubtedly the Phoenix, which probably derived its name from the colour of the sediment. After crossing a second salt-spring, which is the source of the Phoenix, and a stream of cold salt water, Leake entered upon that which Herodotus calls the plain of Anthela, which is a long triangular slope, formed of a hard gravelly soil, and covered with shrubs. There is an easy descent into this plain over the mountains, so that the western opening was of no importance in a military point of view. Upon reaching the eastern pass, situated at the end of the plain of Anthela, the traveller reaches a white elevated soil formed by the deposit of the salt-springs of the proper Thermopylae. There are two principal sources of these springs, the upper or western being immediately at the foot of the highest part of the cliffs, and the lower or eastern being 200 yards distant. From the lower source the water is conducted in an artificial canal for a distance of 400 yards to a mill. This water emits a strong sulphurous vapour, and, as it issues from the mill, it pours out a great volume of smoke. Beyond the hill are conical heights, and in the hollows between them are two salt-ponds, containing cold water; but as this water is of the same composition as the hot springs, it is probably also hot at its issue. Leake observes that the water of these ponds, like that of the principal hot source, is of a dark blue colour, thus illustrating the remark of Pansanias, that the bluest water he ever saw was in one of the baths at Thermopylae. (Ians. iv. 33. § 9.) The springs at this pass are much hotter, and have left a far greater deposit than those at the other end of the plain, at the opening which may be called the false Thermopylae. Issuing from the pass are foundations of a Hellenic wall, doubtless the remains of works by which the pass was at one time fortified; and to the left is a tumulus and the foundations of a circular monument. Upwards of a mile further is a deep ravine, in which the torrents descending from Mt. Callidromon, are collected into one bed, and which afford the easiest and most direct passage to the summit of the mountain. This is probably the mountain path by which the Persians, under Hydarnes, descended in the rear of Leonidas and his companions. This path, as well as the mountain over which it leads, is called Anopacea (Ἀνοπαέα) by Herodotus, who does not use the name of Callidromon. He describes the pass as beginning at the gorge of the Asopus, passing over the crest of the mountain, and terminating near Alpeni and the rock called Melampygus, and the seats of the Cercopes, where the road is narrowest. (Herod. vii. 216.) The history of the defence of Thermopylae by Leonidas is too well known to require to be related here. The wall of the Phocians, which Leonidas repaired, was probably built a little eastward of the western salt-spring. When the Spartan king learnt that Hydarnes was descending in his rear, he advanced beyond the wall into the widest part of the pass, resolved to sell his life as dearly as possible. Upon the arrival of Hydarnes, the Greeks retired behind the wall, and took up their position upon a hill in the pass (κολωνια ἐν τῇ κοιλωσίᾳ), where a stone lion was afterwards erected in honour of Leonidas. This hill Leake identifies with the western of the two small heights already described, as nearest to the position of the Phocian wall, and the narrowest part of the pass. The other height is probably the rock Melampygus.

Thermopylae is immortalized by the heroic defence of Leonidas; but it was also the scene of some important struggles in later times. In n. c. 279 an allied army of the Greeks assembled in the pass to oppose the Gauls under Brennus, who were marching into southern Greece with the view of pillaging the temple of Delphi. The Greeks held their ground for several days against the attacks of the Gauls, till at length the Heraclaeots and Aenianes conducted the invaders across Mount Callidromon by the same path which Hydarnes had followed two centuries before. The Greeks, finding their position
no longer tenable, embarked on board their ships and retired without further loss. (Paus. x. 19—22.)

In B.C. 207, when the Romans were carrying on war in Greece against Philip, king of Macedonla, the Aetolians, who were then in alliance with the Romans, fortified Thermopylae with a ditch and a rampart, but Philip shortly afterwards forced his way through the pass. (Livy. xxxvii. 5, 7; Polyb. x. 41.) In B.C. 181, Antiochus, who was then at war with the Romans, took up his position at Thermopylae, which he fortified with a double rampart, a ditch, and a wall; and, in order to prevent the Romans from crossing the mountains and descending upon his rear, he garrisoned with 2000 Aetolians the three summits, named Calidromum, Teichius, and Rhodenia. The consul Acilius sent some troops against these fortresses and at the same time attacked the army of Antiochus in the pass. While the battle was going on in the pass, the Roman detachment, which had succeeded in taking Calidromum, appeared upon the heights, threatening the king's rear, in consequence of which Antiochus immediately took to flight. (Liv. xxxvi. 15—19.)

There are still remaining three Hellenic fortresses upon the heights above Thermopylae, which probably represent the three places mentioned by Livy. Appian (B. C.) speaks only of Calidromum and Teichius, but Strabo (ix. p. 428) mentions Rhodenia also. Procopius relates that the fortifications of Thermopylae were restored by Justinian (de Aed. iv. 2).

(On the topography of Thermopylae, see the excellent account of Leake, Northern Greece, vol. ii. pp. 5, seq., 40, seq.; there is also a treatise by Gordon, Account of two Visits to the Anopae or the Highlands above Thermopylae, Athens, 1838, which the writer of this article has not seen.)

THERMUM. 1163

THERMUM, THERMUS or THERMA (τῆς Ῥημο-πως, Pol. v. 8; τῆς Θερμως, Strab. x. p. 463; Pol. v. 7; Θιρμών, Steph. B. s. v.: Θυρμως; Φλόβιο, the chief city of Aetolia during the flourishing period of the Aetolian League, and the place where the meetings of the league were usually held and an annual festival celebrated. It possessed a celebrated temple of Apollo, in connection with which the festival was probably celebrated. It was situated in the very heart of Aetolia, N. of the lake Trichonis, and on a height of Mt. Panatomodium (Vieu). It was considered inaccessible to an army, and from the strength of its situation was regarded as a place of refuge, and, as it were, the Acropolis of all Aetolia. The road to it ran from Metapa, on the lake Trichonis, through the village of Pamphia. The city was distant 60 stadia from Metapa, and 30 from Pamphia; and from the latter place the road was very steep and dangerous, running along a narrow crest with precipices on each side. It was, however, surprised by Philip V, king of Macedonla, in his invasion of Aetolia in B.C. 218. The Aetolians, who had never imagined that Philip would have penetrated so far into their country, had deposited here all their treasures, the whole of which now fell into the hands of the king, together with a vast quantity of arms and armour. He carried off the most valuable part of the spoil, and burnt all the rest, among which were more than 15,000 suits of armour. Not content with this, he set fire to the sacred buildings, to retaliate for the destruction of Dium and Dodona. He also defaced all the works of art, and threw down all the statues, which were not less than 2000 in number, only sparing those of the Gods. (Pol. v. 6—9, 13.) A few years afterwards, when the Aetolians had sided with the Romans, Philip again surprised Thermus (about B.C. 206), when he destroyed everything which had escaped his ravages in his first attack. (Pol. xi. 4.) We have no further details of the history of Thermum. Polibius alludes, in one or two other passages (xxviii. 31, xxxvii. 4), to the meetings of the league held there. In the former of these passages Livy (xxxiii. 35) has misunderstood the words Ῥημωνος. Map of Thermopylae and the surrounding country.

to overthrow the existing government; but the latter receiving assistance from Thbes, many of the conspirators withdrew to Athens. (Thuc. vi. 95.) In B.C. 372 the walls of Thespiae were again destroyed by the Thebans. According to Diodorus (xv. 46) and Xenophon (Hell. vi. 3. § 1) Thespiae was at this time destroyed by the Thebans, and the inhabitants driven out of Boeotia; but this happened after the battle of Leuctra, and Mr. Grote (Hist. of Greece, vol. i. p. 219) justly infers from a passage in Isocrates that the fortifications of the city were already demolished at this period. Pausanias expressly states that a contingent of Thespian was present in the Theban army at the time of the battle of Leuctra, and availed themselves of the permission of Epaminondas to retire before the battle. (Paus. ix. 13. § 8, ix. 14. § 1.) Shortly afterwards the Thespians were expelled from Boeotia by the Thebans. (Paus. ix. 14. § 2.) Thespiae was afterwards reprieved and mentioned in the Roman wars in Greece. (Polyb. xxvii. 1; Lív. xlix. 45.) In the time of Strabo, Thespiae and Tanagra were the only places in Boeotia that deserved the name of cities. (Strab. i. p. 410.) Pliny calls Thespiae a free town ("lib. op. 8). It is also mentioned by Ptolemy (iii. 15. § 20) and in the Antonine Itinerary (p. 326, ed. Wess.), and it was still in existence in the sixth century (Herod. p. 643, ed. Wess.).

Eros or Love was the deity chiefly worshipped at Thespiae; and the earliest representation of the god in the form of a rude stone still existed in the city in the time of Pausanias (ix. 27. § 1). The courtesan Phryne, who was born at Thespiae, presented to her native city the celebrated statue of Love by Praxiteles, which added greatly to the prosperity of the place in consequence of the great numbers of strangers who visited the city for the purpose of seeing it. (Dicaearch. § 25, ed. Müller; Cic. Verr. iv. 2; Strab. i. p. 410, who erroneously calls the courtesan Glycera; Paus. ix. 27. § 3.) The story of the manner in which Phryne became possessed of this statue, and its subsequent history, are related in the life of Praxiteles. [Dict. of Biogr. Vol. III. pp. 520, 521.] In the time of Pausanias there was only an imitation of it at Thespiae by Menodorus. Among the other works of art in this city Pausanias noticed a statue of Eros by Lynxus, statues of Aphrodite and Phryne by Praxiteles, the agora being a statue of Heiod, the theatre, a temple of Aphrodite Melaneia, a temple of the Muses, containing their figures in stone of small size, and an ancient temple of Hercules. (Paus. ix. 27.) Next to Eros, the Muses were specially honoured at Thespiae; and the festivals of the Euporónia and Mouória celebrated by the Thespians on Mt. Helicon, at the end of every four years, are mentioned by several ancient writers. (Paus. ix. 31. § 3; Plut. Ama. i. Athen. xiii. p. 561; K. F. Hermann, Lexicon de poet. Attic. § 63, n. 4.) Hence the Muses are frequently called Thespiae by the Latin writers. (Varr. L. L. vii. 2; Cic. Verr. ii. 4; Ov. Met. v. 310; Plin. xxxvi. 5. s. 4, § 39, ed. Silius.)

The remains of Thespiae are situated at a place called Leftia from a deserted village of that name near the village of Erínókastro or Rínókastro. Unlike most other Greek cities, it stands in a plain surrounded by hills on either side, and its founders appear to have chosen the site in consequence of its abundant supply of water, the sources of the
THESSALIA. 1165

rivers Kenarvior rising here. Leake noticed the foundations of an oblong or oval enclosure, built of very solid masonry of a regular kind, about half a mile in circumference; but he observes that all the adjacent ground to the SE. is covered, like the interior of the fortress, with ancient foundations, squared stones, and other remains, proving that if the enclosure was the only fortified part of the city, many of the public and private edifices stood without the walls. The site of some of the ancient temples is probably marked by the churches, which contain fragments of architraves, columns, and other ancient remains. (Leake, Northern Greece, vol. ii. p. 479, seq.; Dodwell, vol. i. p. 253.)

Thessaly, properly consists of two plains, which received in antiquity the name of Upper and Lower Thessaly; the Upper, as in similar cases, meaning the country near Mount Pindus, and the Lower far distant from the sea, and the Lower the country near the Thracian gulf. (Strab. ix. pp. 430, 437.) These two plains are separated by a range of hills between the lakes Nessenis and Boebeis on the one hand, and the river Enipeus on the other. Lower Thessaly, which constituted the ancient division Pelasgiotis, extends from Mount Titarus and Ossa on the N. to Mount Othrys and the shores of the Pagasaean gulf on the S. Its chief town was Larissa. Upper Thessaly, which corresponded to the ancient divisions Thessaliotis and Histiaetis, of which the chief city was Pharsalos, stretches from Ascanium in the N. to Thaumace in the S., a distance of at least 50 miles in a straight line. The road from Thermopylae into Upper Thessaly entered the plain at Thaumace, which was situated at the pass called Ceela, where the traveller came in sight of a plain resembling a vast sea. (Liv. xxxii. 4.) [THAUMACI.]

The river Peneius, now called the Sadamaria or Salambria (Σαλαμβρα, Σαλαμβρια), rises at the NW. extremity of Thessaly, and is composed of streams collected in the valleys of Mount Pindus and the offshoots of the Cambunan mountains. At first it flows through a contracted valley till it reaches the perpendicular rocks, named the Meteors, upon the summits of which several monasteries are perched. Below this spot, and near the town of Ascanium or Stogis, the valley opens out into the vast plain of Upper Thessaly, and the river flows in a general southerly direction. At Tricca, or Tribkala, the Peneius makes a bend to the E., and shortly afterwards reaches the lowest point in the plain of Upper Thessaly, where it receives within a very short space many of its tributaries. Next it passes through a valley formed by a range of hills, of these upon the right divide the plains of Upper and Lower Thessaly. It then emerges into the plain a few miles westward of Larissa; after passing which city it makes a sudden bend to the N., and flows through the vale of Tempe to the sea. Although the Peneius drains the greater part of Thessaly, and receives many tributaries, it is in the greater part of its course a shallow and sluggish river, except after the melting of the snows, when it sometimes floods the surrounding plains. Hence on either side of the river there is frequently a wide gravelly uncultivable space, described by Strabo as θεταυηθελοντος (ix. p. 430; Leake, Northern Greece, vol. i. p. 420). When the river is swollen in the spring, a channel near Larissa conducts the superfluous waters into the Karasfai' or Μαυρολίμνη, the ancient Nesseus; and when this basin is filled, another channel conveys the waters into the lake of Kerkia, the ancient Boebeis. (Leake, iv. p. 403.) In the latter part of its course, after leaving Larissa, the Peneius flows with more rapidity, and is full of small vortices, which may have suggested to Homer the epithet

COIN OF THESSALIA.
THESSALIA.

The principal rivers of Thessaly, according to Herodotus (vii. 129), are the Peneius, Aisetos, Onchochus, Emlpens and Panias. The four latter rivers all flow from the S. Of these the most important is the Eunipos, now called the Penteleus, which flows through the plain of Pharsalus, and falls into the Peneius near Larissa in the lowest part of the plain. The Apidamus, now called Verghis, into which the Cuarius (Sosofhiltikos) falls, is a tributary of the Eunipos. The Panias, now called Elios or Pellios, also joins the Peneius a little to the W. of the Eunipos. The Onchochus, which probably is the same as the Ocnheuus, flows into the lake Boeheis and not into the Peneius. [For details, see Vol. II. p. 483, a.]

The chief tributary of the Peneius on the N. is the Titaresius, now called Eleassaoutiko or Xeraghki, which rises in Mt. Tithra, a part of the Cebunian range, and joins the main stream between Larissa and the vale of Tempe. Homer relates (II. ii. 753, seq.) that the waters of the Titaresius did not mingle with those of the Peneius, but floated upon the surface of the latter like oil upon water, whence it was regarded as a branch of the infernal river Styx. (Comp. Lucan, vi. 575.) Leake calls attention to the fact that Strabo (ix. p. 441), probably misled by the epithet (apryoloj) applied by the poet to the Peneius, has reversed the true interpretation of the poet's comparison of the Peneius and the Titaresius, supposing that the Peneius was the pellicud river, whereas the apparent reluctance of the Titaresius to mingle with the Peneius arises from the former being clear and the latter muddy. (Northern Greece, iii. p. 396, iv. p. 296.) The Titaresius was also called Eurotas (Strab. vii. p. 329) and Horous or Ursus (Plin. iv. 8, s. 13).

The plain of Thessaly is the most fertile in all Greece. It produced in antiquity a large quantity of corn and cattle, which supported a numerous population in the towns, and especially a rich and proud aristocracy, who were at frequent feuds with one another and much given to luxury and the pleasures of the table (exei yap de plai-stry eftita eiaxai kai dtolaiia, Piat. Crit. 15; Athen. xil. p. 564; Theopomp. op. Athen. vi. p. 260; Dem. Olynth. p. 15). The Thessalian horses were the finest in Greece, and their cavalry was at all times efficient; but we rarely read of their infantry. The nobles, such as the Aeuleaean of Larissa and the Scopadice of Crannon, supplied the poorer citizens with horses; but there was no class of free equal citizens, from which the hoplites were drawn in other Grecian states. (See Grote, Hist. of Greece, vol. ii. p. 367.) Hence the political power was generally either in the hands of these nobles or of a single man who established himself as despot. The numerous flocks and herds of the Scopadice at Crannon are alluded to by Theocritus (Id. xvi. 36), and the wealth of the Thessalian nobles is frequently mentioned by the ancient writers.

Thessaly is said to have been originally known by the names of Pyrrha, Aemonia, and Aeolos. (Rhiay. op. Schol. Rhod. iii. 1089; Steph. B. s. v. Aemonia; Herod. vii. 176.) The two former appellations belong to mythology, but the latter refers to the time when the country was inhabited by the Achaeans.
THESSALIA.

Note (Ap. Athen. vi. p. 265), this can only be true of a part of these tribes, as we know that the Penetae were entirely expelled from the subject Pherae, Magnes, Magneta, and Achaeans. (Aristot. Politi. ii. 6. § 3.) The Penetae, like the Laconian Helots, frequently rose in revolt against their masters.

In the Homeric poems the names of Perra, Magneta, Achaeans, and Dolopes occur; and Achaea Phthiotis was the residence of the great hero Achilles. This district was the seat of Helen, the founder of the Hellenic race, and contained the original Hlias, from which the Hellenes gradually spread over the rest of Greece. (Herod. vi. 483; Thuc. i. 9; Strab. ix. p. 431; Diod. i. p. 21, ed. Hulsen; Steph. B. s. v. "E'XaLr.). The Achaeans of Phthiotis may fairly be regarded as the same race as the Achaeans of Peloponnesus.

Thessaly Proper was divided at an early period into four districts or tetrarchies, named Thessaliotis, Pegasiotis, Histiaecotis and Phthiotis. When this division was introduced is unknown. It was older than Hecatæus (Steph. B. s. v. "KrjCVpov"), and was ascribed to Aoleon, the founder of the family of the Alcmeades. (Hellenic. fr로그. 28, ed. Didot; Harpocrat. s. v. "TespaKva; Strab. ix. p. 430.) This quadruple division continued to the latest times, and seems to have been instituted for political purposes; but respecting the internal government of each we have no precise information. The four districts were nominally united under a chief magistrate, called Tagus; but he seems to have been only an agent in war, and his commands were frequently disobeyed by the Thessalian cities. "When Thessaly is under a Tagus," said Jason, despot of Phæna, "she can send into the field an army of 6000 cavalry and 10,000 hoplites." (Xen. Hell. vi. 1. § 8.) But Thessaly was rarely united. The different cities, upon which the smaller towns were dependent, not only administered their own affairs independently of one another, but the three most important, Larissa, Pharsalus and Phærae, were frequently at feud with one another, and at the same time torn with intestine faction. Hence they were able to offer little resistance to invaders, and never occupied that position in Grecian history to which their population and wealth would seem to have entitled them. (Respecting the Thessalians in general, see Mr. Grote's excellent remarks, Hist. of Greece, vol. ii. p. 363, seq.)

The history of Thessaly may be briefly dismissed, as the most important events are related under the separate cities. Before the Persian invasion, the Thessalians had extended their power as far as Thermopylae, and threatened to over-run Phocis and the country of the Loerians. The Phocians built a wall across the pass of Thermopylae to keep off the Thessalians; and though active hostilities seem to have ceased before the Persian invasion, as the wall was at that time in ruins, the two nations continued to cherish bitter animosity towards one another. (Herod. vii. 176.) When Xerxes invaded Greece, the Thessalians were at first opposed to the Persians. It is true that the powerful family of the Alcmeades, whom Herodotus calls (vii. 6) kings of Thessaly, had urged Xerxes to invade Greece, and had promised the early submission of their countrymen; but it is evident that their party was in the minority, and it is probable that they were themselves in exile, like the Athenian Peisistratidae. (Herod. vii. 176.)

The majority of the Thessalians sent envoys to the confederate Greeks at the Isthmus, urging them to send a force to the pass of Tempe, and promising them active co-operation in the defence. Their request was complied with, and a body of 10,000 heavy-armed infantry was despatched to Thessaly; but the Grecian commanders, upon arriving at Tempe, found that there was another pass across Mount Olympus, and believing it impossible to make any effectual resistance north of Thermopylae, retreated to their ships and abandoned Thessaly. (Herod. vii. 172, seq.) The Thessalians, thus deserted, hastened to make their submission to Xerxes; and under the influence of the Alcmeades, who now regained the ascendency in Thessaly, they rendered zealous and effectual assistance to the Persians. After the death of Leonidas and his heroic companions at Thermopylae, the Thessalians ratified their emnity against the Phocians by directing the march of the Persians against the Phocian towns and laying their country waste with fire and sword.

From the Persian to the Peloponnesian wars the Thessalians are rarely mentioned. After the battle of Thermopylae (6. c. 485) had given the Athenians the ascendency in Boeotia, Lucris, and Phocis, they endeavoured to extend their power over Thessaly. With this view they marched into Thessaly under the command of Myronides in b. c. 454, for the purpose of restoring Orestes, one of the exiled nobles or princes of Pharsalus, whom Thucydides calls son of the king of the Thessalians. The progress of Myronides was checked by the powerful Thessalian cavalry; and though he advanced as far as Pharsalus, he was unable to accomplish anything against the city, and was compelled to retreat. (Thuc. i. 111; Diodor. xi. 85.) In the Peloponnesian War the Thessalians took no part; but the mass of the population was friendly to the Athenians, though the oligarchical governments favoured the Spartans. With the assistance of the latter, combined with his own rapidity and address, Brasidas contrived to march through Thessaly in b. c. 424, on his way to attack the Athenian dependencies in Macedonia (Thuc. iv. 78); but when the Lacedaemonians wished to send reinforcements to Brasidas in the following year, the Thessalians positively refused them a passage through their country. (Thuc. iv. 132.) In b. c. 395 the Thessalians joined the Boeotians and their allies in the league against Sparta; and when Agesilaus marched through their country in the following year, having been recalled by the Spartan government from Asia, they endeavoured to intercept him on his return; but their cavalry was defeated by the skilful manœuvre of Agesilaus. (Xen. Hell. vi. 3. § 3, seq.)

About this time or a little earlier an important change took place in the political condition and relative importance of the Thessalian cities. Almost down to the end of the Peloponnesian War the powerful families of the Alcmeades at Larissa, of the Scopidae at Crenno, and of the Creonidae at Pharsalus, possessed the chief power in Thessaly. But shortly before the close of this war Phærae rose into importance under the administration of Lycephon, and aspired to the supremacy of Thessaly. Lycephon overthrew the government of the nobles at Phærae, and made himself tyrant of the city. In prosecution of his ambitious schemes he attacked Larissa; and in b. c. 404 he gained a great victory over the Thessalians at the Isthmus (b. c. 485); but the Thessalians were driven from the field.

In b. c. 395 Lycephon was still engaged in a coo-
test with Larissa, which was then under the government of Medius, probably the head of the Thebans. Lycephon was supported by Sparta; and Medius accordingly applied for succour to the confederacy of Greek states which had been lately formed to resist the Lacedaemonian power. With their assistance Medius took Pharsalus, which was then occupied by a Lacedaemonian garrison, and is said to have sold all its inhabitants as slaves. (Diod. xiv. 82.) The return of Agesilaus, and his victory over the Thessalians, probably deprived Medius and his party of their power, and Larissa no longer appears as the rival of Pherae for the supremacy of Thessaly. Pharsalus was probably recovered from the blow which it had received from Medius, and became, next to Pherae, the most important city in Thessaly. The inhabitants of Pharsalus agreed to entrust the supreme power to Polydamas, one of their own citizens, in whose integrity and abilities all parties placed the greatest confidence. The acropolis and the whole management of the finances were placed in his hands, and he discharged his trust to the satisfaction of all parties. (Xen. Hell. vi. 1 §§ 2, 3.)

Meantime the supreme power at Pherae had passed into the hands of Jason, a man of great energy and ability, and probably the son of Lycephon, though this is not expressly stated. He inherited the ambitious views of Lycephon, and meditated nothing less than extending his dominion over the whole of Greece, for which his central situation seemed to offer many facilities. He cherished even still more extensive projects of aggrandisment, and, once master of Greece, he looked forward to conquer the Persian empire, which the retreat of the Ten Thousand Greeks and the campaigns of Agesilas in Asia seemed to point out as an easy enterprise. But the first step was his election as Tagus of Thessaly, and the submission of all the Thessalian cities to his authority. For this purpose it was necessary to obtain the acquiescence of Pharsalus, and although he might have gained his object by force, he preferred to effect it by negotiation, and accordingly frankly disclosed his schemes to Polydamas, and offered him the second place in Thessaly, if he would support his views. Polydamas asked the advice of the Spartans, and finding that he could receive from them no help, he acceded to the proposals of Jason, and inducted the Pharsalians to espouse his cause. Soon after this, probably in c. 374, Jason was elected Tagus of Thessaly, and proceeded to settle the contingent of cavalry and heavy-armed troops which the Thebans were to furnish. He now possessed a force of 8000 cavalry and more than 20,000 infantry; and Alcetas I., king of Epirus, and Amyntas II., king of Macedonia were his allies. (Xen. Hell. vi. 1 §§ 2—19; Diod. xv. 60.) He could in effect command a greater force than any other state in Greece; and from the disunion and exhaustion of the other Greek states, it seemed not improbable that he might be able to carry his ambitions projects into effect. He had already formed an alliance with Thebes and after the battle of Leuctra (c. 371) he was invited by the Thebans to join them in attack the Lacedaemonian camp. But Jason's policy was to prevent any other power from obtaining the preponderance in Greece, and accordingly upon his arrival at Leuctra he advised the Thebans not to drive the Lacedaemonians to despair, and obtained a truce for the latter, which enabled them to secure their safety by a retreat. (Xen. Hell. vi. 4 § 20, seq.) In the following year he announced his intention of marching to Delphi at the head of a body of Thessalian troops and presiding at the Pythian festival. Great numbers felt throughout Greece; but before the time came, he was assassinated by seven youths as he sat in public to give audience to all comers. His death was felt as a relief by Greece; and the honours paid in many of the Greek cities to his assassins prove the general fear which his ambitious schemes had excited. (Xen. Hell. vi. 4 §§ 28—32.)

Jason had so firmly established his power that he was succeeded in the post of Tagus of Thessaly by his two brothers Polydamas and Polyphasis; but they did not possess his abilities or energy, and Thessaly again sank into political insignificance. Polydamas was assassinated by his brother Polyphasis, who became sole Tagus. Polydorus exercised his authority with great cruelty; he put to death Polydamas of Pharsalus, and killed or drove into exile many other distinguished persons of this city and of Larissa. (Xen. Hell. vii. 4 §§ 33, 34.) At the end of a year he was also assassinated by Alexander, who was either his brother (Diod. xv. 61) or his nephew (Plut. Polyad. 29.) Alexander surpassed even Polydorus in cruelty, and was guilty of gross enormities. The Lacedaemonians and other noble families, who were chiefly exposed to his vengeance, applied in their distress to Alexander, the youthful king of Macedonia, who had recently succeeded his father Amyntas. Alexander invaded Thessaly, defeated the tyrant, and took possession of Larissa and Crannon, which he garrisoned with his troops. (Diodor. xv. 61.) It would seem, however, that the necessities of his own kingdom compelled him shortly afterwards to withdraw his troops from Thessaly; since we find the Thessalian cities opposed to the tyrant inviting the aid of the Thebans. Accordingly, about c. 369, Pelopidas invaded Thessaly, and took Larissa and several other cities under his protection, apparently with the sanction of Alexander of Macedonia, with whom he formed an alliance. (Diodor. xv. 67.) In the following year (c. 368) Pelopidas again marched into Thessaly at the head of a Theban force, to protect Larissa and the other cities against the projects of Alexander of Pherae, who had solicited aid from Athens. Alexander was compelled to sue for peace; and Pelopidas, after arranging the affairs of Thessaly, marched into Macedonia, where the young king had been lately assassinated. Pelopidas, the regent of the kingdom, was also compelled to enter into alliance with Pelopidas, and to give him several hostages, among whom was the youthful Philip, afterwards king of Macedonia. (Diod. xv. 71; Plut. Pelop. c. 26.) By these means the influence of Thebes was extended over the greater part of Thessaly. Two years afterwards (c. 366) the Thebans obtained from the Persian court a rescript acknowledging their claims to the headship of Greece; and in the same year Pelopidas, accompanied by Isocrates, visited Thessaly with the view of obtaining the recognition of their claim from Alexander of Pherae and the other Thessalian cities. Alexander not only refused them at Pharsalus, but when he found that they were not supported by any armed force, he seized them as prisoners and carried them off to Pherae. The first attempt of the Thebans to rescue their countryman proved unsuccessful; and the army which they sent into Thessaly was only saved from destruction by the genius of Epaminondas, who was then serving as a private, and was compelled to fight against the Thebans.
by the soldiers to take the command. So greatly was Alexander strengthened in his power by this failure that all the Thessalian cities submitted to him, and the influence and Thessaly for a time destroyed. Subsequently a second expedition was sent into Thessaly under the command of Eumenes, who compelled the tyrant to release Pelopidas and Ismenias, but without restoring the Thebes to the commanding position which she had formerly held in Thessaly. (Diod. xv. 71—73; Plut. Pelop. 27—29; Cornel. Nep. Pelop. 5; Paus. ix. 13. § 1.) The continued oppressions of Alexander of Pherae became so intolerable that the Thessalian cities once more applied to Thebes for assistance. Accordingly in B.C. 364 Pelopidas was again sent into Thessaly at the head of a Thessalian army. In the first engagement Pelopidas was slain, but Alexander was defeated. (Diod. xv. 80, 81; Plut. Pelop. 31, 32; Cornel. Nep. Pelop. 5; respecting the different expeditions of Pelopidas into Thessaly, as to which there are discrepancies in the accounts, see Grote, Hist. of Greece, vol. x. p. 361, note, p. 391, note.) The death of Pelopidas, however, proved almost fatal to Alexander. Burning to revenge his loss, the Thes- ban sent a powerful army into Thessaly, which compelled him to renounce his supremacy in Thessaly, to confine himself to Pherae, and to submit to all the demands of Thebes. (Plut. Pelop. 35.)

After the death of Eumenes at the battle of Mantinea (B.C. 362) the supremacy of Thebes in Thessaly was weakened, and Alexander of Pherae recovered much of his power, which he continued to exercise with his accustomed cruelty and ferocity till his assassination in B.C. 359 by his wife Thebe and her brothers. One of these brothers, Tisiphonus, succeeded to the supreme power, under the direction of Thebe; but his reign lasted only a short time, and he was followed in the government by Lyophron, another brother. (Xen. Hell. vi. 4. § 57; Diod. xvi. 14; Plut. Pelop. 35.) Meanwhile Philip, who had ascended the throne of Macedon in B.C. 369, had been steadily extending his dominions and his influence; and the Alexander of Larissa now had recourse to him in preference to Thebes. Accordingly Philip marched into Thessaly in B.C. 353. Lyophron, unable to resist him, invoked the aid of Onomarchus and the Phocians; and Philip, after a severe struggle was driven out of Thessaly. (Diodor. xvi. 35.) In the following year Philip returned to Thessaly, and gained a signal victory over Onomarchus and Lyophron. Onomarchus was slain in the battle; and when Philip followed up his victory by laying siege to Pherae, Lyophron surrendered the city to him, upon being allowed to retire to Thocis with his mercenaries. (Diodor. xvi. 37.) Thus ended the powerful dynasty of the tyrants of Pherae. Philip established a popular government at Pherae (Diod. xvi. 38), and gave nominal independence to the Thessalian cities. But at the same time he garrisoned Magnesia and the port of Pagaeus with his troops, and kept steadily in view the subjugation of the whole country. An attempt made in B.C. 344 to restore the dynasty of the tyrants at Pherae gave him an opportunity of carrying his designs into effect. Not only did he garrison Pherae with his own troops, but he revived the ancient division of the country into four tetrarchies or tetradarchies, and placed at the head of each some of the chiefs of the Almate, who were entirely devoted to his interests. The result of this arrange- ment was the entire subjection of Thessaly to Philip, who drew from the country a considerable addition to his revenues and to his military resources. (Har- porat. s. v. Χεραρχία; Dem. Olynth. i. § 23; Strab. ix. p. 440; Thucyd. ii. p. 12—14.) Upon the death of Philip the Thessalians were the first Greek people who promised to support Alexander in obtaining the supremacy of Greece. (Diod. xvii. 4.) After the death of Alexander the Thessalians took an active part with the other Grec- ian states in attempting to throw off the Macedonian yoke, but by the victory of Antipater they were again united to the Macedonian monarchy, to which they remained subject till the defeat of Philip by the Romans at the battle of Cynossephalae, B.C. 197. The Roman senate then declared Thessaly free (Liv. xxxiii. 32); but from this time it was virtually under the sovereignty of Rome. The government was vested in the hands of the more wealthy persons, who formed a kind of senate, which was accustomed to meet at Larissa. (Liv. xxxiv. 52, xxxvi. 8, xiii. 38.)

When Macedonia was reduced to the form of a Roman province, Thessaly was incorporated with it. (Strab. xvi. p. 840.) Under Alexander Severus it formed a separate province governed by a procurator (Gruter, Juvac. p. 474. 4); and in the later consti- tution of the Empire after the time of Constantine, it also appears as a separate province under the administration of a praeses. (Not. Dig. i. p. 7; Böcking, i. p. 151; Marquardt, in Becker's Röm. Alterth., vol. iii. p. 117.)

In giving an enumeration of the Thessalian tribes and cities, we will first describe the four tetrarchies already mentioned, and then take the other divisions of the country.

1. Histiaiotis or Histiaioi'tis (Ἑστιαίωτιτις, Ἑστιαίωτις), inhabited by the Hesitaeotae (Ἑστιαίωται), was the northern part of Thessaly, of which the Peneius may be described in general as its southern boundary. It occupied the passes of Olym- pus, and extended westward as far as Pindus. (Plin. iv. 1; Strab. ix. pp. 430, 437, 438.) It was the seat of the Perrhaebi (Περραχαδός), a warlike and powerful tribe, who possessed in historical times several towns strongly situated upon the mountains. They are mentioned by Homer (II. ii. 739) as taking part in the Trojan War, and were regarded as genuine Hellenes, being one of the Amphicyonie states (Asch. de Fals. Leg. p. 132). The part of the Hes- tiaiotis inhabited by them was frequently called Perrhaebia, but it never formed a separate Thessalian province. The Perrhaebi are said at one time to have extended south of the Peneius as far as the lake Bœbœus, but to have been driven out of this district by the mythical race of the Lapithæ. (Strab. ix. pp. 439, 440.) It is probable that at an early period the Perrhaebi occupied the whole of Histiaiotis, but were subsequently driven out of the plain and confined to the mountains by the Thessalian con- querors from Thessprotia. Strabo states that Hes- tiaiotis, was formerly, according to some authorities, called Doris (ix. p. 437), and Herodotus relates that the Dorians once dwelt in this district at the foot of Mt. Ossa and Olympus (i. 56). It is said to have derived the name of Hestiaeotis from the district of this name in Euboea, the inhabitants of which were transplanted to Thessaly by the Perrhaebi (Strab. ix. p. 437); but this is an uncertain statement, impro- bably founded alone upon similarity of name. Homer mentions another ancient tribe in this part of Thessaly called the Aetieoe, who are placed by Strabo among

VOL. II.
the Thessalian side of Pindus near the sources of the Peneus. They are described as a barbarous tribe, living by plunder and robbery. (Hom. II. ii. 744; Strab. vii. p. 327, ix. p. 434; Steph. B. s. v. Αἴθωκα.) The towns of Hestiaia were: Ουνείνα, Πάλλα, Αἰγίνια, Μελίβωρα, Φαλορία, Ερικυνία, Πελενησαρ, Τερέκα, Οχείτα, Σιλάυα, Γομφή, Πυθέα της Φθειδού, Ειθόμη, Λιεσναία, Πρακίου, Πραστέστες, Παρακόνος, Μυλαί, Μαλλοία, Κυριτεά, Εμπούτα, Ολυμπία, Σκίτσαρ, Λόριτκη, Πυθέμ, Ελόνε. Successively Leimone, Eudeirus, Lathapous, Gous-nus or Goni, Charax, Condylon, Phalanna, Orthe, Ataxan.

2. Πελασγοίτσ (Πελασγώται), inhabited by the Pelasgote (Πελασγώται), extended S. of the Peneus, and along the western side of Pelion and Ossa, including the district called the Pelasgic plain. (Strab. ix. p. 443.) The name shows that this district was originally inhabited by Pelasgians; and its chief town was Larissa, a well known name of Pelasgic cities. The towns of Pelasgiotis were: Ελάτα, Μορπίσιον, Μετρόπολις, Γερτώντα, Αργερα, Λαρίσα, Συκυρίον, Κυρίνων, Αμύρων, Αρμενίου, Ψηλάρων, Κυνοσκεφαλαίων, Σκοτούσσα, Παλαέφαρος.

3. Θέσσαλοιτις (Θεσσαλωτηίς), the central plain of Thessaly and the upper course of the river Peneus, so called from its having been first occupied by the Thessalian conquerors from Epirus. Its towns were: Περισσαία, Φυλλος, Μετρόπολις, Σιέρα, Ευχυδρίου, Πφαλαίσα, the most important in the district, Θεθοίδιον.

4. Πιθιοτις (Φηθωτης), inhabited by the Achaean Pithiotes (Ἄχααιοι Φηθωτοί), under which name they are usually mentioned as members of the Amphictyonic league. This district, according to Strabo, included the southern part of Thessaly, extending from the Maiax gulf on the E. to Dolopia and Mount Pindus on the W., and stretching as far N. as Pharsalas and the Thessalian plains. (Strab. ix. p. 430.) Pithiiots derived its name from the Homeric Pithia (Φηθη, II. i. 155, ii. 683), which appears to have included in the heroic times not only Bileus and Dolupa, which is expressly called the furthest part of Pithia (II. ix. 484), but also the southern portion of the Thessalian plain, since it is probable that Pithia was also the ancient name of Pharsalus. (L. & K., Northern Greece, vol. iv. p. 484, says that the cities of Pharsalia were Amphaiumaeumae (Συλαξ, p. 25), or Amphaiaci (Αμφαιακαί, Steph. B. s. v.), on the promontory Pythia and on the Pagassaean gulf; Θερακ, Ερεθις, Φυλάκη, Ιόνι, Εκας, Πτέλευμ, Αντρώ, Λαρίσα, Κρεμάς, Προμενά, Πρασ, Ναυχάκιον, Θαυμά, Μελίτα, Κορσέλα, Χυνερά, Λαμία, Φαλάρα, Εχύνιος.

5. Magnesia (Μαγνησία), inhabited by the Magnesians (Μαγνησίτες), was the long and narrow slip of country between Mt. Ossa and Pelion on the W. and the sea on the E., and extending from the mouth of the Peneus on the N. to the Pagassaean gulf on the S. The Magnetae were members of the Amphictyonic league, and were settled in this district in the Homeric times. (II. ii 736.) The Thessalian Magnesia are said to have founded the Aitolian cities of Magnesia on Mt. Sipylos and of Magnesia on the river Maceander. (Arist. op. Athen. iv. p. 173; Conon 29; Strab. xiv. p. 647.) The towns of Magnesia were: Βροε, Βροκε, Γκλάθφεικα, Αοσίνα, Ρα-
Thessalonica. 1171

Ivri...lia I, with kivia iami. the Jiv., (Dion. xii. 421) the distinctly and these was Greek the rebuilt first are city. are (Thermaicus B.)

These districts are connected. The district. miles. intermediate Via lonica across and districts sine'my). These declivity, iosing. and these city, (Thessalonica, the Greek Thessalonica. B.,) is greatly city. which were evidently for commanding the trade of the Macedonian sea. Its relations to the inland districts were equally advantageous. With one of the two great levels of Macedonia, viz. the plain of the "wide-flowing Axios" (Hom. II. ii. 849), to the N. of the range of Olympus, it was immediately connected. With the river, viz. hill, plain of the common and Lake Cercinius, it communicated by a pass across the neck of the Chalcidic peninsula. Thus Thessalonica became the chief station on the Roman Via Egnatia, between the Hadrionic and the Hellespont. Its distance from Pella, as given by the Itineraries, is 27 miles, and from Amphipolis (with intermediate stations; see Act. Apost. xvii. 1) 67 miles. It is still the chief centre of the trade of the district. It contains a population of 60,000, or 70,000, and (though Adriatic may possibly be larger) it is the most important town of European Turkey, next after Constantinople.

2. Name.—Two legendary names, which Thessalonica is said to have borne in early times, are Emathia (Zonar. Hist. xii. 26) and Halia (Steph. B. s. e.), the latter probably having reference to the maritime position of the town. During the first period of its authentic history, it was known under the name of Thерма (Θέρμα, Aesch.; Θέρμα, Herod., Thucyl.; Θέρμα, Mal.Chrones. p. 190, ed. Bomo.), derived, in common with the designation of the gulf (Thermicus Sinus), from the hot salt-springs, which are found on various parts of this coast, and one of which especially is described by Pococke as being at a distance of 4 English miles from the modern city. (See Scylax, p. 278, ed. Gail.) Three stories are told of the origin of the name Thessalonica. The first (and by far the most probable) is given by Strabo (vii. Epit. 10), who says that Thermo was rebuilt by Cassander, and called after his wife Thessalonica, the daughter of Philip; the second is found in Steph. B. (s. e.), who says that its new name was a memorial of a victory obtained by Philip over the Thessalians (see Const. Porphyrog. De Them. ii. p. 51, ed Bonn); the third is in the Etym. Magn. (s. e.), where it is stated that Philip himself gave the name in honour of his daughter. Whichever of these stories is true, the new name of Thessalonica, and the new eminence connected with the name, are distinctly associated with the Macedonian period, and not at all with the earlier passages of true Greek history. The name, thus given, became permanent. Through the Roman and Byzantine periods it remained unaltered. In the Middle Ages the Italians gave it the form of Salonicchi or Salonicki, which is still frequent. In Latin chronicles we find Salonicius. In German poems of the thirteenth century the name appears, with a Teutonic termination, as Saloneck. The uneducated Greeks of the present day call the place Σαλωνικη, the Turks Salanik.

3. Political and Military History.—Thessalonica was a place of some importance, even while it bore the name of Therm. Three passages of chief interest may be mentioned in this period of its history. Xerxes rested here on his march, his land-forces being encamped on the plain between Thermo and the Axios, and his ships cruising about the Thermaic gulf; and it was the view from hence of Olympus and Ossa which tempted him to explore the course of the Penesius. (Herod. vii. 138, sqq.) A short time (o. c. 421) before the breaking out of the Peloponnesian War, Thermo was occupied by the Athenians (Thucyd. i. 61); but two years later it was given up to Pericles (Ib. ii. 29). The third mention of Thermo is in Aeschinus (de Fals. Leg. p. 31, ed. Beek.), where it is spoken of as one of the places taken by Pausanias.

The true history of Thessalonica begins, as we have implied above, with the decay of Greek nationality, the Macedonians. The earliest author who mentions it under its new name is Polybios. It is said that it was rebuilt in the same year (o. c. 315) with Cassander, immediately after the fall of Pydna and the death of Olympias. (Cassandria.) We are told by Strabo (L. c.) that Cassander incorporated in his new city the population, not only of Thermo, but likewise of three smaller towns, viz. Aenea and Cissus (which are supposed to have been on the eastern side of the gulf), and Chalstra (which is said by Strabo (vii. Epit. 9) to have been on the further side of the Axios, whence Tafal (p. xxii.) by some mistake infers that it lay between the Axios and Thermo). It does not appear that these earlier cities were absolutely destroyed; nor indeed is it certain that Thermo lost its separate existence. Pliny (L. c.) seems to imply that a place bearing this name was near Thessalonica; but the text is probably corrupt.

As we approach the Roman period, Thessalonica begins to be more and more mentioned. From Livy (xlv. 10) this city would appear to have been the great Macedonian naval station. It surrendered to the Romans after the battle of Pydna (Ib. xlv. 45), and was made the capital of the second of the four divisions of Macedonia (Ib. xlv. 29). Afterwards, when the whole of Macedonia was reduced to one province (Flor. ii. 14), Thessalonica was its most important city, and virtually its metropolis, though not so called till a later period. [MACEDONIA] Ciceron, during his exile, found a refuge here in the quatorse's house (pro Pian. 41); and on his journeys to and from his province of Cilicia he passed this way, and wrote here several of his extant letters. During the first Civil War Thessalonica was the head-quarters of the Pompeian party and the senate. (Dion Cass. xli. 20.) During the second it took the side of Octavius and Antonius (Ib. Brut. 46; Appian, B. C. iv. 119), and reaped the advantage of this course by being made a free city. (See Plio. L. c.)

It is possible that the word Σαλουνιας, with the head of Octavia, on some of the coins of Thessalonica, has reference to this circumstance (see Eckhel, ii. p. 79); and some writers see in the Vardar gate, mentioned below, a monument of the victory over Brutus and Cassius.

Even before the close of the Republic Thessalonika was a city of great importance, in consequence of its position on the line of communication.
of the Byz. writers. (De Thessalonica a Latinis curatus, in the same vol. with Leo Grammaticus, 1842.) Soon after this period follows the curious history of western feudalism in Thessalonica under Boniface, marquis of Montierrat, and his successors, during the first half of the 13th century. The city was again under Latin dominion (having been sold by the Greek emperor to the Venetians) when it was finally taken by the Turks under Amurath II., in 1430. This event also is described by a writer in the Bonn Byzantine series (Joannes Angustos, de Thessaloniciensi Excidio Narravit, in the same volume with Symeon Camenis).

For the medieval history of Thessalonica see Mr. Finlay's works, Medieval Greece (1851), pp. 70, 71, 135—147; Byzantine and Greek Empires, vol. 1, (1853), pp. 315—332, vol. ii. (1854), pp. 182, 264—266, 607. For its modern condition we must refer to the travellers, especially Beaujour, Consinyé, Holland, and Leake.

4. ECCLESIASTICAL HISTORY. The annals of Thessalonica are closely connected with religion, that it is difficult to separate them here. After Alexander's death the Jews spread rapidly in all the large cities of the provinces which had formed his empire. Hence there is no doubt that in the first century of the Christian era they were settled in considerable numbers at Thessalonica; indeed this circumstance contributed to the first establishment of Christianity there by St. Paul (Acts, Ap. xvii. 1). It seems probable that a large community of Jews has been found in this city ever since. They are mentioned in the seventh century during the Slavonic wars; and again in the twelfth by Eustathius and Benjamin of Tudela. The events of the fifteenth century had the effect of bringing a large number of Spanish Jews to Thessalonica. Paul Lucas says that in his day there were 30,000 of this nation here, with 22 synagogues. More recent authorities vary between 10,000 and 20,000. The present Jewish quarter is in the south-east part of the town.

Christianity was once established in Thessalonica, spread from it in various directions, in consequence of the mercantile relations of the city. (1 Thess. i. 8.) During the succeeding centuries this city was the bulwark, not simply of the Byzantine Empire, but of Oriental Christendom,—and was largely instrumental in the conversion of the Scythians and Bulgarians. Thus it received the designation of "The Orthodox City." It is true that the legends of Demetrius, its patron saint (a martyr of the early part of the fourth century), disfigure the Christian history of Thessalonica; in every siege success or failure seems to have been attributed to the granting or withholding of his favour; but still this see has a distinguished place in the annals of the Church. Thessalonian was baptized by his bishop; even his massacre, in consequence of the stern severity of Ambrose, is chiefly connected in our minds with ecclesiastical associations. The see of Thessalonica was almost a patriarchate at this time; and the withdrawal of the province subject to its jurisdiction from connection with the see of Rome, in the reign of Leo Isaricus, became one of the principal causes of the separation of East and West. Cameniata, the native historian of the calamity of 904, was, as we have seen, an ecclesiastic. Eustathius, who was archbishop in 1185, was, beyond dispute, the most learned man of his age, and the author of an invaluable commentary on the Hist
and Odysseus, and of theological works, which have been recently published by Tafel. A list of the Latin archbishops of Thessalonica from 1205 to 1418, when a Roman hierarchy was established along with Western feudalism, is given by Le Quien (Oristo Christianus, iii. 1059). Even to the last we find this city connected with questions of religious interest. Symeon of Thessalonica, who is a chief authority in the modern Greek Church on ritual subjects, died a few months after the fatal siege of 1430; and Theodore Gaza, who went to Italy soon after this siege, and, as a Latin ecclesiastic, became the translator of Aristotle, Theophrastus, and Hippocrates, was a native of the city of Demetrius and Eustathius.

5. REMAINS OF ANTIQUITY.—The two monuments of greatest interest at Thessalonica are two arches connected with the line of the Via Egnatia. The course of this Roman road is undisputedly preserved in the long street which intersects the city from east to west. At its western extremity is the Valdar gate, which is nearly in the line of the modern wall, and which has received its present name from the circumstance of its leading to the river Valdar or Axios. This is the Roman arch believed by Beaujour, Holland, and others to have been erected by the people of Thessalonica in honour of Octavius and Antoninus, and in memory of the battle of Philip. The arch is constructed of large blocks of marble, and is about 12 feet wide and 18 feet high; but a considerable portion of it is buried deep below the surface of the ground. On the outside face are two bas-reliefs of a Roman wearing the toga and standing before a horse. On this arch is the above-mentioned inscription containing the names of the politicians of the city. Leake thinks from the style of the sculpture, and Tafel from the occurrence of the name Flavins in the inscription, that a later date ought to be assigned to the arch. (A drawing of it is given by Consinny.) The other arch is near the eastern (said in Clarke's Travels, iv. p. 359, by mistake, to be near the western) extremity of the main street. (A drawing of this arch also is given by Consinny and an imaginary restoration by Po-cocke.) It is built of brick and faced with marble, and formerly consisted of three archways. The sculptured camels give an oriental aspect to the monument; and it is generally supposed to commemorate the victory of Constantine over Licinius or over the Sarmatians.

Near the line of the main street, between the two above-mentioned arches are four Corinthian columns supporting an architrave, above which are Caryatides. This monument is now part of the house of a Jew; and, from a notion that the figures were petrified by magic, it is called by the Spanish Jews Los Incantados. The Turks call it Sarch-Match. (A view will be found in Consinny, and a more correct one, with architectural details, in Stuart and Revett's Athens, Antiq. vol. iii. ch. 9. p. 53). This colonnade is supposed by some to have been part of the Propylaea of the Hippodrome, the position of which is believed by Beaujour and Clarke to have been in the south-eastern part of the town, between the sea and a building called the Rotunda, now a mosque, previously the church Eski-Metropolit, but formerly a temple, and in construction similar to the Parthenon at Athens. (Pococke has a ground-plan of this building.) Another mosque in Thessa-loonica, called Eski-Djumah, is said by Beaujour to have been a temple consecrated to Venus Thermaca.

The city walls are of brick, and of Greek construction, resting on a much older foundation, which consists of brown stones of immense thickness. Everywhere are broken columns and fragments of sculpture. Many remains were taken in 1430 to Constantinople. One of the towers in the city wall is called the Tower of the Statue, because it contains a colossal figure of Thessalonica, with the representation of a ship at its feet. The castle is partly Greek and partly Venetian. Some columns of verd antique, supposed to be relics of a temple of Hercules, are to be noticed there, and also a shattered triumphant arch, erected (as an inscription proves) in the reign of Marcus Aurelius, in honour of Antoninus Pius and his daughter Faustina.

In harmony with what has been noticed of its history, Thessalonica has many remains of ecclesiastical antiquity. Leake says that in this respect it surpasses any other city in Greece. The church of greatest interest (now a mosque) is that of St. Sophia, built, according to tradition, like the church of the same name at Constantinople, in the reign of Justinian, and after the designs of the architect Antemius. This church is often mentioned in the records of the Middle Ages, as in the letters of Pope Innocent III. and in the account of the Norman siege. It remains very entire, and is fully described by Beaujour and Leake. The church of St. Demetrius (apparently the third on the same site, and now also a mosque) is a structure of still greater size and beauty. Tafel believes that it was erected about the end of the seventh century; but Leake conjectures, from its architectural features, that it was built by the Latins in the thirteenth. Tafel has collected with much diligence the notices of a great number of churches which have existed in Thessalonica. Dapper says, that in his day the Greeks had the use of thirty churches, Wallpole (in Clarke's Travels, iv. p. 345) gives the number as sixteen. All travellers have noticed two ancient pulpits, consisting of "single blocks of variegated marble, with small steps cut in them," which are among the most interesting ecclesiastical remains of Thessalonica.

6. AUTHORITIES.—The travellers who have described Thessalonica are numerous. The most important are Paul Lucas, Second Voyage, 1705; Po-cocke, Description of the East, 1743—1745; Beaujour, Tableau du Commerce de la Grèce, translated into English, 1800; Clarke, Travels in Europe, &c. 1816—1823; Holland, Travels in the Ionian Isles &c. 1815; Consinny, Voyage dans la Macedoine, 1831; Leake, Northern Greece, 1835; Zachariä, Reise in den Orient, 1840; Grisebach, Reise durch Rumelien, 1841; Bowen, Mount Athos, Thessaly, and Epirus, 1852.

In the Mémoires de l'Académie des Inscriptions, tom. xxxvii. sect. hist. pp. 121—146, is an essay on the subject of Thessalonica by the Abbe Lelley; but the most elaborate work on the subject is that by Tafel, the first part of which was published at Tubingen in 1835. This was

THESTIA.

afterwards reprinted as "De origine et Fronte de Thessaliana epigraeco Agro Archaeoira, Berlin, 1839. With this should be compared his work on the 'Via Egnatia.' To these authorities we ought to add the introduction to some of the commentaries on St. Paul's Epistles to the Thessalonians, especially those of Koch (Berlin 1849) and Lüne-
mann (Göttingen, 1850). [J. S. H.]

THESTIA. [THESIENSES.

THESIENSES (Ovistias, Pol. v. 7), are usually called the inhabitants of a town Thestia in Aetolia. But no town of this name is mentioned by the ancient writers, and it is not improbable that the town itself was called thestia. The name occurs only in Polybius, and the exact site of the place is unknown. We only learn, from the narrative of Polybius, that it was situated in the Northern part of the upper plain of Aetolia. The name is perhaps connected with Thestius, one of the old Aetolian heroes.

THESTIUM (Ovistis, Strab. iv. p. 431; Polh. viii. 3, 4; Ovistis, Eupir. Androm. 20; Ovistis, Steph. B. s. c. = Eth. Ovistis), a place in Thessaly, close to Pharsalus, where Flamininus encamped at the end of the second march from Pharsa towards Scota, between the battles of Cyno-
scaphia. It derived its name from thea, the mother of Achilles, the national hero of the Achaean Pheboiaca. Leake places it at or near Magida, on the opposite bank of the Enipeus. (Northern Greece, vol. iv. pp. 472, 473.)

THEUDELA, one of the chief towns of the A thanomai in Epeirus, is identified by Leake with the modern Tholokariana, a village situated near Mount Tumvërka in a pass which leads from the Achelous to the Arachthos. (Liv. xxxviii. 1; Leake, Northern Greece, vol. iv. p. 212.)

THEUMA, a town of Thessaly, near the frontiers of Dobropia (Liv. xxiii. 13.)

THEUPROSOPON. [PHOENICIA, p. 606, a.]

THEVESTI (Ovistetti, Ptol. iv. 3, § 30), an important town of Numidia, but which is only mentioned in the later writers. It was a Roman colony (Gruter, Inscrip. p. 600; Itin. Ant. p. 27), and the place where many roads running in a SE. direction into the Roman province of Africa, had their commencement. (Cf. Itin. Ant. pp. 33, 46, 47, 53, 54.) It is the town of Tebessa, recently discovered by General Negrier, con-
siderable ruins of which still exist, especially the ancient walls, the circumference of which indicates a town capable of containing 40,000 inhabitants. (See Letronne, in Rev. Archdol. iv. p. 360, sq.; Sur l'Arche de Triomphe de Tebessa, etc., Paris, 1847; Jahn's Jahresber. iii. p. 409.)

THIA. [THERA.

THIANXISTE (Osvistis), Artian. Per. P. Eui. p. 7), or THIANITICE (Ovistis), Anon. Per. P. Eui. p. 14), a district of Asia in the Pontus Euxinus, which was separated from Colchis by the river Ophios. Its name probably should be Samic, as the Sa'mi, or Tzani, were a well-known people in this region. (Cf. M. Miller, p. 378, sq. v. 2. p. 121; Ed. ad Arrian. v. 95.)

THIAL, a town of the Contesti in Italy Etruriae, between Carditago Nova, and Illici (Itin. Ant. p. 401).] Variously identified with Sarm Cisriis and Orthhus, near which latter place are many ruins. (Floreas, Eza. Squiv. p. 39, vii. p. 124.) [T. H. D.]

THIBA (Ovstis: Eth. Ovstis), a district in Pontus, so called from an A racean plain there by Hercules. The inhabitants were said to be sowers, whose

breath was poisonous, and who would not perish if thrown into the water, but would float on the surface. (Eustath. ad Dionys. Per. 528; Steph. B. s. v. Θίβας; Ptol. Synop. v. 7. § 1; Ptolearch. ap. Plin. vii. 2. s. 2.)

THILSAPHATA (Amm. Marc. xxv. 8), a fortified town in the south of Mesopotamia, probably the present Tet el Harra, between Mosul and the Sinjar, in the neighborhood of the Tigris. [V.]

THILUTHIA, an impregnable fortress on an island in the Euphrates, near Anatho, which defied the arms of Julian (Amm. Marc. xxxix. 2). Zeus
mus (iii. 15) speaks of this island, and of the impregnable fortress (φαυνὸς χήρωτατος) situated upon it, but without mentioning its name. It is described by Isidora Charax (Muns. Park. § 1. ed. C. Müller) as an island in the Euphrates, containing a treasury of the Parthians, and distant two schoeni from Anatho. The old editions read Θαδας; but the MSS. have Θαδας, which Müller has changed into Θαδας, and there can be little doubt of the propriety of this correction. It corresponds to the island called Tilbus by Ctesiphon (vol. i. p. 57), and in his map Télbo or Anatelles, containing ruins of very ancient buildings. (See Müller, ed. Isid. Char. L. c.)

THIXAE (Οώδας, Ζαυν), Ptol. viii. 3. § 6, vii. 27. § 12), or THIXA (Οώδας, Artian. Per. M. Erythr. p. 36), a capital city of the Sinae, who carried on here a large commerce in silk and woolen stuffs. It appears to have been an ancient tradition that the city was surrounded with brazzen walls; but Ptolemy remarks that these did not exist there, nor anything else worthy of remark. The ancient writers differ very considerably as to its situation. According to the most probable accounts it was either Naukin, or rather perhaps Thisin, Tim, or Teim, in the province Schetis, where, according to the accounts of the Chinese themselves, the first kingdom of Sin, or Θανά, was founded. (Cf. Ritter, Erdkunde, ii. p. 199.)

THINODES (Θήνατος, i.e. the Sand Hill, Ptol. iv. 5. § 18), a mountain of Egypt, belonging to the Libyan chain, on the S. borders of Mac-
marica. [T. H. D.]

THIEMIDA, a place in Numidia, the situation of which is totally unknown. (Stull. Jug. 12.) [T. H. D.]

THIS. [ABUSDIS.

THIBSE (Οώδας, Home. Pans., Steph. B. s. v.; Θεσα, Strab. Xem.: Eth. Θεσάς), a town of Boscio, described by Strabo as situated at a short distance from the sea, under the southern side of Helicon, bordering upon the confines of Thessia and Corona. (Strab. v. p. 411.) Thibse is mentioned by Homer, who says that it abounds in wild pigeons (πολυτρωπήρα τε Θεσάς, Ω. ii. 502); and both Strabo and Stephanus B. remark that this epit.

\[\text{\textit{THIBSE}}\]

was given to the city from the company of wild pigeons at the harbour of Thibse. Xenophon remarks that Cleobzouos marched through the territory of Thibse on his way to Creusis before the battle of Leuctra. (Hel. vi. 4. § 7.) The only public building at Thibse mentioned by Pausanias (ix. 52. § 3) was a temple of Hercules, to whom a festival was celebrated. The same writer adds that between the mountain on the sea-side and the moun-

\[\text{\textit{THIBSEE}}\]
on one side of the causeway, while that on the other is cultivated. The ruins of Thisbe are found at Kalkisia. “The position is between two great summits of the mountain, now called Karavaninh and Palcanw, which rise majestically above the vale, clothed with trees, in the upper part, and covered with snow at the top. The modern village lies in a little hollow surrounded on all sides by low cliffs connected with the last falls of the mountain. The walls of Thisbe were about a mile in circuit, follow-
ing the crest of the cliffs which surround the village; they are chiefly preserved on the side towards Dobrethai and the south-east. The masonry is for the most part of the fourth order, or faced with equal layers of large, oblong, quadrangular stones on the outside, the interior as usual being filled with loose rubble. On the principal height which lies towards the mountain, and which is an entire mass of rock, appear some repairs of a later date than the rest of the walls, and there are many Hellenic foundations on the face of this rock towards the village. In the cliffs outside the walls, to the north-west and south, there are many sepulchral excavations.” (Leake, Northern Greece, vol. ii. p. 506.)

Leake observed the mole or causeway which Pausanias describes, and which serves for a road across the marais to the port. The same writer remarks that, as the plain of Thisbe is completely surrounded by heights, there is no issue for the river which rises in the Ascracea and here terminates. “The river crosses the causeway into the marsh by two openings, the closing of which in the winter or spring would at any time cause the upper part of the plain to be inundated, and leave the lower part for cultivation in the summer; but as the river is now allowed to flow constantly through them, the western side is always in a state of marsh, and the ground has become much higher on the eastern side.”

The port of Thisbe is now called Vaithi. The shore is very rocky, and abounds in wild pigeons, as Strabo and Stephanus have observed; but there is also a considerable number at Kalkisia itself. The Roman poets also allude to the pigeons of Thisbe. Hence Ovid (Met. xi. 300) speaks of the “Thisbaeae columnae,” and Statius (Theb. viii. 261) describes Thisbe as “Dioneas arvis circumsec.”

Thisbe is mentioned both by Pliny (iv. 7. s. 12) and Ptolemy (iii. 15. § 20). Thisbe was a town after Leake (top. 15. § 20).

THUS. [MEGALOPOLEIS.]

THUMIS (Thumis, Tho. ii. 168; Aristides, Aegypt. vol. iii. p. 610; Ptol. iv. 5. § 51 ; modern Tmu, was a town in Lower Aegypt, situated upon a canal E. of the Nile, between its Tanite and Mendesian branches. It was the capital of the Thumite Nome, in which the C a sian division of the Egyptian army possessed lands. At the time of Herodotus’s visit to the Delta the Thumite Nome had been incorporated with the Mendesian. Their incorporation was doubtless owing, partly to the superior size of the latter, and partly to their having a common object of worship in the goddess Tanis (Pan), of whom Thmus was in the old Egyptian language (Hieronym. in Isaian. xlii. 1) the appellation. In the reigns of Valentinian and Theodosius the Great (A.D. 375, foll.) Thmus was a town of some consequence, governed by its own magistrates, and exempt from the jurisdiction of the Alexandrian prefect (Amm. Marx. xxiii. 16. § 6). It was also an episcopal see, and one of its bishops, Serapion, is mentioned by Hieracaneus. (ap. Photium, p. 65, ed. Beckler.) Remains of the ancient city are supposed to exist at Tell-Tamai or Tamai, SW. of Mansourah. A monolithic shrine and many sarcophagi of granite have been found there, and a fictitious mound at the village of Ternay, raised above the level of the inundation, is probably an Egyptian work. (Champollion, Egypte sous les Pharaons, vol. ii. p. 114.) That dykes were essential to the preservation of the city appears from the description of it by Aristides (i. c.), who represents Thmaus as standing upon and surrounded by flat and marshy grounds. [W.B.D.]

THOAE. [ECHINAXDES.]

THOANA. [THANA.]

THOARIS or THOARUS (ὁθαίας or θαόμας), a small coast town in Pontus Ptolemaicus (Arrian, Peripl. P. E. p. 16; Anon. Peripl. P. E. p. 11), is now called Ghenreh, Irnak, or perhaps more correctly Tharesh Irnak. (Hamilton, Researches, i. p. 273.)

THOCNIA (Θωκνία, Θοκνία; Eih. Θωκνία), a town of Arcadia in the district Parrhasias, situated upon a height on the river Aminius, which flows into the Hellesus, a tributary of the Alpheus. The town was said to have been founded by Thoacus, the son of Lycaon, and was deserted in the time of Pausanias, as its inhabitants had been removed to Megalopolis. It is placed by Leake in the position of Vromosela. (Paus. vili. 3. § 2, 27. § 4, 29. § 5; Steph. B. s. v.; Leake, Morea, vol. ii. p. 293.)

THOMNA. [TAMNA.]

THRONITIS LACUS. [THOPTYRIT.] THORA. [ATTICA. p. 331, a.]

THORICUS (Θορίκος; Eih. Θωρίκος; Thoerikus), a town of Attica on the S.E. coast, and about 7 or 8 miles N. of the promontory of Sunium, was originally one of the twelve cities into which Attica is said to have been divided before the time of Theseus, and was afterwards a demus belonging to the tribe Acanthia. (Strab. ix. p. 397.) It continued to be a place of importance during the flourishing period of Athenian history, as its existing remains prove, and was hence fortified by the Athenians in the 24th year of the Peloponnesian War. (Xen. Hell. i. 2. § 1.) It was distant 60 stadia from Anaphylus upon the western coast. (Xen. de Vect. 4. § 43.)

Thoricus is celebrated in mythology as the residence of Cepheus, whom Es or Aurora carried off to dwell with the gods. (Apollod. ii. 4. § 7; Eust. Hippol. 450.) It has been conjectured by Words-worth, with much probability, that the idea of Thoricus was associated in the Athenian mind with such a translation to the gods, and that the “Thorican stone” (Θορικός πέτρος) mentioned by Sophocles (Oed. Col. 1595), respecting which there has been so much doubt, probably has reference to such a migration, as the poet is describing a similar translation of Oedipus.

The fortifications of Thoricus surrounded a small plain, which terminates in the harbour of the city, now called Porto Mandri. The ruins of the walls may be traced following the crest of the town on the northern and southern sides of the plain, and crossing it on the west. The acropolis seems to have stood upon a height rising above the sheltered creek of Prangó Liminión, which is separated only by a cape from Porto Mandri. Below this height, on the northern side, are the ruins of a theatre, of a singular form, being an irregular curve, with one of the sides longer than the other. In the plain, to the westward, are the remains of a quadrangular colonnade, with Doric columns. (Leake, Deni of Attica, 4 & 4.)
THORKAX.  

p. 68, seq. 2nd ed.; Wordsworth, Athens and Attica, p. 208, seq.)

THORKAX (Θορκάς).  1. A mountain near the city of Hermion in Argolis, between which and Mt. Parnon the road ran from Hermion to Halice. It was subsequently called Coccychium, because Zeus was said to have been there transformed into a cuckoo; and on its summit was a temple of Zeus Coccychius. (Paus. ii. 36. §§ 1, 2; Leake, Peloponnesiac, p. 288; Curtius, Peloponnesus, vol. ii. p. 463.)

2. A mountain in Lucania, on the road from Sparta to Selasia, upon which stood a colossal statue of Apollo Pythaeus. (Herod. i. 69; Paus. iii. 10. § 8; Steph. B. s. a. v.; Leake, Morea, vol. ii. p. 534, Peloponnesiac, pp. 348, 352; Bobbeye, Rch. p. 75; Ross, Peloponnes, p. 190; Curtius, Peloponnesos, vol. ii. pp. 237, 239.)

THOSPIA (Θοσπία, Ptol. v. 13. § 19, vili. 19, § 12), the capital of the district Thospitis. [T. H. D.]

THOSPUTIS (Θοσπύτης, Ptol. v. 13. § 18), a district of Armenia Major. It lay at the northern side of the Lacus Thospitis (Θοσπίτης λίμνη, Ptol. ib. § 7), through which the Tigis flowed (Plin. vi. 27. s. 31). It is perhaps the same lake called Thousitis or Thospitis by Strabo (Θοσπίτης or Θοσπίτης, xi. p. 529), and Priscian (Lacus Thousitis, Perig. 919), the water of which is described by Strabo as nitrous and undrinkable. It is probably the modern Varas, in the district of Tosp, and hence called by the Armenians Varas Tospik. [T. H. D.]

THRACIA (Θρακία, Hom.; Θρακίας, Herod. i. 168, or Θρακίας, iv. 99; Attic, Θρακίας. Eth. Θραξ, Hom.; Θραξ, Herod. viii. 116; Attic, Θραξ; Trag. Θραξ: Thrax, the latter form being chiefly, if not exclusively, employed by (gladiators), a country at the southern extremity of Europe, and separated from Asia only by the Propontis and its two narrow channels, the Bosporus and the Hellespont.

1. Name. — Besides its ordinary name, the country had, according to Steph. B. (o. e.), two older appellations, Περέα and Ἀρία; and Gallus (xiv. 6) mentions Sition as another. Respecting the origin of these names, various conjectures have been made both in ancient and in modern times; but as none of them, with the exception to be presently mentioned, are of much value, it is not worth while to devote any space to their consideration. * The exception alluded to in the etymology adopted by Col. More (Hist. of Lang. and Lit. of Anc. Greece, i. p. 153, note), which is far more probable and satisfactory than any other that the present writer has seen, and which derives the name Thrace from the adjective τραχια, "rugged," by the common transfer of the aspirate. Thus the name would indicate the geographical character of the various districts to which it is given; for, as we shall see, it was by no means confined to the country which is the special subject of the present notice.

H. Extent. — In the earliest times, the region called Thrace had no definite boundaries, but was often regarded as comprising all that part of Europe which lies to the north of Greece. Macedinia, in the south, is spoken of by Herodotus as belonging to it (cf. Met. ii. 2, sub fin., where the Chalcidic peninsula is described under the title of Thrace); and

* Those who are curious about such matters may consult Steph. B. s. e. Exon. ad Dion. Per. 322, 323; Sicker, Handb. i. § 480; Berkel ad Steph. B. p. 400; Tszschucke, ad Met. ii. 2. p. 62; Kenrick, Philol. Mus. i. p. 618.

THRACIA.  

Scythia, in the north, is included in it by Steph. B. (o. e. Σκύθων: cf. Aesop, xxvii. 4. § 3). This explains the fable reported by Andron (Tzetz. ad Lycoper. 894), to the effect that Oceanus had four daughters, Asin, Libya, Europa, and Thracia; thus elevating the last-named country to the rank of one of the four quarters of the known—or rather unknown—world. But as the Greeks extended their geographical knowledge, the designation Thrace became more restricted in its application, and at length was generally given to that part of Europe which is included within the following boundaries: the Ister on the N. (Strab. ii. p. 129; Plin. iv. 18; Mel. ii. 2); the Euxine and the Bosporus on the E.; the Propontis, the Hellespont, the Aegean, and the northern part of Macedonia, on the S.; the Strymon, or subsequently, i.e. in the time of Philip II. and his son Alexander the Great, the Nestos (Strab vii. pp. 323, 330; Ptol. iii. 11), and the countries occupied by the Illyrians, on the W., where, however, the boundary was never very settled or accurately known. (Plin. and Mel. ii. cc.) These were the limits of Thrace until the Romans subdued the country, when, in the reign of Augustus, it was divided into two parts, separated by the Haemus; the portion to the south of that mountain chain retaining the name of Thrace, while the part between the Ister and the Haemus received the appellation of Moesia, and was constituted a Roman province. [Moesia, Vol. ii. p. 367.] But even after this period both countries were sometimes included under the old name, which the Latin poets frequently used in its earliest and widest extent of meaning. (Cf. Heyne, add Vg. Aen. xi. 653; Burman, add Val. Flacc. iv. 280; Musæus, add Hygin. Fab. 138; Tzschucke, ad Mel. ii. 2. 63.) As the little that is known about Moesia is stated in the article above referred to, the present will, as far as possible, be confined to Thrace proper, or south of the Haemus, corresponding pretty nearly to the modern Rumelia, which, however, extends somewhat more to the west than ancient Thrace.

III. Physical Geography, Climate, Productions, &c. — Many circumstances might have led us to expect that the ancients would have transmitted to us full information respecting Thrace: its proximity to Greece; the numerous Greek colonies established in it; the fact that it was traversed by the highroad between Europe and Asia; and that the capital of the Eastern Empire was situated in it,—all these things seem calculated to attract attention to the country in an unusual degree, and to induce authors of various kinds to employ their pens in recording its natural and political history. Yet the latest and most profound historian of Greece is compelled to admit that, apart from two main roads, "scarcely anything whatever is known of the interior of the country." (Grote, vol. xii. p. 34, note. For this various reasons may be assigned; but the principal one is the barbarous character, in all ages, of the occupants of the land, which has, at least until very recently, precluded the possibility of its exploration by peaceful travellers.* Those who have

* Even one of the latest travellers there, M. Vignes, commissioned by the French government, and countenanced by the Turkish authorities, found it impossible to induce his guides to conduct him to a certain district which he wished to visit, although he offered to take as numerous an escort as they pleased. (See Archives des Missions scient. et litt. v. i. p. 210.)
traversed it have been almost invariably engaged in military enterprises, and too much occupied with their immediate objects to have either opportunity or inclination, even had they possessed the necessary qualifications, to observe and describe the natural features of the country. What adds to the difficulty of the writer on the classical geography of Thrace is the unfortunate loss of the whole of that portion of the seventh book of Strabo which was devoted to the subject. Strabo, in several parts of his work, treats incidentally of Thrace: but this is a poor substitute for the more systematic account of it which has perished, and the new branches into two almost parallel ranges, the Pangaenus and Rhodope, which are separated from each other by the river Nestus; the former filling up the whole space between that river and the Strymon, the latter the district E. of the Nestus and NW. of the Hebrus. Both Pangaenus and Rhodope extend down to the coast of the Aegean, and the latter is continued parallel to it as far E. as the Hebrus. The central range of the Haemus branches off between the two sources of the Hebrus and the Tanais, and extends to their junction near Hadrianopolis. The most easterly chain diverges from the Haemus about 100 miles W. of the Enzine, to the W. shore of which it is nearly parallel, though it gradually approaches nearer to it from N. to S.; it extends as far as the Bosphors, and with its lateral offshoots occupies nearly the whole country between the E. tributaries of the Hebrus and the Enzine. The central and E. ranges appear to have had no general distinctive names; at least we are not aware that any occur in ancient writers: the modern name of the most easterly is the Strandja-Dagh. A continuation of this range extends along the shore of the Propontis, and is now called the Tekir-Dagh.

The hottest peaks, among these mountains, belong to Rhodope, and attain an elevation of about 8900 feet (Vigesn. p. 529): the summits of the Strandja-Dagh, are 2600 feet high (ib. p. 314); those of the Tekir-Dagh, 2300 (id. p. 315); the other mountains are from 2000 to 600 feet in height (id. pp. 314, 315). The Haemus is not more than 4000 feet high, in that portion of it which belongs to Thrace. It is obvious from these measurements that the statements of some of the ancients that the summits of the Thracian mountains were covered with eternal snow (Orph. ap. Iu. p. v. 506; Str. v. vii. p. 230) point out the inaccuracy of this notion. An interesting account is given by Livy (xli. p. 22) of the ascent of Haemus by Philip V., who shared in the popular belief in question. Livy states plainly enough his conviction that Philip's labour, which was far from slight, was thrown away; but he and his attendants were prudently silent upon the subject, not wishing, says Livy, to be laughed at for their pains. Yet Florus, who alludes to the same circumstance (ii. 12), but makes Persius the mountain-climber, assumes that the king's object was accomplished, and that the bird's-eye view of his dominions, obtained from the mountain top, assisted him in forming a plan for the defence of his kingdom, with reference to his meditated war with Rome. Mela too repeats the erroneous statement (ii. 2).

The main direction of the rivers of Thrace is from N. to S., as might be inferred from the foregoing description of its mountain system. The Strymon forms its W. boundary. In the lower part of its course, it expands to a considerable width, and was called Lake Cerinthis, into which flowed a smaller river, the Angites (Herod. vii. 113); next, towards the E., comes the Nestus; then, in succession, the Travus, which falls into Lake Bistonon, the Schoenus of the Hebrus, the principal river of Thrace, and lastly the Melas. All these rivers fall into the Aegean. Several small streams flow into the Hellespont and
the Propontis, of which we may mention Aegospotami, renowned, notwithstanding its insignificant size, the Arzus, and the Ergius. The rivers which fall into the Euxine are all small, and few of them are distinguished by name in the geographers, though doubtless not so unhonoured by the dwellers upon their banks; among them Plyny (iv. 18) mentions the Pira and the Orosmes. The Hebrus drains at least one-half, probably nearly two-thirds, of the entire land of Thracia; and in those of its tributaries, most of the level portions of the country are situated, as well as nearly all the inland towns. Its principal affluents are the Arda (in some maps called the Harpesans), and the Suenmus on the W., the Tonuzus, Artiscus, and Agrianes on the E.

The Thracian coast of the Aegan is extremely irregular in its outline, being broken up by bays which enter far into the land, yet appear to be of comparatively little depth. Most of them, indeed, are at the mouths of streams, and have probably been filled up by alluvial deposits. It was perhaps for this reason that several of them were called λακες, as if they had been regarded as belonging to the land rather than to the sea; e. g. Lake Cerinicus, already mentioned, which seems, indeed, to have been little more than a marsh, and in Kiepert's map its site is so represented; Lake Bistonos, east of Abdera; and Stenoris Laeus, at the mouth of the Hebrus. The gulfs of Melas, formed by the northern shore of the Chersonesus and the opposite coast of what may be called Thrace, and on its banks, is a part of this description of the Thracian bays. The coasts on the Propontis and the Euxine are comparatively unbroken, the only gulf of any extent being Portus Heliodos, near Anchialus, which is known in modern times, by the name of the bay of Bourghaz, as one of the best harbours in the Euxine, the Thracian shore of which was regarded by the ancients as extremely dangerous. [Salmébuss.] The principal promontories were, Ismarum, Ser- rheum, Sarpemnium, and Arctaeum, on the southern coast; Thylias and Haemii Extrema, on the eastern.

For an account of one of the most remarkable parts of Thrace, see Chersonesus, Vol. I. p. 608.

Off the southern coast are situated the islands of Thasos, Samothrace, and Imbras; the first is separated from the mainland by a channel about 5 miles wide; the other two are considerably more distant from the shore.

The climate of Thrace is always spoken of by the ancients as being extremely cold and rigorous; thus Athenaeus (VII. p. 351) describes the year at Aenus as consisting of eight months of cold and four months of winter; but such statements are not to be taken literally, since many of them are mere poetical exaggerations, and are applied to Thrace as the representative of the north in general. The Haemius was regarded as the abode of the north wind, and the countries beyond it were believed to enjoy a beautifully mild climate. (See Niebuhr, Etymology, and Geog. i. p. 16, Eng. trans.; Soph. Antig. 189; Eurip. Beller. 17; Virg. Georg. iii. 350 seq.; Ov. Pont. iv. 10. 41, iv. 7. 8; Fris. i. 10; &c.) Even after making full allowance for the Chaubt effect of doubt about the excellence of vast forests, undrained marshes, and very partial cultivation, in lowering the average temperature of a country, it is difficult to believe that a land, the northern boundary of which (i.e. of Thrace Proper) is in the same parallel of latitude as Tuscany and the Pyrenees, and the highest mountains of which are less than 9000 feet above the level of the sea, can have had a very severe climate. That the winter was often extremely cold, there can be no doubt. The Hebrus was sometimes frozen over; not to dwell upon the "Hebrus nivali compellatus vincus" of Horace (Ep. i. 3. 3; cf. Virg. Aen. xii. 331, and the epigram, attributed by some to Caes. ar, beginning, "Thrax puer substricto gladio dum judit in Hebro"), Florus (iii. 4) relates that, in the campaign of Minucius in southern Thrace, a number of horsemen in his army were drowned while trying to cross that river on the ice. Xenophon states that the winter which he passed in Thrace, in the mountainous district of the Thyri, was so cold that even wine was frozen in the vessels, and that many Greek soldiers had their noses and ears frostbitten; the snow also lay deep upon the ground. And that this was not an exceptional season may be inferred from Xenophon's remarks on the dress of the Thracians, which seemed to him to have been devised with special reference to the climate, and to prevent such mishaps as those which befell the Greeks (Anab. vii. 4. §§ 3, 4). Tacitus (Ann. iv. 51) assigns the early and severe winter of Mount Haemus among the causes which prevented Poppaeus Sabinus (A. D. 26) from following up his first success over the rebellious Thracians.* Plynay (xvii. 3) says that the vines about Aenus were often injured by frosts, after the Hebrus was brought nearer to that city; the ad- lusion probably being to the formation of the western mouth of the river, nearly opposite to Aenus, the floating ice and the cold water brought down by which would have some effect in lowering the temper- temperature of the neighbourhood. Mela (ii. 2, init.) describes Thrace generally as agreeable neither in climate nor in soil, being, except in the parts near the sea, barren, cold, and very ill adapted for agriculture and fruit-trees of all kinds, except the vine, while the fruit even of that required to be protected from the cold by a covering of the leaves, in order to ripen. This last remark throws some doubt upon the accuracy of the writer for the ripening of the grapes from the direct rays of the sun is obviously more likely to prevent than to promote their arrival at maturity; and hence, as is well known, it is the practice in many parts of Europe to remove the leaves with a view to this object.

However this may be, it is certain that Thrace did produce wine, some kinds of which were famous from very early times. Homer, who bestows upon Thrace the epithet ἐπικάρεια (I. xx. 482), repre- presents Nestor reminding Agamemnon that the Greek ships bring to him cargoes of wine from that country every day (Ib. ix. 76); and the poet celebrates the excellence of the produce of the Mureonian vineyards. (Odx. ix. 197, seq.) Plynay (xiv. 6) states that this wine still maintained its reputation, and describes it as black, perturbed, and growing rich with age; a description which agrees with Homer's (I. e.). Paul Lucas says that he found the Thracean wine excellent. (Voy. dans la Turquie, i. p. 25; see also Athen. i. p. 31.) Thrace was fertile in corn (Plixn. xviii. 3), and its wheat is placed by Plynay high in the scale of excellence as estimated by weight. It has, he says (xviii. 12), a stalk consisting of several coats (τουνιές).

* M. Viquezels states, on two occasions, that he was compelled to change his route in consequence of heavy and continuous snow-storms, in the month of November (pp. 219, 312). The wind also was extremely violent.
to protect it, as he supposes, from the severity of the climate; by which also he accounts for the cultivation, in some parts of the country, of the *triticum triternum* and *bimis*; so called because these varieties were reaped in the third and fourth month respectively after they were sown. Cere was exported from Thrace, and especially from the Chersoneseus to Athens (Theop. de Plantis, viii. 4, Lys. in Dioct. p. 902, and to Rome (Plin. l.c.). Millet was cultivated in some parts of Thrace; for *Xenophon* (Anab. vii. 5. § 12) states that on the march to Salamis, Suthes and his allies traversed the country of the "millet-eating Thracians" (cf. Strab. vii. p. 315). The species of *Thrace* may be briefly mentioned: a species of water-chestnut (*tribulus*) grew in the *Strymon*, the leaves of which were used by the people who lived on its banks to fatten their horses, while of its nuts they made a very sweet kind of bread. (Plin. 1. 16, xxi. 12.)

Roses (*Rosa centifolia*) grew wild on the *Pangaeus*, and were successfully transplanted by the natives (id. xi. 10). The mountains, in general, abounded in wild-thyme and a species of mint (id. xix. 55). A sort of more or less *sweet chestnut* was found in *Thrace* (id. xix. 12; Athen. ii. p. 62), and a styptic plant (*ischnochonum*), which was said to stop bleeding from even divided blood-vessels. (Theop. de Plant. 1.xv. 15; Plin. xxv. 45.) Several varieties of ivy grew in the country, and were sacred to Dionysus. (Theop. de Plant. iii. 16; Plin. xxi. 62.)

Herodotus (iv. 74) states that the *Scythians* had hemp both wild and cultivated; and as he proceeds to say that the Thracians made clothing of it, we may fairly infer that it grew wild there also. "The Athenians imported their timber chiefly from the country about the *Strymon*, for the Thracian hills abounded in oak and fir-trees." (Niebuhr, Lect. Anc. Hist. i. p. 292, Eng. trans.) M. Viquesnel states that the *Stranjdag* is covered with forests of oak (p. 314), and that in some parts of the district of *Rhodope* tobacco is now cultivated (p. 320).

Among the animals of *Thrace*, white horses are repeatedly mentioned. The famous steeds of *Rhesus* were "white than snow." (Harm. ii. x. 437; Eurip. *Rhes.* 304.) When *Xerxes* reached the banks of the *Strymon* in his onward march, the magi sacrificed white horses (Herod. vii. 119), which were probably Thracian, for the same reason, whatever that was, that the human victims spoken of in the next chapter were the children of natives. *Xenophon* states that, during a banquet given by a Thracian, a Thracian entered, leading a white horse; which he presented to his prince, with an eunuchon on its forehead (Anab. vii. 3. § 26). Virgil speaks of Thracian horses with white spots (Aen. v. 565, ix. 49). Horses were no doubt plentiful in *Thrace*: Homer (II. xiv. 227) calls the *Thracians* πωρομολογος; and cavalry always formed a large part of their armies. Thus *Thucydides* (ii. 98) estimates the number of horsemen in the army with which *Sitalces* invaded *Macedonia* at about 50,000. One of the twelve labours of *Heracles* was to bring to *Myeneae*, king of the *Bistonae* in *Thrace*, who fed them with human flesh. (Or. Met. ix. 136.) *Herodotus* (vii. 126) states that lions were found throughout the country bounded on the W. by the *Achelous* and on the E. by the *Nestus*; a statement which is repeated by *Aristotle* (II. A. vi. 31, viii. 28); so that the part of *Thrace* between the *Strymon* and the *Nestus* must have been infested, at least in early times, by those formidable animals. Herodotus says that they attacked the baggage-camels of *Xerxes* during the march of his army from *Acanthus* to *Thermus* (vii. 125). *Cattle*, both great and small, were abundant, and so is it, we have constituted the chief wealth of a people who like most barbarians, considered agriculture a base occupation. (Herod. v. 6.) The fertile valleys were well adapted for oxen, and the thyme-covered hills for sheep; and it is clear, from several passages in *Xenophon* that even the wilder Thracian tribes were rich in this kind of wealth. *(Anab. vii. 3. § 48, 7, § 53.) Aristotle informs us that the Thracians had a peculiar method of fattening swine. (II. A. viii. 6.) He attributes the smallness of their bears to the coldness of the climate *(ib. 28).* Cranes are often mentioned as belonging to *Thrace*. (Virg. Georg. i. 120; Ov. A. A. iii. 182; Juv. xiii. 167.)

Aristotle says that an aquatic bird of the pelican kind (πελακεφανης) migrates from the *Strymon* to the *Ister* *(H. A. viii. 11);* and that the people in some marshy districts of *Thrace* were assisted in catching water-fowl by hawks, which do not seem to have been trained for the purpose; they were found to be wild, to have been induced by a share of the game, to second the proceedings of their human associates *(ib. ix. 36).* Eels were caught at certain seasons in the *Strymon* *(ib. viii. 2; ad fin.)*. The tunny fishery was a source of great wealth to *Byzantium.* (Strab. vii. p. 320.)

The principal mineral productions of *Thrace* were gold and silver, most of which came from the mountainous district between the *Strymon* and the *Nestus*. There, at the southern extremity of the *Pangaeus*, was situated *Cresidies*, founded by the *Thasians,* and afterwards called *Philippi*, in a hill near which, named the hill of *Dionysus* (Appian, B. C. iv. 106), were the most productive gold mines of *Thrace*, to get possession of which was *Philip's* principal object in annexing the district in question to his dominions. He is said to have derived from the mines an annual income of 1000 talents. (Diod. xvi. 8; cf. Strab. vii. p. 335.) *Strabo* (xiv. p. 860) says that the wealth of *Cadmus* came from the mines of the *Pangaeus*; and *Pliny* refers to the same tradition when he states (vii. 57) that according to some authorities, the *Pangaeus* was the place where *Cadmus* first discovered gold-mines, and the art of melting their produce (confitatur). Herodotus (vii. 112) mentions silver, as well as gold, mines in the *Pangaeus*, which in his time were in the possession of the native tribes called *Pieres, Okomanti,* and *Sibrae.* He states also (vi. 46) that the *Thasians* had gold mines at *Scapte Hyle*, near *Abrasus,* from which they derived an (annual) revenue of about 80 talents; and that a part of the revenues of *Peisistratus* came from the *Strymon*, by which the mines on its banks are probably meant (i. 64.). (See also, ix. 75.; Eurip. *Rhes.* 921; *Strabo* (or rather his epitomiser), vii. p. 331.) According to *Pliny* (xxxii. 21) gold was found in the *sands* of the *Hebrus*, and this is confirmed by Paul Loras (L.C.), and by *Viquesnel,* who states (p. 204) that in rainy years the affluents of that river are frequented by gold-finders, who wash the sands which contain gold in grains (en pailettes). Thucydides was interested in gold mines and works near *Amyrhus,* as he himself informs us (iv. 105.). Of the other minerals of *Thrace* we may mention the
The first point to be determined here is, whether the Thracians mentioned in the ancient writers as extending over many parts of Greece, as far south as Attica, were ethnologically identical with those who in historical times occupied the country which is the subject of the present article. And before discussing the topic, it will be convenient to lay before the reader some of the principal passages in the classics which bear upon it.

It is Strabo who makes the most distinct statements on the point. He says (vii. p. 321), "He- cateaus the Milesian states that, before the Hellenes, barbarians inhabited Peloponnesus. But in fact nearly all Greece was originally the abode of barbarians, as may be inferred from the traditions. Pelops brought a people with him into the country, to which he gave his name, and Danaus came to the same region with followers from Egypt, at a time when the Brygones, Caunones, Pelagi, Leleges, and other similar races had settlements within the isthmus; and indeed without it too, for the Thracians who accompanied Eumolpus had Attica and Teres possessed Dalus in Phocis; the Phocian companions of Cadmus occupied Cadmea, the Aones, Tamieus, and Hyante Boeotia." Strabo subsequently (ix. 401) repeats this statement respecting Bocotia, and adds that the descendants of Cadmus and his followers, being driven out of Thebes, took the Pelasgi and Pelasgians, and retired into Thessaly. They afterwards returned, and, having joined the Myoans of Orchomenus, expelled in their turn the Pelasgians and Thracians. The former went to Athens, where they settled at the foot of Hymettus, and gave the name of Pelasgi to a part of the city (cf. Herod. vi. 157); the Thracians, on the other hand, were driven to Parthenus. Again (ix. p. 410) he says, speaking of Helecon: "The temple of the Muses, and Hippoeces, and the cave of the Leithreidian pygmys are there from which one would conjecture that those who consecrated Helecon to the Muses were Thracian; for they dedicated Piers, and Leithrethum, and Pimpieia to the same goddesses. These Thracians were called Piersians (Hiiiper); but their power having declined, the Macedonians now occupy these (last named) places." This account is afterwards (x. p. 471) repeated, with the addition that "the cultivators of ancient music, Orpheus, Musaeus, Tiamyris, and Eunomus, were Thracians." The difficulty that presents itself in these passages,—and they are in general agreement with the whole body of Greek literature,—arising from the confounding under a common name of the precursors of Greek poetry and art with a race of men designated as barbarous, is well stated by K. O. Miller (Hist. of Greek Liter. p. 26, seq.): "It is utterly unaccountable that, in the later historic times, when the Thracians were confounded as a barbarian race, a notion should have sprung up that the first civilization of Greece was due to them; consequently we cannot doubt that this was a tradition handed down from a very early period. Now, if we are to understand it to mean that Eumolpus, Orpheus, Musaeus, and Thamyris were the fellow-countrymen of those Elodians, Odrysians, and Odomantians, who in the historical age occupied the Thracian territory, and who spoke a barbarian language, that is, one unintelligible to the Greeks, we must despair of being able to comprehend these accounts of the ancient Thracian minstrels, and of assigning them a place in the history of Greek civilization; since it is
manifest that at this early period, when there was scarcely any intercourse between different nations, or knowledge of foreign tongues, poets who sang in an unintelligible language could not have had more influence on the mental development of the people than the twittering of birds.

it follows concludes that the Thracians of the ante-historical era, and those of subsequent times, belonged to distinct races. "When we come to trace more precisely the country of these Thracian bard,, we find that the traditions refer to Pieria, the district to the east of the Olympus range, to the north of Thessaly, and the south of Euboea or Macedonian: in Pieria likewise was Leibethra, where the Muses are said to have sung the lament over the tomb of Orphus: the ancient poets, moreover, always make Pieria, not Thrace, the native place of the Muses, which last Homer clearly distinguishes from Pieria. (H. i. 226.) It was not until the Pierians were pressed in their own territory by the early Macedonian princes that some of them crossed the Strymon into Thrace Proper, where Herodotus (vii. 112) mentions the castles of the Pierians at the time of the expedition of Xerxes. It is, however, quite conceivable that in early times, either on account of their close vicinity, or because all the north was comprehended under one name, the Pierians might, in Southern Greece, have been called Thracians. These Pierians, from the intellectual relations which they maintained with the Greeks, appear to be a Grecian race; which supposition is also confirmed by the Greek names of their places, rivers, fountains, &c., although it is probable that, situated on the limits of the Greek nation, they may have borrowed largely from neighbouring countries. (See Müller's Dorians, vol. i. pp. 472, 488, 501.)" After referring to the accounts of the Thracians in Southern Greece, Müller adds: "From what has been said, it appears sufficiently clear that these Pierians or Thracians, dwelling about Helicon and Parnassus in the vicinity of Attica, are chiefly signified when a Thracian origin is ascribed to the mythical bards of Attica."

Colonel Marr, after referring to the foregoing view, which he designates as "plausible," goes on as follows: "But the case admits of another, and perhaps more satisfactory explanation. It is certain that, in the mythical geography, a tract of country on the frontiers of Boeotia and Phocis, comprehending Mount Parnassus and Helicon, bore the name of Thrace. [See the etymology, ante.] In this region the popular mythology also lays the scene of several of the most celebrated adventures, the heroes of which are called Thracians." The author then applies this explanation to the stories of Tereus and Proeae, and of Lycurgus, "king of Thrace;" and proceeds thus: "Pamianias makes the 'Thracian' bard Thamyris virtually a Phocian. He assigns him for mother a nymph of Parnassus called Argiope. His father, Philammon, is described as a native of the same region, son of Apollo, by the nymph Chione, and brother of Autolycus, its celebrated robber chieftain. The divine grandparent is obviously here but a figure of his own sacred region, the grandson Chione, as her name bears, of its snow. Others call the latter heroine Leucadia. The names of these heroines are all so many varied modes of typifying the same 'snow-white' Par-

nassus. This view of the 'Thracian' character of these sages becomes the more plausible, if it be remembered that the region of Central Greece, in which the Heliconian Thrace was situated, is that from which first or chiefly, the seeds of elementary culture were propagated throughout the nation. Here tradition places the first introduction of the alphabet. Here were also the principal seats of Apollo and the Muses. In the heart of the same region was situated the Myanean Orkhomenos, the temple of the Graces, rivalling Miletus, where the Graces herself performer of the Olympic games, and Iridheus, in the land of Thracian fame, and Iridheus, for the promotion of art. Among the early masters of poetry or music, not vulgarly styled Thracians, the most illustrious, Amphion and Linus, are Boeotians. Nor was this region of Central Greece less favoured in respect of its religious institutions. It was not only the favourite seat of Apollo, the Muses, and the Graces, but the native country of the Dionysian rites, zeal for the propagation of which is a characteristic of the Thracian sages." (Hist. of Lang. and Lit. of Ant. Greece, i. pp. 150—153; cf. Niebuhr, Lect. on Ethnog. and Geog, i. p. 287.)

In thus entirely disconnecting these early "Thracians," from those of later times, we have the authority of ThucyDides (ii. 29), who, in speaking of Teres, the father of Sitac, remarks: "This Teres had no connection whatever with Teres, who married Proeae, daughter of Pandion of Athens; they did not even belong to the same Thracian tribes, one at Danuia, a city of the country now called Phocis, and which was then occupied by the Thracians."

And he proceeds to show that it was not likely that Pandion would form an alliance with any one who lived so far from Athens as the country of the Odrysae.*

The consideration of the ethnological relations of the early Thracians hardly falls within the scope of this article; but since identity of name has often caused them to be confounded with the historical inhabitants of Thrace, it may be desirable briefly to discours the subject in this place.

The view which seems to the present writer to be best supported by the evidence, and to explain most satisfactorily the ancient authors, is that which regards the mythical Thracians as members of the widely extended race to which the name of Pelasgians is usually given. It is clear from Homer that a close connection existed between the people of Southern Thrace and the Trojans, who were probably Pelasgians, and who are at the same time represented by him as agreeing, in language, religion, and other important respects, with the Greeks. Again, Homer mentions among the auxiliaries of Priam, the Cauconians, who are named along with the Pelasgians (H. x. 429), and the Cicones (H. ii. 846). These two names bear so close a resemblance to each other as to suggest the probability of the cognate origin of the tribes so designated. Now the Cicones were undoubtedly Thracians (Odys. ix. 39, seqq.); while as to the Caucones, Strabo (xii. p. 542) informs us that they occupied part of the coast of Bithynia, and were regarded by some as Scythians, by others as Macedonians, by others again as Pelasgians. It will be remembered that Caucones are mentioned by him (vii. p. 321) among the earliest inhabitants of Peloponnesus. Another noticeable fact is, that in the passage of Strabo already quoted (ix. p. 401), he represents the Thracians and Pelasgians as acting in

* Yet subsequent prose writers, to say nothing of poets, fall into the error of making Tereus an inhabit-
TIRACIA.

concert. The same author (viii. p. 590) points out the similarity of many Thracian names of places to those existing in the Trojan territory. Finally, the names of the places mentioned by Strabo (vii. p. 321) as common to Pieria and the southern Thracians, are evidently Greek (see Muller's Dorians, i. p. 501); and, as we have seen, the name Thrace itself is in all probability a significant Greek word.

These considerations appear to us to lead to the conclusion already stated, namely, that the mythical Thracians, as well as those spoken of by Homer, were Pelasgians; and hence that that race once occupied the northern as well as the other shores of the Aegean, until, at a comparatively late period, its continuity was broken by the irruption of the historical Thracians from the north into the country between the Strymon and the Euxine. The circumstance that the Greeks designated these barbarians by the name which had been borne by those whom they sup- planted, admits of easy explanation, and history abounds in instances of a similar kind. But it may be doubted whether the Thracians had any general designation in their own language: they probably called themselves Edones, Denseteae, Thyni, Sataes, and so on; but we have no evidence that they really were all branches of a common stock. Under these circumstances, it was inevitable that the Greeks should bestow upon them the name of the earlier possessors of the country; and those Thracians who were brought in contact with the more civilized race would probably adopt it. (On the foregoing question, see Niebuhr, Lect. on Anc. Hist. i. pp. 142, 212; Lect. on Ethnog. and Geog. i. p. 287; Wachsmuth, Hist. Ant. i. p. 44, seq.)

Respecting the historical Thracians we have tolerably full information, but not of that kind which will enable us to arrive at any very definite conclusions as to their ethnological relations. That they belonged to an extensively diffused race, whose early abodes were in the far northern regions, may be regarded as sufficiently proved by the concurrent testimony of the ancient writers. Herodotus, in a well-known passage (v. 3), says that the Thracian nation is the greatest in the world, after the Indians, and that its subdivisions, of which the Getae are one, have many names, according to the countries which they severally occupy. Strabo too (vii. p. 295) states that the Getae and the Mysi were Thracians (as to the Mysi, see also i. p. 6), who extended north of the Danube (vii. p. 296). In confirmation of his assertion that the Getae were ethnologically akin to the Thracians, he adduces the identity of their language (vii. p. 303). He adds (vii. p. 305) that the Daci also spoke this language. From his remark (vii. p. 315) about the Lopodes, it would seem that he regarded the Ilyrians also as nearly allied to, if not actually a branch of, the Thracians. In another passage (x. p. 471) he says that the Phrygians were colonists of the Thracians: to which race also the Sarapaeae, a nation still farther towards the east, north of Armenia, were reported to belong (xi. p. 531), "the Bitilani, previously called Mysi, were so named, as is admitted by most authorities, from the Thracian Bitilani and Thyrai, who emigrated to that country (G. e. Asia Minor; cf. Herod. vii. 73). And I conjecture that the Bębryces, who settled in Mysia before the Bitilani and Mysi, were also Thracians. The Mysians themselves are said to be colonists of those Thracians who are now called Mysi. As the Mariandyni are in all respects like the Bitilani, they too are probably Thracians." (Strab. xii. pp. 541, 542.) Justin

TIRACIA.

coouples the Thracians with the Illyrians and Danubians (xii. 1). In the west and southwest it is impossible to define the Thracian boundary; we have seen that Mela describes the whole of the Chalcidic peninsula as part of Thrace (cf. Thucyd. ii. 79); and there is no doubt that they extended as far south as Olympus, though mixed up with Macedonians, who were the preponderating race in that quarter. In later times the intrusive and undoubtedly distinct races which were mingled with the Thracians near the Danube, were sometimes confounded with them. Thus Florus (iii. 4) calls the Socordes the most savage of all the Thracians.

Of the language of the Thracians scarcely a trace exists. They were too barbarous to have any literary or artistic memorials, so that the principal guides of the ethnologist are wanting. Strabo (vii. p. 319) states that brúa, which occurs as the termination of several names of Thracian towns, signi- fied "city" or "town." This and a few proper names constitute all that remains of their language.

The following is the account which Herodotus gives of the customs of the Thracians. They sell their children into foreign slavery. The women while unmarried enjoy perfect freedom in their intercourse with men; but after marriage they are strictly guarded. The men pay large sums of money for their wives to the parents of the latter, "to be tattooed is considered an indispensable mark of noble birth. (Cf. Strab. vii. p. 315.) Idleness is most honourable; the cultivator of the soil is regarded as the meanest of men; to live by war and plundering is most noble. The only gods they worship are Ares, Dionysus, and Artemis. But their kings differ in this respect from their subjects; for they worship Hermes especially, and swear by him alone, from whom they say that they are descended. When a wealthy man dies, his corpse lies in state for three days: his friends then make a great feast, at which, after bewailing the departed, they slaughter victims of every kind: the body is then buried, hav- ing sometimes been previously burnt. A mound is raised above the grave, upon which athletic games are celebrated (v. 6—8; cf. Xen. Hell. iii. 2, § 5). Besides these customs, which were common to all the Thracians, Herodotus mentions some which were peculiar to certain tribes; as, for instance, that which prevailed among the people to the north of the Cret- sonians. "Among them, each man has many wives. When any man dies, a great contest arises among his widows on the question as to which of them was most beloved by their husband; and in this their relations take a very active part. She in whose favour the point is decided, receives the con- gratulations of both men and women, and is then slain upon her husband's grave by her nearest male relation. The other widows regard themselves as extremely unfortunate, for they are considered to be disgraced." (Ib. 5.) Herodotus here seems to speak of polygamy as confined to a certain tribe of Thracians; but Strabo (vii. p. 297) represents this custom as general among them. In a more general passage, Casaubon quotes from Heracleides Ponticus to the effect that Thracians often had as many as thirty wives, whom they employed as servants, a practice still common in many eastern countries. Xenophon furnishes us with an illustration of the Thracian custom of purchasing wives. He states that at his first interview with Seuthes, the Thracian prince proposed to give his daughter in marriage to Xenophon; and if the Greek himself had a
Thracia. 1183

daughter, offered to buy her as a wife. (Anab. vii. 2, § 38; cf. Mela, ii. 2.)

The want of union among the Thracians is mentioned by Herodotus (v. 3) as the only cause of their weakness. Their tribes, like the Highland clans, seem to have been constantly engaged in petty warfare with one another, and to have been incapable of co-operating even against foreign foes, except for very brief periods, and rarely with any higher object than plunder. Until a late period (Flori. iv. 12, § 17) they appear to have been destitute of discipline, and this, of course, rendered their bravery of comparatively little avail. Thus we learn from Thucydides (ii. 96, 98) that, although Sitalces was the most powerful Thracian king that had ever reigned — (he seems indeed to have been subsequently regarded as a kind of national hero: Xen. Anab. vi. 1 § 6)—yet a large part of the army with which he invaded Macedonia consisted of mere volunteers, formidable chiefly for their numbers, and attracted to his standard by his offers of pay, or by their hope of plunder. Any one, in fact, who held out these inducements, could easily raise an army in Thrace. Thus Clearchus no sooner received supplies of money from Cyrus the Younger, than he collected a force in the Chersonesus, which, although in great part undoubtedly Thracian, was employed by him in making war upon other Thracians, until he was required to join Cyrus in Asia Minor (Ib. i. 1, § 9, 2, § 9, &c.). So when Scuthes undertook the expedition against his so-called revolted subjects, his army was soon tripled by volunteers, who hastened from other parts of Thrace to serve him, as soon as they heard of his enterprise (Ib. vii. 4, § 21). Such soldiers could not, of course, be depended upon for one moment after a reverse. A considerable number of Thracian mercenaries in the army of Cyrus took the earliest opportunity to desert to Artaxerxes after the battle of Cunaxa (Ib. ii. 2, § 7).

Tactus (Ann. iv. 46) informs us that the principal cause of the insurrection (v. 26) of the Thracians who dwelt in the elevated mountain districts (probably of Rhodope), was their dislike of the conscription, which, it would appear, the Romans had introduced into Thrace. This was a yoke to which they could not submit; they were not accustomed to obey even their own rulers, except when it pleased them; and when they sent troops to the assistance of their princes, they used to appoint their own commanders, and to war against the neighbouring tribes only. (Cf. Liv. xiii. 31; Xen. Anab. vii. 4, § 24, 7, § 29, seq.)

Thraian troops were chiefly light-armed infantry and irregular horse. (Xen. Anab. i. 2, § 9, vii. 6, § 27, Memor. iii. 9, § 2; Cart. iii. 9.) The bravest of the foot-soldiers in the army of Sitalces were the free mountaineers of Rhodope, who were armed with short swords (μαχαιροφοροι; Thucyd. ii. 98). The equipment of the Asiatic Thracians is described by Herodotus (vii. 75), and as this description agrees with what Xenophon states regarding Scuthes' forces (Anab. vii. 4, § 4), it is no doubt substantially true of the Thracians generally. They wore caps covering their ears, made of fox-skins, cloaks, and party-coloured mantles (κεπαί, λευκά); their boots, which came high up the leg, were made of deer-skin; their arms were shields, javelins, and daggers (cf. Thucyd. vii. 27). The Thracians in the army of Philip V were armed with very long slings, a word which some translate χαλκάς, others swords. (Liv. xxxi. 39; Plut. Paul. Aemil. 17.) Thracian soldiers fought with impetuosity and with no lack of bravery; but, they like all barbarian and undisciplined troops were incapable of sustained efforts. Livy (xii. 59) describes them as rushing to the attack like wild beasts long confined in cages: they hamstring the horses of their adversaries, or stabbed them in the belly. When the victory was gained on this occasion (the first encounter in the war between the Romans and Persians), they returned to their camp, singing songs of triumph, and carrying the heads of the slain on the tops of their weapons (Ib. 60). When defeated, they fled with rapidity, throwing their shields upon their backs, to protect them from the missiles of the pursuers. (Xen. Anab. vi. 4, § 17.)

About the time of the Peloponnesian War, Thrace began to be to the countries around the Aegean what Switzerland has long, to its disgrace, been to the despotic powers of modern Europe, a land where men might be procured to fight for any one who could hold out sufficient inducements in the shape of pay or plunder. (Thucyd. vii. 27, et alib; Xen. Anab. i. pass.: Just. xi. 1 & 9.) The chief causes of this, apart from the character of its people, appear to have been the want of any central government, and the difficult nature of the country, which rendered its savage independence tolerably secure; so that there was nothing to restrain those who might wish to seek the fortune in foreign warfare. During the period of Macedonian supremacy, and after its close, under the Roman power, Thracians are often mentioned as auxiliaries in Macedonian and Roman armies; but few of these, it is probable, were volunteers. (Liv. xxxi. 39, xxxii. 29, 51, et al.; Cae. B. C. iii. 4; Vell. Pat. ii. 112; Tac. Hist. i. 68, &c.) Cicero (De Pro. Cons. 4) seems to imply that Thracians were sometimes hired to assassinate like the modern Italian braves; these were perhaps gladiators, of whom great numbers were Thracians. Caligula gave the command of his German bodyguard to Thracians. (Suet. Colg. 55.)

Another point in which the Thracians remind us of the natives of India, is mentioned by Thucydides (ii. 97) in these words: "The tribute of the barbarians and of the Greek cities received by Scuthes, the successor of Sitalces, might be reckoned at 400 talents of silver, reckoning gold and silver together. The presents in gold and silver amounted to as much more. And these presents were made not only to the king, but also to the most influential and distinguished of the Odrysae. For these people, like those of Thrace generally, differ in this respect from the Persians, that they would rather receive than give; and among them it is more shameful not to give when you are asked, than to refuse when you ask. It is true that abuses arise from this custom; for nothing can be done without presents."

(Ch. Liv. xxii. thr. Liv. xiv. 42; Tac. Germ. 15.) Xenophon (Anab. vii. 3) gives some amusing illustrations of this practice among the Thracians.

Mention is often made of the singing and dancing of the Thracians, especially of a martial kind. Xenophon (Anab. vi. 1, § 3, seq.) speaks of an account of a dance and combat performed by some Thracians to celebrate the conclusion of a peace between the remnant of the 10,000 Greeks and the Paphlagonians; they danced fully armed to the music of the flute, jumping up mightily to a considerable height, and fencing with their swords: at last, one man struck another, to all appearance mortally and he fell as if
deal, though in reality not in the least injured. His antagonist then stripped off his armour, and went out singing the praises of Sisalcas, while the other man was carried out like a corpse by his comrades (cf. Ib. vii. 3. § 32, seq.; Tac. Ann. iv. 47). Their music was rude and noisy. Strabo (x. p. 471) compares it to that of the Thyrgians, whom, indeed, he regards as descended from the Thracians. Xenophon, in the passage last referred to, says that they played on horns and on trumpets made of raw ox-hide. Their worship of Dionysus and Cotytta was celebrated on mountain tops with loud instruments of music, shouting, and noises like the bellowing of cattle. (Strab. x. p. 470.) Their barbarity and ferocity became proverbial. Herodotus (viii. 116) tells a story of a king of the Bis-altai, who punished his six sons for disobeying him by putting out their eyes. Senthes, with his own hand, transfixed some of the Thyni who had been taken prisoners (Xen. Anab. vii. 4. § 6). Rhescopius invited his nephew to a banquet, pined him with wine, then loaded him with fetters, and afterwards put him to death. (Tac. Ann. ii. 64, seqq.) Thucydides (vii. 27, seq.) gives an instance of the ferocity of the Thracians in their massacre of the inhabitants of Mycaleus.

A truly barbarian trait in the character of the Thracians was their faithlessness, even to one another. Thus, especially shown is their disregard of their obligations towards the HOSTAGES whom they gave as securities for the observance of their engagements with others. Senthes had received from the Thyri a number of old men as hostages; yet the Thyri, seeing a favourable opportunity, as they supposed, for renewing hostilities, at once seized it, apparently without a thought of the but too probable consequences of such conduct to their helpless countrymen. (Xen. Anab. viii. 4. § 31; cf. Liv. xiii. 22.) Some of the tribes inhabiting the Thracian coast of the Euxine were systematic wreckers [SALMYPDENSIUS]. Robbery, as we have seen, was considered honourable by them; and plunder was their chief inducement to engage in war. (Strab. vii. p. 318; Cic. Pis. 34; Liv. xxvi. 25, xxxviii. 40, seq.) Strabo (iii. pp. 164, 165), Mela (ii. 2), and Tacitus (Ann. iv. 51) bear witness to the bravery of the Thracian women.

The deity most worshipped by the Thracians was Dionysus or Dionysus called Sabazius. (Sched. Aristoph. Xen. 9.) The mythical stories respecting Orpheus and Lycurgus are closely connected with the worship of this god, who had an oracle on Rhodope, in the country of the Saturae, but under the direction of the Bessi [SATRAE]. Herodotus (viii. 111) states that the mode of delivering the answers of this oracle resembled that which prevailed at Delphi. He compares also the worship of Artemis (whose Thracian name was Badeis or Cotytta), as he had seen it celebrated by Thracian and Paesian women, with some of the ceremonies at Delos (iv. 33). These resemblances may be accounted for on the supposition that the Thracian rites were derived from the original Pelasgian population, remnants of which may have maintained themselves amid the mountain fastnesses; as Niedhardt holds (Eidymag. and Igeag. i. p. 287) was the case with the Paesians, who are mentioned by Herodotus in the passage last referred to. (On the Thracian deities, see Strabo. x. pp. 470, 471; Soph. Antig. 955, seqq.; Plut. xvi. 62; and the articles BENDIS, COTYS, and RIGA, in the Dict. Biog. and Myth.)

It has sometimes been asserted that the Thracians were accustomed to sacrifice human victims to their divinities; but this appears to be either an incorrect generalisation, or a confounding of them with other races; for we find no reference to such a custom in any of the ancient accounts of their manners. Herodotus, it is true, states (ix. 119) that when the Persian Oskilaxus fell into the hands of the Apinithi, after the taking of Scuthia by the Athenians, they sacrificed him to their local god, Polestas: but from the next words (γεμάτος της οφειρίας) it is clear that he regarded the practice as characteristic of the Apinithi, and not as one common to all Thracians: nor is it conceivable that he would have omitted to mention so striking a circumstance, in his general description of Thracian manners, which has been already quoted (v. 3, seq); for the practice of slaying the favourite wife on the tomb of her deceased husband cannot with any propriety be called a sacrifice.

Whether indulgence in wine was regarded as a part of the homage due to Dionysus, or simply as a means of sensual gratification, certain it is that it was prevalent in Thrace, and frequently attended with violent and sanguinary quarrels: "Natis in usum lactis scyphis pagnare Thracum est," says Horace, and evidence is not wanting in support of the accusation. Ammianus (xxvii. 4. § 5) describes the case as so fond of bloodshed that in their banquets, after eating and drinking to satiety, they used to fall to blows with one another. Tacitus (Ann. iv. 48) relates that the Thracians serving with Poppaeus Sabinus against their fellow-countrymen, indulged to such a degree in feasting and drinking that they kept no guard at night, so that their camp was stormed by their.exasperated brethren, who slew great numbers of them. Xenophon tells us that at his first interview with Senthes, they drank horns of wine to each other's health, according to the Thracian custom (Anab. vii. 2. § 23). At the banquet which Senthes afterwards gave to Xenophon and some other important persons the drinking seems to have been deep. Xenophon admits that he had indulged freely; and he was evidently astonished that when Senthes rose from the table, he manifested no signs of intoxication. (ib. 3. § 26, seqq.) The Thracians are said to have had a custom, which prevailed in England as late as the last century, of all the guests to drink the same quantity. (Cullum, ob. Athen. x. p. 442.) The Odrysian auxiliaries of Dercyllidias poured great quantities of wine upon the graves of their slain comrades. (Xen. Hell.iii. 28 seq.) It would appear from Mela (ii. 2), that some of the Thracians were unacquainted with wine, but practiced another mode of producing intoxication: while feasting, they threw into the fires around which they were seated certain seeds, the fumes of which caused a cheerful kind of drunkenness. It is possible that these may have been the seeds of hemp, which, as we have seen, probably grew in Thrace, and contains, as is well known, a narcotic principle.

The Thracians against whom Senthes led his forces lived in villages (ib. § 43), the houses being fenced round with large stakes, within the inclosure formed by which their sheep were secured (ib. 4. § 14; cf. Tac. Ann. iv. 49).

Pliny (vii. 41) states that the Thracians had a custom of marking their happy or unlucky days, by placing a white or a black stone in a vessel at the close of each day. On any one's death, the vessel
belonging to him was emptied, the stones were separately transferred, and his life pronounced to have been by or the reverse, as the white or the black were more numerous.

V. History.—Thrace is one of those countries whose people, not being sufficiently civilised to establish a national government or to possess a national literature, cannot have histories of their own. We became acquainted with the Thracians at second hand, as it were, through the narrations of foreigners, who necessarily make them subordinate to their own countrymen; and therefore it is only in connection with foreign states that their history has been recorded. Hence it is fragmentary, and, consequently, often obscure; nor would it be more so, indeed, repay the labour that might be employed in elucidating it, even if we possessed the requisite materials. Destitute of union, the Thracians, notwithstanding their numbers, their wide diffusion, their powers of endurance, and their contempt of death, exerted no perceptible influence upon the general course of history; but were reduced, in spite of their wild love of independence, to assist, as humble allies or subjects, in the aggrandisement of the more civilised or political races with which they came in contact. These were the Greeks, the Persians, the Macedonians, and the Romans, with the successors of the last in the Eastern Empire. We shall now briefly state the leading points of their history, as connected with that of the nations just mentioned; referring the reader for details, especially as to the little that is known of their purely internal affairs, to the articles in this work which relate to the Bessi, Odrysae, and other prominent Thracian tribes.

We pass over the alleged conquest of Thrace by Sesostris (Herod. ii. 103; Diod. i. 53), and that said to have been effected by the Teucri and Mysii before the Trojan War (Herod. vii. 20; cf. Eurip. Rhes. 408, seq.), and come at once to the strictly historical period.

The first connection of the Greeks with Thrace was through colonies planted upon its various coasts, the original object of which seems generally to have been of a commercial kind. Only an approximation to the date of most of these can be made, since the majority were established long before the commencement of authentic history. Byzantium and Selymbria, colonies of Megara, belong to the seventh century B.C., the year 675 B.C. being assigned for the foundation of the former. In 651 B.C. an unsuccessful attempt is said to have been made by settlers from Clazomenae to establish themselves at Abdera (Solin. x. 10); but that city was not actually founded till 560 B.C., and then by emigrants from Teos (Herod. i. 168.) Mesembria, on the Enxice, was a colony of the Byzantines and Chalecedonians, who abandoned their cities on the approach of the Phoenician fleet, B.C. 493. (Id. vi. 33). When Dicaea, Marenza, and Amus, all on the south coast, were established, is not known; which is the case also with Cardia and Sestus in the Chersonesus. That these settlements were generally exposed to the hostility of their Thracian neighbours, there can be no doubt, though we rarely have their infant struggles so fully recorded as in the instance of Amphipolis. The Athenians sent no less than 10,000 men (B.C. 463) to found a colony there; and they succeeded in driving off the Edonians who occupied the country; but having advanced into the interior, they were defeated at Drabecus by the natives, and compelled to abandon the country. About thirty years afterwards, however, the Athenians returned, and this time overcome all resistance. Sometimes the relation between the Greeks and the Thracians was of a more friendly description. Thus, in the time of Pilestratus, the Dolonci, who dwelt in the Chersonesus, invited Miltiades (the elder) to rule over them, as they were unable to cope with their neighbours the Apionithi; and this led to the Athenians obtaining a firm footing in that most important and valuable district. (Herod. vi. 54, seq.) By these various means, the Greeks had obtained possession of nearly the whole coast of Thrace, a considerable period before the commencement of the great contest between themselves and the Persian empire. Of the interior they appear to have known scarcely anything whatever; and although in some cases the surrounding barbarians may have been brought into subjection (Byzantium is said to have reduced the Thracian Thracians to the condition of tributary peoples), yet this was rarely the case. On the contrary, it is clear from Thucydides (ii. 97), that the Greeks sometimes paid tribute to the native kings. The Greeks, even when dwelling among hostile strangers, showed their tendency to separation rather than to union; and hence their settlements on the Thracian coast never gained the strength which union would have conferred upon them. Each city had a government said to a great extent to be of its own; and we must therefore refer the reader for information respecting those states to the separate articles in this work devoted to them.

The first Persian expedition to Thrace was that of Darius, who crossed the Bosphorus with his army about B.C. 513 (or 508, as some authorities hold). As the principal object of Darius was to chastise the Scythians for their invasion of Asia in the reign of Cyaxares, he took the shortest route through Thrace, where he met with no opposition. The Greeks whom he found there were required to follow in his train to the Danube; among them was the younger Miltiades, the destined hero of Marathon, who then ruled over the Chersonesus, as his uncle had formerly done, and who had married the daughter of a Thracian king. (Herod. vi. 39.) On returning from the north, Darius directed his march to the Hellespont, and before crossing from Sestus into Asia, erected a fort at Darius near the mouth of the Hebrus. (Herod. iv. 89—93, 143, 144, vii. 59.) Megabazus was left with 80,000 men to subdue the whole of Thrace, a task which he began by besieging Perinthos, which, though previously weakened by the attacks of the Paeonians, made a brave but fruitless resistance. After this, Megabazus reduced the country into submission, though perhaps only the districts near the sea. (Herod. v. 1, 2, 10.) That his conquests extended as far as the Strymon appears from Darius's grant of a district upon that river to Histaicus, who founded there the town of Myrcinus. (Herod. v. 11.) Megabazus soon returned to Asia; and it seems probable that he took with him the greater part of his army; for if the Persians had maintained

* Instances occur in later times of the intermarriage of Greeks with Thracians; thus the wife of Sitalces was a daughter of Hecules, a citizen of Abdera (Thucyd. ii. 29); and Iphicrates married a daughter of the Thracian king Cotys. (Nep. Iph. 3.)
a powerful force in Thrace, the Phocicians could hardly have succeeded in making their escape from Phrygia back to the Styron (Id. v. 98), nor could the revolted Ionians (b.c. 498) have taken Byzantium and all the other cities in that country. (Id. v. 103.) It is to this period that we must refer the invasion of the Scythians, who are said to have advanced as far as the Chersonesus, thus occasioning the temporary flight of Miltiades, who, they were aware, had assisted Darius in his attack upon their country. (Id. vi. 40.)

After the suppression of the Ionia revolt (n. c. 493), the Phocian fleet sailed to the Hellespont, and again brought the country under the Persian dominion, Caria being the only city which they were unable to take. (Id. vi. 33.) Miltiades made his escape from the Chersonesus to Athens; on hearing of the approach of the hostile fleet. (Ib. 41.)

Next year Mardonius led an army across the Hellespont, and advanced to the front of Macedonia after his fleet having been wrecked off Mount Athos, and his land forces having suffered considerably in a war with the Thracians, who then occupied the country W. of the Styron, he retraced his steps, and transported his shattered army into Asia (Id. vi. 43, seqq.).

It was not till n. c. 480 that the vast army under the command of Xerxes crossed the Hellespont by the famous bridges which spanned the strait from Abrydos to Sestus. Of his march through Thrace, Herodotus gives an interesting account (vii. 108—115); but, as he met with no opposition, we need not dwell upon these circumstances.

After the disastrous battle of Salamis, Xerxes, with an escort of 60,000 men, hastened back by the same road which he had so recently trod in all the overweening confidence of despotic power; in Thrace, his miserable troops suffered greatly from hunger and consequent disease, but do not appear to have been openly attacked. (Herod. viii. 115, seqq.)

Next year (n. c. 479) was fought the battle of Plataea, in which Thracian forces, part of the motley host arrayed against Greek freedom (Id. ix. 32). Artabazus led the 40,000 men, who alone remained of the Persian army, by forced marches through Thessaly, Macedonia, and Thrace. He struck through the interior of the latter country, probably for fear of the Greek cities on the coast; but he encountered enemies as much to be dreaded, and lost a great part of his army by hunger, fatigue, and the attacks of the Thracians, before he reached Byzantium. It was now the turn of the victorious Greeks to assail their foes in their own territories. Thrace, with the exception of Doricenae, was soon cleared of the Persians. After the battle of Mycale, their fleet sailed to the Hellespont, where the Athenians laid siege to Sestus, which was taken early in the following year (n. c. 478) [SESTUS]. Elon, at the mouth of the Styron, made a desperate resistance; but at length (n. c. 476) fell into the hands of Cimon and the Athenians, after its Persian governor had put to death all his family, and finally himself. (Herod. vii. 107; cf. Thucyd. i. 98). Byzantium had been taken by Persians the year before. Thus the Persians were driven out of Europe, and the Greek settlements in Thrace resumed their internal freedom of action, though most of them, it is probable, were under the supremacy of Athens, as the chosen head of the great Greek confederacy.

During the administration of Pericles, 1000 Athenian citizens were settled in the Thracean Chersonesus, which was always the chief stronghold of Athens in that quarter. Under the auspices of the same statesman, in b.c. 437, the Athenians succeeded in founding Amphipolis, the contests for the possession of which occupy a very prominent place in the subsequent history of Greece. [AMPHIPOLIS, Vol. i. p. 126.]

About this time flourished the most powerful Thracian kingdom that ever existed, that of the Odrysae, for the history of which see ODYSIRAE, Vol. i. pp. 430—453. At the commencement of the Peloponnesian War (n. c. 431), the Athenians entered into an alliance with Sitakes, the king of the Odrysae (Thucyd. ii. 29), who, they hoped, would enable them to subdue all opposition to their supremacy in the Chalcidic peninsula. In consequence of this alliance, Sitakes led (n. c. 429) a vast host into Macedonia, the ruler of which supported the enemies of Athens; he encountered no opposition, yet was compelled by want of supplies to return to Thrace, about the 5th of May he had left it (Ib. 93—101). But although Sitakes was an ally of Athens, this did not prevent Brasidas from having great numbers of light-armed Thracians in his armies, while commanding the Spartan forces in the neighbourhood of Amphipolis (n. c. 422).

It would occupy too much space to relate minutely the various turns of fortune which occurred in Thrace during the Peloponnesian War. The principal struggle in this quarter was for the command of the Bosporus and Hellespont, so important, especially to the Athenians, on account of the corn trade with the Euxine, from which Athens drew a large part of her supplies. Hence many of the most important naval battles were fought in the Hellespont; and the possession of Byzantium and Sestus was the prize of many a victory. The battle of Aegospotami, which terminated the long contest for supremacy, took place to the S. of Sestus. n. c. 405. By the peace concluded next year, Athens gave up all her foreign possessions; and those in the east of Thrace fell into the hands of the Persians and Persians. [See BYZANTIUM, SESTUS, &c.]

When the remnant of the 10,000 Greeks returned (n. c. 400) to Europe, they were engaged by Seuthes, an Odrysian prince, to assist him in recovering the dominions which had belonged to his father, in the south-eastern part of Thrace. (Xen. Anab. vii. pass.) Having thus been reinstated in his principality, he showed his gratitude to the Greeks, by sending auxiliaries to Dercyllidas, who commanded the Spartan forces against the Persians, with whom they were now (n. c. 399) at war (Xen. Hell. iii. 2). Next year Dercyllidas crossed over into the Chersonesus, and erected a wall across its northern extremity, as a protection to the Greek inhabitants, who were exposed to constant attacks from their barbarous neighbours (Ib. 2. §§ 8—10). The same general successfully defended Sestus from the combined forces of Comon and Pharnabazus (n. c. 394 : Ib. iv. 8, § 5, seqq.) But in n. c. 390 Thrasylalus restored Athenian influence in Thrace, by forming an alliance with two native princes, and by establishing democracy at Byzantium (Ib. § 25, seqq.); and his success was confirmed by the victory of Iphicrates over Anaxikles the next year (ib. § 34). The peace of Antalcidas, however, released all the Greek states from their connection with Athens, and virtually gave the supremacy to Sparta (n. c. 387).

Nothing of any importance happened in Thrace after this event till the accession of Philip II. to the throne of Macedonia (n. c. 339). This able but un-
scrupulous monarch at once began his career of aggrandizement towards the east. He contrived to get possession of Amphipolis (n. c. 358), and thus obtained a secure footing from which he might extend his dominions in Thrace as opportunity offered. At this time there were three native Thracian princes, probably brothers, who seem to have ruled over most of the country. According to Justin (viii. 3), Beiszides and Amadocus, two of them, chose Philip as judge of their disputes; of which position he treacherously availed himself to seize upon their dominions. Though this statement is not supported, we believe, by any other ancient author, yet it is probably true; for such conduct is highly characteristic of the Macedonian monarch; and the almost entire disappearance from history of these Thracian princes soon after Philip's accession, would thus be accounted for. Cersobleptes, the third brother, who seems to have had the E. portion of Thrace, maintained a long struggle against his ambitious neighbour. In n. c. 357 he ceded the Cheroneas to the Athenians, who sent a colony to occupy it four years afterwards. [See Cersobleptes, Dict. Biog. Vol. I. p. 674: Sestus.] Philip at various times marched into Thrace, and repeatedly defeated Cersobleptes, whom he at length (n. c. 343) completely subdued and rendered tributary. Next year he established colonies in the eastern part of Thrace, and acts of hostility occurred between him and Diopesitheus, the Athenian commander in that quarter. Philip was occupied the next three years in Thrace, and laid siege to Perinthus and Byzantium, which were in alliance with Athens, whose forces, commanded by Phocion, compelled Philip to abandon the sieges; and he soon afterwards left Thrace, to advance towards the south against the confederate Greeks. On his departure Phocion recovered several of the cities in which Macedonian garrisons had been placed.

Notwithstanding these checks, Philip had brought under his command a great part of Thrace, especially on the south coast: he had, above all, completely incorporated with his kingdom the district between the Strymon and the Nestus, and from the mines of the Pangaerus, which he seized in n. c. 356, he obtained abundant supplies of the precious metals.

Phil. was assassinated n. c. 336; next year his successor, Alexander, after a desperate struggle across the Haemus, set out to attack the Triballi; but his chief attention was bestowed upon the preparations for the Asiatic expedition, which he entered upon next year, crossing the Hellespont from Sestus.

On the death of Alexander (n. c. 323), Thrace was allotted to Lysimachus, who was soon involved in hostilities with Seuthes, a king of the Odrysae. The reader is referred to the account of Lysimachus (Dict. Biog. Vol. II. pp. 687—670) for details respecting his government of Thrace, the result of his various wars was that his sway was firmly established over all the countries south of the Danube, as far as the confines of Macedonia, the Greek cities on the Euxine were garrisoned by his troops; and though many of the native tribes, in the more inaccessible districts, no doubt retained their freedom, yet he had completely defeated all their attacks upon his power. In n. c. 309 he founded Lysimachia, near the northern extremity of the Chersonesus, and made it his capital. After the great, but unsuccessful campaign in war with Seleucus, the ruler of Syria, he advanced to meet his antagonist in Asia, and was defeated and slain at Carupedon (n. c. 281), upon which Seleucus passed over into Europe and took possession of Thrace. Next year, however, he was assassinated by Ptolemy Cersanus, who was thereupon acknowledged king; but shortly afterwards a vast horde of Celts invaded the country, and Ptolemy was slain in a battle with them. Anarchy now prevailed for some years in the country; the Celts again advanced to the south in n. c. 279, and under Brennus penetrated as far as Delphi, on their repulse from which they retreated northwards, and some of them settled on the coast of Thrace.

For nearly fifty years after this time little mention is made of Thrace in history; it appears to have been annexed to Macedonia; but the rulers of that kingdom were too insecure, even in their central dominions, to be able to exercise much control over such a country as Thrace, inhabited now by races differing so widely as the Thracians, the Greeks, and the Celts, and offering so many temptations to the assertion of independence. [See Antigonus Gonus-Tas, Demetrius II., and Pyrrhus, in Dict. Biog.]

About n. c. 247, the fleet of Ptolemy Euergetes captured Lysimachia and other important cities on the coast; and they remained for nearly half a century under the kings of Egypt. (Polyb. v. 34, 58.)

In n. c. 220, Philip V. ascended the throne of Macedonia. Under him the Macedonian power regained something of its old prestige; and had it not been brought in collision with Rome, it might have become as extensive as in former times. But Philip unfortunately directed his ambitious views in the first instance towards the West, and thus soon encountered the jealous Republic. It was not till n. c. 211 that Philip commenced his enterprises against Thrace: he then led an army into the country of the Maeduli, who were in the habit of making incursions into Macedonia. Their lands were laid waste, and their capital, Samothrace, compelled to surrender. Having made peace with the Romans (n. c. 205), he invaded Thrace, and took Lysimachia. In n. c. 200, he again attacked that country, both by sea and land; and it is evident that he did not anticipate much resistance, since he took with him only 2000 infantry and 200 cavalry. Yet with this insignificant force, aided by the fleet, he made himself master of the whole of the south coast, and of the Chersonesus. He then laid siege to Alydos, and after a desperate struggle, took it (Liv. xxxii. 16). This seems to have hastened the declaration of war on the part of the Romans; a war which lasted till n. c. 196, when Philip was reduced to procure peace by surrendering all his conquests, and withdrawing his garrisons from the Greek cities (Liv. xxxiii. 30).

L. Sertorius was sent to see that these terms were complied with (ib. 35). But scarcely had the cities been evacuated by the Macedonian garrisons, when Antiochus the Great crossed the Hellespont, and took possession of the Chersonesus, which he claimed as a conquest of Seleucus (ib. 38). He refused to comply with the demand of the Romans, that he should withdraw his army from Europe; but left his son Seleucus to complete the restoration of Lysimachia, and to extend his influence, which seemed to have been done by placing garrisons in Maroneia and Aenus.

In the war which ensued between the Romans and Antiochus (n. c. 190), Philip rendered the former good service, by providing everything necessary for their march through Thrace, and securing them from molestation by the native tribes (Liv. xxxvii. 7).

Antiochus was defeated by Scipio at Magnesia, and
sued for peace, which was at length granted to him (n. c. 188) on condition of his abandoning all his dominions west of the Taurus (Liv. xxxviii. 38). The Romans gave the Chersonese and its dependencies to their ally Eumenes (ib. 39). As indicative of the internal condition of Thrace, even along the great southern road, the account which Livy (ib. 40, seq.) gives of the march of the consul Manlius' army through the country on its return from Asia Minor, is highly interesting. The army was loaded with booty, conveyed in a long train of baggage-waggons, which presented an irresistible temptation to the predatory tribes through whose territories its route lay. They accordingly attacked the army in a defile, and were not beaten off until they had succeeded in their object of sharing in the plunder of Asia.

The possession of the Chersonese by Eumenes soon led to disagreements with Philip, who was charged by Eumenes (n. c. 185) with having seized upon Maroneia and Aenus, places which he coveted for himself. (Liv. xxxix. 24, 27). The Romans insisted upon the withdrawal of the Macedonian garrisons (n. c. 184); and Philip, sorely against his will, was obliged to obey. He wreaked his anger upon the defenceless citizens of Maroneia, by confiscating all the property actually captured, and the massacre of a great number of them (ib. 33, 34). In the course of the disputes about these cities, it was stated that at the end of the war with Philip, the Roman commissioner, Q. Fabius Laboe, had fixed upon the king's road, which is described as nowhere approaching the sea, as the boundary of Philip's possessions in Thrace; but that Philip had afterwards formed a new road, considerably to the S., and had thus included the cities and lands of the Maroneians (ib. 35, 37).

In the same year, Philip undertook an expedition into the interior of Thrace, where he was fettered by no engagements with the Romans. He defeated the Thracians in a battle, and took their leader Amaudocus prisoner. Before returning to Macedonia he sent envoys to the barbarians on the Danube to invite them to make an incursion into Italy (ib. 32). Again in n. c. 183, Philip marched against the Odryses, Dethelteae and Beosi, took Philipopolis, which its inhabitants had abandoned at his approach, and placed a garrison in it, which the Odryses, however, soon afterwards drove out (ib. 53). In n. c. 182, Philip removed nearly all the inhabitants of the coast of Macedonia into the interior, and supplied their places by Thracians and other barbarians, on whom he thought he could more safely depend in the war with the Romans, which he now saw was inevitable (Liv. xl. 3). He had done something of the same kind a few years before (Id. xxxix. 24).

Philip's ascent of the Haemus, already referred to, took place in n. c. 181 : on the summit he erected altars to Jupiter and the Sun. On his way back his army plundered the Dethelteae; and in Mardica he took a town called Petra. (Liv. xl. 21, seq.)

Philip died in n. c. 179, and his successor Perseus continued the preparations which his father had made for renewing the war with Rome, which had not begun, however, till n. c. 171. The Romans had formed an alliance the year before with a number of independent Thracian tribes, who had sent ambassadors to Rome for the purpose, and who were likely to be formidable foes to Persians. The Romans took care to send valuable presents to the principal Thracians, their ambassadors having no doubt impressed upon the senate the necessity for compliance with this national custom. (Liv. xiii. 19.)

The advantage of this alliance was soon seen. Cotys, king of the Odryses, was an ally of Perseus, and marched with him to meet the Romans in Thessaly, but with only 1000 horse and 1000 foot, a force which shows how greatly the power of the Odrysian monarchy had declined since the reign of Sitalkes (ib. 51). Cotys commanded all the Thracians in Perseus's army in the first engagement with the Roman cavalry, which was defeated (ib. 57, seq.). When Perses retreated into Macedonia a report was brought that the Thracian allies of Rome had invaded the dominions of Cotys, whom Perses was therefore obliged to dismiss for their protection (ib. 67), and he does not seem to have personally taken any further part in the war, though he probably sent part of his forces to assist Perses (xiv. 42). His son Bitis fell into the hands of the Romans, after the battle of Pydna (n. c. 168), which put an end to the Macedonian kingdom.

Cotys sent ambassadors to Rome to endeavour to ransom his son, and to excuse himself for having sided with Perses. The senate rejected his offer of a sum of money, but liberated his son, and gave a considerable sum to each of the Thracian ambassadors. The reason it assigned for this generosity was the old friendship which had existed between Rome and Cotys and his ancestors. The Romans were evidently unwilling to engage in a war with the Thracian people at this time; and were anxious to secure friends among them for the sake of the peace of Macedonia, which, though not yet nominally made a province, was completely in their power. They sent (n. c. 167) three commissioners to confer with Bitis and other Thracian princes; and at the same time, no doubt, to make observations on the state of that country. (Liv. xiv. 42.)

After the fall of Perses, the senate divided his dominions into four districts (regiones), the first of which included the territory between the Styronus and the Nestus, and all the Macedonian possessions east of the latter, except Aenus, Maroneia, and Abdera. Bissalica and Sintiris, west of the Styronus, also belonged to this district, the capital of which was Amphipolis. (ib. 29.) It is important to remark that the Thracian spoken by the Latin historians subsequently to this time does not include the territories here specified, which thenceforth constituted an integral part of Macedonia.

From the year n. c. 148, when the Romans undertook the direct government of that country, they were brought into contact with the various barbarous nations on its frontiers, and were continually at war with one or another of them. For some years, however, their chief occupation was with the Sceridici, a people of Celtic origin which had settled south of the Danube, and often made devastating incursions into the more civilised regions of the south. They are sometimes called Thracians (e. g. by Florus, iii. 4.; cf. Amm. xxvii. 4. § 4), which is the less surprising when we remember that great numbers of Celts had settled in Southern Thrace, and would soon be confounded under a common name with the other occupants of the country.

The history of all this period, up to the time of Augustus, is very obscure, owing to the loss of so great a part of Livy's work; though, however, appears in other writers to show that Thrace was left almost entirely to its native rulers, the Romans rarely interfereing with it except when provoked by the predatory incursions.
of its people into Macedonia; they then sometimes
made retaliatory expeditions into Thrace; but seem
generally to have made their way back as soon as
the immediate object was accomplished. The rela-
tion existing between the Romans and the Thracians,
for more than a century after the conquest of Ma-
cedonla, thus bears a close resemblance to that
which has long existed between our own countries
and the Caiffes.

During the years B.C. 110, 109, the Consul M.
Minucius Rufus was engaged in hostilities with the
Scordisci and Triballi; and, according to Florus (l.c.),
laid waste the whole valley of the Hebrus (cf. Enutr.
iv. 27). In B.C. 104, Calpurnius Piso penetrated into
the district of Rhodope (Flor. l.c.). In B.C. 92,
the Macedonians defeated the praetor, C. Senarius,
and then ravaged Macedonia (Cic. Fler. 34 ; Liv. Epit.
70). After the breaking out of the Mithridatic
War (B.C. 88), mention is made in several successive
years of the incursions of the Thracians into the
Roman provinces, and it is probable that they were
acting in concert with Mithridates, whose general
Taxiles, in B.C. 86, led a vast army through Thrace,
and Macedonia to the assistance of Archelaus. (Liv.
Epit.74, 76, 81, 82). On the final defeat of Archelaus,
Sulla directed his march towards Asia through Thrace
B.C. 84, and, either to punish the people for their
conspiracy with Mithridates, or because they opposed
his passage, made war upon them with complete suc-
cess (Id. 83). C. Scribonius Curio defeated the
Dardanians, and penetrated to the Danube, being the
first Roman who had ventured into that part of
Europe (B.C. 75 ; Liv. Epit. 92 ; Enutr. vi. 2). Curio
was succeeded as governor of Macedonia by M.
Lucullus (B.C. 73), who defeated the Bessi in a
pitched battle on Mount Haemus, took their capital,
and ravaged the whole country between the Haemus
and the Danube (Liv. Epit. 97 ; Enutr. vi. 10). The
Bessi were again conquered in B.C. 60 by Octavi-
us, the father of Augustus (Suet. Aug. 3 ; cf. Ib.
94 ; Freisch. Suppl. cxxxx. 2). In the years B.C.
58, 57, Piso, so well known to us from Cicero's cele-
brated speech against him, was governor of Ma-
cedonla; and, if we may believe Cicero, acted in the
most cruel and faithless manner towards the Bessi
and other peaceable Thracian tribes. (Flis. 34, de
Prov. Cons. 2, seq.). From the latter passage it
appears that although Thrace was not under the
government of Rome, yet the Romans claimed the
right of way through it to the Hellespont; for Cicero
calls the Egyptian Way "via illa nostra militaris."

In the civil war between Caesar and Pompey,
several Thracian princes furnished the latter with
auxiliary forces. Why they interfered in the con-
test, and why they preferred Pompey to Caesar,
are matters of conjecture only. Pompey had been
chiefly engaged all his life in the East, Caesar in the
West; and that is probably sufficient to account for
the greater influence of Pompey in Thrace. (Cass.
L. C. iii. 4 ; Flor. iv. 2 ; Dion Cass. xili. 51, 63,
xxvii. 25).

At the time of Caesar's death two brothers, Rhas-
copus and Rascus (Dict. Biog. Vol. iii. p. 647)
rulea over the greater part of Thrace; and when the
war broke out between the triumvirs and the re-
publican party, Rhascopus sided with the latter,
who had been aided by the former. By this plan they
hoped to be safe, whichever party might be victorious;
and it is said that their expectations were realized.

When the power of Rome was at length wielded
by Augustus without a rival, the relation of Thrace
to the Roman state seems to have become in many
respects like that which the native princes of India
long bore to the British. The Thracian kings were
generally allowed to exercise, without restraint, their
authority over their own subjects, and when needful
it was supported by the arms of Rome. But all dis-
putes among the native rulers were referred to the
decision of the emperors, who disposed of the coun-
try as its acknowledged lords. These subject princes
were expected to defend Thrace on occasion from
e external and internal foes; to assist the Romans in the
field; to allow them to enlist troops, and in other ways
to exercise the rights of sovereignty. For illustrations
of these statements we must refer the reader to Tacitus,
especially to the following passages : Ann. ii. 64—
67, iii. 38, 39, iv. 5, 46—51. The few Thracian
coins which are extant afford a proof of the de-
pendent character of the Thracian kings; they bear
on the obverse the effigy of the reigning emperor, on
the reverse that of the native prince. [See Dict.
Biog. Vol. iii. p. 653.]

The interference of the Romans in the government
of Thrace was not submitted to by the nation at
large without several severe struggles. The most
formidable of these occurred about B.C. 14, the
fulllest account of which is given by Dion Cassius
(lit. iv.). The leader in this insurrection was Vo-
logaesus, a Bithynian prince, who availed
himself of his subject character to inflame the
religious feelings of his countrymen. Having thus
assembled a large army, he attacked, defeated, and
slain Rhascopus, a king under Roman protection ;
his uncle, Rhoemetallus, was next assailed and com-
plied to flee; the insurgents pursued him as far as
the Chersonesus, where they devastated the country
and captured the fortified places. On re ceiv-
ing information of these proceedings, Augustus ordered
L. Piso, the governor of Pamphylia, to transport his
army into Thrace, where, after a three years' war
and several reverses, he at length succeeded in sub-
du ing the Bessi, who had adopted Roman arms and
discipline. They soon afterwards made a second
attempt to regain their independence; but were now
easily crushed. (Vell. Pat. ii. 98 ; Tac. Ann. vi. 10;
Sen. Epict. 83 ; Flor. iv. 12 ; Liv. Epit. 137.)

After this war, the Romans gradually absorbed
all the powers of government in the country. Ger-
manicus visited it in A.D. 18, and introduced re-
forms in its administration (Tac. Ann. ii. 54). A
system of conscription seems to have been imposed
upon the Thracians about A.D. 26 (Ib. iv. 46).

The last native prince of whom we find any mention
is Rhoemetallus II., who, in A.D. 38, was made by
Caligula ruler over the whole country; and at length,
in the reign of Vespasian (A.D. 69—79), Thrace
was reduced into the form of a province. (Suet.
Vesp. 8 ; Enutr. vii. 19 ; cf. Tac. Hist. i. 11.) The
date of this event has been disputed on the authori-
ty of the Eusebian Chronicle, which states that it took
place in A.D. 47, in the reign of Claudius; but the
statement of Suetonius is express on the point.
It is possible that Rhoemetallus II. may have died about
the year last mentioned; and if Claudius refused to
appoint a successor to him, this would be regarded
as equivalent to incorporating the country in the
Roman empire, although its formal constitution as a
province was delayed; as we know was commonly
the case. It is remarkable that Miesia was made
a province upwards of 50 years before Thrace Proper,
its first proprietor being mentioned in A.D. 15.
(Tac. Ann. i. 79; cf. Ib. ii. 66; Plin. iii. 26. s. 29.)

46 3
Thrace now shared in the general fortunes of the Roman world, on the division of which into the Eastern and Western Empires, it was attached to the former, being governed by the Vicarius Thraciae, who was subordinate to the Proconsul Proconsularis Orientis. Its situation rendered it extremely liable to the inroads of barbarians, and its history, so far as it is known, is little else than a record of war and devastation. The Goths made their first appearance there in A.D. 255; the emperor Probus, about A.D. 280, established in it 100,000 Bastarnae. In A.D. 314, and again in 323, the emperor Licinius was defeated at Hadrianople by Constantine, who, in A.D. 354, settled a multitude of Sarматians in Thrace, which, in 376, received another accession to its heterogeneous population, Valens having given permission to the Goths to reside in it. This gave rise to innumerable wars, the details of which are recorded by Ammianus (lib. xxxi.). In 395 the devoted country was overrun by Alaric, and in 447 by the more dreadful Attila. Through all these misfortunes, however, Thrace remained in connection with the Eastern Empire, the capital of which was within its boundaries, until the year 1333, when the Turks, who had advanced over it into Europe in 1341, obtained possession of the Thracean fortresses. Their leader Amurath conquered the whole country, except Constantinople, and made Hadrianople his capital. At length, in 1453, Constantinople itself was taken, and the Turks have ever since been the undisputed lords of Thrace.

VI. TOPOGRAPHY.—Under this head we shall merely collect such names as will serve to direct the reader to articles in this work, where fuller information is given.

Pliny (iv. 18; cf. Nela, i. 2; Amm. xxvii. 4) enumerates the following as the principal Thracian tribes: Densctae, Maedi, Bisalatae, Digeri, Bessi, Eletii, Diobessi, Caribesi, Bryae, Sapaevi, Odomati, Odyræae, Cabyleti, Pyrogeri, Drugeri, Caenici, Hyspalti, Beni, Corplili, Bottaei, Edoni, Sellea, Praneta, Dolanci, Thyini, Coelacæ. To these we may add, the Apaisthi, Bistones, Coecmes, Satræ, Di, and Trausii.

Of the towns mentioned by Pliny (l. c.), these belonged to Thrace Proper: 1. On the coast (l.) of the Aegean: Oesyma, Neapolis, Datum, Aldbr, Tirida, Dicaca, Maronea, Zone, and Aenus; to these must be added Ampipolis, Pitysuras, Cosinthus, and Mesembria; (ii.) of the Chersonesus: Cardia, Lysimachia, Pachyta, Callipolis, Sestus, Easena, Coesos, Triestiasis, and Panormus; besides these there were Alapeconnesus and Acora; (iii.) of the Propontis: Bisantia, Parthenius, and Selymbria; (iv.) of the Bosporus: Byzantium; (v.) of the Encrise: Mesembria, Anchialus, Apollonia, Thynus, Salymbdes, and Phyleopolis. 2. In the interior: Philippopolis, Philippi, Scottea, Topiris, Doriscus, Cyrgia, Ayros, and Develton. This is a very scanty list; but many of the principal inland towns were founded after Pliny's time; their names also were often changed. The following are some of the chief towns in the interior: Hadrianopolis, Pliotineis, Trajanopolis, Theopryi, Nicopoli, Beroca, Lampornia, and Petra.

Ballest the rivers mentioned in the course of this article, the following occur: the Boutrais, Pydoras or Atys, Bargus, Cossinies, Compus, and Xerogypsus.

As to the political divisions of Thrace, Pliny (l. c.) states that it was divided into fifty strateigAs; but he describes Moesia as part of Thrace. According to Ptolemy (ii. 11, § 8, seq.), its districts were Macedonia, Dethetaleia, Sardica, Bassicia, Drosicia, Benicis, Eudicesia, Solitetta, Samnica, Coedetica, Sapica, Corpiacae, Caenica, and Astica.

Ammianus (l. c.) states that in the 4th century Thrace was divided into six provinces, but of these only four belonged to Thrace south of the Haemus: (i.) Thrace Proper (speciali nomine), including the W. part of the country; principal cities, Philippopolis and Beroea; (ii.) Haemimontus, i.e. the NE. district; chief towns, Hadrianopolis and Anchialus; (iii.) Europa, comprehending the SE. district; cities, Apri and Perinthus (Constantinople, being the capital of the whole Eastern Empire, was not regarded as belonging to any province); (iv.) Thrace, comprising the SW. region; principal cities, Maximiopolis, Maroneia, and Aenus.

The principal modern writers in whose works information will be found respecting Thrace, have been mentioned in the course of this article. Among the other authors whom the reader may consult, we may name the following: Dapper, Beschrijving der Eilanden in des Archipel, Amst. 1688, of which Latin and French translations were published at Amsterdam in 1739. In this work are described the springs in Thrace, 1728, the first part of the second not till 1809; the author died in 1817. A new edition, with many corrections and additions, was published in 4 vols. Svo. at Paris in 1842. This work is devoted chiefly to the antiquities of the country; of which the plates contained in the illustrative Atlas which accompanies the book give many representations. And Bene's, La Turquie d'Europe, 4 vols. Svo. Paris, 1840, is the most complete work yet written on the subject; its author, a man of great scientific acquirements, made two journeys in Turkey, in 1836, when he was accompanied by M. Viqvesneel, and in 1888. The first volume contains an elaborate account of the physical geography, geology, vegetation, fauna, and meteorology of the country; but takes little or no notice of its classical geography. A map is prefixed to it, which was a vast improvement on all that had previously been made; but it is now in its turn superseded by that of Kiepert, who has employed in its construction the materials afforded by M. Viqvesneel's reports already referred to. (Comp. Gatterer, De Herodoto de Thracia, in the Commentationes Societ. Reg. Guttini, vol. iv. pp. 87—112, vol. v. pp. 59—88.)

THIRACIA, in Asia. A district in Asia Minor on the coast of the Euxine, as sometimes called Thrace, and its inhabitants Thracians. (Herod. i. 29; Xen. Anab. vi. 2 § 14, et al.) This country is more commonly called Bithynia. [See Bithynia, Vol. I. p. 404.]

THIRACIAUS BOISPORUS. [BOISPORUS.]

THRAAGMENUS IACUS [TRASEMENTES.]

THRAUSTUS (Θραυστος), XEN. or THRAESTUS (Θραίστος), a town in the mountainous district of Arcadia in Elis, of unknown site. (Xen. Hell. vii. 14. § 14; Diod. xiv. 17.)

THRIA. [ATTICA, p. 928, b.]

THRONICUS (Θρωνικός), a town in Carmania, mentioned by Ptolemy (vi. 8. § 14). Perhaps the modern Girost.

THRONI (Θρόνιος), a town and promontory on the SE. coast of Cyprus, distant 700 stadia from the promontory of Curia. On the promontory of Throni
THRONIUM.

Pococke observed an ancient tower. (Strab. xiv. p. 682; Pol. v. 14. §§ 2, 3; Euseb. Cypros. vol. i. 99.)

THRONIUM (Θρόνιον, Θρόνιον, Θρόνιον, Θρόνιον). 1. The chief town of the Locrian Thronum, mentioned in the Odyssey (xxi. 341) Thronium was taken by the Athenians. (Thuc. ii. 26; Diod. xii. 44.) In the Sacred War it was taken by Omenarchus, the Phocian general, who sold its inhabitants into slavery, and hence it is called by Sthias a Phocian city. (Diod. xvi. 33; Aesch. de Fals. Leg. p. 43, 33; Stchias. p. 23.) (Thronium is also mentioned by Polyb. ix. 41, xvii. 9; Euphr. Ishl. Abd. 264; Liv. xxxii. 5, 6, xxxiii. 3, xxxv. 37, xxxvi 20; Paus. v. 22 § 4; Lycophr. 1148; Pol. viii. 16; Strab. viii. 12; Steph. B. s. n. 4. The site of Thronium was ascertained by Meletius who found above the village Romanla, at a place named Paleokastra, where some remains of the city still exist, a dedicatory inscription of the council and demus of the Thronienses. (Leake, Northern Greece, vol. ii. pp. 177, 178.)

2. A town in Greek Illyria in the neighbourhood of Amantia (Ἀμάντια), said to have been founded after the Trojan War by the Abantes of Euboea, and the inhabitants of the Locrian Thronium. It was taken at an early period by the inhabitants of the neighbouring town of Apollonia, and annexed to their territory, as appears from an epigram inscribed on a dedicatory offering of the Apolloniates at Olympia. (Paus. v. 22. §§ 3, 4.)

THIRON, THIYOSSA. [ΕΠΙΛΑΙΜΙΟΣ.

THULE (Θούλη, Θούλη, Θούλη, Θούλη). THULE (Θούλη, Θούλη, Θούλη, Θούλη), a celebrated island in the Northern Ocean, discovered by the navigator Pytheas. Pytheas arrived at it after a voyage of six days from the Occades, in which it may be computed that he had accomplished about 3000 stadia. (Plini. ii. 77.) According to the account of Pytheas, he reached the polar circle, so that on this island the longest day was twenty-four hours, and there was constant day during the six summer months and constant night during the six winter ones. It was deficient in animals, and even the most necessary fruits, but produced a little corn. From the time of its discovery it was regarded as the most westerly point of the known world, although no further knowledge was obtained respecting it; and this view seems to be confirmed by its name, since in Gothic Tiel or Thule (τέλος, goal) denoted the remotest land. (Strab. i. p. 63, ii. pp. 104, 114, iv. p. 201; Agath. i. 8: Prisc. Perieg. 587, sqq.; Mel., iii. 6: Plin. iv. 16. s. 30; Tac. Agr. 10; Virg. G. i. 30; Solin. c. 22; &c.; cf. Praetorius, de Orbe Goth. iii. 4. p. 33; D'Arcy, See H. Navig. de Pytheas, p. 439; Rudbeck, Atlant. i. p. 314.) Pytheas is the only writer who places Thule a great deal further S., though he undoubtedly had in view the island discovered by Pytheas; and according to him it would seem to have been by far the largest of the Shetland islands, or the modern Mainland (see ii. 3. § 32. i. 24. §§ 4, 6, 17, 20, vi. 16. § 21, vili. 5. § 12, viii. 3. § 3). Most modern geographers incline to the opinion that Pytheas meant Iceland; though according to others his Thule is to be variously sought in Norway; in that part called Thule or Thulemarch; in Jutland, the extreme point of which is called Thy or Thyland; or in the whole Scandinavian peninsula, between Funen and Brun, Geogr. Univ. i. p. 120; Ortelius, Theat. Orb. p. 103.)

THUMATA (Θομώτα, Pol. vi. 7. § 33; Plin. viii. 28. s. 32; Thamathia, Not. Imp. Rom. § 22. p. 37), a town of Arabia Felix, according to Ptolemy, and described by Pliney as distant 10 days' sail from Petra, and subject to the king of the Characceni.

THUMNIA. [ΘΟΜΝΙΑ.

THUMNIDEMON (Θομνίδεμον, Pol. iv. 3. § 29), a Roman colony in Numidia. It seems to be the same place as the Thynidremene opoppium of Pliny (v. 4. s. 4.)

THURIA. [Θούρια.

THURIMAT (Θούριματ, Pol. vi. 7. § 33; Pline. viii. 28. s. 32; Thomasia, Not. Impress. Rom. § 22. p. 37), a town of Arabia Felix, according to Ptolemy, and described by Pliney as distant 10 days' sail from Petra, and subject to the king of the Characceni.

THURIA. [Θούρια.

THURIA (Θούρια: Eilh. Θούριας), a town of Messenia, situated in the eastern part of the southern Messenian plain, upon the river Aris (Pellhima), and at the distance of 80 stadia from Pharnace, which was about a mile from the coast (Paus. iv. 31. § 1). It was generally identified with the Homeric Thuriatae, though others supposed it to be Aepicia. (Paus. i. c.; Strab. viii. p. 360.) It must have been a place of considerable importance, since the distant Messenian gulf was even named after it (Δ Θούριας κοίλος, Strab. l. c.). It was also one of the chief towns of the Lacedaemonian Perieges after the subjugation of Messenia; and it was here that the Thuriatae War took its rise, r. c. 464 (Thuc. i. 101). On the restoration of the Messenians by Epiandrus Thurius, like the other towns in the country, was dependent upon the newly-founded capital Messene; but after the capture of this city by the Achaeans in r. c. 182, Thuria, Pharnace, and Abia joined the Achaean League as independent members. (Polyb. xxv. 1.) Thuria was annexed to Lacedaon by Augustus (Paus. l. c.); but it was restored to Messenia by Tiberius. [Messenia, p. 343. a.] Pausanias found two cities of this name. The Thuria of Messenia descended from the summit of the lofty hill of the upper city to dwell upon the plain; but without abandoning altogether the upper city, where a temple of the Syrian goddess still stood within the town walls (Paus. iv. 31. § 2). There are considerable remains of both places. Those of Upper Thuria are on the hill of the village called Paleokastra, divided from the range of mountains named Makryplati by a deep ravine and torrent, and which commands a fine view of the plain and gulf. The remains of the walls extend half a mile along the summit of the hill. Nearly in the centre of the ruins is a quadrangular cistern, 10 or 12 feet deep, cut out of the rock at one end, and on the other side constructed of masonry. The cistern was divided into three parts by two cross walls. Its whole length is 29 paces; the breadth half as much. On the highest part of the ridge there are numerous ruins, among which are those of a small Doric temple, of a hard brown calcareous stone, in which are cockle and muschle shells, extremely perfect. In the plain at Palei Lativa are the ruins of a large Roman building, standing in the middle of field and mulberry grounds. Leake observes that it is in an uncommon state of preservation, part even of the roof still remaining. The walls are 17 feet high, formed of equal courses of Roman tiles and mortar. The roof is of rubble mixed with cement. The plan does not seem to be that of a bath only, as the name would imply, though there are many appearances of the building having contained baths: it seems rather to have been the palace of some Roman

4 6 4
As there are no sources of water here, it is to be supposed that the building was supplied by an aqueduct from the neighbouring river of *Pelidaima*. (Leake, Menas, vol. i. pp. 334. seq. 360; Bölbay, Recherches, f. cit. p. 105; Ioss, Reisen im Peloponnes, p. 2; Curtius, Peloponnesos, vol. ii. p. 161.)

The city of that site has remained desolate for a period of 58 years after its destruction by the Crotonians [**Thyras**]; when at length, in B.C. 452, a number of the Sybarite exiles and their descendants made an attempt to establish themselves again on the spot, under the guidance of some leaders of Thesealian origin; and the new colony rose so rapidly to prosperity that it excited the jealousy of the Crotonians, who, in consequence, expelled the new settlers a little more than 5 years after the establishment of the colony. (Diod. xii. 90, xii. 10.)

The fugitive Sybarites first appealed for support to Sparta, but without success: their application to the Athenians was more successful, and that people determined to send out a fresh colony, at the same time that they reinstated the settlers who had been lately expelled from them. A body of Scythian colonists was accordingly sent out by Pericles, under the command of Lampsucus and Xenocrates; but the number of Athenian citizens was small, the greater part of those who took part in the colony being collected from various parts of Greece. Among them were two celebrated names,—Herodotus the historian, and the orator Lycurgus, both of whom appear to have formed part of the original colony. (Diod. xii. 10; Strab. vi. p. 263; Dionys. Lyc. p. 453; Vit. X. Orat. p. 835; Plut. Peric. xii. 6, 13.)

The new colonists at first established themselves on the site of the deserted Sybaris, but shortly afterwards removed (apparently in obedience to an oracle) to a spot at a short distance from thence, where there was a fountain named Thuris, from whence the new colony derived its name of Thuri. (Diod. L.c.; Strab. L.c.) The foundation of Thuri is assigned by Diodorus to the year 446 B.C.; but other authorities place it three years later, n. c. 443, and this seems to be the best authenticated date. (Clinton, F. H. vol. ii. p. 54.)

The protection of the Athenian name probably secured the rising colony from the assaults of the Crotonians, at least we hear nothing of any obstacles to its progress from that quarter; but it was early disturbed by dissensions between the descendants of the original Sybarite settlers and the new colonists, the former laying claim not only to honory distinctions, but to the exclusive possession of important political privileges. These disputes at length ended in a revolution, and the Sybarites were finally expelled from the city. They established themselves for a short time upon the river Trasaeus, but did not maintain their footing long, being dislodged and finally dispersed by the neighbouring barbarians. (Diod. xii. 11, 22; Arist. Pol. v. 3.)

The Thuriotes meanwhile concluded a treaty of peace with Crotona, and the new city rose rapidly to prosperity. Fresh colonists poured in from all quarters, especially the Peloponnes; and though it continued to be generally regarded as an Athenian colony, the Athenians in fact formed but a small element of the population. The citizens were divided, as we learn from Diodorus, into two tribes, the names of which sufficiently indicate their origin. They were,—the Arcadian, Acteans, Eleotian, Amphilochian, Dorian, Ionian, Athenian, Euboean, and Neosotic, or that of the islanders. (Diod. xii. 11.)

The form of government was democratic, and the city is said to have enjoyed the advantage of a well-ordered system of laws; but the statement of Diodorus, who represents this as owing to the legislation of Charodas, and that lawgiver himself as a citizen of Thuri, is certainly erroneous. [Dict. of Biog. art. CHARONDAS.]

The city itself was laid out with great regularity, being divided by four broad streets or "platae", each of which was crossed in like manner by three others. (Diod. xii. 10.)

Very shortly after its foundation, Thuri was involved in a war with Tarentum. The subject of this was the possession of the fertile district of the Strils, about 30 miles N. of Thuri, to which the Athenians had a claim of long standing [**Strius**], which was naturally taken up by their colonists. The Spartan general, Cleandridas, who had been banished from Greece some years before, and taken up his abode at Thuri, became the general of the Thurians in this war, which, after various successes, was at length terminated by a compromise, both parties agreeing to the foundation of the new colony of Heraclea in the disputed territory. (Diod. xii. 23, 36, xii. 106; Strab. vi. p. 264; Polyaen. Strat. ii. 10.)

Heraclea. Our knowledge of the history of Thuri is unfortunately very scanty and fragmentary. Fresh disputes arising between the Athenian citizens and the other colonists were at length allayed by the oracle of Delphi, which decided that the city had no other founder than Apollo. (Diod. xii. 35.)

But the same difference appears again on occasion of the great Athenian expedition to Sicily, when the city was divided into two parties, the one desiring of favouring and supporting the Athenians, the other opposed to them. The latter faction at first prevailed, so far that the Thurians observed the same neutrality towards the Athenian fleet under Nicias and Alebiades as the other cities of Italy (Thuc. vi. 44); but two years afterwards (n. c. 215) the Athenian party had regained the ascendency; and when Demosthenes and Eurymedon touched at Thuri, the citizens afforded them every assistance and furnished an army of 700 hoplites and 300 darters. (Ib. vii. 33, 35.)

From this time we hear nothing of Thuri for a period of more than 20 years, though there is reason to believe that this was just the time of its greatest prosperity. In n. c. 330 we find that its territory was already beginning to suffer from the incursions of the Lucanians, a new and formidable enemy, for protection against whom all the cities of Magna Graecia had entered into a defensive league. But the Thurians were too impatient to wait for the support of their allies, and issued forth with an army of 14,000 foot and 1000 horse, with which they repulsed the attacks of the Lucanians; but having rashly followed them into their own territory, they were totally defeated, near Lais, and above 10,000 of them cut to pieces (Diod. xiv. 101.)

This defeat must have inflicted a severe blow on the prosperity of Thuri, while the continually increasing power of the Lucanians and Bruttians, in their immediate neighbourhood would prevent them from quickly recovering from its effects. The city
continued also to be on hostile, or at least unfriendly, terms with Dionysius of Syracuse, and was in consequence chosen as a place of retirement or exile by his brother Leptines and his friend Philistus (Irod. xxi. 23). Thus by the year 356 probably became the cause of the complete decline of Thurii, but the statement of Diodorus that the city was conquered by that people (xvi. 15) must be received with considerable doubt. It is certain at least that it reappears in history at a later period as an independent Greek city, though much fallen from its former greatness. No mention of it is found during the wars of Alexander of Epirus in this part of Italy; but at a later period it was so hard pressed by the Lucanians that it had recourse to the alliance of Rome; and a Roman army was sent to its relief under C. Fabricius. That general defeated the Lucanians, who had actually laid siege to the city, in a pitched battle, and by several other successes to a great extent broke their power, and thus relieved the Thurians from all immediate danger from that quarter. (Liv. Epist. xi.; Plin. xxxiv. 6. s. 15; Val. Max. i. 8. § 6.) But shortly after they were attacked on the other side by the Tarentines, who are said to have taken and plundered their city (Appian, Syrac. 7. § 1); and this aggression was one of the immediate causes of the war declared by the Romans against Tarentum in B. C. 282.

Thurii now sunk completely into the condition of a dependent ally of Rome, and was protected by a Roman garrison. No mention is found of its name during the wars with Pyrrhus or the First Punic War, but it plays a considerable part in that with Hannibal. It was apparently one of the cities which revolted to the Carthaginians immediately after the battle of Cannae, though, in another passage, Livy seems to place its defection somewhat later. (Liv. xxxii. 61, xxxv. 1.) But in B. C. 213, the Thurians returned to their alliance with Rome, and received a Roman garrison into their city. (Id. xxv. 1.) The very next year, however, after the fall of Tarentum, they changed sides again, and betrayed the Roman troops into the hands of the Carthaginian general Hannibal. (Id. xxxv. 15; Appian, Hann. 54.) A few years later (c. c. 210), Hannibal, finding himself unable to protect his allies in Campania, removed the inhabitants of Atella who had survived the fall of their city to Thurii (Appian, Hann. 49); but it was not long before he was compelled to abandon the latter city also to its fate; and when he himself in B. C. 204 withdrew his forces into Bruttium, he removed to Crotona 3500 of the principal citizens of Thurii, while he gave up the city itself to the plunder of his troops. (Appian, L. c. 57.)

It is evident that Thurii was now sunk to the lowest state of decay; but the great fertility of its territory rendered it desirable to preserve it from utter desolation; hence in B. C. 194, it was one of the places selected for the establishment of a Roman colony with Latin rights. (Liv. xxxiv. 53; Strab. vi. p. 263.) The number of colonists was small in proportion to the extent of land to be divided among them, but they amounted to 3000 men and 300 knights. (Liv. xxxv. 9.) Livy says merely that the colony was sent "in Taurinum agrum," and does not mention anything of a change of name; but Strabo tells us that they gave to the newly colonized city the name of Copiae, and this statement is confirmed both by Stephanus of Byzantium, and by the evidence of coins, on which, however, the name is written Copia. (Strab. l. c.; Steph. Byz. s. v. Copiae; Liv. p. 164.) But this new name did not continue long in use, and Thurii still continued to be known by its ancient appellation. It is mentioned as a municipal town on several occasions during the latter ages of the Republic. In B. C. 72 it was taken by Spartacus, and subjected to heavy contributions, but not otherwise injured. (Appian, B. C. i. 117.) At the outbreak of the Civil Wars it was deemed by Caesar of sufficient importance to be secured with a garrison of Gaulish and Spanish horse; and it was there that M. Coelius was put to death, after a vain attempt to excite an insurrection in this part of Italy. (Caes. B. C. iii. 21, 22.) In B. C. 40 also it was attacked by Sextus Pompeius, who had waste its territory, but was repulsed from the walls of the city. (Appian, B. C. v. 56, 58.)

It is certain therefore that Thurii was at this time still a place of some importance, and it is mentioned as a still existing town by Pliny and Ptolemy, as well as Strabo. (Strab. vi. p. 263; Plin. iii. 11. s. 15; Ptol. iii. 1. § 12.) It was probably, indeed, the only place of any consideration remaining on the coast of the Tarantine gulf, between Crotona and Tarentum; both Metapontum and Heraclea having already fallen into almost complete decay. Its name is still found in the Itineraries (Hui. Ant. p. 114, where it is written "Tarisius:" Tab. Punt.); and it is noticed by Procopius as still existing in the 6th century. (Procop. B. G. i. 15.) The period of its final decay is uncertain; but it seems to have been abandoned during the middle ages, when the inhabitants took refuge at a place called Terranora, about 12 miles inland, on a hill on the left bank of the Cratis.

The exact site of Thurii has not yet been identified, but the neighborhood has never been examined with proper care. It is clear, from the statements both of Diodorus and Strabo, that it occupied a site near to, but distinct from, that of Sybaris (Diod. xii. 10; Strab. l. c.); hence the position suggested by some local topographers at the foot of the hill of Terranora, is probably too far inland. It is more likely that the true site is to be sought to the N. of the Cocle (the ancient Sybaris), a few miles from the sea, where, according to Zannoni's map, ruins still exist, attributed by that geographer to Sybaris, but which are probably in reality those of Thurii. Swinburne, however, mentions Roman ruins as existing in the peninsula formed by the rivers Cratis and Sybaris near their junction, which may perhaps be those of Thurii. (Swinburne, Travels, vol. i. pp. 291, 292; Bonamonti, vol. i. p. 236.) The whole subject is very obscure, and a careful examination of the localities is still much needed.

The coins of Thurii are of great beauty; their number and variety indeed gives us a higher idea of the opulence and prosperity of the city than...
we should gather from the statements of ancient writers.

THUIUM. [Boccidia, p. 412, b.]

THYAMIA. [Philus, p. 602, b.]

THYAMIS (Θαμίς), a river of Ephesus, flowing into the sea near a promontory of the same name. (Prohl. iii. 14, §§ 4, 5.) It formed the northern boundary of Thymothina, which it separated from Cæstrinum, a district of Chania (Thuc. i. 46; Strab. vii. p. 324; Paus. i. 11. § 2; Cic. ad Att. vii. 2, de Leg. ii. 3; Plin. iv. 1.) It is now called Kαλανά, apparently from the large reeds and aquatic plants which grow upon one of its principal tributaries. Its ancient name seems to have been derived from the σας or juniper, which, Leake informs us, though not abundant near the sources of the river, is common in the moist valley which border the middle of its course. The historian Phyllarchus related (op. Athen. iii. p. 73) that the Egyptian bean, which grew only in marshy places and nowhere in Egypt, once grew for a short time upon the banks of the Thyanias. (Leake, Northern Greece, vol. i. p. 105, vol. iv. p. 97.)

THYAMUS (Θαμος), a mountain lying to the S. of Argos Amphilocheum, identified by Leake with Sprotocion. (Thuc. iii. 106; Leake, Northern Greece, vol. iv. p. 251.)

THYATIRA (τὰ Θατύηρηα: Eth. Θατυεργίνος), a considerable city in the north of Lydia, on the river Lyceu, and on the road leading from Sardis in the south to Gera in the north. It was anciently called Pelopoeia, Enlípippo, and Samirandas. (Plin. v. 31; Steph. B. s. v. Θατύηρηα) Strabo (xiii. p. 625) calls it a Macedonian colony, which probably means only that during the Macedonian period it was increased and embellished, for Stephæus B., admitting that it previously existed under other names, relates that Scipio Nasica at Cestrine, 1194 vol. S., b. (Thui.) that Sciscius Nasica or Thyatira on being informed that a daughter (Θατύηρηα) was born to him. But whatever we may think of this etymology, it seems clear that the place was not originally a Macedonian colony, but had existed long before under other names, and at one period belonged to Myasia. After the time of Antiochus the Great, however, it became an important place, and is often noticed in history. When the two Ptolemaeus arrived in Asia on their expedition against Antiochus the Great, the latter was encamped near Thyatira, but retreated to Magnesia. (Liv. xxxviii. 8, 21, 37.) After the defeat of the Syrian king, the town surrendered to the Romans. (Liv. xxxviii. 44; Polyb. xvi. 1. xxxii. 25; comp. Appian, Syr. 30; Strab. xiii. p. 646; Plut. Sulla, 15; Ptol. v. 2 § 16; It. Ant. p. 336.) In Christian times Thyatira appears as one of the seven Churches in the Apocalypse (xi. 18); in the Acts of the Apostles (xvi. 14) mention is made of one Lydia, a purple-seller of Thyatira, and at a still later period we hear of several bishops whose see it was. In the middle ages the Turks changed the name of the town into Aklisar, which it still bears. (Mich. Disc. p. 114.) Sir C. Fellows (Asia Minor. p. 22), who calls the modern place Aktus, states that it teems with relics of an ancient splendid city, although he could not discover a trace of the site of any ruin or early building. These relics consist chiefly of fragments of pillars, many of which have been changed into wall-tops or trowsers. (Comp. Arundell, Seven Churches, p. 188, foll.; Wheeler and Syen, vol. i. p. 253; Lucas, Topoiitisme Vog. p. 192, &c.; Prokesch, Denkwürdigkeiten, ii. 60, foll.)

THYIA (Θηία), a place in Phocis, where the Delphians erected an altar to the winds, derived its name from Thyia, a daughter of Cepheus or Castalia, and the mother of Delphna by Apollo. (Herod. vii. 178; Dict. of Biogr. art. THYIA.)

THYMBIRA (Θημβήρα or Θημβρία), a town of Troes, in the vicinity of Ilissm. (Hom. Il. x. 430; Steph. B. s. v.; Plin. v. 93.) Strabo (xiii. p. 598) speaks of it only as a plain traversed by the river Thymbrios. The valley of Thymbra and the hill in it, called Callicolone (Hom. Il. xx. 53, 151; Strab. l. c.), are said still to retain their ancient names. (Prokesch, Denkwürdigkeiten, i. p. 145, foll.) The town of Thymbra must have perished at an early period, but its name remained celebrated in religion, for Apollo, who had had a temple at Thymbra, is frequently called Thymbracus (Θημβρακος; Virg. Aen. xii. 85; Polyb. ii. 234; Steph. B. s. v. Θημβρακος.)

THYMBRARA (Θημβράρα), a place near Sardes, not far from the small river Pactolus, at which the contingents of the Persian army furnished by the inhabitants of Asia Minor used to assemble. (Xen. Cyrop. vi. 2 § 11, vii. 1 § 45; Steph. B. s. v.) Some are inclined to identify this place with Thybarna, mentioned by Diodorus Siculus (xiv. 80), but this latter place could hardly be said to be situated on, or even near the Pactolus. (L. S.)

THYMBRES (Θημβρες), a tributary of the Sambucus in Phrygia (Liv. xxxviii. 18), is no doubt the same as the Tembrigius of Phryg. (vi. 1) and the Timbrus in the Argonautica bearing the name of Orpheus (713), where the river is described as abounding in fish. (L. S.)

THYMBRIA (Θημβρία), a small town of Caria, only 4 stadia east of Myus on the banks of the Maeander; in its neighbourhood there was a so-called Chernomium, or cave from which poisonous vapours issued. (Sebeus, xiv. p. 188.)

THYMBRIUM (Θημβριος; Eth. Θημβρίαν), a town of Phrygia, at a distance of 10 parasangs to the west of Tyrrenium (Xenoph. Anab. ii. 2 § 13; Herod. p. 673; Conc. Constant. iii. p. 505.) Vitius Sequester (p. 25, ed. Oehlric) mentions a forest Thybria in Phrygia, which seems to have been near the town of Thybrium. (L. S.)

THYMBRIUS (Θημβρίους), a small river of Troes in the neighbourhood of Ilissm.; it was a tributary of the Ismenus, and on its banks stood the town of Thybria (Strab. xiii. p. 598); Eustath. ad Hom. ll. x. 430.) There still exists in that district a small river called Timbrek, which, however, does not flow into the Scamander, but into a bay of the sea; if this be the ancient Thymbria, the plain of Thymbra must have been at a considerable distance from Ilium. For this reason, Col. Leake is inclined to identify the Thymbrius rather with the Kámeus Sa, which still is a tributary of the Scamander or Memère Sa (Asia Minor, p. 286.) (L. S.)

THYMENA (Θημήνα), a place on the coast of Paphlagonia, at a distance of 90 stadia from Ac-
**THYMIATERION.**

Grais. (Arrian, *Peripl. P. E. P. E. 15; Anonym. *Peripl. P. E. P. E. 6.) Potenya (v. 4, § 2) mentions it under the name of Thyanaia, and states that it was

"...Thymiaterion (Θυμιατέριον, Hanno, *Peripl. P. E. P. E. 2), called by Scylax (p. 23) Θυμιατέριος, the first Carthaginian colony planted by Hanno on the west coast of Mauretania, 26 miles south-west of Luxus, on the Sinus Emporicos. There is no further mention of it. It has been variously identified with Marmora, Larache, and Tangier, but perhaps most correctly with the first. [T. H. D.]"

**THYMIANIA, a bay on the south-west coast of Caria, on the south-west of the bay of Schoeneira, and between Capes Aphrodisium and Posidium. (Pomp. Mela, i. 16; Plin. v. 29.) [L. S.]**

**THYMOIETAE. [Attica, p. 325, b.]**

Thyni (Plin. iv. 11. s. 18; v. 32. s. 43; Θυνί, Horod. i. 28), a people in the SE. part of Thrace, between the Axios and the mountains which separate its head-waters from the Euxine. At a very early period, a portion of the tribe, along with the related race of the Bithyni, emigrated to Asia Minor, where they occupied the district afterwards called Bithynia; but part of which seems originally to have been named more directly from the Thyni, since we find the names Θυναίαθ and Θυνίαθ (Mannen., c. 18), Θυνία (Scymn. 727, and 236), Θυνία (Steph. B. p. 515), and Thyasia (Amm. xxxii. 8. § 14). Respecting the Asiatic Thyni, see also Strabo, vii. p. 293, xii. p. 541; and the article Θυνία. Of the Thyni who remained in Europe scarcely any notice is taken by the ancient historians. When Xenophon and the remnant of the 10,000 Greeks entered the service of Suthus, one expedition in which they were employed had for its object the subjugation of the Thyni, who were said to have defeated Teres, an ancestor of Suthus (Amm. vii. 2. § 22). Xenophon gives them the somewhat equivocal character of being the most warlike of all people, especially by night: and he had personal experience of their fondness for nocturnal fighting: for, having encamped in their villages at the foot of the mountains, to which the Thyni had retired on the approach of Suthus and his forces, he was attacked by them on the next night, and narrowly escaping being burnt to death in the house in which he had taken up his quarters (Ib. 4. § 14, seq.). But this attack failing, the Thyni again fled to the mountains, and soon afterwards submitted to Suthus. Xenophon visited the country of the Thyni in the winter (Ib. 6. § 31), which he describes as being extremely severe, there being deep snow on the ground, and so low a temperature, that not only water, but even wine in the vessels was frozen; and many of the Greeks lost noses and ears through frostbite. (Ib. 4. § 3.) [J. R.]

**THYNIANIAS (Θυνιάνιας), a small island in the Euxine at a distance of one mile from the coast of Thy- nia or Bithynia; its distance from the port of Ribel was 20 stadia, and from Calpe 40. (Plin. vi. 13; Arrian, *Peripl. P. E. P. E. 13.) The island had only 7 stadia in circumference, and had at first been called Apollonia from a temple of Apollo which existed in it. (Plin., Arrian, ill. cc; Apollon. Rhod. ii. 177, 675; Annon. *Peripl. P. E. P. E. 3.) According to Ptolemy (v. 1. § 1.5) it was also called *Daphnusias,* and obtained its name of Thyania from the Thyni, who inhabited the opposite coast. The island had a port and a naval station belonging to Hera- clea (Scylax, p. 34; Arrian, L. c.;) and Mela (ii. 7) is probably mistaken in believing that the island contained a town of the same name. (Comp. Strab. xii. p. 543, where it is called Thyulia; Marcián, p. 69; Steph. B. s. c.; Orph. Argen. 717, where it bears the name Thyenia.) The modern name of the island is *Kounina.*

**THYNIAS (Mela ii. 2. § 5; Plin. iv. 11. s. 18; *Oriens*, Strabo viii. p. 319, xii. p. 541; Scymn. 727; Arrian, *Per. P. Eux. P. Eux. 24; Anon. *Per. P. Eux. 15; Ptol. iii. 11. § 4; Steph. B. s. c.), a promontory on the Thracian coast of the Euxine, N. of Sinusdessus, which was probably at one time in the territories of the Thyni, although Strabo (vii. p. 519) speaks of the district as belonging to the people of Apollonia. Pliny (L. c.) mentions a town of the same name, which in some maps is placed a little to the south of the promontory, on the site of the modern *Istada ou Inida;* but which, according to Dapper (de *L'Archipel.* p. 515), is still called *Thiuno.* [J. R.]

**THYNOS or TYNOS, a town mentioned only by Pliny (v. 22) as situated between *Mopsus* and *Ze- phyrion* in Cilicia.** [L. S.]

**THYRAEOUS (Θυραίος), a town of Arcadia in the district *Cynuria,* said to have been founded by Thyrreas, a son of Lycan. It is placed by Leake at *Palamair* (Paus. viii. 3. § 13, 35. § 7; Steph. B. s. c.; Leake, *Peloponnesia.* p. 240.)

**THYRAEUM. [MEGALOPOLIS, p. 310, a.]**

**THYREA, THYREIA TIS. [CYNURIA.]**

**THYREATES SINUS. [CYNURIA, p. 727, a.]**

**THYREUM. [THYRUM.]**

**THYROGONIAE. [Attica, p. 330, a.]**

**THYRIDES (Θυρίδες), a promontory of *Laconia,* on the western coast of the Tagetian peninsula, now called Cape *Gresso.* It is of a semicircular form, nearly 7 miles in circumference, and rises from the sea to the height of 700 feet. There are many apertures and clefts in the rocks, the abodes of innumerable pigeons, and from the window-like form of these holes the whole promontory has received the name of Thyrides. Strabo describes it as a πολύς θυρίδες, "a precipitosa cape beaten by the winds," distant 130 stadia from *Taenarum* (reckoning from the northern point of *Thyrides;* Pausanias, as a promontory (ναυα), situated 70 stadia from *Taenaraum* (reckoning from the southern point of the promontory). Pausanias likewise calls it a promontory of *Taenarum,* using the latter word in its widest sense, to signify the whole peninsula of *Mani.* According to Strabo, the Messenian gulf terminated at this promontory. Pliny (iv. 12. s. 56) mentions three islands of the name of *Thyrides* in the Achaean gulf. (Paus. iii. 25. § 9; Strab. viii. pp. 360, 362; Leake, *Morea,* vol. i. p. 302, seq.; Boblaye, *Recercches,* p. 91; Curtius, *Peloponnesus,* vol. ii. p. 281.)

**THYRIUM, or THYREUM (Θυρίου, Pol. iv. 25; Θυρίου, Pol. iv. 6; Θυρίου, Pol. xxviii. 5; Θυρίου, Antich. Graec. iv. 553: Θυρίων, *Thyremnes,* a city in *Acarnania,* the exact site of which is unknown. It placed by Pospeville in the interior near the sources of the *Anapus, and his authority is followed by K. O. Müller and others. This, however, is evidently a mistake. Cicero tells us (ad Fam. xvi. 5) that it is sailing from *Albisia* to *Leucas, he touched at *Thy- rium, where he remained two hours; and from this statement, as well as from the history of the events in which *Thyrium* is mentioned, we may infer that it was situated on or near the Ionian sea, and that it was the first town on the coast S. of the caual
COIN OF TIBERIUS.

THYRUS or TYRUS (Θῦρος τυρᾶς, Ptol.; Θύρος, Paus.: Τύρος), the most considerable river of Scythia, which still retains its ancient name almost unaltered. It has its sources in the mountains in the NE. corner of the island, and flows into the Gulf of Oristano on the W. coast, after a course of about 75 miles. About 20 miles from its mouth it flowed past Forum Trajani, the ruins of which are still visible at FORDOMANIA; and about 36 miles higher up are the Bagni di Benuatti, supposed to be the Aque Leustine of the Itinerary. The Ionarians give a station ad Caput Tyrst (B. H. ii. p. 81), which was 40 M.P. from Olbia by a ranged mountain road; it must have been near the village of Budus. (De la Marmona, Voy. en Saroagine, vol. ii. p. 445.) Pausanius tells us that in early times the Thyrisus was the boundary between the part of the island occupied by the Greeks and Thracians and that which still remained in the hands of the native barbarians. (Paus. x. 17, § 6.) [E. H. B.]

THYSBDUS (Θυσβίδος, Ptol. iv. 3, § 39), the epipolae Tushridinum or Thysdrisus of Pliny (v. 4. s. 4), a city of Byzantium, in the Roman province of Africa, lying midway between Th preseason and Thyskerus, and west of the promontory Brachide. It was here that the emperor Gordianus first set up the standard of rebellion against Maximian (Herodian, vii. 4, seq.; Capitol. Gres. c. 7, seq.), and it was from him, probably, that it derived its title of a Roman colony. We find the name variously written, as Tysbusa, by Hierius or whoever was the author of the history of the African War (B. Afr. 26, 27, &c.), and Thysdrus, in the B. H. ii. p. 59. Now El Jemene or Legem, with extensive ruins, especially of a fine amphitheatre in a tolerably perfect state. (Slav. Travels, vol. i. p. 220, seq.) [T. H. D.]

THYSAGETAE (Θυσαγηταί, Herod. iv. 22), a numerous people of Asiatic Sarmatia, living principally by the chase. They dwelt to the north-east of a great desert of 7 days' journey, which lay between them and the Bodunn. Stephanus B. (s. v.) erroneously places them on the Maeotis, apparently from misunderstanding Herodotus. They are called

TIBERIAS.

Thusagetae by Mela (i. 19) and Pliny (iv. 12 s. 26), and Thysagetae by Valerius Flacceus (vi. 140). [T. H. D.]

THYSUS (Θύσος), a town of Chalcidice in Macedonia, situated on the W. or S. side of the peninsula of Acte or Mt. Athos. Its exact position is uncertain, but it appears that Thysus and Cleone occupied the central part of the W. or S. coast of the peninsula, and that one of them may be placed at Zagra or Bhokshirin, and the other at Aeropotami. (Herod. vii. 22; Thuc. iv. 109, v. 55; Strab. vii. p. 531; Strab. viii. p. 517; Leake, Northern Greece, vol. iv. pp. 149—122.)

TIRANTUS (Tàmarwòs, Herod. iv. 48), a river in Scythia, flowing into the Ister from the N. Manner identifies it with the Syb (iv. p. 105; cf. Urt, iii. 2, p. 184). [T. H. D.]

TIRIULIA. [Teari Juliienses.]

TISACA. [Laconia, p. 140, a.]

TASACUM (Τάσακος or Τασωρ, Ptol. iii. 8, § 9), a town in Scythia, in the neighbourhood of the modern Foschani.

TIBARANI, a tribe of Galicia, about Mount Ama- nus and in the vicinity of Pindus, which was subdued by Cicero during his proconsular administration of that country, but is otherwise unknown. (Cic. ad Fam. xiv. 4.) [L. S.]

TIBARENI (Τιβαρενοῖ), a tribe on the coast of Pontus, occupying the country between the Chalybes and the Amynni, on the coast of the river Tauris. They are mentioned as early as the time of Herodotus (iv. 94), and were believed to be of Scythian origin. (Schol. ad Apoll. Rhod. ii. 378, 1010; Xen. Antab. v. 5, § 2; Strab. p. 33; Steph. B. s. r. Τιβαρενια.) Strabo (xi. p. 527) describes them as inhabiting the mountains branching off from the Montes Maschici and Colchici, and mentions Corbara as their principal town. (Comp. Xen. l. c.; Plut. vi. 4.) They appear to have been a harmless and happy people, who performed all their duties in a joyous manner. (Schol. ad Apoll. Rhod. l. c.; Steph. B. l. c.; Anm. Veripl. l. c. p. 12; Pomp. Mein. i. 19.) Their arms consisted of wooden helmets, small shields, and short spears with long points. (Herod. vii. 78.) Xanophon and his Greeks spent three days in travelling through their country. (Xen. l. c., vii. 8, § 25; Diod. Sic. xiv. 30; Dios. Per. 767; Pomp. Mein. i. 2; Val. Face. iv. 149; Strab. ii. p. 129, vii. p. 309, xi. p. 549, xii. p. 553.) [L. S.]

TIBERACIUM, in North Gallia, is placed in the Antonine Itin. between Julianum (Juliers) and Colonia Apurgina (Cologne), vii. from Julianum and x. from Colonia. D'Anville and others fix Tiberacium at Bergen, at the passage of the river Erft, which flows between Juliers and Cologne. Others place Tiberacium at Tarreus, south of Bergen, where the bridge is. D'Anville adds, "that a place situated in the direction between Juliers and Bergen is called Stein-Strato, that is to say, Lapiden Strata (Stone Street), just as in our provinces they say Chemin-Parer." (D'Anville, Notice, &c.; Urt, Gallica, p. 544.) [G. L.]

TIBERIAS (Τιβερίας, Joseph. Ant. xviii. 3, B. J. ii. 8, iii. 16; Steph. B. s. r.; Ptol. viii. 20, § 16), the principal town of Galilea, on the SW. slope of the sea of Tiberias or Genesareth. It was situated in the most beautiful and fruitful part of that state (Joseph. Ant. xviii. 2, § 3), and was adorned with a royal palace and stadium. (Joseph. V. 12, 13, 64.) It was built by the
TIBERIAS MARE.

tetrarch Herod Antipas, in honour of the Roman emperor Tiberius, from whom it derived its name. (Joseph, Ant. xviii. 8.) It is stated (p. 299) that the road from Hippo, 60 from Gadara, and 120 from Scythopolis (Joseph. Vit. 65) distances which are not much at variance with that of J ohn, who states that it is 20 miles from Nazareth and 90 from Jerusalem. (Travels, p. 40.)

From the time of Herod Antipas to that of the reign of Agrippa II., Tiberias was probably the capital of the province (Joseph. Vit. 9), and it was one of the three or four cities which were given to the kingdom of Agrippa. (Joseph. Ant. xx. 8.)

In the last Jewish War, Tiberias, from its great strength, played an important part (Joseph. B. J. ii. 20); and, as after Sepphoris, it was held to be the largest place in Galilee (Joseph. Vit. 65), and was very strongly fortified. (B. J. iii. 10. § 1.)

The inhabitants derived their sustenance in great measure from their fisheries in the adjoining sea. (Joseph. Vit. 12.) On the destruction of Jerusalem, and for several centuries subsequently, Tiberias was famous for its academy of learned Jews. (Lightfoot, Hor. Hebr. p. 140.)

In the immediate neighbourhood of Tiberias were the celebrated hot springs of Emmaus (Joseph. B. J. ii. 21, Ant. xviii. 2.) [EMMAUS]. It is not certain whether Tiberias occupied the site of Chinemereth, though Hieronymus thinks so (Onom. a. v. Chinemereth;) it seems more likely that this place belonged to the tribe of Naphtali. (Josh. xiii. 35; Heland, Palast. p. 161.) Nor is there any better reason for identifying it, as some have done, with Chamath (Joseph. xix. 35) or Ekkah, which was the Rabbinical notice. (Cit. Hieron, Megil. fol. 701; Lightfoot, Chorograph. Cont. cap. 72—74.)

The modern name of Tiberias is Tabarijah: it is not, however, built actually on the site of the old town, though close to its ruins. When Juliffe was there, it had a population of 11,000 (Travels, pp. 48—58.) It was nearly destroyed by an earthquake on New Year's Day, 1837, since when it has never been completely rebuilt. (Russegger, ii. p. 132; Strauss, p. 356; Robinson, iii. p. 500.) [V.]

TIBERIAS MARE (Λίμνη Τιβερίας, Pausan. v. 7. § 4; Itel. v. 16. § 4; Λίμνη Ὄ Τιβερίας, Joseph. B. J. iv. 26), the principal lake or sea of Palestine in the province of Galilee. It was bordered on its side by the tribe of Issachar and Zebulun, and on the E. by the half-tribe of Manasseh. The waters were fresh (Joseph. B. J. iii. 35) and full of fish (Joseph, B. J. iv. 26; Matth. iv. 18; Luke, v. 1, &c.), and its size is variously stated, by Josephus (l. c.), to have been 140 stadia long by 40 broad, and by Pliny, to have been 16 M. P. long and 6 M. P. broad (v. 15). It was traversed in a direction NW. and SE. by the river Jordan. [JORDANES; Palaestina.] This sea is known by many different names in the Bible and profane history. Its earliest title would seem to have been Chinemereth (Num. xxxiv. 11; Josh. xili. 27; LXX. Ξενερεθ.) From this form has probably arisen its second appellation of Gennesareth (ἡ λίμνη Γένναια, Matth. xiv. 34, &c.; Æsop Genesaret, 1 Macrob. ii. 67; ἡ λίμνη Γένασαρ, Joseph. B. J., ἡ λίμνη Γένασαρ, Joseph. Ant. xviii. 3; Strab. xvi. p. 753; Genasara, Plin. v. 15.) A third appellation it has derived from the province with which it was most nearly connected, viz. the sea of Galilee (Σαββατάρια ἡ τῆς Γαλατίας, Matth. xv. 21, &c.; Mark, vii. 31, &c.; and with a double title, Σαββατάρια τῆς Γαλατίας, τῆς Τιβερίαδος, John vi. 1). Pliny, in describing the same localities, speaks of a town called Tarichea, from whence also he says the adjoining Locris Eumenes named (l. c.; cf. also Strab. xvi. p. 754). The proper stream of the lake is Buhr-al-Tabarich. (Poesec. ii. p. 103; Thoenen, p. 387; Hasegquist, i. p. 181; Robinson, iii. pp. 499—509, &c.) [V.]

TIBERIOPOLIS (Τιβεριοπόλις), a town in Phrygia Major, in the neighbourhood of Eumenia. (Ptol. v. 2. § 25; Socrat. Hist. Eclecs. vii. 46.) Its site is yet uncertain, but Kiepert (in Franz., Pflanzenbesch. p. 32) is disposed to regard the extensive ruins near Sudaiman, as the remains of Tiberiopolis. Hamilton (Researches, i. p. 127, &c.), probably more correctly, regards them as the ruins of Baniadus. (Comp. Arundel, Discoveries, i. p. 81, &c.) [L. S.]

TIBERIUS (τιβέριος; Teure, Τιβέριος; Tiber, Τιβέρης; Tibyris, and Thybris are chieflv poetical, as is Θέρβας also in Greek: the Latin poets use also Tiberinus as an adjective form, as Tiberinus pater, Tiberinum flumen, &c., and thence sometimes Tiberinus by itself as the name of the river), one of the most important rivers of Central Italy. It has its sources in the Apennines above Tiberinus, but in the territory of Arretium (Plin. iii. 5. s. 9), on the confines of Etruria and Umbria, and flows at first in a southerly direction, passing by the walls of Tiberinus, which derived from it the name of Tiberium (Città di Castello), and afterwards within a few miles of Perusia on the E. and within a still shorter distance to the W. of Tuder (Todi). From thence it still preserves a general S. direction, notwithstanding considerable windings, till it receives the waters of the Anio (Tevereone), a few miles from the walls of Rome, from which point it has a general SW. course to the sea at Ostia. Pliny estimates the upper part of its course at 150 miles, to which must be added about 35 more for the lower part, giving as a total 185 miles (Plin. l. c.; Strab. v. p. 218); but this estimate is below the truth, the whole course of the river being about 180 geogr. or 223 Roman miles. During the whole of its course from Tiberinus to the sea the Tiber formed in ancient times the eastern boundary of Etruria, separating that country from Umbria in the upper part of its course, afterwards from the territory of the Sabines, and, in the lower part, from the mouth of the Anio downwards, dividing it from Latium. (Strab. v. p. 219; Plin. l. c.) It receives numerous contributaries or tributaries, of which the most important are, the Tinia, an inconsiderable stream which joins it from the E. a little below Perusia, bringing with it the waters of the more celebrated Citimanna, the Claris, which falls into it from the right bank, descending from the marshy tract near Clusium; the Naer, a much more considerable stream, which is joined by the Velinus a few miles above Interamna, and discharges their combined waters into the Tiber, a few miles above Oriculum; and the Anio, which falls into the Tiber at Antenaria, 3 miles above Rome. These are the only affluents of the Tiber of any geographical importance, but among its minor tributaries, the Adda on its left bank, a few miles above the Anio, and the Cenere on the right, are names of historical celebrity, though very trifling streams, the identification of which is by no means certain. [See the respective articles.] Two other streams of less note, which descend from the land of the Sabines and fall into the Tiber between Oriculum and Ere-
The Tiber is unquestionably, in a merely geographical point of view, the most important river of Central Italy, but its great celebrity is derived from its flowing under the walls of Rome, or rather through the heart of the city, after this had attained to its full extension. The detailed account of the river in this part of its course must be sought in the article ROMA; we need here only mention that after flowing under the Milvian Bridge [Pons Milvius] the river makes a considerable bend to the W. so as to approach the foot of the Vatican hills, and leave, on the other side, between its left bank and the nearest ridge of hills, a broad tract of plain, early known as the Campus Martius, the whole of which was eventually included within the imperial city. A short distance lower down, but still within the walls of the city, its stream was divided into two by an island known as the Isola Tiberina, and reported by tradition to have been formed by alluvial accumulations within the period of Roman history. It is remarkable that this is the only island of any consideration in the whole course of the river, with the exception of that called the Isola Sacra, at its mouth, formed by the two arms of the river, which is at once an object of late growth, and in great part of artificial formation.

The Tiber was at all times, like most rivers which are supplied principally by mountain streams, a turbid, rapid, and irregular river, that must always have presented considerable difficulties to navigation. The yellow and muddy hue of its turbid waters is repeatedly alluded to by the Roman poets ("flavum Tiberim," Hor. Carm. i. 2. 13; "aneum gurgitare flavo," Virg. Aen. ix. 816; &c.), and the truth of Virgil's description, "Vorticibus rapidis et melia flavus arena," (Aen. vii. 31), must be familiar to every one who has visited Rome. In the upper part of its course, as we learn from Pliny, the river was with difficulty navigable, even for small boats; nor did its first tributary, the Tinia and Clanis contribute much to its facilities in this respect, though their waters were artificially dammed up, and left off from time to time in order to augment the main stream. (Plin. iii. 5. s. 9.) But from the point of its junction with the Narn, the Tiber became navigable for larger vessels, and even from an early period extensive supplies of various kinds were brought down the river to Rome. (Liv. iii. 34, v. 54; Cie. de Rep. ii. 5; &c.) In the more flourishing period of the city the navigation of the river was of course enormously increased; and vast supplies of timber, stone, and other materials for building, as well as corn and provisions, were continually introduced by means of the river and its tributaries. (Strab. v. p. 235.) Corn was brought down the Tiber even from the neighbourhood of Tiferonum, when the upper part of the stream was navigable. (Plin. Ep. v. 6.)

It seems also to have been used as an ordinary mode of travelling, as we are told that in A.D. 20, Bce, the murderer of Germanicus, proceeded from Rome to Narnia by descending the Narn and the Tiber. (Tac. Ann. iii. 9.) At the present day the river is navigated by boats of large size as far as the confluence of the Nera, and small steamers ascend as far as Borgia. But it was from Rome itself to the sea, a distance of 27 miles by the river (Strab. v. p. 232), that the navigation of the Tiber was the most important. Pliny speaks of it as in this part of its course navigable for the largest vessels ("quamlibet magnitum navium ex Italiis mare capax"), and as becoming the receptacle of merchandise from every part of the world. The latter statement may be readily admitted; but the former is calculated to astonish any one acquainted with the river in its present condition: yet it is partly confirmed by the distinct statement of Strabo (v. p. 232), that the larger class of merchant vessels used to ride at anchor in the open sea off the mouth of the river, until they had been lightened of a part of their cargoes, which they discharged into barges, and afterwards proceeded up the river to Rome. Donyusius gives the same account, with the exception that vessels which exceeded 3000 amphorae in burden were unable to enter the river at all, and forced to send their cargoes up by barges. (Donyus. iii. 44.) But all kinds of rowing vessels, not excepting the largest ships of war, were able to ascend the river (Illy.); and thus we find the younger Cato on his return from Cyprus proceeding at once in his galley to the Narnia within the walls of Rome. (Plin. Cat. Min. 39.) We learn also from Livy that the ships of war which had been taken from Persia king of Macedonia, though of unusual size ("im畜e ante magnitudinis"), were carried up the river as far as the Campus Martius (Livy. xii. 27.) and were constructed for the purpose of bringing the obelisk that was set up in the Circus Maximus, was able to ascend as far as the Vicus Alexandri, within three miles of Rome (Ammian. xvi. 4. § 14). The chief difficulties that impeded the navigation of the river in the time of Strabo were caused by its own accumulations at its mouth, which had destroyed the port of Ostia. These were afterwards in great measure removed by the construction of an artificial port, called the Porticus Augusta, commenced by Claudius, and enlarged by Trajan, which communicated by an artificial canal or arm with the main stream of the river. (The history of these works, and the changes which the mouths of the Tiber underwent in consequence, are fully given in the article Ostia.) The importance of the navigation of the Tiber led to the formation of distinct bodies or corporations in connection with it, called Navicellarii and Lenuncularii, both of which are frequently mentioned in inscriptions of imperial times (Peller, p. 147.)

Another disadvantage under which the Tiber laboured, in common with most rivers of mountain origin, arose from the frequent inundations to which it was subject. These appear to have occurred in all ages of the Roman history; but the earliest recorded is in B. C. 241, immediately after the close of the first Punic War (Oros. iv. 11), which is said to have swept away all the houses and buildings at Rome in the lower part of the city. Similar inundations, which did more or less damage to the city as recorded by Livy in B. C. 215, 202, 193, and again in 192 and 189 (Liv. xiv. 9. xxx. 38. XXXV. 9, 21, XXXVII. 28) and there is little doubt that it is only from the loss of the detailed annals that we do not hear again of the occurrence of similar catastrophes till near the close of the Republic. Thus we find a great inundation of the Tiber noticed as taking place in B. C. 54 (Dion Cass. xxx. 61), which is alluded to by Cicero (ad Q. Fr. iii. 7); and several similar inundations are known to have occurred in the time of Augustus, in B. C. 27, 24 and 22, of which the first is probably that alluded to by Horace in a well-known ode. (Hor. Carm. i. 2. 13; Orell. Excr. ad L. c.; Dion Cass. liii. 20,
TIBERIS.

Great attention was bestowed by Augustus upon the subject, and he instituted magistrates with the title of Curatores Tiberis, whose special duty was to endeavour to restrain the river within due bounds, to preserve the embankments, &c. (Suet. Oct. 37.) These officers embarked increased powers under Tiberius, and continued down to the close of the Empire. We frequently meet with mention in inscriptions of the "Curatores alvei Tiberis et riparum," and the office seems to have been regarded as one of the most honourable in the state. (Dion Cass. livi. 40; Orell. Inscr. 1172, 2284, &c.; Gruter, Inscr. pp. 197, 198.) But it is evident that all their efforts were ineffectual. In the reign of Tiberius so serious was the mischief caused by an inundation in A.D. 15 that it was proposed in the senate to diminish the bulk of the waters by diverting some of the chief tributaries of the stream, such as the Nar, Velinus and Clainias. (Tac. Ann. i. 76; Dion Cass. ivii. 14.) This plan was, however, abandoned as impracticable; and in A.D. 69 another inundation took place, which appears to have caused still more damage than any that had preceded it (Tac. Hist. i. 86). It is strange that in face of these facts Pliny should assert that the Tiber was so confined within artificial banks as to have very little power of outburst, and that its inundations were rather subjects of superstitious alarm than formidable in themselves. (Pi. iii. 5. s 9.) During the later ages of the Empire indeed we hear but little of such outbreaks of the Tiber, but this is very probably owing only to the scanty nature of our records. One great inundation is, however, recorded as doing great mischief in the reign of Trajan, another in that of Macrinus, and a third in that of Valerian. (Dion Cass. lixviii. 25; Vict. Cass. 34, Eiglt. 13.) One of the most destructive of all is said to have been that of A.D. 590, which added to the various calamities that at that time almost overwhelmed the city. (Hist. Marcell. xviii. p. 583; Greg. Taurin. x. 1.) At the present day the lower parts of Rome are still frequently flooded by the river, for though the soil of these parts of the city has unquestionably been raised, in some places many feet, the bed of the Tiber has undoubtedly been also elevated, though probably in a less degree. The whole subject of the inundations and navigation of the Tiber, and the measures taken in ancient times in connection with them, is fully illustrated by Plinder in an article entitled "Rom und der Tiber in der Berichte der Sächsischen Gesellschaft für 1848 and 1849.

The Tiber appears to have been in ancient times occasionally frozen, at least partially; a circumstance to which the Latin poets repeatedly allude. But we must not construe their rhetorical expressions too strictly; and it is clear from the terms in which Livy notices its being frozen over in the extraordinary winter of B. C. 298, that such an occurrence was of extreme rarity. ("Inimica annus hie gelida ac nivosa fut, adea ut vice clausae, Tiberis inanivagabilis fuerit, Liv. v. 13.) St. Augustine also alludes to such a winter (apparently the same noticed by Livy), "ut Tiberis quoque glacie duraturum," as a thing unheard of in his times. (Augustin, Civ. Del. iii. 17.)

It was a tradition generally received among the Romans that the Tiber had been originally called Albula; and that it changed its name consequent of Tiberius edifying one of the fabulous kings of Alba, having been drowned in its waters. (Liv. i. 3; Dionys. i. 71; Vict. Orig. G. Rom. 15.) Virgil, however, who calls the king Thybris, assigns him to an earlier period, prior to the time of the Tiber (Dion. Cass. lixii. 330). Hence the river is not unfrequently called by the Roman poets Albula. (Sil. Ital. vi. 391, viii. 455, &c.) It had naturally its tutelary divinity or river-god, who, as we learn from Cicero, was regularly invoked in their prayers by the augurs under the name of Tiberinus (Cic. de N. D. iii. 20). He is frequently introduced by the Roman poets as "pater Tiberinus" (Enn. Ann. i. p. 43; Virg. Aen. viii. 31, 72; &c.)

TIBIGENSE OPTIDUM, a town in Africa Provincia, apparently the Thagilia (Orceba) of Ptol. (iv. 3. § 29; Plin. v. 4. s 4). [T. H. D.]

TIBILIS, a town in the interior of Numidia, 54 miles from Cirta having hot mineral springs (Aquae Tibilisanae) (August. Ep. 128; Itin. Ant. p. 42), commonly identified with Hammatum Medusitium in the mountains near the river Sebous; but, according to D'Arencac and the map of the province of Constantine (Par. 1827), it is Hamman-el-Berda, somewhat more to the N. [T. H. D.]

TIBISCUM (Τήβισκος), Ptol. iii. 8. § 10, a town of Dacia, on the river Tisibus. By the Geogr. Rav. it is called Tibus (iv. 14), and in the Tab. Punt. Tiviscum. Its ruins exist at Kavarun, at the junction of the Teneza (Tibiscus) and Bistra (cf. Uberti, iii. 2. p. 616). [T. H. D.]

TIBICUS (Τήβικος), Ptol. iii. 8. § 3, a tributary river of the Danube in Dacia. We also find it called Tissusus (Inscr. Grat. p. 448. 3) and Tibistis (Geogr. Rav. iv. 14). Several authors identify it with the Tisanaus or Tyisia (the modern Theiss), with which, indeed, Ptolemy seems to have confounded it, as he does not mention the latter (Manett, iv. p. 203; Sickler, i. p. 196; cf. Uberti, iii. 2. p. 603). But Forlager, after Reichard, identifies it with the Temeza: his grounds for that opinion being that Jornandes (Got. c. 34) and the Geographer of Ravenna (L. c.) mention the Tyisia and Tisista as distinct rivers, and that the site of the ancient town of Tisicum appears to point to the Donesa (Hemm. d. alt. Geogr. iii. p. 1103, note). It is probable that the Pathissa of Phiny (iv. 12. s 25) and the Pathisus of Ammianus Marcellinus (xvii. 13. § 4) are the same river, though some identify them with the Tisanaus. [T. H. D.]

TIBISS (Τήβις), a large river of Sardinia, which Herodotus describes as rising in Mt. Haemus, and flowing into the Maius (iv. 49). It is identified by some with the Kara Loav.

TIBULA (Τίβουλα, Ptol.), a town of Sardinia, near the N. extremity of the island, which appears to have been the customary landing-place for travellers coming from Corsica; for which reason the Itineraries give no less than four lines of route, taking their departure from Tisula as a starting-point. (Itin. Ant. pp. 78—83.) It is very unfortunate therefore that its position is a matter of great uncertainty. That assigned to it by Ptolemy would place it on the site of Castel Sardo on the N. coast of the island, and only about 18 miles from Porto Torres, but this is wholly incompatible with the statements of the Itineraries, and must certainly be erroneous. Indeed Ptolemy himself places the Tabulata, or Tibulatii (Τίβουλαττοι), a town which have been closely connected with the town of that name, in the extreme N. of the island (Ptol. iii. 3. § 6), and all the data derived from the Itineraries concur in the same result. The most probable posi-
tion is, therefore, that assigned it by De la Marmora, who fixes it on the port or small bay called Porto di Lungo Sardo, almost close to the northernmost point of the island, the Errembium Prom. of Pedone. (De la Marmora, Voy. en Sardeigne, vol. ii. pp. 421—432, where the whole question is fully examined and discussed.)

[Page not visible]

The foundation of Tibur was long anterior to that of Rome (Plin. xvi. 87). According to Dionysius of Halicarnassus (i. 16), it was one of the cities founded by the Siculi when they had possession of Italy; in proof of which statement he adds the fact that in his own time part of the town was still called by the name which it had from the peculiar scenery, which made it a favourite retirement of the wealthy Romans. Besides its sublimity, the air was said to possess the peculiar property of bleaching ivory (Sili. i. xii. 229; Mart. viii. 12, 19). Tibur was also famed for its pottery (Sen. Ep. 119).

The storey of its Greek origin was very generally adopted by the Roman poets, whence we find it designated as the "moenia Cutilii" by Horace (Od. i. 18; 2, 16 ii. 6, 5; Virg. Aen. viii. 671; Ov. Fast. vi. 71; Amor. iii. 6, 45; Sili. i. 3, 74; Sil. It. iv. 225, viii. 364). Tibur possessed a small surrounding territory, the limits of which, however, we are unable to fix, all that we know respecting it being that the towns of Empulium and Sassa, besides one or two others, at one time belonged to it. Both these places lay in what is called the Valle di Saeliano, to the NE. of the town, the name of which is probably connected with the Sicelium of Dionysius. Empulium is identified with the present Aspinale, a place about 4 miles distant from Tibur. Sassa is probably 2 or 3 miles beyond Empulium, in the same direction. The boundary between the Tibur- tine territory and that of the Sabines was very uncertain. Augustus adopted the Anio as the limit; yet considerable uncertainty seems to have prevailed even subsequently to the assumption of that boundary. Thus according to Tacitus (Ann. iv. 22), the territory of Tibur extended beyond the Anio, and included Sublabacum, that modern name commonly assigned to the Aquil. Originally Tibur with its territory seems to have belonged to the Sabines. Pliny enumerates Tibur among the Sabine towns (iii. 12, s. 17).
We know nothing of the history of Tibur except in connection with that of Rome. The first occasion on which we find it mentioned is in the time of the desecrator, n. c. 446, when M. Claudius, the inimous tool of the desecrator Appius, went into exile there (Liv. ii. 58). It does not appear, however, as taking any active part in affairs till n. c. 357; in which year the Tiburtines shut their gates against the Roman consuls C. Sulpicius and C. Licinius Callinus, who were returning from a successful expedition against the Brittons. There appear to have been previous disputes and complaints between the Tiburtines and Romans, and the latter seized the opportunity to declare war (Liv. vii. 9). But hostilities were suspended for a time by an incursion of the Gauls, who crossed the Anio and advanced to within 3 miles of Rome. This invasion of the Gauls was assisted by the Tiburtines; and therefore, after the barbarians had been repulsed by the prodigious valor of Manlius Torquatus, the consul C. Postelius was sent against them with an army in the following year. But the Gauls returned to the assistance of the Tiburtines; and, to meet this emergency, Q. Sertulllus Aballus was named dictator. The Gauls again advanced close to the walls of Rome, and a great battle was fought just outside the Porta Collina, in the sight of all the citizens. After a desperate conflict, the barbarians were defeated and fled to Tibur for refuge. Here they were intercepted and completely defeated, who drove them into the city, as well as the Tiburtines who had come to their aid. For this achievement a triumph was awarded to Postelius, which we find recorded in the Fasti Capitolini as well as by Livy. This triumph, however, excited the ridicule of the Tiburtines, who denied that the Romans had ever met them in a fair and open field; and in order to wipe out this affront, they made, in the following year, a nocturnal attempt upon Rome itself. But when dawn dawned and two armies, led by the two consuls, marched out against them from different gates, they were scarcely able to sustain the first charge of the Romans (Liv. vii. 11, 12). Yet the war continued for several years. In B. C. 350, the consul M. Popilius Laenas devastated their territory (ib. 17), and in the following year Valerius Poplicola took Empulum, one of their dependent cities (ib. 18; cf. Euseb.). Sassa-un also yielded to M. Fabius Amor, and the Tiburtines would have lost all the rest of their territory had they not laid down their arms and submitted to the Roman consuls. The triumph of Fabius is recorded in the Fasti and by Livy (ib. 19). Yet a few years later we find the Tiburtines joining the Latin league against the Romans; and even after the overthrow of the Latins they allied themselves with the Praenestini and Veliterni to defend Pulum (Id. viii. 12). In B. C. 353, the consul L. Furius Camillus, attached and castigated them under the walls of that place, in spite of a sortie of the inhabitants, and then took the town by escalade. All Latium was now subdued, and we do not again hear of the Tiburtines taking up arms against Rome (ib. 13). For this exploit Camillus not only obtained a triumph, but also an equestrian statue in the forum, a rare honour in that age. In the Senatusconsulatum subsequently drawn up for the settlement of Latium, Tibur and the other cities were treated with more severity than the other cities, except Veii. They were deprived of part of their territory, and were not admitted to the Roman franchise like the rest. The cause of this severity was not their recent insurrection, the guilt of which they shared with the rest of the Latin cities, but their having formerly joined their arms with those of the Gauls (ib. 14). Thus Tibur remained nominally free and independent, so that Roman exiles might resort to it (Poliy. vi. 14). Hence we find the Tiburtines taking refuge there when they fled from the rigour of the consuls (n. c. 310), who had deprived them of the good dinners which they were accustomed to enjoy in the temple of Jupiter; an event more important than at first sight it might seem to be, since, without the tribunes, neither sacrifices, nor several other important ceremonies, could be performed at Rome. On this occasion the rights of the Tiburtines were respected. The senators sent ambassadors to them as to an independent city, to request their assistance in procuring the return of the fugitives. The Tiburtines, like able diplomatsists, took the pipers by their weak side. They invited them to dinner and made them drunk, and during the night carted them in waggons to Rome, so that when they awoke in the morning sober, they found themselves in the Forum (Liv. ix. 30). The story is also told by Ovid with his usual felicity (Fast. vi. 665, sqq.). Other instances might be adduced in which Tibur enjoyed the privilege of affording an asylum. That of M. Claudius, before alluded to, was of course previous to the conquest of Latium by the Romans; but we find Cinna taking refuge at Tibur after the murder of Caesar (App. B. C. i. 65); and Ovid (ex Ponto, i. 3, 81, sq.) notes it as the most distant land of exile among the ancient Romans.

It was at Tibur that Syphax, king of Numidia, expired, in B. C. 201, two years after being captured in Africa. He had been brought thither from Africa, and was destined to adorn the triumph of Scipio; a humiliation which he escaped by his death (Liv. xxx. 45). Some centuries later Tibur received a more interesting captive, the sober, and accomplished Zenobia. The former queen of the East resided near the villa of Hadrian, in the unostentatious manner of a Roman matron; and at the time when Trebellius Pollio wrote her history, the estate still bore her name. (Poll. X.XX. Tfr. 26.)

In the Barberini palace at Rome is preserved a bronze tablet which is engraved the following fragment of a Senatusconsultum: Propter pecuniam, qua sebuiturus, ea, vos, merito, vos, praeceps, nomen, potiusesse, neque, vos, dignum esse, quic, fictoretrum, neque, id. volibus, neque, rei. poplicoe, vae. turae, oitile. esse, fictore. This monument, first acquired by Fulvio Ursini, and let by him to Cardinal Farnese, is published by Gruter (Inscr. eccles.). The tenor seems to show that the Tiburtines had been accused of some grave offence from which they succeeded in exculpating themselves; but, as there is nothing to fix the date of the inscription, various opinions have been entertained respecting the occasion of it. As the style seems to belong to about the middle of the 7th century of Rome, Nibby (Digesti, iii. p. 172) is of opinion that the document refers to the social war; that the Tiburtines had cleared themselves from the charge of taking part in that league, and were afterwards admitted to the Roman franchise, at the same time with many other Latin and Eruscan cities. This conjecture is by no means improbable. If, however, Tibur received the franchise before the civil wars of Marius and Sulla, the latter must have taken

VOL. II.
TIBUR.

it away when he deprived the rest of the munici-

pal cities of it, with the exception of Anagnia (Cic. pro Dom. 30), but it was probably regained

on the abdication of the dictator. The treasure

deposited at Tibur in the temple of Hercules was

appropriated by Octavian during his war against

Lucius Antonius, when so many other temples

were plundered at Rome and in its neighbourhood.

(App. B. c. v. 29.) From this period we have no

notices of Tibur till the time of the Gothic war

in the 6th century of our era. During the siege of

Rome by Vitiges, Belisarius placed 500 men in it,

and afterwards garrisoned it with Isaurians. (Proc-

cop. B. G. ii. 4.) But under his successor Totila a

party of the Tiburtines having introduced the Goths

by night into the city, the Isaurians fled, and the

Goths murdered many of the inhabitants with cir-

cumstances of great cruelty (Ib. iii. 16.) Great part

of the city must have been destroyed on this occasion,

since it appears further on (c. 24) that Totila having

retired to Tivoli, after a vain attempt upon Rome,

rebuilt the fortress.

At present there are but few traces of the bor-

deries of the ancient city; yet there are certain

points which, according to Nibby (Dintorni, iii. p.

186, seq.), enable us to determine the course of the

walls with some degree of accuracy, and thus to es-

timate its circumference, at all events during the

time of its subjection to the Romans. These points

are determined partly by the nature of the ground,

partly by existing remains, and partly by positive tes-

timony. The nature of the ledge upon which the town

is built shows that the walls must have traversed

the edge of it towards the N. and E.; and this as-

sumption is confirmed by some remains. The two

temples commonly known as those of the Sibyl and

of Diva Felix in the quarter called CASTRO VETERE, and

the evident pains taken to isolate this part, indicate

it to have been the ancient acropolis or arx, and

probably the Stabion of Deymures. On the W. the

boundary is marked by some remains of the walls

and of the gate opening on the road to Rome. On

investigating this track, we find that it inclined

inwards towards the church of the AUNNAZIATA,

leaving out all that part now occupied by the Villa

d’ESTE and its appurtenances. From that church it

proceeded towards the modern gate of SANTA CREC

and the citadel built by Pepe Pius II. on the site of

the ancient amphitheatre. Thence to the Anio

two points serve to fix the direction of the walls;

first, the church of S. CLEMENZA, which was cer-

tainly outside of them, since, according to the tes-

timony of Marzi, some sepulchral stones were

discovered there; second, the church of S. VIN-

cenzo, which was certainly within them, as vestiges

of ancient baths may still be seen at that spot.

From the fortress of Pius II. the wall seems to have

continued in an almost direct line to the Anio be-

tween the church of S. BARTOLOMEO and the mo-

dern gate of S. GIOVANNI. It did not extend to the

opposite bank, as a small sepulchre of the imperial

times has recently been discovered there, at the spot

where the tunnel for diverting the Anio was opened;

where also were found remains of an ancient bridge.

Thus the plan of the city, with the abatement of

some irregularities, formed two trapeziai joi ned

together at their smallest sides. The arx also

formed a trapezium completely isolated, and was

connected with the town by a bridge on the same

site as the present one of S. Martina. The cir-

cumference of the city, including the arx, was about

8000 Roman feet, or 14 miles. The remains of the

wall which still exist are of three different epochs.

The rarest and most ancient consist of trapezoidal

masses. Others, near the Porta Romana or del

Colle, are of opus incertum, and belong to the time

of Sulla. The gate itself, though composed of quad-

rilateral masses, is of the style of the gates of

Rome of the age of Justinian. From the nature of

the place and the direction of the ancient roads, Tibur

must have had five gates; namely, three to-

wards the W., one towards the S., and one towards

the E., without counting that which communicated

with the citadel; but with the exception of the He-

atina, where the aqueduct called Anio Vetus began,

their names are unknown, and even with regard to

that the reading is doubtful. (Front. Ag. p. 30.)

The ancient remains existing at TIVOLI, to call

them by the names under which they commonly

pass, are, as well the temple and portico of Hercules,

the temples of Vesta and Sibylia, the thermas or baths,

the two bridges and the little tomb recently disco-

vered, the temple of Tusius, the villas of Macenas,

of Varus, &c.

Tibur was famed for the worship of Hercules, and

hence the epithet of Herculaneum, so frequently

applied to it by the Roman poets (Prop. ii. 32. 5; Sil.

Il. iv. 224; Mart. i. 13. 1, &c.; cf. Stat. Sib. iii.

1. 183.) The temple of that demigod at Tibur was,

with the exception of the vast temple of Fortune at

Prænesta, the most remarkable presented by any

city in the neighbourhood of Rome. Thus Strabo

(L. c.) mentions the Heraclean and the waterfall as

the distinguishing features of Tibur, just as he

alludes to the temple of Fortune as the principal

object at Prænesta. And Juvenal (xiv. 86, seq.)
censures the extravagance of Cetronius in building

by saying that his villas at Tibur and Prænesta

outdid the fames of Hercules and Fortune at those

places. The name of Hercules used by Strabo of

the river was afterwards applied to it by Stephauus

Byzantius, show that it embraced a large tract of

ground, and as Augustus is said to have frequently

administered justice in its porticoes (Suet. Oct. 72),

they must have been of considerable size. It pos-

sessed a library, which, however, in the time of the

Antonines appears to have fallen into decay. (A. Gall. N. A. xix. 5.) We have already

seen that it had a treasury. There was also an

oracle, which, like that at Praeneste, gave responses

by means of shells (cf. Cic. de nat. deor. i. 13. 72.) Some

antiquaries seek this vast temple behind the tri-

burg of the present cathedral, where there are some

remains of a circular cella composed of materials

of a rhomboidal shape, thus marking the transi-

tion in the mode of building which took place

about the age of Augustus from the opus incertum

to the opus reticulatum. But it would be difficult

to regard these vestiges as forming part of a temple

150 feet in circumference; nor was it usual to erect

the principal Christian church on the foundations of

a heathen temple. Nibby therefore (Dintorni, iii. p.

193), after a careful investigation, and a comparison

of the remains at Palestrina with those of the so-

called villa of Macenas at Tivoli, is inclined to re-

gard the latter, which will be described further on,

as belonging to the celebrated temple of Hercules.

It is probable, however, that there were several

temples to that deity at Tibur, just as there were at

Rome. The principal one was doubtless that dedi-

cated to Hercules Victor Tibur; but there was also

one of Hercules Saccates, which will be described by
and by; and the remains at the cathedral may have belonged to a third. It is pretty certain, however, that the Forum of Tibur was near the cathedral, and occupied the site of the present Piazza dell'Ormo and its environs, as appears from a Bull of Pope Benedict VII. in the year 978, referred to by Ugelli in his Italia Sacra (t. i. p. 1306), and copied by Marius (Pagini Diplom.). p. 316). In this Bull, the object of which was to determine the rights and jurisdiction of the bishop of Tivoli, many places in the town are mentioned by their ancient names; as the Forum, the Vicius Patricius, the Eupirus, the Porta Major, the Porta Obscura, the walls, the postern of Vesta, the district of Castrum Vetus, &c. The round temple at the cathedral belonged therefore to the Forum, as well as the crypto-porticus, now called Porta di Eros, on the street del Poggio. The exterior of this presents ten closed arches about 200 feet in length, which still retain traces of the red plaster with which they were covered. Each arch has three loopholes to serve as windows. The interior is divided into two apartments or halls, by a row of twenty-eight slender pillars. Traces of arabesque painting on a black ground may still be seen. The mode of building shows it to be of the same period as the circular temple.

In that part of the city called Castro Vetere, which Nibby identifies with the arc, are two temples, one round, the other oblong, both of which have been variously identified. The round one, a charming relic of antiquity, is commonly regarded as the temple of the Sibyl. We know that the tenth and last of the Sibyls, whose name was Aburana, was worshipped at Tibur (Varro, ap. Lactant. de Falsa Rel. i. 6; cf. Eusebii Pseudo-Herap. i. 6; &c.). Horace evidently alludes to her when he speaks of the "domus Albanorum resonantis" at that place. (Od. i. 7. 12.) It can scarcely be doubted therefore that she had a face at Tibur. But Nibby is of opinion that the epitaph of "resonantis," which alludes to the noise of the waterfall, is inapplicable to the situation of the round temple on the cliff; for though it immediately overhung the fall, before the recent diversion of the stream, the cataract, as before shown, must in the time of Horace have been lower down the river. This objection however, may perhaps be considered as pressing a poetical epithet rather too closely; nor is there anything to show how far the fall may have been removed by the catastrophe described by the younger Pliny. Some writers have ascended the temple to Vesta, an opinion which has two circumstances in its favour: first, we know that Vesta was worshipped at Tibur, from inscriptions recording the Vestal virgins of the Tiburtini; secondly, the temples of Vesta were round, like the celebrated one near the Roman Forum. Unfortunately, however, for this hypothesis, the Bull of Pope Benedict before referred to shows that the district of Vesta was on the opposite side of the river. Hence Nibby (Dintorni, iii. p. 205) regards the building in question as the temple of Hercules Saxanus. We know that round temples were sometimes erected to that deity, as in the Forum Boarium at Rome; and the epitaph of Saxanus is applicable to the one referred to by Pliny, placed on a rock. It may be observed, however, that Saxanus is not a usual derivative form from Saxum; and on the whole it may perhaps be as satisfactory to follow the ancient tradition which ascribes the temple to the Sibyl. It is of the style called peripteral, or hav-
Nibby holds that it is not anterior to the 4th century of our era, its construction resembling that of the villa of Maxentius on the Via Appia. There are traces of painting of the 13th century, showing that then, if not previously, it was a Christian church, of little further notice save to an inscription which records the levelling of the Circus Tiburtinus in the time of Constantius and Constant. The name of the latter is purposely effaced, no doubt by the order of Magnentius. This monument was discovered in 1736, and re-erected by order of the magistrates of Tibur at the same spot where it was found.

The delightful country in the vicinity of Tibur caused many villas to be erected there during the latter period of the Republic and under the first Caesars, as we see from the writings of Cælius, Horace, Propertius, Statius, and other poets. Of these villas, however, of which we shall mention only the most interesting, there are but few remains, and scarcely any that can be identified with certainty. The most striking are those commonly called the villa of Maecenas on the SW. side of the town, near the Cascatelle. Ligorio was the first who called this building the villa of Maecenas; but there is no authority for the assumption. It was probably founded on a wrong conception of an inscription by Horace (Od. iii. 29. 6, seq.), which is also quoted by Mr. Cramer (Italy, vol. ii. p. 60) under a misapprehension that it contains an allusion to a residence possessed by Maecenas at Tibur, instead of to his town-house on the Esquiline. The plan of this building published by Marquèze and Ugozèi is correct. It was founded on gigantic substructions, the magnificence of which may be best observed on the N. side, on the slope of the valley of the Anio. It is an immense quadrilateral edifice, 637 feet long, and 450 broad, surrounded on three sides by symmetrical porticoes. The fourth side, or that which looks towards Rome, which is one of the long sides, had a theatre in the middle of it, with a hall or销on on each side. The porticoes are arched, and adjoined on the side towards the area with half columns of the Doric order. Behind is a series of chambers. An oblong tumulus now marks the site of the house, or, according to Nibby, who regards it as the temple of Hercules, the Cella. The pillars were of travertine, and of a beautiful Ionic order. One of them still existed on the ruins as late as 1812. This immense building intercepted the ancient road, for which, as appears from an inscription preserved in the Vatican, a vault or tunnel was constructed, part of which is still extant. Hence it gave name to the Porta Scura, or Obcura, mentioned in the Bull of Benedict, which it continued to bear at least as late as the 15th century.

To our apprehension, the plan here laid down is rather that of a palace or villa, than of a temple, nor do we perceive the resemblance, insisted on by Nibby, to the temple of Fortune at Praeneste. It is not improbable that the chief fane of Hercules, the patron deity of Tibur, should have been erected outside the town, nor would it have been a convenient spot for Augustus to administer justice, as we have mentioned that he did in his frequent retreats to Tivoli in the precincts of the temple of Hercules. The precincts of the Forum would have been more adapted to such a purpose. But if that emperor so much frequented Tibur, evidently the favourite among all his country retreats (Suet. l.c.), he must have had a suitable residence for his reception. Might not this villa have been his palace? Nibby himself observes that the style of building is of the Augustan, or transition, period; and a subject would scarcely have ventured to occupy the highroad with his substructions. But we offer this notion as a mere conjecture in favour of which we can adduce nothing but its probability.

Catullus had a paternal estate in the neighbourhood of Tibur; and the pretended site of his house is still pointed out in the valley by Monte Catillo. It is evident, however, from his address to his farm (Carm. 42), that it was more distant from the town, and lay at a point where the boundary between the Sabine and the Tiburtine territory was uncertain. He himself wished it to be considered as in the latter, probably as the more fashionable and aristocratic situation; but his ill-wishers persisted in asserting that it was Sabine. Horace had also a residence at Tibur, besides his Sabine farm; and, according to his biographer, it was situated near the grove of Tiburnus (Suet. Vit. Hor.); but whether it was at the spot now pointed out, near the hermitage of S. Antonio, on the road from Tivoli to the Castelle, is very problematical, the remains there being, according to Nibby (Dintorni, iii. p. 221), of a period anterior to that of Horace; and it would identify, not as belonging to the villa of Sabine, who, if we may trust the Declaratio in Selluatianum (c. 7) falsely ascribed to Cicero, had a residence at Tibur. But this is mere conjecture. Equally uncertain is the site of the villa of Vopiscus, a poet of the age of Julian, of which Statius has left us a pretty description (Silv. i. 3). The grounds seem to have extended on both sides of the river, and from certain particulars in the description, Nibby (Dintorni, iii. p. 216) imagines he has discovered them, the spot near the place commonly assigned to the villa of Catullus and the grove of Tiburnus, in the valley between M. Catillo and M. Peschiavatore. The Cynthia of Propertius, whose real name was Hostia (Appul. Apol. ii. p. 405, ed. Bosscha), lived and died at Tibur (Prop. iii. 30. iv. 7. 85, &c.); so that scarcely any place was more associated with the domestic life of the Roman poets. The situation of the villa of Quintillus Varus, a little further on the same road, is much better supported than most of the others. Horace alludes to the estate of Varus at Tibur, which appears to have lain close to the town (Od. i. 18. 2). A tract on the declivity of Monte Peschiavatore, opposite to the Cascatelle, bore the name of Quintilius as far back as the 10th century, and the little church at this spot is called La Madonna di Quintiliolo, an apellation which may possibly have been derived from the family name of Varus. Here are the remains of a magnificent villa, in which marble pavements, columns, capitals, statues, cornucopiae, &c., have been discovered, and especially, in 1820, two beautiful marble Fauns, now in the Vatican. Just below this villa is the Ponte Acquoria, which, as well as the surrounding district, takes its name, literally "the golden water," from a beautifully clear spring which rises near it. This bridge was traversed by the primitive Via Tiburtina. One arch of it still remains, constructed of large blocks of travertine. Near it is another bridge of bricks, more recent times, as well as a modern one of the 15th century, but none of these are at present in use. On the other side of the river, which is crossed by a rude wooden bridge, the road ascends the Clivus Tiburtinus in returning towards the town. Portions of
the pavement are in complete preservation. Under a rock on the right is an ancient artificial cave, called by the local antiquaries "Il Tempio del Mondo," but which was probably either a sepulchre, or one of those caves consecrated by the ancients to the rustic tutelary deities. This road joins the Via Constantinia before mentioned, leading up to the ruins of the associated villa of Marcianus.

Outside the Porta S. Croce is a district called Carrusino, a corruption of the name of Cassianum which it bore in the 10th century, derived from a magnificent villa of the gens Cassia which was situated in it. In the time of Z hippi, in the 16th century, a great part of this building was extant. The splendour of this residence is attested by the numerous beautiful statues found there, many of which were acquired by Pope Pius VI. and now adorn the Vatican. In the neighbourhood of Tibur are also the remains of several aqueducts, as the Anio Vetus, the Aqua Marcia, and the Aqua Claudia. The ruins of the sumptuous villa of Hadrian lie about 2 miles S. of the town. A description of it would be too long for this place, and it will suffice to say that, in a circuit of about 8 miles, it embraced, besides the imperial palace and a barracks for the guard, a Lyceum, an Academy, a basilica of the Pacello at Athens and of the Scaccia at Alexandria, a vale of Tempe, a Tarantus, a track called the Elysian Fields, a stream called the Euripus, numerous temples, &c. (Cf. Nibby, "Vaggio Antiquario," vol. i.; "Analisi della Carta de’ Dintorni di Roma," vili.; Gell, Topography of Rome and its vicinity, ed. Bunbury; Ant. del Ré, Antichita Tiburtine; Cavalerio and F. del Ré, Della Villa e de’ Monumenti antichi della Città e del Territorio di Tivoli; Santo Vito, Storia di Tivoli; Keller, "De veteri cam da Tivoli comparato:" concerning the villa of Hadrian, Piero Ligorio, Pianta della Villa Tiburtina; Fen. ap. Winkelmann, ii. p. 379.) [T. H. D.]

TIBURES or TIBUR (Τιβύρων in gen., Plut. iii. 6, § 37), a branch of the Astures in Hispania Tarraconensis, whose principal town was Nemetobriga. [T. H. D.]

TICHIS (Τίχης), a river of Gallia Narbonensis, placed by Mela (ii. 5) in the "Ora Sardoniun [Sardones]." The Tichis is the Tet of Pliny (iii. 4). The Tet and the Tichis, two small rivers, cross the territory of Bousalina from west to east. The Tichis is named Illiberis or Ileris by other writers. [ILLIBERIS.] [G. L.]

TICHIUM. [Τίχιον.]

TICHIUSSA (Τιχιουσσα), is mentioned twice by Thucydides (viii. 26, 28) as a fortified place in Caria in the territory of Miletus. Stephanus B. speaks of it under the name of Τιχιουσσα, and Athenaeus knew it under the name of Τιχιουσσα (viii. p. 358). It seems to have been situated on the north coast of the bay of Lasius. [L. S.]

TICHOS or TEICHOS. [DYMÉ.]

TICINUM (Τικινον, Eth. Ticinensia, Pavia), a city of Gallia Transpadana, situated on the river Ticinus, from which it derived its name, about 5 miles above the junction of that stream with the Padus. According to Pliny it was founded by the two tribes of the Lecii and Marici, at the close of the first Gaulish immigrations into this part of Italy, (Plin. iii. 17, s. 74.) But it is remarkable that no mention is found of any town on the site during the operations of P. Scipio against Hannibal in B. C. 218, though he must have crossed the Ticinum in the immediate neighbourhood of the spot where the city afterwards stood. It is probable, indeed, that in this, as in many other cases, the rise of a town upon the spot was mainly owing to the existence of a convenient passage across the river. There seems no reason to doubt that under the Roman government Ticinum had grown up into a considerable municipal town before the close of the Republic, though its name is not noticed in history. But it is mentioned by all the geographers, and repeatedly figures in history during the Roman Empire. It is included by Ptolemy among the cities of the Iasibares, and would naturally be reckoned, though not of Iasibaren origin, as soon as the river Ticinus came to be considered as the boundary of that people. (Strab. v. p. 217; Plin. iii. 17. s. 21; Procli. iii. 1, § 36.)

The earliest mention of Ticinum in history is on occasion of the death of Drusus, the father of Germanicus, when we are told that Augustus advanced as far as Ticinum to meet his funeral procession. (Tac. Ann. iii. 5.) Its name is also repeatedly mentioned during the civil wars of A. D. 69, when its position on the great highroad that led from the foot of the Alps to join the Aeemilian Way at Placentia, rendered it an important post. It was the scene of a serious sedition among the troops of Vitellius, while that emperor halted there. (Id. Hist. ii. 17, 27, 30, 68, 88.) At a later period it was at Ticinum that the emperor Claudius (the second of the name) was saluted with the imperial title, while he was commanding the garrison of the city. (Vict. Caes. 33, Epit. 34.) It was there also that Constantius took leave of his nephew Julian, whom he had just raised to the rank of Caesar. (Amian. xv. 8, § 18.) From these frequent notices of Ticinum it seems probable that it had been risen under the Roman Empire into a flourishing municipal town, and derived importance from its position, the great highroad which formed the continuation of the Aeemilian Way from Placentia to the foot of the Alps passing through Ticinum, until the increasing importance of Mediolanum, which became the second capital of Italy, made it customary to proceed through that city instead of following the direct route. (Him. Ant. pp. 293, 340, 947.)

But though Ticinum was undoubtedly a considerable town under the Roman Empire, it was not till after the fall of that empire that it rose to the position it subsequently occupied. In A. D. 452, indeed, it had sustained a great calamity, having been taken and devastated by Attila (Jornand. Got. 42); but the Gothic king Theodoric, being struck with the importance of its position, not only raised it from its ruins, but erected a royal palace there, and strengthened the city with fresh fortifications, until it became one of the strongest fortresses in this part of Italy. It consequently bears an important part in the Gothic wars, that people having made it their chief stronghold in the north of Italy (Procop. B. G. ii. 12, 25, iii. 1, iv. 32, &c.), in which the royal treasures and other valuable were deposited. At the time of the Lombard invasion, it offered a prolonged resistance to the arms of Alboin, and was not taken by that monarch till after a siege of more than three years, A. D. 570 (P. Dian. Hist. Lang. ii. 26, 27). It thenceforth became the residence of the Lombard kings, and the capital of the kingdom of Italy, and continued to hold this position till A. D. 774, when Desiderius, the last of the Lombard kings, was compelled to surrender the city to Charlemagne, after a blockade of more than 15 months.

4 in 3
From this time Ticinum sank again into the condition of an ordinary provincial town, which it has retained ever since. Before the close of the Lombard period we find that it was already designated by the name of Papia, from which its modern appellation of Pavia is derived. Paulus Diaconus calls it "Ticinum quae allo nomine papia appellatur" (P. Dic. ii. 15); and the anonymous Geographer of Ravenna gives the same double appellation (Geogr. Ravenn. iv. 30). The most probable explanation of this change of name is that when Ticinum became admitted to the rights of a Roman municipality its inhabitants were enrolled in the Papian tribe, a fact which we learn from inscriptions (Gruter, Inscr. p. 1023. 7; Murat. Inscr. p. 1087. 1. p. 1119. 4.), and that in consequence of this the city came to be known as "Civitas Papia," in contradistinction to Mediolanum, which belonged to the Ufotine tribe. (Aldini, Antica Lapidi Ticinensis, pp. 43—60.)

The modern city of Pavia contains no remains of antiquity except a few sarcophagi and inscriptions. These confirm the municipal condition of the city under the Roman Empire, but are not of much interest.

[Edward B. B.]

TICINUS (Ticinos: Ticino), a considerable river of Northern Italy, and one of the most important of the northern tributaries of the Padus. It has its sources among the high Alps, in the Mons Adula or Mont St. Gothard, and, where it first emerges from the Alpine valleys forms an extensive lake, called the LACUS VERBANUS or Lago Maggiore. Where it issues from the lake it is a deep, clear, and rapid stream, and flows through the level plains of Lombardy, with a course of about 60 miles, passing under the walls of Ticinum (Pavia), and discharging its waters into the Padus or Po, about 3 miles below that city. (Strab. iv. p. 209, v. p. 217; Plin. ii. 103. s. 106, iii. 19. s. 23.) Throughout this lower part of its course (from the Lago Maggiore to the Po) it is navigable for vessels of considerable burden; but the extreme rapidity of the current renders the navigation inconvenient if not dangerous. Its banks are low and marshy, the river being bordered on each side by a belt of shrubs and marshy woods. This character of its banks is noticed by Claudian (de V. Cons. Hon. 194), while Silius Italicus alludes to the beautiful clearness of its waters. (Sil. Ital. iv. 82.)

The Ticinus appears to have been recognized at an early period as the boundary between the Insulrians and their neighbours the Libici and Laevi (Liv. v. 34. 53). From its geographical position it must always have presented a formidable barrier to any invader advancing into Italy after having crossed the Cottian, Graian or Pennine Alps, and for this reason its banks have been the scene of many successive battles. Even in the first descent of the Gauls into the plains of Northern Italy, we are told that they defeated the Etruscans in a battle near the river Ticinus (Liv. v. 34). But much the most celebrated of the contests which were fought on its banks was that between Hannibal and Scipio in B.C. 218, shortly after the descent of the Carthaginian general into Italy. The precise scale of this action cannot, however, be determined; but it appears to have been fought on the W. or right bank of the Ticinus, at a short distance from the Padus, and probably not far from the site of Ticinum or Pavia. Livy marks it more distinctly as being within 5 miles of a place called Vicenumvii (?); but as no other mention of this obscure name occurs, this lends us no assistance. (Liv. xx. 45.)

The narrative of Polybius is far from clear and has given rise to considerable discussion. Scipio, who had hastened from Pisa to Cisalpine Gaul, on hearing that Hannibal had actually crossed the Alps and descended into the plains of Italy, advanced to meet him, crossed the Padus by a bridge constructed for the occasion, and afterwards crossed the Ticinus in like manner. After this, Polybius tells us, "both generals advanced along the river, on the side facing the Alps, the Romans having the stream on their left hand, the Carthaginians on their right" (iii. 63). It is clear that this is inconsistent with the statement that the Romans had crossed the Ticinus *, as in ascending that river they would have had the stream on their right, unless we suppose "the river" to mean not the Ticinus but the Padus, which is at least equally consistent with the general plan of operations. Hannibal was in fact advancing from the country of the Taurini, and no reason can be assigned why he should have turned so far to the N. as to be descending the Ticinus, in the manner supposed by those who place it near Vigevano or Bergo S. Siro. If we are to understand the river in question to be the Ticinus, the words of Polybius above quoted would necessarily require that the battle should have been fought on the left bank of the Ticinus, which is at variance with all the other particulars of the operations, as well as with the probabilities of the case. The battle itself was a mere combat of cavalry, in which the Roman horse was supported by a portion of their light-armed troops. They were thrown into the fight, defeated, and Scipio as he once retreated to the bridge over the Padus, leaving a small body of troops to break up that over the Ticines. These troops, 600 in number, were cut off and made prisoners by Hannibal, who, however, gave up the attempt to pursue Scipio, and turned up the stream of the Padus, till he could find a point where he was able to construct a bridge of boats across it. (Pol. iii. 63, 66.) The account of Livy (which is based mainly upon that of Polybius, though he must have taken some points, such as the name of Vercellum or Venetum, from Euthalus) is much more consistent, though he certainly seems to have transferred what Polybius relates as occurring at the bridge over the Ticinus to that over the Padus. It appears also by his own account that there was considerable discrepancy among his authorities as to the point at which Hannibal eventually crossed the Padus. (Liv. xxi. 45—47.) It may therefore on the whole be assumed as probable that the battle was fought at a short distance W. of the Ticinus, and not close to the banks of that river: the circumstance that Scipio had encamped on the banks of the Ticinus just before, and advanced from thence to meet Hannibal will explain why the battle was always called the "pugna ad Ticinium" or "apud Ticinum." Two other battles were fought in the same neighbour-hood before the close of the Roman empire: one

* Polybius, indeed, does not distinctly say that the Romans crossed the Ticinus, but it is implied in his whole narrative, as he tells us that the consuls ordered a bridge to be built over the Ticinus with the purpose of crossing that river, and afterwards relates their advance without further allusion to it (iii. 64, 65). But after narrating the defeat and retreat of Scipio, he says that Hannibal followed him as far as the bridge on the first river, which can be no other than the Ticinus. (Ib. 66.)
TIERA. in A.D. 270, in which the Alemanii, who had invaded Italy, were finally defeated by the Emperor Aurelian (V. Epit. 35): the other in A.D. 352, between the rival emperors Magnentius and Constantius. (Ib. 42.)

[The H. B.]

TIERNA (called by Ptol. *Διαβρα, iii. 8, § 10), a town of Placentia on the Danube, opposite to the castle of Zernensium in Moesia. In inscriptions we find it called Statia Tierseniana (Murat, p. 352. 3; Grisellini, i. 265); in the Digest (de Cens. i. 8), Colonia Zernensium; and in the Not. Imp. (c. 3), Trans Dieriana. [T. H. D.]

TIFATA (тα Τιφατίνα ον, Dion Cass. : *Μοντε τιθαλονει), a mountain range on the borders of Campania and Samnium, only about a mile from the city of Capua. It is one of the last outlying masses of the Apennines, and is a long, narrow ridge of no great elevation, but above 12 miles in length from E. to W., and presenting a bold and steep mountain front towards the Campanian plain, upon which it looks directly down. The name was derived according to Festus from the woods of evergreen oak with which it was covered, "Tifata" being equivalent to "Iliceta," though whether it was an Ocean or old Latin word, we are not told. (Fest. s. v. Tifatn.) It is first mentioned during the war between the Samnites and Campanians, which immediately preceded the First Samnite War. On that occasion the Samnites in the first instance occupied the ridge itself with a strong force, and afterwards drew out their main army into the plain below, where they soon defeated the Campanians in a pitched battle. (Liv. vii. 29.) Livy calls it on this occasion "Tifata, imminentes Capnae colites, and elsewhere "modem imminentes Capnae" (xxvi. 5), which well describes its character and situation. It was this opportune position with regard to Capua and the surrounding plain, that caused it to be selected by Hamilaubo as a post where he established his camp in B.C. 215, and from whence he long carried on his operations against the various cities of Campania. (Id. xxiii. 36, 37, 39, 43, xxvi. 5; Sib. Ital. xii. 457.) At a later period it was in the plain at the foot of Tifata that Sulla defeated the Marian general Norbanus, B.C. 83; and in granting the town its charac- tute to Diana, the tutelary goddess of the mountain. (Vell. Pat. ii. 25.) We hence learn that that divinity had a celebrated temple on Tifata, and the "Diana Tifatinae faunum" is noticed also in inscriptions found at Capua. From one of these we learn that the consecrated territory was again assigned to the goddess by Vespasian. (Orell. Inser. 1460, 3055.) As the Tabula marks a station "Ad Dianae" near the W. extremity of the ridge, it is probable that the temple was situated in that neighbourhood. (Tab. Pict.) From the same authority we learn that Jupiter, who was worshipped on so many of the highest points of the Apennines, had a temple also on Tifata, to which it gives the name of Jovis Tifatinus. It is placed in the Tabula at the E. extremity of the ridge. (Tab. Pict.) Again in n. c. 48 the fastnesses of this mountain ridge afforded a shelter to Milo when driven from Capua. (Dion Cass. xxii. 25.) This, and the site of the temple, is that last time its name is mentioned in history, and it is not noticed by any of the geographers; in the middle ages the name seems to have been wholly forgotten; and the mountain is now called from a neighbouring village the *Monte di Maddaloni. But the descriptions of Livy and Silius Italicus leave no doubt of the identification. It is indeed, from its proximity to Capua and the abruptness with which it rises from the plain, one of the most striking natural features of this part of Campania.

[The E. H. B.]

TIFERNUM (Στεφορίον) was the name of two cities or towns of Umbria, which were distinguished by the epithets Tiberinni and Metauerens (Plin. iii. 14. 19).

1. TIFERNUM TIBERINUM, which appears to have been the most considerable place of the name, was situated on or near the site of the modern *Città di Castello, in the upper valley of the Tiber, about 20 miles E. of Arezzo. The Tifernates Tiberini are enumerated among the municipal communities of Umbria by Pliny (i. c.); but our principal knowledge of the town is derived from the epistles of the younger Pliny, whose Tuscan villa was situated in its neighbourhood. For this reason the citizens had chosen him at a very early age to be their patron; and in return for this honour he had built a temple there at his own expense. (Plin. Ep. iv. 1.) He afterwards adorned this with statues of the various Roman emperors, to which he in one of his letters begs leave to add that of Trajan (Ib. x. 24). From the circumstance that Pliny's villa itself was in Etruria (whence he always calls it his Tuscan villa), while Tiferanum was certainly in Umbria, it is evident that the frontier of the two countries ran very near the latter place, very probably as that of the Tuscan and Roman States does at the present day, between *Città di Castello and *Borgo S. Sepolcro. The position of Tiferanum on nearly the same site with the former of these cities seems to be well established by the inscriptions found there and reported by Cluverius (Cluver. Ital. p. 624; Gruter, Inscr. p. 494. 5). But it was probably situated rather further from the Tiber, as Pliny describes it as being, like Perugia and Orculum, "not far" from that river (Plin. iii. 5. s. 9), while the modern *Città di Castello almost adjoins its banks.

The precise site of Pliny's Tuscan villa cannot be ascertained, as the terms in which he describes its position (Ep. v. 6) will apply to many localities on the underfalls of the Apennines in the upper valley of the Tiber. It is, however, most probable that it was situated (as suggested by Cluverius) in the neighbourhood of *Borgo S. Sepolcro, about 10 miles N. of *Città di Castello, rather than in the immediate vicinity of Tiferanum. (Cluver. Ital. p. 590.)

2. TIFERNUM METAUERENSE was evidently, as its name implies, situated on the other side of the Apennines, in the valley of the Metaurus. Its name is mentioned only by Pliny among ancient writers; but it is found in several inscriptions (in which the citizens are termed, as by Pliny, Tifernates Metau- renses), and the discovery of these at *S. Angelo in Vado leaves no doubt that Tiferanum occupied the same site as that town, near the sources of the Metaurus, about 20 miles above *Possembrone. (Forum Sempronii.) (Cluver. Ital. p. 621; Orell. Inser. 3049, 3303, 3902.)

It is uncertain which of the towns above mentioned is the Tiferanum of Plutony (iii. 1. § 39); perhaps the first has the better claim.

TIFERNUS (Στεφορίον, Ptol.: *Ειβερνο, one of the most considerable rivers of Sammium, which has its sources in the heart of that country, near Bovi- anum (Bojano), in a lofty group of mountains, now known by the same name as the river (*Monte Ei- ferino). This is evidently the same which is called by Livy the TIFERNUS MONS, which the Samnite 1207
TIGAVA CASTRA.

Tigris.

Army had occupied as a stronghold in B.C. 295- but notwithstanding the strength of the position, they were attacked and defeated there by the Roman consul, suil L. Volumnius Flamma (Liv. x. 30, 31). Upon two other occasions during the Samnite wars Livy speaks of Tifernum or Tifernium in a manner that would leave it uncertain whether this mountain fastness is meant, or a town of the same name (Liv. ix. 44, x. 14); but as we have no other mention of a town of Tifernum in Samnium, it is perhaps more probable that in all these cases the mountain of that name is meant. The group thus named is a part of that which was called the Montis Tiferni, or part of the most conspicuous mountain masses in Samnium. [Sammium.] The river Tifernus has a course of above 60 miles from its source to the Adriatic, in a general direction from SW. to NE. In the lower part of its course, after leaving the confines of Samnium, it constituted more of the ancient boundary between Apulia and the Franchata. (Med. ii. 4. § 6; Plin. iii. 11. s. 16, 12. s. 17; Polt. iii. 1. § 18, where the above identification is made; but this is probably a mistake for Téphasrus.) [E. H. B.]

TIGAVA CASTRA (Jt. Ant. p. 38; Tigrave, Plin. v. 2. s. 1, Tigrasia, Polt. iv. 2. § 26), a fortress in Mauretanis Caesariensis, between Oppadum Novum and Malliana, variously identified with Ed-Elbera, Cantuara, Abd-el-Kader.

TIGRIG (called Trya byProcopius, de Aed. iv. 7), a fortress in Moesia Inferior, near the Danube, and between Sexantaprista and Appia (Itin. Ant. p. 222). In the Not. Imp. it is called Tegra. Variously identified with Maruvina and a place near Olousinae. [T. H. D.]

TIGRANOCERTA (таг Тараносерт, Strab. xi. pp. 522, 532; Polt. v. 13. § 22; Τερανωκάρντα, Plat. Lucciul. 25, &c.), literally, the city of Tigranes, since κόρα (kort, gerd, or korta) meant, in the Armenian dialect, city (Hesych. in. p. 237). The later capital of Armenia, built by Tigranes on an eminence by the river Nisibis, a city of considerablesize and strongly fortified. It was in a great measure previous to Greeks and Macedonians, taken thither by force from Cappadocia and Cilicia. After Lucullus gained his victory over Tigranes before its walls, he caused a great part of the still unfinished town to be pulled down, and permitted its kidnapped inhabitants to return to their homes. Nevertheless, the town continued to exist, though we hear but little of it subsequently to this event. (Cf. Strab. ii. 8. cc. and xii. p. 539, xvi. p. 747; App. Mithr. 67; Plat. Lucciul. 25, sqq.; Tac. Ann. xii. 50, xiv. 24, xv. 4; Plin. vi. 9. s. 10.) It has been variously identified with the ruins of Sert on the Chabar, with Mejafurkijl, and with Amid or Amudah. (See Ainsworth, ii. p. 361; St. Martin, i. p. 173; Ritter, Erdk. x. p. 87, xi. p. 106, sqq.) [T. H. D.]

TIGRIS, a celebrated river of Asia. We find various forms of its name, both in Greek and Latin writers. The earlier and more classical Greek form is ΔΤιγρ judiciary, Δτιγρυν, gen. Δτιγρυνος (Herod. vi. 20). Xen. Anabith. vii. 3, 3: Ar. Anab. vii. 7, &c.); whilst the form ΔΤιγρας, gen. Δτιγραλος, and sometimes Δτιγρας, is more usual among the later writers. (Strab. ii. p. 79, xv. p. 728; Polt. v. 18. § 7; Plat. Lucciul. 22, &c.) Amongst the Romans the nom. is constantly Tigris, with the gen. Tigris and acc. Tigrin and Tigrin among the better writers (Verg. Eleg. i. 63; Lucan, iii. 261; Plin. vi. s. 9; Curtiv. iv. 3, &c.); but sometimes Tigrigis, Tigriden (Lucan, iii. 236; Eutrep. ix. 18; Amm. Mar. xxii. 6. § 26, &c.). According to Pliny, the river in the upper part of its course, where it flowed gently, was called Digeis; but lower down, where it moved with more rapidity, it bore the name of Tigris, which, in the Median language, signifies an arrow (cf. Strab. xi. p. 529; Curtiv. iv. 9; Ibid. Or. xii. 2, &c.). (Joseph. (Ant. i. 1, 2, sq.) and Zonaras (Ant. i. 2) mention it that bore the name of Digdad; and in its earliest course it is still called Hygheche, Diplesche or Dodechiacle. According to the general testimony of the ancients the Tigris rose in Armenia (Xen. Anab. iv. 1. § 3; Eratost. Math. 37. 1 (Plut. l. c. &c.). Dioecus, indeed, places its sources in the territory of the Uxii in Persia (xvii. 67); but he has here confounded the Tigris with the Pasi-tigris. Herodotus (v. 52) observed that there were three rivers bearing the name of Tigris, but that they did not spring from the same source; one of them rising in Armenia, another in the country of the Matieni, whilst he does not mention the origin of the third. These two branches, which are not mentioned by Strabo, are probably the two other arms of the river, more western and proper sources of the Tigris in Sophene, to the NE. of the cataracts of the Euphrates. The mere eastern of them forms the little river Nymphius or Nympheus (now the Botanus Su or river of Mixiara). The union of these two sources forms the main western arm of the Tigris, which flows for between 100 and 200 miles, first in a N., then in a S., and lastly in an E. direction, before it joins the main branch of the river, about 62 miles SE. of Tigranocerta. The authors subsequent to Herodotus do not notice his correct account of these sources, but confine themselves entirely to the eastern branch. According to Strabo (xi. pp. 521, 529) this river in Mount Niphates, at a distance of 2500 stadia from the sources of the Euphrates. But Pliny, who has written in most detail concerning this eastern branch, describes it as rising in a plain of Armenia Major, at a place called Elegosine (vi. 27. s. 81). It then flowed through the nitrous lake of Archeus, without, however, mingling its waters with those of the lake, and after losing itself at a place called Zeramonda (near the present Hazer), under a chain of the Taurus (the Nimroud Dagh), burst again from the earth, and flowed through a second lake, the Tospites. After emerging from this, it again sank into the earth with much noise and foam (cf. Strab. xvi. p. 746; Prise. Persig. 913; Amm. Marc. xxiii. 6. § 15, &c.), and, after a subterranean passage of 25 miles, reappeared at a place called Nympheum, of which Justin, xii. 3). The account of Strabo, however, varies very considerably from the preceding one of Pliny. The former writer mentions only one lake (xi. p. 529), the description of which entirely resembles Pliny's Archeus, but which Strabo calls Arcene or Theopis, meaning evidently the Tospites of Pliny, the present Wcin in Tosp, on which is situated the town of Arcadesich, with which the Tigris is in reality quite unconnected. Subsequently the river approaches the Euphrates in the neighborhood of Seleucia, forming in this part of its course the boundary between Assyria and Mesopotamia. Dioecus Siculo (ii. 11) and Curicius (v. 1) erroneously represent it as flowing through Media, which it does not even touch. Near Seleucia, it was connected with the Euphrates by means of canals (Arrian, Anab. vii. 7). After this, it again retires from the Euphrates, till at last, bending its
TILURIUM. 1209

course to the SW., it completely unites with that river, at a place called by Pliny (l. c.) Digala, 1000 stadia above their common embouchure in the Persian gulf. Many of the ancients were aware that the two rivers joined on another common mouth (Plin. ib.; Strab. ii. p. 79; Procop. B. P. 1. i. 17, &c.), whilst others were of opinion that the Euphrates had a separate embouchure (Onesicritus, ap. Strab. xv. p. 729; Arrian, Anab. l. c.; and Ind. 41; Nearch. p. 37, Huds.). But even those who recognised their junction were not agreed as to which stream it was that received the other, and whether their united course, now the Shat-el-Arab, should be called Tigris or Euphrates. Most writers adopted the former name, but Nearchus and Onesicritus preferred that of the Euphrates (cf. Arrian, Indic. 41). It is not impossible, however, that the Euphrates may at one time have had a separate mouth (cf. Plin. l. c.; Eitler, Erdk. x. p. 27). There was also a difference of opinion as to the number of mouths by which the united stream emptied itself into the Persian gulf. Its western mouths were entirely unknown to the ancient Greeks, as Antholus Ephiphanes was the first who caused the coast to the W. of the Tigris to be accurately surveyed; and amongst later conquerors, Trajan alone penetrated as far as this neighbourhood.

Hence the ancient Greeks, as well as Pliny (l. c.), speak of only one mouth, the breadth of which is given by the latter at 10 miles. Ptolemy, however, mentions two mouths (vi. 3. § 2) at a distance of 3½ degrees apart, which is confirmed by Onesicritus (ap. Philod. Histor. Ecl. iii. 7, 8), according to whom the island between these mouths was inhabited by the Meseni. But probably the eastern mouth was meant that of the river Eulaeus, the present Karia, one arm of which unites with the Tigris, whilst the other falls into the sea by an independent mouth. This river was also called Pastigiris by the ancients (Παστίγρις, Strab. xv. p. 729), that is, "the little Tigris," from the old Persian word pes, signifying "small," whence also among the modern Persians it bears the name of Dijelaki-Kudak, which means the same thing. Hence we may explain how the united stream of the Tigris and Euphrates itself was throughout its course called Pastigiris by some writers (Strab. l. c.; Plin. l. c.) whilst others regarded the Pastigiris as quite a separate stream, rising in the territory of the Uxii, and discharging itself into the Persian gulf (Nearch. ap. Strab. l. c.; Arrian, Ind. 42; Diodor. xvii. 67; Curt v. 3, itil). This last view would make it identical with the present Karia (of kinneer, Mem. p. 59; Gosselin, Recchereke, &c. ii. p. 86, 893; Vivante, Peripl. iii. p. 67, not. &c.). The other affluents of the Tigris were the Nicephorus or Centrilius, the Zabatus or Lycus, the Bumaline, the Caprus, the Tormacitus or Tonra, apparently the same as the Phasis of Xenophon (Anab. ii. 4. § 23), the Gyndes or Delas, the Chosaeus, and the Coprates, which fell into the main stream after joining the Eulaeus. All these rivers were on the left or eastern bank of the Tigris. The stream of the Tigris was very rapid, and according to Strabo (p. 529) from its very source; whilst Pliny (l. c.) more correctly ascribes this quality only to its lower course. It was, in fact, owing to the large quantity of water which the Tigris received by means of the canals which connected it with the Euphrates, none of which was returned through the same channels, owing to the bed of the Tigris being at a lower level. (Arrian, l. c.; Dion Cass. lxxxvii. 28; Strab. l. c.; Hor. Od. iv. 14, 46; Lucan, iii. 256, &c.) In ancient times many dams had been constructed in its course from Opis to its mouth, designed to retain its waters for the purpose of irrigating the adjoining districts (cf. Heeren, Idenn. i. 2. p. 171; Tavernier 1. v. i. p. 185; Niebuhr, Reise, ii. p. 243). These, however, were all cut through by Alexander, in order to improve the navigation, which began as high up as Opis (Arrian, l. c.; Strab. 739, sq.) Between Mosul and the confluence of the greater Zab, and 3 hours' journey above the latter, there still remains an ancient dam of massive thrown across the stream (Ritter, Erdkunde, x. p. 5, sq.). [T. H. D.]

TIGUADRA, a small island of the coast of Spain, opposite the town of Palma, in the island of Baleares Major. (Plin. iii. 5. s. 11.) [T. H. D.]

TIGURINUS PAGUS. [Helyveti.]

TILDAECA (Tlada, Ptol. vii. 2. § 15), a race who lived under the Mons Mucenum in Western India. They were probably the same as the Taleutae of Pliny (vi. 19. s. 22). [Taloustae.] [V.]

TILAVEMPTUS (Talavemtenos; Toglamenos), a river of Venetia, which has its sources in the Alps, above 80 miles from the sea, and after traversing the broad plain of the Frioul, falls into the Adriatic sea between Aquileia and Concordia. (Plin. iii. 18. s. 22; Ptol. iii. l. 3. § 26.) It is the most considerable river in this part of Italy, and, like all the neighbouring rivers, is subject to be swollen by floods and winter rains, so that it leaves a broad bed of shingle, great part of which is dry at ordinary seasons. The name is found in Pliny and Ptolemy; and it is doubtful the same river which is described by Strabo, though without mentioning its name, as separating the territory of Aquileia from the province of Venetia, and which he says was navigable for 1200 stadia from its mouth. (Strab. v. p. 214.) This last statement is indeed a great exaggeration; but the valley of the Toglamenino is one of the natural openings of this part of the Alps, and was followed by the line of a Roman road, which passed from Aquileia by Julien Carinus (Zuglio) over the pass of the Monte di Sta Croce into the valley of the Gail. [Alpes, p. 110.]

Pliny speaks (l. c.) of a "Tilavemtun magus minuscus," but it is impossible to say what river he meant to designate under the latter appellation. The name is written in the Tabula "Tilavetin," while it assumes very nearly its modern form in the Geographer of Ravenna. (Tilamentum, Geogr. Rav. iv. 36.) [E. I. B.]

TILENE, in Gallia. The name is Fike in the Table, or Filiene as some say. D'Anville altered it to Tiene, and he finds the place on a road in the Table from Andometum (Langres) to Cahil- lonum (Challon-sur-Saine). The place is Til-le-Chateau, the Tils Castrum of the eleventh century. Some documents of that time have Trescastrum and Tricastel, and accordingly the place is vulgarly called Tri-chateau or Tri-chateau. [G. I.]

TILLIIOSONS FONS. [Bocottia, p. 412, a.]

TILLIIOSSICUM or TILLIIOSSAEUM. [Bocottia, p. 412, a.]

TILURIUM (Geogr. Rav. iv. 31), or TILLURIUM FONS (Hin. Ant. p. 337), a place in Dalmatia, on the river Tilurus. It appears to be the same place as the Tribulum of Pliny (iii. 22. s. 26). Now Trigajh. [T. H. D.]
TURUS, a river of Dalmatia falling into the sea near Dalminum. (Itin. Ant. p. 337: Tab. Peut.)

Now the Cattina. [T. II. D.]

TIMACHUS, a river in Upper Moesia, a tributary of the Danube, which it joined between Durticum and Florentiana. (Plin. iii. 26. s. 29: Tab. Peut.)

Now the Tumak. [T. II. D.]

TIMACUM MAJUS and MINUS (Tiauos, Ptol. iii. 9, § 5), two towns of Moesia Superior situated on the Timacum. (Geogr. Rav. iv. 7: Tab. Peut.)

One still exists by the name of Timok; but Mannert seeks the larger town near Iperik, and the smaller one near Geogyopratz. [T. H. D.]

TIMAVUS (Tiauos: Timavus), a river of Venetia, flowing into the Adriatic sea between Aquilica and Tergeste, about 12 miles E. of the former city. Notwithstanding its classical celebrity, it is one of the shortest of rivers, being formed by copious sources which burst out from the rock at the foot of a lofty cliff, and immediately constitute a broad and deep river, which has a course of little more than a mile before it discharges itself into the sea. There can be no doubt that these sources are the outlets of some subterranean stream, and that the account of Poseidonius (ap. Strab. v. p. 213), who says that the river after a course of some length falls into a chasm, and is carried under ground about 150 stadia before it issues out again and falls into the sea, is substantially correct. Such subterranean passages are indeed not uncommon in Carniola, and it is impossible to determine from what particular river or lake the waters of the Timavus derive their origin; but the popular notion still regards them as the outflow of a stream which sinks into the earth near S. Canzian, about 13 miles from the place of their reappearance. (Cluver. Ital. p. 193.)

The number of the sources is variously stated; Virgil, in the well-known passage in which he describes them (Aen. i. 245), reckons them nine in number, and this agrees with the statement of Mela; but Strabo speaks of seven; and this would appear from Servius to have been the common belief (Serv. ad Aen. l. c.; Mel. ii. 4, § 3), which is supported also by Martial, while Claudian follows Virgil (Mart. iv. 25. 6; Claudian. de VI. Cons. Hon. 198). Cluverius, on the other hand, could find but six, and some modern travellers made them only four. Strabo adds, according to Polybius, all but one of them were salt, a circumstance which would imply some connection with the sea; and, according to Cluverius, who described them from personal observation, this was distinctly the case in his time; for though at low water the stream issued tranquilly from its rocky sources, and flowed with a still and placid current to the sea, yet at high tides the waters were swolllen, so as to rush forth with much greater force and volume, and inundate the neighbouring meadows; and at such times, he adds, the water of all the sources but one become perceptibly brackish, doubtless from some subterranean communication with the sea. (Cluver. Ital. p. 194.)

It appears from this account that Virgil's remarkable expressions—

"Unde per ora novem, vasto cum murmurare montis
It mare prorupit, et pelago premit arva sonanti"

—are not mere rhetorical exaggerations, but have a foundation in fact. It was doubtless from a reference to the same circumstances that, according to Polybius (ap. Strab. l. c.), the stream was called by the natives "the source and mother of the sea" (μητρα της θαλάσσης). It is probable that the communication with the sea has been choked up, as no modern traveller alludes to the phenomenon described by Cluverius. The Timavo is at present a very still and tranquil stream, but not less than 50 yards broad close to its source, and deep enough to be navigable for vessels of considerable size. Hence it is justly called by Virgil "aquea Timavus" (Ecl. viii. 6); and Ausonius speaks of the "aqua tempestuosa Timavi" (Clar. Urb. xiv. 34).

Livy speaks of the "lacum Timavi," by which he evidently means nothing more than the basin formed by the waters near their source (Livy. xii. 1): it was close to this that the Roman consul A. Manlius established his camp, while C. Furius with 1,000 ships app. to have ascended a river to the same point, where their combined camp was attacked and plundered by the Istrians. According to Strabo there was a temple in honour of Dionys erecated near the sources of the Timavus, with a sacred grove attached to it. (Strab. v. p. 214). There were also warm springs in the same neighbourhood, which are now known as the Bagno di S. Giovanni. [E. H. B.]

TIMOLAEUM (Timo6aioi), a fort or castle on the coast of Paphlagonia, 40 or 60 stadia to the north of Ulcinum, and 100 or 150 stadia from Cape Carambis. (Marcian. p. 71; Anon. Peripl. P. E. p. 6.)

TIMONITIS (Timouinitis), a district in the interior of Paphlagonia, near the borders of Bithynia. (Strab. xii. p. 562; Ptol. v. 1, § 12.)

Pliny (v. 42) mentions its inhabitants under the name of Timonitaienses, and Stephanus B. knows Timonius (Timonon) as a fort in Paphlagonia, from which the district nee doubt derived its name. [L. S.]

TINCA (Tina or Tina, Ptol. ii. 3, § 5), a river on the E. coast of Britannia Romana, forming the boundary between it and Britannia Barba, and still called the Tyne. [T. H. D.]

TINCONIUM, in Gallia, is placed in the Itins. on a road between Avaricum (Bourges) and Dec生态环境（Decina）. In the Table the name is Tinocolle. The distance in the Itins. is the same (xx) from Avaricium to Tinconium (Soneoines), which is named Tinconitum in some middle-age documents. The Itins. agrees in the distance between Tinconium and Dececina. [G. L.]

TINFADI, a place in Numidia, 22 miles W. of Therveste (Itin. Ant. p. 33). According to Lapie, the ruins on the Oued Hrahia. [T. H. D.]

TINGERTARA. [TRANSJUNCTA.]

TINGIS (Tingi, Strab. iii. p. 140, and TīγGran, xvii. p. 827; in Ptol. iv. 1, § 5, TīγGis Kaepreda), a very ancient city on the N. coast of Mauretania. Mela (v. 5) calls it Tingi, Pliny (v. l. s. 1) Tingi. It lay 60 miles W. of the promontory of Abyla (Itin. Ant. p. 9, 9) and 30 miles from Felu on the opposite coast of Spain (Plin. L. c.).

Mela and Pliny record the tradition of its foundation by Antaeus, whilst according to Plutarch it was founded by Sophax, a son of Hercules and the widow of Antaeus (Sert. 9). In that neighbourhood was the fabled grave of Antaeus, and his skeleton 60 cubits long (Strab. xviii. 829, cf. iii. p. 422). These mythic legends serve at least to indicate the great antiquity of the place. (Cit. Strab. l. c.; Solin. c. 45.)

It was raised by Augustus to the rank of a free city.
TINIA. (Dion Cass. xlvii. 43), and in the time of Claudius became a Roman colony (Plin. L. c.; Itin. Ant. 8, 12) and the capital of the province of Tingitana. It was also a place of considerable importance to the present day. [T. H. D.]

TINIA (Τερέας: Tímio), a small river of Umbria, falling into the Tiber, a few miles below Persia. The name is given by the ancient geographers to the affluent of the Tiber (one of the first tributaries which that river receives), but at the present day the stream called the Tímio loses its name after its junction with the Topino, a more considerable stream. Four small rivers indeed bring down their united waters to the Tiber at this point: 1, the Maroggia, which rises between Todí and Spoleto, and brings with it the waters of the Chi- treno, the ancient Clitumnus; 2, the Tímio, which joins the Clitumnus near Mevaris (Bovagna); 3, the Topino, which descends from the Apennines near Nocera, and turns abruptly to the NW., after receiving the waters of the Tímio; and 4, the Aqimio, which joins the Topino from the N. on a short point from the point where it falls into the Tiber. Though thus augmented from various quarters the Tinia was always an inconsiderable stream. Pliny speaks of it as navigable with difficulty even for boats, and Silius Italicus calls it "Tiniae inglorius humor." (Sil. Ital. viii. 453; Plin. iii. 5. 9; Strab. v. 297.) [E. H. B.]

TINNETIO, a place in Ebaetia, mentioned only in the Antonine Itinerary (p. 277), but still retaining its ancient name in the form of Tirén. [L. S.]

TINNITUM, in Gallia, is placed in the Ituns near the Scione, between Cabillonum (Challon) and Matisco (Macon). The Antonine Itin. marks M.P. xxi, leuas xiii. between Cabillonum and Tinntum, which is Tournon. The Table gives only xii, which appears to be nearer the truth. The two Ituns, do not agree in the distance between Tinntum and Matisco. Spartanus (Vita Septim. Severi, c. 11) says that Severus defeated Cledius Albinus at Tinntum, or Tinntum, for the reading is perhaps doubtful. (In. Cass鸠non, in Aed. Spartan. p. 110.) Dion (Ixxv. c. 6), Herodian (iii. 7), and Eutropius (viii. 18) speak of Cledius Albinus being defeated by Severus at or near Lindumnum (Lyons). The name Tinntum appears to be sometimes misswritten Tifritum. [G. L.]

TIRA MAIENAE. [Aeoreinis.]

TIPARENSUS, an island off the coast of Her- mione in Argolis, mentioned only by Pliny (iv. 12. s. 19). It is frequently identified with Spetsia; but Leake remarks that Tiparenas has no appearance of a Greek name, and conjectures that it is not for Tricarion, the same as the Tricarana of Paussias (ii. 34. § 8) and the modern Trikkhíri. (Leake, Moren, vol. ii. p. 462; Ross, Wanderungen in Griechenland, vol. ii. p. 21.)

TIPASA (Tiraza, Pol. iv. 2. § 5). 1. A town in Mauretania Caesariensis, endowed with the jus Latii by the emperor Claudius (Plin. v. 8) in the subsequent a Roman colony (Itin. Ant. p. 15). It lay between Iessoim and Casareas (ib.). Procopius (B. F. i. 10) mentions two columns near Tipasa in the SE. of Mauretania, which had on them the following inscription in the Phoenician language: "We are fugitives from the face of Joshua, the robber, and his son Nave." Now Téfesrad or Téfouch.

TIPHAE. [Thiárae.]

TIPHSAIL. [Thiaparos.]

TIIPSUM or TIPSUS (It. Hier. p. 569), a plain in Thrace, now Sandulki or Kerakiai, according to Lapide. [J. L.]

TIRDA. [Stabulum Proimedes.]

TIRISSA (Geogr. Rav. iv. 6), called by Arrian Terpavrias (Per. p. Exx. p. 24), and in the Tab. Pent. Trissa; a fortified place on the promontory of Tirizis. From its situation on this bold headland it was sometimes called simply Ἀκρα (Steph. p. 53; Hieroc. p. 637), and hence at present Eterna or Äkerne. [T. H. D.]

TIRISTIS (Plin. iv. 11. s. 18; Tirósoavres, Scyl. p. 28; Tirósoavres, Epit. Phil. ad Ath. ap. Dem. p. 159, k.), a town of the Thracian Chersones, on the coast of the Propontis. It was included in the dominions of Philip, who in the letter above referred to complains that the Athenian general Diopeithes had taken it and sold its inhabitants for slaves (n. c. 340) (Diopeithes, Dict. Byz.). According to Cleinesis, its site is still occupied by a village bearing the same name. [L. 12.]

TIRIZIS (Τιρίζη, Strab. vii. p. 319), a very projecting headland of Moesia in the Pontus Euxinus. The name varies, being written Tíriξ in Anon. (Perip. P. Exx. p. 13), Τηρίστης or Τηρίστης Ἀκρα by Ptolemy (iii. 10. § 8), and Tiristis by Mela (ii. 2). Now Cape Gal Farad. [T. H. D.]

TIRYS (Τίρυς; Ετ. Τιρυδής; the name is perhaps connected with τίρωμα, Lepiens, Trymb, Pelanger, p. 13), one of the most ancient cities of Greece, by a short distance SE. of Argos, on the right of the road leading to Epidaurus (Pausii. ii. 25. § 8), and at the distance of 12 stadia from Nauplia. (Strab. viii. p. 373.) Its massive walls, which have been regarded with wonder in all ages, are said to have been the work of the Cyclopes, and belong to the same age as those of Mycenae. (Pausii. ii. 16. § 5, ii. 25. § 8, vii. 25. § 6, ix. 36. § 5; Strab. L. c.; Plin. vii. 36. s. 57.) Hence Homer calls the city Τίρυς την καλλίστην. (II. ii. 559.) Findar speaks of the Κωλύγαντα περίθοι of Tiryns (P. frag. 642. ed. Böckh), and Pausanias says that the walls are not less worthy of admiration than the pyramids of Egypt (ix. 36. § 5.) In another passage he describes the walls as consisting of wide masses of stone (ἀγιαλόα), of such a size, that a roof of oxen could not stir the least of them, the interstices being filled in with smaller stones to make the whole more compact and solid. (Paus. ii. 25. § 8.) The foundation of Tiryns ascends to the earliest mythical legends of the Argives. It was said to have derived its name from Tiryns, the son of Argos (Paus. ii. 25. § 8), and to have been founded by Proetus. (Strab. viii. p. 372; Paus. ii. 16. § 2.) According to the common tradition, Megapenthes, the son of Proetus, ceded Tiryns to Persius, who transmitted it to his descendant Electryon. Alcmena, the daughter of Electryon, married Amphirion, who would have succeeded to the crown, but had been expelled by Athenæus, king of Argos. Their son Hercules afterwards regained possession of Tiryns, where he lived for many years, and hence is frequently called Tirynthius by the poets. (Hes. Sent. 81; Pind. Ol. x. 37, Isthm. vi. 39; Virg. Aen. vii. 662; Oc. Met. vii. 410.) Although Tiryns was thus closely connected with the Heroides, yet the city remained in the hands of the old Achaean population after the return of the Heroides and the conquest of Peloponnesus by the
Dorians. The strong fortress of Tiryns was dangerous to the neighbouring Dorian colony of Argos. After the dreadful defeat of the Argives by Cleomenes, their slaves took possession of Tiryns and held it for many years. (Heron, vi. 83.) In the Persian War the Tirynthians sent some men to the battle of Plataea. (Heron, ix. 28.) Subsequently their city was taken by the Argives, probably about the same time as Mycenae, B.C. 468. The lower city was entirely destroyed; the citadel was dismantled; and the inhabitants fled to Epidauros and Halieis, a town on the coast of Hermione. (Strab. viii. p. 373; Ephorus, ap. Steph. B. s. v. 'Αργεία; Enstat. ad Hom. Il. ii. 559, p. 286.) It was probably owing to this circumstance that Stephanus B. (z. v. Týrpe) was led into the mistake of saying that Tiryns was formerly called Halieis. The Tirynthians, who did not succeed in effecting their escape, were removed to Argos. (Paus. ii. 25, § 8.) From this time Tiryns remained uninhabited; and when Pausanias visited the city in the second century of our era, he saw nothing but the remains of the walls of the citadel, and beneath them towards the sea the so-called chambers of the daughters of Proetus. No trace of the lower city appears to have been left. The citadel was named Lyckyma, after Lyckymus, son of Ekecyron, who was slain at Tiryns by Teopentles, son of Hercules. (Strab. viii. p. 373; Pind. Ol. vii. 47.) Hence Statius calls the mazes in the neighbourhood of Tiryns "stigma Lyckyma." (Theb. iv. 734.) Theophrastus represents the Tirynthians as celebrated for their laughing propensities, which rendered them incapable of attention to serious business (ap. Athen. vi. p. 261, d.).

The ruins of the citadel of Tiryns are now called Palai Aigipli. They occupy the lowest and flattest of several rocky hills, which rise like islands out of the plain. The impression which they produce upon the beholder is well described by Col. Mure: "This colossal fortress is certainly the greatest curiosity of the kind in existence. It occupies the site of the summit of an oblong hill, or rather knoll, of small extent or elevation, completely encased in masses of enormous stones, rudely piled in tiers one above another, into the form alternately of towers, curtain walls, abutments, gates, and covered ways. There is not a fragment in the neighbourhood indicating the existence of suburb or outer town at any period; and the whole, rising abruptly from the dead level of the surrounding plain, produces at a distance an effect very similar to that of the bulk of a man-of-war floating in a harbour." The length of the summit of the rock, according to Col. Leake's measurement, is about 250 yards, the breadth from 40 to 50, the height above the plain from 20 to 50 feet, the direction nearly N. and S. The entire circuit of the walls still remains more or less preserved. They consist of huge masses of stone piled upon one another, as Pausanias describes. The wall is from about 20 to 25 feet in thickness, and it had two entrances, one on the eastern, and the other on the southern side. "In its general design the fortress appears to have consisted of an upper and lower enclosure of nearly equal dimensions, with an intermediate platform, which may have served for the defence of the upper castle against an enemy in possession of the lower. The southern entrance led by an ascent to the left into the upper enclosure, and by a direct passage between the upper enclosure and the eastern wall of the fortress into the lower enclosure, having also a branch to the left into the middle platform, the entrance into which last was nearly opposite to the eastern gate. Besides the two principal gates, there was a postern in the western side. On either side of the great southern entrance, that is to say, in the eastern as well as in the southern wall, there were galleries in the body of the wall of singular construction. In the eastern wall, where they are better preserved, there are two parallel passages, of which the outer has six recesses or niches in the exterior wall. These niches were probably intended to serve for the protracted defence of the gallery itself, and the galleries for covered communications leading to towers or places of arms at the extremity of them. The passage which led directly from the southern entrance, between the upper inclosure and the eastern wall into the lower division of the fortress, was about 12 feet broad. About midway, there still exists an immense door-post, with a hole in it for a bolt, allowing that the passage might be closed upon occasion. The lower inclosure of the fortress was of an oval shape, about 100 yards long and 40 broad; its walls formed an acute angle to the north, and several obtuse angles on the east and west. Of the upper inclosure of the fortress very little remains. There is some appearance of a wall of separation, dividing the highest part of all from that next to the southern entrance; thus forming four interior divisions besides the passages." (Leake.) The general appearance of these covered galleries is shown in the accompanying drawing from Gell's Itinerary. (Leake, Morea, vol. ii. p. 350, seq.; More, Tour in Greece, vol. ii. p. 175, seq.; Curtius, Peloponnese, vol. ii. p. 388, seq.)

TISIA.

TISIAEUM (Τήσιαος; Βαρδύτια), a lofty mound on the promontory of Acantium in Magnesia in Thessaly, at the entrance of the Pagassian gulf, on which stood a temple of Artemis, and where in n. c. 207 Philip V., son of Demetrios, caused watch-fires to be lighted, in order to obtain immediate knowledge of the movements of the Roman fleet. (Apoll. Rhod. i. 568; Val. Flacc. ii. 6; Polyb. x. 42; Liv. xxxvii. 5; Leake, Northern Greece, vol. iv. p. 597.)

TISCIUS (Γορζανός, Get. 5), or TYSCH (Θυώς; Geogr. Rav. iv. 14); a river in Thrace, a tributary of the Danube, the modern Thessia. [T.H.D.]

TISEEARICE. [Τισιεαρισί.] TISIA (Τίσια; Eth. Τισιάρης), a town of the Bruttii, mentioned by Appian in his account of the operations of Hannibal in that country. It had been occupied by that general with a Carthaginian garrison, but was betrayed by one of the citizens into the hands of the Romans, who held it for a short time, but it was soon recovered by Hannibal. (Appian, Hann. 44.) It is probably the same place which is called Isia by Diodorus, from whom wo
learn that it was besieged without success by the leaders of the Italian forces during the Social War. (Iusid. xxxvii. Exc. Philot. p. 240.) On both occasions it appears as a strong town situated apparently in the neighborhood of Rhegium; but no other mention is found of the city, which is not noticed by any of the geographers, and must probably have ceased to exist, like so many of the smaller towns of Bruttium. The name is, however, found in Stephanus of Byzantium, who corrects the correctness of the form Tisba, found in Appian. (Steph. Byz. v. 275.) Its site is wholly uncertain. [E. H. B.] TISSA (Titosa, Ptol.; Titessa, Steph. B. s. e.; Eth. Teraso, Tissensis, Cie., Tissainens, Pln.), a town in the interior of Sicily, repeatedly mentioned by ancient authors, but without any clue to its position. As its name is cited from Philistus by Stephanus of Byzantium (s. v.), it must have existed as a Sicilian town from an early period, but its name is not found in history. Under the Romans it continued to subsist as a municipal town, though a very small place. Cicero calls it "perparva et tensis civitas," and Silius Italicus also terms it "incola nomine Tissa." (Cic. Verr. iii. 35; Sil. Ital. xiv. 267.) It is again noticed by Pliny and Ptolemy among the towns of the interior of Sicily, but all trace of it is subsequently lost. The only clue to its site is derived from Ptolemy, who places it in the neighborhood of Aetna. It has been fixed by Claverius and others on the site of the modern town of Randazzo, at the northern foot of Aetna, but this is a mere conjecture. (Plin. iii. 8. s. 14; Pol. iii. 4. § 12; Claver. Sicil. p. 508.)

TITACIAE. [Attica, p. 330, a.]

TITANE (Terda, Paus.; Titava, Steph. B. s. e.; Eth. Terdavos), a place in the Sicynia, upon the left bank of the Asopus, distant 60 stadia from Sicyn, and 40 from Phlius. It was situated upon the summit of a hill, where Titan, the brother of the Sun, is said to have dwelt, and to have given his name to the spot. It was celebrated for a temple of Asclepius, reported to have been built by Alexander, the son of Machaon, the son of Asclepius. This temple still existed in the time of Pausanius, in the middle of a grove of cypress trees, in which the servants of the god attended to the patients who came thither for the recovery of their health. Within the temple stood statues of Asclepius and Hygeia, and of the heroes Alexander and Eumnerion. There was also a temple of Athena at Titane, situated upon a hill, and containing an ancient wooden statue of the goddess. In descending from the hill there was an altar of the Winds. (Paus. ii. 11. §§ 5—8, ii. 12. § 1, ii. 27. § 1.) Stephanus B. (s. v.) refers the Terdavos τε λεωτα κάρυα of Homer (II. ii. 735) to Titane, but those words indicate a mountain in Thessaly. [Vol. I. p. 248, b.] The ruins of Titane were first discovered by Ross. Leake heard that there were some ancient remains on the summit of the hill above Lipapsi, which is supposed to be the remains of the temple of Asclepius at Titane; but although Hellenic remains exist at this site, there can be no doubt that Titane is represented by the more important Paleokastron situated further S., and a few minutes N. of the village of Tisvnin. This Paleokastron stands upon a projecting spur of the mountains which run eastward towards the Asopus, and terminate just above the river in a small hill, which is surrounded by beautiful Hellenic walls, rising to the height of 20 or 30 ft. on the W. and SW. side, and flanked by three or four quadrangular towers. On this hill there stands a chapel of St. Tryphon, containing fragments of Doric columns. This was evidently the acropolis of the ancient city, and here stood the temple of Asclepius mentioned by Pausanias. The other parts of this projecting spur are covered with ancient foundations; and upon this part of the mountain the temple of Asclepius must have stood. (Leake. Morea, vol. iii. p. 334, seq.; Ross, Reisen in Peloponnes, p. 49, seq.; Curtius, Peloponnesos, vol. ii. p. 300, seq.)

PLAN OF TITANE.

A. Village of Tosvina.
B. Acropolis of Titane.
C. Temple of Asclepius and surrounding Buildings.

TITANUS. [Asterium.]

TITARENIUS. [Thessalia, p. 1166, a.]

TITARUS. [Thessalia, p. 1166, a.]

TITHOREA. [Neo.]

TITHEON (Tithonos: Eth. Tithouros), a frontier town of Phocis, on the side of Doris. Livy, who calls it Titmon, describes it as a town of Doris (xxviii. 7), but all other writers place it in Phocis. It was destroyed by the army of Xerxes together with the other Phocian towns. It is placed by Pausanias in the plain at the distance of 15 stadia from Amphiclea. The site of Tithonium is probably indicated by some ruins at Mullikebowneran, where a torrent unites with the Cephissus. (Herod. viii. 33; Paus. x. 3. § 2, x. 33. § 11; Steph. B. s. v.; Leake, Northern Greece, vol. ii. p. 87.)

TITIUM. [Eumvata, p. 841, a.]

TITULCA, a town of the Carpathians in Hispanic Tarracencensia, on the road from Emerita to Cessaugnata (Itin. Ant. pp. 436, 438, &c.) It seems to be the same town called Tosauna by Ptolemy (ii. 6. § 57). Variously placed near Torredon, at Cetate, and at Bayonna. [T. H. D.]

TITYRUS (Tityros, Strab. x. p. 479), a mountain in the NW. part of Crete, not far from Cydonia. Upon it was the sanctuary or temple called Diktyneum, (Strab. ib.) One of its spurs formed the headland also called Tityrus (Stadium. p. 302) or Psacum. (Cap. Spada. ) [T. II. D.]

TIUS or TIUM (Tit or Tior: Eth. Tiveros), a town on the coast of Bithynia, or, according to others, belonging to Paphlagonia. It was a Greek town situated at the mouth of the river Binasus, and seems to have belonged to Paphlagonia until Prens annexed it to Bithynia. (Momson, 17—19; Pom. Mela, i. 19; Marcian, p. 70; Appian, Peripl. P. E. p. 14; Ann. Peripl. P. E. p. 2.) In Strabo's (xii. pp. 542, 543, 565) time, Tius was only a small place but remarkable as the birthplace of Philoctetes, the founder of the royal dynasty of Pergamum. (Comp. Plin. vi. 1.) There are coins of Tius as late as the reign of Gallienus, on which the ethnic name appears as Tiovi, Teciu, and Tavoii. (Sestini, p. 71; Eckhel, ii. p. 438.)

TILOS (Tis or Tiva), an ancient and important
city of Lycia. It is not often mentioned by ancient writers, but we know from Artemidorus (ap. Strab. xiv. p. 665) that it was one of the six cities forming the Lycian confederacy. Strabo only remarks further that it was situated on the road to Cibyra. (Comp. Plin. v. 28; 1 Ptol. v. 3, § 5; Steph. B. s. v.; Hieroc. p. 639.) Until recently the site of this town was unknown, though D'Anville had correctly conjectured that it ought to be looked for in the valley of the Xanthus. Sir C. Fellows was the first modern traveller who saw and described its beautiful remains, the identity of which is established beyond a doubt by inscriptions. These ruins exist in the upper valley of the Xanthus, at a little distance from its eastern bank, almost due north of the city of Xanthus, and about 5 miles from the village of Azeroe. They are, says Sir Charles, very extensive, consisting of extremely massive buildings, suited only for palaces; the design appears to be Roman, but not the mode of building nor the inscriptions. The original city must have been demolished in very early times, and the finely wrought fragments are now seen built into the strong walls, which have fortified the town raised upon its ruins. The theatre was large, and the most highly and expensively finished that he had seen; the seats not only are of marble, but the marble is highly wrought and has been polished, and each seat has an overhanging cornice often supported by low paws. There are also ruins of several other extensive buildings with columns; but the most striking feature in the place is the perfect honeycomb formed in the sides of the acropolis by excavated tombs, which are cut out of the rock with architectural ornaments, in the form of triangles, &c, some showing considerable taste. (Fellows, Asia Min. p. 237, foll.; Lycia, p. 132, foll., where some of the remains are figured and a number of inscriptions given.)

L. S.

TMOLUS (Τσολος), a mountain range on the south of Sardis, forming the watershed between the basins of the Hermus in the north and the Cayster in the south, and being connected in the east with Mount Messogis. It was said to have received its name from a Lydian king Timoclus, whence Ovid (Met. vi. 16) gives this name to the mountain itself. Mount Timoclus was celebrated for the excellent wine growing on its slopes (Virg. Georg. ii. 97; Sen. Con. 602; Euphr. Basc. 55, 64; Strab. xiv. p. 637; Plin. v. 30). It was equally rich in metals; and the river Pactolus, which had its source in Mount Timoclus, at one time carried from its interior a rich supply of gold. (Strab. xiii. pp. 591, 610, 625; Plin. xxxii. 43; comp. Hum. R. ii. 373; Asch. Pers. 50; Hieroc. i. 84, 93, v. 101; Ptol. v. 2, § 13; Dion. Per. 531.) On the highest summit of Mount Timoclus, the Persians erected a marble watch-tower commanding a view of the whole of the surrounding country (Strab. xiii. p. 625). The Turks now call the mountain Jaguar jag (Kiechler, Wall. Fahrten, pp. 512, 513).

L. S.

TMOLUS, a town of Lydia, situated on Mount Timoclus, which was destroyed during the great earthquake in A.D. 19. (Tac. Ann. ii. 47; Plin. v. 30; Euseb. Chron. ad Ann. V. T. 2; Niep. Cal. i. 17.) Some coins are extant with the inscription ἀντιλίτωρ (Sest. p. 114).

L. S.

TOBIUS (Tòbiou or Tòbiou, Ptol. ii. 3, § 5), a river on the western coast of Britannia Iannana, now the Tyne. [T. H. D.]

TOCAE (Tòca), a very large city of Numidiae, mentioned only by Diodorus (xx. 57), is perhaps the same as Tecca.

TOCHARI (Τοχαροι, Ptol. vi. 11, § 6), a powerful Scythian people in Bactriana, which also spread itself to the E. of the Jaxartes over a portion of Sogdiana, and even as far as the borders of Serica. (Plin. vi. 17, s. 20; Aen. Marc. xxii. 6, § 577.)

TOCOLOSIDA (Τοκολοσίδα, Ptol. iv. 1, § 14), the most southern place in the Roman possession in Mauretania Tingitana. (Hist. Ant. p. 223 s. v.) Very probably identified with Mogilla, Fortis near Sidli Cassani, and Mergo or Amegro. [T. H. D.]

TOCOSANNA (Τοκοσάννα, Ptol. vii. 2, § 2), a river which falls into the Bay of Bengaul at its N. end. It is probably that now called the river Arracian, which is formed by the junction near its mouth of three other rivers. (Lassen, Map of Anc. India.)

TODUCAE (Τοδοκαί, also Οδοκαί, Τοδοκάι, Ptol. iv. 2, § 21), a people in Mauretania Carthaginis, on the left bank of the Amopus. [T. H. D.]

TOEOBOSIB (Τοιοβοσίβ, Ptol. ii. 3, § 29), a river on the western coast of Britannia Iannana, now the Conway. [T. H. D.]

TOGARMAI (Τογάρμαι, Armenia.)

TOGISONUS (TOCISONUS), Bacchiglione), a river of Venetia, mentioned only by Pliny, who describes it as flowing through the territory of Patavium, and contributing a part of its waters to the artificial canals called the Fossesini Philistinae, as well as to form the port of Brundisium (Plin. iii. 16, s. 30). The rivers in this part of Italy have changed their course so frequently that it is very difficult to identify them: but the most probable conjecture is that the Togisonus of Pliny is the modern Bacchiglione, one arm of which still flows into the sea near the Porto di Brondolo, while the other joins the Brenta (Medoacus) under the walls of Padona (Pleina). [E. H. B.]

TOLEBIACUM, in North Gallia, on the road from Augustave Trierorum (Trier) to Colonia Agrippina (Cologne). The distance of Tolebiae from Colonia in civ. is xvi. in the Antonine Itin. Tolebiacum is Zalipich, south-west of Bonn, on the direct road from Trier to Cologne. The words "vicus supernorum" or "vicus super-numorum," which occur in the MSS. of the Itin. after the name "Tolbiaco," have not been explained. Several writers have proposed to alter them. Tacitus (Hist. iv. 79) places Tolebiacum within the limits of the territory of the Agrippinenses or the Colonia Agrippina.

TOLENTINUM OR TOLENTINUM (Ett. Tolentinos, äts: Tolentino), a town of Picenum, in the valley of the Flusor or Chienti, about 12 miles below Camerim (Camerina). It is mentioned by Pliny among the municipal towns of Picenum, and its municipal rank is attested by the Liber Colonii, which mentions the "ager Tolentinus," and by inscriptions. (Plin. iii. 13, s. 18; Lib. Col. pp. 926, 259; Orell. Inscr. 2474; Gruter, Inscr. pp. 194, 2, 410, 2.) The modern city of Toletino, which retains the ancient site as well as name, is situated on the present highroad from Lame to Ancona; but as no ancient road descended the valley of the Flusor, the name is not found in the Itineraries. [E. H. B.]

TOLENUM (Turinu), a river of Central Italy, which rises in the mountains between Carseoli and the lake Fucinus, flows within a short distance of the walls of the former city, and falls into the Velun a few miles below Reute. Its name is men-
TIONED ONLY BY OVID AND ORSINUS, IN REFERENCE TO A GREAT BATTLE Fought ON ITS BANKS DURING THE SOCIAL WAR, BETWEEN THE ROMAN CONSUL RUTILIUS AND THE MARSI, IN WHICH THE ROMANS WERE DEFEATED WITH GREAT Slaughter AND RUTILIUS HIMSELF SLAIN. (OVID, Fast. vi. 565; Ors. v. 18.) [E. H. B.]

TOLETUM (Toletum, Plut. ii. 6. § 57; Eth. Toletani, Plut. iii. 3. 4; Orelli, Inscrip. no. 980), THE CAPITAL OF THE CARPETANI, IN HISPANIA TARACENSIS, SITUATED ON THE TAGUS, AND ON THE ROAD FROM EMERITA TO CASSARANGUSTA, AND CONNECTED ALSO BY ANOTHER ROAD WITH LUMINUM. (Hist. Anti. Ant. pp. 438, 446.) IT WAS A VERY STRONG TOWN, THOUGH ONLY OF MODERATE SIZE, AND FAMED FOR ITS MANUFACTURE OF ARMS AND STEEL-WARE. (Liv. xxv. 7, 22; xxvi. 30; Grat. Cyneg. 341; cf. Miiano, Diccion. viii. p. 453.) ACCORDING TO AN OLD SPANISH TRADITION, TOLEDO WAS FOUNDED IN THE YEAR 540. IN THE C. B.C. BY JEWISH COLONISTS, WHO CALLED IT "TOLEDOK," THAT IS, "MOTHER OF PEOPLE," WHENCE WE MIGHT PERHAPS INFER A PHOENICIAN SETTLEMENT. (Cf. MIUANO. i. 3; Puente, Travels, p. 27.) IT IS STILL CALLED TOLEDO, AND CONTAINS SEVERAL REMAINS OF ROMAN ANTIQUITIES, AND ESPECIALLY THE RuINS OF A CIRCUS. (Cf. FIORE, Esp. Sagra. v. p. 22; Puente, p. i. 165, seq.) [T. H. D.]

TOLAIUS (Tolauius, Plut. ii. 3. § 33), A SMALL ISLAND ON THE E. COAST OF ALBION, OPPOSITE TO THE COUNTRY OF THE TRINOBANTES. SHIPPY SEEMS THE ONLY ISLAND WITH WHICH IT IS AT ALL POSSIBLE TO IDENTIFY IT; YET IT LIES FARTHER S. THAN THE ACCOUNT OF TOLEMY APPEARS TO INDICATE. [T. H. D.]

TOLISTOBORGI, TOLISTOBORI, OR TOLISTOBOI. [Galatia.]

TOLENTINUM. [Tolentinum.]

TOLEBIS, A COAST TOWN OF THE HERACONES, IN HISPANIA TARACENSIS. (Mela, ii. 6.) [T. H. D.]

TOLOSA OR THOLOSA (Tolosâ, Tolwa, Tolosâ, Dian Cass. xxxviii. c. 32; Eth. Tolosates, Toloses, Tolosan), IN GALLIA, IS TOULOUSE, IN THE DEPARTMENT OF HAUTE-GARONNE, ON THE RIGHT BANK OF THE GARONNE.

The identity of Tolosa and Toulouse is easily proved FROM THE ITINERARIES AND OTHER EVIDENCE. IN Caesar's time Tolosa was within the Roman Provincia. (B. G. i. 10.) When Caesar is speaking of the intention of the Helvetii to migrate into the country of the Suantones, he remarks that the Suantones are not far from the territory of the Tolosates, who are in the Provincia. He considered that it would be dangerous to the Provincia if the warlike Helvetii, the enemies of Rome, should be so near to an open country, which produced a great deal of grain. The commentators have found some difficulty in Caesar's expression about the proximity of the Suantones and the Tolosates, for the Nitiobriges and Petrocorii were between the Suantones and the Tolosates; but Caesar only means to say that the Helvetii in the country of the Suantones would be dangerous neighbours to the Provincia. In Caesar's time Tolosa and Narbo, both in the basin of the Garonne, were fully organised as a part of the Provincia; for when P. Crassus invaded Aquitania, he summoned soldiers from the muster-rolls of these towns to join his army. (B. G. iii. 20.) Tolosa being situated on the neck of land where Gallia is narrowest [GALLIA TRANSALPINA, Vol. i. p. 949] and in a position easy of access from the west, north, and east, was one of the places threatened by the Galli in the great rising of n. c. 52; but Caesar, with his usual vigilance protected the provinces on this side by placing a force at Tolosa. (B. G. vii. 7.)

Tolosa was an old town of the Volcae Tectosages which existed probably many centuries before it was conquered by the Romans. A great quantity of gold and silver was collected there, the gold the produce of the auriferous region near the Pyrenees, and both the precious metals the offerings of gallic superstition. The treasury was kept in the temples, and also in sacred tanks. This is the story of Posidamius (Strab. iv. p. 188), who had
TOULOUS travelled in Gallia; and it is more probable than the tradition that the gold of Tolosa was the pro-
duce of the plunder of Delphi by Brennus and his men, among whom it is said there were some
Tectosages (Justin, xxxii. e. 3); for it is very
doubtful if any of Brennus' soldiers got back to
Gallia, if we admit that they came from Gallia.
Tolosa was in some kind of alliance with Rome
(Dion Cass. xxxiv. 97) about n. c. 106; but the
Tentones and Cimbri at this time had broken into
Gallia, and fear or policy induced the Tectosages
to side with them. Q. Servilius Caepio (consul n. c.
106) made this a pretext for attacking Tolosa,
which he took and plundered of its treasures, either
in n. c. 106 or in the following year. This act of
sacrilege was supposed to have been punished by
the gods, for Caepio was defeated by the Cimbri
n. c. 105, and his army was destroyed. (Liv. Epit.
67; Onl. ii. 15; Gell. iii. 9.) The treasure of
Tolosa never reached Rome, and perhaps Caepio
himself laid hold of some of it. However this may
be, the "Aurom Tolosanum" became a proverb.
All who had touched the consecrated treasure came
to a miserable end. It seems that there was an
inquiry made into the matter at Rome, for Cicero
(De Nat. Deorun, iii. 30) speaks of a "quaestio
auri in Tolomii." The Tolosani or Tolosates were that division of
the Tectosages which was nearest to the Aquitanian
A place called Fines, between Tolosa and Carcasson,
denotes the boundary of the territory of Tolosa in
that direction, as this term often indicates a terri-
torial limit in the Roman geography of Gallia
[Fines]; and another place named Fines marks the
boundary on the north between the Tectosages and
the Cadurci.
Pliny (ii. 4) mentions Tolosa among the Op-
pida Latina of Narbonensis, or these towns
which had the Latinus, and, as Polyen. (ii. 10. § 9)
names it a Colonia, we must suppose that it
was made a Colonia Latina. Tolosa maintained its
importance under the Empire. Ammianus (Ordo
Nob. Urb. xii.) describes Tolosa as surrounded by a
brick wall of great circuit, and as a populous city,
which had sent out inhabitants enough to found
four other cities. The name Palladice, which Martial
(Ep. ix. 101), Solinus Apollinaris, and Ammianus
majorius refer to Tolosa appears to refer to the
cultivation of the liberal arts in this Gallic city —
"Te sibi Palladice antecinit toga docta Tolosanae."
(Auson. Parent. iii. 6; and Comment. Profess.
Burdig. xvii. 7.)

[A. L.]

TOULOS, a place of the Hergetes in Hispania
Tarraconensis. (Itin. Ant. p. 391.) Probably Mon-
zon.

[TH. D.]

TOUJARUS. [Diodora, p. 783, 6.] TOUJERUS (Toujous, Arran, Indt. 24), a river, or
rather torrent of Gredosa, called Tomeros or
Tomberos by Pliny (vi. 23. s. 25. § 33, ed. Sullig.),
and Tubero by Publii (iii. 7. 7). According to the
distances in Arrian, this river is the Moskov or
Hingul.

[MESSAIX, p. 341, 6.]

TOUIUS or TOUL (Toujus, Strab. vii. p. 319;
Or. Tr. iii. 9. 33; Geogr. Bk. iv. 6, 56; Tofa,
Ptol. iii. 10. § 8; Jum, Plin. iv. 11, s. 18; Stat.
S. i. 2. 255; Itin. Ant. p. 227, xvi.; in Mela, ii. 2,
Touius: we also find the Greek form Touropoi.
Steph. B. s. v.; Arrian, Per. P. Eux. p. 24), a
town of Lower Moesia, on the Euxine, and the
capital of the district of Scythia Minor (Sozom.
H. Eccl. vii. 25; Hierocl. p. 637). It was situated
at a distance of about 300 stadia or 36 miles from
Istros or Istropoos (Anon. Per. P. Eux. p. 12;
Itin. Ant. p. 227), but according to the Tab. Peut.
40 miles. It was a Messian colony, and according
to the legend the place where Medea cut off her
brother's body, or where their father Aeetes got
put together and buried the pieces (Or. L. c.; Apollod. i.
9. 35; Hygin. Fab. 13.) The legend is no doubt
connected with the name of the town, which,
however, is still better known as the place of
banishment of Ovid. Now Tomisvar or Jeni Pung-
ula.

[TH. D.]

COIN OF TOMIS OR TONI.

TOMISDA (Tomas: Eth. Tomispiou, Tomouo, a
town of Sopheia, in Armenia, was ceded by Lu-
cullus to the Cappadocians. (Polyb. xxxiv. 13;
Strab. xii. p. 535, xiv, pp. 663, 664; Steph. B. s. r.)
TONEROS. [TONERUS.]

TONICE. [Niconis Dromus.]

TONOSA, a town of Cappadocia, 50 miles from
Sebastian, still called Tomina. (H. Ant. pp. 181, 182,
212.)

TONUS, or TONZUS (Tawos, Zos. ii. 28. § 8; or
Laup. Elag. 7), the principal tributary of the
Hebrus in Thrace. It rises in the Haemus: its
general course for about 70 miles is almost due E.;
it then makes a sudden bend to the S., and, after a
farther southerly course of nearly the same length,
falls into the Hebrus, a short distance from Hadrian-
polis. Now Tumaza or Tonufis. [J. E.]

TOUPRIS (Phii. iv. 11. s. 19; Tomous or Tourop-
is, Proti. iii. 11. § 15), or TOURUS (It. Ant. p. 321;
in p. 331, it is corrupted into Olympus; and in
It. Her. p. 609, into Epurus; Tab. Peut.; Tomusos,
Hierol. p. 634), a town in the SW. of Thrace, a little
NE. from the mouth of the Nestus, and a short distance
W. of Abdera. In the time of Procopius (B. G. iii.
38) it was the first of the maritime cities of Thrace,
and is described as distant 12 days' journey from
Byzantium. Very little is known about this place.
In later times it was called Illision (Ptoleas,
Hierol. i. c.; cf. Apoc. Geo. in Histovn. iv.
p. 42; and Anna Conn. p. 212), and was the seat
of a bishopric. (Cons. Chalced.) Justinian rebuilt
its walls, which had been demolished, and made them
stronger than before. (Procop. de Aed. iv. 11.)
According to Paul Lucas and Boudone, the modern
Toubar occupies its site; but Lapie identifies it with
Kara-Giueica. [J. E.]

TOREATAE. [TOREATAE.]

TORECCADAE. [TOREATAE.]

TOREATAE (Toerat, Steph. B. s. r.; Dionys.
Per. 6-22; Plin. vii. 5; Mela, i. 12; Avian. Orb. Terr.
867) or TOREATAE (Tapara, Strab. xi. p. 495),
a tribe of the Maeotae in Asiac Satmaria. Pliny
(v. 9 § 9) mentions a Toperachis in Asiac
Satmaria; and in another passage (iii. 5. § 25) he
order of the names in Ptolemy to have stood in one of the bays between the mouth of the river Thamis and Sybota, probably at Parga. (Leake, *Northern Greece*, vol. i. p. 103, vol. iii. p. 8.)

*TOTTAEUM*, a place in Bithynia of uncertain site (II. *Ant.* p. 141; II. *Hieros.* p. 573, where it is called Tuttum; *Concil. Chalced. p. 98*); but some look for its site near Geireh, and others near Karakat.

*TOXANDRI*. These inhabitants of North Gallia are first mentioned by Pliny (iv. 17) in a passage which has been interpreted several ways. Pliny's Belgica is limited on the north by the Segid's (Schede). (GALLIA TRANS., Vol. i. p. 960.) Pliny says: "A Scæidii indecut extera Toxandri phribus nominibus. Deinde Menapi, Morini." D'Aville and others explain "extera" to signify beyond the limits of the Schede, that is, north and east of this boundary; and Cluver places the Toxandri in the islands of Zeeland. D'Aville supposed that they took a part of their territory from the Menapi, and that this newly acquired country was the *Campos* north of Brabant and the bishopric of Liege. This conjecture is supposed to be confirmed by the passage of Ammianus Marcellinus (xvii. 8), in which he says that Julian marched against the Franks named Sali, who had dared to fix themselves on Roman ground; and Toxandrian location. The geographical names are best acquainted with the Netherlands fix Toxandri locus at Tesselelo Lo, a small place in the *Campos* to the north of Brabant. Ubert (Gallien, p. 372) gives a different meaning to the word "extera." He remarks that Pliny, describing the north coast of Europe (iv. 14), says: "Tato antem hoc mari ad Scæidian usque fluviim Germanicæ accipitur gentium," and he then enumerates the people as far as the Schede. Afterwards (c. 17) he adds: "A Scæidii indecut," &c.; and a few lines further, a word "inturnus" is opposed to this "extera," from which Ubert concludes that "extera" here means the coast country, a meaning which it has in two other passages of Pliny (ii. 67, iv. 13). After describing the nations which occupy the "extera," or coast, Pliny mentions the peoples in the interior, and in the third place the Germanic peoples on the Rhine. Accordingly Ubert concludes that "we must look for the Toxandri in the neighbourhood of Gent and Bruges." (G.L.)

*TRACA* (Traca, Ptol. iii. 5. § 27), an inland city of European Sarmatia. (T. L. I.)

*TRACHIS* (Trachis, *Herod.*, Thuc., et alii; *Trachis, Strab.*; *Eth. Trachis*). 1. A city of Mysia, in the district called after it Trachinia. It stood in a plain at the foot of Mt. Oeta, a little to the N. or rather W. of Thermopylae, and derived its name from the rocks which surrounded the plain. It commanded the approach to Thermopylae from Thessaly, and was, from its position, of great military importance. (Herod. vii. 176; Strab. ix. p. 428; Steph. B. s. v.) The entrance to the Trachian plain was only half a plethron in breadth, but the surface of the plain was 22,000 plethra, according to Herodotus. The same writer states that the city Trachis was 3 stadia from the river Melas, and that the river Ausonius issued from a greater river in the mountains, to the S. of Trachis. (Herod. vii. 198.) According to Thucydides, Trachis was 40 stadia from Thermopylae and 20 from the sea. (Thuc. iii. 92.) Trachis is mentioned in Homer as one of the cities subject to Achilles (II. ii. 628), and is celebrated in the legends of Hercules as the scene of

**VOL. II.**
I. Generally one of the neighbour"ing Dorian, who suffered much from the predatory incursions of the Aetolian mountaineers, solicited aid from the Spartans, who eagerly availed themselves of this opportunity to plant a strong colony in this commanding situation. They issued an invitation to the other states of Greece to join in the colony; and as many as 10,000 colonists, under three Spartan ephors, built and fortified a new town, to which the name of Heracleia was given, from the great hero, whose name was so closely associated with the surrounding district. (Thuc. iii. 92; Diod. xii. 59.) It was usually called the Trachian Heraclia, to distinguish it from other places of the same name, and by later writers Heraclia in Phthiotis, as this district was subsequently included in the Thessalian Phthiotis. (Ἡράκλεια ἡ ἐν Τραχείᾳ, Xen. Hell. i. 2, § 18; Diod. xii. 77, xv. 57; Περαιάλεωτα οἱ ἐν Τραχείᾳ, Thuc. v. 51; Η ἢ Τραχείῃ καλουμένη πρύταναρ, Strab. i. p. 428; Heraclea Trachin dieta, Plin. iv. 7. s. 14; Π. Θεοδώρας, Ptol. iii. 13. § 46.) The new colonists also built a port with docks near Thermopylae. It was generally expected that this city, under the protection of Sparta, would become a formidable power in Northern Greece, but it was attacked from the beginning by the Thessalians, who regarded its establishment as an invasion of their territory; and the Spartans, who rarely succeeded in the government of dependencies, displayed haughtiness and corruption in its administration. Hence the city rapidly dwindled down; and in n. c. 420 the Heracleots were defeated with great loss by the neighbouring Thessalian tribes, and Xenures, the Lacedaemonian governor, was slain in the battle. Sparta was unable at the time to send assistance to their colony; and in the following year the Boeotians, fearing lest the place should fall into the hands of the Athenians, took possession of it, and dissimulated the Lacedaemonian governor, on the ground of misconduct. (Thuc. v. 51, 52.) The Lacedaemonians, however, regained possession of the place; and in the winter of n. c. 409—408, they experienced here another disaster, 700 of the Heracleots being slain in battle, together with the Lacedaemonian harvest. (Xen. Hell. i. 3, § 18.) But, after the Peloponnesian War, the city again rose into importance, and became the headquarters of the Spartan power in Northern Greece. In n. c. 399 Herippidas, the Lacedaemonian, was sent thither to repress some factional movements in Heraclia; and he not only put to death all the opponents of the Lacedaemonians in the town, but expelled the neighbouring Oeacians and Trachians from their abodes. (Diod. xiv. 38; Polyen. ii. 21.) In n. c. 393 the Thracians, under the command of Lameceus, wrested this important place from the Spartans, killed the Lacedaemonian garrison, and gave it to their own city, the Trachians, and Oeacian inhabitants. (Diod. xiv. 82.) The walls of Heraclia were destroyed by Jason, lest any state should seize this place and prevent him from marching into Greece. (Xen. Hell. vi. 4, § 27.) At a later time Heraclia came into the hands of the Aetolians, and was one of the main sources of their power in Northern Greece. After the defeat of Antiochus at Thermopylae, n. c. 191, Heraclia was besieged by the Roman consul Aecius Galienus, who divided his army into four bodies, and directed his attacks upon four points at once; one body being stationed on the river Asopus, where was the gymnasion; the second near the citadel outside of the walls (extra muros), which was almost more thickly inhabited than the city itself; the third towards the Midue gulf; and the fourth on the river Melas, opposite the temple of Diana. The country around was marshy, and abounded in lofty trees. After a siege of twenty-four days the Romans succeeded in taking the town, and the Aetolians retired to the citadel. On the following day the consul seized a rocky ammitt, equal to the citadel in height, and separated from it only by a chasm so narrow that the two summits were within reach of a missile. Therupon the Aetolians surrendered the citadel. (Liv. xxxvi. 24.) Leake remarks that it seems quite clear from this account of Livy that the city occupied the low ground between the rivers Korennarid (Asopus) and Marra-Néris (Melas), extending from the one to the other, as well as a considerable distance into the plain in a south-eastern direction. There are still some vestiges of the citadel upon a lofty rock above; and upon its perpendicular sides there are many catacombs excavated. "The distance of the citadel above the town justifies the words extra muros, which Livy applies to it, and may explain also the asser tion of Strabo (I. c.), that Heraclia was six stadia distant from the ancient Trachis; for, although the town of Heraclia seems to have occupied the same position as the Trachis of Herodotus, the citadel, which, according to Livy, was better inhabited in the Aetolian War than the city, may very possibly have been the only inhabited part of Heraclia two centuries later." (Leake, Northern Greece, vol. ii. pp. 26—29.)

2. Surrounded PHOCIA (ἡ Φοικία), a small city of Phocis, situated upon the confines of Boeotia, and on the road to Lebadeia. (Strab. i. p. 423; Pans. x. 3. § 2.)

TRACHONITIS (Τραχωνίτης, Luke, iii. 1; Joseph. Ant. xvi. 9, B. J. iii. 3; Plin. v. 18. s. 16; Τραχωνιτης, Joseph. Ant. xiii. 16), according to Josephus, a portion of Palestine which extended in a NE. direction from the neighbourhood of the sea of Galilee in the direction of Damascus, having the Syrian desert and Auranitis on its eastern frontier, Iuranis on the S., and Gamaliota on the W. It was considered as the northern portion of Perea (Περαια, i. e. Περαία τοῦ Ἰουδαίου, Judith, i. 9; Matth. iv. 25.) According to Strabo, it lay between Damascus and the Arabian mountains (xvi. p. 755); and from other authorities we may gather that it adjoined the province of Batanaea (Joseph. B. J. i. 20, § 4), and extended between the Regio Decapolisitana (Plin. v. 15) as far as Sostra (Euseb. Onomast. s. e. Πατανεα.) It derived its name from the rough nature of the country (τραχών, i. e. τράχος καὶ πετρώδες τόπος); and Strabo mentions two τραχώνας (xvi. p. 755, 756), which Burckhardt considers to be the summits of two mountain ranges on the road from Mecca to Damascus, near the village of Al Kassem. (Travels, p. 115.) The inhabitants of Trachonitis are called by Ptolemy, οἱ Τραχωνιταί Αράβαις (v. 19. § 26), and they seemed to have maintained their character for remarkable skill in shooting with the bow and plundering (Joseph. B. J. ii. 4. § 2), for which the rocky nature of the country they inhabited, full as it was of cliffs, and holes and secret fastnesses, was peculiarly well suited (Joseph. Ant. xv. 10. § 14.) Trachonitis belonged originally to the tetarchcy of Philippus, the sea of Herod the
TRACHY.

Great (Joseph. Ant. xvii. 8, § 1, J. J. ii. 6, § 3); but it subsequently formed part of the dominion of Herodes Atticus. (Joseph. Ant. xvii. 6, § 10, B. J. iii. 3, § 5; Philo, Opp. ii. p. 593.)

The whole district has been recently explored and examined with much care and judgment by the Rev. J. L. Porter of Damascus, who has shown that the ancient accounts of this province, properly weighed, coincide with remarkable accuracy with what we know of it now. According to him, it must have been to the NW. of Batanea, and have extended along the styx tract at the base of the Jebel Hauran, as Kermath (now Kumanah) was a city of Trachon (Kuseb. Onomast. s. v. Caneth), while the Targums extend it, though improbably, as far S. as Bosra. Mr. Porter observes that the name is sometimes applied in a more general sense by ancient writers, so as to include the adjoining provinces (as in Luke, iii. 1, where the "Region of Trachonitis" must be understood as embracing Batanea and Aramitis; Joseph. Ant. xvii. 14, § 4) he thinks, too, that the plain on the western side as far as the "Haj road was embraced in Trachonitis, and like any that on the north to the Jebel Khigirah, with a considerable section of the plain on the east, N. of Arulal-Batannah. The Argob of Numb. xxix. 15, 1 Kings, iv. 13, &c., Mr. Porter considers to be the same district as Trachonitis, the latter being the Greek rendering of the Hebrew form. (Porter, Five Years in Damascus, ii. pp. 239—262, 268—272; Robinson, iii. p. 907; Tassegger, iii. p. 279; Winer, Beitr. Rechr. Altert. u. Gesch.)

[TRACHY. (Orchomenos, p. 490, a.)

TRACTARI, a tribe in the Chersoneseus Taurica (Plin. iv. 12, s. 26). [T. H. D.]

TRAEILLIUS. [TRAGILUS]

TRAENS or TRAIS (Träens or Träps, -cpp, -cop, Trionto), a river of Brutthien celebrated for the singular harmony of the Sybarites on its banks by their rivals the men of the Conotones, which led to the destruction of the city of Sybaris, h. c. 510. (Iambi. Vit. Pyth. § 260.) It is singular that the banks of a stream which had been the scene of such a catastrophe should have been selected by the Sybarites who were expelled from the new colony of Thurii shortly after its foundation [THURII] for the site of their settlement. They, however, did not remain long, being expelled and put to the sword by the neighbouring barbarians, whom Diodorus by a remarkable anachronism calls Brutthians, apparently within a few years of their establishment. (Diod. xii. 22.) The name of the river is not found in any of the geographers, but there can be little doubt of its being the one still called the Trionto, which falls into the gulf of Tarentum a few miles E. of Rosano, and gives name also to an adjoining headland, the Capo di Tronto.

[T. H. B.]

TRA gia (Tragia), also called Tragia (Tra gia), Tragia, Tragaeae (Tragae), or Tragae (Tra gia), a small island off the south coast of Samos, near which Pericles, in n. c. 440, defeated the Samians in a naval engagement. (Thucyd. i. 116; Plin. iv. 71, v. 132; Plut. Per. 25; Strab. xiii. p. 655; Steph. B. v. 12; Egerius.) Respecting the Tragaeae Samiae, see HALESON. [L. S.]

T R A G I A or TRAGAE. [NAKOS, p. 406, a.]

TRAGIULUS (Tragoulos; Eth. Tragoulos, Steph. B. v. 12), a town of Macedon, and doubtless the same as the Bijdalo or Djafidao found in Hierocles (p. 639) among the towns of the first or consular Macedonia. In the Tahir there is a place "Trigulo" marked as 10 miles from Philippi. This is apparently a corruption of "Tradio," since numerous coins (one of which is figured below) have been found near Amphipolis with the inscription TRAIG N. Mr. Leake conjectures with much probability that the real name was Tragilos, and that in the local form of the name the Γ may have been omitted, so that the ΤΡΑΙΓΩΝ of the coin may represent the Hellenic ΤΡΑΓΩΝ. (Eckhel, vol. ii. p. 81; Leake, Northern Greece, vol. iii. p. 228.)

TRAGU R I U S. [Caphyae.]

TRAI A CAPITA (Htin. Ant. p. 399), more correctly TREA CAPITA (Geeg. Rev. v. 3), since it lay near the three mouths of the Ibrus, a town of the Catenian, in Hispania Tarraconens, between Dertosa and Terraco. Variously identified with Tivissa and Torre del Aigua. [T. H. D.]

TRA I A N I MUNIMENTUM, a fort or castle built by Trajan on the southern bank of the river Moesus, not far from its junction with the Ibrus. (Amm. Marc. xvii. 1.) The site is uncertain, nor is it known what the Munimentum really was. [L. S.]

TRIAS I ANI M PORTUS [Cavia.]

TR A J ANO POLIS (Traiawvolos), a town in Mydia, in the district occupied by the tribe of the Traumonothyrates, on the frontiers of Phrygia. (Plut. v. 2, §§ 14, 15.) The Cilician city of Selinus also for a time bore the name of Trajanopolis. [SELINUS.]

TR A JANOPOLIS (Traianavlou), an important town in the S. of Thrace, which was probably founded by or in honour of the emperor Trajan, about the time when Pitoopolis was founded, to perpetuate the name of his wife Plotina. Its exact site appears to be somewhat doubtful. Some authorities describe it as situated on the right bank of the Hebrus, near the pass in the range of Mount Rhodope, through which that river flows, and about 40 miles from its mouth. Now this is the site of the modern Orikhora, with which accordingly it is usually identified. It would be difficult, however, to reconcile this with the various distances given in the Itineraries; e.g. Trajanopolis is stated to be 9000: paces from Tempyra, and 29,000 from Cyampsa; whereas the site above mentioned is nearly equidistant from those assigned to Tempyra and Cyampsa, being, however, more distant from the former. But this is only one example out of many showing how extremely imperfect is our knowledge of the geography of Thrace, both ancient and modern. In the map of the Society.
for the Diffusion of Useful Knowledge Trajanopolis is placed on the Egyptian Way at a considerable distance W. of the Hebrus, and at a point which fulfils tolerably well the conditions of distance from the two places above mentioned.

Trajanopolis became the capital of the province of Rhodes, and continued to be a place of importance until the fourth century. It is remarkable, however, that it is not mentioned by Ammianus in his general description of Thrace (xxviii. 4); according to him, the chief cities of Rhodes were Maximumpolis, Maronia, and Aenus. (Prot. iii. 11. § 13.; Hieroc. p. 631; Procop. de Aed. iu. 11: Const. Porph. de Caerim. ii. 54; Cantacuz. i. 38, iii. 67, et alibi; It. Aut. pp. 175, 322, 332, 333; H. Hier. p. 602; Geog. Rav. iv. 6; cf. Manver, vii. p. 224.)

[El.] TRAJECIUM, in North Gallia, is not mentioned in any Roman writing before the Itin. of Antoninus. It was on the Roman road which ran along the Rhine from Lugdunum Batavorum, and the site is Utrecht in the kingdom of the Netherlands, at the bifurcation of the old Rhine and the IJ. The modern name contains the Roman name abbreviated, and the part U seems to be a corruption of the word "Utrecht." But D'Aulnoy observes that the name is written Utrecht as early as 870. [G. L.]

TRAJECIUM in Gallia, placed by the Antonine Itin. on a road which runs from Agrippa (Agrippa) through Excusium and Trajectus to Vesunna (Dorlincum). Trajectus is xxii. from Excusium (Villa Neure), and xviii. from Vesunna, and it marks the passage of the Duranus (Dorlincum) between these two positions at a place called Pontus on the Dorlincum, opposite to which on the other bank of the river is La Litude, mentioned in the Table under the name of Dilolimun. [Dilolimun.] [G. L.]

TRAIUS, &c. [TRAIENS]

TRAILLES or TRALLIS (τραλλίας, τραλλάι), a large and flourishing city of Caria, on the southern slope of mount Messogis, a little to the north of the S-aamander, a small tributary of which, the Eudon, flowed close by the city, while another passed right through it. Its acropolis was situated on a lofty eminence in the north of the city. Trailles was said to have been founded by Argives in conjunction with a body of Thracians, whence its name Trailles was believed to be derived (Strab. xiv. 111. 1. 7; Paus. xvi. 63.; Plut. Ager. 16), for it is said to have previously been called Anthea, Eanthea, Erymena, Charax, Selucia, and Antioscha (Steph. B. s. v. Traillias, Χαώρ; Eytm. M. p. 389; Pinn. v. 29). Others, however, state that it was a Pelasgian colony, and originally bore the name of Larissa (Asgath. ii. 17; Schol. ad Hom. ii. x. 429). It was situated in a most fertile district, at a point where highroads met from the south, east, and west; so that it must have been a place of considerable commerce. (Cic. ad Att. v. 14, ad Fam. iii. 5, ad Quint. Frat. i. 1; Strab. xiv. p. 663.) The inhabitants of Trailles were celebrated for their great wealth, and were generally appointed a-rarchs, that is, presidents of the games celebrated in the district. But the country in which Trailles was situated was much subject to earthquakes; in the reign of Augustus many of its public buildings were greatly damaged by a violent shock; and the emperor gave the inhabitants a handsome sum of money to repair the losses they had sustained. (Strab. xii. p. 579.) Out of gratitude, the Traillans petitioned to be permitted to erect a temple in honour of Tiberius, but without effect, (Tac. Ann. iv. 55.) According to Pliny (xxxiv. 49), king Attalus had a palace at Trailles. A statue of Caesar was set up in the temple of Victoria at Trailles; and during the presence of Caesar in Asia a miracle is said to have happened in the temple, respecting which see Caes. Bell. Civ. iii. 105; Plut. Caes. 47; and Val. Max. i. 6. The city is very often mentioned by ancient writers (Xen. Anab. i. 4. § 8, Hist. Gr. ii. 2. § 19; Polyb. xxi. 27; Liv. xxxvii. 45, xxxviii. 281; Irod. xive. 36, xiv. 75; Juven. iii. 70; Pol. v. 2. § 19; Hieroc. i. 659). During the middle ages the city fell into decay, but was repaired by Andronicus Patiælogus (G. Pachym. p. 320). Extensive ruins of the place still exist above the modern Ghulol Isar, in a position perfectly agreeing with the description of Strabo. (See Arundell, Seven Churches, pp. 58, 63, 293; L concl., Asia Minor, pp. 243, 246; Fellows, Asia Minor, p. 276; Leips. p. 16; Hamilton, Researches, i. p. 533.) As to the coins of Trailles, which are very numerous, see Sestini, p. 89. [L. S.]

COIN OF TRAILLES.

TRAILLES or TRALLIS (Τράλλας), a town in Phrygia, on the west of Apamea, and 15 miles east of Hierapolis, not far from the banks of the Maeander (Hieroc. p. 667; Conm. Costvii. p. 243; Conm. Nicaea. ii. p. 51; Tab. Pont.) The ruins seen by Arundell (Seven Churches, p. 231) near the village of Kuslar are probably those of Trailles. [L. S.]

TRALLIA (Τραλλία : Eth. Τραλλάας, Τραλλίες, Steph. B. s. v.), a district of Iliocia, whose inhabitants, the Trailles, are mentioned several times by Livy (xxvii. 32, xxxi. 35, xxxii. 4).

TRALLICON, a town of Caria, mentioned only by Pline (v. 29), situated on the river Harpaso; but in his time it had already ceased to exist. [L. S.]

TRAMPA. [Τραμπάς]

TRANSCELLINUS MONS, a mountain in Mauretania, between Caesarea and the river Chalaph. (Annm. Marc. xxix. 5. § 20.) [T. H. D.]

TRANSUCTA (Τρανσοικτοτα), a region, as described by Strabo (ii. 140) called Ισάκλας, and set down between Bebon and Gades, whether the Romans transplanted the inhabitants of Zela, in Mauretania Tingitana. According to Ukert (ii. p. 343) it is also the Tingentera of Mela (ii. 6), who informs us that he was born there; though it is not easy to see how it could have had so many names. But the ground for the conjecture is that Tingentera, according to Mela, was inhabited by Phoenicians, who had been transported thither, which in some respects resembles Strabo's account of Julia Isca. It is sought at the modern Turifi, or in its neighbourhood. For coins see Flore, Med. ii. p. 596; Eckhel, Doctr. Num. i. 1. p. 30; Mionnet, i.
TRANSMARICA.

p. 26, and Suppt. i. pp. 19, 45; Sestini, p. 90; Flocer, Esp. Scriptor. x. p. 50; Mem. de l'Acad. des Inscr. xxx p. 103.) [T. H. D.]

TRANSMARICA (Triumph., Ptol. iii. 10. § 11; Trausiius und Trausiaium, Procop. de Aed. iv. 7. p. 292; Starnarica, Geogr. Rav. iv. 7), a strong fortress of Lower Moesia, opposite to the spot where the Marisci flows into the Danube. It was the head-quarters of two cohorts of the Legio xi. Claudia, and also of some light-armed troops. (Hain. Ant. p. 223; Not. Imp.; Tab. Peut.) Now Turtukai, Turtukari, or Tokerkam. [T. H. D.]

TRANSOMTA'NI (Trausomtano, Ptol. iii. 5. § 21), a name of a tribe in Independent Sarmatia dwelling between the sources of the Borysthenes and the Punician mountains. [T. H. D.]

TRAPEZOPOLIS (Triausopolis or Triausopol- 

| sastos: Eth. Trapezopolis), a town situated, according to Ptolemy (ii. 2, § 18), in Caria, but according to Socrates (Hist. Eclecs. vii. 36) and Hierocles (p. 665), in Phrygia. The former is the more correct statement, for the town stood on the southern slope of Mount Cadmus, to the south-east of Antiochia, and, according to the Notitia Imperii, afterwards belonged to the province of Parthia. It is possible that the ruins which Arundel (Discoveries, ii. p. 147) found at Kestil-pah-boutuk may be those of Trapezopolis. [L. S.]

TRAPEZUS (Trauoi: Eth. Trapezutai: now Trapezous or Trichizoid). an important city on the coast of Pontus, on the slope of a hill, 60 stadia to the east of Hermonassa, in the territory of the Maeronae (Anon. Peripl. P. E. p. 13), was a colony founded by the Sinopians, who formed many establishments on this coast. (Xenoph. Anab. iv. 8, § 22; Arrian, Peripl. P. E. pp. 1, 3, 6; Sclav. p. 533.) It derived its name probably from its form, being situated on an elevated platform, as it were a table above the sea; though the town of Trapezus in Arcadia pretended to be the mother-city of Trapezus in Pontus (Paus. viii. 27. § 4). Trapezus was already a flourishing town when Xenophon arrived there on his memorable retreat; and he and his men were most hospitably treated by the Trapezuntians. (Xen. Anab. v. 5. § 10.) At that time the Colchians were still in possession of the territory, but it afterwards was occupied by the Maeronae. The real greatness of Trapezus, however, had to come afterwards, under the domination of the Romans. Pliny (vi. 4) calls it a free city, a distinction which it had probably obtained from Pompey during his war against Mithridates. In the reign of Hadrian, when Arrian visited it, it was the most important city on the south coast of the Euxine, and Trajan had before made it the capital of Pontus Cappadocicus, and provided it with a larger and better harbour. (Arrian, Peripl. P. E. p. 17; comp. Tac. Ann. xiii. 39, Hist. iii. 47; Pompeius, Mela, i. 19; Strab. vii. pp. 309, 320, xi. p. 499, xii. p. 548; Steph. B. e. r.) Henceforth it was a strongly fortified commercial town; and although in the reign of Gallienus it was sacked and burnt by the Goths (Zosim. i. 33; Eustath. ad Dion. Per. 687), it continued to be in such excellent condition, that in the reign of Justinian it required but few repairs. (Procop. de Aed. iii. 7.) From the Notitia Imperii (c. 27) we learn that Trapezus was the station of the Persian branch of the and its staff. Some centuries later a branch of the imperial house of the Commene declared themselves independent of the Greek Empire, and made Trapezus the seat of their principality. This small principality maintained its independence even for some time after the fall of Constantinople; but being too weak to resist the overwhelming pressure of the Turks, it was obliged, in A.D. 1460, to submit to Mohammed II., and has ever since that time been a Turkish town. (Chalcond. ix. p. 203, foll.; Duc. 43; comp. Gibbon, Decline, c. xlvii. foll.) The port of Trapezus, called Daphnus, was formed by the acropolis, which was built on a rock running out into the sea. (Anon. Peripl. P. E. p. 13.) The city of Trapezus is still one of the most flourishing commercial cities of Asia Minor, but it contains no ancient remains of any interest, as most of them belong to the period of the Lower Empire. (Tourn. Trave. Voy. au Lecant, iii. letter 17, p. 79, foll.; Fontanier, Voyages dans l'Orient, p. 17—23; Hamilton's Researches, i. p. 240.) The coins of Trapezus all belong to the imperial period, and extend from the reign of Trajan to that of Philip. (Ekkel. i. 2, p. 358; Sestini, p. 60.) [L. S.]

TRAPEZUS (Trausos, -ovs, -ovtov: Eth. Tra- 

| zoctouv: now Trausos or Trichizoid). a town of Arcadia in the district Parrhassa, a little to the left of the river Alpheus, is said to have derived its name from its founder Trapezus, the son of Lycon, or from trapeza (trapeza), "a table," because Zeus here overturned the table on which Lycon offered him human food. (Paus. viii. 3. §§ 23; Apollod. iii. 8. § 1.) It was the royal residence of Hippothus, who transferred the seat of government from Tegea to Trapezus. On the foundation of Megalopolis, in n. c. 371, the inhabitants of Trapezus refused to move to the new city; and having thus incurred the anger of the other Arcadians, they quitted Peloponnese, and took refuge in Trapezus on the Pontus Euxinens, where they were received as a kindred people. The statues of some of their gods were removed to Megalopolis, where they were seen by Pausanias. Trapezus stood above the modern Morra. (Paus. viii. 5. § 4, 27; §§ 4—6, viii. 29. § 1, 31, § 5; Herod. vi 127; Steph. B. e. r.) Leake, Morea, vol. ii. p. 292; Ross, Reisen im Peloponnes, vol. i. p. 90.)

TRAPEZUS MONS. [TAURICA CHERSONENSIUM.]

TRA'RIUM (Tpaeioi, a town of Etruria, mentioned by Strabo in conjunction with Perperena (xxii. 607.) Textes (ad Lycochr. 1141, 1159) mentions a mountain named Taron (Tpaeioi) in the Traud. TRASIMENUS LACUS, an ancient lake in the Traus or Trausoea or Trausoea, h) Trausoea (Lat. Pol. Lago di Perugia), one of the most extensive and important of the lakes of Etruria, situated between Cortona and Perugia. It is the largest of all the lakes of Etruria, being about 10 miles in length by 8 in breadth; and differs from all the other considerable lakes of that country in not being of volcanic origin. It is merely formed in a depressed basin, surrounded on all sides by hills of moderate elevation, and having no natural outlet on the N. side of the lake, which extends fromero to Perugia, are considerably more elevated than those that form the other sides of the basin, but even these scarcely rise to the dignity of mountains. The lake itself is of small depth, nowhere exceeding 30 feet, and its banks are almost everywhere low, flat, and covered with reeds. No con-
siderable town was situated on its shores: Perusia, from which it derives its modern name of the Lago di Perugia, stands on a lofty hill about 10 miles to the E. of it; Clusium is situated about 9 miles to the SW., and Cortona between 6 and 7 to the NW. The highroad from Arretium to Perusia followed the northern shore of the lake for a considerable distance.

The lake Trasimenum derives its chief celebrity from the great victory obtained upon its shores by Hannibal over the Roman consul, C. Flaminius, u. c. 217; one of the greatest feats of arms in history. The lake is situated on the southern slope of the Apennines, and the object was to draw him into a general battle, moved along the upper valley of the Arno, and passing within a short distance of the consul's camp, advanced along the road towards Rome (i. e. by Perusia), laying waste the country as he advanced. Flaminius on this hastily broke up his camp, and followed the Carthaginian army, Hannibal had already passed the city of Cortona on his left, and was advancing along the N. shore of the lake, which lay on his right hand, when, learning that Flaminius was following him, he determined to halt and await his attack, taking advantage of the strong position which offered itself to him. (Pol. iii. 82; Liv. xxi. 4.) The hills which extend from Cortona to the lake, called by Livy the "montes Cortonenses," and now known as the Monte Guadandro, descend completely to the bank of the lake, or at least to the marshes that border it, at a point near the NW. angle of the lake, now marked by a village and a round tower called Borghetto. This spur of the hills with his army at Albe, lay on the northern side of the lake from the plains below Cortona, and it is not until after surmounting it that the traveller by the modern road comes in sight of the lake, as well as of the small plain or valley, shut in between its N. shore and the Guadandro, which was the actual scene of the catastrophe. Arrived at the highest point of the road, the traveller has a partial view of the fatal plain, which opens fully upon him as he descends the Guadandro. He soon finds himself in a vale, enclosed to the left, and in front, and behind him by the Guadandro hills, bending round in a segment larger than a semicircle, and running down at each end to the lake, which oblique to the right and forms the chord of this mountain arc. The position cannot be guessed at from the plains of Cortona, nor appears to be so completely enclosed, unless to one who is fairly within the hills. It then indeed appears a place made as it were on purpose for a snare, "locus insidias natus." (Liv. xxi. 4.) Borghetto is then found to stand in a narrow marshy pass close to the hill and to the lake, whilst there is no other outlet at the opposite turn of the mountains than through the little town of Passignano, which is pushed into the water by the foot of a high rocky acclivity. There is a woody eminence branching down from the mountains into the upper end of the plain nearer to the site of Passignano, and on this stands a village called Torre. (more properly Tuoro). (Hobhouse, Notes and Illustrations to Childs Harold, cantos iv. st. 63.)

From this description of the localities by an eye-witness, which agrees almost exactly with that given by Livy (xxii. 4), the details of the battle are rendered clearly. Hannibal occupied the hill last-mentioned with the main body of his troops, his heavy-armed African and Spanish infantry, while he sent round his light-armed troops to occupy the slopes of Monte Guadandro on his right, so as to threaten the left flank of the advancing Roman army, while he posted his cavalry and the Gaulish troops on the hills on the left between Borghetto and the present road. Flaminius advanced the next morning almost before daylight, while a thick fog rising from the lake still further concealed the position of the enemy. He therefore advanced through the pass, in ignorance of the bodies of troops that hung upon both his flanks, and, seeing only the array in front on the hill of Tuoro, began to draw up his forces for battle in the plain in front of them. But before he was able to commence the engagement, he found himself suddenly attacked on all sides at once: the surprise was complete, and the battle quickly became a mere promiscuous massacre. Flaminius himself fell early in the day, and numbers of the Roman troops were driven into the lake, and either perished in its waters or were put to the sword by the enemy's cavalry. A body of about 5000 men having forced their way through the lake, occupied a hill on which there stood an Etruscan village, but finding themselves wholly isolated, surrendered the next day to Maharbal. Sixteen thousand Roman troops perished in this disastrous battle: the site of the chief slaughter is still marked by a little rivulet which traverses the plain, and is known at the present day by the name of the Sangiaceto. (Hobhouse, l.c.) The details of the battle are given by Polybinus (iin. 83, 84) and Livy (xxii. 4–6). It is remarkable that in this instance the localities are much more clearly and accurately described by Livy than by Polybinus: the account given by the latter author is not incompatible with the existing local details, but would not be easily understood, unless we were able to correct it by the certainty that the battle took place on this particular spot. The narratives of Appian and Zonaras add nothing to our knowledge of the battle. (Appian, Anab. 9, 10; Zonar. viii. 25.) Numerous allusions to and notices of the memorable slaughter at the lake of Trasimene are found in the later Roman writers, but they have preserved no additional circumstances of interest. The well-known story related by Livy, as well as by Pliny and later writers, that the fury of the combatants rendered them unconscious of the shock of an earthquake, which occurred during the battle, is easily understood without any prodigy, such shocks being frequently very local and irregular phenomena. (Flin. ii. 84. s. 86. xv. 18. s. 20; Cic. de N. D. ii. 3.

* The name of Orsaja, a village on the road from Cortona to the lake, has been thought to be also connected with the slaughter of the battle, but this is very improbable. Orsaja is several miles distant from the lake, and on the other side of the hills. (Hobhouse, l. c.) It is probable moreover that the modern name is only a corruption of Orsaja or Orsorua. (Niebuhr, Lecturae, vol. ii. p. 103.)
TRAUSI.

de Div. ii. 8; Eutrop. iii. 9; Flor. ii. 6 § 13; Oros. iv. 15; Val. Max. i. 6 § 6; Sil. Ital. i. 49, v. 1, &c.; Ovid, Fast. vii. 770; Strab. v. p. 226.)

The lake is now commonly known as the Lago di Pergina, though frequently called on maps and in guide-books the Lago Trastisino. [E. H. B.]

TRAUSI (Tryaosi, Herod. v. 3, 4; Trausi, Liv. xxxvi. 41), a Thracian people, who appear in later times at least, to have occupied the NE. of Mount Rhodope, to the W. of the Hebrus, and about Tempyra. Herodotus tells us that the Thrausis entertained peculiar notions respecting human life, which were manifested in appropriate customs. When a child was born, his kindred, sitting around him, bewailed his lot in having to encounter the miseries of mortal existence; whereas when any one died, they buried him with mirth and rejoicing, declaring him to have been freed from great evils, and to be now in perfect bliss.*

As to the Thrausi spoken of by Livy, see TEMPS.

Suidas and Hesychius (s. v.) mention a Scythian tribe called the Trausi, who, according to Steph. B. (s. v.), were the same people as the Agathysri. The last-named author speaks of a Celtic race also, bearing this appellation. On this slight foundation the strange theory has been built that the Thracian Trausi were the original stock of the Celts; and by way of supporting this notion, its propounders arbitrarily read Tryaowi instead of Pyraow in Strabo, i. p. 187, where Strabo expressly says that he was unable to state what was the original abode of the Trausi: had he been writing about the Thracian Trausi we may safely assume that to such ignorance would have been acknowledged. (Cf. Ukert, ii. 2, § 230)

TRAUS (Tryaosi, Herod. vii. 109), a small river in the S. of Thrace, which falls into the Axios Berois, a shallow estuary penetrating far into the land, NE. of Abdera. The Traurus is the principal outlet for the drainage of that part of southern Thrace which is included between the Nestus and the Hebrus.

TREBA or TREBIA. 1. (Eth. Trebans, adia: Trevi), a municipal town of Umbria, situated at the western foot of the Apennines, between Faluginium and the sources of the Clitumnus, about 4 miles from the latter. It is mentioned by Pliny among the municipal cities of Umbria, and its name is found in an inscription among the "XV Populi Umbrians" in both these authorities the name of the people is written Trebates. The Jerusalem Itinerary, which places it on the Via Flaminia, 4 miles from Sacaria (at the sources of the Clitumnus) and 5 from Faluginium, writes the name Trevis, thus approximating closely to the modern name of Trevi. The modern town is still a considerable place standing on a hill which rises abruptly from the valley of the Clitumnus. (Plin. iii. 14 s. 19; Itin. Hier. p. 613; Orell. Inscr. 98).

2. (Troya, Ptol.; Eth. Trebanss: Trevi), a city of Latium, in the upper valley of the Anio, about 5 miles from the sources of that river and 10 above Subiaco. It is mentioned both by Pliny and Frontinus, as well as by Frontinus, who calls it Treba Augustus (Plin. iii. 5 s. 9; Ptol. iii. 1 § 62; Front-

---

*Mela has followed Herodotus very closely in the following passage (ii. 2): "Luceotum apud quodam puerperiam, natique def literacy: fuerat contra festa sunt, et veluti sacra, canta husque celebrantur."
to the W.; where the town of Castellum was betrayed into his hands. Meanwhile Sempronius, who was newly arrived, after a short interval of repose, was eager for a general engagement, and his confidence was increased by a partial success in a combat of cavalry, in the plain between the Trebia and the Padus (ib. 69.) Hannibal, who on his side was equally desirous of a battle, took advantage of this disposition of Sempronius, and succeeded in drawing him out of his camp, where he could not venture to attack him, into the plain below, which was favourable to the operations of the Carthaginian cavalry and elephants. For this purpose he sent forward a body of Numidian horse, who crossed the Trebia and approached the Roman camp, but, as soon as a body of Roman cavalry and light-armed troops were sent out against them, retreated skirmishing until they had crossed the river. Sempronius followed with his whole army, and crossed the Trebia, not without difficulty, for the river was swollen with late rains, and was only just fordable for the infantry. His troops suffered severely from cold and wet, and when the two armies met in order of battle, early began to feel themselves inferior to the enemy: but the victory was decided by a body of 1000 foot and 1000 horse, under the command of Mago, the brother of Hannibal, which had been placed by that general in ambuscade, in the hollow bed of a stream which crossed the field of battle, and by a sudden onset on the rear of the Roman army, threw it into complete confusion. A body of about 10,000 Roman infantry succeeded in forcing their way through the centre of the enemy's line, but finding themselves isolated, and their retreat to their camp quite cut off, they directed their march at once towards Placentia, and succeeded in reaching that city in safety. The other troops were thrown back in confusion upon the Trebia, and suffered very heavy loss in passing that river; but those who succeeded in crossing it, fell back upon the body already mentioned and made good their retreat with them to Placentia. Thither also Scipio on the following day repaired with that part of the Roman forces which had not been engaged in the battle. (Pol. iii. 70—74.)

From the view above given of the battle and the operations that preceded it, which coincides with that of General Vaudoncourt (Campagnes d'Arnimed en Italie, vol. i. pp. 99—120), it seems certain that the battle was fought on the left bank of the Trebia, in the plain, but a short distance from the foot of the hills; while the Roman camp was on the hills, and on the right bank of the Trebia. It is certain that this view affords much the most intelligible explanation of the operations of the armies, and there is nothing in the narrative of Polybius (which has been exclusively followed in the above account) inconsistent with it, though it must be admitted that some difficulties remain unexplained. Livy's narrative on the contrary is confused, and though based for the most part on that of Polybius, seems to be mixed up with that of other writers. (Liv. xxii. 52—56.) From his account of the retreat of the Roman army and of Scipio to Placentia after the battle, it seems certain that he considered the Roman camp to be situated on the left bank of the river, so that Scipio must necessarily cross it in order to arrive at Placentia, and therefore he must have conceived the battle as fought on the right bank; and this view has been adopted by many modern writers, including Niebuhr and Arnold; but the difficulties in its way greatly exceed those which arise on the contrary hypothesis. Niebuhr indeed summarily disposes of some of these, by maintaining, in opposition to the distinct statements of Polybius, that Hannibal had crossed the Padus below Placentia, and that Sempronius joined Scipio from Gonna and not from Ariminum. Such arbitrary assumptions as these are worthless in discussing a question, the decision of which must rest on the evidence, on the authority of Polybius. (Niebuhr's Lectures on Roman History, vol. ii. pp. 94—96; Arnold, Hist. of Rome, vol. iii. pp. 94—101.) Cramer adopts the views of General Vaudoncourt. (Anct. Italy, vol. i. p. 82.)

The battle on the Trebia is alluded to by Lucan, and described by Silvius Italicus: it is noticed also by all the epitomisers of Roman history; but none of these writers add anything to our knowledge of the details. (Lucan, ii. 46; Sil. Ital. iv. 238—244; Nep. Hanno. 4; Rem. 499; Oros. iv. 14; Flor. ii. 6, § 12.)

TREBULA (Trebiolus, Eth. Trebalanus; Trebula, a city of Campania, situated in the district N. of the Vultures, in the mountain tract which extends from near Cosa (Calatia) to the Via Latina. Pliny terms the citizens "Trebalani cognomine Balienienses," probably to distinguish them from those of the two cities of the same name among the Sabines (Plin. iii. 5. s. 9), but the Campanian seems to have been the preferable of the two, and is termed simply Trebula by statistics, as well as by Livy. The first mention of the name occurs in n. c. 303, when we are told that the Trebalani received the Roman franchise at the same time with the Arpinates. (Liv. x. 1.) There seems no doubt that the Campanian city is here meant; and this is quite certain in regard to the next notice in Livy, where he tells us that the three cities of Compulteria, Trebula, and Saticula, which had revolted to Hannibal, were recovered by Fabius in b. c. 215. (Id. xxii. 39.) The "Trebula magister" is mentioned also by Cicero among the fertile districts of Campania, which Ennius proposed to distribute among the poorer Roman citizens (Cis. de Leg. Agr. ii. 25); and we learn from Pliny that it was noted for its wines, which had rapidly risen in estimation in his day. (Plin. xiv. 6. s. 8.) The Liber Columbarum also mentions Trebula among the municipal towns of Campania. It appears to have received a fresh body of settlers under Augustus, but was only a village in the Early Imperial period (Cod. Col. p. 238; Plin. iii. 5. s. 9; Prov. iii. 1. § 88.) The site of Trebula, which was erroneously fixed by conermers and some local writers to the S. of the Vultures, appears to be correctly identified by local antiquarians with a place called Trequila or Treghina, at the foot of the Pizzo S. Salvatore, about 6 miles N. of the Vultures and 8 NE. of Capua. There are said to be considerable ancient remains upon the spot, which together with the resemblance of name would probably give a clue to the position of the ancient city. (Romanci, vol. iii. pp. 575, 576; Trutta, Antichità Allilune. Diss. xxiii; Abeken, Mitt. Italien, p. 99.)

TREBULA (Trebiolus, Eth. Trebalanus) was the name of two cities or towns of the Sabines, apparently at no great distance from one another, which were called for the sake of distinction Trebula Mutusca and Trebula Sulfiana.

1. TREBULA MUTUSCA, called by Virgil simply Mutusca, while the full name is preserved to us by Pliny, the only author who mentions both places ("Trebalani qui cognominabantur Mutuscae, et qui
TREIA. Suffenas," Flin. vii. 12, a. 17). Its site is clearly fixed at Monte Leone, sometimes called Monte Leone della Sabina, a village about 2 miles to the right of the Via Salaria, between Osteria Nuova and Poggio S. Lorenzo. Here there are considerable ruins, including those of a theatre, of thermae or baths, and portions of the ancient pavement. Several inscriptions have also been found here, some of which have the name of the people, "Plebs Trebulana," "Trebalvanii Mutucanii," and "Trebalvanii Mut.," so that no doubt can remain of their attribution. (Chauzy, Maison d'Hercule, vol. ii. pp. 92—96; Orell. Inscr. 923, 3442, 3963.) As this seems to have been much the most considerable place of the two, it is probably that meant by Strabo, who mentions Trebula without any distinctive adjunct but in conjunction with Eretum (Strab. v. p. 228). The Liber Columarianus also mentions a "Tribule, municipium" (p. 258) which is probably the same place. Martial also alludes to Trebula as situated among cold and damp mountain valleys (v. 72), but it is not certain which of the two places he here refers to. Virgil speaks of Mutusca as abounding in olives ("cliviteraque Mutuscanus," Aen. viii. 711), which is still the case with the neighbourhood of Monte Leone, and a village near it bears in consequence the name of Olivetum.

2. TREBULA SUFFENAS, the name of which is known only from Pliny, is of very uncertain site. Chauzy would place it at Rocca Spinabelli, in the valley of the Taverno, but this is mere conjecture. Guattani on the other hand fixes it on a hill named Stroncone, between Rieti and Terni, where there are said to be distinct traces of an ancient town. (Chauzy, l.c.; Guattani Mom. della Sabina, vol. i. p. 190.) It is probable that the Tribula (Tribuia) of Dionysius, mentioned by him among the towns assigned by Varro to the Aborigines (Dionys. l. 14) may be the same with the Trebula Suffenas of Pliny. In this case we know that it could not be far from Rente. [E. H. B.]

TREIA (Eth. Treiensis; Ru. near Treja), a municipal town of Etruria, situated on the left bank of the river Potentia, about 9 miles below Septempeda (S. Severino) and 5 above Rieti. Pliny is the only geographer that mentions it; but it is probable that the Tavaria of Potenly is only a corruption of its name. (Plin. iii. 13. 8; Ibid. iii. 1. § 52.) The Treienses are enumerated by Pliny among the municipal communities of Etruria, and the municipal rank of the town is further attested by several inscriptions. (Orell. Inscr. 516, 3899.) It seems indeed to have been a considerable place. The History of Antoninus places it on the branch of the Via Flaminia which led direct to Ancena: it was 9 miles from Septempeda and 18 from Ausium. (Itin. Ant. p. 312.) Cluverius says that he could find no trace either of the place or the name; but the ruins were pointed out by Holsteinus as still existing on the left bank of the Potenza, 93, at the foot of the hill occupied by the village of Monteclisio. The latter place has since adopted the ancient name of Treja, and having been augmented by the population of several neighbouring villages, is now become a considerable town. (Cluver. Ital. p. 738; Holsten. Not. ad Clus. p. 136.) [T. H. B.]

TREMERUS INS. [DIOMEDEAE INSULAE.]

TREMITHUS (Tremitiobos, Steph. B. s. v.; Tremitios, Ptol. v. 14. § 6; Tripitaca, Constant. de Them. l. 15. p. 99, ed. Boer; Tremithus, Hieroc. p. 707; Eth. Tremithos, Tremithaion), a town in the interior of Cyprus, was the seat of a bishopric and a place of some importance in the Byzantine times. According to the Pewtinger Table it was 18 miles from Salamis, 24 from Famagusta, and 24 from Tamassus. Stephanus B. calls it a village of Cyprus, and derives its name from the turpentine trees (ρηπιθένων) which grew in its neighbourhood. (Engel, Kypros, vol. i. p. 148.)

TREMULA, a town in Mauretania Tingitana. (Itin. Ant. p. 24.) Variously identified with Ezaulchen and Sce el Campa. [T. H. B.]

TREMONTIUM or THIPUNTIUM, a place on the Appian Way near the entrance of the Pontine Marshes, 4 miles nearer Rome than Forum Appii. It is not mentioned as a station in the Itineraries, but we learn from an inscription of the time of Trajan that it was from thence the part of the road which was restored by that emperor began. This important work, as we are informed by another inscription, was continued for twenty miles, a circumstance that explains the origin of the name of DECENNOTIUM, which occurs at a later period in connection with the Pontine Marshes. Ptolemy calls the Decennovium a river; but it is evident that it was in reality an artificial cut or canal, such as must always have accompanied the highroad through these marshes, and as we know already existed in the days of Heracle from Forum Appii. The importance of this work will account for the circumstance that we find the Pontine Marshes themselves called by Cassiodorus "Decenniariis Patales." (Cassiod. Var. ii. 32, 33; Procop. R. G. i. II.) The site of the Tremontium is clearly marked at a distance of 39 miles from Rome, by the name of Torre di Tremonti, together with the remains of the 3 ancient bridges, from which it derives its name (Chauzy, Maison d'Hercule, vol. iii. pp. 387—392; D'Anville, Analyse de l'Italie, pp. 184—187.)

The inscriptions above cited are given by Sir R. Hoare, Clas. Tour, vol. i. pp. 97, 98; and by the Aloc Chauzy (l. c.). The name of Decennavi- tor, found in Strabo (v. p. 237) among the cities on the left of the Appian Way, can hardly be other than a corruption of Tremonti, but it is wholly out of place in that passage, and is supposed by Kramer to be an interpolation. [E. H. B.]

TRESES (Tripes), a people repeatedly mentioned by Strabo, generally as a tribe of, or at least as closely connected with, the Cimmerii, but in a few passages as Thracians. They are not named by Himer or Herodetus. Strabo was evidently undecided whether to regard them as a distinct race, or as identical with the Cimmerii, in whose company they several times made destructive inroads into Asia Minor. "The Cimmerii, whom they name Treces also, or some tribe of them, often overran the southern shores of the Euxine and the adjoining countries, sometimes throwing themselves upon the Paphlagonians, at other times upon the Phrygians, at the time when they say Mithradates from drinking bull's blood. And Lygdamis led his army as far as Lydia and Ionia, and took Sardes, but perished in Cilicia. And the Cimmerii and Treces often made such expeditions. But they say that the Treces and Cobus [their leader] were at last driven out [of Asia] by Madyes, the king of the Scythians." [Strab. i. p. 61.] * Callathines states —

* The reading in the text is with Μάδοις δότω τοῦ τῶν Κυμαίων Βασιλέως, but as just before we find Μάδοις τοῦ Σκότους, we can have no hesita-
that Sardes was taken several times; first by the Cimmerian; then by the Treres and Lyceans, as Callinus also shows; lastly in the time of Cyrus and Croesus." (Id. xiii. p. 627). "In olden times, it befel the Magnets [the people of Magnesia on the Maeander] to be utterly destroyed by the Treres, a Cimmerian tribe." (Id. xiv. p. 647; see also xi. p. 511, xii. p. 573; Clemmehi, Vol. I. p. 623, seq.; Müller, Hist. Lit.Asia, Greece, pp. 108, 109; and cf. Herod. i. 6, 15, 16, 103.)

Various attempts have been made to fix the dates of these events; but the means of doing so appear to be wanting, and hence scholars have arrived at very different conclusions on the subject. Strabo infers from some expressions of Callinus that the destruction of Sardes preceded that of Magnesia, which latter occurred, he considers, after the time of that poet, and during the age of Archilochus, whom alludes to it.

Tucydides (ii. 96) states that the kingdom of Sitalkes was bounded on the side next to the Triballi by the Treres and Titalai, who dwelt on the northern slope of Mount Scoumbus (Scomius), and extended towards the W. as far as the river Ossius (Oseus). Whether this relative clause applies to the Treres as well as to the Titalai is doubtful; but the collocation of the words seems to confine it to the latter.

Strabo (i. p. 59) speaks of the Treres as dwelling with the Thracians; and says that the Treres, who were Thracians, possessed a part of the Troad after the time of Priam (xii. p. 556).

Pliny does not mention the Treres as a Thracian people; but in the description of Macedonia (iv. 10. s. 17), says that they, with the Dardani and Pieres, dwell on its borders; it is not clear, however, which borders are meant. (Cf. Theopom. Frag. 313, where they are called Τρετος; and Steph. B. p. 664, where also a district of Thrace inhabited by them is named Τρετος.)

It is possible that these Thracian Treres were the descendants of a body of the Cimmerian Treres, left N. of the Haemus when the main body advanced to Asia Minor; for there can be little doubt that Niebuhr's view respecting the course of their inroads is correct. "The general opinion, which is presupposed in Herodotus also, is that the Cimmerians invaded Asia Minor from the E., along the coasts of the Euxine. But it would seem that, on the contrary, they came through Thrace, for they make their first appearance in Ionia and Lydia. The former road is almost entirely impassable for a nomadic people, as the Caucasus extends to the very shores of the Euxine." (Lect. Aec. Hist. i. p. 32, note.)

In confirmation of the conjecture above made, we may refer to the parallel case mentioned by Caesar (B. G. ii. 29), that the Adaeatae, a Belgian tribe, were the descendants of the 6000 men whom the Cimbri and Teutoni, on their march towards Italy, left behind them W. of the Elbe, to guard that part of their property which they were unable to take with them any farther. [J. R.]

TREBUR (Τρετός, Strab. iv. 626), a river of Latium, and one of the principal tributaries of the Liris (Garigliiano), into which it discharges its waters close to the ruins of Fabrateria. (Strab. v. p. 237.)

Its name is mentioned only by Strabo, but there is no doubt of its identification; it is still called the

Trotum in the lower part of its course, near its junction with the Garigliano, but more commonly known as the Sacco. It has its sources in the elevated plain which separates the mountains about Praeneste from the Velscian group; and the broad valley through which it flows for about 40 miles before it joins the Garigliano must always have formed a remarkable feature in this part of Italy. Through its extent it separates the main or central ranges of the Apennines from the outlying mass of the Monti Lepini or Velscian mountains, and hence it must, from an early period, have constituted one of the natural lines of communication between the plains of Latium proper (the modern Campagna di Roma) and those of Campania. After the whole district had fallen under the power of Rome it was the line followed by the great highway called the Via Latina (Ant. Lat. i. 12; E. H. 383).

TRES ARBORES, the Three Trees, was a Mutation or relay for horses mentioned in the Jerusalem Itin., between Vassatae and Elusa (Eusebius). The site is unknown. [G. L.]

TRES TABERNAE, was the name of a station on the Via Appia, between Arcia and Forum Appii, which is noticed not only in the Itineraries (Itin. Ant. p. 107; Tob. Peut.); but by Cicero and in the Acts of the Apostles. From the former we learn that a branch road from Antium joined the Appian Way at this point (Cic. ad Att. ii. 12); while in the latter it is mentioned as the place where many of the disciples met St. Paul on his journey to Rome. (Acts, xxviii. 15.) It was probably therefore a village or place of some importance from the traffic on the Appian Way. Its position would appear to be clearly determined by the Antonine Itinerary, which gives 17 miles from Arcia to Tres Tabernae, and 10 from thence to Forum Appii: and it is a strong confirmation of the accuracy of these data, that the distance thus obtained from Forum Appii to Rome corresponds exactly with the true distance of that place; marked by ruins and ancient milestones. It is therefore wholly unnecessary to change the distances in the Itinerary, as proposed by D'Anville and Chaupy, and we may safely fix Tres Tabernae at a spot about 3 miles from the modern Ceterna, on the road to Terracina, and very near the commencement of the Pontine Marshes. The Abbé Chaupy himself points out the existence of a track which remains to this day, which he supposes to be that of the station Ad Sponsas mentioned only in the Jerusalem Itinerary. It is far more likely that they are those of Tres Tabernae; if indeed the two stations be not identical, which is very probable. This situation would also certainly accord better than that proposed by Chaupy with the mention of Tres Tabernae in Cicero, who there joined the Appian Way on his road from Antium to his father's villa, not to Rome. (Cic. ad Att. ii. 12, 13, 14; Appian, Mapp. Herc., vol. i. p. 250; D'Anville, Analyse de l'Italie, p. 195; Westphal, Rom. Kaiserzeit, p. 69.) [E. H. B.]

TRES TABERNAE, in Gaul. [TABERNAE.]

TRETA (Τρήτα, Strab. xiv. p. 683), in Cyprus, called Τρήτων in the Stadiasmus Maris Magni (p. 283, ed. Hoffmann), where it is placed 50 stadia from Palaephasus or Old Pafusus, was apparently a promontory in the SW. of the island, and probably the same as the one called Ψυκρίων by Ptolemy (v. 14. § 5).

TRETEM (Τρήτων Σκεπασμός, Pol. iv. 3, § 3), a
TRETUM PROM. 

promontory of Numidia at the W. point of the Sinus Ghismites. (Strab. xvii. p. 829, 832.) It probably derived its name from the numerous caves in the cliffs, which are still the landmarks of the piratical tribes of this coast. Now Sidiha Ros. [T. H. D.]

TRETUM PROM. (Tyrpúr, Stat. Arm., § 277), the NW. promontory of Crete now called Grabia, the Conyves of Ptolemy. [E. B. J.]

TRETUS. (Argos, p. 201, b.)

TREVA (Topoidea), a town of the Saxones in north-western Germany (Polk. ii. 11. § 27), which must have been situated somewhere on the Trave, but as no further details are known, it is impossible to fix its site with any degree of certainty. [L. S.]

TREVENTUM or TEREVENTUM (Ebd. Treventinæ, Plin., but inscriptions have Trevorintins and Tereventiæ: Tivento), a town of Samnium, in the country of the Pentri, situated on the right bank of the Trunis (Trigno), not far from the frontiers of the Fructi. Its name is not noticed in history, but Pliny mentions it among the municipal towns of Samnium in his time, and we learn from the Liber Coloninarum that it received a Roman colony, apparently under the Trimvirate (Plin. iii. 14. s. 17; Lib. Col. p. 238). It is there spoken of as having been thrice besieged ("ager ejus ... post tertiam obsidieron designatus est"), probably during the Social War and the civil wars that followed; but we have no other account of these sieges; and the name is not elsewhere mentioned. But from existing remains, as well as inscriptions, it appears to have been a place of considerable importance, as well as of municipal rank. The modern Tivento, which is still the see of a bishop and the capital of the surrounding district, stands on a hill above the river Trigno, but the ruins of ancient buildings and fragments of masonry are scattered to a considerable extent through the valley below it. (Romanelli, vol. ii. p. 473.) The inscriptions which have been discovered there are given by Mommsen (Inscr. R. N. pp. 269, 270).

TREVIRI or TREVIRI (Tepurici, Trepuculi, Potl.). There is authority for both forms of the name. The position of the Treviri is determined by several passages of Caesar. The Treviri bordered on the Rhine (B. G. iii. 11, iv. 10), and south of them along the Rhine were the Treboci or Tribocci. The Arduenna Silva extended through the middle of the territory of the Treviri from the Rhine to the commencement of the territory of the Remi (B. G. v. 3). The Treviri were separated from the Germans by the Rhine (B. G. vii. 63, viii. 25); the Ultsi were their neighbours on the opposite side of the Rhine (B. G. vi. 29, 35). In Caesar's time the Treviri differed little from the Germans in their way of living and their savage temper. Tacitus remarks (de Mor. Germ. c. 28) that the Treviri and Nervii affected a Germanic origin, and it is probable that the Treviri were mixed with Germans, but Caesar supposed them to be a Gallic people. Mela (iii. 2) calls them the most renowned of the Belgae. When Hieronymus speaks of the resemblance between the language of the Galatæa of Asia and of the Treviri, he means to say that the Treviri are Galli (Galattia, Vol. i. p. 931). Strabo (iv. p. 194) speaks of the Nervii as being German. He says: "The Nervii are neighbours of the Treviri, and they (the Nervii) are also a German people;" which remark about the Nervii being also German does not refer to the Treviri, but to the Treboci, whom he had just spoken of as a German nation which had settled on the Gallic side of the Rhine.

TREVIDON.

It seems impossible to determine whether Caesar includes the Treviri among the Belgae or the Celtae. Some geographers include them in the Gallia of Caesar in the same districts that is, in the country of the Celtae, which lay between the Germanic and the Scirn, and between the Ocean and the Rhine. If this determination is correct, the Mediomatrici also of course belong to Caesar's Gallia in the limited sense. [Mediomatrici.]

The Treviri are often mentioned by Caesar, for they had a strong body of cavalry and infantry, and often gave him trouble. From one passage (B. G. vi. 32.9) it appears that the Segni and Condriti, German settlers in Gallia, were between the Treviri and the Eburones; and the Condriti and Eburones were dependents of the Treviri (B. G. iv. 6). Caesar constructed his bridges over the Rhine in the territory of the Treviri (B. G. vi. 9); and Strabo speaks of a bridge over the Rhine in the territory of the Treviri. It appears then that the Treviri occupied a large tract of country between the Meuse (Meus) and the Rhine, which country was intersected by the lower course of the Mosel (Menus), for Augusta Trevirorum (Trier), on the Mosella, was the chief town of the Treviri in the Roman imperial period and probably a town of the Treviri in Caesar's time. It is not possible to fix the exact limits of the Treviri on the Rhine, either to the north or the south. When the Germans were settled on the west side of the Rhine by Agrrippa and after his time, the Treviri lost part of their territory; and some modern writers maintain that they lost all their country on the Rhine, a conclusion derived from a passage of Pliny (iv. c. 17), but a conclusion by no means certain. Another passage of Pliny, cited by Suetonius (Calig. c. 8), says that Caligula was born "in Treveris, vice Ambianitcum, supra Confluentes," and this passage places the Treviri on the Rhine. Ptolemy in his geography gives the Treviri no place on the Rhine: he assigns the land on the west bank of the river to the Germania Inferior and Germania Superior. The bishopric of Trier used to extend from the Meus to the Rhine, and along the Rhine from the Ahr below Andernach as far south as Bingen. The limits of the old country of the Treviri and of the diocese may have been the same, for we find many examples of this coincidence in the geography of Gallia. The rugged valley of the Ahr would be a natural boundary of the Treviri on the north.

Tacitus gives the Treviri the name of Socii (Ann. i. 63); and in his time, and probably before, they had what the Romans called a Curia or senate. The name of the Treviri often appears in the history of the war with Civilis (Tacit. Hist. iv.). The Treviri under the Empire were in that part of Gallia which was named Belgic, and their city Augusta Trevirorum was the chief place, and under the later emperors frequently an imperial residence. [Augusta Trevirorum.]

TREVIDON, a place in Gallia, mentioned by Sidonius Apollinaris (Propempt.), the position of which is partly determined by the fact of the poet fixing Trevidon in the mountainous region of Central France, and partly by the existence of a place named Treve on the boundary of the old province of Rouergue, and on a little river named Trevedet. The mountain in which the Trevedet rises (Leucteron) is the "Vieilin minimus ben! jagum Rutenis" of Sidonius. [Ruteni.]

[G. L.]
TREVI. [Treviri.]

TRIACONTASCHENUS (Tρακοντάσχονος, Ptol. iv. 7, § 32), a district so named by Ptolemy after the analogy of the Dodecaschamnoi of Egypt, and forming the most northern part of fashionable on the W. side of the Nile, between the cataracts of that river and the Cynothian marshes. [T.H.D.]

TRIADITZA (Τριάδιτζα; Nicei. Chron. p. 214; Apost. Greg. Huds. iv. p. 43), a town in Upper Moesia, at the confluence of the sources of the Oescus, and the capital of the district called in late times Dacia Interior. It was situated in a fertile plain, and its site is identified with that of some extensive ruins N. of Sophia. [J. R.]

TRIBALLI (Τριβαλλι), a Thracian people which appears to have been in early times a very widely diffused and powerful race, about the Danube; but which, being pressed upon from the N. and W. by various nations, became gradually more and more confined, and at length entirely disappeared from history. Herodotus speaks of the Triballian plain, through which flowed the river Augrus, which fell into the Brongus, a tributary of the Ister (iv. 49). This is probably the plain of Kossovo in the modern Serbia.

Thucydides states (ii. 96) that on the side of the Triballians were independent at the beginning of the Peloponnesian War, the territory of Sitalces was bounded by the Iricres and Tilatiae, whose W. limit was the river Oescus (Oescus), which must therefore, at that time, have been the E. frontier of the Triballi. (Cf. Plin. iii. 29, iv. 17; Strab. vii. pp. 317, 318.) Strabo (vii. p. 305) informs us that the Triballi were much exposed to the inroads of migrating hordes driven out of their own countries by more powerful neighbours, some expelled by the Scythians, Bastarnae, and Sauromatae, from the N. side of the Danube, who either settled in the islands of that river, or crossed over into Thrace; others from the W., set in motion by the Illyrians.

The earliest event recorded of them is the defeat which they gave to Sitalces, king of the Odrysae, who made an expedition against them, n. c. 424, in which he lost his life (Thuc. iv. 101). In n. c. 376 the Triballi crossed the Haemus, and with 30,000 men advanced as far as S. as the territory of Abdera, which they ravaged without opposition. On their return, however, laden with booty, the people of Abdera took advantage of their careless and disorderly march, to attack them, killing upwards of 2000 men. The Triballi therupon marched back to take revenge for this loss; and the Abderites, having been joined by some of the neighbouring Thracians, gave them battle; in the midst of which they were defeated by their treacherous allies and, being surrounded, were slain almost to a man. The Triballi then prepared to lay siege to Abdera which would now have been quite unable to resist them for more than a very short time; but, at this critical moment, Chabrias appeared before the town with the Athenian fleet, which had recently defeated the Macedonian fleet at Naxos. Chabrias compelled the Triballi to retire from Abdera, and garrisoned the city when he departed. (Diod. xvi. 36.) In n. c. 339, Philip II., after raising the siege of Byzantium, marched to the Danube, where he defeated the Getae, and took much booty. On his return through the country of the Triballi, the latter posted themselves in a defile, and refused to allow the Macedonian army to pass, unless Philip gave to them a part of the plunder. A fierce battle ensued, in which Philip was severely wounded, and would have been slain, but for his son Alexander, who threw himself before his father, and thus saved his life. The Triballi were at length defeated, and probably professed submission to Philip, so long, at least, as he was in their country.

On Alexander's accession to the throne, he thought it necessary to make his power felt by the barbarians on the frontiers of his kingdom, before he quitted Europe for his great enterprise against the Persian empire. Accordingly, in the spring of n. c. 333, he marched from Aripopolis in a north-easterly direction, at the head of a large force. In ten days he reached the pass by which he intended to cross the Haemus, where a body of Thracians had assembled to oppose his progress. They were defeated, and Alexander advanced against the Triballi, whose prince, Strumno, having had timely information of Alexander's movements, had already withdrawn, with the old men, women, and children into an island of the Danube, called Peace, where many other Thracians also had sought refuge. The main force of the Triballi posted themselves in woody ground on the banks of the river Lygians, about 3 days' march from the Danube. Having ventured out into the open plain, however, they were completely defeated by the Macedonians, with a loss of 3000 men. (Arr. Anab. i. 2.) Alexander then marched to the Danube, opposite to Peace; but he was unable to make himself master of that island, because he had few boats, and the enemy were strongly posted at the top of the steep sides of the island. Alexander therefore abandoned the attempt to take it, and crossed the Danube to make war on the Getae. It would appear, however, that he had made sufficient impression on the Triballi to induce them to apply to him for peace, which he granted before his return to Macedonia. It was probably some time after these events that the Triballi were attacked by the Autariatae, a powerful Illyrian tribe, who seem to have completely subdued them, great numbers being killed, and the survivors driven farther towards the east. (Strab. vii. pp. 317, 318.) Hence, in n. c. 293, the Gauls, with only 15,000 foot and 3000 horse, defeated the combined forces of the Triballi and Getae (Aust. xxv. 1.) When the Romans began to extend their dominion in the direction of the Danube, the Triballi were a small and weak people, dwelling about the confluence of the Oescus with the Danube, near the town Oescus (cf. Ptol. iii. 10, § 10, vii. 11, § 6).

Pliny (vii. 2) states that, according to Ibligenus, there were people among the Triballi who fascinated by their look, and destroyed those whom they gazed upon too long, especially with angry eyes; adults were more liable to be injured by them than children. This is probably the same superstition as the modern one respecting the "evil eye," which is peculiarly prevalent among the Slavonian races. (Arr. Anab. i. 1 § 4, 2, § 4, seqq., 3, § 3, seqq., 4, § 6, v. 26, § 6, vii. 9, § 2; Steph. B. s. r.; Mannert, vii. § 25, seqq.)

TRIBOCI or TRIBOCCI, a German people in Gallia. Schneider (Caesar, B. G. i. 51) has the form "triboeci" in the accusative plural. Pliny has Triboci, and Strabo Triboci (Τριβοκσι). In the passage of Caesar (B. G. iv. 10) it is said that all the MSS. have "tribocorum" (Schneider, note).

The Triboci were in the army of the German king Ariviatus in the great battle in which Caesar defeated him; and though Caesar does not say that
TRIBOLA.

they were Germans, his narrative shows that he considered them to be Germans. In another passage (B. G. iv. 10) Caesar places the Triboci on the Rhine, near Strassburg, and the Mediomatrici on the Rhine, near Treviri, and he means to place them on the left or gallic side of the Rhine, Strabo (iv. p. 193), after mentioning the Sequani and Mediomatrii as extending to the Rhine, says, "Among them a German people has settled, the Tribocici, who have passed over from their native land." Pliny also (iv. 17) and Tacitus (German. c. 28) say that the Triboci are Germans. The true conclusion from Caesar is that he supposed the Triboci to be settled in Gallia before c. 58.

Potency (ii. 9, § 17) places the Triboci in Upper Germany, but he incorrectly places the Vangiones between the Nemetess and the Tribocci, for the Nemetess bounded on the Triboci. However he places the Triboci next to the Rauraci, and he names Breucconuggus (Broecconus) and Eicucus (Helcus) as the two towns of the Triboci. D'Anville supposes that the territory of the Triboci corresponded to the diocese of Strassburg. Scelto (Selt or Sete), we may suppose, belonged to the Nemetess, as in modern times it belonged to the diocese of Speyer; and it is near the northern limits of the diocese of Strassburg. On the south towards the Rauraci, a place named Markelsheim, on the southern limit of the diocese of Strassburg and bordering on that of Basle, indicates a boundary by a Tautoic name (mark), as Fines does in those parts of Gallia where the Roman tongue prevailed. The name of the Triboci does not appear in the Notit. Provinci, in which the names of the Nemetess and Vangiones are there; but instead of the Triboci we have Civitas Argentarotum (Strassburg), the chief place of the Triboci. Potency makes Argentarotum a city of the Vangiones. [G. L.]

TRIBOLA (Τριβόλα, App. Hist. 62, 63), a town of Lusitania, in the mountainous region S. of the Tagus, probably the modern Tercos. [T. H. D.]

TRIBULUM. [TRIBULUM.]

TRIBUCNI, a place in Gallia, which we may assume to have been near Concordia, for Annnianus (xvi. 12), after speaking of the battle near Strassburg, in which Chnodomaries, king of the Alamanni, was defeated by Julian, says that the king hurried to his camp, which was near Concordia and Tribunci. But neither the site of Concordia nor of Tribunci is certain. [Concordia.]

[TRIBULUM.]

TRICARA NUM. [PETRUS, p. 602, a.]

TRICASSES, a people of Gallia Lugdunensis. (Pline. iv. 18.) In Potency (ii. 8, § 13) the name is Tribes (Τριβές), and their city is Augustobona (Αὔγουστομμα). They border on the Parasii. The name appears in the form Terracissini in Annianus (xvii. 1) and in an inscription. In the Notit. Provinci, the name Civitas Tribasciun occurs; and the name of the people has been transferred to the town, which is now Troyes on the Seine, the chief town of the French department of Arde. Caesar does not mention the Tribes, and his silence has led to the conjecture that in his time they were comprised within the powerful state of the Sequani. [G. L.]

TRICASTIINI (Τρικαστίινοι), a Gallic people between the Rhone and the Alps. Livy (v. 34) describing the march of Bellovaci and his Galli into Italy, says they came to the Tribasciun; "The Alps next opposed them;" from which it is inferred that the Tribasciun were near the Alps. But nothing exact can be inferred from the narrative, nor from the rest of this confused chapter. In the description of Hannibal's march (Livy. xxi. 34) it is said that Hannibal, after settling the disputes of the Allobarges, being now on his road to the Alps, did not make his march straight forward, but turned to the left into the territory of the Tribasciun, and from the country of the Tribasciun he went through the utmost part of the territory of the Vosciuni into the country of the Triboci, and finally reached the Dracioi (Durans). It would be out of place to examine this question fully, for it would require some pages to discuss the passages in Livy. He means, however, to place the Tribasciun somewhere between the Allobarges and part of the border of the Vosciuni territory. The old capital of the Vosciuni is Dea Vostorum, or Die in the department of Drome; and the conclusion is that the Tribasciun were somewhere between the Isara (Iure) and the Druna (Drome). This agrees with the position of Augusta Tricastinorum (Augusta Trincastino- rum) as determined by the Rhine.

Potency (ii. 10, § 13) places the Tribasciun east of the Segalianni, whose capital is Valenti, and he names Sallia as the capital of the Tribasciun a town Nearcunus, which appears to be a different one from Augusta Tricastinorum. D'Anville places the Tribasciun along the east bank of the Rhone, north of Aracous (Orange), a position which he fixed by his determination of Augusta Tricastinorum: and he adds, "that the name of the Tribasciun has been preserved pure in that of Tribasciun." But the Tribasciun of Livy and Potency are certainly not where D'Anville places them. [G. L.]

TRICCA (Τρίκκα), Ed. (Τρίκκας, Trikkoio!, an ancient city of Tesaly in the district Histiaeotis, which has been named after the city of the Tribociun. (Strab. i. p. 438, xiv. p. 647.) This city is said to have derived its name from Tricca, a daughter of Peneus. (Steph. B. s. v.) It is mentioned in Homer as subject to Podealeiri and Mahaon, the two sons of Asclepius or Aesculapius, who led the Tribasciun to the Trojan War (Hom. II. ii. 729, iv. 202), and it possessed a temple of Asclepius, which was regarded as the most ancient and illustrious of all the temples of this god. (Strab. i. p. 437.) This temple was visited by the sick, whose cures were recorded there, as in the temples of Asclepius at Epidaurus and Cos. (Strab. viii. p. 374.) There were probably physicians attached to the temple; and Leake gives an inscription in four elegaic verses, to the memory of a "god-like physician named Cimber, by his wife Androame," which he found upon a marble in a bridge over the ancient Lethaenus. (Northern Greece, vol. iv. p. 285.) In the edict published by Polybiospeus and the other generals of Alexander, after the death of the latter, allowing the exiles from the different Greek cities to return to their homes, those of Trieca and of the neighbouring town of Pharracia were excepted for some reason, which is not recorded. (Bod. xviii. 56.) Trieca was the first town in Tesaly at which Philip V. arrived after his defeat on the Aenus. (Livy. xxxii. 13.) Trieca is also mentioned by Liv. xxxvi. 13; Plin. iv. 8. 15; Ptol. iii. 13, § 44; Them. Orat. xxvii. p. 333.

Procopius, who calls the town Trikuci (Тρικχίου), says that it was restored by Justinian (de Aedif. iv. 3); but it is still called Trica by Hierocles (p. 642) in the sixth century, and the form in Justinian may be a corruption. In the twelfth century it already bears its modern name Tpavcic (Triaca). Anna Comn. v. p. 97, ed. Paris.; Enskith. ad II. ii. p.
TRICCIANA, a place in Pamonia, in the valley called Cariniana (It. Ant. p. 267). It is probably the same as the Garticiana noticed in the Peut. Table, as the difference in the statements about the distances amounts only to 2 miles. [L. S.]

TRICCIASMAE, in Gallia, one of the places mentioned by Ammianus Marcellinus (xviii. 2) in the list of these places along the Ilenian frontier which Julian repaired. Ammianus mentions Tricesiamae between Quadriburgium and Novesium. [Quadrriburgium.] [G. L.]

TRICESIMUM, AD, in Gallia. D'Anville observes that the ancient Itins contain many positions with similar names, which names of places are derived from the distances which they indicate from the principal towns; for the distances within the dependent territory were measured from the principal towns. This Tricesiagma is measured from Narbo (Narbonne), as the Jerusalem Itin. shows, on the road to Touloud, through Caroinas. The name, on the canal of Languedoc may represent the name; and Tricesiagma may be near that place. [G. L.]

TRICHIOMUS LACUS. [Aetolia, p. 64, a.] TRICHIOMUS (THYKKnJLV: ETH. TRICHIENNVS), a town of Aetolia, from which the lake Trichionis derived its name. [Respecting the lake, see Vol. I. p. 64, a.] Its position is uncertain. Leake places it S. of the lake at a place called Garula, and Kiepert, in his map E. of the lake. But since Strabo mentions it along with Stratus as situated in a fertile plain, it ought probably to be placed N. of the lake (Strab. x. p. 450; Pol. v. 7; Steph. B. s. v.). It was evidently a very ancient place, and several natives of this town are mentioned in history. (Pol. iv. 3, v. 13, xvii. 10; Paus. ii. 37. § 3; Leake, Northern Greece, vol. i. p. 155.)

TRICOLOUS. [MEGALOLOUS, p. 309.]

TRICOMIA (THYKOMIA), a place in the eastern part of Phrygia, on the road from Dorylaemon to Apamea (Orelli, lvi. 391). (Ptol. ii. 2 § 22; I. T. Rieu.) is placed by the Table at a distance of 28,425 miles from Mideaum and 21 from Pessinus. [L. S.]

TRICORIIL (TRIKORei), a people between the Rhone and the Alps. Hannibal in his march from the Rhone to the Alps passed into the country of the Tricori, as Livy says [TRICANTII]. Strabo (iv. pp. 185, 203) says in one passage that above the Cavares are "the Venticelli and Tricori and Ionii and Meduli," from which we learn that he considered the Tricori as neighbours of the Venticelli; and in another passage he says, "after the Venticelli are the Ionii and Tricori, and next to them the Meduli, who occupy the highest summits of the Alps." Some geographers conclude that the Tricori must lie on the Drac, a branch of the Iare, in the southern part of the diocese of Gròude, but if the Tricori were in the valley of the Drac, we do not therefore admit that Hannibal’s march to the Alps was through that valley. [G. L.]

TRICORNIA. [TRICORNIVM.] TRICORNIA (THYKOKpT), Ptol. iii. 9. § 3), or TRICORNIA CASTRA (Itin. Hieros, p. 564), a town in the territory of the Tricorinensi, a people of Upper Moesia, on the borders of Illyria. Variously identified with Ritepl and Tricorni or Koloubae. [T. H. D.]

TRICORYTHUS [MARAITION.] TRICORHANA (THYKHpHANA), an island off the coast of Hermonitis in Argolis (Paus. ii. 34. § 5), perhaps the same as the Thaerennus of Pliny. [Thaerennus.] [Phoen. p. 595.]

TRIDENTINI (Thdp'terins), an Alpine tribe occupying the southern part of Rhaetia, in the north of Lucus Beaucus, about the river Athesis. (Strab. iv. p. 204; Plin. iii. 23.) They, with many other Alpine tribes, were subdued in the reign of Augustus. [L. S.]

TRIDENTUM or TRIDENTE (Thd'derine; Trento or Trent), the capital of the Tridentini in the south of Rhaetia, on the eastern bank of the Athesis, and on the highroad from Verona to Veldinum. (Plin. ii. 23; Justin, xx. 5; J. Ant. pp. 275, 281; Paul. Disc. i. 2, iii. 9, iv. 42, v. 36; Flor. iii. 3; Ptol. iii. 1. § 31; Tab. Peut.) The town is said to have derived its name from the trident of Neptune, which is still shown fixed in the wall of the ancient church of S. Vigil. The place seems to have been a Roman colony (Orelli, Inscrip. Nos. 2183, 3744, 3905, 4225). Theodoric the Great surrounded Tridentum with a wall, of which a considerable portion still exists. (Orelli, Pol. 287.) Grenen, der Röm. Heerstrasse von Verona nach Augsburg, p. 28, fol.; Benedetto Giovannielli, Descorso sopra l'iscrizione Trevuntina, Trento, 1824, and by the same author, Trento, Citta de' Rege e Colonia Romana, Trento, 1825.) [L. S.]

TRIÈRES (TRI€R€S, Polyb. v. 68; Strab. xvi. p. 754), a small fortified place in Phoenicia, on the northern declivity of Lebanon, and about 12 miles distant from Tripolis. It is in all probability the same place as the Triais of the Itin. Hierosol. (I. 583). Itape identifies it with Einy, others with Beulmont. [T. H. D.]

TRIÈTRUM (TRI€TRV or TRI€TRV &amp;quot, Ptol. iv. 3. § 13), a headland of the Regio Syrtica in Africa, Propria. Birker (Erolk. i. p. 928) identifies it with the promontory of Cephyalae mentioned by Strabo (xvii. p. 836), the present Cape Cafalo or Messoroa. Poluney indeed mentions this as a separate and adjoining promontory; but as Cafalo still exhibits three points, it is possible that the ancient name may be connected, and refer only to this one cape. (See Buques, Letters from the Mediterraneum, i. p. 18; Delia Cella, Viaggio, p. 61.) [T. H. D.]

TRIFANUH. [VENCIA.

TRIGABOLI. [PADUS.]

TRIGISAMUM, a town of Neronium, mentioned only in the Peutinger. Table, as situated not far from the mouth of the river Trigisamus (Trasum), which flows into the Danubius. It still bears the name of Traism. (See Moehl, Noricum, vol. i. p. 205.)

TRIGLYPHON (TRIGLYPON YO or TRIGLIFON, Ptol. vii. 2. § 23), the metropolis and royal residence (Basilinon) of Ciluria, a district in the NE. corner of the Ily. of Bengal. It is doubtless the present Tipperah (Ripinura), which is situated on the Gomuti (Gonaut), a small river which flows into the Brahmaputra near its mouth. [V.]

TRIGUNDUM, a place in the territory of the Calliiaci Lacedaemon, in Galliaecia. (Hispania Tarraconensis, Itin. Ant. p. 424.) Variously identified with Dercos and Arandon. [T. H. D.]
TRILEUCEM.

TRILEUCEM (Αγιος τον Τριλεύκη, Ptol. ii. 6, § 4), a promontory in the territory of the Callihat Lakenes, on the N. coast of Ḥariānia Tarracosenēs, known also by the name of Ἀγιος τον Τριλεύκη (Marcian, p. 44). Now Cape Ortigia. [T. H. D.]

TRIMAMIUM (Σμαράγδαν ὄρος, Τριμάμιου, Ptol. iii. 10, § 10), a castle on the Iambi, in Lower Moesia. (Itin. Ant. p. 222; called Trimmium in the Tab. Peut. and by the Geogr. Rav. iv. 7.) Variously identified with Murota, Didolika, and the ruins near Pirgo or Birgo. [T. H. D.]

TRIMENOTHYRA. [TEMENOTHRIA.]

COIN OF TRIMENOTHYRA.

TRIMONTIUM (Σμαράγδαν ὄρος, Ptol. ii. 5, § 8), a town of the Selgovae, in Britannia Barba, probably near Longholm, in the neighborhood of the Solway Frith. [T. H. D.]

TRIMYTHUS. [TREMITHUS.]

TRINACIA. [TRACIA.]

TRINACRIA. [SICILIA.]

TRINASUS (Σμαράγδας, Paus. iii. 22, § 3; Τρινάς, Ptol. iii. 16, § 9), a town or rather fortress of Laosia, situated upon a promontory near the head of the Laconian gulf, and 30 stadia above Gythium. It is opposite to three small rocks, which gave their name to the place. The modern village is for the same reason still called Trinass (rā Triπνάς). There are considerable remains of the ancient walls. The place was built in a semi-circular form, and was not more than 400 or 500 yards in circuit. (Leake, Morea, vol. i. p. 232; Bobhaye, Recherches, etc., p. 94; Ross, Wanderungen in Griechenland, vol. ii. p. 293; Curtius, Peloponneseos, vol. i. p. 887.)

TRINEMELA. [ATTICA, p. 330, b.]

TRINIUS (Triypo), a considerable river of Samnium, which has its sources in the rugged mountain district between Aepone and Castel di Sangro, and has a course of about 60 miles from thence to the Adriatic. During the lower part of its course it traverses the territory of the Frentani, and falls into the sea about 5 miles SE. of Histonium (II. V. 20). The only ancient writer who mentions it is Pliny (iii. 12, s. 17), who calls it "floemum partumusum"; it is, indeed, the only river along this line of coast the mouth of which affords shelter even for small vessels. [E. H. B.]

TRINOBANES (called by Ptolemy Τρινοβαντες), ii. 3, § 22), a people on the E. coast of Britannia Romana, situated N. of London and the Thames, in Essex and the southern parts of Suffolk, whose capital was Camabodunum (Colchester). They submitted to Caesar when he landed in Britain, but revolted against the Romans in the reign of Nero. (Cass. B. G. v. 20; Tac. Ann. xiv. 31.) [T. H. D.]

TRINURIA. [TIRNURTH.]

TRIOBRIS, a river of Gallia named by Sidonius Apollinaris (Propeptum). It is a branch of the Otis (Lot), and is now named Trupery. [G. L.]

TRIOCALA (Τριόκαλα, Eth. Triocolium; Τριόκαλον, near Calatabellotta), a city of Sicily, situated in the interior of the island, about 12 miles from Thermia Selinuntiae (Scicce). As the name is cited by Stephanus of Byzantium (who writes the name Τριοκάλα) from Philius, it is probable that it was a Sicilian name and was first given to that place as the time of the elder Dionysius; but no notice of it is now found in history until the second Servile War in Sicily in B.C. 103–100. On that occasion Triocular was selected, on account of its great natural strength and other advantages, by Tryphon, the leader of the insurgents, as his chief stronghold: he fortified the rocky summit on which it was situated, and was able to hold out there, as in an impregnable fortress, after his defeat in the field by L. Lucullus. (Diod. xxxvi. 7, 8.) The circumstances of its fall are not related to us, but Silian Italicus alludes to it as having suffered severely from the effects of the war. ("Servili vastata Triocular bella," xiv. 270.) Cicero nowhere notices the name among the municipal towns of Sicily, but in one passage mentions the "Triocolium aeger" (Verr. v. 4); and the Trioculiani again appear in Pliny's list of the municipal towns of Sicily. The name is also found in Polyanus, but in a manner that gives little information as to its position. (Plin. iii. 8. s. 14; Ptol. iii. 4, § 14.) It was an episcopal see during the early part of the middle ages, and the site is identified by Fazello, who tells us that the ruins of the city were still visible in his time a short distance from Calatabellotta, a town of Sicans origin, situated on a lofty hill about 12 miles inland from Scicce; and an old church on the site still preserved the ancient appellation. (Fazell. de Reb. Sic. x. 472; Cluver. Sicil. p. 374.)

TRIOPIUM (Σμαράγδαν ὄρος, C. Criu), the promontory at the eastern extremity of the peninsula of Cnuidus, forming at the same time the southwestern extremity of Asia Minor. (Thucydi. viii. 35, 60; Scylax, p. 38; Pomp. Mela, i. 16.) On the summit of this promontory a temple of Apollo, hence called the Triopian, seems to have stood, near which games were celebrated, whence Scylax calls the promontory the άκρωτήριον ιαπ. According to some authorities the town of Cnuidus itself also bore the name of Triopium, having, it is said, been founded by Triopas. (Steph. B. s. v. Τριόγος; Plin. v. 29, who calls it Triopia; Eustath. ad Hom. II. iv. 341; Τριοπος.)

TRIPHIILIA. [ELEI.]

TRIPODISCUS. [THERACDIS, Thuc. iv. 79; Τριπόδιος, Paus. i. 43, § 8; Τριπόδιος, ΤΡΙΑΠΩΔΙΟΣ, Strab. ix. p. 394; ΤΡΙΑΠΩΔΙΟΣ, Herod. op. Steph. B. s. v. Τριπόδιος; Eth. Τριπόδιος, Steph. B.; Τριπόδιος), an ancient town of Megar, said to have been one of the five hamlets into which the Megarid was originally divided. (Ithn. Ques. Gr. c. 17.) Strabo relates that, according to some critics, Tripodi was mentioned by Homer, along with Aegeira and Nisa, as part of the dominions of Ajax of Salamis, and that the verse containing these names was omitted by the Athenians, who substituted for it another that proved that Salamis in the time of the Trojan War, belonged to Athens. (Strab. L. c.) Tripodiscus is celebrated in the history of literature as the birthplace of Suriarion, who is said to have introduced comedy into Attica, and to have removed from this place to the Attic Icaria. (Aspas. ad Aristot. Eth. Nic. iv. 2; Dict. of Biog. Vol. iii. p. 948.) They were born from Thurydides (i. c.) that Tripodiscus was situ-
TRIPOLIS.

Kast Yeviij. (Arundell, Seven Churches, p. 245; Hamilton, Researches, i. p. 525; Fellows, Asia Minor, p. 287.)

2. A fortress in Pontus Polemaiscus, on a river of the same name, and with a tolerably good harbour. It was situated at a distance of 90 stadia from Cape Taphymum. (Arrian, Periplus, P. E. p. 17; Anon., Periplus, P. E. p. 153; Plin. iv. 4.) There still exists under the name of Tirabolus, and is situated on a rocky headland. (Hamilton, Researches, i. p. 257.)

TRIPOLIS (Tripoli). 1. A district in Arecusia. (Vol. i. p. 193, No. 12.)

2. A district in Lacedaemon. (Vol. ii. p. 113, b.)

3. A district of Perrhaebia in Thessaly, containing the towns Azorus, Pythium, and Doliche. (Liv. xiii. 53.)

TRIPOLITANA REGIO. (Syriac.)

TRIPONTUM, a town of Britannia Romana, apparently in the territory of the Coritani. (Itin. Ant. p. 477.) Variously identified with Libbourn, Calthorpe, and Rugly. [T. H. D.]

TRIPYRGIA. (Aegina, p. 34, b., p. 35, a.)

TRISANTON (Tripontos), Rog. ii. 3, § 4), a river on the S. coast of Britannia Romana; according to Camden (p. 137) the river Test, which runs into Southampton Water; according to others the river Arun. [T. H. D.]

TRISCIANA (Tripiciina, Procop. de Aed. iv. 4, p. 282), a place in Moesia Superior, perhaps the present Pristina or Pristina. [T. H. D.]

TRISSUM (Tripontos, Rog. iii. 7, § 2), a place in the country of the Jazyges Metanatae. [Cf. Jazyges, Vol. ii. p. 7.]

TRITAE. 1. (Tripaila; Eth. Tripaistis; in Herod. i. 145, Tripaistros is the name of the people), a town in Achaia, and the most inland of the 12 Achaea cities, the distance from the coast being 120 stadia from Phocae. It was one of the four cities, which took the lead in reviving the Achaean League in B.C. 280. In the Social War (B.C. 220, seq.) it suffered from the attacks of the Aetolians and Eleans. Its territory was annexed to Patrae by Augustus, when he made the latter city a colony after the battle of Actium. Its site is probably represented by the remains at Kastritsa, on the Solmsa, near the frontiers of Achaia. (Herod. i. 145; Rog. iii. 41, iv. 6, 59, 60; Strab. viii. p. 380; Paus. viii. 23, § 8, seq.; Steph. B. s. v.; Leake, Moroco. vol. ii. p. 117.)

2. (Tritea, Plin. iv. 3, s. 4; Eth. Tripaistros, Herod. viii. 33), one of the towns of Phocis, burnt by Xerxes, of which the position is uncertain. (Leake, Northern Greece, vol. ii. p. 89.)

3. (Tripia, Steph. B. s. v.; Eth. Tripaistros, Thuc. iii. 101), a town of the Luci Ozae, described by Stephanus B. as lying between Phocis and the Luci Ozae. Hence it is placed by Leake not far from Delphi and Amphissa, on the edge, perhaps, of the plain of Sicyon. (Leake, Northern Greece, vol. ii. p. 621.)

TRITIUM, a town of the Antirigones, in Hispania Tarraconensis, in the jurisdiction of Chania. (Plin. iii. 3, s. 4; Itin. Ant. pp. 430, 454.) Variously identified with Carcola, Rodilla, and a place near Monasterio. [T. H. D.]

TRITIUM METALLUM (Tripontos Megalon), Plin. ii. 6, § 50), a town of the Berones, in Hispania Tarraconensis, now called Tricio, near Nejerena. (Flores, Cantabr. p. 182.) [T. H. D.]

TRITIUM TUBOCRICUM (Tripontos Toubochon), Plin. ii. 6, § 66), a town of the Barduli, in Hispan-
nia Tarraconensis, on the river Deva or Devalez, (Mela, iii. 1.) It is commonly identified with Motrice, which, however, does not lie on the Deva; and Manner (p. 365) seeks it near Mondragon, in Gipuzcoa. [T. II. D.]

TRITON (Διτρών ποταμός, Ptol. v. p. 19, &c.), a river of Libya, forming, according to Italius, the boundary of the Regio Syrta towards the W. It rose in Mount Vasaletus, and, flowing in a northerly direction, passed through three lakes, the Libya Palus, the lake Pallas, and the lake Tritonis (ἡ Τριτώνια Λίμνη, i. 1). After which it fell into the sea in the innermost part of the Syrtes Minor between Maconada and Tacape, but nearer to the latter.

The lake Tritonis of Polonys is called, however, by other writers Tritonis (ἡ Τριτώνια Λίμνη, Herod. iv. 179). Herodotus seems to confound it with the Lesser Syrtes itself; but Skylax (p. 49), who gives it a circumference of 1000 stadia, describes it as connected with the Syrtes by a narrow opening, and as surrounding a small island—called by Herodotus (ib. 178) Phila (Φίλα), which is also mentioned by Strabo (xvi. p. 586), as containing a temple of Aphrodite, and by Dioneas, (Perieget. 267.) This lake Tritonis is undoubtedly the present Schibbah-el-Loveijah, of which, according to Shaw (Travele, i. p. 237), the other two lakes are merely parts; whilst the river Triton is the present El-Hammah. This river, indeed, is no longer connected with the lake (Shaw, Ib.); a circumstance, however, which affords no essential ground for doubting the identity of the two streams; since in those regions even larger rivers are sometimes compelled by the quick sands to alter their course. (Cf. Bitter, Erdkunde, i. p. 1017.) Skylax (l. c.) mentions also another island called Tritonos (Τριτώνος) in the Syrtes Minor, which last itself is, according to him, only part of a large Sinus Tritonitico (Χείμων) .

Some writers confound the lake Tritonis with the lake of the Hesperides, and seek it in other districts of Libya; sometimes in Macrætia, in the neighborhood of Mount Atlas and the Atlantic Ocean, sometimes in Cyrenaica near Berenice and the river Lathon or Lethon. The latter hypothesis is adopted by Lucan (ix. 346, seq.), the former by Diodorus Siculus (iii. 53), who also attributes to it an island inhabited by the Amazons. But Strabo (l. c.) especially distinguishes the lake of the Hesperides from the lake Tritonis.

With this lake is connected the question of the epithet Tritopontico, applied to Pallas as early as the days of Homer and Hesiod. But though the Libyan river and lake were much renowned in ancient times (cf. Aschyl. Eum. 293; Eurip. Ion. 872, seq.; Pind. Pyth. iv. 36, &c.), and the application of the name of Pallas to the lake connected with the Tritonis seems to point to these African waters as having given origin to the epithet, it is nevertheless most probable that the brook Triton near Alkmonæum and Boscoreale has the best pretensions to that distinction. (Cf. Pauser. ix. 33, § 5; Schol. ad Apollon. Rhod. i. 109, iv. 1345; Müller, Orchomenos, p. 355; Leake, Northern Greece, vol. ii. p. 136, seq.; Kühn, Hellas, vol. ii. pt. 1 p. 475. [T. II. D.]

TRITON (Τριτών, Iod. v. 72), a river of Crete at the source of which Athenes was said to have been born. From its connection with the Omphalonic plain, it is identified with the river discharging itself into the sea on the N. coast of the island which is called Platypornos, but changes its name to Ghiéresco as it approaches the shore. (Pasley, Travels, vol. i. p. 225.) [E. B. J.]

TRITON (Τριτών), a river of Boeotia. [Vol. i. p. 413, n.]

TRITURITA. [Perach.]

TRIVICUM (Tirveco), a town of Samnium, in the country of the Hirpini, not far from the frontiers of Apulia. Its name is known to us only from Horace, who slept there (or at least at a villa in its immediate neighbourhood) on his well-known journey to Brandusium. (Hor. Sat. i. 5. 79.) It appears therefore that it was situated on the Via Appia, or the line of road then frequented from Rome to Brundusium. But this was not the same which was followed in later times, and is given in the Itineraries under that name, a circumstance which has given rise to much confusion in the topography of this part of Italy. [Via Appia.] There can be no doubt that Triviciem occupied nearly, if not exactly, the same site with the modern Triveco; the ancient road appears to have passed along the valley at the foot of the hill on which it was situated. It was here that stood the villa to which Horace alludes, and remains of Roman buildings, as well as of the pavement of the ancient road, still visible in the time of Pratili, served to mark the site more accurately. (Pratili, Via Appia, i. 10. p. 507; Romanieli, vol. ii. p. 350.) It probably never was a municipal town, its name is not mentioned by any of the geographers. [E. H. B.]

TRIUMPILIINI, an Alpine people of Northern Italy, who are mentioned by Augustus in the inscription in which he recorded the final subjugation of the Alpine tribes (op. Plin. iii. 20, s. 24). It appears from Pliney that the whole people was reduced to slavery and sold together with their lands. According to Cato they were of Euganian race, as well as their neighbours the Camni, with whom they are repeatedly mentioned in common. (Plin. l. c.) Hence there is little doubt that they were the inhabitants of the district called the Val Trempia, the upper valley of the Mella, and separated only by an intervening ridge of mountains from the Val Camonica, the land of the Camni. [E. H. B.]

TROAS. (Τροάς, Tropin, Tropía, or Ῥοᾶς ἄτια), the territory ruled over by the ancient kings of Troy or Ilium, which retained its ancient and venerable name even at a time when the kingdom to which it had originally belonged had long ceased to exist. Homer himself nowhere describes the extent of Troas or its frontiers, and even leaves us in the dark as to how far the neighbouring allies of the Trojans, such as the Dardanians, who were governed by princes of their own, of the family of Priam, were true allies or subjects of the king of Ilium. In later times, Troas was a part of Mycia, comprising the coast district on the Aegean from Cape Lectum to the neighbourhood of Dardanus and Abydos on the Hellespont; while inland it extended about 8 geographical miles, that is, as far as Mount Ida, so as to embrace the south coast of Mycia opposite the island of Lesbos, together with the towns of Assus and Antandrus. (Horn. II. xxiv. 544; Herod. vii. 42.) Strabo, from his well-known inclination to magnify the empire of Troy, describes it as extending from the Aegeus to the Caicus, and his view is adopted by the Scholiast on Apollonius Rhodius (i. 1115). In its

Vol. ii.
proper and more limited sense, however, Troy was an undulating plain, traversed by the terminal branches of Ida running out in a north-western direction, and by the small rivers Satnioi, Scamander, Simois, and Thyamorius. This plain gradually rises towards Mount Ida, and contained, at least in later times, several flourishing towns. In the Iliad we hear of several towns, and Achilles boasts (II. ix. 328) of having destroyed eleven in the territory of Troy; but they can at best only have been very small places, perhaps only open villages. That Ilium itself must have been far superior in strength and population is evident from the whole course of events; it was protected by strong walls, and had its acropolis. 

The inhabitants of Troy, called Troes (Τρόες), and by Roman prose-writers Trojani or Teuti, were in all probability a Pelasgian race, and seem to have consisted of two branches, one of which, the Teuti, had emigrated from Thrace, and become amalgamated with the Phrygian or native population of the country. Hence the Trojans are sometimes called Teuti and sometimes Phryges. (Herod. v. 122, vii. 43; Strab. i. p. 62, iii. p. 604; Virg. Aen. i. 33, 248, ii. 252, 571, &c.) The poet of the Iliad in several points treats the Trojans as inferior in civilisation to his own countrymen; but it is impossible to say whether in such cases he describes the real state of things, or whether he does so only from a natural partiality for his own countrymen. According to the common legend, the kingdom of Troy was overturned at the capture and burning of Ilium in B.C. 1184; but it is attested on pretty good authority that a Trojan state survived the catastrophe of its chief city, and that the kingdom was finally destroyed by an invasion of Phrygians who crossed over from Europe into Asia. (Xen. Mem. ap. Strab. xiv. p. 680, xvi. p. 572.) This fact is indirectly confirmed by the testimony of Homer himself, who makes Poseidon predict that the posterity of Aeaea should long continue to reign over the Trojans, after the race of Priam should be extinct. 

TROCHOEIDES LACUS. [DELOS, p. 739, b.]

TROCHUS. [CENCHREAE, p. 584, a.]

TROCMADA (Τροκμάδα), a place of uncertain site in Galatia, which probably derived its name from the porbous of Trocmad, is mentioned only by late Christian writers (Conc. Chalced. pp. 125, 309, 663; Conc. Constant. iii. p. 672: Conc. Niceen. ii. p. 535, where its name is Τρομκαδα: Hieroc. p. 698, where it is misspelt Περγερμαδα.) [L. S.]

TROCHI. [GALATIA.]

TROES. [TROAΣ.]

TROESEN. [ΤΕΡΑΣ.]

TROEZEIN (Τροέζειν), a city in "Massilia of Italy," as Stephanus (s. v.) says, if his text is right; but perhaps he means to say, "a city of Massilia in Italy." Eustathius (ad II. p. 287) says that it is in "Massalitica Italy." Charax is Stephanus' authority. This brief notice adds one more to the list of Massalitica settlements on the coast of the Mediterranean; but we know nothing of Troezen. [GLT.] 

TROEZEIN (Τροέζειν): also Τροέζειν, Ptol. iii. 16, § 12: Eit. Tropōivous; the territory γγ' Tropōivous. Turc. Mem. 673; ι Τροζειν 76, Timoc. ii. 56), a city of Peloponnesus, whose site is to be sought in the south-eastern corner of the district to which the name of Argolis was given at a later time. It stood at the distance of 15 stadia from the coast, in a fertile plain, which is described below. (Strab. viii. p. 373.) Few cities of Peloponnesus boasted of so remote an antiquity; and many of its legends are closely connected with those of Athens, and prove that its original population was of the Ionic race. According to the Troezenians themselves, their country was first called Ornea from the Egyptian Orus, and was next named Althepia from Althepus, the son of Poseidon and Leu, who was the founder of Orus. In the reign of this king, Poseidon and Athena contended, as at Athens, for the land of the Troezenians, but, through the mediation of Zeus, they became the joint guardians of the country. Hence, says Pausanias, a trigent and the head of Athena are represented on the ancient coins of Troezen. (Comp. Muret, Suppl. iv. p. 267. § 189.) Althepus was succeeded by Saron, who built a temple of the Saronian Artemis in a marshy place near the sea, which was hence called the Phleborean marsh (Φλεβορεια Νιηρ), but was afterwards named Saronic, because Saron was buried in the ground belonging to the temple. The next kings mentioned are Hyperes and Anthas, who founded two cities, named Hy perplex and Anthia. Aitius, the son of Hyperes, inherited the kingdom of his father and uncle, and called one of the cities Poseidonia. In his reign, Troezen and Pittiums, who are called the sons of Pelops, and may be regarded as Achaeum princes, settled in the country, and divided the power with Aitius. But the Pelopids soon supplanted the earlier dynasty; and on the death of Troezen, Pittiums united the two Ionic settlements into one city, which he called Troezen after his brother. Pittiums was the grandfather of Theseus by his daughter Asthri; and the great national hero of the Athenians was born and educated at Troezen. The close connection between the two states is also intimated by the legend that two important demi of Atica, Amphipolis and Sphetius, derived their names from two sons of Troezen. (Paus. ii. 30. §§ 5—9.) Besides the ancient names of Troezen already specified, Stephanus B. (s. v. Τροζείν) mentions Aphrodiasia, Saronia, Poseidoniae, Apolloniae and Anthusias. Strabo likewise says (ix. p. 373) that Troezen was called Poseidonia from its being sacred to Poseidon. At the time of the Trojan War Troezen was subject to Argos (Hom. II. ii. 561); and upon the conquest of the Peloponnesus by the Dorians, it received a Doric dynasty from Argos. (Paus. ii. 30. § 10.) The Doric settlers appear to have been received on friendly terms by the ancient inhabitants, who continued to form the majority of the population; and although Troezen became a Doric city, it still retained its Ionic sympathies and traditions. At an early period Troezen was a powerful maritime state, as is shown by its founding the cities of Halicarnassus and Myndus in Caria. (Paus. ii. 30. § 8; Herod. viii. p. 472; Strab. viii. p. 374.) Troezenians also took part with the Achaeans in the foundation of Sybaris, but they were eventually driven out by the Achaeans. (Aristot. Pol. v. 3.) It has been conjectured with much probability that the expelled Troezenians may have been the chief founders of Poseidonia (Paestum), which Solinus calls a Doric colony, and to which they gave the ancient name of their own city in Peloponnesus. (Paestum.) In the Persian War the Troezenians took an active part. After the battle of Thermopylae, the harbour of Troezen was appointed as the place of rendezvous for the Greek fleet (Herod. viii. 42); and when the Athenians were obliged to quit Attica upon the

one appears approach iv. and although Troezen. this of taken yolie, was monians Troezenians to account. p. was its after in Lk:-i:.era have classes, (Xen. i. vi. 2. § 16); and again in 373 they are numbered among the allies of Sparta against Athens. (Xen. Hell. vi. 2. § 3.) In the Macedonian period Troezen passed alternately into the hands of the contending powers. In b. c. 303 it was delivered, along with Argos, from the Macedonian yoke, by Demetrius Poliorcetes; but it soon became subject to Macedonia, and remained so till it was taken by the Spartan Cleonymus in b. c. 278. (Polyb. xii. 29. § 4; Frontin. strat. iii. 6. § 7.) Shortly afterwards it again became a Macedonian dependency; but it was united to the Achæan League by Aratus after he had liberated Corinth. (Paus. ii. 8. § 5.) In the war between the Achæan League and the Spartans, it was taken by Cleomenes, in b. c. 223 (Polyb. ii. 52; Plut. Cleomen. 19); but before the defeat of this monarch at Sellasia in b. c. 221, it was doubtless restored to the Achæans. Of its subsequent history we have no information.

It was a place of importance in the time of Strabo (vii. p. 372), and in the second century of the Christian era it continued to possess a large number of public buildings, of which Pausanias has given a detailed account. (Paus. ii. 31, 32.) According to the description of Pausanias, the monuments of Troezen may be divided into three classes, those in the Agora and its neighbourhood, those in the sacred enclosure of Hippolytus, and those upon the Acropolis. The Agora seems to have been surrounded with stone or colonnades, in which stood marble statues of the women and children who fled for refuge to Troezen at the time of the Persian invasion. In the centre of the Agora was a temple of Artemis Soteira, said to have been dedicated by Theseus, which contained altars of the infernal gods. Behind the temple stood the monument of Pittheus, the founder of the city, surmounted by three chairs of white marble, upon which his real and two assessors are said to have administered justice. Not far from thence was the temple of the Muses, founded by Ardalus, a son of Hephaestus, where Pittheus himself was said to have learnt the art of discourse; and before the temple was an altar where sacrifices were offered to the Muses and to Sleep, the deity whom the Troezensians considered the most friendly to these goddesses.

Near the theatre was the temple of Artemis Lycia, founded by Hippolytus. Before the temple there was the very stone upon which Orestes was purfied by nine Troezensians. The so-called tent of Orestes, in which he took refuge before his expiation, stood in front of the temple of Apollo The- mina, which was also the ancient temple of Pan. The water used in the purification of Orestes was drawn from the sacred fountain Hippo- cere, struck by the hoof of Pegassus. In the neighbourhood was a statue of Hermes Polybios, with a wild olive tree, and a temple of Zeus Soter, said to have been erected by Actius, one of the mythical kings of Troezen.

The sacred enclosure of Hippolytus occupied a large space, and was a most conspicuous object in the city. The Troezensians denied the truth of the ordinary story of his being dragged to death by horses, but worshipped him as the constellatio An- rign, and dedicated to him a spacious sanctuary, the foundation of which was ascribed to Dionysus. He was worshipped with the greatest honours; and each virgin, before her marriage, dedicated a lock of her hair to him. (Eurip. Hippol. 1424; Paus. ii. 32. § 1.) The sacred enclosure contained, besides the temple of Hippolytus, a temple of Apollo Epheusterus, also dedicated by Dionysus. On one side of the enclosure was the stadium of Hippolytus; and above it the temple of Aphrodité Calopaque, so called because Phæacian beheld from this spot Hippolytus as he exercised in the stadium. In the neighbourhood was shown the tomb of Phæacia, the monument of Hippolytus, and the house of the hero, with the fountain called the Heroeum in front of it.

The Acropolis was crowned with the temple of Athena Polias or Sthenias; and upon the slope of the mountain was a sanctuary of Pan Lyterius, so called because he put a stop to the plague. Lower down was the temple of Isis, built by the Halcari- mæans, and also one of Aphrodité Ascezea.

The ruins of Troezen lie west of the village of Dhalten. They consist only of pieces of wall, Hellenic masonry or of Roman brickwork, dispersed over the lower slopes of the height, upon which stood the Acropolis, and over the plain at its foot. The Acropolis occupied a rugged and lofty hill, commanding the plain below, and presenting one of the most extensive and striking prospects in Greece. There are in the plain several ruined churches, which probably mark the site of ancient temples; and several travellers have noticed the remains of the temple of Aphrodité Calporate, overlooking the cavity formerly occupied by the stadium. The chief river of the plain flows by the ruins of Troezen, and is now called Potami. It is the ancient Taurus, afterwards called Hellicus (Paus. ii. 32. § 7), fed by several streams, of which the most important was the Chrysocémus, flowing through the city, and which still preserved its water, when all the other streams had been dried up by a nine years' drought (Paus. ii. 31, § 10).

The territory of Troezen was bounded on the W. by that of Ephenarrus, on the SW. by that of Hermion, and was surrounded on every other side by the sea. The most important part of the territory was the fertile maritime plain, in which Troezen stood, and which was bounded on the south by a range of mountains, terminating in the promontories of Syllium and Buraea, the most easterly points of the Peloponnese. [Syllarium.] Above the promontory Syllium, and nearly due E. of Troe- zen, was a large bay, protected by the island of

Nubia 29. Sandalion. The same district districts namesakes, even in the interior of Libya east of the Garamantes, along the Arabian shore of the Red Sea, as well as on the opposite coast of Aethiopia and Aegypt, and on both in such numbers that the districts were each of them named "Regio Trogodytæ," and even on the northern side of the Caucasus (Strab. xi. p. 506). The Caucaian Trogodytæ were in a higher state of civilisation than their eastern namesakes, since they cultivated corn.

But the race most commonly known as Troglo-

TROGLODYTAE.

dytae inhabited either shore of the Red Sea, and were probably a mixture of Arabian and Aethiopian blood. Their name, as its composition imports (τραγανός, δέω), was assigned to them because they either dug for themselves cabins in the lime and sandstone hills of that region, or availed themselves of its natural caverns. Even in the latter case, the villages of the Trogodytæ were partly formed by art, "long tunnels, for the passage or stabbing of their herds, were cut between village and village, and the rocks were honey-combed by their dwellings. Bruce saw at Gogiam in Nubia a series of such caverns, inhabited by herdsmen, and witnessed the periodical passage of the cattle in Summer from the lowlands to the hills. The same cause led to similar migrations in ancient times, viz., the appearance of the gaudy in the marshes, immediately after the cessation of the periodical rains.

The accounts of the Regio Trogodytæ that extended from the Sinus Ariminontes to Berenice may be sufficiently ascertained from the Trogodytæ generally. The catacombs of Naples will perhaps give the most accurate image of their dwellings. The Ababeiæ, who now inhabit this region, exhibit many of their peculiar manners and customs. Their language was described by the Greeks as a shriek or whistle, rather than as articulate speech; a portion at least of them were serpent-eaters. (Herod. iv. 183.) But their general occupation was that of herdsmen.

Agatharchides of Cnidus is the earliest writer who mentions the Trogodytæ (πολιτική, p.454, ed. Bekker). According to him and Strabo (xvii. p. 786) animal food was their staple diet; and they eat not only the flesh but also the bones and hides of their cattle. Their drink was a mixture of milk and blood. Since, however, the older and stickier beasts were slaughtered for food, it may be presumed that the better animals were reserved for the Egyptian and Aethiopian markets. The hides supplied their only article of raiment; but many of them went naked, and the women tattooed their bodies, and wore necklaces of shells. The pastoral habits of the Trogodytæ rendered them so swift of foot as to be able to run down the wild beasts which they hunted; and they must have been acquainted with the use of weapons, since they were not only hunters, but robbers, against whom the caravan-passengers from the interior of Libya to Berenice on the Red Sea were obliged to be armed. A guard of soldiers, stationed at Phalaris (Φαλάρης, Tuk. Pent.), about 25 miles from Berenice. Trogodytæ also served among the light troops in the army of Xerxes, b.c. 480, and acted as guides to the caravans, since the Icthyophagi whom Cambyses employed as explorers of Morea were a tribe of Trogodytæ. (Herod. iii. 19.) Among the common people a community of women existed: the chiefs alone, who may have been of a superior race, having wives appropriated. For the abstraction or seduction of a chief's wife an ox was the penalty. During their retirement in caverns they seem to have lived peaceably together, but as soon as they saluted forth with their herds into the pastures they were incessantly at war with one another, on which occasions the women were wont to act as mediators. They practised the rite of circumcism, like the Armenians and Aethiopians generally. According to Agatharchides the Trogodytæ differed as much from the rest of mankind in their sepulchral customs as in their habitations. They bound the corpse neck and heels together, affixed it to a stake, pelted it with stones amid shouts of laughter, and when it was quite covered with stones, placed a horn upon the mound, and went their ways. But they did not always wait for natural death to perform this ceremony, since, accounting inability to procure a livelihood among intemates even, they strangled the aged and of soldiers with an ox-tail. Their civilisation appeared so low to Aristotle (Hist. Anim. viii. 12) that he describes the Trogodytæ as pignaries who, mounted on tiny horses, waged incessant wars with the cranes in the Aethiopian marshes. A tribe on the frontiers of Abyssinia, called Barnagula by the natives, correspond according to modern accounts, with the

TROCIUS MONS (Τροκίον ὄρος, Strab. xvii. p. 809; Steph. B. s. v.; Традио Луно ὄρος, Ptol. iv. 5. § 27), was a long range of hills east of the Nile, which threw out several abrupt spurs into the Hesperidom of Aegypt. It stood in the parallel of Heracleopolis, i.e. in Lat. 31° N. From this calcareous range was quarried, according to Strabo, the stone used in the construction of the Pyramids. [W. B. D.]

TROJA. [ILLUM: TROAS.]

TRONIS. [DAULIS, p. 756, h.]

TROPÆA AUGUSTI. [MONOECHI PORTUS.]

TROPÆA DRUSI (Τρόπαιον Δροσίου), a trophy erected on a hill on the banks of the Elbe by Drusus, to mark the point to which he had advanced in the north of Germany. (Dion Cass. iv. 1; Flor. iv. 12; Ptol. ii. 11. § 28, who speaks of it as if it were a town.) [L. S.]

TROPÆA POMPEII (τὰ Πομπείων τρόπαια, or Δαμακήματα, Strab. iii. p. 160, iv. p. 178), a trophy or monument erected by Pompey on the summit of the Pyrenees, recording the subjugation of 876 Spanish cities. (Plin. iii. 3. s. 4, v. 7. s. 27, xxvii. 2. s. 6.) It stood at the spot named Summann Pyreneum in the Itin. Ant. (p. 397), and according to some on the boundary between Gaul and Spain. [T. H. D.]

TRUSNISI (Τρούσσες, Hieroc. p. 637; Τρούσσες or Τρούσσις, Ptol. iii. 10. § 11), a town of some importance in Lower Moesia, on the Danube, where, according to the Itin. Ant. (p. 225), the Legio I. Iovia had its head quarters, though the Not. Imp. (c. 28) more correctly mentions the Legio II. Hier. Culea. Lapis identifies it with Matchin. (Cf. Ovid. ex Fust. iv. 9, v. 79.) [T. H. D.]

TROSSULUM, a town of Etruria, which, according to a story current among the Romans, was taken by a body of cavalry alone, unsupported by an expedition; it is thought to be so singular, that the Roman knights were for some time called Trossuli on account of it. (Plin. xxxii. 2. s. 9; Festus, s. v. Trosuli, p. 367.) No other mention is found of it; and it was probably a small place which had disappeared in the time of the geographers, but Pliny tells us (L. 6.) that it was situated 9 miles from Volscius, on the side towards Rome. It is said that the name was still retained by a place called Troso or in the abode of Troso, about 2 miles from Monte Faino, as late as the 17th century, but all trace of it is now lost. (Holsten. Not. ed. Cluer. p. 67; Dennis's Etruria, vol. i. p. 517.) [E. H. B.]

TRUENTUM. [Castrum Truentinum.]

TRUENTUS or TRUENTYNUS (Τρουετήνιος: Trovata), a considerable river of Picenum, which rises in the Apennines above Amatrice, flows under the walls of Acrolo (Ascanium), and falls into the Adriatic about 5 miles S. of S. Benedetto. It gave name to a town which was situated at its mouth, and is called by Pliny Truentum, but more commonly Castrum Truentinum. Though one of the most considerable of the rivers of Picenum, the Truentus has very much the character of a mountain torrent, and is only navigable for about 5 miles near its mouth. (Strab. v. p. 241; Plin. iii. 13. s. 18; Mel. ii. 4. § 6; Ptol. iii. 1. § 21.) [E. H. B.]

TRYBACTRA (Τρυβακτρα, Ptol. vi. 12. § 6), a place to the NW. of Alexandria Oïxans, probably represented by the present Bobhara. [V.]

TUAESSIS (Τούαςες, Ptol. ii. 3 § 13), a town on the E. coast of Britannia Barabara, which stood on an estuary of the same name (Ptol. ib. § 5), now the Murray Firth. [T. H. D.]

TUATI VETUS, a town in Hisp. Vitellinae, belonging to the jurisdiction of Corduba. (Plin. iii. 3. s. 3.) Uberti (ii. p. 370) is of opinion that it should be called Tuci Vetus. [T. H. D.]

TUBANITES or TUBANTII (Τούβαντιοι or Τούβαντες), a German tribe which was allied with the Cherussi, and seems originally to have dwelt between the Rhine and Jutland; but in the time of Germans they appear in the country south of the Lippe, that is, in the district previously occupied by the Sigambri (Tac. Ann. i. 51, xiii. 55, foll.) They seem to have followed the Cherussi still farther to the south-east, as Ptolemy (ii. 11. § 23) places them on the south of the Chatti, near the Thuringer Wald, between the rivers Fulda and Herrera (Comp. Tac. Germ. 36). In the end we find them again as a member of the confedery of the Franks. (Nazar. Pomeg. Com. 18.) The name Subatis in Strabo (vii. p. 292) is probably only an error of the transcriber, whereas Kramer has changed it into Toobantia. (Wilhelm, Germanian, p. 130.) [L. S.]

TUBUCCI, a place in Lusitania between Scalbris and Mundobriga. (Itin. Ant. p. 420.) Probably Abravantes. [T. H. D.]

TUBURBO MAJUS and MINUS (Θουβοφράξ, Ptol. iv. § 33), two neighbouring towns in the interior of Byzacium. The latter is still called Teobron; the former is variously identified with Tabercole and Zaghouan. Pliny (v. 4. s. 4) writes the name Tubur-bias. (Itin. Ant. pp. 44, 48; Tab. Peut.) [T. H. D.]

TUBUSUPTUS (Τουβούσουπτος, Τουβουσουπτος, or Τούβουσοπτος, Ptol. iv. 2. § 31, viii. 13. § 12), a town of Mauretania Caesariensis, 18 miles SE. of Suldun. (Itin. Ant. p. 32.) According to Ammianus Marcellinus it was situated close to Mons Ferratus (xix. 5. § 11). From Pliny (v. 2. s. 1) we learn that it was a Roman colony since the time of Augustus. It was once a place of some importance, but afterwards declined, though even at a late period it seems to have had a Roman garrison (Not. Imp., where it is called Tubususbus). Variously identified with Bury, Bordj, Tiela, and a place on the Dybek Afrona. [T. H. D.]

TUCABA (Τούκαβα, Ptol. iv. 6. § 25), a place in the interior of Libya. [T. H. D.]

Tucca (Τούκα, Ptol. iv. 2. § 1), a town of Mauretania Caesariensis. Ptolemy places it in the interior; but according to Pliny (v. 2. § 1) it was on the sea, at the mouth of the river Ampsaga. (Cf. Tab. Peut.)

2. A town in the district of Byzacium in Africa Proper. (Ptol. iv. § 32.) From inscriptions found in a village still called Dugga it may be inferred that the place should be more correctly called Tugga. According to the Itin. Ant. (pp. 47, 49, 51) it lay 50 miles N. of Sufetula, the modern Sbeitla or Sfilita, and also bore the name of Terebetina or Terebinthana, probably from its being situated in a neighbourhood abounding with the Terebinth tree. Tucea was a fortified town. (Procop. de Aed. vi. 5.) It is probably the same place called Taccabori by St. Augustine (adv. Dentat. vi. 24.) (Cf. Wesseld. ad Itin. p. 48.)

3. A town of Numidia. (Ptol. iv. 3 § 29.)

4. Tucca (Γουκά, Ptol. iv. 4 § 11), a town of Hisp. Baetica, between Ilipa and Italice (Itin. Ant. p. 432.) According to Pliny (ii. 3. s. 3) it is

4 to 3
TUCRIS.

The name of Augusta Gemella. Commonly identified with Tejada. (Cf. Florence, Esp. Sagr. ii. p. 635.)

TUCRIS (Towcris, Pot. ii. b. § 56), a town of the Arenci in Hispam Tarraconensis. [T. H. D.]

TUCUL (Towcul and Tovcul, Pot. iii. § 6), a town of the Iberians in the province of Tarraconensis, E. of Limia, and on the road from Bracara to Asturica. (Hist. Ant. p. 429.) It is called Tyde by Pliny (iv. 20. s. 34), and according to an ancient tradition it was the seat of an Aetolian colony under Dionysus; a tale probably occasioned by the similarity of its name to that of Tydeus. (Sil. Ital. iii. 367, xvi. 369; Plin. l. c.; Arioni. Descr. Orb. 659.) It is the modern Tury. [T. H. D.]

TUCULIERS (Towciers; Edu. Tuderinus; Tdlc), one of the most considerable cities of Umbria, situated on a lofty hill, rising above the left bank of the Tiber, about 26 miles S. of Perusia and 18 W. of Spoletrum. There is no doubt that it was an ancient Umbrian city, but no mention of the name occurs in history previous to the Roman conquest. Silius Italicus tells us that it was celebrated for the worship of Mars (Sil. Ital. iv. 222, viii. 462), and notices it on a lofty hill. (Id. vi. 645.) The first notice of it in history is on occasion of a pro- digy which occurred there at the time of the invasion of the Cimbri and Teutones (Plut. Mar. 17; Plin. ii. 57. s. 58); and shortly after we learn that it was taken by Crassus, as the lieutenant of Sulla, during the wars of the latter with the partisans of Marius. (Plut. Cross. 6.) It received a colony under Augustus, and assumed the title of "Colonia Fida Tudor," probably in consequence of some services rendered during the Peruvian War, though its manner of acquisition is uncertain. (Plin. iii. 14. s. 19; Lib. Colon. p. 214; Murat. Insocr. pp. 1111. 4. 1120. 3; Orell. Insocr. 3726.) It appears from inscriptions to have been a flourishing and important town under the Roman Empire, and is mentioned by all the geographers among the chief towns of Umbria. (Strab. v. p. 227; Plin. l. c.; Pot. iii. 1. § 54.) It was not situated on the Flaminian Way, but the Tadula gives a line of road, which led from Ameria to Tuder, and thence to Perusia. (Tab. Peut.) Its great strength as a fortress, arising from its elevated position, is already alluded to by Strabo (L. c.), and rendered it a place of importance during the Gothic Wars, after the fall of the Western Empire. (Procop. B. G. ii. 10, 13.) It is again mentioned as a city under the Lombards (P. Diaec. iv. 8); and there can be no doubt that it continued throughout the middle ages to be a considerable city. It is now much decayed, and has only about 2500 inhabitants, but still retains the title of a city.

Considerable ancient remains still attest its former consideration. Among these the most remarkable are the walls of the city, some portions of which are apparently of great antiquity, resembling those of Perusia, Volaterrae, and other Etruscan cities, but they are in general more regular and less rude, other parts of the walls, of which three distinct circuits may be traced, are of regular masonry and built of travertine. These are certainly of Roman date. The remains of the ancient building, called by local antiquaries the temple of Mars, but more probably a basilica of Roman date, numerous coins and other small objects have been found at Tdlc; among the latter the most interesting is a bronze statue of Mars, now in the Museo Or- ganizzato at Rome. The coins of Tuder, which are numerous, belong to the class called Aes Grave, being of brass and of large size, resembling the earliest coinage of Volaterrae, Ligurium, &c. They all have the name written in Etruscan characters Tvertere, which we thus learn to have been the native form of the name Tuder. [T. H. D.]

TUCULUS (Towculus, Pot. iii. § 11), a river on the W. coast of Britannia Romana, now the Tyer. [T. H. D.]

TUFICUS (Towfcus; Edh. Tuscanius), a municipal town of Umbria, mentioned both by Pliny and Ptolemy, as well as in an inscription, which confirms its municipal rank; but its site is wholly uncertain. (Plin. iii. 14. s. 19; Pot. iii. 1. § 53; Orell. Insocr. 87.)

TUGENI (Towgeni). [Helveti, Vol. i. p. 1041.]

TUGIA, a town of the Oretani, in Hispam Tarraconensis. (Plin. iii. 3. s. 4; Hist. Ant. p. 404.) Its site is marked by some ruins at Tugia, near Questa, at the sources of the Guadalquivir. (Cf. Plorce, Esp. Sagr. v. pp. 24, 34; D'Anville, Geogr. Anc. i. p. 34.)

TUGINII (Togigii, Tugii), a town of the Massi Argentarii, now called Tucumain, near the river Tuy, a tributary of the Segura. (Cf. Orosie. [T. H. D.]

TUCIAE or TERCIAE, as some read it, in Gallia Narbonensis, between Glanum [Glarem] and Aque Sextiae (Aix). It is placed in the Table between Glanum and Pisae, xt. from Glanum and xv. from Pisae. D'Anville fixes Thieniae or Terceias, as he reads the name, to Aigueksi or Aiguissi. This second name, as he observes, seems to have some relationship to that of the Roman road described in the Antonine Itin. under the name of Via Aurelia as far as Areola (Arles). It is said that there are many remains at a place named Jean-Jean about a mile from Aigueksi. [G. L.]

TUCICUS, a small river on the E. coast of Hispam, near Tarraco. (Mela, ii. 6.) It is probably the modern Tagus. [T. H. D.]

TULLINGI. [Helveti, Vol. i. p. 1042.]

TULLPLIDURUM (Tivuliidurum), a city in Germany, probably in the country of the Chani Minores, on the right bank of the Visurgis. (Pot. ii. 11. § 28.) Wilhelm (Germanien, p. 161) identifies it with the modern Verden; but this is a mere conjecture. [L. S.]

TULLISBRIGIUM (Tivulisbronivum), a town in Germany, probably belonging to the country of the Duhinghi, (Pot. ii. 11. § 28.) Not to mention other conjectures as to its modern representative, Zeuss (Die Deutschen, p. 7) and Wilhelm (Germanien, p. 46) are of opinion that the reading in Ptolemy is wrong, and that we should read Tentovirgyn, which they regard as the place from which the Tentoburgiensis Salvus derived its name; and it is accordingly believed that the remains of an ancient wall, now called the Hunewiring, on Mount Grestonburg, near Detmold, marks the site of the ancient Tentoburgium. But all this is no more than a plausible conjecture. [L. S.]

TULLICA (Tollica, Pot. ii. § 64), a town of the Caristi in Hispam Tarraconensis. [T. H. D.]

TULLONIUM (Tovulonum, Pot. ii. § 66), a town of the Barduli in Hispam Tarraconensis, on the road from Pompello to Asturica. (Hist. Ant. p. 453.) Probably the modern Uggé. [T. H. D.]
TULLUMUM (Σωϊκλων), in Galicia Bética, is one of the cities of the Leuci, who bordered on the Mediomatrici. (Ptol. ii. 9. § 13.) Nasium is the other city [NASIUM]. The Notitia of the Provinces of Gallia mentions Tullum thus: "Civitas Lusitanorum, Nasa." Tullum, which is Tullum, has preserved its name instead of taking the name of the people, like most other capital towns. Tullum, &c."

The department of the Meurthe. [G.L.]

TUNES (Τούνης), Polyb. i. 30; Teus, or Tows, Strab. xvii. p. 834, &c.), a strongly fortified town, once of some importance, in the Roman province of Africa. According to Polybius (xiv. 20), who is followed by Livy (xxx. 9), it was 120 stadia or 13 miles from Carthage, from which it lay in a SW. direction, but the Tab. Peut., in which it is written Thunias, places it more correctly at a distance of only 10 miles from that city. It is said to have been situated at the mouth of a little river called Catada, in the bay of Carthage, but there are no now traces of any such river. On the present state of Tunis, see Blaquier, Lett. i. p. 161, seq.; Ritter Erdkunde, i. p. 914, seq. [T. H. D.]

TUNGRI (Τούνγροι), are placed by Ptolemy (ii. 9. § 9) east of the Tabulhas river, and their chief place is Ambacuma, which is identified on Tongera (AQUATICA). Tacitus (German. c. 2) says, "Those who first crossed the Rhine and expelled the Galli, are now called Tungri, but were then Germans." Tacitus speaks of the Tungri in two other passages (Hist. iv. 55, 79); and in one of them he appears to place the Tungri next to the Nervi. The name of the Elamores, whom Caesar attempted to annihilate (EBRUONES), disappears in the later geography, and the Tungri take its place (Polyb. vi. 67. 1). D'Anville observes (Notices, &c.) that the name of the Tungri extended over a large tract of country, and comprehended several peoples; for in the Notit. of the Provinces of Gallia, the Tungri divide with the Agrippinenses all Germania Secunda; and there is some evidence that the bishop of Tongera had once a territory which bordered on that of Reims.

Ammanus (xv. 11) gives the name of the people, Tungri, to one of the chief cities of Germania Secunda; the other is Agrippina (Colpgone). This shows that Tongera under the later Empire was a large place. Many Roman remains have been dug up there; and it is said that the old Roman road may still be traced through the town. [G. L.]

TUNNOCELIUM, according to the Notitia Imp. a place on the coast of Britannia Romana, at the end of the wall of Hadrian, the station of the Cohors I. Adilia Classic. Horsley (p. 91) and others place it at Boudicca, on Solway Frith; Cambden, with less probability, seeks it at Tynemouth, on the E. coast. [T. H. D.]

TUNTUBBRIGA (Σουντουβρίγα), Polib. ii. 6. § 39), a town of the Galliici in Hispania Tarraconensis. [T. H. D.]

TURANIA, a place in Hispania Baetica, not far from the coast, between Murgis and Urdú. (Plin. Ant. p. 405.) Variously identified with Torqures, Torquheon, and Tiberinum.

TURBA, a town of the Edetani in Hispania Tarraconensis. (Liv. xxxii. 44.) Perhaps the modern Tejar on the Guadalaviar. [T. H. D.]

TURBULA (Τουρπουλα), Polib. ii. 6. § 61), a town of the Bastetani in Hispania Tarraconensis. D'Anville (Geogr. An. i. p. 28) and Montelle (Esp. 124 Ann. p. 177) identify it with Turlum, but Uchert (cf. pt. i. p. 407) more correctly declares it to be Turo in Merucia. The inhabitants are called Turbales by A.P. HISP. 10. [T. H. D.]

TURCAE (Τουρκάς, Sud. s. v.), a Sythian people of Asiatic Sarmatia, dwelling on the Parnassus, which appears to be identical with the Toxca of Tirocium. The various hypotheses that have been started respecting the Turcae only show that nothing certain is known respecting them. (CC. Mannert, iv. p. 130; Heeren, Ideen, ii. 2, pp. 189, 281, 307; Schaffink, Stor. Alterth. i. p. 318, &c.) Humboldt (Central-Austria, i. p. 245, ed. Mahnmann) opposes the notion that these Turcae or Jycrae were the ancestors of the present Turks. [T. H. D.]

TURCILINGI, a tribe in northern Germany which is not noticed before the fifth century of our era, and then is occasionally mentioned along with the Rugii. (Jornand, gest. 15; Paul. Diaec. i. 1.) [L. S.]

TURDENTI (Τούρδενταί), Polib. ii. 4. § 5, &c.), the principal people of Hispania Baetica; where we find the name of Turdetae (Τούρδεντας or Τούρτρας) used by Strabo (iii. p. 136) and Stephanus Byz. (p. 611) as identical with Turdinae. Their territory lay to the W. of the river Singales (now Xeriff), on both sides of the Baetic as far as Lusitania on the W. The Turdenti were the most civilised and polished of all the Spanish tribes. They cultivated the sciences; they had their poets and historians, and a code of written laws, drawn up in a metrical form (Strab. iii. pp. 139, 141, 167; Polyb. xxxiv. 9). Hence they were readily disposed to adopt the manners and customs of their conquerors, and became at length almost entirely Romans; but with these characteristics we are not surprised to find that they are at the same time represented by Livy (xxxiv. 17) as the most warlike of all the Spanish races. They possessed the Jrs Latii. Some traits in their manners are noted by Diodorus Sic. (v. 33). Silius Italicus (ii. 340, &c.), and Strabo (iii. 164). Their superior civilisation was no doubt derived from their intercourse with the Poeni; and the Spanish name of Tartessus lay in their neighbourhood. [T. H. D.]

TURDULI (Τούρδουλος), Polib. ii. 4. § 10), a people in Hispania Baetica, very nearly connected with the Turdenti, and ultimately not to be distinguished from them. (Strab. iii. p. 139; Polyb. xxxiv. 9). They dwelt to the E. and S. of the Turdenti, down to the shores of the Vetulian Herculaneum. A branch of them called the Turuli Victorers appears to have migrated into Lusitania, and to have settled to the S. of the Durias; where it is probable that in process of time they became amalgamated with the Lusitanians (Strab. iii. p. 151; Mela, iii. 1. § 7; Plin. iii. 1. s. 3, iv. 21. 53; cf. Flor. Exp. Sagr. ix. p. 7). [T. H. P.]

TURCIONICUM or TURCIONNX, in Galilia Narbonensis, is placed in the Table on a road between Vienna (Vienne) and Culuro (Grenoble). Turcionicum is between Vienna and Mursus (Maurorum). The site is unknown. [G. L.]

TURIA or TIRUM, a river in the territory of the Edetani in Hispania Tarraconensis, which enters the sea in the neighbourhood of Valencia (Mela ii. b. Plin. iii. 3. 5. 4; Vlb. Seq. p. 227, ed. Bl.) It was famed for the prodigious Turiae or Turcium between Pompey and Sertorius (Plut. Pomp. 18, Sert. 13; Vlb. p. Balb. 2). Now the Guadalaviar. [T. H. D.]

Annot: 124

4 K 4
TURIASO (Turiasson et Turiasson. Ptol. ii. 6. § 58; Turiasson, Geogr. Rav. iv. 43. Euth. Turiasonensis, Plin. iii. 3. s. 4), a town of the Celtiberi in Hispania Tarraconensis, on the road from Cesar-augusta to Numantia (Itin. Ant. pp. 442. 443). According to Piny (l. c.) it was a civitas Romana in the jurisdiction of Cesar-augusta. A fountain in its neighbourhood was said to have the quality of hardening (Id. xxviii. 14. s. 41). The town is now called Tuzazense. For coins see Flores, Med. iv. p. 690, iii. i. 124; Muenet, l. p. 53, and Suppl. l. p. 167; Nestini p. 207. [T. II. D.]

TURICIUM. [Helvetii, Vol. I. p. 1041.]

TURIGA. [Curia.]

TURISSA (called by Ptolemey Τυρίσσα, ii. 6. § 67), a town of the Vascos in Hispania Tarraconensis, on the road from Pompelo to Burdigala (Itin. Ant. p. 455). Variously identified with Iterum and Asteria. [T. I. D.]

TURMODIGI. [Mellebo.]

TURMOCUM (Τούρμωκος, Ptol. ii. § 8), a town in the interior of Lusitania. [T. II. D.]

TURMULI, a town of Lusitania on the Tagus, and on the road from Emerita to Cesar-augusta. (Itin. Ant. p. 438.) Variously identified with Alcucetar and Puente de Alcudia. [T. II. D.]

TURACUM or TORNACUM, a city of North Galla, is first mentioned in the Roman Itinera. In the Notitia, it is presumed to be a military force under the name of Numerus Tarraconensis; and of a "Procurator Gynaecii Tarraconensis Belgicæ Secundae." This procurator is explained to be a superintendent of some number of women who were employed in making clothing for the soldiers. Hieronymus about a. d. 407 speaks of Tarraconum as one of the chief towns of Gallia; and Augustine, in his life of St. Eligius (St. Ethl), in the seventh century, says of it, "qua quondam regalis exitii civitatis." Tarraconum was within the limits of the ancient territory of the Nervii. The Flemish name is Doorwick, which the French have corrupted into Tournaï. Tournaï is on the Schelde, in the province of Hainaut, in the kingdom of Belgium.

There are silver corns of Tarnacum, with the legend DVETACOS and DVENACOS. On one side there is the head of an armed man, and on the other a horseman armed. On some there is said to be the legend DVENACVS. Numerous Roman names have been found at Tarunkai, some of the time of Augustus and others as late as Claudius Gothicus and Tetris, and even of a later date. The tomb of Childeric I, who died a. d. 481, was discovered at Tournaï in the seventeenth century, and a vast quantity of gold and silver medals, and other curious things; among which was the golden ring of Childeric, with his name on it, CHILDERI REGIS. Such discoveries as these, which have been made in various places in Belgium, show how little we know of the Roman history of this country. (D'Anville, Notice, &c.; Ukert, Gallien; Recueil d'Antiquités Romaines et Gauloises trouvées dans la Flandre proprement dite, par M. J. de Bast.) [G. L.]

TURROBICA, a town of Hispania Baetica in the jurisdiction of Hispala (Plin. iii. i. 3. [T. II. D.]

TURÓDI (Τουρότιος, Ptol. ii. § 40), a people in Hispania Tarraconensis, probably a subdivision of the Calicaces Bracarii, in whose territory were the towns called "Thara and And..." [T. II. D.]

TURrones, TURONI, TURONI. Some of Caesar's troops wintered in the country of the Turrones after the campaign of B. C. 57 (B. G. ii. 55). The Turrones are mentioned again (B. G. viii. 46), where we learn that they bordered on the Carnutes; and in another place (vii. 4) they are mentioned with the Pictones, Cadurci, Aulerici, and other states of Western Galicia. When Verecigenorix (n. c. 52) was raising all Gallia against Caesar, he ordered the Turrones to join him. The contingent which they were called on to furnish was to consist of 1000 men (vii. 75). But the Turrones never gave Caesar much trouble, though Luecas called them "instabiles" (i. 437), if the verse is genuine.

In Ptolemey (ii. 8. § 14), the name is Τυρωνιας, and the capital is Caesarodunum or Tournas on the Loire. In the insurrection of Sacrovir in the time of Tiberius, the Turonii, as Tacitus calls them (Ann. iii. 41. 46), rose against the Romans, but they were soon put down. They are in the Lusitannum of Ptolemey. The chief part of the territory of the Turrones was south of the Loire, and their name is the origin of the provincial name Tournais. Ukert (Gallien, p. 329) mentions a silver coin of the Turonii. On one side there is a female head with the legend "Turones," and on the other "Canotioris" with the figure of a galloping horse. [G. L.]

TURONI (Τουρωνιας), a German tribe. described as occupying a district on the south of the country once inhabited by the Chattii, perhaps on the northern bank of the Mosaces. (Ptol. ii. 11. § 22.) [L. S.]

TUROQUA (in the Geogr. Rav. iv. 43, Turaqua), a town of the Callacii in Hispania Tarraconensis on the road from Bracara to Lucus Augusti (Itin. Ant. p. 430). Variously identified with Touran (or Turun) and Ribavada. [T. II. D.]

2. A town in the territory of the Contestani in the same province (Itin. Ant. p. 400). Identified either with Caltrailla or Olettea. [T. II. D.]

TURRES ALBAE (Ποργαν Αλβος, Ptol. ii. § 6), a place of the Celtic in Lusitania. [T. II. D.]

TURRES ALBIAE (Τουρριας Λιβης, Ptol. ii. § 23), a town of the Callacii Lusitani in Hispania Tarraconensis. [T. II. D.]

TURIRM, AD, in Gallia Narbonensis, east of Aquae Sextiae (Aix), is placed in the Antonine Itin. between Matavonum and Tegulata (Tegulata). The name Turris is preserved in that of Tovers, which is written Torres and Torris in some middle age documents. (D'Anville, Notice, &c.) [G. L.]

TURIS. I. Turris Caesaris, a place in Numia, whence there was a road through Signa to Cirta. (Itin. Ant. p. 34.) Usually identified with Tervil, but by Lapie with Dybel Gierium. [T. II. D.]

2. [Euphranta Turris.]

3. Turris Hannibalis, a strong fortress in the territory of Carthage, where Hannibal took ship when flying to king Antiochus. (Liv. xxvii. 48.) Justin calls it the Iasiam urbanum Hannibalis. [T. II. D.]

4. Turris Tamalleni, in Africa Proper, on the road from Tacape to Lepcis Magna. (Itin. Ant. pp 73, 74.) Now Tlemcin. [T. II. D.]
which places it on the Via Collia, between Blera and Saturnia, but in a manner that would afford little clue to its true position were it not identified by the resemblance of name with the modern Toscanelle. (Plin. iii. 5. s. 8; Tab. Pent.) The name is found in an inscription, which confirms its municipal rank. (Murat. Inscr. p. 328.) But it appears to have been in Roman times an obscure town, and we find no allusion to it as of ancient Etruscan origin. Yet that it was so rendered probable by the tombs that have been discovered on the site, and some of which have sarcofagi and other relics of considerable interest; though none of these appear to be of very early date. The tombs have been carefully examined, and the antiquities preserved by a resident antiquary, Sig. Campanari, a circumstance which has given some celebrity to the name of Toscanella, and led to a very exaggerated estimate of the importance of Tuscania, which was apparently in ancient times never a place of any consideration. It was probably during the period of Etruscan independence a dependency of Tarquinii. The only remains of ancient buildings are some fragments of reticulated masonry, undoubtedly of the Roman period. (Demetrius Etrurius, vol. i. pp. 440—460.)

TUSCULUM (Τούσκουλον, Ptol. v. 9, § 22), a people of Asiatic Sarmatia between the Caspian and the Montes Ceranii. [T. H. D.]

TUSCULUM. [TUSCULUM, p. 1243, b.]

TUSCULUM (Τούσκουλον, Ptol. iii. i. § 61; Toúskoλον, Strab. v. p. 237; Toûssklo, Steph. B. p. 673; Eth. Tuscus, Cio. Indul. 20; Liv. iii. 7; &c.; Adj. Tuscus, Tib. i. 7. 57; Stat. Silv. iv. 4. 16; Tusculanesis, Cio. Fam. ix. 6: Frusceni and ill Tuscolo), a strong and ancient city of Latium, lying on the hills which form a continuation of Mount Albanus on the W. When Dиныvs of Halicarnassus (c. 20) places it at a distance of 100 staedia, or 12 miles, from Rome, he does not speak with his accustomed accuracy, since it was 120 staedia, or 15 miles, from that city by the Via Latina. Josephus (Ant. xviii. 7. 6) places the imperial villa of Tiberius at Tusculum on 100 staedia from Rome, which, however, lay at some distance to the W. of the town. Festus (s. v. Tuscolo) makes Tusculum a diminutive of Tuscanus, but there is but slight authority to connect the town with the Etruscans. According to common tradition, it was founded by Telecomus, the son of Ulysses and Circe; and hence we find its name paraphrased in the Latin poets as "Telegoni moenia" (Ov. Fast. iii. 91, iv. 71; Prop. iii. 30. 4; Sil. B. xii. 535) and "Circeae moenia" (Hor. Epod. i. 30); and the hill on which it stood called "Telegoni juga parricide" (ib. Od. iii. 29. 8), "Circeae dorum" (Sil. B. vii. 631), and "Telegoni jugera" (Stat. Silv. 1. 3. 85). Thus Tusculum did not claim so remote an origin as many other Latin cities; and, as being founded a generation after the Trojan War, Virgil, a learned antiquary, consistently omits all notice of it in his Aeneid. The author of the treatise entitled Origo Gentis Romanae mentions that it was made a dependency or colony of Alba by Latins Silvius (c. 17 § 6). After the destruction of Alba by Titus Hostilius it appears to have recovered its independence, and to have become a republic under the government of a dictator.

But to descend from these remote periods to the more historical times. In the reign of Tarquinii
TUSCULUM.

Superbus, who courted the friendship of the Latin cities, Octavius Mamilius of Tusculum was the foremost man of all the race, tracing his descent from Ulysses and Circe. Him Tarquin conciliated by the gift of his daughter in marriage, and thus obtained the powerful alliance of his family and connections. (Liv. i. 49; Dionys. iv. 45.) The geopolitical pretensions of the gens Mamilia are still to be seen on their coins, which bear on the reverse the head of Mercury, and on the reverse Ulysses in his travelling dress and with his dog.

The alliance of Mamilius with Tarquin, however, was the main cause of the Latin War. After his expulsion from Rome, and unsuccessful attempt to regain his crown by means of the Etruscans, Tarquin took refuge with his son-in-law at Tusculum (Liv. ii. 15), and by his assistance formed an alliance with the confederacy of the thirty Latin cities (76 B.C.). The confederate army took up a position near Lake Regillus, a small sheet of water, now dry, which lay at the foot of the hill on which Tusculum is seated. This was the scene of the famous battle so fatal to the Latins, in n. c. 497. Mamilius, who commanded the Latin army, was killed by the hand of Titus Hermanni; Tarquinius Superbus himself, who, though now advanced in years, took part in the combat, was wounded; and the whole Latin army sustained an irreparable defeat (Liv. iv. 20; Dionys. iii. 4, sect.). After the peace which ensued, the Tusculans remained for a long while the faithful allies of Rome; an attachment which drew down on their territory the incursions of the Volsces and Aequi, n. c. 461, 460. (Liv. iii. 7, 8.) In n. c. 458, when the Roman capital was seized by the Sabine Appius Herdonius, the Tusculans gave a signal proof of their love and fidelity towards Rome. On the next morning after the arrival of the news, a large body of them marched to that city and assisted the Romans in recovering the capital, an act for which they received the public thanks of that people (ib. 18; Dionys. x. 16); and soon afterwards, Lucius Mamilius, the Tuscanus dictator was rewarded with the gift of Roman citizenship. (Liv. i. 29.) In the following year the Romans had an opportunity of repaying the obligation. The Aequi had seized the citadel of Tusculum by a nocturnal assault. At that time, Fabius with a Roman army was encamped before Antium; but, on hearing of the misfortune of the Tusculans, he immediately broke up his camp and flew to their assistance. The enterprise, however, was not of such easy execution as the expedition of Herdonius, and several months were spent in combats in the neighbourhood of Tusculum. At length the Tusculans succeeded in recapturing their citadel by reducing the Aequi to a state of famine, whom they dismissed after compelling them to pass unarmed under the yoke. But as they were flying homewards the Roman camp overtook them on Mount Algidus, and slew them to a man. (Jb. 23; Dionys. x. 20.)

In the following year, the Aequi, under the conduct of Graccius, ravaged the Labican and Tuscan territories, and encamped on the Algidus with their booty. The Roman ambassadors sent to expostulate with them were treated with insolence and contumacy. Then Tit. Quinctius Cincinnatus was chosen dictator, who defeated the Aequi, and caused them, with their commander Graccius, to pass thenceforward under the yoke. (Liv. ii. 25—26.) Algidus became the scene of a struggle between the Romans and Aequi on two or three subsequent occasions, as in n. c. 452 and 447. (Jb. 31, 42.) In the latter battle the Romans sustained a severe defeat, being obliged to abandon their camp and take refuge in Tusculum. After this, we do not again hear of the Tusculans till n. c. 416. At that period, the Romans, suspecting the Labicans of having entered into a league with the Aequi, charged the Tusculans to keep a watch upon them. These suspicions were justified in the following year, when the Labicans, in conjunction with the Aequi, ravaged the territory of Tusculum and encamped upon the Algidus. The Roman army despatched against them was defeated and dispersed, owing to the dissensions among its chiefs. Many of these, however, together with the elite of the army, took refuge at Tusculum; and Q. Servilius Priscus, being chosen dictator, changed the face of affairs in eight days, by routing the enemy and capturing Labicum. (Id. iv. 45—47.)

This steady friendship between Tusculum and Rome, marked for so many years by the strongest tokens of mutual goodwill, was at length interrupted by an occurrence which took place in n. c. 379. In that year the Tusculans, in conjunction with the Gabinians and Labicans, accused the Praenestines before the Roman senate of making inroads on their lands; but the senate gave no heed to their complaints. Next year Camillus, after defeating the Volscians, was surprised to find a number of Tusculans among the prisoners whom he had made, and, still more so when, on questioning them, he found that they had taken up arms by public consent. These prisoners he introduced before the Roman senate, in order to prove how the Tusculans had abandoned the ancient alliance. So war was declared against Tusculum, and the conduct of it entrusted to Camillus. But the Tusculans would not accept this declaration of hostilities, and opposed the Roman arms in a manner that has scarcely been paralleled before or since. When Camillus entered their territory he found the peasants engaged in their usual avocations; provisions of all sorts were offered to his army; the gates of the town were standing open; and as the legions defiled through the streets in all the panoply of war, the citizens within, like the countrymen without, were seen intent upon their daily business, the schools resounded with the hum of pupils, and not the slightest token of hostile preparation could be discerned. Then Camillus visited the Camianus temple and demanded his right. When he appeared before the senate in the Curia Hostilia, not only were the existing treaties with Tusculum confirmed, but the Roman franchise also was shortly afterwards bestowed upon it, a privilege at that time but rarely conferred. It was this last circumstance, however, together with their unsolicited fidelity towards Rome, that drew down upon the Tusculans the hatred and vengeance of the Latins; who, in the year n. c. 374, having burnt Satriicum, with the exception of the temple of Matatia, directed their arms against Tusculum. By an unexpected attack, they obtained possession of the city; but the inhabitants retired to the citadel with their wives and children, and despatched messengers to Rome with news of the invasion. An army was sent to their relief, and the Latins in turn became the besieged instead of the besiegers; for whilst the Romans encompassed the walls of the city, the Tusculans made sorties upon the enemy from the arx. In a short time the Romans took the town by assault and slew all the
TUSCULUM.

Latinis. (Ib. 33.) Servius Sulpicius and L. Quincin-
tius, both military tribunes, were the Roman com-
manders who were defeated and killed by the gold
coins, still extant, of the former family, are seen on
the obverse the heads of Castor and Pollux, deities
peculiarly worshipped at Tuscumum (Cic. Div. i. 43;
cf. Festus, s. v. Stroppa), and on the reverse the
image of a city with the letters TUSCVL on the
gate.

From this period till the time of the great Latin
war we have little to record of Tuscumum except the
frustrated attempt of the Veliterni on its territo-
ry (Liv. iv. 36) and the horrible destruction
committed on it by the Gauls, when in alliance with
the Tiburtines, in B. c. 357. (Id. vii. 11.) After
their long attachment to Rome we are totally at a
loss to conjecture the motives of the Tusculans in
joining the Latin cities against her. The war
which ensued is marked by the well-known anec-
dote of Titus Manlius, who, being challenged by
Geminus Metellus, the commander of the Tuscan
cavalry, attacked and killed him, against strict
orders to the contrary; for which breach of military
discipline he was put to death by his father. (Id.
vi. 7.) The war ended with the complete subju-
gation of the Latins; and by the famous senatus-
consultum regulating the settlement of Latinum, the
Tusculans were treated with great indulgence.
Their defection was ascribed to the intrigues of a
few, and their right of citizenship was preserved to
them (Id. 14.) This settlement took place in B. c.
335. In 321 the Tusculans were accused by the
tribune, M. Flavius, of having supplied the Veliterni
and Privernates with the means of carrying on war
against Rome. There does not appear to have been
any foundation for this charge; it seems to have
been a mere calumny: nevertheless the Tusculans,
with their wives and children, having put on mour-
ning habits, went in a body to Rome, and implored
the tribes to acquit them of so odious an impu-
tation. This spectacle moved the compassion of the
Romans, who, without further inquiry, acquitted
them unanimously; with the exception of the tribe
Polilia, which voted that the men of Tuscumum
should be scourged and put to death, and the women
and children sold, agreeably to the laws of war.
This vote remained indebted imprinted on the
memory of the Tusculans to the very latest period
of the Roman Republic; and it was found that scarce
one of the tribe Papiria, to which the Tusculans be-
longed, ever voted in favour of a candidate of the
tribe Polilia. (Ib. 37.)

Tuscumum always remained a municipium, and
some of its families were distinguished at Rome.
(Id. vi. 21—26; Orell. Insocr. 775, 1368, 3042.)
Among them may be mentioned the gens Mamilia,
the Porcii, which produced two Catos, the
Fulvia, Coruncania, Juventia, Fontela, &c. (Cic.
p. Pianc. 8, p. Font. 14; Corn. Nep. Cat. 1; Val.
Max. iii. 4, § 6.)

Hannibal appears to have made an unsuccessful
attempt upon, or perhaps rather a mere demona-
tion against, Tuscumum in B. c. 212. (Liv. xxvi.
9; cf. Sil. It. xii. 534.) In the civil wars of Ma-
rinius and Sulla, its territory seems to have been dis-
tributed by the latter. (Auct. de Colonia.) Its
walls were also restored, as well as during the wars
of Pompey. We have no notices of Tuscumum under
the Empire. After the war of Justinian and the
roads of the Lombards, Tuscumum regained even
more than its ancient splendour. For several cen-
turies during the middle ages the counts of Tus-
cumum were supreme in Rome, and could almost
enforce the use of the papal chair. The ancient city
remained entirely near the end of the 12th century.
At that period there were constant wars between
the Tusculans and Romans, the former of whom
were supported by the German emperors and
protected by the popes. According to Romualdus,
340), the walls of Tuscumum were razed in the ponti-
tificate of Alexander III. in the year 1168; but
perhaps a more probable account by Richard de S.
Germano (ap. Marmortr. Sec. X. t. vii. p. 972) de-
scribes the destruction of the city to the permission
of the German emperor in the year 1191.

Towards the end of the Republic and beginning of
the Empire, Tuscumum was one of the favourite re-
sorts of the wealthy Romans. Strabo (v. p. 239)
describes the hill on which it was built as adorned
with many villas and plantations, especially on the
side that looked towards Rome. But though the
air was salubrious and the country fine, it does not
appear, like Tibur, to have been a favourite resort
of the Roman poets, nor do they speak of it much in
their verses. The Anio, with its fall, besides other
natural beauties, lent a charm to Tibur which would
have been sought in vain at Tuscumum. Lucullus
seems to have been one of the first who built a villa
there, which seems to have been on a magnificent
scale, but with little arable land attached to it.
(Plin. xviii. 7; s. 1.) Its parks and gardens, how-
ever, which were adorned with avaries and fish-
ponds, extended to the Anio, a distance of several
miles; whence he was noted in the report of the
censors as making more use of the bough than the
plough. (Ib. and Varr. R. R. i. 13, iii. 3, seq.;
Colunella, i. 4.) On the road towards Rome, in the
Vigna Angiottii, is the ruin of a large circular ma-
suleum, 90 feet in diameter inside, and very much
resembling the tomb of Cucilia Metella on the Via
Appia. It evidently belongs to the last period of
the Republic; and Nibby (Dissert. p. 334) is inclined
to regard it as the sepulchre of Lucullus, mentioned
by Plutarch (Ib. L. 43), though that is commonly
identified with a smaller mausoleum between Fras-
catai and the Villa Rufellia. Besides the villa of
Lucullus, we hear of those of Cato, of Cicero and his
brother Quintus, of Marcus Brutus, of Q. Horter-
sinus, of T. Anicius, of Balbus, of Caesar, of L.
Crassus, of Q. Metellus, &c. It would now be vain
to seek for the sites of most of these; though it may
perhaps be conjectured that Cato's stood on the hill
to the N.E. of the town, which seems to have been
called Mons Porcius from it, and still bears the
name of Monte Poroio. So much interest, however,
is attached to the villa of Cicero (Tuscalumum), as
the favourite retirement in which he probably composed
a great portion of his philosophical works, and especially
the Deipignationes which take their name from it, that
we shall here present the reader with the chief par-
ticulars that can be collected on the subject. Re-
specting the site of the villa there have been great
disputes, one school of topographers seeking it at
Grotta Ferrata, another at the Villa Rufellia.
Both these places lie to the W. of Tuscumum, but
the latter nearer to it, and on an eminence, whilst
Grotta Ferrata is in the plain. We have seen from
Strabo that the Roman villas lay chiefly on the W.
side of the town and it will be found further on
that Cicero's adjoined those of Lucullus and Ga-
binius, which were the most splendid and remarkable,
TUSCULUM.

and must therefore have belonged to those noticed by Strabo. The scholiast on Horace (Epod. i. 30) describes Cicero's as being "ad latere superioria" of the Tusculan hill; and if this authority may be relied on, it dispenses with the claims of Grotta Ferrata. The plural "latera" also determines us in favour of the W. side of the town, or Villa Rufina, where the hill has two ridges. At this spot some valuable remains were discovered in 1741, especially a beautiful mosaic, now in the Museo Pio Clementino. The villa belonged originally to Sulla (Plin. xxii. 6. s. 6). It was, as we have said, close to that of Lucullus, from which, in neighbourly fashion, Cicero was accustomed to fetch books with his own hand. (De Fin. iii. 2.) It was likewise near that of the consul Gabinius (pro Dom. 24, post Red. 7), which also stood on the Tusculan hill (in Pisc. 21), probably on the site of the Villa Falconieri. In his vision pro Scito (43), Cicero says that his own villa was a mere cottage in comparison with that of Gabinius, though the latter, when tribune, had described it as "pictum," in order to excite envy against its owner. Yet from the particulars which we learn from Cicero himself, his retirement must have been far from deficient in splendour. The money which he lavished on it and on his villa at Pompeii brought him deeply into debt. (Ep. ad Att. ii. 1.) And in another letter (ib. ii. 2) he complained that the coreus valued that at Tusculum, as only quingentis millibus. or between 4000 and 50000. This would be indeed a very small sum, to judge by the description of it which we may collect from his own writings. Thus we learn that it contained two gymnasia (Dir. i. 5), an upper one called Lyceum, in which, like Aristotle, he was accustomed to walk and dispute in the morning. (Tusc. Disp. ii. 3), and to which a library was attached (Dir. ii. 5), and a lower one, with shady walks like Plato's garden, to which he gave the name of the Academy. (Tusc. Disp. ii. 3). The latter was, perhaps on the spot now occupied by the Casino of the Villa Rufina. Both were adorned with beautiful statues in marble and bronze. (Ep. ad Att. i. 1. 8. 9. 10.)

The villa likewise contained a little atrium (atrium, ib. i. 10, de Quint. Fr. iii. 1), a small portico with exedra (ad Fam. vii. 24), a bath (ib. xiv. 20), a covered promenade "pecta ambae ambae," ad Att. xiii. 29), and an horologium (ad Fam. viii. 15), which was made at the time of Zuzzeri, a sun-dial was discovered here, and placed in the Collegio Romano. The villa, like the town and its neighbourhood, was supplied with water by the Aqua Crabra. (De Leg. Agr. iii. 31.) But of all this magnificence scarce a vestige remains, unless we may regard as such the ruins now called Scuola di Cicerone, close to the ancient walls. These consist of a long corridor with eight chambers, forming apparently the ground floor of an upper building, and if they belonged to the villa they were probably granaries, as there is not the least trace of decoration.

We will now proceed to consider the remains at Frascati. Strabo (v. p. 239) indicates where we must look for Tusculum, when he describes it as situated on the high ridge connected with Mount Albanus, and serving to form with it the deep valley which stretches out towards Mount Algidsus. This ridge was known by the name of the Tusculan Colea. We have already seen that Tusculum was composed of two distinct parts, the town itself and the arx or citadel, which was isolated from it, and seated on a higher point; so elevated, indeed, that when the Aequi had possession of it, as before narrated, they could deserv the Roman army falling out of the gates of Rome. (Dionysy. z. 20.) It was indeed on the very cut, or pinnacle, of the ridge, a point isolated by cliffs of great elevation, and approachable only by a very steep ascent. According to Sir W. Gell (Topogr. 6c. p. 429) it is 2079 French feet above the level of the sea. Here a few traces of the walls of the citadel remain, from which, and from the shape of the rock on which the town stood, we may see that it formed an irregular oblong, about 2700 feet in circumference. There must have been a gate towards the town, where the ascent is less steep; and there are also vestiges of another gate on the E. side, towards 1o Molarea, and of a road which ran into the Via Latina. Under the rock are caves, which probably served for sepulchres. The city lay immediately under the arx, on the W. side. Its form was a narrow oblong, approaching to a triangle, about 3000 feet in length, and varying in breadth from about 1000 to 500 feet. Thus it is represented of a triangular shape on the coins of the gens Sulpisia. Some vestiges of the walls remain, especially on the N. and S. sides. Of these the ancient parts consist of large quadrilateral pieces of local tufo, some of them being 4 to 5 feet long. They are repaired in places with opus incertum, of the age of Sulla, and with opus reticulatum. Including the arx, Tusculum was about 15 mile in circumference. Between the town and the citadel is a large quadrilateral piscina, 86 feet long by 673 broad, divided into three compartments, probably intended to collect the rain water, and to serve as a public washing-place. One of the theatres lies immediately under this citern, and is more perfect than any in the vicinity of Rome. The scene, indeed is partly destroyed and covered with earth, but the benches or rows of seats in the corea, of which there are nine, are still nearly entire, as well as the steps cut in them for the purpose of commodious descent. There are three flights of these steps, which consequently divide the corea into four compartments, or cunei. The spectators faced the W., and thus enjoyed the magnificent prospect over the Alban valley and the plains of Latium, with Rome and the sea in the distance. Abeken (Mittel-Italien, p. 260), considers this theatre belonging to the early times of the Empire. Sir W. Gell, on the other hand, pronounces it to be earlier. (Topogr. of Rome, p. 429.) Near this edifice were discovered in 1818, by Lucien Buonaparte, the beautiful bronze statue of Apollo and those of the two Rutiliae. The last are now in the Vatican, in the corridor of the Museo Chiaramonti. At the back of this structure are vestiges of another theatre, or odeum; and at its side two parallel walls, which bounded the street leading to the citadel. On the W. of the theatre is an ancient road in good preservation, leading to one of the gates of the city, where it is joined by another road. Close to the walls near the piscina is an ancient cistern, and at its side a small fountain with an inscription; a little further is a Roman milestone, recording the distance of 15 miles. Besides these objects, there are also remains of a columbarium and of an amphitheatre, but the latter is small and not of high antiquity. Many fragments of architecture of an extremely ancient style are strewn around. Within the walls of the town, in what appears to have been the principal street, several inscriptions
TUSCUM MARE.

still remain, the chief of which is one on a kind of pedestal, recording that the object to which it belonged was sacred to Jupiter and Liberty. Other inscriptions found at Tusculum are preserved in the Villa Gregoriana; the one to M. Fabius Nobilior, the conqueror of Atolia; another to the poet Diphilos, mentioned by Cicero in his letters to Atticus (ii. 19).

Near the hermitage at Camaldoli was discovered in 1667 a very ancient tomb of the Furi, as recorded by Falconieri, in his Inscr. Athel. p. 143, seq. It was cut in the rock, and in the middle of it was a sarcophagus, about 5 feet long, with a pediment-shaped cover. Round it were twelve urns placed in loculi, or coffins. The inscriptions on these urns were in so ancient a character that it bore a great resemblance to the Etruscan and Pelasgic. The form of the P resembled that in the sepulchral inscriptions of the Scipios, as well as that of the T. The diphthong OU was used for V, and P for F. The inscriptions on the urns related to the Furi, that on the sarcophagus to Luc. Turpilius. There were also fragments of fictile vases, commonly called Etruscan, and of an elegant cornice of terra cotta, painted with various colours. (Nibby, Dintorni, iii. p. 360.)

We shall only add that the ager Tusculanus, though now but scantily supplied with water, formerly contributed to furnish Rome with that element by means of the Aqua Tepula and Aqua Virgo. (Front. Ag. 8, seq.)

TUSCUM MARE. [Tyrrhenicum Mare.]

TUTATIO, a place in Noricum of uncertain site (L. Ant. p. 277; Tab. Peut, where it is called Tutestio). [L. S.]

TUTHUA (Tothuda), a river of western Arcadia, flowing into the Ladon, on the confines of Thespias and Heraea. It is now called Lamodiola, and joins the Ladon opposite to the small village of Reneci. (Paus. viii. 25. § 12; Leake, Morea, vol. ii. p. 95; Peloponnesiac, p. 223.)

TUTIA, a small stream in the neighbourhood of Rome, mentioned only by Livy and Silius Italicus, who inform us that Hannibal encamped on its banks, when he was commencing his retreat from before the walls of Rome. (Livy xxvi. 11; Sil. Ital. xiii. 5.) Livy places it 6 miles from the city, and it is probable that it was on the Lusarian Way, by which Hannibal subsequently commenced his retreat; in this case it may probably be the stream now called the Fiume di Conca, which crosses that road between 6 and 7 miles from Rome, and has been supposed by Gall and Nibby to be the Alia, or Alia in Silius Italicus expressly tells us that it was a very small stream, and little known to fame. The name is written Turia in many editions of that poet, but it appears that the best MSS. both of Silius and of Livy have the form Tutia. [E. H. B.]

TUTIA (Toorria, Plut. Sert. 19), a place in the territory of the Edetani in Hispania Tarraconensis not far from Sueco, the scene of a battle between Pompey and Sertorius (Plut. l. c.); Florus, iii. 22.) It is thought to be the modern Toas. But perhaps the conjecture of Uertk (ii. pt. i. p. 413) is correct that in both these passages we should read Turia. [T. H. D.]

TUTICUM. [Ercus Tusculus.]

TUTINI (L. Ant. Ov. 162), a small fortified town in Aetiaopia, situated 12 miles N. of Tauronzo, upon the western side of the Nile. The ruins of Tutia are supposed to be near, and NW. of the present village of Gypros. (Belzoni, Travels, vol. i. p. 112.)

TYANA (νς Τηνάω; Εθ. Τυαρεῖος ή Τυαίρις), also called Thyana or Thiana, and originally Theaom, from Theas, a Thracian king, who was believed to have founded it, or Atrexus and Polyeades, and to have founded the town (Arran, Period. P. L. p. 6; Steph. B. s. v.). Report said that it was built, like Zela in Pontus, on a causeway of Semiramis; but it is certain that it was situated in Cappadocia at the foot of Mount Taurus, near the Cilician gates, and on a small tributary of the Lamus (Strab. xii. p. 537, xiii. p. 587.). It stood on the highroad to Cilicia and Syria at a distance of 300 stadia from Cybistra, and 400 stadia (according to the Peut. Table 73 miles) from Mazaca (Strab. xii. p. 518, Plut. v. 6 § 18) 2 miles from the l. Ant. vi. 3; L. Ant. p. 145. Its situation on that road and close to so important a pass must have rendered Tyana a place of great consequence, both in a commercial and a military point of view. The plain around it, moreover, was extensive and fertile, and the whole district received from the town of Tyana the name of Tyantia (Τυαντία, Strab. l. c.). From its coins we learn that in the reign of Caracalla the city became a Roman colony; afterwards, having for a time belonged to the empire of Palmyra, it was conquered by Aurelian, in A.D. 272 (Vopisc. Aurel. 22, foll.), and Valens raised it to the rank of the capital of Cappadocia Secunda (Basil. Magn. Epist. 74, 75; Hieroc. p. 700; Malala, Chron.; Not. Imp.). Its capture by the Turks is related by Cedrenus (p. 477). Tyana is celebrated in history as the native place of the famous impostor Apollonius, of whom we have a detailed biography by Philostratus. In the vicinity of the town there was a temple of Zeus on the borders of a lake in a marshy plain. The water of the lake itself was cold, but a hot well, sacred to Zeus, issued from it (Philost. Vit. Apoll. i. 4; Amm. Marc. xxii. 6; Aristot. M. Anu. 163.) This well was called Asmabocon, and from it Zeus himself was supposed Asmabocon. These details about the locality of Tyana have led in modern times to the discovery of the true site of the ancient city. It was formerly believed that Kara Hisar marked the site of Tyana; for in that district many ruins exist, and its inhabitants still maintain that their town once was the capital of Cappadocia. But this place is too far north to be identified with Tyana; and Hamilton (Researches, ii. p. 302, foll.) has shown most satisfactorily, what others had conjectured before him, that the true site of Tyana is at a place now called Kiz Hisar, south-west of Nigde, and between this place and Erebi. The ruins of Tyana are considerable, but the most conspicuous is an aqueduct of granite, extending seven or eight miles to the foot of the mountains. There are also massy foundations of several large buildings, shafts, pillars, and one handsome column still standing. Two miles south of these ruins, the hot spring also still bubbles forth in a column or lake. (Leake, Ant. ii. 61; Eckel, iii. p. 195; Sestini, p. 60.) [L. S.]

people of Scythia intra Imaian, on the banks of the Rhame. [T. H. D.]

TYDE. [Tude.]

TYLE (Τύλη, Polib. iv. 46), a town of Thrace, on the coast of the Euxine, where the Gauls established a seat of government (Basilidram), and which Reischard identifies with Kilios. Steph. B. (p. 670) calls it Tylas, and places it on the Haemon. [J. R.]

TYLILLUS, a town of Crete (Plin. iv. 20), the position of which can only be conjectured. On its ancient coins are found on the reverse a young man holding in his right hand the head of an ibex or white goat, and in his left a bow. These types on the coins of Tylissus led the most distinguished numismatist of the last century (Eckhel, vol. ii. p. 321) to fix its situation somewhere between Cydonia and Elyans, the bow being common on the coins of the one, and the ibex's head on those of the other, of these two cities. Hick (Kresta, vol. i. p. 433) and Torres Y. Ribera (Periplus Crestae, p. 324) adopt this suggestion of Eckhel, and place Tylissus on the same as the W. extremity of the island near the modern Sclavo-Kastelli. (Pashley, Travels, vol. i. p. 162.)

[Ε. Β. Ι.]

TYLUS or TYRUS (Τύλος, Poli. vi. 7: § 47; Tóρρας, Strab. xvi. p. 766; Steph. B. s. v.), an island in the Persian gulf, off the coast of Arabia. It has been already mentioned that according to some traditions, this island was the original seat of the Phoenicians, who named the city of Tyre after it when they had settled on the coasts of the Mediterranean. (Phocion, p. 607.) Pliny describes the island as abounding in pearls. (Plin. vi. 28. s. 32, xii. 10. s. 21. xvi. 41. s. 80; Ariam, An. urb. vii. 20; Theor. Hist. Plant. iv. 9. v. 6.)

TYMANDUS (Τυμάνδος: Eth. Tymándorphos), a place in Phrygia, between Philomelum and Sosopolis. (Conc. Chalc. pp. 244, and 247: in this passage the reading Μαξάνδρος πάλιος is corrupt; Hier. vol. i. p. 673, where the name is misspelled Τυμάνδορος.) It is possible that Tymandus may be the same as the Demus mentioned by Livy (xxxviii. 15), for which some MSS. have Dymas or Drias.

[L. S.]

TYMURES, a tributary of the Sangarius, in the north of Phrygia (Liv. xxxvi. 18), is in all probability the same river as the one called by Pliny (vii. 1) Tymbrocras, which joined the Sangarius, as Livy says, on the borders of Phrygia and Galatia, and, flowing in the plain of Doryleum, separated Phrygia Epactens from Phrygia Sosanonas. It seems also to be the same river as the Tiracrion and Batiss mentioned in Byzantine writers. (Cassius, v. i. p. 111: Richter, Worldhierarchen, p. 522, 610.)

[T. H. D.]

TYMPHAIAE, TYPHMAEI. [Tymphae.

TYMPHIL (Τιμφήλ), a mountain on the confines of Macedonia, Epirus, and Thessaly, a part of the range of Pindus, which gave its name to the district Tymphai (Τυμφαία), and to the people, the Tymphai (Τυμφαίοι, Steph. B. s. v.). As it is stated that the river Anthias rose in Mt. Tymphæ, and that the Tymphæ was a town of the Tymphai (Strab. viii. pp. 325, 327), Mt. Tymphæ may be identified with the summits near Metsovo, and the Tymphai may be regarded as the inhabitants of the whole of the upper valley of the Peneus from Metsovo to Kalabaka. The name is written in some editions of Strabo, Tymphæ and Tymphaei, and the form Tymphaia also occurs in Arrian (1. 7); but the orthography without the s is perhaps to be preferred. The question whether Symphalia or Symphilia is the same district as Tymphæa has been discussed elsewhere. [Stymphalia.]

Pliny in one passage calls the Tymphae an Aetolian people (iv. 2. s. 3), and in another a Macedonian (iv. 10. s. 17), while Steph. B. describes the mountain as The-protan, and Strabo (l. c.) the people as an Epicritic race.

Stephanus B. mentions a town Tymphae, which is probably the same place called Trampya (Τραμπύα) by others, where Dypserophon, who was a native of this district, murdered Heracle, the son of Alexander the Great (-viii. 29, with Wesseling's note; Steph. B. s. v. Tymphae.) (Leake, Northern Greece, vol. i. p. 422, vol. ii. pp. 275, 276.)

TYMPHESTUS. [Pindes.]

TYNDARIS (Τυνδάρις, Strab. Tυνδάρις, Poli.: Eth. Tυνδάριτης, Tyndaritians: Tynodore), a city on the N. coast of Sicily, between Mylace (Milazzo) and Agathyrnas. It was situated on a bold and lofty hill standing out as a promontory into the spacious bay bounded by the Punta di Milazzo on the E., and the Cape Calastra on the W., and was distant according to the Itineraries 36 miles from Messana. (It. Ant. p. 90; Tab. Peut.) It was a Greek city, and one of the last of all the cities in Sicily that could claim a purely Greek origin, having been founded by the elder Dysnusus in B. C. 395. The original settlers were the remains of the Messenian exiles, who had been driven from Naxapuas, Zacynthus, and the Peloponnese by the Spartans after the close of the Peloponnesian War. These had at first been established by Dysnusus at Messana, when he repeopled that city (Messana); but the Spartans having taken umbrage at this, transferred them to the site of Tynodar, which had previously been included in the territory of Abasaenum. The colonists themselves gave to their new city the name of Tynodar, from their native divinities, the Tyndaridae or Dioscuri, and readily admitting fresh citizens from other quarters, soon raised their whole population to the number of 5000 citizens. (Diod. xiv. 78.)

The new city thus rose at once to be a place of considerable importance. It is next mentioned in B. C. 344, when it was one of the first cities that declared in favour of Tuedon after his landing in Sicily. (Id. xvi. 69.) At a later period we find it mentioned as espousing the cause of Hieron, and supporting him during his war against the Mantinians. (B. C. 269.) On that occasion he rested his position upon Tynodar on the left, and on Tyrreniaum on the right. (Diod. xxii. 12. iv. p. 493.) Indeed the strong position of Tynodar rendered it in a strategic point of view as important a post upon the Tyrrhenian, as Tyrreniaum was upon the Sicilian sea, and hence we find it frequently mentioned in subsequent wars.

In the First Punic War it was at first dependent upon Carthage; and though the citizens, alarmed at the progress of the Roman arms, were at one time on the point of retreating to Rome, they were restrained by the Carthaginians, who carried off all the chief citizens as hostages. (Diod. xxii. p. 502.) In B. C. 257, a sea-fight took place off Tyrnaris, between that city and the Liparitan islands, in which a Roman fleet under C. Atlius obtained some advantage over the Carthaginian fleet, but without any decisive result. (Ptol. i. 25; Zonar. viii. 12.) The Roman fleet is described on that occasion as touching at the promontory of Tynodar, but the city had not yet fallen into their hands, and it was not till after the fall of Panormus, in B. C. 254, that
TYDARIAS.

Tydarias expelled the Cretan garrison, and joined the Roman alliance. (Diod. xxxii. p. 505.) We hear but little of Tydarias under the Roman government, but it appears to have been a flourishing and considerable city. Cicero was particularly noted for his "nobilissima civitas" (Verr. iii. 33), and we learn from him that the inhabitants had displayed their zeal and fidelity towards the Romans upon many occasions. Amongst others they supplied naval forces to the armament of Scipio Africanus the Younger, a service for which he requited them by restoring them a statue of Mercury which had been carried off by the Cretans, and which continued an object of great veneration in the city, till it was again carried off by the rapacious Verres. (Cic. Verr. iv. 39—42, v. 47.) Tydarias was also one of seventeen cities which had been selected by the Roman senate, apparently as an honorary distinction, to contribute to certain offerings to the temple of Vesta at Fyris. (Ib. v. 47 ; Zumpt, ad loc.; Diod. iv. 83.) In other respects it had no peculiar privileges, and was in the condition of an ordinary municipal town, with its own magistrates, local senate, &c., but was certainly in the time of Cicero one of the most considerable places in the island. It, however, suffered severely from the exactings of Verres (Cic. Verr. ii. cc.), and the inhabitants, to revenge themselves on their oppressor, publicly demolished his statue as soon as he had quitted the island. (Ib. ii. 66.)

Tydarias again bore a considerable part in the war between Sextus Pompeius and Octavian (n. c. 36). It was one of the places occupied and fortified by the former, when preparing for the defence of the Sicilian straits; but was taken by Agrigina after his naval victory at Mylae, and became one of his chief posts, from which he carried on offensive warfare against Pompey. (Appian, B. C. v. 105, 109, 116.) Subsequently to this we hear nothing more of Tydarias in history; but there is no doubt of its having continued to subsist throughout the period of the Roman Empire. Strabo speaks of it as one of the places on the N. coast of Sicily which, in his time, still despaired of the name of cities; and Pliny gives it the title of a Colonia. It is probable that it received a colony under Augustus, as we find it bearing in an inscription the titles of "Colonia Augusta Tydaritana-norum." (Strab. vi. p. 272; Plin. iii. 8. s. 14; Ptol. iii. 4. § 2; Orell. Inscr. 955.) Pliny indeed mentions a great calamity which the city had sustained, when (he tells us) half of it was swallowed up by the sea, probably from an earthquake having caused the fall of part of the hill on which it stands, but we have no clue to the date of this event; (Plin. ii. 92. s. 94.) The Itineraries attest the existence of Tydarias, apparently still as a considerable place, in the fourth century. (Itin. Ant. pp. 90, 93; Tubb, Pent.)

The site of Tydarias is now wholly deserted, but the name is retained by a church, which crowns the most elevated point of the hill on which the city formerly stood, and is still called the Madonna di Tindaro. It is 650 feet above the sea-level, and forms a conspicuous landmark to sailors. Considerable ruins of the ancient city are also visible. It occupied the whole plateau or summit of the hill, and the remains of the ancient walls may be traced, at intervals, all round the brow of the cliffs, except in one part, facing the sea, where the cliff is now quite precipitous. It is not improbable that it is here that a part of the cliff fell in, in the manner recorded by Pliny (ii. 92. s. 94.) Two gates of the city are also still distinctly to be traced. The chief monuments, of which the ruins are still extant within the circuit of the walls, are: the theatre, of which the remains are in imperfect condition, but sufficiently to show that it was not of large size, and apparently of Roman construction, the Gymnasium, or site of Tharmonium, rebuilt in Roman times upon the Greek foundations; a large edifice with two handsome stone arches, commonly called a Gymnasium, but the real purpose of which is very difficult to determine; several other edifices of Roman times, but of wholly uncertain character, a masonry pavement, and some Roman tombs. (Serra di Falco, Antichità della Sicilia, vol. v. part vi.; Smyth's Sicily, p. 101; Howe's Classical Tour, vol. ii. p. 217, &c.) Numerous inscriptions, fragments of sculpture, and architectural decorations, as well as coins, vases, &c. have also been discovered on the site. [E. H. B.]

TYNIDIS (Tyndis, Ptol. vii. i. § 16), a river of India intra Gangem, which flowed into the Bay of Bengal. There is great doubt whether of two rivers, the Manades (Mahanade) or the Mesoous (Godaveri), represents this stream. According tomannert it was the southern branch of the former river (v. 1. p. 179). But, on the whole, it is more likely that it is another name for the Godaveri. [v.]

TYNDRUMENENSE OPIL. [THECUDROMON.]

TYNKA (Tirva), a place in Catania or the southern part of Cappadocia, in the neighbourhood of Faustopinum, is mentioned only by Ptolemy (v. 7. § 7).

TYPAEUS. [OLYMPIA.]

TYPAEAE (Tymphae, Polyb. Steph. B.; Tymophone, Strab.; Typhonae, Polyb.; Etr. Tauranepo), a town of Triphylia in Elis, mentioned by Strabo along with Hypana. It was taken by Philip in the Social War. It was situated in the mountains in the interior of the country, but its exact site is uncertain. Leuke supposes it to be represented by the ruins near Platana; but Bobluye supposes these to be the remains of Apep or Apem (Aepv), and that Typaram was situated on the hill of Malekyn. The Typanns stood on the hill of Malekyn. (Strab. viii. p. 343; Polyb. iv. 77—79; Steph. B. s. v.; Plut. i. 16. § 18; Leuke, Morea, vol. ii. p. 82; Bobluye, Recherches, g.e. p. 133; Ross, Reisen im Peloponnes, p. 105; Curtis, Peloponnesus, vol. ii. p. 89.)

TYRACI'A or TURACI'NA (Tyrakw, Steph. B.; Etr. Tyraeiensis, Plin.), a city of Sicily, of which very little is known. It is noticed by Stephanus as "a small but flourishing city;" and the Tyraeienses are mentioned by Pliny among the municipal communities of the interior of Sicily. (Steph. B. s. v.; Plin. iii. 8. s. 14.) It is doubtful whether the "Tyracinus, princeps civitatis," mentioned by Cicero (Verr. iii. 56) is a citizen of Tyra or one of Helorus who bore the proper name of Tyracius. In either case the name was probably derived from the city; but though the existence of this is clearly established, we are wholly without any clue to its position.

Several writers would identify the Trinacria (Travacia) of Diodorus (xii. 29), that which writer describes as having been one of the chief towns of the Siculi, until it was taken and destroyed by the Syracusans in b.c. 439, with the Tyracina of Stephanus and Tyracian of Pliny. Both names are otherwise unknown, the readings are in both cases uncertain: but Diodorus seems to represent Trinacria as having been totally destroyed, which would sufficiently account for its not being again
TYRALLIS.

TYRALLIS (Τυραλλής), a place in Paphlagonia, on the south-west of Cappadocia, on the river Cydnus.

(Ptol. v. 7. § 7.)

TYRAMBAE (Τυραμβαί), a place in Cappadocia, in the neighbourhood of the river Rhombodes Minor.

[T. H. D.]

TYRANNOBOAS (Τυραννοβοᾶς), an emporium on the western coast of Bengal between Mandagnura and Byzantium, noticed by the author of the Peripus (p. 30). It cannot now be identified with any place.

[V.]

TYRES (Τύρος, Strab. ii. p. 107), one of the principal rivers of European Sarmatia. According to Herodotus (iv. 51) it rose in a large lake, whilst Polyennus (iii. 8. § 14 &c.) places its sources in Mount Carpates, and Strabo (c. 600) calls them, with more correct orthography, Tyraeetas, and represents them as dwelling on a large island in the Tyas.

[T. H. D.]

TYRANNOBOS (Τυραννοβός), an emporium on the western coast of Bengal between Mandagnura and Byzantium, noticed by the author of the Peripus (p. 30). It cannot now be identified with any place.

[V.]

TYRES (Τύρος, Strab. ii. p. 107), one of the principal rivers of European Sarmatia. According to Herodotus (iv. 51) it rose in a large lake, whilst Polyennus (iii. 8. § 14 &c.) places its sources in Mount Carpates, and Strabo (600) calls them, with more correct orthography, Tyraeetas, and represents them as dwelling on a large island in the Tyas.

[T. H. D.]

TYRIAEUM (Τυριαεύμ), a town of Lycaonia, which according to Xenophon (Anab. i. 2, § 24) was 20 parasangs west of Iconium, and according to Strabo (xiv. p. 663) on the eastern frontier of Phrygia, and probably on the road from Smyrna to Laodicea, and between the latter and Philomelium. Near this town Cyrus the Younger reviewed his forces when he marched against his brothers. (Comp. Plin. v. 25; Herod. i. 672; and Conc. Chalced. p. 401, where the name is written Τυριαύμ). It is possible that Tyriaseum may be the same town as the Taterion or Tetradron of Ptolemy (v. 4. § 10), the Tyraion in the Conc. Chalced. (p. 669), and the Tygion of Anna Comnena (xiv. 7, 13). Its site seems to be marked by the modern Tyyn or Tihanum. (Hamilton, Researches, ii. p. 200; Kiepert in Franz. Inschriften, p. 36.)

[L. S.]

TYRITACA (Τυριτάκα or Τυρίτακα, Ptol. iii. 6. § 4), a town in the Chersones, on Asia. (Ann. Perip. P, Exc. p. 4, where it is written Τυριτάκα.) Dubois de Montremer identifies it with some ruins found on lake Thaurschos. (Voy. autour du Caucase, p. 247.)

[T. H. D.]

TYRISSES (Τυρίσσα, Ptol. iii. 13. § 39; E. Tyriassaeus, Plin. iv. 10. s. 17), a town of Emathia in Macedonia, placed by Ptolemy next to Epirus.

TYRITAE (Τυριτάι, Herod. ii. 51), certain Greeks settled at the mouth of the Tyas, probably Milesians who built the town of that name. (T. H. D.)

TYRRHENIA, TYRRHENI. [Ετρύρηνα.]

TYRRHHEUM MARE (τὸ Τυρρηνικὸν πέλαγος), was the name given in ancient times to the part of the Mediterranean sea which adjoins the W. coast of Italy. It is evident from the name itself that it was originally employed by the Greeks, who universally called the people of Etruria Tyrrhenians, and were merely adopted from them by the Romans. The latter people indeed frequently used the term Tyrrhenus, Tyrrhenian, etc. (Livy. v. 36, iii. 4. § 9), but still more often designated the sea on the W. of Italy simply as "the lower sea," MARE INFEREUM, just as they termed the Adriatic "the upper sea," or MARE SUPERFICIEUM. (Mel. iii. § 4; Plin. iii. 5. s. 10; Liv. l. e.) The name of Tyrrhenium Mare was indeed in all probability never in use among the Romans, otherwise than as a mere geographical term; but with the Greeks it was certainly the habitual designation of that portion of the Mediterranean which extended from the coast of Liguria to the N. coast of Sicily, and from the mainland of Italy to the islands of Sardinia and Corsica on the W. (Polyb. i. 10, 14, &c.; Strab. i. p. 122, v. p. 211, &c.; Dionys. Per. 83; Scl. §§ 15, 17; Agathem. i. 14.) The period at which it came into use is uncertain; it is not found in Herodotus or Thucydides, and S-ylax is the earliest author now extant by whom the name is mentioned. [E. H. E.]

TYRHHINE. [Οὐγιόνα.]

TYRUS. [Θύρυς.]

TYRUS (Τῦρος, Herod. ii. 44, &c.: E. Τῦρος, Tyrus), the most celebrated and important city of Phoenicia. By the Israelites it was called Tsor (Jos., xii. 29, &c.), which means a rock but by the Tyrians themselves Sor or Sur (Theodoret in E susp. xxvii.), which appellation it still retains. For the initial letter t was substituted by the Greeks, and from them adopted by the Romans; but the letter also used the form Surri or Surra, said to be derived from the Phoenician name of the purple fish; whence also the adjective Surri-
The question of the origin of Tyre has been already discussed, its commerce, manufactures and colonies described, and the principal events of its history narrated at some length (P. 608, seq.), and this article will therefore be more particularly devoted to the topography, and to what may be called the material history of the city.

Strabo (xvi. p. 756) places Tyre at a distance of 200 stadia from Sidon, which pretty nearly agrees with the distance of 24 miles assigned by the Hein. Ant. (p. 149) and the Tab. Peutinger. It was built partly on an island and partly on the mainland. According to Pliny (v. 19 s. 17) the island was 22 stadia, or 2½ miles, in circumference, and was originally separated from the continent by a deep channel 4ths of a mile in breadth. In his time, however, as well as long previously (cf. Strab. l. c.), it was connected with the mainland by an isthmus formed by the mole or causeway constructed by Alexander when he was besieging Tyre, and by subsequent accumulations of sand. Some authorities state the channel to have been only 3 stadia (Sylvæus, p. 12) or 4 stadia broad (Diodor. Sic. xvii. 60, Curt. iv. 2); and Arrian (Anab. ii. 18) describes it as shallow near the continent and only 6 fathoms in depth at its deepest part near the island. The accretion of the isthmus must have been considerable in the course of ages. William of Tyre describes it in the time of the Crusades as a bow-shot across (xiii. 4); the Pope Roger makes it only 50 paces (Terre Sainte, p. 41); but at present it is about 1 of a mile broad at its narrowest part, near the island.

That part of the city which lay on the mainland was called Palæ-Tytrus, or Old Tyre; an appellation from which we necessarily infer that it existed previously to the city on the island; and this inference is confirmed by Ezechiæl's prophetical description of the siege of Tyre by Nebuchadnezzar, king of Babylon, the particulars of which are not suitable to an island city. Palæ-Tytrus extended along the shore from the river Orontes on the E, to the fountain of Ras-el-Ain on the S., a space of 7 miles; which, however, must have included the suburbs. When Strabo says (xvi. p. 738) that Palæ-Tytrus was 30 stadia, or 3 miles, distant from Tyre, he is probably considering the southern extremity of the former. Pliny (l. c.) assigns a circumference of 19 miles to the two cities. The plain in which Palæ-Tytrus was situated was one of the broadest and most fertile in Phœnicia. The fountain above mentioned afforded a constant supply of pure spring water, which was received into an octagonal reservoir, 60 feet in diameter and 18 feet deep. Into this reservoir the water gushed to within 3 feet of the top. (Maudrell, Journey, p. 67.) Hence it was distributed through the town by means of an aqueduct, all trace of which has now disappeared (Robinson, Palæst. iii. 684.) The unusual contrast between the battles of a great seaport and the mere tranquil operations of rural life in the fertile fields which surrounded the town, presented a striking scene which is described with much felicity in the Dionys. sicae of Nonnus (40, 327, sqq.).

The island on which the new city was built is the largest rock of a belt that runs along this part of the coast. We have no means of determining the origin of the island city; but it must of course have arisen in the period between Nebuchadnezzar and Alexander the Great. The alterations which the coast has undergone at this part render it difficult to determine the original size of the island. Maudrell (p. 66) estimated it at only 40 acres; but he was guided solely by his eye. The city was surrounded with a wall, the height of which, where it faced the mainland, was 150 feet. (Strab. ii. 18.) The foundations of this wall, which must have marked the limits of the island as well as of the city, may still be discerned, but have not been accurately traced. The measurement of Pliny before cited must doubtless include the subsequent accretions, both natural and artificial. The smallness of the area was, however, compensated by the great height of the houses of Tyre, which were not built after the western fashion, but story upon story, like those of Aradus, another Phœnician island city (Mela, ii. 7), or like the insulae of Rome. (Strab. l. c.) Thus a much larger population might be accommodated than the area seems to promise. Bertoni, calculating from the latter alone, estimates the inhabitants of insular Tyre at between 22,000 and 23,000. (Topogr. de Tyr, p. 17.) But the accounts of the capture of Tyre by Alexander, as will appear in the sequel, show a population of at least double that number; and it should be recollected that, from the maritime pursuits of the Tyrians, a large portion of them must have been constantly at sea. Moreover, part of the western side of the island is now submerged, to the extent of more than a mile; and that this was once occupied by the city is shown by the bases of columns which may still be discerned. These remains were much more considerable in the time of Benjamin of Tudela, in the latter part of the 12th century, who mentions that towers, markets, streets, and halls might be observed at the bottom of the sea (p. 62, ed. Ashor).

Insular Tyre was much improved by king Hiram, who in this respect was the Augustus of the city. He added to it one of the I.-lands lying to the N., by filling up the intervening space. This island, the outline of which can no longer be traced, was probably contained on the N. by the sea, on the S. by the N. of the N. by the S. by the mountain, on the E. by the E. and on the W. by the W. This island contained a temple of Baal, or, according to the Greek way of speaking, of the Olympian Jupiter. (Joseph. c. Apion, i. 17.) It was by the space thus gained, as well as by substructions on the eastern side of the island, that Hiram was enabled to enlarge and beautify Tyre, and to form an extensive public place, which the Greeks called Eurychors. The artificial ground which Hiram formed for this purpose may still be traced by the loose rubbish of which it consists. The frequent earthquakes with which Tyre has been visited (Sec. Q. X. ii. 26) have rendered it difficult to trace its ancient configuration; and alterations have been observed even since the recent one of 1837 (Kenrick, Phœnicia, p. 333, &c.).

The powerful navies of Tyre were received and sheltered in two roadsteads and two harbours, one on the N., the other on the S. side of the island. The northern, or Seleucid roadstead, so called because it looked towards Sidon (Arian, ii. 20), was protected by the chain of small islands already mentioned. The harbour which adjoined it was formed by a natural inlet on the NE. side of the island. On the N., from which quarter alone it was exposed to the wind, it was rendered secure by two sea-walls running parallel to each other, at a distance of 100 feet apart, as shown in the annexed plan. Portions of these walls may still be traced. The eastern side

VOL. II.
of the harbour was enclosed by two ledges of rock, with the assistance of walls, having a passage between them about 140 feet wide, which formed the mouth of the harbour. In case of need this entrance could be closed with a boom or chain. At present this harbour is almost choked with sand, and only a small basin, of about 40 yards in diameter, can be traced (Shaw, Travels, vol. ii. p. 30); but in its original state it was about 300 yards long, and from 230 to 340 yards wide. Part of the modern town of Sur, or Sour, is built over its southern portion, and only vessels of very shallow draught can enter.

PLAN OF TYRE.
(From Kenrick's "Phoenicia.")

A. Northern harbour.
B. Supposed limit of ancient harbour.
C. Tract of loose sand.
D. Southern, or Egyptian, harbour.
E. Southern, or Egyptian, roadstead.
F. Isthmus formed by Alexander's mole.
G. Depression in the sand.
H. Northern, or Sidonian, roadstead.
1. Portions of inner sea-wall, visible above water.
2. Original line of sea-wall.
3. Outer wall, now below water.
4. Line of rocks, bordered on the E. by a wall, not of ancient construction.
5. Ledge of rocks projecting 20 feet into the sea.
6. Columns united to the rock.
7. Rock, below 5 feet of rubbish.
8. Ledge of rocks extending 200 feet into the sea.
9. Remains of a wall, with iron in its mortar.
10. Masonry, showing the entrance of the canal.
11, 11, 11. Walls of the Cohon or harbour, about 25 feet broad.
12. Portions of wall overturned in the harbour.
13. Rocky islets.
14. Supposed submarine dyke or breakwater.
15. Commencement of the isthmus, covering several yards of the harbour wall.
16. Angle of the ancient wall of circumvallation, and probable limit of the island on the E.

The southern roadstead was called the Egyptian, from its lying towards that country, and is described by Strabo (i. c.) as unenclosed. If, however, the researches of Berton may be relied upon (Topogr. de Tyre, p. 14), a stupendous sea-wall, or breakwater, 35 feet thick, and running straight in a S.W. direction, for a distance of 2 miles, may still be traced. The wall is said to be covered by 2 or 3 fathoms of water, whilst within it the depth is from 6 to 8 fathoms. Berton admits, however, that this wall has never been carefully examined; and if it had existed in ancient times, it is impossible to conceive how so stupendous a work should have escaped the notice of all the writers of antiquity. According to the same authority, the whole southern part of the island was occupied by a cohon, or dock, separated from the roadstead by a wall, the remains of which are still visible. This harbour, like the northern one, could be closed with a boom; whence Chariton (vii. 2. p. 126, Reiske) takes occasion to compare the security of Tyre to that of a house with bolted doors. At present, however, there is nothing to serve for a harbour, and even the roadstead is not secure in all winds. (Shaw, ii. p. 30.) The northern and southern harbours were connected together by means of a canal, so that ships could pass from one to the other. This canal may still be traced by the loose sand with which it is filled.

We have already adverted to the sieges sustained by Tyre at the hands of Shalmaneser, Nebuchadnezar-
TYRUS.

By Alexander, and Antigonus. [Phoenicia, pp. 610—613]. That by Alexander was so remarkable, and had so much influence on the history of Tyre, that we reserved the details of it for this place, as they may be collected from the narratives of Arrian (Anab. ii. 17—26), Diodorus Siculus (xvii. 40—45), and Q. Curtius (iv. 4—27). The insular situation of Tyre, the height and strength of its walls, and the command which it possessed of the sea, seemed to render it impregnable; and hence the Tyrians, when summoned by Alexander to surrender, prepared for an obstinate resistance. The only method which occurred to the mind of that conqueror of overcoming the difficulties presented to his arms by the site of Tyre, was to connect it with the mainland by means of a mole. The materials for such a structure were at hand in abundance. The deserted buildings of Palæa-Tyros afforded plenty of stone, the mountains of Lebanon an inexhaustible supply of timber. For a certain distance, the mole, which was 200 feet in breadth, proceeded rapidly and successfully, though Alexander's workmen were often harassed by parties of Tyrian troops, who, landed in boats, as well as by the Arabs of the Syrian desert. But as the work approached the island, the difficulties increased in a progressive ratio. Not only was it threatened with destruction from the depth and force of the current, often increased to violence by a southerly wind, but the workmen were also exposed to the missiles of the Tyrian slingers and bowmen, aimed both from vessels and from the battlements of the city. To guard themselves from these attacks, the Macedonians erected two lofty wooden towers at the extremity of the mole, and covered them with hides as a protection against fire. The soldiers placed on these towers occasioned the Tyrians considerable annoyance. At length, however, the latter succeeded in setting fire to the towers by means of a fire-ship filled with combustibles; and afterwards, making a sortie in their boats, pulled up the stakes which protected the mole, and destroyed the machines which the fire had not reached. To complete the discomfiture of the Macedonians, a great storm arose and carried away the whole of the work which had been thus loosened. This misfortune, which would have damped the ardour of an ordinary man, only incited Alexander to renew his efforts with greater vigour and on a surer plan. He ordered a new mole to be constructed, broader than the former one; and in order to obviate the danger of destruction by the waves, he caused it to incline towards the SW., and thus to cross the channel diagonally, instead of in a straight line. At the same time he collected a large fleet from Sidon, whither he went in person, from Soli, Mallos, and other places; for, with the exception of Tyre, all Phoenicia was already in the hands of Alexander. He then made an incursion into Coele-Syria, and chased away the Arabs who annoy his workmen employed in cutting timber in Anti Libanus. When he again returned to Tyre with his fleet, which he had joined at Sidon, the new mole had already made great progress. It was formed of whole trees with their branches, covered with layers of stone, on which other trees were heaped. The Tyrian divers, indeed, sometimes succeeded in loosening the structure by pulling out the trees; but, in spite of these efforts, the work proceeded steadily towards completion. The large fleet which Alexander had assembled struck terror into the Tyrians, who now confined themselves to defensive measures. They sent away the old men, women, and children to Carthage, and closed the mouths of their harbours with a line of tirames. It is unnecessary to recur to the incidents which followed, and we shall therefore confine ourselves to the most important. Alexander had caused a number of new machines to be prepared, under the direction of the ablest engineers of Phoenicia and Cyprus. Some of these were planted on the mole, which now very nearly approached the city; others were placed on board large vessels, in order to batter the walls on other sides. Various were the devices resorted to by the Tyrians to frustrate these attempts. They cut the cables of the vessels bearing the battering rams, and thus sent them adrift; but this mode of defence was met by the use of iron mooring chains. To dealen the blows of the battering engines, heathen bags filled with sea-weed were suspended from the walls, whilst on their summit were erected large wheel-like machines filled with soft materials, which being set in rapid motion, either avert or intercept the missiles hurled by the Macedonians. A second wall also was commenced within the first. On the other hand, the Macedonians, having now carried the mole as far as the island, erected towers upon it equal in height to the walls of the town, from which bridges were projected towards the battlements, in order to take the city by escalade. Yet, after all the labour bestowed upon the mole, Tyre was not captured by means of it. The Tyrians annoyed the soldiers who manned the towers by throwing out grappling hooks attached to lines, and thus dragging them down. Nets were employed to entangle the hands of the assailants; masses of red-hot metal were hurled amongst them, and quantities of heated sand, which, getting between the interstices of the armour, caused intolerable pain. An attempted assault from the bridges of the towers was repulsed, and does not appear to have been renewed. But a breach was made in the walls by battering rams fixed on vessels; and whilst this was assaulted by means of ships provided with bridges, simultaneous attacks were directed against both the harbours. The Phoenician fleet burst the boom of the Egyptian harbour, and took or destroyed the ships within it. The northern harbour, the entrance of which was undefended, was easily taken by the Cyprian fleet. Meanwhile Alexander had entered with his troops through the breach. Provoked by the long resistance of the Tyrians and the obstinate defence still maintained from the roofs of the houses, the Macedonian soldiers set fire to the city, and massacred 8000 of the inhabitants. The remainder, except those who found shelter on board the Sidonian fleet, were sold into slavery, to the number of 30,000; and 2000 were crucified in expiation of the murders of certain Macedonians during the course of the siege. The lives of the king and chief magistrates were spared. Thus was Tyre captured, after a siege of seven months, in July of the year b.c. 332. Alexander then ordered sacrifices and games in honour of the Tyrian Hercules, and consecrated to him the battering ram which had made the first breach in the walls. The population, which had been almost destroyed, was replaced by new colonists, of whom a considerable portion seem to have been natives of the subsequent fortresses of Tyre who had already been recorded. [Phoenicia, p. 613.]

For the coins of Tyre see Eckhel, Doctr. Num. 4. 1. 2
TYSANUSA.

P. i. vol. iii. pp. 379—393, and 408, seq. Respecting its history and the present state of its remains, the following works may be advantageously consulted: Hengstenberg, De Rebus Tyrioven; Kenrick, Phoenicia; Poschke, Description of the East; Volney, Voyage en Syrie; Richter, Walfahrten; Berton, Topographie de Tyr; Maundrell, Journey from Aleppo to Damascus; Shaw's Travels; Robinson, Biblical Researches, &c.

[T. H. D.]

COIN OF TYRUS.

TYSANUSA, a port on the coast of Caria, on the bay of Schoenus, and a little to the east of Cape Poseidium (Pomp. Mela, i. 16). Pliny (v. 29) mentions Tysanusa as a town in the same neighbourhood.

[T. S.]

TYRA. [TYSANUS.

TARULLUM (Ταρούλλη), Procop. B. Goth. iii. 38: Anna Comm. vii. p. 215, x. p. 273; Theopyl. vi. 5: in Geogr. Rav. iv. 6, and Tab. Peut. Sarul- lum and Syrulhum: in It. Ant. pp. 138, 230, Ixirul- lum, but in p. 323, Tarullum: and in It. Hier. p. 569, Tunorullum), a strong town on a hill in the SE. of Thrace, not far from Perinthus, on the road from that city to Hadrianopolis. It has retained its name with little change to the present day, being the modern Tchorov or Tchorin.

[J. R.]

U, V.

VARAB, a river of Mauretania Caesariensis, which fell into the sea a little to the W. of Salsida. Ptolemy (v. 2, § 9) mentions it under the name of Ochabas as if it had been a town; and Maiffe (Mau. Ver. p. 463) thought that he had discovered such a place in the valley of Bavares, in an African inscription (cf. Orelli, Inscr. no. 529). In Pliny (v. 2, § 1) and Mela (i. 6) the name is erroneously written Sabara. It is probably the present Biderab. [T. H. D.]

VACALUS. [BATAVI.

VACCA. 1. (Sull. J. 29, &c.) or VAGA (Sil. It. iii. 239; Ovid. Patul. iv. 3. § 28; Buxa, Procop. de Aed. vi. 9), an important town and place of considerable commerce in the interior of Numidia, lying a long day's journey SW. of Utica. Pliny (v. 4) calls it Vagana Oppidum. It was destroyed by Metellus (Sull. J. 69); but afterwards restored and inhabited by the Romans. Justinian surrounded it with a wall, and named it Theodora, in honour of his consort. (Procop. I. c.; cf. Strab. xvii. p. 881; Sall. J. 47, 68; Plut. Mar. 8. p. 109) Now Baggah (Begga, Beg- gia, Begija) in Tunisia, on the borders of Algeris. (Cf. Shaw, Travels, i. p. 183.) Vaga is mentioned by the Geographer. (C. I. iii. 1. p. 88) under the name of Bagga, and by Leo Africa. (p. 406, Lorschach) under that of Beggia, as a place of considerable commerce.

2. A town in Byzacium in Africa Proper, lying to the S. of Raspinum (Hirt. B. Afr. 74). This is probably the "allied Vagense oppidum" of Pliny (iv. 30). [T. H. D.]

VACCALI (Ovacalai, Ptol. ii. 6. § 50), an important people in the interior of Hispam Tarraco- nensis, bounded on the W. by the Astures, on the N. by the Cantabri, on the E. by the Celtiberi (to whom Appian, Hist. 51, attributes them), and on the S. by the Vettones and the river Durus. Hence their district may be considered as marked by the modern towns of Assurora, Toro, Patencia, Burgos, and Valladolid. Their chief cities were Palfianda (Polencia) and Intercatina. According to Diodorus (v. 34) they yearly divided their land for tillage among themselves, and regarded the produce as common property, so that whoever kept back any part for himself was capitally punished. (Cf. Liv. xxx. 7. xli. 47; Polib. iii. 14; Strab. iii. pp. 132, 162; Plin. iii. 3. s. 4; Plut. Sert. 21.) [T. H. D.]

VACOMAGI (Ovacomagia, Ptol. ii. 3. § 13), a people in Britannia Barbarea, near the Tasciab, never subdued by the Romans. Camden (p. 1217) seeks them on the borders of Loch Lomond. Proieny (I. c.) ascribes four towns to them. [T. H. D.]

VACUA (Ovacova, Strab. iii. p. 153; Ovaco, Ptol. ii. 5. § 4), a river in Lucania, which entered the Atlantic ocean between the Durus and Munia, in the neighbourhood of Tahaloria. Pliny (iv. 21. s. 35) calls it Vaccia. The present Iongia. [T. H. D.]

VACUATAE (Ovacuatae or Basoavastae, Ptol. iv. 6. § 10), a people in the S. of Mauretania Tingitana, extending as far as the little Atlas. [T. H. D.]

VADA, a place on or near the Rhine, in North Galilia. Tacitus (Hist. v. 21) in his history of the war of Civilis speaks of Civilians attacking on one day with his troops in four divisions, Aramnucam, Batavodurum, Grinnes, and Vada. The history shows that Grinnes and Vada were south or on the south side of the stream which Tacitus calls the Rheus. [Grinnes.]

VADA SABBATA (Sabatov Ovada, Strab.; Sabbera, Ptol.; Yado), a town and port on the seacoast of Liguaria, about 30 miles W. of Genua. It was situated on a bay which affords one of the best roadsteads along this line of coast, and seems to have been in consequence much frequented by the Roman fleets. In B. C. 43 it was the first point at which M. Antonius halted after his defeat at Mutina, and where he effected his junction with Ventidius, who had a considerable force under his command. (Cic. ad Fam. xi. 10, 13.) D. Brutus, in his letter to Cicero, speaks of it as "inter Apenninum et Alpes," a phrase which obviously refers to the notion commonly entertained that this was the point of demarcation between the two chains of mountains, a view adopted also by Strabo (iv. p. 202). A pass led into the interior across the Apennines from Vada to Aquae Satrielle, which was probably that which followed by An- tony. Brutus speaks in strong terms of the rugged and difficult nature of the roads in all directions from this point, (Id.); but at a later period a regular road was constructed across the mountains from Vada to Aquae Satrielle, as well as in both directions along the coast. (Tit. Ann. p. 295: Tab. Peut.) Under the Roman Empire we learn that Vada con- tinued to be a place of considerable trade (Jul. Capit. Pert. 9, 13); and it is still mentioned as a port in the Maritime Itinerary (p. 502). Some doubt has arisen with regard to its precise position, though the name of Yado would seem to be obviously derived from it; but that of Sabbata or Sabatia, on the other hand, is apparently connected with that of Saron, a
VALENS.

1253

town with a small but secure port about 4 miles N. of Vado. Livy indeed mentions Savo (undoubtedly the same with Savona) as a sea-port town of the Ligurians, where Mago established himself during the Second Punic War (Liv. xxviii. 46); but the name does not occur again in any writer, and hence Cluvcrius supposed that this was the place afterwards called Sabbata. There seems, however, no doubt that Sabbata or Sabatia, Vada Sabatia, or Vada Sahara, and Vado simplicity (as the name is written by Cicero), are all only different forms of the same name, and that the Roman town of Vado was situated on, or very near, the same site as the present Vado, a long straggling fishing village, the bay of which still affords an excellent roadstead. The distinctive epithet of Sabbata or Sabatia was evidently derived from its proximity to the original Ligurian town of Savo. [E. H. B.]

VADAVERO, a mountain near Billia in the territory of the Celtibiri, in Hispania Tarraconensis. It appears to be mentioned only by Martialis (i. 50. 6), who characterises it by the epithet of "sacred," and adverts to its rugged character. [T. H. D.]

VADA VOLATERRANA. [Volaterrana.] VADICASSII (Ωδικάθασσος), a people of Gallia Lugdunensis, whom Ptolemy (ii. 8. § 16) places on the borders of Belgium, and next to the Meleae. He assigns to the Vadicasii a city Neumagnum. D'Anville concludes that following Ptolemy's data we may place his Vadicasii in Villa Bois, which is between Meaux and Soissons. He remarks that Villa Bois is Vadisius in the capitularies of Charles the Bald, and Vadenis in the later acts. Other geographers have different opinions. In many of the editions of Pliny (iv. 18) we find enumerated "Andegavi, Videcasii, Vadicascess, Uxelli;" but only one MS. has "Vadociasses," and the rest have Bodicasss or Bodicascess, which must be taken to be the true reading, and they seem to be the same as the Baicascess. (D'Anville. Notice, &c.; Ubert. Gallien.) [G. L.]

VADIMONIS LACUS (ἡ Όδικάθασση Ῥυάρ, Polyb.: Laghetto di Bassano), a small lake of Etruria, between the Ciminian hills and the Tiber, celebrated in history as the scene of two successive defeats of the combined Etruscan forces by the Romans. In the first of these battles, which was fought in n. c. 309, the Etruscans had raised a chosen army, enrolled with peculiar solemnity (lege sacra); but though they fought with the utmost valour and obstinacy, they sustained so severe a defeat at the hands of the Roman Consul Q. Fabius Maximus, that as Livy remarks, this disastrous day first broke the power of Etruria (Liv. ix. 39). The second battle was fought near 30 years later (n. c. 283), in which the allied forces of the Etruscans and Gauls were totally defeated by the consul P. Cornelius Dolabella. (Polyb. ii. 20 ; Enutrop. ii. 10 ; Flor. i. 15.) But thus celebrated in history, the Vadimonis lake is a very trilling sheet of water, in fact, a mere pool or stagnant pond, now almost overgrown with reeds and bulrushes. It was doubtless more extensive in ancient times, though it could never have of any importance, and scarcely deserves the name of a lake. But it is remarkable that the younger Pliny in one of his epistles describes it as a circular basin abounding in floating islands, which have all disappeared, and probably have contributed to fill up the ancient basin. Its waters are whitish and highly sulphureous, resembling, in this respect, the Aquae Albulae near Tiber, where the phenomenon of floating islands still occasionally occurs. (Plin. Ep. viii. 20.) It enjoyed the reputation, probably on account of this peculiar character, of being a sacred lake. But the apparent singularity of its having been twice the scene of decisive conflicts is sufficiently explained by its situation just in a natural pass between the Tiber and the wooded heights of the Ciminian forest, which (as observed by Mr. Dennis) must always have constituted a natural pass into the plains of Central Etruria. The lake itself, which is now called the Laghetto di Bassano from a neighbouring village of that name, is only a very short distance from the Tiber, and about 4 miles above Orte, the ancient Horta. (Dennis's Etruria, vol. i. pp. 167—170.) [E. H. B.]

VAGA, a town of the Cantii in Britannia Romana. (Not. Imp.) [T. H. D.]

VAGA. (Vacca.)

VAGREDUSA, the name of a river in Sicily, mentioned by Silius Italicus (civ. 229), according to the old editions of that author; but there can be no doubt that the true reading is that restored by Ruperti, "vage Chrysas," and that the river Chrysas is the one meant. (Ruperti, ad l. c.) [E. H. B.]

VAGIENNI (Βαιγιηνη), a Ligurian tribe, which inhabited the region N. of the Maritime Alps, and S. of the territory of the Taurini. According to Pliny they extended as far to the W. as the Mens Venula or Alpes Piso, in the main chain of the Alps (Plin. iii. 16. s. 20), while their chief town or capital under the Roman rule, called Augustas Vagiennornann, was situated at Bene, between the rivers Stura and Tanaro, so that they must have occupied an extensive territory. But it seems impossible to receive as correct the statement of Velius (i. 15) that the Roman colony of Epopedia (Horea) was included within their limits. (Ep. Rom.) It is singular that Pliny more than once speaks of them as being descended from the Caturiges, while at the same time he distinctly calls them a Ligurian tribe, and the Caturiges are commonly reckoned a Gallic one. It seems probable, however, that many of the races which inhabited the mountain valleys of the Alps were of Ligurian origin; and thus the Caturiges and Segusiani may very possibly have been a Ligurian stock like their neighbours the Taurini, though subsequently confounded with the Gauls. We have no account of the period at which the Vagienni were reduced under the Roman yoke, and their name is not found in history as an independent tribe. But Pliny notices them as one of the Ligurian tribes still existing in his time, and their chief town, Augusta, seems to have been a flourishing place under the Roman Empire. Their name is sometimes written Bagienii (Orell. Inser. 740), and is found in the Tabula under the corrupt form Bagitenni. (Tab. Peut.) [E. H. B.]

VAGNIACAE, a town of the Cantii in Britannia Romana, between Noviomagus and Durobrivae. Camden (p. 226) identifies it with Mainstone, Horsley (p. 424), with more probability, with Northfield. Others have sought it near Longfield, and at Wrotham. [T. H. D.]

VAGORUM (Ωγόρος). [Ant.]

VAHALIS. [Batai. Rhenus.]

VALCUM, a place near the confines of Upper and Lower Pannonia, not far from Lake Sebisa. (Itin. Ant. p. 233), but its exact site is uncertain. [L. S.]

VALDASUS, a southern tributary of the Savus, flowing from the mountains of Illyricum, and join-
VALENTIA.

VALENTIA (Ebeh. Valentinus: Nauagens), a town in the interior of Sardinia, NE. of Usellis. It seems to have been a considerable place, as the Valentinii are one of the few names which Pliny thought it worth while to mention among the Sardinian towns. Ptolemy also notices the Valentinii among the "populi" of the island, and there can be little doubt that the Valeria of the same author is only a false reading for Valeria. (Plin. iii. 12. s. 17; Tutt. iii. 3. §§ 6, 7.) Its remains are still visible at a village called Nuvagia, near the town of Ulii, about 12 miles from the ruins of Usellis. The adjoining district is still called Parte Valenza. (De la Marmora, Voy. en Sardaigne, vol. ii. p. 407.) [E. H. B.]

VALENTIA, the later name of a Roman province in the S. part of Britannia Barbara, or of the country lying N. of the Flets' wall, as far as Graham's Line, including Northumberland, Dumfriesshire, &c. This district was wrested from the Flets and Scots in the time of Valentinian, and formed by Theodosius a Roman province, but it remained only a short time in the possession of the Romans. (Arminian, Marc. xxviii. 3; Not. Imp.) [T. H. D.]

VALENTIA (Odacentina, Tutt. ii. 6. § 62), a considerable town of the Edetani in Hispania Tarraconensis, situated on the river Tarrinum, at a distance of 3 miles from its mouth, and on the road from Cartago Nova to Castula. (Plin. iii. 3. s. 4; Vib. Seq. p. 18; Itin. Ant. p. 400.) Ptolemy (L. e.) erroneously attributes it to the Contestanis. It became at a later period a Roman colony (Plin. l.e.), in which apparently the consul Junius Brutus settled the soldiers of Viriathus. (Liv. Epit. lv.) Pompey destroyed it. (Epist. Pomp. op. Salust, ed. Corte, p. 965; cf. Piat. Pomp. 18.) It must, however, have been restored soon afterwards, since Metel mentions it as being still an important place (ii. 6), and coins of it of a late period are preserved. (Cf. Flores, Med. ii. p. 610, iii. p. 123; Mommit, l. p. 55, Soppk. i. p. 110; Sestini, p. 209; Echbel, i. p. 60.) The town still bears the same name, but has few antiquities to show. [T. H. D.]

VALENTIA, in Brittanum. [Hippoxion.]

VALLEPONGA or VAELEBONGA, a town of the Celtiberi in Hispania Tarraconensis, on the road from Lagnostum to Casarangusta. (Hist. Ant. p. 477.) Variously identified with Valsellum and Valdobres. [T. H. D.]

VALETHA, the name of the NE. part of Lower Pannonia, which was constituted as a separate province by the emperor Galerius, and named Valeria in honour of his wife. (Aurel. Vict. de Caes. 40; Annm. xvi. 16, xxviii. 3.) This province was bounded on the E. and N. by the Danubius, on the S. by the Savus, and on the W. by Lake Pusio. (Comp. Pannonia, p. 531, and Muehl, Noricum, vol. ii. p. 37; Valsi. L. S.)

VALETHA (Oaiaresi, Tutt. ii. 6. § 58), a town of the Celtiberi in Hispania Tarraconensis, on the Sueci. At a later period it became a Roman colony in the jurisdiction of Cartago Nova. (Plin. iii. 3. s. 4.) Now Valiera de Vizela, with ruins. (Cf. Flores, Esp. Seg. viii. p. 198, with v. p. 19, and vii. p. 59.) [T. H. D.]

VALETHIANA (Valeriana, Procop. de Aed. iv. 6), a place in Moesia Inferior. (Itin. Ant. p. 229.) Probably the same as the modern Vali.

VALI (Oadànov, Tutt. v. 9. § 21), a people of Asiatic Sarmatia, between Mount Cersanum and the river Rha. (Plin. vi. 7. s. 7.) [T. H. D.]

VALINA (Oadinenta or Balbina), a place in Upper Pannonia, commonly identified with the modern Valbach. (Tutt. ii. 15. § 6.) [L. S.]

VALLA. [Ballas.]

VALLATUM, a town in Vindelicia, not far from the S. bank of the Danubius, on the road from Regnium to Augusta Vindeliciorum; it was the station of the staff of the third legion and the second Valerian squadron of cavalry. (Itin. Ant. p. 250; Not. Imp.) It occupied, in all probability, the same site as the modern Wahl, on the little river Rin. [L. S.]

VALLIS PENNIXA, on the river Tinj in the name, written in some inscriptions, is the long valley down which the Rhone flows into the Lake of Geneva. In the Notitia of the Gallie Provinces all the inhabitants of this valley are included in the name Vallesiens, for we read " Civitas Vallesium, hoc est, Octodurum." (Octodurum.) But there were four peoples in the Vallaec, as it seems, Naxtuates, Veeagri, Sediuni, and Viberi. The name Vallis Pennina went out of use, and it was called Pagus Valleria. The name Valla is preserved in that of the canton Wallis or Valais, which is the largest valley in Switzerland. (Gallia Transalpina, Vol. i. p. 950; Rhodan. [G. L.]

VALLUM ROMANUM.

VALLUM ROMANUM. Under this title we propose to give a short account of the remarkable work constructed by the Romans across our island, from near the mouth of the Tyne on the E. to the Solway Frith on the W., and of which considerable remains still exist. The history of the formation of this line of fortification is involved in a great deal of obscurity, and very different opinions have been entertained, respecting its authors; and neither the Latin writers nor the inscriptions hitherto found among the ruins of the wall and its subsidiary works are sufficient to settle the disputed points, though they suggest conjectures more or less probable.

COIN OF VALENCIA IN SPAIN.

VALENTIA (Odacleta), in Gallia Xaralonsensis, a colony in the territory of the Cavari, as Pliny says (iii. 4); but D'Avville proposes to alter the meaning of this passage of Pliny by placing a full stop between "Cavarae" and "Valentia." However, Valentia (Valencia) was not in the country of the Cavari, but in the territory of the Segallantii, as Ptolemy (ii. 10. § 12) says, who calls it "colonia." The Roman town on the east bank of the Rhone, a few miles below the junction of the Isere. In the middle ages it was the capital of the Valentinii, and in the fifteenth century it became the seat of a university. [G. L.]
The origin of the barrier may have been the forts and stationary camps which Agricola (A.D. 79) caused to be erected in Britain (Tac. Agr. 20); but the account which Tacitus gives of this measure is so vague that it is quite impossible to form any certain conclusion on his words. In A.D. 120, Hadrian visited Britain, where he determined on fixing the boundary of the Roman Empire considerably to the S. of the most N. conquests of Agri-
cola. He chose this boundary well, as it coincides with a natural one. The Tyne flows almost due E., just S., and nearly parallel to the 55° N. lat., for more than two thirds of the breadth of the island. The valley of the Tyne is separated from that of the Irthing, a branch of the Eden, by the N. extremity of the great chain of hills sometimes called the Back-
bone of England; and the Irthing, with the Eden, completes the boundary to the Solway Frith. In order to strengthen this natural frontier, Hadrian, as we are informed by Spartianus, "drew a wall (murus) 80,000 paces in length, to divide the barbarians from the Romans;" which wall followed the same general direction as the line above indicated.

Entrance (viii. 19) states that the Emperor Septimius Severus, who was in Britain during A.D. 208-211, constructed a rampart (vallum) from sea to sea, for the protection of the Roman provinces in the S. of the island.

Next, as will be seen from the following description, the lines of works designated by the general name, Roman Wall, consist of two main parts, a stone wall and an earthen rampart; and most writers on the subject have regarded these as two distinct, though connected, works, and belonging to two dif-
ferent periods; the earthwork has generally been ascribed to Hadrian, the stone wall to Severus. Such is the opinion of Horsley, whose judgment, as Mr. Bruce emphatically admits, is always deserving of the highest consideration. Mr. Bruce himself ex-
presses an opinion, founded on repeated and careful examination of all the remains of the wall, "that the lines of the barrier are the scheme of one great military engineer.; The wall of Hadrian was not a line such as that by which we prevent the straying of cattle; it was a line of military ope-
ration, similar in its nature to the works which Wel-
lington raised at Torres Vedras. A broad belt of country was firmly secured. Walls of stone and earth crossed it. Camps to the north and south of them broke the force of an enemy in both directions; or, in the event of their passing the outer line, enabled the Romans to close upon them both in front and rear. Look-out stations revealed to them the movements of their foes; beacons enabled them to communicate with neighbouring garrisons; and the roads, which they always maintained, assisted them in concentrating their forces upon the points where it might be done with the best effect. Such, I am persuad-
ed, was the intention of the Roman wall, though some still maintain that the murus and vallum are independent structures, the productions of different periods" (pp. ix. x. Pref. 2nd ed.).

We contemn that the reasoning here does not seem to us to be very conclusive. Grant that the system of defence has consistency and unity, yet it by no means follows that the whole was executed at one time. The earliest works were probably detached stationary camps; the next step would naturally be to connect them together by a wall, whether of earth or stone; and if experience shoulel afterwards prove that this barrier was insufficient, it would be an obvious pro-
ceeding to strengthen it by a parallel fortification.

The common opinion, therefore, that Agricola commenced the defensive line, Hadrian strengthened it, and Severus completed it, appears to be probably in itself, and in the light that we find upon the subject in the classical writers. If we may assume that the words murus and vallum were used by Spartianus and Entropius in their strict signifi-
cations, it would seem that the stone wall was the work of Hadrian, the earthen rampart of Severus. That some portion of the barrier was executed under the direction of the latter, is rendered still more likely by the fact that the Britons called the wall Curia Severi, or Severus Wall, as Camden states. It has been designated by various names in later times, as the Picta Wall, the Third Wall, the Kepe Wall; but is now generally called the Roman Wall.

The following description is taken almost entirely from Mr. Bruce's excellent work, mentioned at the end of this article.

The barrier consists of three parts: (i.) a stone wall or murus, strengthened by a ditch on its northern side; (ii.) an earthen wall or vallum, south of the stone wall; (iii.) stations, castles, watch-
towers, and roads; these lie for the most part be-
tween the stone wall and the earthen rampart.

The whole of the works extend from one side of the island to the other, in a nearly straight line, and comparatively close to one another. The wall and rampart are generally within 60 or 70 yards of each other, though the distance of course varies accord-
ing to the nature of the country. Sometimes they are so close as barely to admit of the passage of the military way between them; while in one or two instances they are upwards of half a mile apart. It is in the high grounds of the central region that they are most widely separated. Here the wall is carried over the highest ridges, while the rampart runs along the adjacent valley. Both works, however, are so arranged as to afford each other the greatest amount of support which the nature of the country allows.

The stone wall extends from Wallaend on the Tyne to Bechness on the Solway, a distance which Horsley estimates at 68 miles 3 furlongs, a measurement which almost exactly coincides with that of General Roy, who gives the length of the wall at 68½ miles. The vallum falls short of this length by about 3 miles at each end, terminating at Newcastle on the E. side, and at Drumburgh on the W.

For 19 miles out of Newcastle, the present high-
road to Carlisle runs upon the foundations of the wall, which pursues a straight course wherever it is at all possible, and is never curved, but always bends at an angle.

In no part is the wall perfect, so that it is difficult to ascertain what its original height may have been. Bede, whose monastery of Jarrow was near its eastern extremity, and who is the earliest authority respecting its dimensions, states that in his time it was 8 feet thick and 12 high. Sir Christ. Ridley, writing in 1572, describes it as 3 yards broad, and in some places 7 yards high. Samson Erdeswick, a well-known antiquary, visited the wall in 1574, when he ascertained its height at the W. end to be 16 feet. Camden, who saw the wall in 1599, found a part of it on a hill, near Carrvoran, to be 15 feet high and 9 broad. Allowing for a battlement, which would probably soon be destroyed, we may conclude that the average height was from 18 to 19 feet. The thickness varies from 6 to 21 feet.

4 L 4
The wall was everywhere accompanied on its northern side by a broad and deep fossæ, which may still be traced, with trifling interruptions, from sea to sea, even where the wall has quite disappeared. It traverses indifferently alluvial soil and rocks of sandstone, limestone, and basalt. Thus, on Tupper Moor, enormous blocks of whinstone lie just as they were left out of the fossæ. East of Hadrian on the Wall, the fossæ is 34 feet wide at the top, 14 at the bottom, and about 9 deep. In some places it is 40 feet wide at the top, and in others 20 feet deep.

Hodgson, in his History of Northumberland (iii. p. 276), states a fact or two: "A Little W. of Portgate, the earth taken out of the fossæ lies spread all round the N. in lines, just as the workmen wheeled it out and left it. The tracks of their barrows, with a slight mound on each side, remain unaltered in form." It is scarcely credible, however, that such elevations of earth, and superficial traces in it, should, for more than a thousand years, have successfully resisted the constant operation of the natural agencies which are sufficient to disintegrate the hardest rocks.

The Vallum, or earth wall, is uniformly S. of the stone wall. It consists of three ramparts and a fossæ. One rampart is close to the S. edge of the ditch. Of the other two, which are considerably larger, one is situated N., the other S. of the ditch, at the distance of about 24 feet from it. These larger ramparts are even now, in some places, 6 or 7 feet high. They are composed of earth, in which masses of stone are often imbedded, for the sake of which they are sometimes quarried. The fossæ of the vallum was probably smaller than that of the murus.

No outlets through the S. lines of fortification have been discovered; so that the gateways of the stations appear to have originally been the only means of communication with the country.

At distances averaging nearly 4 miles, stationary camps were erected along the line. Some of these, though connected with the wall, were evidently built before it.

The stations are four-sided and nearly square, but somewhat rounded at the corners, and contain an area averaging from 3 to 6 acres, though some of them are considerably larger. A stone wall, about 5 feet thick, encloses them, and was probably in every instance strengthened by a fossæ and one or more earthen ramparts. The stations usually stand upon ground with a southern inclination.

The great wall either falls in with the N. wall of the stations, or else usually comes up to the N. cheek of their E. and W. gateways. The vallum in like manner generally approaches close to the S. wall of the stations, or comes up to the S. side of the E. and W. portals. At least three of the stations, however, are quite detached from both lines of fortification, being to the S. of them. These may have been erected by Agricola.

Narrow streets intersecting one another at right angles traverse the interior of the stations; and abundant ruins outside the walls indicate that extensive suburbs were required for the accommodation of those connected with the soldiers stationed in the camps. The stations were evidently constructed with exclusive reference to defence; and hence no traces of tesselated pavements or other indications of luxury and refinement have been discovered in the mural region.

According to Horsley, there were 18 stations on the line of the wall, besides some in its immediate vicinity; but Hodgson reduces the number to 17, believing that in one instance Horsley mistook a mere temporary encampment for a station.

In ascertaining the number and names of the stations, our principal literary authority is the Notitia Imperii, supposed to have been compiled about the end of the reign of the emperor Theodosius the younger. The 69th section of this document contains a list of the prefectoral and tribunes under the Duke of Britain; the portion relating to our subject is headed, "Item per lineam Valli," and contains the names of 23 stations, evidently arranged in their order from E. to W. The heading, however, manifestly implies, not, as it seems sometimes to have been interpreted, that all the stations were actually on the line of the wall, but that they were along it, that is, parallel to, or at no great distance from it. It is clear, therefore, that as remains of stations exist both to the N. and to the S. of the wall, as well as actually on its line, nothing but the remains themselves can enable us to name the stations with certainty.

Now the first 12 stations mentioned in the Notitia have been accurately identified by means of inscriptions found in the ruins of the stations. Of these we subjoin a list, with the ancient and modern names, taken chiefly from the plan prefixed to Mr. Bruce's work:—

Aescia | Great Chesters |
Magnae (Magnae) | - |
Amblesanna | - Birdoswald |

All these are on the actual line of the wall, except Vindolana and Magna, which are a little to the S. of it.

West of Amblesanna no evidence has yet been discovered to identify any of the stations; and it is to be feared that many antiquities which might have enabled us to do so have been destroyed; for it appears that the country people, even quite recently, regarded stones bearing inscriptions as "unlucky," calling them "witch-stones," the evil in one such which was to be extirpated by pounding them to powder. Besides this, stone is scarce in that part of the country; and hence the materials of the wall and stations have been extensively employed in the construction of dikes and other erections in the neighbourhood.

It appears from the plan already referred to that there were stations at the places now called Cambeek Fort, Stanwix, Burtby, Brambergh, and Bewness; the first a little to the S., all the rest on the line of the wall.

Of the remaining eleven stations mentioned in the Notitia, the plan identifies Alnwick with Whitley Castle, some miles S. of the wall. Mr. Bruce places Brementeaca a little W. of the village of Brempton; Petriana, he thinks, is probably the same as Cambeek Fort.

It is possible that something may yet be done to elucidate what is still obscure in connection with these most interesting monuments of Roman Britain; and the Duke of Northumberland bad, in 1853, given
VANDUARA. 1237

directions to competent persons to make an accurate and complete survey of the whole line of the barrier, from sea to sea. Whether any results of this investigation have yet been published, we are not aware.

Of the identified stations, the most noteworthy and important are Vindobola, Citrumum, Proculia, and Borovicius. At the first, great numbers of coins and other antiquities have been found. The second has an area of 8 acres, and is crowded with ruins of stone buildings. A great part of the rampart of Proculia is entire, and its northern face, which is formed of the main line of wall, is in excellent preservation. Borovicius, however, surpasses all the other stations in magnitude and in the interest which attaches to its remains. It is 15 acres in extent, besides a large suburb on the S. Within it no less than 20 streets may be traced; and it seems to have contained a Doric temple, part of a Doric capital and fragments of the shafts of columns having been discovered in it, besides a great number of altars, inscriptions, and other antiquities.

The remaining portions of this great fortification may be briefly described.

The Castella, or mile-castles as they are called, are of two kinds: usually a Roman mile from one another, are buildings about 60 or 70 feet square. With two exceptions, they are placed against the S. face of the wall; the exceptions, at Portgate and near Aesica, seem to have projected equally N. and S. of the wall. The castella have usually only one entrance, of very substantial masonry, in the centre of the S. wall; but the most perfect specimen of them now existing has a N. as well as a S. gate.

Between each two castella there were four smaller buildings, called turrets or watch-towers, which were little more than stone sentry-boxes, about 3 feet thick, and from 8 to 10 feet square in the inside.

The line of the wall was completed by military roads, keeping up the communications with all its parts and with the southern districts of the island. As these were similar in their construction to other Roman roads, it is not necessary to say more respecting them in this place.

The following works contain detailed information of every kind connected with the Roman Wall:—

Horsley's Britannia Romana; Warburton's Vallum Romanaum, 4to. Lond. 1753; W. Hutton's History of the Roman Wall, 1801; Roy's Military Antiquities of the Romans in Britain; the 3rd vol. of Hodgson's History of Northumberland; and lastly, The Roman Wall; or Historical and Topographical Description of the Barrier of the lower Isthmus, prefixed to numerous personal Surveys. By the Rev. J. C. Bruce, M. A., 2nd edit. Lond. 1858, 4to.

This work contains full descriptions of all the antiquities hitherto discovered along the line of the wall, and great numbers of well executed engravings of the most interesting objects, besides maps and plans of the works. [J. R.]

VALVA (Oeçouva, Ptol. iv. 2 § 16), a mountain in Mauretania Caesariensis. [T. H. D.]

VAMA (Oeçouva, Ptol. ii. 4 § 15), a town of the Celti in the Baetica Baetica. [T. H. D.]

VANCJANIS. (Battiana.)

VANDABANDA (Oeçouvaoua, Ptol. vi. 12 § 4), a district of Sogdiana, between the Mons Caucasus (Hindis-Kish) and the Innacs (Hinidek). It is probably nearly the same as the present Badakshân (Wilson, Ariana, p. 164). [V.

VANDALI, VANDALII, VINDILI, or VANDULI (Oeçouvaoua, Barzgoua, Varzoua), a powerful branch of the German nation, which, according to Procopius (Bell. Goth. i. 3), originally occupied the country about the Palus Macestis, but afterwards inhabited an extensive tract of country on the south coast of the Baltic, between the rivers Vistula and Vindula. (iv. 28) mentions the Burgundiones as a tribe of the Vinduli. At a somewhat later period we find them in the country north of Bolivia, about the Riesengebirge, which derived from them the name of Vandalici Montes (Oeçouva-šlanak ūrâ; Dion Cass. iv. 1.) In the great Marcomannian war, they were allied with the Marcomanni, their southern neighbours, and in conjunction with them and the Quadi attacked Pannonia. (Jul. Capitol. M. Aserd. 17 ; Eutrop. viii. 13; Vopisc. Prob. 18; Dexippus, Exc. de Leg. p. 12.) In the reign of Constantine they again appear in a different country, having established themselves in Moravia, whence the emperor transplanted them into Pannonia (Jormand. Get. 22), and in the reign of Probus they also appear in Dacia. (Vopisc. Prob. 38.) In A. D. 406, when most of the Roman troops had been withdrawn from Gaul, the Vandals, in conjunction with other German tribes, crossed the Rhine and invaded Gaul in all directions. At first they devastations in that country and afterwards in Spain have made their name synonymous with that of savage destroyers of what is beautiful and venerable. Three years later they established themselves in Spain under their chief Godigisuclus. Here again they plundered and ravaged, among many other places, Nova Carthage and Hispalias, together with the Balearian islands. At last, in A. D. 429, the whole nation, under their king Genseric, crossed over into Africa, whither they had been invited by Bonifacius, who hoped to avail himself of their assistance against his coevaluaries. But when they were once in Africa, they refused to quit it. They not only defeated Bonifacius, but made themselves masters of the whole province of Africa. This involved them in war with the Empire, during which Sicily and the coasts of Italy were at times fearfully ravaged. On one occasion, A. D. 455, Genseric and his hordes took possession of Rome, which they plundered and sacked for fourteen days. And not only Rome, but other cities also, such as Capua and Nola, were visited in a similar way by these barbarians. Afterwards various attempts were made to subdue or expel them, but without success, and the kingdom of the Vandals maintained itself in Africa for a period of 105 years, that is, down to A. D. 534, when Belisarius, the general of the Eastern Empire, succeeded in destroying their power, and recovered Africa for the Empire. As to the nationalit of the Vandals, most German writers claim them for their nation (Zeuse, Die Deutschen, p. 57; Wilhelm, Germanien, p. 87); but Dr. Latham (on Tac. Epit. p. 138, and others) and others regard them as a Slavonic people, though their arguments are chiefly of an etymological nature, which is not always a safe guide to historical inquiries. (Papenooit, Gesch. der Vandalen, Herrschaft in Afrika, Berlin, 1837; Lassen, Wer veranlasste die Berufung der Vandalen nach Afrika? D rapt. 1843; Friedländer, Die Mänzen der Vandalen, Leipzig, 1849.) [L.S.]

VANDALICI MONTES. [VANDALI]

VANDUARA, or VANDOGARA (Oeçouvaoua, Ptol. ii. 3 § 9), a town of the Damoni in Britannia Barbara. Now Paisley. (Cf. Camden, p. 1214.) [T. H. D.]
VANESIA. A place in Gallia Aquitania, fixed by the Jerusalem Itin. between Elusa (Eauses) and Auscic, the capital of the Ausci, xii. from Elusa and viii. from Auscic. The place is supposed by D'Avville to be the passage of the Baize, a branch of the Garonne which comes from the Pyrenees. [G. L.]

VANGIONES (Oiaioyioves). There were Vangiones in the army of Ariosticus when Caesar defeated him. (B. G. 1. 51.) Caesar means to say that they were Germans, but he does not say whether they were settled in Gallia. Pliny and Tacitus (Ann. xii. 27; Germ. c. 25) also describe the Vangiones as Germans and settled on the left bank of the Rhine, where they are placed by Ptolemy (ii. 9. § 17); but Ptolemy makes a mistake in placing the Nemetes north of the Vangiones, and making the Vangiones the neighbours of the Triboci, from whom in fact the Vangiones were separated by the Nemetes. In the war of Civilis (Tact. Hist. iv. 70), Tutor strengthened the force of the Treviri by levies raised among the Vangiones, Caracates [Caracates], and Triboci. The territory of the Vangiones seems to have been taken from that of the Mediomatrici. Their chief town was Borbetomagus (Worms). [Borbetoiiagvcw.] [G. L.]

VANXIA (Oapavia, Plt. ill. i. § 52), according to Ptolemy a town of the Bechani in Carnia or Carnio (cf. Plin. iii. 19. s. 23). Variously identified with Varanio, Carcates, Varia, etc. [L. H. D.]

VAPINCUM, in Gallia Narbonensis, is not mentioned by any authority earlier than the Antonine and Jerusalem Itins. In the Notitia of the Gallia Provinces it is styled "Civitas Vapincensium." The initial letter of the name has been changed to G, as in many other instances in the French language, and the modern name is Gap, which is the capital of the department of Hautes-Alpes, and on a small stream which flows into the Durance. [G. L.]

VARA, or VARAE, a town in Britannia Romana, between Concericum and Deva. (Hist. Ant. p. 482.) Variously identified with St. Asaph, Ruddall, and Bodelwy. [T. H. D.]

VARADA (Oodapa, Plt. ii. 6. § 57), a town of the Carpetani in Hispania Tarraconensis. [T. H. D.]

VARADETUM, in Gallia, is placed by the Table on a road from Divona (Cahors) to Segedunum (Rodez); and the distance from Divona is X. D'Anville places Varadetum at Varase, which is on the road between Cahors and Rodez; but the distances do not agree. Others fix the site at Parujondes. [G. L.]

VARAE. [VARA.]

VARAGII. [VARAGII.]

VARAI (Oiaiap, Plt. ii. 6. § 5), an estuary on the E. coast of Britannia Barbara, very probably the present Feith of Carnonity. [T. H. D.]

VARIANI (Oiaparavi), a tribe in Upper Panonnia, which is mentioned by both Pliny (iiii. 28) and Ptolemy (ii. 15. § 2), but of which nothing is known, except that it probably occupied the western part of Salvia. [L. S.]

VARSILEN-ES, the inhabitants of a town of the Carpetani in Hispania Tarraconensis. (Inscr. in Morales, Ant. pp. 17, 26, 28.) The modern Varces still contains some ruins of the old town. [T. H. D.]

VARDAEI (Oiapaiou, Plt. ii. 17. § 8), an Illyrian tribe dwelling opposite to the Island of Pharas (cf. Plin. iii. 23. § 26). By Strabo they are called Ardeaei (Apiraioi, vii. p. 312). In the Epitome of Livy (iv.) they are said to have been subdued by the consul Fulvius Haccus. [T. H. D.]

VARDANES (Oiapbiyton, Plt. v. 9 §§ 5 and 28), a river of Asiatic Sarmatia, represented as falling into the Exuine to the SW. of the Atticites. Probably, however, it was only the southern arm of the latter, the present Kouban. (Cf. Uerkt, iii. pt. ii. p. 202.) [Arttccius.] [E. H. D.]

VARIDO, a tributary of the Rhone, which rises in the Cevennes, and is formed by two branches named respectively Gardon d'Alais and Gardon d'Andance, from the names of these two towns. The Vardo flows in a deep valley, and passes under the great Roman aqueduct now named Pont du Gard, below which it enters the Rhone on the west bank, near a place named Cons. The name Vardo occurs in Sidonins Apollinaris; and in a Latin poem of three or four centuries' later date the name is Wardo, from which the modern name Gardon is formed, according to a common change of Vinto G. [Vapincum.]

VARDULI (Oiapboulovl, Plt. ii. 6. §§ 9, 66; Babpatoulo, Strab. iii. p. 162; where we also learn that at an earlier period they were called Babpatoula), a people in Hispania Tarraconensis, who dwelt westward of the Vascones, as far as the N. coast (in the present Guipuscoa and Alava). (Mela, iii. i; Plin. iii. 3. 4. iv. 20. s. 34.) [T. H. D.]

VARIOGONES (Oiapptoiavtes), a German tribe, between the eastern bank of the Rhenos and Mons (Augsburg). Pliny calls it Abnoba, Strabo (i. 5.) the Rhoner; it is supposed to lie between the Rhone and the Ronse Ap. (Plt. ii. 11. § 9.) [L. S.]

VARIA. 1. (Oiapjia: Vicovaro), a town of the Sabines, situated in the valley of the Anio, on the right bank of the river, about 8 miles above Tibur. The name is corruptly written in most editions of Strabo Valeria (Vapalapia), for which there is no doubt that we should read Variia (Oiapia, Strab. v. p. 237; Kramer, ad loc.). Strabo there calls it a Latin city, as well as Carsoö and Alba, both of which were certainly Aquitan towns, and subsequently included in Latium. But Horace speaks of it as the town to which the sanctuary from his Sabine farm and the neighbouring villages used to resort (Hor. Ep. i. 14. 3), in a manner that certainly seems to imply that it was the municipal centre of that district, and if so, it must have then been reckoned a Sabine town. It is not mentioned by Pliny, but according to his limitation it was certainly included among the Sabines, and not in Latium. It was probably never a large place, that is, of the ancient walls still extant prove that it must at one time have been a fortified town. But it early sank into a mere village; the old commentator on Horace calls it "Ospidum in Sabinis olim, nunc vacuis " (Schol. Crnq. ad loc.); and hence in the middle ages it came to be called Vicus Varia, whence its modern appellation of Vicovaro. It is still a considerable village of about 1000 inhabitants, standing on a hill to the left of the Via Valeria, and a short distance above the Anio, which flows in a deep valley beneath. The Tabula and the old commentary on Horace both place it 8 miles above Tibur, which is very nearly exact. (Tab. Pient. Comm. Crnq. ad loc.)

2. Pliny mentions among the cities of Calabria a place called Varia, "cui cognomen Apulae" (iii. 11. s. 16); but the name is otherwise unknown, and it is probable that we should read "Uria;" the place meant being apparently the same that is called by other writers Hyria or Uria. [Hyrva.] [E. H. B.]

VARIA (Oiapia, Strab. iii. p. 162; Oiapia, Plt. ii. 8. § 55), a town of the Beocians in Hispania Tarraconensis, situated on the Icirus, which here be-
VARIANA. (Bazdoa), a town in Lower Moesia on the Danube, was the garrison of a portion of the fifth legion and of a squadron of horse. [It. Ant. p. 393, where, under the name of Vereia, the same town is undeniably meant.] Usually identified with Variannum (cf. Florus, Caesar. p. 198), though some have sought it at Lugnano, and others at Maurotto of Rio Leca. [T. H. D.]

VASAL'NAYA, the territory. [T. D.]

VARI'NA, a place in Pannasia, on the road running along the left bank of the Savus from Siscia to Sirmium. [It. Ant. pp. 260, 265.]

VAR'IINI, a German who mentioned by Pliny (iv. 28) as a branch of the Vinduli or Vanduli, while Tacitus (Germ. 40) speaks of them as belonging to the Suevi. But they may have occupied a district in the north of Germany, not far from the coast of the Baltic, and are probably the same as the Pharnodini (Pagnobulvi) of Ptolemy (v. 11, § 13), in the country between the Chalmas and Suebius; it is highly probable, also, that the Varni (Varinio) of Procopius (B. Goth. ii. 15, iii. 35, iv. 20, &c.) are the same people as the Varini. The Viruni (Virinovuo) of Ptolemy (ii. 11, § 17), who dwelt north of the Albis, seem to have been a branch of the Varini. (Comp. Cassiod. Var. iii. 3, where they are called Guarni; Werscebe, Beschreibung der Gebieten zwischen Elbe, Sende, &c. p. 70.) [L. S.]

VARISTI, the Varisi (Vorii). [Narker.]

VARUS (Ovara), a river which the ancient geographers make the boundary of Gallia and Italia, as it is now the boundary of France and Italy. (Mela, ii. 4; Ptol. ii. 10, § 1.) It is the lower part of the Var which forms the boundary between Italy and France. The river gives its name to the French department of Var, the eastern limit of which is the lower course of the river Var. The larger part of the Var is in the Sardinian territory. It is only the mouth of the Var which Ptolemy names when he fixes the limit between Italy and Gallia Narbonensis. D'Anville remarks on the line of Lacan (i. 404)—

"Finis et Heperinae promotio limite Varus."

that he alludes to the extension of the boundary of Italy westward from the summit of the Alpis Maritimæ, which is Italy's natural boundary. He adds that the dependencies of the province of the Alpis Maritimæ comprehend Cemenelum (Cimiez) and its district, which are on the Italian side of the Var and east of Nieus (Nizza). [Cemenelium.] But D'Anville may have mistaken Lucan's meaning, who seems to allude to the extension of the boundary of Italy from the Rubicon to the Varus, as Vitius Sequester says: "Varus nunc Galliae dividit, ante Rubicon." (ed. Oberl.) However, the critics are not agreed about this passage. (D'Anville, Notice, &c.; Ukert, Gallien, p. 81.) [G. L.]

VASAL'NAYA, (Ozadalat), a town of Lycia, a little to the south-west of Laodicea (Ptol. v. 4. § 10); Hieroc. p. 675; Conc. Chalcod. p. 674, where it is miswritten Ozadala; Conc. Const. iii. p. 675, where it bears the name of Adarasa). Its site is probably marked by the ruins near Chaman Chaghah, between Hyun and Ludik. (Hamilton, Researcher, ii. p. 190, in the Journal of the Roy. Geogr. Soc. viii. p. 144; Kiepert, in Franz. Fund Inschriften, p. 36.) [L. S.]

VASALAETUS (Ozadalat or Oza dalat Osopo, Ptol. iv. 3. §§ 18, 25), a mountain at the S. boundary of the Regio Sycritæ. [T. H. D.]

VASAL'NAYA, (Ozadalat), a town of Lycia. [G. L.]

VASATES. It is probable that the name Vasaari in Ptolemy (ii. 7. § 15) should be Vasatii, as D'Anville says, and so it is printed in some Greek texts. But Ptolemy makes them border on the Galbi and places them farther north than Borvalce, though he names their chief town Cossium. The Vocates are enumerated by Caesar (B. G. iii. 23, 27) among the Aquitanian peoples who submitted to T. Crassus in B. C. 56. [Cons. or Cossium.] [G. L.]

VASCONES (Ozd,'alat), Strab. iii. pp. 155, 116; Oza dalat, Ptol. ii. 8. §§ 10, 67), a people in the NE. part of Hispania Tarraconensis, between the Iberus and the Pyrenees, and stretching as far as the N. coast, in the present Navarra and Guipuzcoa. Their name is preserved in the modern one of the Basques; although people do not call themselves by that appellation, but Euskaldunae, their country Euskaleria, and their language Euskara. (Fort. Handbook of Spain, p. 557; cf. W. v. Humboldt, Untersuch. &c. p. 54.) They went into battle bareheaded. (Sil. Ital. iii. 358.) They passed among the Romans for skillful soothsayers. (Lamp. Alex. Sec. 27.) Their principal town was Pompelo (Pamplona), (Cf. Malte-brun, Moeurs et Usages des anciens Habitans d'Espagne, p. 309.) [T. H. D.]

VASCONE'N TALTUS, the W. offshoot of the Pyrenees, running along the Mere Cantabricum, and named after the Vascones, in whose territory it was. (Ptol. iv. 20. s. 34; Auson. Ep. 15.) It may be more precisely defined as that portion of the chain now called Sierra de Ocum, S. de Augana, and S. Sejas, forming the E. part of the Cantabrian chain. [T. H. D.]

VASIO (Viasio: Erib. Vasiensis), a town of the Vociutii in Gallia Narbonensis, and the only town which Ptolemy (ii. 10. § 17) assigns to them. Vasio is mentioned by Mela (ii. 5) as the richest towns of the Narbonensis; and Pliny (iii. 4) names Vasio and Lucus Augusti as the two chief towns of the Vociutii. The ethnic name Vasiensis appears in the Notitia of the Gallic Provinces (Civitas Vasiensis), and in inscriptions. The place is Vasion in the department of Vosges, on the Ouche, a branch of the Rhone. It is now a small, decayed place; but there are remains which show that it may have been what Mela describes it to have been. The ancient remains are spread over a considerable surface. There is a Roman bridge of a single arch over the Ouche, which still forms the only communication between the town and the frontier. The bridge is built on two rocks at that part of the river where the mountains which shut in the bed of the river approached nearest. There are also the remains of a theatre; the semicircle of the cave is clearly traced, and the line of the prosenion is indicated by some stones which rise above the earth. There are also the remains of a quarry on the banks of the river which was destroyed by an inundation in 1616. The quarry was pierced at considerable intervals by sewers which carried to the river the water and filth of the town; these sewers are large enough for a man to stand upright. There are also traces of the aqueducts which brought to the town the waters of the great spring of Greucoa.
VATEDO.
(Brabanç. Mém. de la Societé Royale des Antiquaires de France, tom. xvi, quoted by Richard et Hoquart, guide du Voyageur.) [G. L.]

VATEDO, in Gallia, mentioned in the Table, is a place east of Bordeaux, supposed to be Vaires on the left bank of the Dordogne, a branch of the Garonne. [G. L.]

VATRENNUS (Saniterno), a river of Gallia Cispadana, one of the southern tributaries of the Padus. It had its sources in the Apenines, flowed under the walls of Forum Cornelian (Imola), and joined the southern branch of the Padus (the Scupinenum Ostium) not far from its mouth, for which reason the port at the entrance of that arm of the river was called the Portus Vatreni. (Plin. iii. 16. s. 20.) The Santerno now flows into the Po di Primaro (the modern representative of the Spinentic branch), above 16 miles from its mouth; but the channels of both are in this part artificial. In this lower part of its course it must always have been more of a canal than a river, whence Martial uses its name as typical of a sluggish stream. (Martial, iii. 67. 2.) [E. H. B.]

UBERAE, a nation in India extra Gangem, mentioned by Pliny (vi. 19. s. 22). It possessed a large town of the same name. It is not possible to determine its exact position; but from the names of other nations mentioned by Pliny in connection with the Uberae, it is probable that this people lived near the mouths of the Brahmaputra. [V.]

UBII (Oben), a German people who in Caesar's time lived on the east bank of the Rhine and opposite to the Treviri, for Caesar having made his bridge in the country of the Treviri passed over into the country of the Ubii. Owing to their proximity to the Rhine they were somewhat more civilised than the other Germans, being much visited by merchants and accustomed to Gallic manners. (B. G. iv. 3, 18, vi. 29, 35.) The Sigambiri were the neighbours of the Ubii on the north. The Suevi were pressing the Ubii hard, when the Ubii applied to Caesar for help; they gave him hostages, and offered him with a large number of boats to cross the river, from which we may infer that they were accustomed to navigate the Rhine. (B. G. iv. 16.) In the time of Augustus (Strab. iv. p. 194), the nation crossed the Rhine, and Agrippa assigned them lands on the west bank of the river, the policy of the Romans being to strengthen the Rhennish frontier against the rest of the Germans. (Tacit. Germ. c. 28. Annal. xii. 27; Tacit. Ann. c. 21.) In the new territory of the Ubii was Colonia Agricippia (Gaha), and hence the people had the name of Agricippenses, which was one of the causes why the Germans east of the Rhine hated them. They were considered as traitors to their country, who had assumed a new name. (Tacit. Hist. iv. 28.) North of the Ubii on the west side of the Rhine were the Guerni (Gréverini); and south of them were the Treviri. (Colonia Agricippia; Aria Uniorum.)

VATRUM ARUM. [Aria Uniorum.] [G. L.]

UBRICI. [Brioveres Vivest.]

UBCENA (Obcena), a town of the tribe of the Trocmi in Galatia. (Polt. v. 4. § 9.) [L. S.]

UCENI, a people of Gallia Narbonensis, mentioned in the trophy of the Alps quoted by Pliny (iii. 20), and placed between the Meduli and Caturiges. The site of these people is uncertain. D'Anville supposes that they were in that part of the mountain region of the Alps which contains the boury of Obcena. But other geographers place them in the district of Uce or near Ivce, both of which places are on the right bank of the river Romanche, which flows into the Drac, a branch of the Isère. (Ubert, Gallien, p. 317.) [G. L.]

UCETIA, in Gallia Narbonensis, north of Nimes. This place is known only from the Roman remains which have been discovered there, and from the inscription Ucetae on a stone found at Nimes. The place is Uzes, north of the river Gardon, from which place the water was brought to Nimes by the aqueduct over the Gardon. (NEMAEUS.) Ucetae appears in the Notitia of the Provinces of Gallia under the name of Castrum Ucetinum. Ucetia was a bishopric as early as the middle of the fifth century. [G. L.]

UCHALICENSES (Ouch'[allak%^i], Polt. iv. 6, § 20), an Athæopian tribe in the interior of Libya. [T. H. D.]

UCHEMERIUM (Ouchemirm, Procop. B. Goth. iv. 14), a mountain fortress in the Regio Laicia, in Coelhis. [T. H. D.]

UCIA (Obca, Polt. ii. 4. § 13), a town of the Turdetani in Lusitania. [T. H. D.]

UCIENSE, a town in Hispafia Baetica, on the road from Corduba to Castulo. (Hist. Ant. p. 403.) Variously identified with Marmolajo, Andujar, and S. Julian. [T. H. D.]

UCIBUS, a place in Hispania Baetica, in the neighbourhood of Corduba and the Flumen Sasum. (Hist. B. H. 7.) According to Ubert (ii. pt. i. p. 361) between Ossusia and Adburua. [T. H. D.]

UCLUTENIACUM. (Uclotia.)

UDAÉ (Udaa, Polt. v. 9. § 23), a people of Asiatia Sarmatia on the Caspian sea. They are probably the people mentioned under the name of Udini by Pliny (vi. 12. s. 15). They appear to have derived their name from the river Udon. [T. H. D.]

UDON (Pubod, Polt. v. 9. § 12), a river of Asiatia Sarmatia, which rises in the Caucasus and falls into the Caspian sea between the Elua and the Altona. Most probably the modern Kuma. [J. K.]

UDUBA. [Uderia.]

UDURA (Obodosa, Polt. ii. 6. § 72), a town of the Jaccetani in Hispafia Tarracoensis, probably the modern Cardona. [T. H. D.]

VECTA or VECTIS (Oeours, Polt. ii. 3. § 33), an island on the S. coast of Britannia Romana, lying opposite to the Portus Magnus (Fortsmouth). It was known to the Romans before their conquest of Britain, through the Massiliae, who had here a station for their tin trade. (Ptol. v. 22, 38.) At that time the channel between the island and the mainland become almost dry at ebb tide, so that the Britons carried their tin in carts to the island. It was first conquered by Vespasian, in the reign of Claudius. (Suet. Vesp. 4.) Now the Isle of Wight. (Cf. Hist. Ant. p. 509; Linn. Pan. Const. 15; Mela, iii. 6; Ptol. iv. 16. s. 30.) [T. H. D.]

VECTURiones, a subdivision of the Fidae in Britannia Barbaria, according to Annius (xxvii. 8). [T. H. D.]

VEDIANTHI (Oediantv, Polt. iii. 1. § 41), a Ligurian tribe, who inhabited the foot of the Maritime Alps near the mouth of the Var. Both Pliny (iii. 5. s. 7) and Ptolomy assign to them the town of Cemenelum or Cimiez near Nica; the latter also includes in their territory Santium; but this must certainly be a mistake, that town, which answers to the modern Senze, being far off to the NW. (D'Anville, Geog. des Gaules, p. 682.) [E. H. B.]
VEDINUM

VEDINUM (Uline), a city of Venetia, mentioned only by Pliny (iii. 19. s. 23) among the municipalities of that country. It was situated in the plain of the Carità, 11 miles W. of Civitavecchia (Forum Julii), and 22 NNW. of Aquileia. In Pliny's time it was apparently an inconsiderable place, but rose into importance in the middle ages, and is now a flourishing and populous city, and the capital of the whole province of the Friuli. Many MSS. of Pliny write the name Nedinates, which has been adopted both by Harduin and Silling, but it is probable that the old reading Vedinates is correct. [E. H. B.]

VEDRA (Oedipa). Ptol. ii. 3. § 6), a river in the N. part of the E. coast of Britannia. The name would lead us to the conclusion that it is the Year (Camden, p. 944), yet Horsley (p. 103) and others have taken it to be the Tyne. [T. H. B.]

VEGLA (Oegria or Oetria), or Veigium (Plin. iii. 21. s. 20), a town of Liburnia, the present Vence. [T. H. D.]

VEGISTUM (Oegistrov), or, as some read, Vestestum (Oetistov), a town of Galatia, in the territory of the Tolstobogi, between Mounts Didyymus and Cenea (Ptol. iv. 4. § 7) is perhaps the same place as the Veissium of the Peutinger Table. [L. S.]

VEL (Oegius, Strab. p. 326; Oebod, Dionys. H. ii. 54; Eth, Veientes, C. Cr. i. 44; Liv. i. 15, &c.; cf. Propertius, [ep. iv. lvi. 41]), an ancient and purely Tuscan city of Etruria. According to Festus (ap. P. Dian. s. v.) Veia was an Ocean word, and signified a waggon (plaustrum); but there is nothing to show that this was the etymology of the name of the town.

Among the earlier Italian topographers, a great diversity of opinion prevailed respecting the site of Veii. Nardini was the first writer who placed it at the present Isola Farnese, the correctness of which view is now universally admitted. The distance of that spot northwards from Rome agrees with the distance assigned by Dionysius of Halicarnassus (L. c.) to Veii, namely, "about 100 stadia," which is confirmed by the Tabula Peut., where it is set down at 12 miles. In Livy, indeed (v. 4), it is mentioned as being "within the 20th milestone;" but this is in a speech of App. Claudius, when the orator is using round numbers, and not soliciting about strict accuracy; whilst the two writers before cited are probably giving the exact distance. Nor can the authority of Eutropius (i. 4), who places Veii at 18 miles from Rome, be admitted to invalidate the testimony of these authors, since Eutropius is notoriously incorrect in particulars of this description. There are other circumstances which tend to show that Isola Farnese is the site of ancient Veii. Thus the Tab. Peutig, further indicates that the city lay on the Via Cassia. Now following that road for a distance of about 12 miles from Rome, the locality not only exactly corresponds with the description of Dionysius, but also the remains of city walls and sepulchres, and traces of roads in various directions, have been found there. Moreover at the same spot were discovered, in the year 1810, stones bearing inscriptions which related exclusively to Veii and the Veientes.

We know little of the history of Veii but what concerns the wars it waged with the Romans. It is called by Eutropius (i. 20), "Umbri a oedipum et omnibus coniugibus sibi utur, cum arma essent; car, nisi omnes omnes esse dismissam, et cum tempore esse dismissam;" and there can be no doubt that it was in a flourishing state at the time of the foundation of Rome. At that period the Etruscan, or Veentine, territory was separated from the Latin by the river Albul, afterwards called Tiberis; and consequently neither the Mons Vaticanus nor Janiculum then belonged to the Romans. (Liv. i. 3.) To the SW. of Rome it extended along the right bank of the Tiber down to the sea, where it contained some Saliae, or salt-works, at the mouth of the river. ( Dionys. ii. 53.) The district immediately opposite to Rome seems to have been called Septem Pagi (ib.). On the N. of Rome the territory of Veii must at one time have extended as far as Mount Soracte, since the ater Capenatia belonged to it; Capena being a colony of Veii (Cato, ap. Serv. Aen. vii. 697); though in the history of the wars between Rome and Veii, Capena appears as an independent city. [CAPPENA, Vol. i. p. 504.] On the NW. it may probably have stretched as far as the Mons Ciminus; but here, as well as more to the S., its limits are uncertain, and all we know is that in the latter direction it must have been bounded by the territory of Caere. (Cf. Müller, Itinerar. ii. 2. p. 1, &c.) The ater Veins is stigmatised by Horace and others as producing an excelleot sort of red wine (Sat. ii. 3. 143; cf. Pers. v. 147; Mart. i. 103. 9, ii. 53. 4, &c.). We learn from Dionysius (ii. 54) that the city was of about the same size as Athens, and therefore nearly as large as Rome within the walls of Servius. [ROMA, Vol. ii. p. 756.]

The political constitution of Veii, like that of the other Etruscan cities, seems originally to have been republican, though probably aristocratically republican, with magistrates annually elected. It was perhaps their vicinity to ambitious and aspiring Rome, and the constant wars which they had to wage with that city, that induced the Veientes to adopt the form of an elective monarchy, in order to avoid the dissensions occasioned by the election of annual magistrates under their original constitution, and thus to be enabled, under a single leader, to act with more vigour abroad; but this step procured them the ill-will of the rest of the Etruscan confederacy (Liv. v. 1, cf. iv. 17). Monarchy, however, does not appear to have been permanent among them; and we only know the names of two or three of their kings, as Tolumnius (ib.), Propertius (Serv. Aen. vii. 697), and Morrins (ib. viii. 285).

The first time that the Veientes appear in history is in the war which they waged with Romulus in order to avoid the capture of their colony, Fidenae. According to the narrative of Livy, this war was terminated by one decisive battle in which Romulus was victorious (i. 15); but Dionysius (ii. 54, seq.) speaks of two engagements, and represents the Romans as gaining the second by a stratagem. Both these writers, however, agree with regard to the results of the campaign. The loss of the Veientes was so terrible, both in the battle and in the subsequent flight, in which numbers of them were drowned in attempting to swim the Tiber, that they were constrained to sue for peace. The terms imposed upon them by Romulus show the decisive nature of his victory. They were compelled to surrender that part of their territory in the neighbourhood of Rome called Septem Pagi, probably from its containing seven villages; to give up the salt-works which they possessed at the mouth of the Tiber; and to provide 50 hostages as security for the due execution of these engagements. In these conditions they obtained a peace for 100 years, with the restoration of their prisoners; though such of the latter as preferred to remain at Rome were presented with the freedom of the city and lands on the left bank of the Tiber. The district of Septem Pagi thus acquired
probably comprehended the Vatican and Janiculum hills, and became the seat of the 5th Roman tria, the Romilia or Romulia. (Varr. l. L. v. 9. § 63, Müller; Paul. ap. Fest. s. v. Romilia Trib.)

This peace seems to have lasted about 60 or 70 years, when war again broke out between the Veientines and Romans in the reign of Tullus Hostilius, and this time also on account of Fidenae, which appears to have become a Roman colony after its capture by Romulus. The cause of the war was the treacherous conduct of the Fidenates during the Roman struggle with Alba. When called to account, they refused to give any explanation of their conduct, and procure the assistance of the Veientines. Tullus crossed the Anio (Teverone) with a large army, and the battle which took place at a spot between that river and the town of Fidenae was the most obstinate and bloody which had yet been recorded in the Roman annals. Tullus, however, gained a signal victory over the Fidenates and their allies the Veientines. The battle is remarkable for the vows made by Tullus, of twelve Salian priests, and of temples to Favor and Faller. These were the second set of Salians, or those attached to the worship of Quirinus [cf. Roma, p. 289]; and the appropriateness of the vow was the subject of considerable discussion. The Fidenates, in their answer to the Romans, had asserted that they and their engagements towards Rome had expired on the death of that defiled hero. (Liv. i. 27; Dionys. iii. 23, sqq.)

The war was renewed under Ancus Marcus by forays on both sides, which, however, seem to have been begun by the Veientines. Ancus overthrew them in two pitched battles, the last of which was decisive. The Veientines were obliged to surrender all the tract on the right bank of the Tiber called the Silva Massia. The Roman dominion was now extended as far as the sea; and in order to secure these conquests, Ancus founded the colony of Ostia at the mouth of the Tiber. (Liv. i. 33; Dionys. iii. 41.)

The next time that we find the Veientines in collision with Rome, they had to contend with a leader of their own nation. L. Tarchiniaus, an emigrant from Tarquinii to Rome, had distinguished himself in the wars of Ancus Marcus against Veii, and was now in possession of the consulship of the Roman sovereignty. The Veientines, however, on this occasion did not stand alone, but were assisted by the other Etruscan cities, who complained of insults and injuries received from Tarquin. The Veientines, as usual, were discontented, and so thoroughly, that they did not dare to leave their city, but were the helpless spectators of the devastation committed on their lands by the Romans. The war was terminated by Tarquin's brilliant victory at Eretus, which enabled him to claim the sovereignty of all Etruria, leaving however, the different cities in the enjoyment of their own rights and privileges. It was on this occasion that Tarquinia is said to have introduced at Rome the institution of the twelve lictors and their fasces, emblems of the servitude of the twelve Etruscan cities, as well as the other Etruscan insignia of royalty. (Dionys. iii. 57; Flor. l. 5.) It should be observed that on this subject the accounts are very various; and some have even doubted the whole story of this Etruscan conquest, because Livy does not mention it. That historian, however, when he speaks of the resumption of the war under Servius Tullius, includes the other Etruscans with the Veientines, as parties to the truce which had expired ("hellum cum Veientibus (jam enim indutum exierant) allisque Etruscis sumptum," i. 42), although the Etruscans had not been concerned in the last Veientine war he had recorded. (Of. Dionys. iv. 27.)

This war under Servius Tullius was the last waged with the Veientines during the reign of Ancus Marcius. When the second Tarquin was expelled from Rome, the Etruscans endeavoured to restore him. Veii and Tarquinii were the two most forward cities in the league formed for this purpose. The first battle, which took place near the Silvia Arsis, was bloody but indecisive, though the Romans claimed a dubious victory. But the Etruscans having obtained the assistance of Porsena, Lars of Clusium, the Romans were completely worsted, and, at the peace which ensued, were compelled to restore to the Veientines all the territory which had been wrested from them by Romulus and Ancus Marcius. This, however, Porsena shortly afterwards restored to the Romans, out of gratitude for the hospitality which they had displayed towards the remnant of the Etruscan army after the defeat of his son Aruns at Acria. (Liv. ii. 6—15; Dionys. v. 14, sqq.; Pint. Publ. 19.)

The Veientines could ill brook being deprived of this territory; but, whilst the influence of Porsena and his family prevailed in the Etruscan league, they remained quiet. After his death the war again broke out. B. c. 483. For a year or two it was a kind of border warfare characterised by mutual depredations. But in u. c. 481, after a general congress of the Etruscans, a great number of volunteers joined the Veientines, and matters began to assume a more serious aspect. In the first encounters the Romans were unsuccessful, chiefly through a mutiny of the soldiers. They seem to have been disheartened by their ill success; their arrow was inferior in number to that of the Veientines, and they endeavoured to decline an engagement. But the insults of the enemy incensed the Roman soldiery to such a degree that they insisted on being led to battle. The contest was long and bloody. The Etruscans at one time were in possession of the Roman camp; but it was recovered by the valour of Titus Siccus. The Romans lost a vast number of officers, amongst whom were the consul Maenius, Q. Fabius, who had been twice consul, together with many tribunes and centurions. It was a drawn battle; yet the Romans claimed the victory, because during the night the Etruscans abandoned their camp, which was sacked by the Romans on the following day. But the surviving consul, M. Fabius Vibulanus, on his return to Rome, refused a triumph, and abjured his office, the duties of which he was prevented from discharging by the severity of his wounds. (Dionys. ix. 5, sqq.; Liv. ii. 42—47.)

Shortly after this, the Veientines, finding that they were unable to cope with the Romans in the open field, adopted a most annoying system of warfare. When the Roman army appeared, they shut themselves up within their walls; but no sooner had the legions retired, than they came forth and scoured the country up to the very gates of Rome. The Fabian family, which had given so many consuls to Rome, and which had taken so prominent a part in the late war, now came forward and offered to relieve the commonwealth from this harassing annoyance. The whole family appeared before the senate, and by the mouth of their chief, Cæsas Fabius, they counsel for the third time, declared, that, as a continual rather than a large guard was required for the Veientine war, they were willing to undertake the duty and to maintain the majesty of the Roman
name, without calling upon the state for either soldiers or money. The senate thankfully accepted the offer. On the following morning 306 Fabii met in the vestibule of the consul's house. As they passed through the city to the place of their destination, they stopped at the capitol and offered up vows to the gods for the success of their enterprise. Then they passed out of Rome by the right arch of the Porta Capena, and proceeded straight to the river Tiber, where there was water. What seemed adapted by nature as a fortress for their little garrison. It appears, however, that the Fabii were accompanied by their clients and adherents, and the whole band probably amounted to 3000 or 4000.

(Dionys. ix. 15; F. Diai. s. v. Securata Porta.) The place which they chose as the station of their garrison was a precipitous hill which seemed to have been cut and isolated by art; and they further strengthened it with entrenchments and towers. The spot has been identified with great probability by Nardini, and subsequently by other topographers, with a precipitous hill about 6 miles from Rome, on the left of the Via Flaminia, where it is traversed by the Cremera (now the Velabro), and on the right bank of that stream. It is the height which commands the present Osteria delle Vecchette.

(Nibby, Dintorni di Roma, vol. iii. p. 399; Dennis, Etruria, vol. i. p. 43.)

The position here taken up by the Fabii not only enabled them to put a complete stop to the marauding expeditions of the Veientes, but even to commit depredations themselves on the territory of Veii. The Veientes having made many vain attempts to dislodge them, at length implored the succour of the Etruscans; but the Fabii on their side were supported by a consular army under Ae- milius, and the Veientes and their allies were defeated. This success rendered the Fabii still more enterprising. After occupying their fortress two years with impunity they began to extend their excursions; and the Veientes on their side sought to draw them onwards, in which they at length succeeded. By a feigned flight, they enticed the Fabii into an ambuscade and slew them, 13th Feb. n. c. 476. (Ot. Fast. ii. 195, sqq.; Liv. ii. 48—50; Dionys. ix. 16—19; Florus, i. 12, &c.)

Elated with this success, the Veientes united with the Etruscans under Ae- milius, and pitched their camp on the Janiculan hill, at a distance of only 6 stadia from the city. Thence passing the Tiber, they penetrated as far as the ancient temple of Hope, which stood near the modern Porta Maggiore. Here an indecisive action took place, which was renewed at the Porta Collina with the same result; but two engagements of a more decisive character on the Janiculan hill obliged the allied army to retreat. In the following year the Veientes allied themselves with the Sabines, but were completely defeated under the walls of their own city by the consul Pub. Valerius. The war was brought to a termination in the following year, in the consulship of C. Manlius, who concluded with them a truce of 40 years, the Veientes engaging to pay a tribute in corn and money. (Liv. ii. 51—54; Dionys. ix. 23, sqq.)

But such terms were merely nominal, and in a few years hostilities were renewed. With intent of some forays made by the Veientes in n. c. 442 (Liv. iv. 1); but there was no regular war till seven years later, when the Veientes, who were at that time governed by Lars, or King, Tolminius, excited the Roman colony Fidenae to rebel; and in order completely to compromise the Fidenates, Tolminius ordered them to send the Roman ambassadors who had been despatched to demand an explanation. Both sides flew to arms; one or two obstinate engagements ensued; but the allies who had been joined by the Falisci also, were overthrown in a decisive battle under the walls of Fidenae, in which Tolminius was killed by the Roman military tribune, A. Cornelius Cossus. (Liv. iv. 17—19; cf. Propert. iv. 10, 29, sqq.)

Three years afterwards, Rome being afflicted with a severe pestilence, the Veientes and Fidenates were emboldened to march upon it, and encamped before the Porta Collina; but on the appearance of a Roman army under the dictator Aulus Servilius, they retreated. Servilius having pursued and routed them near Numautum, marched to Fidenae, which he at length succeeded in taking by means of a circumvallus or mine. (Liv. iv. 22.)

Although the Veientes obtained a truce after this event, yet they soon violated it, and began to commit depredations in the Roman territory, b. c. 427; and even defeated a Roman army whose operations had been paralysed through the dissensions of the three military tribunes who commanded it. The Fidenates now rose and massacred all the Romans colonists, and again allied themselves with the Veientes, who had also enlisted a great number of Etruscan volunteers in their service. These events occasioned great alarm at Rome. Mancius Asemilius was created dictator, and, marching against the enemy, encamped in the peninsula formed by the confluence of the Anio and the Tiber. Between this spot and Fidenae a desperate battle was fought; stratagems were employed on both sides; but at length the allies were completely defeated, and the Romans entered the gates of Fidenae along with the flying enemy. The city was sacked and destroyed and the inhabitants sold as slaves; but on the other hand the Romans granted the Veientes a truce of 20 years. (Liv. iv. 31—35.)

At the expiration of this truce, the Romans resolved to subdue Veii, as they had done Fidenae, and it was besieged by an army commanded by six military tribunes. At this news the national assembly of the Etruscans met at the fane of Volturnus, to consider what course they should pursue. The Veientes had again resorted to the regal form of government; but unfortunately the person whom they elected for their king, though rich and powerful, had incurred the hatred of the whole Etruscan nation by his oppressions and imperious manners, but especially by his having hindered the performance of certain sacred games. The Etruscans consequently declared that, unless he was deposed, they should afford the Veientes no assistance. But the latter were afraid to adopt this resolution, and thus they were abandoned to their fate. Nevertheless, they contrived to prolong the siege for a period of ten years, during which the Romans were several times discomfited. It is worthy of remark that it was during this siege that the Roman soldiers, being obliged to pass the winter out of Rome, first received a fixed regular stipend. The Cacenates, the Falisci, and the Turcicaces, in vain endeavoured to relieve the beleaguered city.

The length of the siege had begun to weary the Romans, when, according to the legend, the means of its capture was suggested by an extraordinary portent. The waters of Lake Albano swelled
to such an extent that they threatened to inundate the surrounding country. The oracle of Delphi was consulted on the occasion, and the response involved not only the immediate subject of the application, but also the remoter one of the capture of Veii. According to the voice from the sacred tripod, that city would be taken when the waters of the lake were made to flow off without running directly into the sea; and the prophecy was confirmed by the revelation of a Veientine haruspex made during the interval of the embassy to Delphi. All that we can infer from this narrative is that the formation of the embassy for draining the Alban lake was contemporary with the siege of Veii [cf. Alaricus Laciuss, Vol. I. p. 29]; the rest must be referred to the propensity of the ancients to ascribe every great event to the intervention of the gods; for we have already seen that Fidenae was captured by means of a cuniculus, a fact which there does not appear to be any valid reason to doubt, and therefore the embassy of the lake cannot be regarded as having first suggested to the Romans the method of taking a city by mine.

The honour of executing this project was reserved for the dictator M. Furius Camillus. Fortune seemed to have deserted the Veientines: for though the pleading of the Capenates and Falcii on their behalf had made some impression on the national assembly of the Etruscans, their attention was diverted in another direction by a sudden irruption of the Cisalpine Gauls. Meanwhile Camillus, having defeated some bodies of troops who endeavoured to relieve Veii, erected a line of forts around it, to cut off all communication with the surrounding country, and appointed some consuls to reside at its gates and continue the cuniculus. When the mine was completed, he ordered a picked body of his most valiant soldiers to penetrate through it, while himself diverted the attention of the inhabitants by feigned attacks in different quarters. So skilfully had the mine been directed that the troops who entered it emerged in the temple of Juno itself, in the highest part of the citadel. The soldiers who guarded the walls were thus taken in the rear; the gates were thrown open, and the city soon fell with Romans. A desperate massacre ensued; the city was sacked, and those citizens who had escaped the sword were sold into slavery. The image of Juno, the tutelary deity of Veii, was carried to Rome and pompously installed on Mount Aventine, where a magnificent temple was erected to her, which lasted till the abolition of paganism.

(Liv. v. 8, 12, 13, 15—22; Cic. Div. l. 44, ii. 32; Plut. Cam. 5, sq.; Flor. l. 12.)

Veii was captured in the year 396 B.C. Its territory was divided among the citizens of Rome at the rate of seven jugera per head. A great debate arose between the senate and the people whether Veii should be repopulated by Roman citizens, and thus made as it were a second capital; but at the persuasion of Camillus the project was abandoned. But though the city was deserted, its buildings were not destroyed, as is shown by several facts. Thus, after the battle of the Alia and the taking of Rome by the Gauls, the greater part of the Romans retired to Veii and fortified themselves there; and when the Gauls were expelled, the question was mooted whether Rome, which had been reduced to ashes, should be abandoned, and Veii converted into a new capital. But the eloquence of Camillus again decided the Romans for the negative, and the question was set at rest for ever. This took place in n. c. 389. Some refractory citizens, however, who disliked the trouble of rebuilding their own houses at Rome, took refuge in the empty ones of Veii, and set at nought a senatorial edict ordering them to return; but they were at length compelled to come back by a decree of capital punishment against those who remained at Veii beyond a day prescribed. (Liv. v. 49, sqq., vi. 4.)

From this time Veii was completely deserted and went gradually to decay. Cicero (ad Fam. xvi. 9) speaks of the measuring of the Veientine territory for distribution; and it was probably divided by Caesar among his soldiers in n. c. 45. (Plut. Cesar. 57.) Propertius also describes its walls as existing in his time; but the space within consisted of fields where the shepherd fed his flock, and which were then under the operation of the decempeda (iv. 10. 29). It is, however, rather difficult to reconcile this chronology, unless there were two distributions. Caesar also appears to have planted a colony at the ancient city, and thus arose the second, or Roman, Veii, which seems to have been considerable enough to sustain an assault during the wars of the triumvirs. The inhabitants were again dispersed, and the colony was not restored till towards the end of the reign of Augustus, when it assumed the name of municipium Augustum Veieens, as appears from inscriptions. (C. Auct. de Colonia.) When Florus, who flourished in the reign of Hadrian, asserts (t. 12) that scarcely a vestige remained to mark the spot where Veii once stood, he either writes with great carelessness or is alluding to the ancient and Etruscan Veii.

The existence of the municipium in the reign of Augustus and Tiberius is attested by several monuments, but not in its main continuance. It was also found there show that it was in existence at least as late as the reign of Constantius Chlorus. The monuments alluded to consist partly of sculptures relating to those emperors and their families, and partly of inscriptions. Amongst the latter the most important is now preserved in the Capitoline Museum at Rome, recording the admission of Caius Julius Gelates, a freedman of Augustus, to the office of an Augustalis, by the centurion of Veii. It is dated in the consulship of Gaetulicus and Calvisius Sabinus, A. u. c. 779=41. c. 26, or the 13th year of the reign of Tiberius. It is published by Fabretti (Jas. p. 170), but more correctly from the original by Nibby in his Diitorni di Roma (vol. iii. p. 409). The accents are worthy of note. Among the centurions whose names are subscribed to this decree are those of two of the Tarquidian family, namely, M. Tarquinius Saturninus and T. Tarquinius Rufus. This family, which produced a celebrated writer on Etruscan divination (Macrobi. Sat. iii. 7), seems to have belonged to Veii and to have enjoyed considerable importance there, as two other inscriptions relating to it have been discovered. One of these records the restoration of a statue erected in honour of M. Tarquinius Saturninus by the 22nd Legion; the other is a tablet of Tarquinius Frisia dedicated to her husband M. Saemius Marcellus. (Nibby, Ibid. p. 410, sq.) The family of Frisia was the most celebrated of the gens Tarquini.,. One of these was the accuser of Statilius in the reign of Clodius, and was himself condemned under the law of repetundae in the reign of Nero. (Tac. Ann. xii. 59, xiv. 44.) There are various coins of the Tarquii. (Eckhel, D. N. V. i. p. 322.) After the era of Constantine
we have no notices of Veii except in the Tab. Pentingeriana and the Geographer of Ravenna. It was probably destroyed by the Lombards. At the beginning of the 11th century a castle was erected on the precipitous and isolated hill on the S. side of Veii, which was called la Isola, and is now known by the name of the Isola Farnese.

Sir William Gell was the first who gave an exact plan of Veii in the Memorie dell'Istituto (Fasc. 1.), and afterwards in his Topography of Rome and its Vicinity. He traced the vestiges of the ancient walls, which were composed of irregular quadrilateral masses of the local tufo, some of which were from 9 to 11 feet in length. Mr. Dennis, however, failed to discover any traces of them (Etruria, vol. i. p. 15), and describes the stone used in the fortifications of Veii, as being cut into smaller pieces than usual in other Etruscan cities. These remains, which are principally to be traced in the N. and E., as well as the streams and the outline of the cliffs, determine the extent of the city in a manner that cannot be mistaken. There is a circumferential trench (canaliculus), which agrees with the account of Dionysius, before referred to, when he compares the size of Veii with that of Athens. It has been debated whether the isolated rock, called the Isola Farnese, formed part of the city. Nibby (Dintorni, vol. iii. p. 424) and others are of opinion that it was the arg or citadel. On the other hand Sir William Gell and Mr. Dennis hold that this could not have been the case; and it must be confessed that the reasons advanced by the latter (vol. i. p. 42, note 5) appear decisive; namely, 1, the Isola is separated from the city by a deep glen, so that, had it been the citadel, the buffule by its capture would not have obtained immediate possession of the town, as we learn from Livy's narrative, before referred to, that he did; 2, the remains of Etruscan tombs on the Isola show that it must have been a cemetery, and consequently without the walls. The two authorities last cited identify the citadel with the hill now called the Piazza d'Armi at the SE. extremity of the town, in the angle formed by the junction of the stream called Fosso de' due Fossi with the stream called Fosso di Formello. These two streams traverse the southern and eastern boundaries of ancient Veii. The latter of these streams, or Fosso di Formello, is thought to be the ancient Cremera. The other rivulet rises at La Torretta, about 12 miles from Rome. Near Veii it forms a fine cataract, precipitating itself over a rock about 80 feet high. From this spot it runs in a deep channel among precipices, and separates the Isola from the rest of Veii. It then receives the Rivo del Pino or della Storta, whence its name of Fosso de' due Fossi. After joining the Fosso di Formello, or Cremera, the stream gives a new name to the Isola, and falls into the Tiber about 6 miles from Rome, near the Via Flaminia.

Topographers have discovered 9 gates, to which they have assigned imaginary names from local circumstances. It would be impossible to explain the exact sites of these gates without the assistance of a plan, and we shall therefore content ourselves with enumerating them in the order in which they occur, premises only that all writers do not call them alike. The westernmost gate, called the Porto de' Sette Pari, from its being supposed to have led to the district called the Sette Pari, is situated near the Ponte dell'Isola. Then proceeding round the S. side of the city, the next gate occurs near the Fosso dell'Isola; and, from its leading to the rock of Isola, which, as we have seen, was thought by some topographers to be the ancient citadel, has been called the Porto dell'Arce. The next gate on the E. is the Porta Campana; and after that, by the Piazza d'Armi, is the Porta Festina. Near this spot was discovered, in 1840, the curious staircase called La Scoletta. Only six steps of uncremented masonry, seated high in the cliff, remain, the lower part having fallen with the cliff. After passing the Piazza d'Armi, in traversing the northern side of the city by the valley of the Cremera, the gates occur in the following order: the Porta di Pietra Posta; the Porta delle Arce Musce; the Porta Capuana; the Porta del Columbario, so named from the columbarium near it; and lastly the Porta Sartina, not far from the Ponte di Formello.

The Municipium Veiens, which succeeded the ancient town, was undoubtedly smaller; for Roman sepulchres and columbaria, which must have been outside the Municipium, have been discovered within the walls of Etruscan Veii. It was perhaps not more than 2 miles in circumference. On the spot probably occupied by the Forum, were discovered the colossal heads of Augustus and Tibbassus, and the colossal statue of the latter, crowned with oak and in a sitting posture, which are now in the Vatican, in the corridor of the Museo Chiaravalle. Several other fragments of statues have been found, as well as 24 marble columns, 12 of which now adorn the Piazza Colonna at Rome, and the rest are employed in the Chapel of the Sacrament in the new Basilica of St. Paul.

The remains of Etruscan Veii are portions of the walls, the bridge near the Porta di Pietra Posta, the bridge, or tunnel, called Ponte Sudo, and the tombs and sepulchral grotoes. Of the walls we have already spoken. The remains of the bridge consist of a piece of wall about 20 feet wide on the bank of the stream, which seems to have formed the pier from which the arch sprang, and some large blocks of hewn tufo which lie in the water. The piers of the bridge called Ponte Formello are also possibly Etruscan, but the arch is of Roman brickwork. The Ponte Sudo is a tunnel in the rock through which the stream flows. Nibby (Dintorni, vol. iii. p. 50) describes it as 70 feet long, 20 wide, and 15 high; but Mr. Dennis, who waded through it, says that it is 249 feet long, 12 to 15 wide and nearly 20 high (Etruria, vol. i. p. 14). It is in all probability an Etruscan excavation, or has at all events been enlarged by art. An ancient road ran over it; and from above it is scarcely visible. No trace remains of the cuniculus of Cannulus. The vicinity of Veii abounds with tombs excavated in the rock, and sepulchral tumuli, some of which are Roman. Among the most remarkable one, discovered in the winter of 1842, and still open to inspection. It consists of a long passage in the tumulus, or mound, called Poggio Michele, leading to a door in the middle of the mound, and guarded at each end by sculptured lions. This is the entrance to a low dark chamber, hewn out of the rock, the walls of which are covered with paintings of the most grotesque character, consisting of horses, men, sphinxes, dogs, leopards, &c. On either side a bench of rock, about 2½ feet high, projects from the wall, on each of which, when the tomb was first opened, a skeleton reposed; but these soon crumbled into dust. One of them, from the arms lying near, was the remains of a warrior; the other skeleton was probably that of his wife. On the floor were large jars containing
human ashes, and also several small vases of the most archaic Etruscan pottery. Within was another smaller chamber also containing cinerary urns. A complete description of this remarkable sepulchre will be found in Mr. Denio's Etruria (vol. i. p. 12.) at the mouth of an extensive territory (probably the same once held by the Ligurian tribe of the Veleiates) which was divided into a number of Pagii, or rural districts. The names both of these and of the various 'fundi' or farms noticed are almost uniformly of Roman origin,—thus affording a remarkable proof how completely this whole district had been Romanised before the period in question. The Tabula Alimentaria Trajana, as it is commonly called, has been repeatedly published, and illustrated with a profusion of learning, especially by Lenz. (Tabula Alimentaria Veleitae detta Trajana, 4to, Parma, 1819.) A description of the mines and antiquities has been published by Antolini (Le Roveri di Velga, Milan, 1819). The coins found at Veleia are very numerous, but none of them later than the time of Probos; whence it is reasonably inferred that the catastrophe which buried the city occurred in the reign of that emperor.

VELIA (Οὐδέα, or Οὐδέα, Ptol. ii. 6 § 65), a town of the Caristi in Hispania Tarraconensis, on the road from Pompeii to Asturien (Itin. Ant. p. 454, where it is called Beleia). (Cf. Ptol. iii. 3, § 4; Gesner has incorrectly identified it with Viaia, Berenice, and Yria.)

VELIA (Τύλα or Έλεα: Edh. Τυλίτης or Έλεάτης, Velia: Castell a Mare della Breccia), one of the principal of the Greek colonies in Southern Italy, situated on the shores of the Tyrrhenian sea, about midway between Poseidonia and Pyxus. There is some uncertainty respecting the correct form of the name. Strabo tells us that it was originally called Hyde (Τύλα), but was in his day called Elea (Έλεα), and Diogenes Laertius also says that it was at first called Hyde and afterwards Elea. (Strab. vi. p. 252; Dioec. Laert. ix. 5 § 28; Steph. B. s. v.) But it is certain from the evidence of its coins, which uniformly bear the legends 'ΤΕΛΑ and 'ΤΕΛΗΤΩΝ, that the name of Hyde continued in use among the people themselves as long as the city continued; while, on the other hand, the name of Elea is already found in Sylax (p. 4 § 12), and seems to have been certainly in use among Attic writers from an early period, where the Eleatic school of philosophy rendered the name familiar. Strabo also tells us that some authors wrote the name Ele (Έλεα), from a fountain of that name, and this form, compared with Τύλα and the Latin form Velia, seems to show clearly that the diversity of names arose from the Aeolic Dicamma, which was probably originally prefixed to the name, and was retained in the native usage and in that of the Romans, while it was altogether dropped by the Attics. (Münter, Velia, p. 21.) It is not improbable that the name was derived from that of the neighbouring river, the Hales of Cicero (Alento), of which the name is written Еλέα by Strabo and Beleia by Stephens of Byzantium. (Cic. ad Fam. vii. 20; Strab. vi. p. 254.) Others, however, derived it from the marshes (Έλαια) at the mouth of the same river.

There is no trace of the existence of any town on the site of Velia before the establishment of the Greek colony there, and it is probable that this, like most of the Greek colonies in Southern Italy, was founded on a wholly new site. It was a colony from Phocaea in Ionia, and derived its origin from the voluntary ex-
patrition of the inhabitants of that city in order to avoid falling under the Persian yoke, at the time of the conquest of Ionia by Harpagus, b.c. 544. The Phocaean emigrants proceeded in a body to Corsica, where they had already founded the colony of Alalia about 20 years before; and in the first instance established themselves in that island, but, having provoked the enmity of the Tyrrenhians and Carthaginians by their piracies, they sustained such severe loss in a naval action with the combined fleets of these two powers, that they found themselves compelled to abandon the colony. A part of the emigrants then repaired to Massilia (which was also a Phocaean colony), while the remainder, after a temporary halt at Rhegium, proceeded to found the new colony of Hyyle or Velia on the coast of Lucania. This is the account given, by Herodotus (i. 164—167), with which that cited by Strabo from Antiochus of Syracuse substantially agrees. (Strab. vi. p. 254.) Later writers have somewhat confused the narrative, and have represented the foundation of Massilia and Velia as contemporaneous (Hygin. op. a. Cell. x. 16; Ammianus. Marc. xv. 9. § 7); but there is no doubt that the account above given is the correct one. Sylxam alone represents Velia as a colony of Thurii. (Sycl. p. 4. § 12.) If this be not altogether a mistake it must refer to the admission at a later period of a body of fresh colonists from that city; but of this we find no trace in any other author. The exact date of the foundation of Velia cannot be determined, as we do not know how long the Phocaeans remained in Corsica, but it may be placed approximately at about 540 B.C.

There is no doubt that the settlers at Velia, like those of the sister colony of Massilia, followed the example of their parent city, and devoted themselves assiduously to the cultivation of commerce; nor that the city itself quickly became a prosperous and flourishing place. The great abundance of the silver coins of Velia still in existence, and which are found throughout the S. of Italy, is in itself sufficient evidence of this fact; while the circumstance that it bore the name of P. Aemilius Lepidus, placed on the tablet of which was found in Corsica, might have been the leaders of which continued through successive generations to reside at Velia, proves that it must have been a place of much intellectual refinement and cultivation. But of its history we may be said to know absolutely nothing. Strabo tells us that it was remarkable for its good government, an advantage for which it was partly indebted to Parmenides, who gave his fellow-citizens a code of laws which the magistrates from year to year took an oath to obey. (Strab. vi. p. 254; Diog. Laert. ix. 3, § 25.) But the obscure story concerning the death of Zeno, the disciple of Parmenides, who was put to death by a tyrant named Nearcims or Dionedon, would seem to show that it was not free from the same kind of violent interruptions by the rise of despotsisms as were common to most of the Greek cities. (Diog. Laert. ix. 5; Cic. Tus. ii. 22.) Strabo also tells us that the Eleans came victorious in a contest with the Posidonians, but of the time and circumstances of this we are wholly ignorant; and he adds that they maintained their ground against the Lucanians also. (Strab. l.c.) If this is correct they would have been one of the few Greek cities which preserved their national existence against those barbarians, but their name is not found in the scanty historical notices that we possess of the wars between the Lucanians and the cities of Magna Gracicia. But the statement of Strabo is in some degree confirmed by the fact that Velia was certainly admitted at an early period (though on what occasion we know not) to the alliance of Rome, and appears to have maintained very friendly relations with that city. It was from thence, in common with Neapolis, that the Romans habitually derived the priestesses of Ceres, whose worship was of Greek origin. (Cic. pro Balb. 24; Val. Max. i. 1. § 1.) Cicero speaks of Velia as a well-known instance of a "foedera civitatis," and we find it mentioned in the Second Punic War as one of those which were bound by treaty to contribute their quota of ships to the Roman fleet. (Cic. l.c.; Liv. xxvi. 39.) It eventually received the Roman franchise, apparently in virtue of the Lex Julia, b.c. 90. (Cic. l.c.) Under the Roman government Velia continued to be a tolerably flourishing town, and seems to have been from an early period noted for its mild and salubrious climate. Thus we are told that P. Aemilius Lepidus determined to order there by his physicians for the benefit of his health, and we find Horace making inquiries about it as a substitute for Baiae. (Plut. Aemil. 39; Hor. Ep. i. 15. 1.) Cicero's friend Trebutius had a villa there, and the great orator himself repeatedly touched there on his voyages along the coast of Italy. (Cic. Verr. ii. 40, v. 17, ad Fam. vii. 19, 20, ad Att. xvi. 6, 7.) It appears to have been at this period still a place of some trade, and Strabo tells us that the poverty of the soil compelled the inhabitants to turn their attention to maritime affairs and fisheries. (Strab. vi. p. 254.) It is probable that the same cause had in early times co-operated with the national disposition of the Phocaean settlers to direct their attention especially to maritime commerce. We hear nothing more of Velia under the Roman Empire. Its name is found in Pliny and Ptolemy, but not in the Itineraries, which may, however, probably proceed from its secluded position. It is mentioned in the Liber Coloniarm (p. 269) among the Prefectures of Lucania; and its continued existence as a municipal town is proved by inscriptions. (Mommsen. Inscr. R. N. 190. Aug. 1.) Velia was visited by Pliny in the early ages of Christianity, and still retained that dignity as late as the time of Gregory the Great (A. p. 599). It is probable that the final decay of Velia, that of Paestum, was owing to the ravages of the Saracens in the 8th and 9th centuries. The bishopric was united with that of Capaccio, which had succeeded to that of Paestum. (Münter, Velia, pp. 69—73.) During the middle ages there grew up on the spot a fortress which was called Castell'de Mare della Braccia, and which still serves to mark the site of the ancient city. The ruins of Velia are situate on a low ridge of hill, which rises above a mile and a half from the mouth of the river Aiento (the ancient Hales), and half a mile from the coast, which here forms a shallow but spacious bay, between the headland formed by the Monte della Stella and the rocky point of Porticello near Ascea. The mediaeval castle and village of Castell'de Mare della Braccia occupy the point of this hill nearest the sea. The outline of the ancient walls may be traced at intervals round the hill for their whole extent. Their circuit is not above two miles, and it is most likely that this was the old city or acropolis, and that in the days of its prosperity it had considerable suburbs, especially in the direction of its port. It is probable that this was an artificial basin, like that of Metapontum, and its site is in all probability marked by...
VELINUS.

VELITAE.

a marshy pool which still exists between the ruins of the ancient city and the mouth of the Anio. This river itself, however, was sufficient to afford a shelter and place of anchorage for shipping in ancient times (Cic. ad Att. vii. 7), and is still resorted to for the same purpose by the light vessels of the country. No other ruins exist on the site of the ancient city except some masses of buildings, which, being in the reticulated style, are unquestionably of Roman date: portions of aqueducts, reservoirs for water, &c. are also visible. (The site and existing remains of Velia are described by Mil. Vet. in Lucemb. 380, Alt. Alton. 1818, pp. 15-20, and by the Duc de Louvain, in the Annales dell' Instituto, 1829, pp. 381-385.)

It is certain that as a Greek colony Velia never rose to a par with the more opulent and flourishing cities of Magna Graecia. Its chief celebrity in ancient times was derived from its celebrated school of philosophy, which was universally known as the Eleatic school. Its founder Xenophanes was indeed a native of Colophon, but had established himself at Velia, and wrote a long poem, in which he celebrated the foundation of that city. (Diog. Laert. i. 2. § 20.) His distinguished successors Parmenides and Zeno were both of them born at Velia, and the same thing is asserted by some writers of Leucippus, the founder of the atomic theory, though others represent him as a native of Abdera or Melos. Hence Diogenes Laertius terms Velia "an inconsiderable city, but capable of producing great men" (ix. 5. § 28).

COIN OF VELIA.

VELINUS (Velia), a considerable river of Central Italy, which has its sources in the lofty group of the Appennines between Nursia (Norcia) and Interoxcia (Antrodoco). Its actual source is in the immediate neighbourhood of the ancient Falacerum, the birthplace of Vespasian, where an old church still bears the name of Sta Maria di Fonte Velino. The upper part of its course is from N. to S., but near Antrodoco it turns abruptly to the W., parries that direction as far as Rieti, and thence flows about NW., till it discharges its waters into the Nar (Nera) about 3 miles above Termi (Interamna). Just before reaching that river it forms the celebrated cascade now known as the Falls of Termi or Cascata delle Marmore. This waterfall is in its present form wholly artificial. It was first formed by M. Carinus Dentatus, who opened an artificial channel for the waters of the Velinus, and thus carried off a considerable part of the Lucus Velinus, which previously occupied a great part of the valley below Rutae. There still remained, however, as there does to this day, a considerable lake, called the Lucus Velinus, and now known as the Lago di Fic di Lago. It was on the banks of this lake that the villa of Axius, the friend of Cicero and Varro, was situated. (Cic. ad Att. iv. 15; Varro, R.R. ii. 1, 8.) Several smaller lakes still exist a little higher up the valley: hence we find Pliny speaking in the plural of the Velini Lacus (Plin. iii. 12, s. 17; Tac. Ann. i. 79; Vitr. Sec. p. 24.) The character and extent of the former basin of the Velinus are fully described in the article Rutae. Pliny has made a complete confusion in his description of the Nar and Velinus. [NAR.] The latter river receives near Rieti two considerable streams, the Salto and the Tevere: the ancient name of the first is unknown to us, but the second is probably the Tolenus of Ovid. (Fast. vi. 565.) It flows from the mountain district once occupied by the Aquilini, and which still retains the name of Cieoli. [FOLEUMUS.]

VELITAE (Oeolatae: Ech. Oeolataurai, Veliternii, Veliterni), a city of Latium situated on the southern slope of the Alban hills, looking over the Pomptine Marshes, and on the left of the Via Appia. There can be no doubt that it was included within the limits of Latium, as that name was usually understood, at least in later times: but there is great uncertainty as to whether it was originally a Latin or a Volscian city. On the one hand Dionysius includes the Veliterni in his list of the thirty cities of the Latin League, a document probably derived from good authority (Dionys. v. 61). On the other hand both Dionysius himself and Livy represent Veliterni as a Volscian city at the earliest period when it came into collision with Rome. Thus Dionysius, in relating the wars of Ancus Marcius with the Volscians, speaks of Veliterni as a city of that people which was besieged by the Roman king, but submitted, and was received to an alliance on favourable terms. (Id. iii. 41.) Again in B.C. 494, just about the period when its name figures in Dionysius as one of the Latin cities, it is mentioned both by that author and by Livy as a Volscian city, which was wrested from that people by the consul P. Virginius (Id. vi. 42; Liv. ii. 30). According to Livy a Roman colony was sent there the same year, which was again recruited with fresh colonists two years afterwards. (Liv. ii. 31, 34.) Dionysius, on the contrary, makes no mention of the first colony, and represents that sent in B.C. 492 as designed to supply the exhausted population of Veliterni, which had been reduced to a low state by a pestilence. (Dionys. viii. 13, 14.) It appears certain at all events that Veliterni received a Roman colony at this period; but it had apparently again fallen into decay, as it received a second body of colonists in B.C. 383 (Dionys. vi. 34.) Even this did not suffice to ensure its allegiance to Rome: shortly after the Gallic war, the Roman colonists of Veliterni joined with the Volscians in their hostilities, and after a short time broke out into open revolt. (Liv. vi. 13, 21.) They were indeed defeated in B.C. 381, together with the Praenestines and Volsci, who supported them, and their city was taken the next year (ib. 22, 29); but their history from this time is a continued succession of outbreaks and hostile enterprises against Rome, alternating with intervals of dubious peace. It seems clear that they had really assumed the position of an independent city, like those of the neighbouring Volsciens, and though the Romans are said to have more than once taken this city, they did not again restore it to the position of a Roman colony. Thus notwithstanding its capture in B.C. 380, the citizens were again in arms in 370, and not only ravaged the territories of the Latins in alliance with Rome, but even laid siege to Tusculum. They were quickly defeated in the field, and Veliterni itself in its turn was besieged by a Roman army; but the siege
VELITRAE.

was protracted for more than two years, and it is not quite clear whether the city was taken in the end. (Liv. vi. 36, 37, 38, 42.) In n. c. 39 it broke out, and ravaged the Roman territories, but we hear nothing of their punishment (Liv. vii. 15); and in n. c. 340, on the outbreak of the great Latin War, they are represented as among the first to join in the defection. It is evident indeed that they were at this time still a powerful people; their troops bore an important part in two successive campaigns, but shared in the general defeat of the Latins on the banks of the Astura, n. c. 338. (Liv. viii. 3, 12, 13; Front. Captiv.) After the close of the war they were selected for the second punishment, on the special ground of their having been originally Roman citizens. Their walls were destroyed, and their local senators transported beyond the Tiber, under a severe penalty in case of their return. Their place was, however, supplied by a body of fresh colonists, so that the city continued to be not less populous than before. (Liv. viii. 14.)

From this time Velitrae sank into the condition of an ordinary municipal town, and we hear little of it in history. It is mentioned incidentally on an occasion of some lights that occurred there (Liv. xxii. 38, xxiii. 1, 9), but with so slight a regard to it that it is not again mentioned till the close of the Republic. We hear, however, that it was a flourishing municipal town, and it derived some celebrity at the commence- ment of the Empire from the circumstance of its having been the native place of the Octavian family, from which the emperor Augustus was descended. The Octavius indeed claimed to be descended from the ancient Roman family of the same name; but it is certain that both the grandfather and great-grand- father of Augustus were merely men of equestrian rank, who held municipal magistracies in their native town. (Suet. Aug. 1, 2; Dion Cass. xiv. 1.) According to the Liber Coloniarum, Velitrae had received a fresh body of colonists in the time of the Gracchi; but it continued to retain its municipal rank until the reign of Claudius, when it received a military colony, and from this time assumed the title of a Colonia, which we find it bearing in inscriptions (Lib. Colon. p. 238; Zumpt, de Col. p. 383; Orell. Inser. 1740, 3652). No mention of the city occurs in history under the Roman Empire, but its name is found by the geographers, and Inscriptions testify that it continued a flourishing town down to near the close of the Empire. (Strab. v. p. 237; Plin. iii. 5. s. 9; Sil. Ital. viii. 376; Nibby, Diurnarii, vol. iii. p. 450.) It appears to have subsequently suffered severely from the ravages of the barbarians, but continued to subsist throughout the middle ages; and the modern city of Velleti still occupies the site of the ancient one, though it has no remains of antiquity. Its position is very similar to that of Lanuvium (Clieita Lavinia), on a projecting rock or spur of hill, standing out from the more elevated group of the Alban hills, and rising like a headland above the plain of the Pom- tine Marshes, which lie stretched out beneath it. The inscriptions which have been discovered there have been published by Cardinali (Inscrizioni Antiche Veliternae, 4to. Roma, 1823). From one of these we learn that the ancient city possessed an amphitheatre, which was repaired as late as the reign of Valen- tinian, but no traces of it are now visible. It had also temples of Apollo, Hercules and Mars, as well as of the Sabine divinity Sancus. (Liv. xxxii. 1.)

Pliny notices the territory of Velitrae as producing a wine of great excellence, inferior only to the Falernian (Plin. xiv. 6. x. 2). [E. H. B.]

VELLAUNI. a people of Gallia. In the passage of Caesar (B. G. vii. 75) some editions have Velauni, but it is certain that whatever is the true form of the name, these Velauni are the Vellaisi (Oèclàaion) of Strabo (p. 190). The Gabali and Velauni in Caesar's time were subject to the Arverni. In the poem (i. 7, § 20) the name is Velauni (Oèclàuna), but he puts them next to the Auscii, which is a great mistake. D'Anville says that the diocese of Pole represents their ter- ritory; but that this cannot be said of the small province of Vellag, which was annexed to Langobardic in the late revolutionary division of Francia. NET. of the Provinces of Gallia, the capital of the Vellaii is Civitas Vellavorum [Revesio]. [G. L.]

VELLAUNI. [VELLAUNI.]

VELLAUNODUNUM, in Gallia. In n. c. 52 Caesar, leaving two legions and all the baggage at Agedincum (Senis), marches on Genabum (Orléans). On the second day he reaches Vellaunodunum. (B. G. vii. 11.) In two days Caesar made a valiant round Vellaunodunum, and on the third day the place surrendered, and the people gave up their arms. There is no evidence about the site of Vel- launodunum, except that it was on the road from Senis to Orleans, and was reached in the second day's march from Senis, and that Caesar reached Orléans in two days from Vellaunodunum. Caesar was marching quick. D'Anville conjectures that Vellaunodunum may be Béauce, in the old province of Gátinosis; for Béauce is about 40 Roman miles from Senis, and the Roman army would march that distance in two days. Béauce is named Belina in the Pagnus Vastensis (Gatins, Gastins, Vau- tins, Vapincum), in the acts of a council held at Soissons in 382, and D'Anville thinks that Belina may be a corruption of Vellauni, which is the name of Vellaunodunum, if we cut off the termination dunum. (D'Anville, Notice, &c.) [G. L.]

VELLEIA [VELLEIA.]

VELLICA (Oèclàa, Plut. ii. 6. § 51), a town of the Cantabri in Hispania Tarraconensis. Ubert (ii. p. 1. p. 144) places it in the neighbourhood of Villeha, to the N. of Agulae of Campo. [T.H.D.]

VELLOCASSES. [VELLOCASSES.]

VELLOCASSAE, as Caesar (B. G. ii. 4) writes the name in the inscription at Pliny (iv. 18), and in Plutonius Oèclàonòdàèsii (ii. 8. § 8) Caesar places them in the country of the Belgae, and consequently north of the Seine. The number of fighting men that they could muster in n. c. 57 was estimated at 10,000, unless Caesar means that they and the Vermundati together had this number. In the di- vision of Gallia by Augustus, the Vellocasses were included in Lugudunensis. Their chief town was Iutomagus (Rouen) on the north bank of the Seine. West of the Vellocasses were the Caleti, whose country extended along the coast north of the Seine. That part of the country of the Vellocasses which is between the rivers Andelle and Oise, became in modern times Vexin Normand and Vexin Français, the little river Epte forming the boundary between the two Vexins. [G. L.]

VELPI MONTES (vèclà Oèclàa èmp, Plut. iv. 4. § 8), a range of mountains on the W. borders of Cyreneaca, in which were the sources of the river Lathen. [T. H. D.]

VELTAE (Oèclàau, Plut. iii. 5. § 22), a people of European Sarmatia, dwelling on both banks of
VENETIA. A town of Vindelicia, on the road between Augusta Vindelicorum and Brigantium (H. Ant. pp. 237, 251, 259: Tab. Peut.), seems to have been a place of some importance, as it was the station of the prefect of the third legion, who had to guard the frontier from this town to Campodonum. (Nol. Imp.) The place now occupying the site is called Wangen. [T. S.]

VENAEFRUM (Ověřennov: Etb. Venaefrunum; Venafro), an inland city of Campania, situated in the upper valley of the Vulturnus, and on the Via Latina, 16 miles from Cassinum and 18 from Teanum. (Rin. Ant. p. 303.) It was the last city of Campania towards the N., its territory adjoining on the W., that of Cassinum (S. Germanus), which was included in Latium, in the more extended sense of that name, and that of Asvernus on the NE., which formed part of Samnium. It stood on a hill rising above the valley of the Vulturnus, at a short distance from the right bank of that river. (Strab. v. p. 238.) No mention is found in history of Venafrum before the Roman conquest of this part of Italy, and it is uncertain to what people it originally belonged; but it is probable that it had fallen into the hands of the Samnites before that people came into collision with Rome. Under the Roman government it appears as a flourishing municipal town: Cato, the most ancient authority by whom it is mentioned, notices it as having manufactures of spades, tiles, and ropes (Cato, R. R. 135): at a later period it was more noted for its oil, which was celebrated as the best in Italy, and supplied the choicest tables of the great at Rome under the Empire. (H. Corn. ii. 6. 16. Sat. ii. 4. 69: Juv. v. 86; Martial, xim. 98; Strab. v. pp. 238, 242: Var. R. R. i. 2. § 6; Plin. xv. 2. s. 3.)

The only occasion on which Venafrum figures in history is during the Social War. n. c. 88, when it was betrayed into the hands of the Samnite leader Marcus Egnatius, and two Roman cohorts that formed the garrison were put to the sword. (Aq. p. 41.)

Cicero more than once alludes to the great fertility of its territory (Cic. de Leg. Agr. ii. 25, pro Flacco, 9), which was one of those that the tribune Kallus proposed by his agrarian law to divide among the Roman citizens. This project proved abortive, but a colony was planted at Venafrum under Augustus, and the city continued henceforth to bear the title of a Colonia, which is found both in Pliny and inscriptions. (Plin. iii. 5. 9; Lib. Col. p. 252; Zumpt. de Colon. p. 347; Mommsen, Inschr. R. N. 4643. 4703.) These last, which are very numerous, sufficiently attest the flourishing condition of Venafrum under the Roman Empire: it continued to subsist throughout the middle ages, and is still a town of about 4000 inhabitants. It retains the ancient site as well as name, but has few vestiges of antiquity, except the inscriptions above mentioned and some shapeless fragments of an edifice supposed to have been an amphitheatre. The inscriptions are published by Mommsen. (Inschr. R. N. pp. 243—249.)

VENANTODUNUM, apparently a town of the Catayuchlani in Britannia Romana, perhaps Noviomagus. The name appears in the Nol. Imp.; though Camden (p. 502) notes it as coined by Leland. [T. H. D.]

VENASIA (Ožana), a rather important town in the Morimont in Cappadocia, possessing a celebrated temple of Zeus, to which no less than 3000 slaves belonged. The high priest enjoyed an annual income of fifteen talents, arising from the produce of the lands belonging to the temple. This sacerdotal dignity was held for life, and the priest was next in rank to the high priest of Comana. (Strab. xii. p. 537.)

VENODUM (Oženov, Strab. iii. p. 207, vii. p. 314), a town of the Lepedes in Illyria, and on the borders of Pannonia. It is probably the modern Vindisch-Graul; but some have identified it with Brindjel. [T. H. D.]

VENEDAE (Oženovci, Ptol. iii. 5. § 19), or VENEDI (Tac. Germ. 46; Plin. iv. 13. s. 27), a considerable people of European Sarmatia, situated on the N. declivity of the mountains named after them, and along the Sinus Veneticus about the river Chiron, and as far as the E. bank of the Vistula. They were the northern neighbours of the Galindae and Gytones; but Tacitus was doubtful whether he should call them Germans or Sarmatians, though they more resembled the former than the latter in some of their customs, as the building of houses, the carrying of shields, and the habit of going on foot, whilst the Sarmatians travelled on horse-back or in wagons. They sought a precarious livelihood by scouring the woods and mountains which lay between the Pescini and the Fenni. Whether they were the forefathers of the Wends is very problematical. (Cf. Schaffarik, Slov. Althehr. i. p. 73, seq.; Kcal. Über die Abkunft der Slaven, p. 24.)

VENEDICI MONTES (Ter Oženovci žup, Ptol. iii. 5. § 13), certain mountains of European Sarmatia, bounding the territory of the Venedes on the S. They were probably the low chain of hills which separates Est Prussia from Poland. [T. H. D.]

VENEDICUS SINUS (Oženovce koštov, Ptol. iii. 5. § 1), a bay of the Sarmanian ocean, or Baltic, named after the Venedes who dwelt upon it. It lay to the E. of the Vistula, and was in all probability the Gulf of Riga: a view which is strengthened by the name of Bindau belonging to a river and town in Courland. [T. H. D.]

VENELI. [Užéllis.]
VENELIOCASNI. [Veločasešni.]
VENERIS MONS. [Apendure Mons.]
VENERIS PORTUS. [Portus Venetis.]
VENERIS PROTOM. [Hispania, Vol. i. p. 1064.]
VENETI (Oženovci), a Celtic people, whose country Caesar names Venetia (B. G. iii. 9). The Veneti lived on the coast of the Atlantic (B. G. ii. 34), and were one of the Armoric or Maritime states of Celtica. On the south they bordered on the Nenetes or Nannetes, on the east they had the Redenes, and on the north the Osianii, who occupied the most western part of Brabant. Strabo (iv. p. 195) made a great mistake in supposing the Veneti to be Belgae. He also supposes them to be the progenitors of the Veneti on the coast of the Hainard, whom others supposed to be Paphlagonians; however, he gives all this only as conjecture. The chief town of the Veneti was Dariorigum, afterwards Veneti, now Vanoer [Darihoč). The river Vilaine may have been the southern boundary of the Veneti. Caesar (B. G. iii. 9) describes the coast of Venetia as cut up by estuaries, which interrupted the communication by land along the shore. Most of the towns (Ob. 12) were situated at the extremity of tongues of land or peninsulas, so that when the tide was out they could not receive any commerce, nor could ships reach them during the ebb, for the water was then too shallow. This is the character
of the coast of the French department of Morbihan, which corresponds pretty nearly to Caesar's Venetia. On this coast there are many bays and many "ligatures" as Caesar calls them (Pintatae). The most remarkable is Quiberon, which runs out into the sea near 10 miles, and is insulated at high water. The Veneti commanded the sea in these parts, and as the necessities of navigation often drove vessels to their ports, they made them pay for the shelter. The Veneti had trade with Britain, with Devonshire and Cornwall, the parts of the island which were nearest to them. They were the most powerful maritime state on the Atlantic.

Their vessels were made nearly flat-bottomed, in order that they might the better take the ground when they were left dry by the ebb. The heads were very high, and the sterns strong built, to stand the violence of their seas. The material was oak. Instead of ropes they had chain cables, the use of which has been revived in the present century. Strabo (iv. p. 195) writes as if the ropes of the rigging were chains, which is very absurd, and is contradicted by Caesar, who says that the yards were fastened to the masts by ropes, which the Romans cut asunder in the sea fight with the Veneti (iii. 14). Instead of sails they used skins and leather worked thin, either because they had no flax and did not know its use, or, as Caesar supposes it, in case of necessity because also the sails were not suited for the tempests of that coast.

The Veneti rose against the Romans in the winter of n. c. 57, and induced many other neighbouring states to join them, even the Morini and Menapii. They also sent to Britain for help. Caesar, who was absent in Italy during the winter (n. c. 57—56), sent orders to build ships on the Loira, probably in the territory of the Andes, Turiones and Carnutes, where his legions were quartered, and the ships were floated down to the Ocean. He got his rowers from the Province. In the meantime he came himself into Gallia. He protected his rear against attack by sending Labienus to the country of the Treviri, to keep the Belgae quiet and to stop the Germans from crossing the Rhine. He sent P. Crassus with twelve cohorts and a large body of cavalry into Aquitania to prevent the Celtae from receiving any aid from these parts; and he kept the Unelli [Unelli], Carisbolites and Lecovii in check by sending Q. Titurius Sabinus into those parts with three legions. B. Brutus commanded Caesar's fleet and the Gallic ships furnished by the Pictones and Samontones, and other states that had been reduced to obedience.

Caesar began the campaign by besieging the Venetian towns that were situated on the extremities of the tongue of land; but as the Veneti had abundance of ships, they removed themselves by water from one town to another, when they could no longer resist the besieger. They did this during a great part of the summer, and Caesar could not prevent it, for he had not yet got together all his ships. After taking several of their towns he waited for the remainder of his fleet. The Veneti with about 220 of their best equipped ships came out of port to meet the Romans. The Roman ships could not do the Gallic ships any damage by driving the heads of their vessels against them, for the Gallic ships were too high at the prow and too strong; nor could the Romans have attacked them by raising wooden frameworks on their decks, for the Gallic ships were too high. The only advantage that the Roman ships had was in the oars, which the Gallic ships had not. They could only trust to their sails. The Romans at last fixed sharp hooks at the end of long poles, and laying hold of the enemy's rigging with them, and then putting, their own vessels in motion by the oars, they cut the ropes asunder, and the yards and sails falling down, the Venetian ships were useless. Everything now depended on courage, in which the Romans had the advantage; and the men were encouraged by the presence of Caesar and the army, which occupied all the hills and higher ground which commanded a view of the sea. The Roman ships got round the Venetian, two or three about each, for they had the advantage in number of vessels, and the men began to board the enemy. Some ships were taken and the rest tried to sail away, but a dead calm came on and they could not stir. A very few ships escaped to the land at nightfall. The battle lasted from the fourth hour in the morning to sunset. Thus was destroyed the first naval power that was formed on the coast of the Atlantic. The Veneti lost their ships, all their young men of fighting age, and most of their men of mature age and of rank. They surrendered unconditionally. Caesar put to death all the members of the Venetian state assembly, on the ground that they had violated the law of nations by intercepting Q. Venius Titurius Sabinus. T. Silius, who had been sent into their country in the name of Caesar to get supplies for the Roman troops who were quartered along the Loira (B. G. iii. 7, 8). The rest of the people were sold by auction; all, we must suppose, that Caesar could lay hold of. Thus the territory of the Veneti was nearly depopulated, and an active commercial people was swept from the earth. The Veneti never appear again as a powerful state. When Vercingetorix was rousing all Gallia to come against Caesar at Alesia (n. c. 52), the contingent of all the Armoric states, seven or eight in number, was only 6000 men (B. G. vii. 75).

Dion Cassius (xxxix. 40—43) has four chapters on the history of this Venetian war, which, as usual with him, he puts in confusion, by misunderstanding Caesar and making his own silly additions. [G. L.]

VENETI (Oberveria; Eth. Odixetos or d'Epovetos, Venetus), a province or region of Northern Italy, at the head of the Adriatic sea, extending from the foot of the Alps, where those mountains descend to the Adriatic, to the mouths of the Pulas, and westward as far as the river Atheis (Adjic), or the lake Remucus. But the boundaries of the district seem to have varied at different times, and there is some difficulty in determining them with accuracy. In early times, indeed, before the Roman conquest, we have no account of the exact line of demarcation between the Veneti and the Cenomani, who adjoined them on the W., though according to Livy, Verona was a city of the latter people (v. 85). After the Roman conquest, the whole of Venetia was at first included as a part of Cisalpine Gaul, and was not separated from it till the time of Augustus, who constituted his Tenth Region of Venetia and Istriar, but indulging within its limits not only Verona, but Brixia and Cremona also (Plin. iii. 18. s. 22, 19. s. 23), both of which were certainly cities of the Cenomani, and seem to have commonly continued to be so considered as belonging to Cisalpine Gaul. (Ital. iii. 1. § 31.) Some authors, however, extended the appellation of Venetia still further to the W., so as to include not only Brixia and Cremona, but Bergamo also, and regarded the Adda as the boundary
Great distances lie between Altinum, or, as it is generally termed, Belunum, and Belenum, were all of them properly Rhaetian towns (Plin. iii. 19. s. 23), though included in the Tenth Region of Augustus, and for that reason often considered as belonging to Venetia.

On the E. the limits of Venetia were more definite. The land of the Carni, who occupied the greater part of the modern Frioul, was generally considered as comprised within it, while the little river Formio (Rineno), a few miles S. of Tergeste, separated it from Istria. (Plin. iii. 18. s. 22.) Several authors, however, regard Tergeste as an Istrian city [Tergesti], and must therefore have placed the boundary either at the Triacus, or where the Alps come down so close to the sea, between that river and Tergeste, as to prevent the road being continued along the coast. There can be no doubt that this point forms the natural boundary of Venetia on the E., although the Formio continued under the Roman Empire to constitute its political limit.

The physical peculiarities of the region thus limited are very remarkable. The greater part of Venetia is, like the neighbouring tract of Cisalpine Gaul, a broad and level plain, extending, without interruption, to the very foot of the Alps, and traversed by numerous streams, which descend from those mountains with great rapidity and violence. These streams, swollen by the melting of the Alpine snows, or by the torrents of rain which descend upon the mountains, as soon as they reach the plain spread themselves over the country, forming broad beds of sand and pebbles, or inundating the fertile tract on each side of their banks. Continually stagnating more and more, as they flow through an almost perfectly level tract, they form, before reaching the sea, considerable sheets of water; and the action of the tides (which is much more perceptible at the head of the Adriatic than in any other part of that sea or of the Mediterranean) combining to check the outflow of their waters, causes the formation of extensive salt-water lagunes, communicating with the sea only through narrow gaps or openings in the long line of sandy barriers that bounds them. Such lagunes, which occupy a great extent of ground S. of the present mouth of the Po [Pa Emes], are continued on from its N. bank to the neighbourhood of Altinum; and from thence, with some interruptions, to the mouth of the Isone, at the head or utmost light of the Adriatic. So extensive were they in ancient times that there was an uninterrupted line of inland navigation by these lagunes, which were known as the Septem Maria, from Ravenna to Altinum, a distance of above 80 miles. (Itin. Ant. p. 126.) Great physical changes have naturally taken place in the course of ages in a country so constituted. On the one hand there is a constant tendency to the filling up of the lagunes with the silt and mud brought down by the rivers, which converts them first into marshes, and eventually into firm land. On the other hand the rivers, which have for ages been confined within artificial banks, keep pushing on their mouths into the sea, and thus creating backwaters which give rise to fresh lagunes. At the same time, the rivers thus confined, from time to time break through their artificial barriers and force new channels for themselves; or it is found necessary to carry them off by new and artificial outlets. Thus all the principal streams of Venetia, from the Adige to the Piave, are at the present day carried to the sea by artificial canals; and it is doubtful whether any of them have now the same outlet as in ancient times.

In the eastern portion of Venetia, from the Piave to the foot of the Alps near Aquileia, these physical characters are less marked. The coast is indeed bordered by a belt of marshes and lagunes, but of no great extent; and within this, the rivers that descend from the Alps have been for the most part left to wander unrestrained through the plain, and have in consequence formed for themselves broad beds of stone and shingle, sometimes of surprising extent, through which the streams in their ordinary condition roll their diminished waters, the tripping volume of which contrasts strangely with the breadth and extent of their deposits. Such is the character especially of the Tagliamento, the largest river of this part of Italy, as well as of the Torre, the Natisone, and other minor streams. The irregularity of their channels, resulting from this state of things, is sufficiently shown by the fact that the rivers Turrus and Natiso, which formerly flowed under the walls of Aquileia, have now changed their course, and join the Isone at a distance of more than 4 miles from that city. [Aquileia.]

Of the history of Venetia previous to the Roman conquest we know almost nothing. It was occupied at that time by two principal nations, the Veneti from whom it derived its name, in the W., and the Carni in the E.; the former extending from the Alps to the Plavis, or perhaps to the Tibavemptus, and the latter for the space of Istria. But the origin and affinities of the Veneti themselves are extremely obscure. Ancient writers represent them as a very ancient people (Polyb. ii. 17), but at the same time are generally agreed that they were not the original inhabitants of the tract that they occupied. This was reported by tradition to have been held in the earliest ages by the Euganeans (Liv. i. 1), a people whom we still find lingering in the valleys and unfurrows of the Alps within the historical period, but of whose origin and affinities we know absolutely nothing. [Euganei.] In regard to the Veneti themselves it cannot fail to be remarked that we meet with three tribes or nations of this name in other parts of the world, besides those of Italy, viz., the Gaulish tribe of the Veneti on the coast of Armorica; the Veneti or Veneti of Tacitus, a Sarmatian or Slavonian tribe on the shores of the Baltic; and the Heneti or Eneti, who are mentioned as existing in Papplagonia in the time of Homer. (Hius. ii. 82.) The name of this last people does not subsequently appear in history, and we are therefore wholly at a loss as to their ethnical affinities, but it is not improbable that it was the resemblance between their name and that of the Italian Veneti (according to the Greek form of the latter) that gave rise to the strange story of Antenor having migrated to Venetia after
VENETIA.

the siege of Troy, and there founded the city of Patavium. (Liv. i. 1; Virg. Aen. i. 242; Serv. ad loc.) This legend, so generally adopted by the Romans and later Greeks, seems to have been current as early as the time of Sophocles. (Strab. xiii. p. 608.) Some writers, however, omitted all mention of Antenor, and merely represented the tribe of the Veneti, after having lost their leader Pylaemenes in the Trojan War, as wandering through Thrace to the head of the Adriatic, where they ultimately established themselves. (Id. xii. p. 543; Scymn. Ch. 389.) Whether there be any foundation for this story or not, it is evident that it throws no light upon the national affinities of the Italian Veneti. The other two tribes of the same name would seem to lead our conjectures in two different directions. From the occurrence of a tribe of Veneti among the Transalpine Gauls, just as we find among that people a tribe of Cenomani and of Semones, corresponding to the two tribes of that name on the Italian side of the Alps, it would seem a very natural inference that the Veneti also were a Gaulish race, who had migrated from beyond the Alps. To this must be opposed the fact that, while a distinct historical tradition of the successive migrations of the Gaulish tribes in the N. of Italy has been preserved and transmitted to us (Liv. v. 34. 35), no trace is recorded of a similar migration of the Veneti; but, on the contrary, that people is uniformly distinguished from the Gauls: Livy expressly speaks of them as occupying the same tract which they did in his time not only before the first Gaulish migration, but before the plains of Northern Italy were occupied by the Etruscans (B. 33); and Polybius emphatically, though briefly, describes them as a different people from the Gauls their neighbours, and using a different language, though resembling them much in their manners and habits (ii. 17). Strabo also speaks of them as a distinct people from the Gauls, though he tells us that one account of their origin derived them from the Gaulish people of the same name that dwelt on the shores of the ocean. (Strab. iv. p. 195, v. p. 212.) But there is certainly no ground for rejecting the distinct statement of Polybius, and we may safely acquiesce in the conclusion that they were not of Celtic or Gaulish origin.

On the other hand the existence of a tribe or people on the southern shores of the Baltic, who were known to the Romans (through their German neighbours) as Veneti or Veneti, a name evidently identical with that of the Wenden or Wends, by which the Slavonian race in general is still known to the Germans, would lead us to regard the Italian Veneti also as probably a Slavonian tribe: and this seems on the whole the most plausible hypothesis. There is nothing improbable in the circumstance that the Slavonians may at an early period have extended their migrations as far as the head of the Adriatic, and left there a detached branch or offshoot of their main stock. The commercial intercourse of the Veneti with the shores of the Baltic, a traffic which we find already established at an very early period, may be the most easily explained as the cause if tolayers of a commercial intercourse by tribes of the same origin. Herodotus indeed represents the Veneti as an Illyrian tribe (i. 196, v. 9); but it seems probable that the name of Illyrians was applied in a vague sense to all the mountaineers that occupied the eastern coasts of the Adriatic, and some of these may in ancient times have been of Slavonian origin, though the true Illyrians (the ancestors of the present Albanians) were undoubtedly a distinct people.

Of the history of the Veneti as an independent people we know almost nothing; but what little we do learn indicates a marked difference between them and their neighbours the Gauls on one side, and the Liburnians and Istrians on the other. They appear to have been a commercial, rather than a warlike, people: and from the very earliest dawn of history carried on a trade in amber, which was brought overland from the shores of the Baltic, and exchanged by them with Phoenician and Greek merchants. Hence arose the fables which ascribed the production of that substance to the land of the Veneti, and ultimately led to the identification of the Eridanus of Northern Europe with the Pads of Northern Italy. (ERIDANUS.) Herodotus mentions a peculiar custom as existing among the Veneti in his day, that they sold their daughters by auction to the highest bidder, as a mode of disposing of them in marriage (g. 196). We learn also that they habitually wore black garments, a taste which may be said to be retained by the Venetians down to the present day, but was connected by the poets and mythographers with the fables concerning the fall of Phaethon. (Scymn. Ch. 396.) Another circumstance for which they were distinguished was the excellence of their horses, and the care they bestowed on breeding and training them, a fact which was appealed to by many as a proof of their descent from Antenor and "the horse-training Trojans." (Strab. v. pp. 212, 215.) It is clear that they were a people considerably more advanced in civilization than either the Gauls or the Ligurians, and the account given by Livy (x. 2) of the landing of Ccemnus in the territory of Pata- vium (n. c. 302) proves that at that period Patavium at least was a powerful and well organized city. Livy indeed expressly contrasts the Veneti with the Illyrians, Liburnians, and Istrians, "gentes ferae et magna ex parte hactenus maritimis infames," (B.) On this occasion we are told that the citizens of Patavium were kept in continual alarm on account of their Gaulish neighbours, with whom they seem to have been generally on unfriendly terms. Thus at a still earlier period we are informed by Polybius that the retreat of the Senonian Gauls, who had taken the city of Rome, was caused by an irruption of the Venetians into the Gaulish territory (ii. 18). It was doubtless this state of hostility that induced them, as soon as the Roman arms began to make themselves felt in Northern Italy, to conclude an alliance with Rome against the Gauls (n. c. 215), to which they appear to have subsequently adhered with unshaken fidelity. (Polyb. ii. 23, 24.) Hence while we afterwards find the Romans gradually carrying their arms beyond the Veneti, and engaged in frequent hostilities with the Carni and Istrians on the extreme verge of Italy, no trace is found of any collision with the Venetians. Nor have we any account of the steps by which the latter passed from the condition of independent allies to that of subjects of the Roman Republic. But it is probable that the process was a gradual one, and grew out of the mere necessity of the case, when the Romans had conquered Istriis and the land of the Carni, in which last they had established, in n. c. 181, the powerful colony of Aquileia. It is certain that before the close of the Republic the Veneti had ceased to have any independent existence, and were comprised, like the Gaulish tribes, in the province of Gallia Cisalpina, which was placed under the authority of Caesar, b. c.
59. The period at which the Veneti acquired the Roman franchise is uncertain; we are only left to infer that they obtained it at the same time as the Transpadane Gauls, in B. c. 49. (Dion Cass. xii. 56.)

Under the Roman Empire, Venetia (as already mentioned) was included, together with Istri a, in the Tenth Region of Augustus. The land of the Carni (Carnorum regio, Plin. iii. 18. s. 22) was at this time considered, for administrative purposes, as a part of Venetia; though it is still described as distinct by Poulemy (iii. 1. §§ 25, 26); and there is no doubt that the two were originally separate. But as the population of both districts became thoroughly Romanised, all traces of this distinction were lost, and the names of Venetia and Istri a alone remained in use. These two continued to form one province, and we meet with mention, both in inscriptions and in the Notitia, of a "Corrector Venetiae et Histrisei," down to the close of the Roman Empire. (Notit. Dign. ii. p. 63; Bucking., ed loc. p. 441; Orell. Inscr. 1050. 3191.) The capital of the united provinces was Aquileia, which rose under the Roman Empire to be one of the most flourishing cities of Italy. Its importance was derived, not from its wealth and commercial prosperity only, but from its situation at the very entrance of Italy, on the highroad which became the great means of communication between the Eastern and Western Empires. The same circumstance led to this part of Venetia becoming the scene of repeated contests for power between rival emperors. Thus it was before Aquileia that the Emperor Maximin perished in A.D. 238; it was on the banks of the river Aba (Aesse) that the younger Constantine was defeated and slain, in A.D. 340; again, in 388, the contest between Maximus and Theodosius the Great was decided in the same neighbourhood; and in 425, that between the usurper Johannes and the generals of Theodosius II. [Aquileia] Finally, in A.D. 489, it was on the river Scutus (Istria) that Odoacer was defeated by the Gothic king Theodoric. (Hist. Miscell. xvi. p. 561.)

It seems certain that Venetia had become under the Roman Empire a very opulent and flourishing province; besides Aquileia, Patavium and Verona were provincial cities of the first class; and many other towns such as Concordia, Altinum, Forum Julii, &c., whose names are little known in history, were nevertheless opulent and considerable municipal towns. But it suffered with peculiar severity from the invasions of the barbarians before the close of the Empire. The passage across the Julian Alps from the valley of the Sore to the plains of Aquileia, which presents few natural difficulties, became the highway by which all the barbarian nations in succession descended into the plains of Italy; and hence it was Venetia that felt the first brunt of their fury. This was especially the case with the invasion of Attila in A.D. 452, who, having at length reduced Aquileia after a long siege, raved it to the ground; and then, advancing with fearful rapidity, devastated in like manner the cities of Concordia, Altinum, Patavium, Verona, Brixia, and Bergomum, not one of which was able to oppose any effectual resistance. (Hist. Miscell. xv. p. 549.) The expression of the chronicler that he levelled these cities with the ground is probably exaggerated; but there can be no doubt that they suffered a blow from which three of them at least, Concordia, Altinum, and Aquileia, never recovered. In the midst of this devastation many fugitives from the ruined cities took refuge in the extensive lagoons that bordered the coasts of Venetia, and established themselves on some small islands in the midst of the waters, which had previously been inhabited only by fishermen. It was thus that the refugees from Aquileia gave origin to the episcopal city of Grado, while those from Pata- vium settled on a spot then known as Rivus Altus, in the midst of the lagoons formed by the Medeaus, where the new colony gradually grew up into a wealthy city and a powerful republic, which retained the ancient name of the province in that of Venetia or Venice. "The freeedom (observes Gibbon) is not attested by any contemporary evidence; but the fact is proved by the event, and the circumstances might be preserved by tradition." (Decl. and Fall, ch. 35, note 55.) A curious letter of Cassiodorus (Far. xii. 24), written in A.D. 523, describes the islands of Venetia as inhabited by a population whose sole occupation and resource was derived from their fisheries: and it is remarkable, that he already appears to confine the appellation of Venetia to these islands, an usage which had certainly become prevalent in the time of Paulinus Diaconus, who says, in speaking of the ancient Venetia, "Venitiana enim non solum in paucis insulis, quis nane Venetiae dicimus, constat" (ii. 14). It is clear, therefore, that the transfer the name of the province to the island city, which has continued ever since, was established as early as the eighth century.

The original land of the Veneti, as already observed, was almost entirely a plain. The underfalls of the Alps, and the hills that skirt the foot of that range, were for the most part inhabited by tribes of mountaineers, who were of the same race with the Rhaetians and Euganeans, with whom, so far as we can discover, the Veneti themselves had nothing in common. But a portion of this district was comprised within the limits of the province of Venetia, as this came to be marked out under Augustus; so that the boundary line between Venetia and Rhaetia was carried apparently from the head of the Lake Benuca (Lago di Garda) across the valley of the Athe-is (Adige) to the ridge which separates the valley of the Piavi from that of the Medeaus, so as to exclude the Val Sugana, while it included the whole valley of the Pave (Plavis), with the towns of Peltia and Bellum, both of which are expressly ascribed by Pliny to the Tenth Region. Thence the boundary seems to have followed the ridge which divides the waters that fall into the Adriatic from the valleys of the Drave and Gail, both of which streams flow eastward towards the Danube, and afterwards sweep round in a semicircle, till it nearly touched the Adriatic near Trieste (Tergeste).

Within these limits, besides the underfalls of the Alps that are thrust forward towards the plain, there were comprised two distinct groups of hills, now known as the Cadin Euganei and Monti Berici, both of them wholly isolated from the neighbouring ranges of the Alps, and, in a geological sense, unconnected with them, being both clearly of volcanic origin. The name of the Euganean hills, applied to the more southerly of the two groups, which approaches within a few miles of Patavium (Padova), is evidently a relic of the period when that people possessed the greater part of this country, and is doubtless derived from a very early time. The appellation is not noticed by any ancient geographer, but the name of Euganeus Celleris is given by Lucan
VENETIA.

The rivers of Venetia are numerous, but, for the reasons already mentioned, not always easy to identify. Much the largest and most important is the Athesis (Adige), which at one period formed the boundary of the province, and which, emerging from the Alps, near Verona, sweeps round in a great curve till it pours its waters into the Adriatic only a few miles N. of the mouth of the Padus. The next river of any magnitude is the Mediacus or Brenta, which flows under the walls of Padua, and receives as a tributary the Bacchiglione, apparently the Mediacus Minor of Pliny. After this (proceeding eastwards) comes the Silis (Sole), a small stream flowing by the town of Altinum; next, the Flavis (Fiver), a much more important river, which rises in the Alps above Belluno (Bellana), flows past that city and Feltria (Feltre), and enters the sea a few miles E. of Altinum; then the Lueni (Livenza), and the Romatinius (Leaven), a small river flowing under the walls of Concordia. Next to this comes the Tilavemptus (Tagliamento), the most important of the rivers of the E. portion of Venetia, having its sources in the high ranges of the Alps above Julianum, whence it traverses the whole plain of the Carni, nearly in a direct line from N. to S. Beyond this come several minor streams, which it is not easy to identify, with certainty; such are the Varanus and Anassus of Pliny, probably the Stella and the torrent of Cormor; and the Als, which still bears the name of Ausus. E. of these, again, come three considerable streams, the Turus, Natiso, and Sontius, which still preserve their ancient names, as the Torre, Natitone, and Is zone, but have undergone considerable changes in the lower part of their course; the Natiso having formerly flowed under the walls of Aquileia, about 4 miles W. of its present channel, while the Is zone, which now unites with it, originally followed an independent channel to the sea, near Monsalvone. The Is zone receives a considerable tributary from the E., the Wippach or Vipna, which descends from the elevated table-land of the Karst, and was known in ancient times as the Fluvius Frigidus. It was by the valley of this river that the great highroad from the banks of the Danube, after crossing the dreary highlands of Carniola, descended to Aquileia and the plains of Venetia. On the extreme confines of the province the little river Tinivius must be mentioned, on account of its classical celebrity, though of no geographical importance; and the Formio (Ritiano), a few miles S. of Tergeste, which, from the time of Pliny, constituted the limit between Veneti and Istria. (Plin. iii. 18. s. 22.)

The cities and towns of Veneti may now be enumerated in geographical order. Farthest to the W., and situated on the Atheis, was the important city of Verona. Considerably to the E. of this was Vicentia, and beyond that again, Patavium. S. of Vicentia, at the southern extremity of the Euganean hills, was Ateste (Este). On the borders of the lakes, at their N. extremity, was Altinum, and 50 miles farther to the E., Concordia. Inland from these lay Oppitergium and Tarvisium, both of them considerable towns; and on the slopes of the hills forming the lowest underfalls of the Alps, the smaller towns of Acelum (Asoila) and Veneta (Venici), the name of which is found in Agathias and Paulus Diaconus (Agath. Hist. Goth. ii. 8: P. Dic. ii. 13), and was in all probability a Roman town, though not mentioned by any earlier writer. Still farther to the E. in the valley of the Plavic, were Feltria and Belunam. E. of the Tilavemptus, and therefore included in the territory of the Carni, were Aquileia, near the sea-coast; Forum Julii, N. of the preceding; Vedinum (Udine), farther to the W.; and Julianum Carnicum, in the upper valley of the Tilavemptus, and in the midst of the Alps. Tergeste, on the E. side of the bay to which it gave its name, was the last city of Venetia, and was indeed by many writers considered as belonging to Istria. (Tergeste.)

Besides these, there were in the land of the Carni several smaller towns, the names of which are mentioned by Pliny (iii. 19. s. 23.), or are found for the first time in Paulus Diaconus and the Geographer of Ravenna, but were in all probability Roman towns, which had grown up under the Empire. Of these, Flaminia (Pium) is probably Flappa, in the valley of the Tagliamento; Oesopum (P. Dic. iv. 38) is still called Oesopo, and Glemena, Gemonia, higher up in the same valley; and Artemia, Argetio, a few miles S.E. of the preceding. Cormones (ib.) is still called Cormeno, a small town between Cividale and Grodecus; and Punicum (Plin. Ptol.) is Duino, near the sources of the Timagus.

The other obscure names mentioned by Pliny (L. C.), and of which he himself says, "quos scrupulose dicere non attineat," were apparently for the most part mountain tribes or communities, and cannot be determined with any approach to certainty. Veneti was traversed by a great line of high-road, which proceeded from Aquileia to Verona, and thence to Medinana, and formed the great highway of communication from the latter city to the Danube and the provinces of the Eastern Empire. It passed through Conicum, Altinum, Patavium, Vicentia, and Verona. From Patavium a branch struck off through Ateste and Anemium (probably Legnano on the Adige) to join the Aemilian Way at Mutina. A still more direct line of communication was established from Altinum to Ravenna by water, through the lagunes and artificial canals which communicated from one to another of these sheets of water. This line of route (it such it can be called) is briefly indicated by the Antoline Itinerary (*ante [a Ravenna] navigatorem Septem Maria Altinum usque," p. 126); while the stations are given in detail by the Tabula; but from the fluctuations that the lagunes have undergone, few of them can be identified with any certainty. [E. H. B.]

VENETIA, in Gaul. [VENET.]

VENETICA INSULAE, in Gallia, mentioned by Pliny (iv. 19), are the numerous small islands along the coast of Veneti, or the modern department of Morbihan. The largest is Belle-ile. The others are Houat, Heted, Groin, and some others. Perhaps the peninsula of Quiberon may be included. [VENETI; VINDELA.]

VENETIACUS. [BRIGANTINUS LATUS.]

VENIATVA, a place in Galicia in Hispania Tarraconensis, on the road from Bracara to Asturica. (Itin. Ant. p. 423.) Variously identified with Vinhaes, Vianzana, and Requeija. [T. H. D.]

VENICONES (OCTERIOVASH, Ptol. ii. 3. § 14), a
people on the E. coast of Britannia Barba, S. of the estuary of the T纭枝 (Murray Frith), in
Forfesorshire and Abersidea.
T. H. D.

VENNESSES, a tribe of the Cantabri in His-
pinia Tarracronensis. (Plin. iii. 3. s. 4.) 4. [T. H. D.]
VENNICNI (Observarum, Ptol. ii. 2. § 3), a
people in the SW. part of Hibernia, between the
promontories Boreum and Vennicionum. [T. H. D.
VENNICIUM PRON. (Observarum Speci.
Ptol. ii. 2. § 2), the most northerly headland of
Hibernia, usually identified with Malin Head; but
Camden (p. 1411) takes it to have been Rome's
Head.
T. H. D.

VENNOSES (Obserwationes) or CPhillomria, a
tribe of Bactia (Ptol. ii. 12. § 3), or according to
Strabo (iv. pp. 204. 206), of Vindelicia. They are
described as the wildest among the Bactian tribes, and
are no doubt the same as the Venonnetes who, ac-
companying to Pliny (iii. 24), were mentioned among
the nations of the Alpine Trophy. They seem to have
inhabited the district about the sources of the Athesis, which
bore the name of Venonesgovre or Finesgove as late
as the eleventh century. (Von Hombury, Gesch. Tirols. i. 1. p. 33.)
[1. s.

VENNOAE, a town in Britannia Romana ap-
parently belonging to the Corti, at which the road
from London to the NW. part of Britain separated,
one branch proceeding towards Deva, the other tak-
ing a NE. direction towards Lindum and Eboracum.
There was also another branch to the SW. towards
Vesta Silurum, so that the two main roads which
traversed the whole island must have crossed here.
(Titi. Ant. pp. 470. 477. 479.) Variously iden-
tified with Higbrooch, Claybrook, and Wiston
Parva. [T. H. D]

VENOSTES, probably a branch of the Venon-
eses, a Bactian tribe, were mentioned in the Alpine
Trophy, of which the inscription is quoted by Pliny
(iii. 24). In the middle ages their district bore the
name of Venusta Vallis. (Geiss. Die Deutschen,
p. 237.)
[1. s.

VENTA, the name of several towns in Britannia
Romana. 1. Venta Belgarum (Obserw. Ptol. ii. 3.
§ 28), in the SW. of Britain, on the road from Lon-
dinium to Calleva and Isca Dumnoniorum. (Itin.
Ant. p. 478. &c. Geogr. Ravi. v. 31.) Now Win-
chester, where there are some Roman remains.
(Camden, p. 138.)
2. Venta Silurum on the W. coast of Britannia
Romana, on the road from Londinium to Isca Sil-
urum, and near the estuary of the Silurian. (Itin.
Ant. p. 485.) Now Cor Wint in Montgomeryashire,
where there are traces of the ancient walls, and where
Roman antiquities are (or were) occasionally found.
(Camden, p. 718.)
3. Venta Icenorum, a town of the Iceni, on the
E. coast of Britannia Romana (Ptol. ii. 3. § 21),
to which there was a road from London. (Titi. Ant.
p. 479.) Most probably Caistor, on the river Wol-
sam, a little S. of Norwich, which probably rose
from the ruins of Caistor. Here are traces of Roman
remains. (Camden, p. 460.)
[T. H. D.

VENIA (Observarum), in Gallia Narbonensis,
a town of the Allobroges, mentioned only by Dio
Cassius (xxvii. 47) in his history of the war
between the Allobroges and C. Pompilia the gov-
ernor of Gallia Provinsiae (n. c. 62). Manlius
Lentinius, a legatus of Pompilinus, came upon this
town, but was driven from it. The place appears
to be near the Isara (Isere) from Dion's narrative,
and D'Aville following De Valois supposes it to be

Veni, between Moirene and S. Marcellin, at some
distance from the bank of the Isere. As Venia
is unknown otherwise, it may be a blunder of Don,
and the place may be Vienna.
[6. l.

VENITISPONTE, a town in Hispania Basta-
ica (Hirt. B. Hist. 27), which appears from still extant
inscriptions to have been not far from Puente de
Don Gonzalo. (Ubert. ii. p. 368.) It appears
on coins under the name of Ventipo. (Florez, Med.
ii. p. 617; Eckhel, i. p. 31; Monnet, i. p. 27; Seutini, p. 92.)

Venusia (Observationes: Obser. Venusinus:
Venusia), a city of Apulia, situated on the Appian Way,
about 10 miles S. of the river Aufidus. It nearly
adjointed the frontiers of Lucania, so that, according
to Homer, himself a native of the place, it was
doubtful whether it belonged properly to Lucania or
to Apulia. and the territory of the city, as assigned
to the Roman colony, included a portion of that of both
nations. (Hor. Sat. ii. 1. 34. 35.) This statement of
Horse leaves it doubtful to what people Venusia
originally belonged, though it is more probable that
it was an Apulian city, and that it received only an
accension of territory from Lucania. Later writers,
indeed, distinctly assigned it to Apulia. (Ptol.
iii. 11. s. 16; Ptol. iii. 1. § 73; Lib. Colom. p. 210.)
But no mention of it is found in history till the
occasion of its capture by the Roman consul L. Pos-
turnius in n. c. 262 (Duporta, Enc. Tucia, p. 2353),
when we are told that it was a populous and impor-
tant town. A large part of the inhabitants was put
under the sword, and, shortly afterwards, a Roman colony
was established there by order of the senate.
(Dios.
l. c. ; Vell. i. 14; Hor. L. c.) The colonists
are said to have been 20,000 in number, which must
be either a mistake or an exaggeration; but there
seems no doubt that the new colony became a popu-
rous and flourishing place, and was able to render
important services to the Roman state during the
Second Punic War. It was at Venusia that the
consul Terentius Varro took refuge with 700 horse
after the great defeat at Cannae (n. c. 216), and
where he was gradually able to gather around him a
force of about 4000 horse and foot. The Venusians
vied with one another in showing them the utmost
attention, and furnished them with clothing, arms,
and other necessaries. (Liv. xxii. 49. 54. Polybi.
n. 116. 117.) Again, at a later period of the war,
when so many of the Roman colonies proved unable
to satisfy the repeated demands of the senate, the
Venusians were among those who continued stead-
fast, and declared themselves ready to furnish the
Troops and supplies required of them. (Liv. xxvii.
10.) It was after this, through several successive
campaigns, the head-quarters of the Roman com-
mmanders in Apulia. (It. 20. 41; Appian, Antiq. 50.)
But the colony suffered severely from all
these exertions; and, in n. c. 200, after the close of
the war, it was found necessary to recruit its ex-

COIN OF VENITISPONTE OR VENTICO.
VENUSIA.

haunted strength with a fresh body of colonists. (Liv. xxxi. 49.) From this time Venusia seems to have always continued to be a flourishing town and one of the most considerable places in this part of Italy. It bore an important part in the Social War, having early joined in the outbreak, and became one of the principal strongholds of the allies in the south of Italy. (Appian, B. C. i. 39, 42.) In the second year of the war its territory was ravaged by the Roman praetor Coconius, but we do not learn that the city itself fell into his hands. (Ib. 52.) At all events it did not suffer severely, as it is afterwards mentioned by Appian as one of the most flourishing cities of Italy (Ib. iv. 3); and Strabo also notices it as one of the few cities in this region which retained their consideration in his time (v. p. 250). It received a colony of veterans under the Triumvirate (Appian, B. C. iv. 3; Zoncop, de Colon. p. 332), and seems to have retained the rank of a Colonia under the Empire, as we find it bearing that designation both in Pliny and in inscriptions. (Plin. iii. 11. 16; Orell. Inscr. 867; Mommsen, Inscr. R. N. 735, 745.) Its position on the Appian Way doubtless contributed to its prosperity, and it is mentioned more than once by Cicero as a customary halting-place in proceeding from Rome to Brundusium. (Cic. ad Att. v. 5, xvi. 5.) It appears indeed that the great orator had himself a villa there, as one of his letters is dated "de Vennisio" (ad Fam. xiv. 20). But the chief interest of Venusia is undoubtedly derived from its having been the birthplace of Horace, who was born there in the consularship of L. Manlius Torquatus and L. Aurelius Cotta, n. c. 65. (Hor. Carm. iii. 21. 1.) The works of the poet abound in allusions to the neighbourhood of his native city, the fountain of Bandusia, the forests of Mount Vultur, &c. But it does not appear that he ever resided there in the latter years of his life, having lost his paternal estate, which was confiscated in the civil war. (Ibid. Ep. ii. 2.)

We hear nothing of Venusia under the Roman Empire, but it is certain from the Liber Colonarum, which mentions it among the Civitates Apulliae, and from the Itineraries, that it continued to exist as a city, and apparently one of the most considerable in this part of Italy. (Ptol. iii. 1. § 73; Lib. Colon. pp. 210, 261; Itin. Ant. pp. 104, 113, 121; Tab. Peut.) This is further confirmed by inscriptions, in one of which it is called "splendida civitas Venu- sinorum." (Mommsen, I. R. N. 706.) It retained the same consideration throughout the middle ages, and is still an episcopal city with about 600 inhabitants. Its antiquities have been illustrated with a profusion of erudition by Italian writers, but it has few ancient remains of much interest; though fragments of ancient edifices, mosaic pavements, &c. have been found on the site, as well as numerous inscriptions. These last have been collected and published by Mons. Lupoli, in his Marmor Venu-sina (added as an appendix to the Iter Venusinum, 4to- Neapoli, 1797), and more recently by Mommsen, in his Inscriptiones Regni Neapolitani (pp. 39—48).

Concerning the antiquities of Venusia in general, see the works of Lupoli above quoted, and that of Cimaglia (Antiquitates Venusinum, 4to— Neapoli, 1757.)

VEFITENIUM or VIPITENIUM, a place in the district occupied by the Venostes in Raetia, between Veldidena and Tridentum. (It. Ant. pp. 275, 280; Tab. Peut.) Its modern representative is, in all probability, the town of Surtzing on the Innach, at the foot of the Brenner. (L. S.)

VERAGRI (Oberberg). The Veragri are placed by Caesar (B. G. iii. 1, 6) in the Talais of Switzerland between the Nautuates and the Seduni, [NANTUATES; NEDUM]; their town was Oktodurus (Margravina), whence the Veragi are called Oktoduruses by Pliny [OCTODURUS]. Dion Cassius (xxxi. 5), using Caesar as he generally used him, says that the Veragi extended from the territory of the Allobroges and the Lemani lake to the Alps; which is not true. Strabo (iv. p. 204) mentions the Veragi, as he calls them, between the Caturiges and the Nautuates; and Pliny (iii. 20) between the Seduni and the Salassii; the Salassi are on the Italian side of the Alps in the Val d'Aosta. Livy (xxxi. 39) places the Veragi among the Alps and on the track of the passage of the Venusia Alps, on the Great St. Bernard, which is correct. He says that the pass was occupied by half German tribes. (G.L.)

VERBANUS LACUS (O Gargareo Hwaw; Lago Maggiore), one of the principal lakes of Northern Italy, formed by the river Ticinus, where it first issues from the valleys of the Alps. (Plin. iii. 19, s. 24.) It is the largest of the three great lakes of Northern Italy, whence its modern name of Lago Maggiore; though Virgil appears to have considered the Larian as the largest, as he calls it, "Te, Lari maxima," and singularly enough does not mention the Verbanus at all. (Geog. ii. 159.) Strabo, by a strange mistake, describes the river Addua as flowing from the Lake Verbanus, and the Ticinus from the Larians (iv. p. 209); this may, perhaps, be an error of the copyists, but is more probably an accidental blunder of the author. He gives the length of the lake at 400 stadia, or 40 geog. miles, which is somewhat below the truth, the actual length being 46 geog. miles: its breadth does not exceed 4 or 5 miles, except in one part, where it expands to a width of from 8 to 10 miles. [E. H. B.]

VERBIIAE or VERBICES (Oberelden or Oert- fuen, Ptol. iv. 1. § 10), a people of Maurandia Tingitana. (T. H. D.)

VERBIGENUS PAGUS. (Helythis, Vol. I. P. 1041.)

VERBINUM, in Gallia, is placed by the Ins. on a road from Bagacum (Baraui) to Durocortorum (Reims). Daroum is between Bagacum and Verbinum [DURONUM]. All the several distances between Bagacum and Durocortorum do not agree in the Antonine Itin. and the Table. The sum total of these distances in the Table is 53 M. P., and in the Itin., though it makes the several distances amount to 63 M. P., still gives the sum total at 53 M. P. But these must be Gallic leagues, as D'Anville shows. He supposes Verbinum to be Verinae, which in fact is the same name as Verbinum. The table writes it Vironum. Verinae is in the department of Aisne, about 20 miles N.E. of Laon. [G. L.]

VERCELLAE (Oberelh, Ptol. iii. 1. § 36;
VEREASECA.

Oepeia, Strab. v. p. 218; Verelia, Plut. Mar. 25: Vercelli), the chief city of the Libici, in Gallia Cisalpina. It lay on the W. bank of the Salentus (Sessio); but perhaps the ancient town should be sought at Borgo Vercelli, about 2 miles from the modern city. In the time of Strabo it was an unfortified village (L. c.), but subsequently became a strong and not unimportant Roman municipium. (T.Jat. ii. 70; cf. De clar. Orator. 8; also Orell. Inscr. 3044, 3945.) Here the highroad from Ticinum to Augusta Praetoria was crossed by a road running westwards from Mediolanum. (Itin. Ant. pp. 282, 344, 347, 350.) At the beginning of the 5th century it was rapidly falling to decay. (Hieron. Epist. 17.) There were some gold mines at a place called Icetinum, or Vicus Icetinnorum, in the district of Vercellae (Strab. L. c.; Plin. xxxiii. iv. s. 21), which must have been of considerable importance, as the last cited authority mentions a law forbidding that more than 3000 men should be employed in them. The true position of these mines has, however, been the subject of some dispute. The question is fully discussed by Durandi in his treatise Dell' antica Codicilone del Vercellese. The city was distinguished for its worship of Apollo, where it is called Apollinone Vercellae by Martial (x. 12. 1); and there was in its vicinity a grove, and perhaps a temple sacred to that deity (Stat. Silv. i. 4. 59), which is probably to be sought at a small place called Pollone, at the foot of the Alps. (Cf. Cic. Fam. xi. 19; Plin. iii. 17. s. 21; Bellini, Antichità di Vercelli.)

VEREASECA, a harbour belonging to the town of Argemuseum in the territory of the Cantabri, in Hispания Tarraconensis. (Plin. iv. 20. s. 34.) Probably Porto de S. Martín. (Cf. Floret, Esp. Sagra. xxiv. p. 44.)

VERELA. [Velia.]

VERETUM (Oepeia, Strab. Plut.; Eth. Vericini: Sta Maria di Vereto), a town of Calabria, in the district or territory of the Salentines, and within a few miles of the Iapygian promontory. Strabo tells us that it was formerly called Barius, and describes it as if it were a seaport town; but both Pliny and Ptolemy rank it among the inland towns of the Salentines; and there seems no doubt that its site is marked by the old church of Sta Maria di Vereto, the name of which is found on old maps, between the villages of Salce and Longiano, about 6 miles from the Capo di Lenora, and 10 from Ugoeto, the correct distance given in the Tabula from Uxentum to Veretum. (Strab. vi. p. 284; Plin. iii. ii. 16; Plut. iii. 1. § 76; Tab. Peut.) Gabate, de Sit. Iapyg. p. 99; Hubsten, od Clavier, p. 283; Romanelli, vol. ii. p. 35.) The “ager Vetricinus” is mentioned also in the Liber Coloniarum (p. 262) among the “vivitates Calabriae,” and doubtless comprised the whole district as far as the Iapygian promontory.

VERGAPEA. [Brettia.]

VERGELLIUS, a rivulet or torrent, which crossed the field of battle of Cannae. It is not indeed mentioned by either Livy or Polybius in their circumstantial accounts of the battle, but it is noticed by both Florus and Valerius Maximus in connection with a story that seems to have been current among the Romans, that its course was choked up by the dead bodies of the slain, to such an extent that the Carthaginian troops crossed over them as a bridge. (Flor. ii. 6. § 18; Val. Max. iv. 2, Ext. § 2.) The same incident is alluded to by other writers, but without mentioning the name of the stream. (Sili. Ital. viii. 668; Lucian, Dial. Mort. 12. § 2.) The stream meant is probably a rivulet which falls into the Aufidus on its right bank between Canae and Canusium, and is wholly dry in summer. [E. H. B.]

VERGENTUM, a place in Hispания Baetica, with the surname of Julian Genius. (Plin. iii. 1. s. 3.) Now Gelema or Ginza. [T. H. D.]

VERGELIA (Oepeia, Plut. ii. 6. § 61: Eth. Vergilienes, Plin. iii. iii. 3. s. 4.), a town of the Boste- tini, in Hispания Tarraconensis. It has been identified by some writers with Martica. (D'Anville, Geogr. Anc. i. p. 31.) Montelle, Esp. Anc. p. 186.)

VERGILUM, a fortress in Hispания Tarraconensis (Liv. xxxiv. 21.) Reichard, but perhaps without adequate grounds, identifies it with the present Berga. [T. H. D.]

VERGOANUM. [Lerina.]

VERGUINI, the name of an Alpine people mentioned in the Tragoy of the Alps (Plin. iii. 20.) They are supposed to be represented by the name Verganna or Vergon, between Scaces [Santina] and Glandères, and about half-way between these two places. [G. L.]

VERISA (Bépora), a town in the interior of Pontus, on the road from Sebastian to Scasopolis. (It. Ant. pp. 205, 214; Basil. Magn. Epist. ult.) Its site is yet uncertain, some identifying it with Cora, others with Bainus. [L. S.]

VEILUCIO, a place in Britannia Romana, on the road from Isca Silurum to Calleva (Itin. Ant. p. 456), and apparently in the territory of the Dobuni. It has been variously identified with the village of Lechbam on the Asen, with Westbury, Sapey, and Whestham. [T. H. D.]

VERNEA, a fort in Raetia, on a steep height above the banks of the river Atius, not far from Tridentum, where its site is still marked by the Dos di Trent. (Cassiod. Var. iii. 48; Paul. Dic. iii. 31, where it is called Ferruge; Pallnseus, Beschrei- bung der Röm. Heerstrasse von Verona nach Augsburg, p. 28.)

VERNODUBRUM, a river of Gallia Narbonensis mentioned by Pliny (iii. 4) after the Tecum, which is the Tichis [Tichis] of Mehn. Pliny does not mention the Telis or Telesi (Teî), and it has been conjectured that he gives the name of Vernodubrum to the Teils. But there is a river Gly or Agly, north of the Tet and not far from it, which flows into the Mediterranean past Rivendles, and a branch of the Gly is still named Verdoble or Verdobre, which is certainly the Vernodubrum. (D'Anville, Notez, etc.)

VERNOSOL, in Aquitania, is placed in the Antoine Tit., on a road from Beneharnum [Benehar- num] to Toulouse (Touhiuse). This circuitous road ran through Lusitanum Convarum and Caledavri. Vernosol is between Calagorius (Cauvera) and Tou- louse. Vernosol is Tounes. [G. L.]

VERODUNENSES. This name does not occur in any document earlier than the Notitia of the Gallic Provinces, which was probably drawn up at the commencement of the fifth century of our era. Civitas Verodunensis in the Notitia is the capital of a people, and is named last in the first of the two Belgae. The name Virodunum occurs in the Antoine Tit., and so the name is written on some medals. It is placed on a route from Danaecorum (Reims) to Divodurum (Mézié) In the middle age
VERODUNUM. [VERODUNENSES.]

VEROLA'JIUM and VERUL'AMIUM (OepoAd-
roB, Ptol. ii. 3 § 21), the capital of the Catuvex-
ians in Britannia Romana, on the road from Lon-
dinium to Lindum and Eboracum. (Itin. Ant. pp. 471,
476, 479.) It was probably the residence of Casii-
vellaunus, which was taken by Caesar (B. Gall. v.
21), and subsequently became a considerable Rom-
municipium. (Tac. Ann. xiv. 33.) It is Old Ve-
radum, near St. Albans, in Hertfordshire, which
latter town rose from its ruins; and its celebrated
abbey church is said to be built in great part of
Roman bricks. (Camden, p. 350, seq.) [T. H. D.]

VEROMANDUI (OepoAdroB, Ptol. iii. 9 § 11),
a Belgic people, who in B.C. 57 were supposed
to be able to raise 10,000 fighting men (Caesar,
B. G. ii. 4); unless Caesar's text means that they and
the Velcassae together mustered this number (Ve-
locasses). They joined the Nervii and the Atre-
hates in the attack on Caesar's army on the Sabine
(Sambure). The Veromandui attacked the eleventh
and eighth legions, which were in Caesar's centre,
and they were driven back to the river. They are
not mentioned again in the Commentaries.

The Veromandui had the Ambiani and the
Airesiates on the west, and the Suesiones on the
south. On the north they were neighbours of the
Nervii. Their chief town was afterwards Augustan
Veromandorum, St. Quentin, on the Somme, in the
department of Aisne, and in the old division of
France named Vermondais. The name Civitas Ve-
romandorum occurs in the Notitia of the Gallic
Provinces. [AUGUSTA VEROMANDOUM.]

VEROMETUM, a town of the Coritani in Brit-
nania Romana, between Lutiae and Marginum.
(Itin. Ant. pp. 477, 479, where it is also called
Verometum.) Camden (p. 575) places it at Bur-
rough Hill, near Withywood on the Wold, in the
S. part of Nottinghamshire. [T. H. D.]

VERONA (OepoAdroB, Ptol. iii. i. § 31; Oepo'
29, iii. 3, &c.; and Bespoc, It. iv. 33 : Éd. Veron-
censi, i. Verona), an important town in Gallia
Transpadana, seated on the river Adige ("Verona
Athesi circumflua," Sili. It. viii. 595), and chiefly
on its W. bank. There is some difficulty in deter-
minding whether Verona was a city of the Euganei
or of the Cenomani, from the little knowledge which
we possess of the respective boundaries of those
people, and from the confusion which prevails upon
the subject in ancient authors. By Poleny (l. c.),
who does not mention the Euganei, it is ascribed to
the Cenomani; and Catullus (ixvii. 34), in a passage,
however, which has been banished by some editors as
not genuine, Britsia, which undoubtedly belonged
to the Cenomani, styled the mother-city of Verona.
Pliny, on the other hand (iii. 19, s. 23), gives Verona
partly to the Rheti and partly to the Euganei, and
Strabo (l. c.) attributes it to the former. Some have
sought a solution of this difficulty by assuming that
the city belonged originally to the Euganei, but was
subsequently occupied by the Cenomani, referring to
Livy, v. 33. (Cf. Justin, xx. 5.) We know little or
nothing of the early history of Verona. Under the
Roman dominion it became a colony with the
surname of Augustea, and one of the finest and most
flourishing cities in that part of Italy (Tac. II. iii. 8;
Itin. Ant. p. 129; Strab. p. 213; Grut. Itin. p. 166. 2.) The surrounding country was exceed-
ingly fruitful, producing good wine, excellent apples,
and abundance of spelt (alike, Pline. xviii. 11.
s. 29, xiv. 1. s. 3, xx. 14. s. 14; Cassiod. Var.
xiii. 4). The Rhettian wine also is praised by Virgil.
(G. ii. 94; cf. Strab. iv. 206; Suet. Oct. 77.) The
situation of Verona rendered it a great thoroughfare
and the centre of several highroads (Itin. Ant. pp.

Verona was celebrated in history for the battle
fought by Marius in the Campi Rondii, in its
neighbourhood, against the Cambri, (Vell. Pat. ii. 12;
Florus, iii. 3.) From an inscription still extant on
one of its gates, now called the Porta de Barari,
the walls of Verona appear to have been newly
erected in the reign of the emperor Gallienus, A.D.
265. It was besieged by Constantine on his march
from Gaul to Rome, and, though obstinately defended
by Burianus Pompeianus, obliged to surrender at dis-
cretion. (Pann. Vet. ix. 9, sqq.) It was likewise the
scene of the victory of Theodoric over Odoaco.
(Jornand. Oct. 57.) Theodoric made it one of his
residences, and the town held his幧al and his con-
signment of his palace is still extant upon a seal.
(Gibbon, Decl. and Fall, vol. v. p. 22, ed. Smith.)
It was at Verona that the splendid wedding took
place between king Autharis and Thendelinda.
(Procop. B. G. ii. 5; Paul. Duc. iii. 29.) But,
more than by all these events, Verona is illustrious
as having been the birthplace of Catullus (Ovid.
Amor. iii. 13. 7; Mart. x. 103; Plin. xxxvi. 6. s. 7);
though it is exceedingly doubtful whether the re-
 mains of a villa on the Lago di Garda, commonly
called the villa of Catullus, could really have be-
longed to him. The honour sometimes claimed for
Verona of having given birth to the architect Vit-
ruvius Pollio arises from a mistaken interpretation
of the inscription on the arch of the Gavi, formerly
existing at Verona, but pulled down in the year 1805.
The inscription related to the great architect's less
celebrated namesake, Vitruvius Cercio. (Descrip. di
Verona, pt. i. p. 86.) Some are of opinion that the
elder Pliny also was born at Verona, but it is more
probable that he was a native of COMM. In the
life of him ascribed to the pen of Suetonius, he is
named Novocomensis; and when he calls himself in
his Preface the costurareus of Catullus, that epi-
thet by no means necessarily implies that he was the
fellow-citizen of the poet, but rather that he was
merely his fellow-countryman, or from the same
province.

The amphitheatre at Verona is a very striking
monument of antiquity. Although not nearly so
large as the Colosseum, it is in a much better state
of preservation, owing to the pains which have al-
ways been taken to keep it in repair. It is also of
a more costly material than the Roman amphitheatre;
and whilst the latter is built of travertine, that at
Verona is of marble, from some quarries in the neigh-
bourhood. The substructions are of Roman brick-
work. The site of its erection cannot be ascer-
tained, but it must undoubtedly have been posterior
to the time of Augustus. A great part of the ex-
ternal arcade was thrown down by an earthquake in
the year 1184. Its form is elliptical, the larger

VERAE. [BEERONES.]

VERSUCINI, a Gallic people near the Alps in the Province. Pliny (iii. 1) says: "Regio Camat-
icolorum, dein Sueptri, superque Verucimi." [CAMATULICIC; SCELERI] There is nothing to

guide us in fixing the position of the Versucini, except their position with respect to these two other tribes, and the fact that there is a place named Prumus, between Verucini and Ricu. Dis- 
gigniis is in the department of Var, and Ricu is on the site of Reil [RELI APELAINARI]. [G.L.]

VERUGO or VERRUCA ("Egghoca, Dissi: Colle Ferro"), a town or fortress in the territory of the Volsci, which is repeatedly mentioned during the wars of the Romans with that people. The name first occurs in n. c. 445, when we are told that the place had been recently occupied and fortified by the Romans, evidently as a post of offence against the Volsci; a proceeding which that people resented so much that it became the occasion of a fresh war. (Liv. iv. 1) We do not know at what period it fell again into the hands of the Volsci, but in n. c. 439 it was re-

covered and again garrisoned by the Romans. (ib. 35, 36; Dissi. xiv. 11.) It, however, fell once more into the hands of the Volsci in n. c. 407 (Liv. iv. 58), and apparently continued in their possession till n. c. 394, when it was again occupied with a garrison by the military tribune C. Aemilius, but lost soon after in consequence of the defeat of his colleague Sp. Postumius. (Liv. v. 29; Dissi. xiv. 98.) From this time it wholly disappears from history. It is very doubtful whether it ever was a

town, the manner in which it is mentioned by Livy, in connection with the Aca Carventana, seeming to prove that it was a mere fort or stronghold, garrisoned and fortified, on account of its natural strength and advantageous position. Its site cannot be deter-

mined with any certainty, but from the name itself there can be no doubt that it was situated on a pro-
jecting knoll or peak; hence its site has been sought by Nibby (followed by Abeken) at Colle Ferro, near Segni; Colle Sacco, in the same neighbor-

hood, has as plausible a claim. (Nibby, Dis-
tori, vol. i. p. 472; Sell. Top. of Rome, p. 455; Abeken, Mittel-Italien, p. 75.) [E. H. B.]

VERTACOMORI, a pagus of the Vocontii in Gallia Provincia, to whom Pliny (iii. 17) at-
tributes the foundation of Novaria in Gallia Cisal-
pina [NOVARII]. The name seems to be preserved in Vercors, a district in the old country of the Vocontii, in the northern part of the diocese of Dio-
ict DEA VOCONTORUM). In some middle ages doc-
ments the name appears in the abbreviated form Vereorium, which is the next step to Vercoros (D'An-
ville, Notices, etc. [G. D.]

VERTELEA, a town of the Brigantes in Brit-
annia Romana. (Hist. Ant. pp. 467, 476.) Variously identified with Brough in Westmoreland and

Barrow. [T. H. D.]

VERTINAE (Oberviva: Vercino), a small town of Bruttium, mentioned only by Strabo (vi. p. 254), who places it in the interior of that country. Its name is still retained by the village of Vercino, about 7 miles NW. of Strongoli, the ancient Pe-

tele. [E. H. B.]

VERUBIUM (Oberviovum, Ptol. ii. 3. § 5), a promontory on the N. coast of Britannia Barbara, most probably Nose Head. [T. P.]

VERVES (Obervovit, Ptol. iv. 1. § 10), a people of Mauretania Tingitana. [T. H. D.]

VERULAE (Eth. Verulanus: Feroldi), a city of the Hernici, but included in Latium in the more extensive sense of that name, situated in the Apen-

nines N. of the valley of the Succo, between Alatrium and the valley of the Liris. It was apparently one of the chief cities of the Hernici, and was cer-

tainly a member of the Hernian League; but its name is not mentioned separately in history till the final war of that people with Rome, in n. c. 306. (On that occasion the citizens of Verulam, together with those of Alatrium and Feronia, defected part-

against the Anagni, and refused to join in the hostilities against Rome. For this reason they were rewarded after the termination of the war by being left in possession of their own laws and magistrates, which they preferred to receiving the Roman "citizens." (Liv. ix. 42, 43.) The period at which they ultimately became Roman citizens is uncertain. Florus vaguely asserts that a triumph had been celebrated over the people of Verulam (Flor. i. 11. § 6), but this is probably a mere rhetorical flourish: there is no occasion known in history to which it can be referred. Under the Roman dominion Verulam became a quiet and somewhat obscure country town. According to the Liber Coloniarum it received a body of colonists in the time of the Gracchi, and again under the reign of Ner
t. But it is probable that it always retained its municipal rank. It is mentioned by Pliny among the municipal towns of the Fifth Region (Plin. iii. 5. s. 9), but is not again noticed in history. Its secluded position probably rendered it a place of small importance. The

rock which Caesar describes as occupying the neck of land, where the river does not flow. The lower town is on the other side of the river opposite to the peninsula, with which it is connected by a stone bridge, the foundations of which are Roman.

There is a Roman triumphal arch with a single passage. The date of its construction does not appear. This arch was nearly hidden by rubbish and buildings has been partially uncovered and restored within the present century. It is decorated with sculptures. There are some remains of the aqueduct which supplied Vespout to water from a distant source. It was constructed of a soft stone. It terminated in the town in a vast reservoir of an oval form, which was covered by a roof supported by columns. The water was distributed from the reservoir all through the town: and in many parts of Bessacum there have been found traces of the conduits which conveyed the water to the private houses. (Penny Cyclopæedia, art. Bessacum; Richard et Hoquet, Guide du Voyageur.) [G. L.]

VESPA'SIAE. [NURSIA.]

VESPERIES, a town of the Vandalii in Hispania Tarraconensis. (Plin. iii. 20. s. 34.) It is identified with the present Bormes. (Cf. Mentelle, Esp. Mod. p. 37.) [T. H. D.]

VESTINI (Ωννοτών), a people of Central Italy, who occupied a mountainous tract extending from the coast of the Adriatic to the lofty mountains near the sources of the Aternus. Here they met the Sabines, whose territory bounded them on the W.; thence they were bounded by the high mountain range which forms the southern barrier of the valley of the Aternus, and separated them from the Aequi and Marsi; while towards the S. and E. the river Aternus itself, from the point where it takes the sudden bend towards the NE., became the limit of their territory, and their frontier towards the Peligni and Marrucini. Along the coast of the Adriatic they held only the narrow space between the mouth of the Aternus and that of the Matrinus, a distance of about 6 miles; the latter river apparently formed the northern limit of their territory from its mouth to its source, and thence to the high ridge of the Central Apennines their exact frontier cannot be traced. But it is almost immediately after passing the point where the Vestini adjoined the Praetutii on the one hand and the Sabines on the other, that the chain of the Apennines rises abruptly into the lofty group or mass, of which the Monte Corno (commonly called the Gran Sasso d'Italia) is the highest summit. This mountain is the most elevated in the whole range of the Apennines, attaining to a height of 9500 feet; and those immediately adjoining it are but little inferior, forming a rugged and irregular mass of mountains, which is continued without interruption by a range of inferior but still very considerable elevation, in a S.E. direction. This range is almost continuous with the equally lofty ridge of the Monte Morrone, the two being separated only by the deep and narrow gorge below Popoli, through which the Aternus finds its way to the sea. 

Hence the territory of the Vestini is naturally divided into two distinct regions, the one consisting of the upper valley of the Aternus, W. of the lofty mountain range above described, the other of the tract on the E. of the same mountains, sloping gradually thence to the sea. This last district is very hilly and rugged, but has the advantage of far milder climate than that of the basin of the Aternus, which is a break and cold upland region, having much analogy with the valley of the Peligni (of which it may be considered in some degree as a continuation), but from its considerable elevation above the sea (2380 feet in its upper part) suffering still more severely from cold in winter. The Vestini, however, did not occupy the whole of the valley of the Aternus; Amterunum, near the sources of that river, which was one of the oldest abodes of the Sabines, having continued, even in the days of Pliny, to belong to that people, and though Ptolemy assigns it to the Vestini, it is probable that in this, as in many similar cases, he was guided by geographical views rather than the real ethical distribution of the tribes. (Strab. v. p. 228; Plin. iii. 12. s. 17; Tolst. iii. 1. § 59.) But the precise line of demarcation between the Vestini and the Sabines, cannot now be determined.

No author has left us to any distinct statement concerning the origin and affinities of the Vestini, but there seems to be no reason to doubt that they were, in common with the other tribes by which they were surrounded, a Sabine race. It would indeed have been almost impossible for that people to have extended themselves to the S. and sent forth their numerous colonies, the Peligni, the Samnites, &c., had not the valley of the Aternus been already occupied by a kindly and friendly race. The close connection which we find subsisting between the four tribes of the Vestini, Marrucini, Peligni, and Marsi, may be also taken as a strong presumption of their common origin, and there seem good reasons for supposing them all to have been derived from a Sabine stock. The first mention of the Vestini in history occurs in n. c. 324, when they concluded an alliance with the Samnites against Rome. It was feared that their example would be speedily followed by the Marrucini, Peligni, and Marsi, but this was not the case, and the Vestini, unsupported by their allies, were unable to resist the Roman arms: they were defeated and dispersed by the consul D. Junius Brutus, and took refuge in their fortified towns, of which Cutina and Cingilia were successively taken by assault. (Liv. viii. 29.) From this time we hear nothing more of the Vestini till n. c. 301, when they concluded a treaty with the Romans, which appears to have been an alliance on favourable terms (Id. x. 22); and from this time the Vestini became the faithful allies of the rising Roman power. In the enumeration of the forces of the Italian allies in n. c. 225, Polybius mentions the Vestini, together with the Marsi, Marrucini, and Fregantii (the Peligni being omitted), and estimates their joint contingent at 20,000 foot and 4000 horse soldiers (ii. 24); but we have no means of judging of the proportion furnished by each nation.

No other mention is found in history of the Vestini, with the exception of casual notices of their troops serving as auxiliaries in the Roman armies (Emius, Ann. Fr. viii. 6; Liv. xiv. 40), until the outbreak of the Social War, in n. c. 90. On this occasion they followed the example of the Marsi and Peligni, as well as of their more immediate neighbours the Picentes, and were among the first to declare themselves in insurrection against Rome. Liv. Epit. Ixxi.; Oros. v. 18; Appian, B. C. i. 39.) There can be no doubt that throughout that contest they furnished their contingent to the armies of the Marsi; but their name is not specially mentioned till towards the close of the war, when we learn that they were defeated and reduced to submission, apparently somewhat sooner than the other confed-
rates. (Liv. Epit. lxxv, lxxvi; Appian, B. C. i. 52; Oros. v. 18.) There is no doubt that they at this time received the Roman franchise, and henceforth became merged in the ordinary condition of Roman citizens. Hence we hear nothing more of them in history, though it is evident that they retained their existence as a separate tribe, which is recognised by all the geographers, as well as by inscriptions. (Strab. v. p. 241; Plin. iii. 12. s. 17; Ptol. iii. 1. § 59; Orell. Inscr. 4036.) From the last source we learn that they were enrolled in the Cilurian tribe. Their territory was included in the Fourth Region of Aug - gustus (Plin. l. c.), but in the later division of Italy it was separated into two, the maritime district being united with Picenum, while the inland portion or valley of the Aternum was included (together with the Salinones and Peligni) in the province of Valeria. (Lib. Colon. pp. 227, 228; Bingham's Eccles. Antiq. ix. ch. 5, sect. 3.) We learn from Juvenal that they continued to retain their primitive simplicity and rustic habits of life even under the Roman Em- pire. (Juv. xiv. 181.) Silius Italicus speaks of them as a race, hardy and warlike, and habituated to the chase; their rugged mountains were doubtless the home of wild animals. (Strab. ii. 7. 15; Plin. iv. 16; Liv. ital. viii. 513.) The more inland parts of their territory abounded in excellent upland pastures, which produced a kind of cheese that was highly esteemed at Rome. (Plin. xii. 42. s. 97; Martial, xiii. 31.)

The most important feature of the territory of the Vestini is the Monte Corno or Gran Sasso d'Italia, which, as already observed, is the highest summit of the Apennines. This was identified by Cluver, who has been followed by most later writers, with the Carnus Mons of Servius (ad Aen. x. 185). But Silius Italicus (viii. 517) places the Mons Fuscellus, a name much better known, among the Vestini; and though this is opposed to the statement of Pliny that mountain contains the sources of the Nar, there seems much reason to believe that Pliny has here confounded the Nar with its tributary the Velinus [Nar], which really rises in a group closely connected with the Gran Sasso, and that it was therefore that remarkable mountain range which was known to the ancients as the Mons Fuscellus.

The following towns are noticed by ancient writers as belonging to the Vestini. The most celebrated of these is Civita di Tenna, which is called Civita di Tenna, appears to have been the chief of those which were situated on the eastern slope of the mountains. Lower down, and only a few miles from the sea, was Angulius, now Civita S. Angelo. Aternum, at the mouth of the river of the same name, now Pesca, was the seaport of the Vestini, and, being the only one along this line of coast for some distance, served also as that of the Marruci. In the valley of the Aternum were: Peltinum (Ansedonia), about 14 miles S. of Aquila; Avea, the remains of which are still visible at Fossa, about 6 miles S. of Aquila; and Pietrino, still called Torre di Pietra, about 2 miles E. of the same city, which must have immediately adjoined the territory of Ammeturn. Peltinum, the ruins of which are still visible at Civita di Bagno, a little to the S. of Aquila, though an important place in the early part of the middle ages, is not mentioned by any writer before Paulinus Diaconus (Hist. Lang. ii. 20), and was certainly not a municipal town in the sense of the Romans. Pietrino (mentioned only in the Tab. Peut.) is of very uncertain site, but is supposed to have been near As-

SERGIO. Apulia, the present capital of this district, is a wholly modern city, having been founded by the emperor Frederick II. in the 13th century, when its population was gathered together from the surrounding towns of Ametum, Avea, Furcunnium, &c., the complete desolation of which apparently dates from this period. AUPINA, which according to Pliny (iii. 12. s. 17) was in his time united for municipal purposes with Peltinum, still retains the name of Oepena. CUTINA and CINGHIA, two towns of the Vestini mentioned by Livy (vii. 29), are wholly unknown, and the sites assigned to them by Romanelli, at Civita Aquania and Civita Retengus respectively, are merely conjectural.

The topography of the Vestini is specially illustrated in the work of Giovannuzzi (Della Città d'Austria nei Vestini, 4to, Roma, 1773), as well as by Romanelli (vol. iii. pp. 241—284). [E. H. B.]

VESUBIA'NI, a people mentioned in the inscription of the arch of Sessa. The resemblance of name has led geographers to place the Vesubiani in a valley through which runs a torrent called Vesubia, which falls into the Var. The Esibianici, who are mentioned in the inscription of the Trophy of the Alps (Pliny, ii. 16), are also called the Vesubianici. The only difference between these and the Vesubiani, for the only difference is a V. But D'Anville places the Esibianici on the UBaye and the Ubayette, which two streams unite above Barce- lonette in the department of Basses-Alpes. [G. L.]

VESULUS MONS (Monte Vico), one of the most lofty summits of the Alps, which, from its prominent position near the plains of Italy, and its great superior- ity in height over any of the neighbouring peaks, is one of the most conspicuous mountains of the whole Alpine range as viewed from the Italian side. Hence it is one of the very few individual summits of the Alps of which the ancient name can be identified with certainty. It is mentioned by both Pliny and Mela as containing the sources of the Padus; and the former adds that it was the highest summit of the Alps, which is a mistake, but not an unnatural one, considering its really great elevation (12,580 feet) and its comparatively isolated position. (Plin. iii. 16. s. 20; Mela, ii. 4. § 4.) Virgil also mentions the forestes of "the pine- clad Venusius" as affording shelter to numerous wild boars of the largest size. (Virg. Aen. x. 708; Serv. ad loc.)

VESUNNA (Obisowna), according to Ptolemy (ii. 7. § 12) the capital of the Petrocorii, a people of Aquitania. In inscriptions the name is written Vesunna. The place occurs in the Itins, and its position is Perigeueux, in the old province of Perigord, which name as well as Perigueux is a memorial of the name of the people, Petrocorii. But it is said that the remains of the old town are still called La Véone. Perigueux is on the Ille, a branch of the Dordogne, and it is the capital of the department of Dordogne.

There is no Roman city in France of which we know so little that contains so many remains as Perigueux. Foundations of ancient buildings, mosaics, statues, and ruins of edifices show its former magnitude. The tour de l'Evone, a round building constructed of small stones and of rough materials, is supposed to have been the cella of a temple, or a tomb, as some conjecture. It is about 200 feet in circumference. There were seven bridges at Vesunna, four of which have been repaired or rebuilt. There are some remains of an amphitheatre of large dimensions. Several aqueducts supplied the

VESUNNA. 1283
town with water. There are also remains of a Roman caledon. On a hill which commands Vesuvius, and is separated from it by the river Ile, there are the remains of a Roman camp, which is called Camp de Cesar, though Caesar never was there; but some of his successors may have been. There are several other Roman camps about Periguaues. Several Roman roads have been traced leading to Periguaues. Vesuvium seems to have been an important position in Aquitania during the imperial government of Rome. There is a French work on the antiquities of Visone by M. Vigron de Taillefer, 2 vols. 1821, Periguaues. [G.L.]

VESUVIUS MONS (Ovovdovos, or Ovovdovos; Montis Vesuanus) is a volcanic mountain, which is described by Latin writers Vesuvius, and Vesuvius or Vesuvius (Bacchus, Dion Cassius), a celebrated volcanic mountain of Campania, situated on the shore of the gulf called the Crater or Bay of Naples, from which it rises directly in an isolated conical mass, separated on all sides from the ranges of the Apennines by a broad tract of intervening plain. It rises to the height of 4020 feet, and its base is nearly 30 miles in circumference.

Though now celebrated for the frequency as well as violence of its eruptions, Vesuvius had in ancient times been so long in a quiescent state that all tradition of its having ever been an active volcano was lost, and until after the Christian era it was noted chiefly for the great fertility of the tract that extended around its base and up its sloping sides (Virg. Georg. ii. 227; Strab. v. p. 247), a fertility which was in great measure owing to the deposits of fine volcanic sand and ashes that had been thrown out from the mountain. There were not indeed wanting appearances that proved to the accurate observer the volcanic origin and nature of Vesuvius: hence Dioborus speaks of it as “bearing many signs of its having been a burning mountain in times long past” (Diod. iv. 21); but though he considers it as having on this account given name to the Phlegrean plains, he does not allude to any historical or traditional evidence of its former activity. Strabo in like manner describes it as “surrounded by fields of the greatest fertility, with the exception of the summit, which was for the most part level, and wholly barren, covered with ashes, and containing cliffs and hollows, formed among rocks of a burnt aspect, as if they had been eaten away by fire; so that a person would be led to the conclusion that the spot had formerly been in a state of conflagration, and had craters from which fire had burst forth, but that these had been extinguished for want of fuel” (v. p. 247). He adds that the great fertility of the neighbourhood was very probably owing to this cause, as that of Catania was produced by Mount Astna. In consequence of this fertility, as well as of the beauty of the adjoining bay, the line of coast at the foot of Vesuvius was occupied by several flourishing towns, and by numbers of villas belonging to wealthy Roman nobles.

The name of Vesuvius is twice mentioned in history before the Christian era. In n. c. 340 it was at the feet of this mountain that was fought the great battle between the Romans and the Latins, in which P. Decius devoted himself to death for his country. (Liv. viii. 8.) The precise scene of the action is indeed uncertain, though it was probably in the plain on the N. side. Livy describes it as "hurd procul raducus Vesuvi montis, quin via ad Veserim serebat;" but the situation of the Vesuvs is wholly uncertain. [Vesuvius.] Again, at a later period (n. c. 73) we are told that Spartacus, with the fugitive slaves and gladiators under his command, took refuge on Mount Vesuvius as a stronghold, and by a sudden sally from it defeated the Roman general Claudius Pulcher, who had been sent against him. (Flor. iii. 20. § 4; Plut. Crass. 9; Appian, B. C. i. 116; Vell. Pat. ii. 30; Oros. v. 24; Frontin. Strat. i. 5, § 21.)

But it was the fearful eruption of the 24th of August, a. d. 79, that first gave to Vesuvius the celebrity that it has ever since enjoyed. That great catastrophe is described in detail in a well-known letter of the younger Pliny to the historian Tacitus; and more briefly, but with the addition of many of the most striking and fabulous circumstances, by Dion Cassius. (Plin. Ep. vi. 16, 29; Dion Cass. lxi. 24—25; Vict. Epit. 10.) It is remarkable that in recording this, the earliest eruption of the mountain, Pliny particularly notices the form assumed by the cloud of ashes that, rising from the crater in a regular column to a considerable height, afterwards spread out laterally so as to form a head like that of a stone-pine: an appearance which has been observed in many subsequent eruptions. The other phenomena described are very much the same as are common to all similar eruptions: but the mass of ashes, sand, and pumice thrown out was so vast as not only to bury the cities of Herculanum and Pompeii at the foot of the volcano under an accumulation many feet in depth, but to overwhelm the more distant town of Stabiae, where the elder Pliny perished by suffocation, and to overspread the whole bay with a cloud of ashes such as to cause a darkness more profound than that of night even at Misenum, 15 miles distant from the foot of the mountain. (Plin. l.c.) On the other hand the outflow of lava was inconsiderable, and if any streams of that kind broke out at this time they probably did not descend to the inhabited regions at least we hear nothing of them, and the popular notion that Herculanum was overwhelmed by a current of lava is certainly a mistake. [Herculanum.] So great and unexpected a calamity naturally excited the greatest sensation, and both the poets and the prose writers of Rome for more than a century after the event abound with allusions to it. Tacitus speaks of the Bay of Naples as "pulcerinus sinus, ante quam Vesuvius mons ardens fecit citrum loci verteret." (Ann. iv. 67.) Martial, after descanting on the beauty of the scene when the mountain and its neighbourhood were covered with the green shade of vines, adds:—

"Cuncta jacent flammis et tristis mersa favilla" (iv. 44); and Statius describes Vesuvius as "Aenemula Trimarciis volvens incendia flammis." (Sib. i. 4. 80.)

(See also Val. Flacc. iii. 208, iv. 507; Sib. Ital. xvii. 594; Flor. i. 16. § 5.)

A long interval again elapsed before any similar outbreak. It is probable indeed that the mountain continued for some time at least after this first eruption to give signs of activity by sending forth smoke and sulphurous vapours from its crater, to which Statius probably alludes when he speaks of its summit still threatening destruction ("needum lethale minari cessat apex," Sib. iv. 4. 85). But the next recorded eruption, and probably the next of any magnitude, occurred in a. d. 203, and is noticed by Dion Cassius (lxxvi. 2). This is pro-
bably the one alluded to by Galen (De Meth. v. 12), and it seems certain from the description given by Dion Cassius of the state of the mountain when he wrote (under Alexander Severus) that it was then in a state of occasional, but irregular, activity, much resembling that which exists at the present day. (Dion Cass. lxxvi. 21.) The only other eruption that we find mentioned under the Roman Empire occurred in a. d. 472 under the reign of Anthimus. (Marcellin. Chron. ad ann.) A fourth, which took place in the reign of Theodoric king of the Goths (a. d. 512), is noticed by both Cassiodorus and Procopius, who describe in considerable detail the phenomena of the mountain. It appears certain that these later eruptions were accompanied by the discharge of streams of lava, which caused great mischief to the surrounding country. (Cassiod. Ep. iv. 50; Procop. B. G. ii. 4, iv. 35.)

It would be foreign to our subject to trace the history of the mountain through the middle ages, but it may be mentioned that its eruptions seem to have been far more rare and separated by longer intervals than they have been for more than two centuries past; and in some instances at least these intervals were periods of perfect quiescence, during which the mountain was rapidly losing its peculiar aspect. Even as late as 1611, after an interval of little more than a century, the sides of the mountain were covered with forests, and the crater itself was overgrown with shrubs and rich herbage. (Daubeney on Volcanoes, p. 225.)

At the present day Vesuvius consists of two distinct portions: the central cone, which is now the most elevated part of the mountain; and a ridge which encircles this on three sides at some distance, and is separated from it by a level valley or hollow called the Atrio del Cavallo. This outer ridge, of which the highest point, near its N. extremity, is called Monte Somma, was probably at one time continuous on all sides of the circle, but is now broken down on the S. and W. faces: hence the appearance of Vesuvius as viewed from Naples or from the W. is that of a mountain having two peaks separated by a deep depression. This character is wholly at variance with the description given by Pliny, which tells us that the summit was nearly level, but with cliffs and fissures in it, from which fire appeared to have formerly issued (v. p. 247). Hence it is probable that the mountain was then a single truncated cone, and that the vast crater-like hollow of which the Atrio del Cavallo forms part, was first created by the great eruption of A. D. 79, which blew into the air the whole mass of the then existing summit of the mountain, leaving the present ridge of Monte Somma standing, enclosing a vast crater, within which the present cove has gradually formed. (Daubeney on Volcanoes. 215; Lyell’s Principles of Geology, p. 365, 8th edit.) It has indeed been frequently assumed from the accounts of the operations of Spartacus already mentioned (Flor. iii. 20; Plut. Crass. 9) that the mountain had even then a crater, within which that leader and his band were enclosed by the Roman general; but it is very doubtful whether the passages in question bear out this interpretation, which seems to vary with the account given by Strabo, whose description has every appearance of being derived from personal observation.

Concerning the history of the different eruptions of Vesuvius see Della Torre, Storia del Vesuvio, 4to, Napoli, 1755; and the geological work of Dr. Daubeney, ch. xii. [E. H. B.]

VETEIRA. [Castra Vetera.]

VETTONA (Eth. Vettonensis: Vettona), a municipal town of Umbria, situated about 5 miles E. of the Tiber, between Persia and Mevania. It is mentioned by Pliny among the municipalities of Umbria, and its name is found also in an inscription among the “XV Populi Umbriæ,” while another mentions it in connection with Persia, from which it was only about 10 miles distant, as measured on the map, though the Tabula calls it 14 miles from that city and 20 from Tuder. (Plin. iii. 14. s. 19; Orell. Inscr. 95, 98: Tab. Pent.) Vettona continued in the middle ages to be a city of considerable importance, but it was destroyed by the Perugians in 1352. The ancient site is, however, still marked by the village of Bettona, about a mile from the left bank of the Tiber. [E. H. B.]

VETTONES (Obèttones, Strab. iii. p. 152; Obèttones, Plut. vi. § 9), one of the principal peoples of Lusitania. (Cass. B. C. i. 38; Plin. iv. 21. s. 38; Gratt. Inscr. p. 853, 7.) Strabo alone (l. c.) assigns them to Iltiber Iberis, or the Provincia Tarraconensis. We find their country called Vettonia by Prudentius (Hygmn. in Eulal. v. 186) and in an inscription. (Orelli, no. 3664.) It was watered by the Tagus, and separated by the Darius from Asturia on the N. On the W., where their boundary corresponded very nearly with that of modern Portugal, they adjoined the proper Lusitani. On the E. they neighboured on the Carpetani in Hispania Tarraconensis, and their boundary would be described by a line drawn from the modern Sinoviques in a S.W. direction over Fuente del Arrozagio to Tuzzillo. On the S. they were bounded by the province of Baetica, so that their country comprehended a part of Estremadura and Leon. Their principal towns were Salmantica (Salamanca), Ceclionicum (Baños?), Capara (las Ventas de Capara), Sentice (in the neighbourhood of Los Santos), Cottaobriga (Abinoa), Augustobriga (Ciudad Rodrigo), &c. In their country grew the herba Vettonica (Plin. xxv. 7. s. 46), still known under the name of betony, an account of which is given in the treatise De Herba Betonica, ascribed to Aurelius Stobæus, Strabo, &c. (T. H. D.)

VETULONIA or VETULONIUM (O’covolôn-rv, Plut. iii. § 49; Eth. Vetulonienses), one of the twelve principal cities of the Etruscan confederation (Dionys. iii. 51; Plin. iii. 5. s. 8). Yet we hear nothing of its political history; and all we now respecting it is, that it was reputed to be the town in which the Etruscan insignia of magistracy, afterwards adopted by the Romans, such as the lictors, fasces, sella curulis, loga praetexta, &c., as well as the trumpet, were first used. (Sili. It. viii. 483, sqq.; Plut. Br. 61; Strab. v. p. 220; Macr. S. i. 6; Flor. i. 5; &c.)

The destruction of Vetulonia, and the silence of history respecting it, have caused even its site to be a matter of doubt. Thus it has been sought at or near Viterbo (Annio, Antiq. Var. Volum.), at Massa Marittima, the ancient Massa Veternensis (Ann. Marc. xiv. 11. § 25), or in a dense wood 5 miles to the W. of that town (Xineses, ap. Ingibrima, Ricerche di Vetulonia, p. 62; cf. Targioni-Tozzetti, Viaggi in Toscana, iv. p. 116); on the site of Volci (Annales Ducae, Ann. Junc. 1161, p. 188, sqq.; and Valeriani, Mus. Chia. i. p. 68); on the hill of Costigliane Bernardi, near Monte Rotondo (Ingibrima, Ricerche di Vetulonia, Ambresch); and at Orbetello (Ernando Barbaro, ap. Dempster, Etrur. 4 N 3)
VETURIL.

Reg. ii. 56). But till very recently the opinion most commonly adopted was that of Leandro Alberti, an antiquary of the 16th century, who placed it on Monte Calvi (Descriz. d'Italia, p. 27), in a wood called Solea de Vetello; and who has been followed by Clavierus (Ital. Ant. ii. 2. p. 472), by Müller (Etrusker, i. p. 211), &c. It is now, however, generally admitted that Vetulonia is to be identified with the remains of a city, discovered in 1842 by Sig. Paquinielli, an Italian engineer, at Maylano, a village between the Ouca and the Albequa, and 8 or 10 miles to the N. of Orbetello. To Mr. Dennis (Cities and Septaichres of Etruria, vol. ii. ch. 48), however, is to be assigned the credit of first identifying these remains as those of the lost Etruscan city. Their site agrees with what we learn respecting that of Vetulonia. Pliny and Ptolemy (H.c. c.) agree in placing the latter among the inland colonies of Etruria; yet Pliny (iii. 103. s. 106) also describes it as being not far from the sea, and as having hot springs, the Aquae Vetuloniacae, in its neighbourhood. Now, all the necessary conditions are fulfilled by the remains added to. The circuit of the walls, about 41 miles, shows it to have been an important city; its situation with regard to the sea agrees with the account of Pliny; and near Telamonacio, at a distance of only 200 or 300 yards from the coast, and in the vicinity of the newly found city, warm springs still exist. For other reasons which led Mr. Dennis to the opinion which he formed, the reader is referred to his work before cited, and to his paper in the Classical Museum, vol. ii. p. 229, seq. For coins of Vetulonia, see Eckhel, vol. i. pt. i. p. 94. [T. H. D.]

VETURIL. [GENUA.]

VEXALLA AEST. (Oued héda efeg survivors, Ptol. ii. 3. § 3), a bay on the W. coast of Britannia Romana, near the mouth of the river Subrinna, now Bridgewater Bay. [T. H. D.]

UFENS (Ufento), a river of Latium, rising at the foot of the Volscian mountains, and flowing through the Pontine Marshes, whence its course is slow and stagnant, and it is described by both Virgil and Silius Italicus, as a sluggish and muddy stream. (Virg. Aen. vii. 801 ; Sil. Ital. viii. 382.) Claudian also calls it "tardatus suis erroribus Ufens." (Prob. et Ol. Cons. 257.) It joins the Amasenum (still called Amaseus) during its course through the marshes to the sea, at Terracina, but the present channels of both rivers are artificial, and it is uncertain whether they united their streams in ancient times or not. The name is corrupted by Strabo into Aurifus (Alphaéos, v. p. 233), but he correctly describes it as one of the chief agents in the formation of the Pontine Marshes. The ancient form of the name was Oufens, whence the Roman tribe Oufentia derived its name, being composed originally of citizens settled in the territory and neighbourhood of Privernum (Fest. s. v. Ouventia, p. 194). [E. H. B.]

UFGUGUM [BRUTTURN].

UGERNUM (Ogeouren), a town of Gallia Narbonensis, on the road from Nemausus through Ugernum and Tarascen to Auca Saxiae (Aiz.). Strabo (iv. p. 178) has described this road. The genitive ugerni occurs in an inscription found at Nimes. Ugernum is represented by Beaucaire. The Table marks the distance from Nemausus (Nimes) to Ugernum xv., which is near the truth. In the last century the Roman road between Nemausus and Ugernum was discovered with several milestones on it in their original position, and numbered, as it seems, from Nemausus the ancient capital of the district. These milestones gave the opportunity of ascertaining the length of the Roman mile. The name of Beaucaire is a corruption of the middle-age name of Bellum-quadrum. If any trace of the name Ugernum exists, it is in the name of Gernegue, the lower part of Tarascon, which is on the opposite side of the river, for Beaucaire and Tarascon stand face to face. But in order to admit this, we must suppose that Gernegue represents an island Germa, which, according to a middle-age document, was between Beaucaire and Tarascon, and that by some change in the river the island has become part of the mainland on the east side of the river; and it is said that this fact about the island is certain. (D'Anville, Notices, &c.; Penny Cyclopaedia, art. Beaucaire.)

UGA (Oyaya, Ptol. ii. 4. § 12), a town of the Tarzitani in Hispania Baetica, on the road from Cadiz to Corduba. (Itin. Ant. p. 410.) It is probably the town called Uyana by Pliny (ii. 1. s. 3), with the surnames of Castrum Julianum or Lucanum, and the name of the island is still preserved by the town of Las Cabezas, where there are some antiquities. (Ch. Uberti, ii. pt. i. p. 356.)

VIA AEMILIA (η Aυιιιιιίι οδος), one of the most celebrated and important of the Roman highways, and the first that was constructed by them in Northern Italy. The period of its first construction is clearly marked by Livy, who tells us that M. Aemilius Lepidus, the consul of B.C. 187, after having effectually subdued the Ligurians, carried a highroad from Placentia to Ariminum, that it might there join the Flaminian Way ("Viam ab Placentia, ut Flaminianam suscentint, et passans a Ariminum perdax," Liv. x xix. 2). Strabo indeed gives a different view of the case, and speaks of the Aemilian Way as constructed in the first instance only from Ariminum to Bononia, and thence sweeping round the marshes, and skirting the roots of the Alps to Aquileia (v. p. 217). But there is every reason to suppose that this last branch of the road was not constructed till long afterwards; and there is no doubt of the correctness of Livy's statement that the original Via Aemilia, and the only one that was generally recognised as such, was the line of road from Ariminum to Placentia. This was the celebrated highway— which is still in use at the present day, and, being carried the whole way through a level plain, preserves almost a straight line during a course of 180 miles—that became the means of carrying Roman civilisation into the heart of Cisalpine Gaul; and so great was its influence upon the population that it traversed, that the whole district between the Apennines and the Padus, constituting the Eighth Region of Augustus, and commonly called by geographers Gallia Cispadana, came to be known as Aemilia, and was eventually constituted into a province under that name. The period at which this took place is uncertain, but the appellation was doubtless in popular use long before it became an official designation; and as early as the first century we find Martial employing the expressions, "Aemiliae de regione viae," and even "tota in Aemilia" (Martial. iii. 4. 2, vi. 85. 6). As indeed all the principal towns of the district (with the single exception of Ravenna) were situated on the Via Aemilia, the use of this designation seems extremely natural.

We have no account of the period at which the Via Aemilia was continued from Placentia to Mediolanum, though there is little doubt that it would take
VIA AEMILIA.

place soon after the complete subjugation of the Transpadane Gauls. Nor do we know with any certainty whether the name of Via Aemilia was ever applied in common usage to this portion of the road, or to the branches that led from Mediolanum to the foot of the Alps, as well as from that city by Verona to Padavium. But as Strabo distinctly applies the name to the branch that led from Padavium to Aquileia, we may here most conveniently include all the principal highroads of the N. of Italy under one view in the present article.

1. The main or trunk line of the Via Aemilia from Ariminum to Placentia. The stations on this road are thus given in the Antonine Itinerary, where they are repeated more than once (pp. 99, 126, 287); and, from the direct line of the road, the distances are subject to no doubt:—

From Ariminum (Rimini) to
Caesena (Caesena) - - - xx. M. P.
Faventia (Faenza) - - - xxiv.
Forum Cornelli (Imola) - - x.
Bononia (Bologna) - - - xxiv.
Mutina (Modena) - - - xxv.
Regium (Reggio) - - - xvii.
Parma (Parma) - - - xviii.
Fidentiola (Borgo S. Donino) xv.
Placentia (Placentia) - - - xxiv.

The same line is given more in detail in the Jerusalem Itinerary (p. 615, &c.), with which the Tabula substantially agrees; but the distances are more correctly given in the latter.

The stations enumerated are:—

Camaena (L. I. App. Confruentes (Tub.)) - - - x.: M. P.
Casena (Caesena) - - - viii.
Forum Populi (Forlìmpopoli) vii.
Forum Livii (Forlì) - - vii.
Faventia (Faenza) - - x.
Forum Cornelii (Imola) - - x.
Claterna (Quaderna) - - xiv.
Bononia (Bologna) - - x.
Forum Gallorum - - - xxv.
Mutina (Modena) - - xvi.
Regium (Reggio) - - xvii.
Tartessum (Tirano) - - xi.
Parma (Parma) - - vii.
Fidentiola (Borgo S. Donino) xv.
Fiorenza (Firenzuola) - - x.
Placentia (Placentia) - - xv.

The general agreement in the distances given (which are those of the Tabula) with those of the Antonine Itinerary, though the division is different, sufficiently shows the accuracy of the two. The distances in the Jerusalem Itinerary are, for this line of route, generally less accurate. Some obscure Mutations mentioned in the one document, and not in the other, have been omitted in the above list.

2. Continuation of the Via Aemilia from Placentia to Mediolanum. This line is summarily given in the Antonine Itinerary thus:—

From Placentia to Laus
Pompeia (Lodi Vecchio) - - xxiv. M. P.
Thence to Mediolanum (Milan) xvi.

The same distances are thus divided in the Jerusalem Itinerary:—

Allia - - - - xi. M. P.
Tres Tabarne - - - - v.
Laus - - - - viii.
Ad Noricum - - - - vii.
Mediolanum - - - - vii. (ix.?)

The intermediate stations are unknown, and are expressly called mere Mutationes, or places for changing horses.

3. From Mediolanum to Augusta Praetoria, at the foot of the Alps, the distances, as given in the Antonine Itinerary, are:—

From Mediolanum to
Novara (Novara) - - - xxxii. M. P.
Vercleria (Verceli) - - - xvi.
Eperedia (Epeo) - - - xxii.
Vitricum (Verce) - - - xii.
Angusta Praetoria (Aosta) - - xxv.

The same authority gives a circuitous line of route from Mediolanum to Vercleria (where it rejoins the preceding) by

Ticium (Tirano) - - - xvi. M. P.
Laumellum (Lomello) - - - xii.
Vercleria (Verceli) - - - xvi.

4. From Mediolanum to Aquileia. The stations given in the Itineraries are as follows:—

Med. to Argentina - - - s. M. P.
Pons Aurelii (Postirolo) x.
Bergamum (Bergamo) - xii.
Brixia (Bre西亚) - - xxxvii. (xxvii.)
Sirmio (Sirmione) - xii.
Verona (Verona) - - xii.
Vicentia (Vicenza) - - xxxiii.
Patavium (Padova) - - xvii. (xxi.)
Altimum (Altino) - - xxxii.
Concordia (Concordia) - - xxx.
Aquileia (Aquileia) - - xxxi.

(In the above line of route the minor stations (Mutationes) given in the Jerusalem Itinerary are omitted. For an examination of them, and a careful comparison of all the Roman roads through Cisalpine Gaul, see Wallis, Geographie des Gaules, vol. iii. pp. 2—13.)

5. From Bononia to Aquileia. This is the road of which Strabo expressly speaks as a continuation of the Via Aemilia (v. p. 217), but it is probable that he did not mean to say that it branched off directly from Bononia; at least the only line given in the Itineraries turns off from the main line of the Via Aemilia at Mutina, and thence proceeds to

Vicus Serninus (?) - - - xxiii. M. P.
Vicus Varianus (Bariano, on the N. bank of the Po) - - x.
Ameliacum (Legnago?) - - xvii.
Ateste (Este) - - - - xx.
Patavium (Padova) - - xxv.

whence it followed the same line to Aquileia as that given above. Another line of road, which though more circuitous was probably more frequented, led from Mutina by Calecara (an uncertain station) to Hostilia (Ostitlia), where it crossed the Padus, and thence direct to Verona (xxx. M. P.). (Itin. Ant. p. 282.)

6. From Placentia to Dertona, where it communicated with the road constructed by Aemilius Scarnus across the Apennines to Vada Sabata. (Strab. v. p. 217.) The stations on this short line were:—

From Placentia to
Comilungous - - - - xxxv. M. P.
Iria (Iglieru) - - - - xvi.
Dertona (Tortona) - - x.

The first station, Comilungous, or Camilungus, as the name is written in the Tabula, is unknown, but must have been situated a short distance to the W. of Bruni.

7. Lastly, a branch of the Via Aemilia led from Placentia to Ticinium (Tirano), whence it was carried westwards to Augusta Taurinorum (Turin) and

1287
the foot of the Cottian Alps. This was therefore one of the great highways leading to Gaul. But the stations on it, as given in the Tabula, are very confused, and can only partially be restored by the assistance of the Antonine Itinerary, which nowhere gives this road in its entirety. At Ticinum it was joined by another road leading from Mediolanum to that city. The stations, as given in the Jerusalem Itinerary (p. 556), are as follows:—

Ticinum
Durne (Durno) — xii. M. P.
Lanum (Lomello) — ix.
Ad Cottias (Cocco) — xii.
Ad Medias — — xiiii.
Rigenagrus (Trino Vecchio) — x.
Ceste (?) — — viii.
Quadraete (near Longobardia) — xii.
Ad Decicum — — xiiii.
Taurin (Turin) — — x.
Ad Fines (Aoviagnaro) — — xvi.
Ad Duaeaddium — — xii.
Segusio (Sassu) — — xiiii.

The rest of the route over the Cottian Alps is given in the article Alpes. [E. H. B.]

VIA AEMILIA SCAURI, is the name given, for the sake of distinction, to a road which was constructed by Aemilius Scaurus long after the more celebrated Via Aemilia above described. Strabo, the only author who distinctly mentions the two, says that Aemilius Scaurus, after having drained the marshes on the S. side of the Padus, constructed the Aemilian Way through Pisse and Luna as far as Sabata, and thence through Dertona. (Strab. v. p. 217.) Whether "the other Aemilian Way," as Strabo calls it, had been already continued from Placentia to Derthona, or this also was first effected by Scaurus, we know not; but it is clear that the two were thus brought into connection. The construction of this great work must be assigned to the censorship of M. Aemilius Scaurus, in B.C. 109, as we learn from Aurelius Victor (V. I, Ill. 79), who, however, probably confounds it with the more celebrated Via Aemilia from Placentia to Ariminum. But a comparison of the two authors leaves no doubt as to the road really meant. The name seems to have gradually fallen into disuse, probably on account of the ambiguity arising between the two Viae of the same name; and we find both the coast road from Pisse to Vada Sabata, and that across the mountains from the latter place by Apuane Stateiiae to Dertona, included in the Itineraries as a part of the Via Aurelia, of which the former at least was in fact a mere continuation. Hence it will be convenient to discuss the stations and distances along these lines, under the general head of Via Aurelia. [E. H. B.]

VIA AMERINA, is the name given in an inscription of the time of Hadrian (Orell. Inscr. 3306) to a line of road, which must obviously be that leading direct from Rome to Ameria. This, as we learn from the Tabula, branched off from the Via Cassia at Baccaneae (Baccano), and proceeded through Nepete and Falerni to Ameria. The stations and distances as there given are:—

Rome to Baccaneae — — xii. M. P.
Nepete (Nepi) — — ix.
Falerni (Sui. Maria di Falleri) — — v.
Castellum Amerinum — — xii.
Ameria (Amelia) — — ix.

The sum of these distances (56 miles) agrees precisely with the statement of Cicer, who, in the

oration Pro Sexto Racio Amerino (c. 7. § 18), observes that it was 56 miles from Ameria to Rome.

According to the Tabula a prolongation of the same road led from Ameria to Tudor, and thence by a circuitous route through Vettona and Perusia to Cisium, where it rejoined the Via Cassia. The first station to Ameria is omitted: thence to Tudur (Todi), was — — vii. M. P.

Vettona (Vettona) — — xx.

Perusia (Perugia) — — xiv.

The distance from that city to Cisium is again omitted. [E. H. B.]

VIA APPIA (5 Aemilia aps), the greatest and most celebrated of all the Roman highways in Italy, which led from Rome direct to Brundisium, and thus became the principal line of communication with Greece, Macedonia and the East. Hence it became, in the flourishing times of the Roman Empire, the most frequented and important of the Roman roads, and is called by Statius "regina viarum." (Silv. ii. 2.12.) Martial also calls it "Appia... Ausoniae maxima fana viae" (ix. 102). The former author terms it "numosa Appia," in reference to its great antiquity (Th. iv. 3. 163.) It was indeed the earliest of all the Roman highways, of the construction of which we have any definite account, and very probably the first of all that was regularly made as a public work; the Via Salaria, Tiburinica, &c., having doubtless long been in use as mere natural roads, before they were converted into solidly constructed Viae. There must in like manner have always been some kind of road communicating from Rome with Alba and Aricia: but it is evident, from the perfectly straight line followed by the Via Appia from a point very little without the gates of Rome to Aricia, that this must have been a new work, laid out and executed at once. The original construction of the Via Appia was undoubtedly due to the censor Appius Claudius Caeceus, who commenced it in B.C. 312, and completed it as far as Capua before the close of his censorship. (Liv. ix. 29; Diod. xx. 36; Frontin. de Aquaed. 5; Orell. Inscr. 539.) From Capua it was undoubtedly carried on to Beneventum, and again at a subsequent period to Brundisium; but the date of these continuations is unknown. It is evident that the last at least could not have taken place till after the complete subjugation of the south of Italy in B.C. 266, and probably not till after the establishment of the Roman colony at Brundisium, B.C. 244. Hence it is certainly a mistake when Aurelius Victor speaks of Appius Claudius Caeceus as having carried the Appian Way to Brundisium. (Vic. V. III. 34.) The continuation and completion of this great work has been assigned to various members of the Claudian family; but this is entirely without authority.

Strabo distinctly speaks of the Appian Way as extending, in his time, from Rome to Brundisium; and his description of its course and condition is important. After stating that almost all travellers from Greece and the East used to land at Brundisium, he adds; "From thence there are two ways to Rome, the one adapted only for mules, through the country of the Peucettians, Daunians, and Samnites, to Beneventum, on which are the cities of Neptunia, Caecilia, Caparum, and Herdonia; the other through Tarentum, deviating a little to the left, and going round about a day's journey, which is called the Appian, and is better adapted for carriages. On this are situated Ursus (between Brundisium and Tarentum) and Venusia, on the confines of the Samnites and Lucanians. Both these roads,
starting from Brundisium, meet at Beneventum. Thence to Rome the road is called the Appian, passing through Caesarea, Calahis, Capua, and Castrum, to Simeoos. The whole distance from Rome to Brundisium is 360 miles. There is yet a third road, from Rhegium, through the Bruttians and Lucanians, and the lands of the Samnites to Campania, where it joins the Appian; this passes through the Apennine mountains, and is three or four days' journey longer than that from Brundisium." (Strab. v. p. 283.) It is not improbable that the first of these branches, which Strabo distinctly distinguishes from the true Appian Way, is the Via Numonica or Minucia (the reading is uncertain), mentioned by Horace as the alternative way by which it was customary to proceed to Brundisium (Sat. i. 18. 20.) But Strabo gives us no information as to how it proceeded from Herdonia, in the plains of Apulia, through the mountains to Beneventum. It is, however, probable that it followed nearly the same line as the high road afterwards constructed by Trajan, through Aecae and Equus Tobicus. This is indeed one of the principal natural passes through this part of the Apennines, and is still followed, with little deviation, by the modern highroad from Naples to Briendisi and Taranto. But it is worthy of remark, that Horace and his companions in their journey to Brundisium of which he has left us the poetical itinerary (Sat. i. 5), appear not to have followed this course, but to have taken a somewhat more direct route through Trivicum, and a small town not named ("opppidum quod versus dicere non est"), to Camnusium. This route, which does not agree either with these mentioned by Strabo, or with those given in the Itineraries, was probably disused after that constructed by Trajan, through Equus Tobicus and Aecae, had become the frequent line. It was to that emperor that the Appian Way was indebted for many improvements. He restored, if he was not the first to construct, the highroad through the Pontine Marshes from Forum Appii to Tarracina (Dion Cass. lviii. 15; Hoare, Class. Tour, vol. i. p. 28); and he at the same time constructed, at his own expense, a new line of highroad from Beneventum to Brundisium (Gruter, Inscr. p. 151. 2), which is undoubtedly the Via Trajana celebrated by coins. (Eckhel, vol. iv. p. 421.) It is probable (as already pointed out) that he did no more than render practicable for carriages a line of route previously existing, but accessible only to mules; and that the Via Trajana coincided nearly with the road described by Strabo. But from the time that this road was laid open to general traffic, the proper Via Appia through Venusia to Tarentum, which traversed a wild and thinly-peopled country, seems to have fallen much into disuse. It is, however, still given in the Antonine Itinerary (p. 120) though not as the main line of the Appian Way. The latter appellation seems indeed to have been somewhat vaguely used under the Empire, and the same Itinerary bestows the name on the line, already indicated by Strabo (l. c.), that proceeded S. through Lucania and Bruttium to Rhegium, on the Sicilian Strait, a route which never went near Beneventum or Brundisium at all.

The Appian Way long survived the fall of the Western Empire. That portion of it which passed through the Pontine Marshes, which was always the most liable to suffer from neglect, was restored by Theodicus (Gruter. Inscr. p. 152. 8); and Procopius, who travelled over it 40 years later, speaks with admiration of the solidity and perfection of its construction. "The Appian Way (says he) extends from Rome to Capua, a journey of five days for an active traveller. Its width is such as to admit of the passage of two waggons in contrary directions. The road itself is worthy of the highest admiration, for the stone of which it is composed, a kind of mill-stone, and by nature very hard, was brought by Appius from some distant region, since none such is found in this part of the country. He then, after having smoothed and levelled the stones, and cut them into angular forms, fitted them closely together, without inserting either broze or any other substance. But they are so accurately fitted and joined together, as to present the appearance of one compact mass naturally united, and not composed of many parts. And notwithstanding the long period of time that has elapsed, during which they have been worn by the continual passage of so many carriages and beasts of burden, they have neither been at all displaced from their original position, nor have any of them been worn down, or even lost their polish." (Procop. B. g. i. 14.) The above description conveys an accurate impression of the appearance which the Appian Way must have presented in its most perfect state. The extraordinary care and accuracy with which the blocks that composed the pavement of the Roman roads were fitted together, when first laid down, is well seen in the so-called Via Triumphalis, which led to the Temple of Jupiter, on Mons Albanus. [AlEANUS MONS.] But it is evident from many other examples, that they became much worn down with time; and the pavement seen by Procopius had doubtless been frequently restored. He is also mistaken in supposing that the hard basaltic lava (siliex) with which it was paved, had to be brought from a distance: it is found in the immediate neighbourhood, and, in fact, the Appian Way itself, from the Copo di Bone to the foot of the Alban Hills, runs along a bank or ridge composed of this lava. Procopius also falls into the common mistake of supposing that the road was originally constructed by Appius Claudius such as he beheld it. But during the long interval it had been the object of perpetual care and restoration; and it is very doubtful how far any of the great works along its line, which excited the admiration of the Romans in later ages, were due to its original author. Caius Gracchus in particular had bestowed great pains upon the improvement of the Roman roads; and there is much reason to believe that it was in his time that they first assumed the finished appearance which they ever afterwards bore. (Plut. C. Gracch. 7.) Caesar also, when a young man, was appointed "Curator Viae Appiae," which had become a regular office, and laid out large sums of money upon its improvement. (Plut. Caes. 5.) The care bestowed on it by successive emperors, and especially by Trajan, is attested by numerous inscriptions. It is very doubtful, indeed, whether the original Via Appia, as constructed by the censor Appius, was carried through the Pontine Marshes at all. No mention is found of his draining those marshes without which such a work would have been impossible; and it is much more probable that the road was originally carried along the hills by Cora, Norta, and Setia, by the same line which was again in use in the last century, before the Pontine Marshes had been drained for the last time by Pius VI. This conjecture is confirmed by the circumstance that Lucullus, in
VIA APPIA.

describing his journey from Rome to Capua, complains of the extremely billy charactar of the road in approaching Setia. (Lucil. Fraga. iii. 6, ed. Ger- lach.) Even in the time of Horace, as we learn from his well-known description of the journey to Brundusium, it was customary for travellers to continue their route from Forum Appii by water, embarking at that point on the canal through the Pontine Marshes (Hor. Sat. i. 5, 11, &c.). But the very existence of this canal renders it probable that there was at that time a road by the side of it, as we know was the case in Strabo’s time, notwithstanding which he tells us that the canal was much used by travellers, who made the voyage in the night, and thus gained time. (Strab. vi. 2. 233.)

It will be convenient to divide the description of the Appian Way, as it existed under the Roman Empire, and is given in the Itineraries, into several portions. The first of these from Rome to Capua was the main trunk line, upon which all its branches and extensions depended. This will require to be described in more detail, as the most celebrated and frequented of all the Roman highways.

1. From Rome to Capua.

The stations given in the Antonine itinerary are:—

From Rome to Afrila (Larioccius) — - xvi. M.P.
Tres Tabernae — - xvii.
Appii Forum — - x.
Tarracina (Terracina) — xviii.
Fundi (Fondi) — - xvi. (xiii.)
Formiae (Mola di Girola) — xiii.
Minturnae (near Fregolito) — ix.
Simessa (Mendragone) — ix.
Capua (Sto. Maria) — - xvi. (xxvi.)

The above stations are for the most part well known, and admit of no doubt. Those in the neighbourhood of the Pontine Marshes have indeed given rise to much confusion, but are in fact to be easily determined. Indeed, the road of the road being almost perfectly straight from Rome to Tarracina renders the investigation of the distances a matter of little difficulty.

The Jerusalem Itinerary (p. 611) subdivides the same distance as follows:

Rome to Ad Nonum (mutatio) — - ix. M.P.
Aricia (civita) — - vii.
Sponsaeor Ad Sponsas (mutatio) — xix.
Appii Forum (fossa) — - xvi. (xii. ?)
Ad Medius (fossa) — - ix.
Tarracina (civitas) — - x.
Fundi (fossa) — - xii.
Formiae (fossa) — - xii.
Minturnae (fossa) — - ix.
Simessa (fossa) — - ix.
Pons Campanus (mutatio) — - ix.
Ad Octavum (fossa) — - ix.
Capua (civitas) — - viii.

The intermediate stations were (as they are expressly called in the itinerary itself) mere Mutations, or posthouses, where relays of horses were kept. The determination of their position is therefore of no interest, except in connection with the distances given, which vary materially from those of the other Itinerary, though the total distance from Rome to Capua (125 miles) is the same in both.

The Appian Way issued from the Porta Capena, in the Servian walls of Rome, about half a mile outside of which it separated from the Via Latina, so that the two roads passed through different gates in the walls of Anroilan. That by which the Via Appia finally quitted Rome was known as the Porta Appia; it is now called the Porta S. Sebastiano. The first milestone on the road stood about 120 yards outside this gate; the distances are always continuing to be measured from the old Porta Capena. The buildings and tombs which bordered the Via Appia in that portion of it which lay between the two gates, are described in the article ROMA, p. 821. It was apparently in this part of its course, just outside the original city, that it was spanned by three triumphal arches, erected in honour of Drusus (the father of the emperor Claudius), Trajan, and L. Verus. One only of these still remains, just within the Porta S. Sebastiano, which, from its plain and undamaged style of architecture, is probably that of Drusus. Outside the Porta Appia the road descends to a small stream or brook, now called Aquatacchio, which it crosses by a bridge less than half a mile from the gate: this tributary stream is identified, on good grounds, with the river Almo, celebrated for the peculiar sacred rites with which it was connected [ALMO]. A short distance beyond this the road makes a considerable bend, and ascends a bank or ridge before it reaches the second milestone. From that point it is carried in a straight line direct to the remains of Bovalia at the foot of the Alban Hills, running the whole way along a slightly elevated bank or ridge, formed in all probability by a very ancient current of lava from the Alban Mount. This long, straight line of road, stretching across the Campania, and bordered throughout by the remains of tombs and ruins of other buildings, is, even at the present day, one of the most striking features in the neighbourhood of Rome, and, when the edifices which bordered it were still perfect, must have constituted a magnificent approach to the Imperial City. The whole line has been recently cleared and carefully examined. It is described in detail by the Cap. Canina (in the Annali dell’ Instituto di Corrispondenza Archeologica for 1852 and 1853: and more briefly by Desjardins, Essai sur la Topographie du Latium, 4to, Paris, 1854, pp. 92—130. We can here mention only some of the most interesting of the numerous monuments that have been thus brought to light, as well as those previously known and celebrated.

On the right of the road, shortly after crossing the Almo, are the remains of a vast sepulchre, which now serve to support the tavern or Ostleria dell’Acquatecchio; this is clearly identified by the inscriptions discovered there in 1773, as the monument of Aba- scantius, a freedman of Domitian, and of his wife Prisca, of which Statins has left us in one of his poems a detailed description (Stat. Silv. v. 1). On the left of the road, almost exactly 3 miles from Rome, is the most celebrated of all the monuments of this kind, the massive sepulchre of Cecilia Metella, the daughter of Q Metellus Creticus, and wife of Crassus the triumvir. Converted into a fortress in the middle ages, this tower-like monument is still in remarkable preservation, and, from its commanding position, is a conspicuous object from all points of the surrounding country. It is popularly known as the Capo di Bove, from the bucanier which appears as an ornament in the frieze. (A view of this remarkable monument is given in the article ROMA, p. 892.) Before reaching the Capo di Bove, the road passes some extensive remains of buildings on the left, which appear to have formed part of an imperial villa constructed by the emperor Maxentius, attached to which are the remains of a circus, also the work of the same emperor, and which, from their remarkably perfect condition, have thrown much light
on the general plan of these edifices. [ROMA, p. 844]

Proceeding onwards from the tomb of Caecilia Metella, the road is bordered throughout by numerous sepulchres, the most remarkable of which is the tomb of Cerialus, at a distance of 3 miles from Rome. The remarkable preservation of the ancient road in this part of its course, shows the accuracy of the description above cited from Procopius; but it is remarkable that this, the greatest and most frequented highway of the Roman empire, was only just wide enough to admit of the passage of two carriages abreast, being only 15 feet broad between the raised crepidines which bordered it. After passing a number of obscure tombs on both sides of the way, there occurs, just beyond the fifth mile from Rome, a remarkable enclosure, of quadrangular form, surrounded by a low wall of Alban stone. This has frequently been supposed to be the Campos Sacer Horatiorum, alluded to by Martial (iii. 47) as existing on the Appian Way, and which preserved the memory of the celebrated combat between the Horatii and Curatii. This was believed to have been fought just about 5 miles from Rome (Liv. i. 23), which would accord well with the position of the enclosure in question; but it is maintained by modern antiquaries that this, which was certainly of a sacred character, more probably served the purposes of an Ustrinum, or place where the bodies of the dead were deposited temporarily to their being deposited in the numerous sepulchres that lined both sides of the Appian Way. These still form a continuous cemetery for above two miles farther. The most massive of them all, which must, when entire, had greatly exceeded even that of Caecilia Metella in magnitude, and from its circular form is known as the Casal Rotondo, occurs near the 6th mile from Rome, on the left of the Via Appia. From a fragment of an inscription found here, it is probable that this is the tomb of Messala Corvinus, the friend of Augustus and patron of Tibullus, and is the very monument, the massive solidity of which is more than once referred to by Martial (Messalae saxa, viii. 3. 5; "marmor Messalae," x. 2. 9). Somewhat nearer Rome, on the same side of the road, are extensive ruins of a different description, which are ascertained to be those of a villa of the Quintilii, two brothers celebrated for their wealth, who were put to death by Commodus (Dion Cass. lxxii. 5), after which the villa in question probably became an imperial residence.

Some remains of a small temple, just 8 miles from Rome, have been supposed to be those of a temple of Hercules, consecrated or restored by Domitian at that distance from the city (Martial, iii. 47. 4, ix. 65. 4, 102. 12); but though the site of the temple in question is clearly indicated, it appears that the existing remains belong to an edifice of earlier date. Exactly 9 miles from Rome are the ruins of a villa of imperial date, within which is a large circular monument of brick, supposed with good reason to be the tomb of Gallienus, in which the emperor Flavius Severus also was buried. (VICT. EPIT. Ix.) Close to this spot must have been the station of Xami, as mentioned in the Jerusalem Itinerary (c. c.). The road is still bordered on both sides by tombs; but none of these are of any special interest. At the Osteria delle Fratocchie (between 11 and 12 miles from Rome) the ancient Via is joined by the modern road to Albano; it here commences the ascent of the Alban Hills, which continues (though at first very gradually) for above 3 miles. A little farther on are the remains of Bovilae; the principal ruins of which lie a short distance to the right of the road. [BOVIIAE.]

The Tabula marks that place as a station on the Via Appia, but erroneously places it 10 miles from Rome, while the real distance is 12 miles. Thence the road (still retaining its straight line) ascended the hill to Albano, near on the site of the Albanum of Domitian, which, as we learn from Martial, was just 14 miles from Rome. (Martial, ix. 65. 4, 102. 12.) The remains of the imperial villa border the road on the left for some distance before reaching the modern town. Two miles farther was Aricia, which is correctly placed by both the Itineraries 16 miles from Rome. The station was probably below the town, outside of the walls, as the Via Appia here deviates from the straight line which it has pursued so long, and descends into the hollow below the city by a steep slope known as the Cirius Aricinus. A little farther on it is carried over the lowest part of the valley by a causeway or substruction of massive masonry, one of the most remarkable works of the kind now extant. [ARICIA.]

The remainder of the road will not require to be described in such detail. From Aricia it was continued, with a slight deviation from the direct line, avoiding the hills of Genzano and those which bound the Lake of Nemi, on the left, and leaving the Nenuvium at some distance on the right, till it descended again into the plain beyond the Alban Hills and reached the station of Tres Tabernae. An intermediate station, Sub Lenuvio, indicated only in the Tabula, must have been situated where a branch road struck off to the city of Lenuvium. The position of Tres Tabernae has been much disputed, but without any good reason. That of Forum Appii, the next stage, is clearly established [FORUM APPII], and the 43rd milestone of the ancient road still exists on the spot; thus showing that the distances given in the Antonine Itinerary are perfectly correct. This being established, it is clear that Tres Tabernae is to be placed at a spot 10 miles nearer Rome, and about 3 miles beyond the modern Ciuterna, where there are still ruins of ancient buildings, near a medieval tower called the Torre d'Annibale. The ancient pavement is still visible in many places between Aricia and Tres Tabernae, and no doubt can exist as to the course of the road. This was indeed carried in a perfectly straight line from the point where it descended into the plain, through the Pontine Marshes to within a few miles of Terracina. The position of the station Ad Sponsas, mentioned in the Jerusalem Itinerary, cannot be determined, as the distances there given are incorrect. We should perhaps read xii. for vii. as the distance from Forum Appii, in which case it must be placed 2 miles nearer Rome than Tres Tabernae. Between the latter station and Forum Appii was Triponium, at which commenced the canal navigation called Decennium from its being 19 miles in length. The site of this is clearly marked by a tower still called Torre di Tre Ponti, and the 19 miles measured thence along the canal would terminate at a point 3 miles from Terracina, where travellers quitted the canal for that city. An inscription records the paving of this part of the road by Trajan. The solitary posthouse of Mes a

* It was probably this long ascent that was known as the CLIVUS VIRBIL, mentioned by Pausius (vi. 55).
is evidently the station Ad Medias of the Jerusalem Itinerary. A short distance from Terraecina the Via Appia at length deviated from the direction it had so long pursued, and turning to the left ascended the steep hill on which the ancient city stood [Tarracina], while the modern road is carried round the foot of this hill, close to the sea. The distance of Tarracina from Rome is correctly given at 61 miles in the Antonine Itinerary.

From Terraecina the line of the ancient road may still be traced distinctly all the way to Fondo, and is flanked by ruins of villas, dilapidated towns, &c., through a great part of its course; but first ascended the hill above the city as far as the convent of San Francesco, and afterwards descended into the valley beneath, joining the modern highroad from Rome to Naples about 3 miles from Terraecina, just before crossing the frontier of the Papal States. The narrow pass at the foot of the mountains, which the road here follows, between the rocks and the marshy lake of Fondo, is the celebrated defile of Lautulæ, or Ad Lautulæ, which more than once bears a conspicuous part in Roman history. [Lautulæ.] The distance from Terraecina to Fondo is overstated in the Antonine Itinerary; the true distance does not exceed 13 miles, as correctly given in the Jerusalem Itinerary. From Fondo to Formine (Mola di Gaeta), a distance of 13 miles, the road passed through a rugged and mountainous country, crossing a complete mountain pass: the substructions of the ancient way are in many places still visible, as well as portions of the pavement, and numerous ruins of buildings, for the most part of little interest. The bridges also are in several instances the ancient ones, or at least rest upon ancient substructions. The ruins of Formine and of the numerous villas with which it was adorned line the shores at Mola di Gaeta, and bound the road for a space of more than 2 miles; other ruins, principally sepulchral, are scattered along its line almost all the way thence to Minturnæ. The ruins of this latter city stand on the right bank of the Liria (Gavigliano), a short distance from its mouth, and about a mile and a half below the village of Trephetto. The line of the ancient road from Mola thus is clearly traced and susceptible of no doubt; the distance is correctly given as 9 miles. Here the Via Appia crossed the Liria, and was continued nearly in a straight line through a level and marshy district along the sea-coast to Sinuessa, the ruins of which are found near the village of Monteacroce. The distance of 9 miles between the two (given in both Itineraries) is somewhat less than the truth. It was at Sinuessa that the Appian Way finally quitted the coast of the Tyrrenian sea (Strab. v. p. 233), and struck inland towards Capua, passing by the stations of Pons Campanus and Ad Octavum. But this part of its course has not been very distinctly traced, and there is some difficulty as to the distances given. The three sub-divisions of the Jerusalem Itinerary would give 26 miles for the total distance from Sinuessa to Capua; and the coincidence of this sum with the statement of the Antonine Itinerary, as given by Wesseling, is a strong argument in favour of the reading xxvi. M. P. instead of xvi. adopted by Rinder. The latter number is certainly too small, for the direct distance between the two points is not less than 21 miles, and the road must have deviated from the straight line on account of the occurrence of the marches of he Savo, as well as of the river Vulturum. It is probably, therefore, that it made a considerable bend, and that the distance was thus prolonged; but the question cannot be settled until this part of the road has been more accurately traced than has hitherto been done. The distances given in the Tabula are too inaccurate to be of any use; but it appears probable from that document that the Pons Campanus was a bridge over the little river Savo, and not, as might have been suspected, over the Vulturnus, which the Appian Way did not cross till it arrived at Cassilium, 3 miles from Capua. It was here that it united with the Via Latina. (Strab. v. p. 237.)

The total distance from Rome to Capua (if we adopt 26 miles as that from Sinuessa) was therefore 131 miles. This portion of the Via Appia as far as Minturnæ has been traced with much care by Westphal (Römische Kampagne, pp. 22–70), as well as by Chauzy (Maison d'Horsac, vol. iii. pp. 363–461) and Sir R. Hoare (Classical Tour, vol. i. pp. 81–148); but all these accounts are deficient in regard to the portion between Minturnæ and Capua.

Several minor branches or cross lines parted from the Appian Way during this first portion of its course. Of these it may suffice to mention: 1. The Via Ardeatina, which quitted the Via Appia at a short distance beyond the Almo, just after passing the Ostleria dell'Acqueatocio: it proceeded in a nearly straight line to Ardea, 23 miles from Rome. [Ardea.] 2. The Via Antiatina, which branched off from the Appian Way just before reaching Bovillæ, and proceeded direct to Antium, 38 miles from Rome. It probably followed nearly the same line as the modern road, but its precise course has not been traced. 3. The Via Nefrina quitted the Appian Way shortly after passing Troquandum, and proceeded in a direct line to Setia (Scize); considerable portions of the ancient pavement still remain. 4. A branch road, the name of which is unknown, diverged from the Via Appia at Minturnæ, and proceeded to Teanum (18 miles distant) on the Via Latina, whence it was continued through Alliae and Telesia to Beneventum. [Via Latina.] 5. The Via Domitiana, constructed by the emperor of that name, of which Statius has left us a pompous description. (Silv. iv. 3.) It was a continuation of the coast-road from Sinuessa, being the modern line of the coastal road from Capua to Minturnæ.

From Sinuessa to Liternum xxiv. m. p. (this must be a mistake for xiv.) thence to Cuma - vi. Puteoli - iii. Neapolis - x. There was also a direct road from Capua to Neapolis (Tab. Pent.), passing through Atelia, which was midway between the two cities. 2. From Capua to Beneventum. This portion of the road may be very briefly disposed of. From Capua it was continued along in the plain as far as Calatia, the site of which is fixed at Le Galazze, near Maddaloni; it then entered the Apennines, and, passing through the valley of Ariceno, commonly supposed to be the celebrated
VIA APPIA.

valley of the Caudine Forks, reached Caulonia, which must have been situated about 4 miles beyond Arpaja, on the road to Beneventum. The distances given along this line are—

From Capua to Calatia - vi. M. P.
All Novus - viii.
Caulonia - ix.
Beneventum - xi.

It was at Beneventum, as above shown, that the two main branches of the Appian Way separated: the one proceeding by Venusia and Tarentum to Brundusium; the other by Equus Tuticus and Canusium to Bariunum, and thence along the coast of the Adriatic. We proceed to give these two branches separately.

3. From Beneventum to Brundusium, through Venusia and Tarentum.

The line of this road is given in the Antonine Itinerary (p. 120) as well as in the Tabula; but in this last it appears so broken and confused a form that it would be unintelligible without the aid of the other authority. But that this line was the original Via Appia is proved not only by the distinct testimony of Strabo, and by incidental notices which show that it was the frequent and customary route in the time of Cicero (Cic. ad Att. v. 5, 7), but still more clearly by an inscription of the time of Hadrian, in which the road from Beneventum to Acclanum is distinctly called the Via Appia. The greater part of the line from Beneventum to Venusia, and thence to Tarentum, was carried through a wild and mountainous country; and it is highly probable that it was in great measure abandoned after the more convenient line of the Via Trajana was opened. It appears that Hadrian restored the portion from Beneventum to Acclanum, but it is doubtful whether he did so farther on. Nevertheless the general course of the road can be traced, though many of the stations cannot be fixed with certainty. The latter are thus given in the Antonine Itinerary—

From Beneventum to Acclanum -
Sub Romulae - xxv. M. P.
Pons Auidii - xxiii.
Venusia (Venosa) - xviii.
Silvium (Garagna) - xx.
Blera (Gravina) - xiii.
Sub Lupatia - xiv.
Canale - xx.
Tarentum (Taranto) - xx.

Acclanum, or Eclanum as the name is written in the Itineraries, is fixed beyond a doubt at Le Grotte, near Mirabella, just 15 miles from Beneventum, where a town grew up on its ruins in the middle ages with the name of Quintolacenum. [ACCLANUM.] The site of Romulae is much less certain, but may perhaps be placed at Bisaccia, and the station Sub Romulae in the valley below it. The Pons Auidii is the Ponte Sta Venere, on the road from Lacedogna to Venosa, which is unquestionably an ancient bridge, and the distance from Venusia agrees with that in the Itinerary, which is confirmed also in this instance by the Tabula. The latter authority gives as an intermediate station between Sub Romulae and the Pons Auidii, Aquilonea, which is probably Lacedogna; but the distances given are certainly incorrect. In this wild and mountainous country it is obviously impossible at present to determine these with any accuracy. From Venusia again the Via Appia appears to have passed, in as direct a line as the nature of the country will allow, to Tarentum; the first station, Silvium, may probably be placed at Garagna, and the second, Plera, or Blera, at or near Gravina; but both determinations are very uncertain. Those of Sub Lupatia and Canale are still more vague, and, until the course of the ancient road shall have been traced upon the spot by some traveller, its idle to multiply conjectures.

From Tarentum to Brundusium the Antonine Itinerary gives 44 M. P., which is nearly correct; but the intermediate stations mentioned in the Tabula, Mesochoron, Urbius, and Scannunum, cannot be identified. Urbius may perhaps be a corruption of Urium or Hyrim, the modern Oria, which is nearly midway between the two cities.

Besides the main line of the Via Appia, as above described, the Itineraries mention several branches, one of which appears to have struck off from Venusia to Potentin, and thence to have joined the highroad to Rhegium, while another descended from Venusia to Heraclea on the gulf of Tarentum, and thence followed the E. coast of the Bruttian peninsula. These lines are briefly noticed in the articles Lucania and Bruttia, but they are very confused and uncertain.

4. From Beneventum by Canusium and Bariunum to Brundusium.

It was this line of road, first constructed by Trajan, and which is more correctly distinguished as the Via TRAJANA, that became after the time of that emperor the frequented and ordinary route to Brundusium, and thus came to be commonly considered as the Via Appia, of which it had in fact taken the place. Its line is in consequence given in all the Itineraries, and can be traced with little difficulty. It passed at first through a rugged and mountainous country, as far as Aecae in Apulia, from which place it was carried through the plains of Apulia to Barium, and afterwards along the sea-coast to Brundusium: a line offering no natural difficulties, and which had the advantage of passing through a number of considerable towns. Even before the construction of the Via Trajana it was not uncommon (as we learn from the journey of Horace) for travellers to deviate from the Appian Way, and gain the plains of Apulia as speedily as possible.

The first part of this road from Beneventum to Aecae may be traced by the assistance of ancient milestones, bridges, &c. (Mommsen, Topogr. degli Irrpini, in the Bullett. dell' Inst. Arch. for 1848, pp. 6, 7.) It proceeded by the villages of Paedui, Banoalbergo, and Casalbore, to a place called S. Eleuterio, about 2 miles S. of Castelfranco, which was undoubtedly the site of Equus Tuticus, a much disputed point with Italian topographers. [EQUUS TUTICUS.] This is correctly placed by the Antonine itinerary 21 miles from Beneventum; the Jerusalem Itinerary, which makes it 22 miles, divides the distance at a station called Forum Novum, which must have been situated at or very near Banoalbergo. From Equus Tuticus, the road followed a NE. direction to Aecae (the site of which is clearly known as that of the modern Tropo), and thence turned in a direction nearly due E. to Heraclea (Ordona). The object of this great bend was probably to open a communication with Luceria and the other towns of Northern Apulia, as well as perhaps to avoid the diefe of the Cervaro, above Borino, through which the modern road passes. At Aecae the Via Trajana descended into the great plain of Apulia, across which it was carried in a nearly
straight line to Barium (Barium). The remainder of its course presents no difficulties, and the stations are, for the most part, well-known towns. The whole line is thus given in the Antonine Itinerary (pp. 112, 116):—

From Beneventum to

Enea (Tuticus) (S. Eleuterio) - - - xxi. M. P. 116.
Aceae (Troy) - - - xvii.
Herdonia (Ordonia) - - - xvii. *
Caurnia (Caunia) - - - xvi.
Rubi (Raro) - - - xxiii.
Butuntum (Bitonto) - - - xii.
Barium (Barri) - - - xii.

Turres (?) - - - xli.

Egnatia (Torre di Gnaia) - - - xvi.
Spulnca (?) - - - xx.
Brandusium (Brividali) - - - xvii.

The two stations of Turres between Barium and Egnatia, and Spulncae between Egnatia and Brandusium, cannot be identified; it is evident from the names themselves that they were not towns, but merely small places on the coast so called. The Jerusalem Itinerary has two stations, Turres Aurelianae, and Turres Juliae, between Egnatia and Barium, but, from the distances given, neither of these can be identified with the Turres of the Antonine Itinerary. The other intermediate stations mentioned by the same authority are unimportant Mutatioes, which can be identified only by a careful survey on the spot.

The Tabula gives (though in a very confused manner) an intermediate line of route, which appears to have been the same as that indicated by Strabo (v. p. 283), which quitted the coast at Egnatia, and proceeded through Caenia to Brundusium. The stations given are:

Caurnia to Indiae - - - xii. M. P.
Rubi - - - xiv.
Butuntum - - - ix.
Caenia (Ceglie) - - - ix.
Ehetium (Azetium?) —
Novate (?) - - - ix.
Ad Veteris (?) - - - vii.
Egnatia - - - viii.

It is certain that the Via Trajana was contioned, probably by Trajan himself, from Brundusium to Hydruntum (Otranto), and was thence carried off round the Calabrian peninsula to Tarentum. The road from Brundusium to Hydruntum passed through Lupiae (Lecc), in the interior of the peninsula, which is correctly placed 25 miles from each of the above cities. (Itin. Ant. p. 118.) The stations on the other line, which is given only in the Tabula, are as follows:

Hydruntum to Castrum Minervae (Castro) viii.
Veretum (Sta Maria di Vereto) - - - xii.
Uxentum (Ugento) - - - x.
Baletium (Aletium) - - - x.
Noricum (Vardo) - - - x.
Manduria (Manduria) - - - xxii.
Tarentum (Taranto) - - - xx.

The above distances appear to be correct.

Lastly, a branch struck off from the Via Trajana at Barium which proceeded direct to Tarentum. It is probable that this came to be adopted as the most convenient mode of reaching the latter city when

* This distance must be above the truth: the direct distance is not more than 8 miles.

Besides the above, which may be considered as all in some degree branches of the Via Trajana, there was another line, probably constructed at a late period, which struck across from Enea (Tuticus) to Venusia, so as to form a cross communication between the Via Trajana and the old Via Appia. This is set down in the Antonine Itinerary (p. 103) as part of a long line proceeding from the N. of Italy to the S., but the intermediate stations between Enea (Tuticus) and Venusia cannot be determined.

5. From Capua by Nuceria to Rhegium.

This line of road is indicated by Strabo in the passage above cited (v. p. 283) as existing in his time, but he certainly did not include it under the name of the Via Appia. It seems, however, to have subsequently come to be regarded as such, as the Antonine Itinerary puts it under the heading, "Ab Urbe Appia via recto itinere ad Colonnun" (Itin. Ant. p. 106.), and inasmuch as it was a continuation of the original Appian Way, it was, strictly speaking, as much entitled to bear the name as the Via Trajana. Strabo does not tell us whether it was passable in his day for carriages or not, and we have no account in any ancient author of its construction. But we learn the period at which it was first opened from a remarkable inscription discovered at La Polla, in the valley of Diano, which commemorates the construction of the road from Rhegium to Capua, and adds the distances of the principal towns along its course: unfortunately the first line, containing the name of the magistrate by whom it was opened, is wanting; and the name of M. Aquilius Gallus, inserted by Gruter and others, is a mere conjecture. There is little doubt that the true restoration is the name of P. Popillius Laenas, who was praetor in b.c. 134, and who, after clearing the mountains of Lucania and Bruttium of the fugitive slaves who had taken refuge in them, appears to have first constructed this highroad through that rugged and monotonous country. (Mommsen, Inscr. R. N. 6276; Kisschel. Mon. Epigr. pp. 11, 12.) There is, therefore, no foundation whatever for the name of Via Aquilia, which has been given by some modern writers (Romellini, Cramer, &c.) to this line of road: it was probably at first called Via Popilia, after its author, who, as was usual in similar cases, founded at the same time a town which bore the name of Forum Popilii, and occupied the site of La Polla (Forum POPILII); but no mention of this name is found in any ancient author, and it seems to have been unknown to Strabo. The distances given in the inscription above mentioned (which are of the greatest value, from their undoubted authenticity), are:

From Capua to Nuceria - - - xxxii.
[Torum Popilii] - - - li.
Muranum - - - lxiv.
[Schieren, &c.] - - - xlix.
Conserna - - - lxii.
Valentia - - - lii.
Ad Statum - - - lii.
Rhegium - - - viii.

The point designated as "Ad Fretum ad Statum" is evidently the same as the Columna of the Itineraries, which marked the spot from which it was

* The words "Appia via" may, however, refer only to the first part of this route, which certainly followed the true Appian Way as far as Capua.
usual to cross the Sicilian straits. The total distance from Capua to Rhegium, according to the above description, is 921 miles. The Antonine Itinerary makes it 357 miles. It is difficult to judge how far this discrepancy is owing to errors in the distances as given in our MSS, or to alterations in the line of road; for though it is evident that the road given in the Itinerary followed generally the same line as that originally constructed by Popilius, it is probable that many alterations had taken place in particular parts; and in the wild and mountainous tracts through which the greater part of it was carried, such alterations must frequently have been rendered necessary. The determination of the particular distances is, for the same reason, almost impossible, without being able to trace the precise course of the ancient road, which has not yet been accomplished. The stations and distances, as given in the Antonine Itinerary, are as follow:

M. P.

From Capua to Nola — — — — xxi. (xix.).
Nuceria (Nocera) — — xv. * (xiv.).
Ad Tanarum — — xv.
Ad Calorem — — — — xxv.
In Marcelliana — — — — xxv.
Cassariana — — — — xxvi.
Nerulum (La Rotonde) — — xxvii.
Sub Murano (near Murano) — — — — xxviii.
Caprasia (Tarsia) — — xxix.
Consentia (Cosenza) — — xxviii.
Ad Salabum fluvium xviii.
Ad Turres — — — — xvii.
Vibon (Monte Leone) — — xxix.
Nicotera (Nicotera) — — xviii.
Ad Nailas — — — — xviii.
Ad Colummanum — — — — xiv.

The stations between Nuceria and Nerulum cannot be determined. Indeed the only points that can be looked upon as certain, in the whole line from Nuceria to Rhegium, are Sub Murano, at the foot of the hill on which stands the town of Murano, Consentia (Cosenza), Vibo Valentia (Monte Leone), and Nicotera, which retains its ancient name. Nerulum and Caprasiae may be fixed with tolerable certainty by reference to these known stations, and the distances in this part of the route appear to be correct.

The others must remain uncertain, until the course of the road has been accurately traced.

At Nerulum the above line of route was joined by one which struck across from Venusia through Potentia (Potenza) to that place. It was a continuation of the cross-road already noticed from Equus Taticus to Venusia; this line, which is given in the Antonine Itinerary (p. 104), was called, as we learn from the inscriptions on milestones still extant, the Via Herculis, and was therefore in all probability the work of the Emperor Maximinus. (Mommsen, I. R. N. p. 348.) The stations mentioned in the Itinerary (L. c.) are:

From Venusia to Opimum — — — — xv. M. P.
Ad fluv. Bradanum xxix.

* Both these distances are overstated, and should probably be corrected as suggested by the numbers in parentheses. The same distances are given in the Tab. Peut. thus:

Capua to Suessula — — — — ix. m. P.
Nola — — — — — — — — ix.
Ad Tegulam — — — — v.
Nuceria — — — — — — — — ix.

From Venusia to Potentia (Potenza) xxiv.
Acidus (?) — — — — — — xxv.
Grumentum (Soprintenza) — — — — xxviii.
Semuncula (?) — — — — xxvii.
Nerulum — — — — xi.

None of the above stations can be identified, except Potentia and Grumentum, and the distances are in some cases certainly erroneous. The same line of route is given in the Tabula, but in a very confused and corrupt manner. The stations set down are wholly different from those in the Itinerary, but equally uncertain. Anzia (Anzi), between Potentia and Grumentum, is the only one that can be identified.

The principal work on the Via Appia is that of Pratelli (Della Via Appia, fol. Napoli, 1745); but, unfortunately, little dependence can be placed upon it. Parts of the route have been carefully and accurately examined by Westphal, Chaupy, and other writers already cited, but many portions still remain to be explored; and accurate measurements are generally wanting. Nor does there exist any map of the kingdom of Naples on which dependence can be placed in this respect.

[E. H. B.]

VIA AQUILA. [VIA APPIA, No. 5.]

VIA ARDEATINA. [Ardea.]

VIA AURELIA, one of the principal highways of Italy, which led from Rome to Pisa in Etruria, and thence along the coast of Liguria to the Maritime Alps. It was throughout almost its whole extent a maritime road, proceeding, in the first instance, from Rome to Alsum on the Tyrrhenian sea, whence it followed the coast-line of Etruria, with only a few trifling deviations, the whole way to Pisa. The period of its construction is quite uncertain. Its name sufficiently indicates that it was the work of some magistrate of the name of Aurelius; but which of the many illustrious men who bore this name in the latter ages of the Republic was the author of it, we are entirely uniformed. We know with certainty that it was in use as a well-known and frequented highway in the time of Cicero, who mentions it as one of the three roads by which he might proceed to Casilinae Gaul ("ab inferno mari Aurelia," Phil. xii. 9). It may also be probably inferred that it was in existence as far as Pisa, when the road was carried from that city to Vada Sabata and Dertona, the construction of which is ascribed by Strabo to Aeumilia Scarrus, in N. c. 109 (Strab. v. p. 217).

[VIA AEMILIA SCARUS.]

This continuation of the Aurelian Way seems to have been commonly included under the same general name as the original road; though, according to Strabo, it was properly called the Aeumilian Way, like its more celebrated namesake in Casilinae Gaul. It was apparently not till the reign of Augustus that the line of road was carried along the foot of the Maritime Alps, from Vada Sabata to Cemenelum, and thence into Gaul. It is certain, at least, that the ancient road, of which the traces are still visible, was the work of that emperor; and we know also that the Ligurian tribes who inhabited the Maritime Alps were not completely Reduce to subjection till that period. [Leggera.]

The Itineraries, however, give the name of Via Aurelia to the whole line of road from Rome to Arelat in Gaul; and though little value can be attached to their authority on this point, it is not improbable that the name was frequently used in this more extended sense; just as that of the Via Appia was applied to the whole line from Rome to Brundisium, though originally carried only as far as Capua.
The stations from Rome, as far as Luna in Etruria, are thus given in the Antonine Itinerary (p. 299, &c.):

Lorinum (near Castel Guido)  ------ xii. m. p.
Ad Turres (Monteconio)  ------ x.
Pyrgi (Sta. Severa)  ------ xii.
Castrum Novum (T. di Chiarauccio)  ---- viii.
Centum Cellae (Civita Vecchia)  ----- v.
Martha (Ad Martam fl.)  ------ x.
Forum Aureli (Montalto) ?  ------ xxiv.
Cosa (Ansedonia)  ------ xxv.
Adiacum Aprilim (Prilem)  ------ xxi.
Solera (?).  ------ xii.
Manilana (?).  ------ ix.
Popolonia (R. of Popolonia)  ------ xii.
Vada Valaterrana (Viavo)  ------ xxvii.
Ad Hercules (near Livorno)  ------ xvii.
Fisae (Fieno)  ------ xi.
Papiniana (Viareggio ?)  ------ xxviv.
Luna (Luni)  ------ xxvii.

The stations thence along the coast of Liguria as far as the river Varus have been mentioned in the article Liguria; and the stations along this part of the line, in both the Antonine Itinerary and the Tabula, are also confused and corrupt so that it is useless to attempt their correction. Even of that part of the Via Aurelia above given, along the coast of Etruria, several of the stations are very uncertain, and some of the distances are probably corrupt. From Rome to Centum Cellae, indeed, the road has been carefully examined and the distances verified (Westphal, Rom. Komp. pp. 162—169); but this has not been done farther on; and as the road traversed the Maremma, which was certainly in the latter ages of the Roman Empire, as at the present day, a thinly-peopled and unhealthy district, several of the stations were probably given then obscure and unimportant places. The Tabula, as usual, gives a greater number of such stations, several of which may be identified as the points where the road crossed rivers and streams whose names are known. But the route is given very confusingly, and the distances are often incorrect, while in some cases they are omitted altogether.

From Rome to

Lorinum (Castel Guido)  ------ xii.
Baetulana (?).  ------ x.
Alsium (?).  ------ vi.
Pyrgi (Sta. Severa)  ------ xii.
Turmulum (Sta. Marinella)  ------ x.
Castrum Novum (Torredi Ciaruccio)  ------ ix.
Centum Cellae (Civita Vecchia)  ------ iv.
(Ad) Minucianum fl. (River Migone)  ------ v.
Gravicae  ------ xii.
Tabellaria (?).  ------ v.
Ad Martam fl.  ------ ii.
Forum Aureli (Montaltor)  ------ iii.
(Ad) Arminianum fl. (River Fiora)  ------ iv.
Ad Novas, or Ad Nonas  ------ iii.
Sub Coasum  ------ ii.
Cosa (Ansedonia)  ------ ii.
(Ad) Albacianum fl. (R. Allegra)  ------ iv.
Telemanoum (Porto Talmone)  ------ ix.
Castellana  ------ vii.
(Ad) Unbrumnum fl. (R. Ombrone)  ------ viii.
Solera (?).  ------ xii.
Manilana (?).  ------ ix.
Popolonia (R. of Popolonia)  ------ xii.
Vada Valaterrana (Viado)  ------ xxv.
Ad Fines  ------ vii.
(Ad) Piscinas  ------ xin.
Turrita (Tristurito)  ------ xvii.
Fisae (Fieno)  ------ ix. (?)

The distances between Popolonia and Fisae, as well as those between Centum Cellae and Cosa, are in many cases unintelligible; and it is often impossible to say to which of the stages they are meant to refer.

The Via Aurelia (in the more extended sense of the term, as used in the Itineraries) communicated with Cisalpine Gaul and the Via Aemilia by two different routes; the one, which according to Strabo was constructed by Aemilinus Scaurus at the same time that he continued the Via Aurelia to Vada Sabata, led from that place across the Apennines to Aquae Statellinae, and thence to Dertona, to which place the Via Aemilia had probably already been prolonged. (Strab. v. p. 217.) The other, which was known as the Via Postumia, and was therefore probably constructed at a different period, led from Dertona across the mountains direct to Genua. Both these lines are given in the Antonine Itinerary and in the Tabula; though in the former they are confused and mixed up with the direct line of the coast-road. [Ligur.]

1. From Genua to Dertona the stations were—

Likarum (R. between Arquata and Seraveccia)  ------ xxi. vii.
Dertona (Tortona)  ------ xxv.

The continuation of this route thence to Placentia will be found under Via Aemilia.

2. From Dertona to Vada Sabata:—

D. to Aquae Statellinae (Acqui) xxviii. m. p.
Crixia (?)  ------ xxvii.
Canaliciun (?)  ------ xxv.
Vada Sabata (Vado)  ------ xii.

(For the correction of these distances and more detailed examination of the routes in question, see Walckenaer, Geographie des Gaules, vol. iii. p. 22.) [E. B. H.]

VIA CANDAVIA. [Via Egnatia.]

VIA CASSIA, was the name given to one of the principal highways of Italy which led from Rome through the heart of Etruria to Arretium, and thence by Florentia to Luca. The period of its construction, as well as the origin of its name, is unknown. We learn only from a passage of Cicero that it was a well-known and frequented highway in his time, as that orator mentions it as one of the three roads by which he could proceed to Cisalpine Gaul. (Cic. Phil. xii. 9.) In the same passage, after speaking of the Flaminian Way, passing along the Upper Sea, and the Aurelian along the Lower, he adds: "Etrurian discriminit Cassia." Hence it is clear that it was the principal road through the centre of that province, and is evidently the same given in the Antonine Itinerary (p. 285), though it is there erroneously called the Via Clodia. But indeed the occurrence of the Forum Cassii upon this line is in itself a sufficient proof that it was the Cassian and not the Clodian Way. The stations there set down, with their distances, are as follow:—

M. P.

From Rome to Baccano (Baccano)  ------ xxi.
Satrum (Sutri)  ------ xii.
Forum Cassii (near Ve-trolla)  ------ xxv.
Volsini (Bolsena)  ------ xxviii.
Clusium (Chiusi)  ------ xxv.
Ad Statius  ------ xii.
Arretium (Arrezzo)  ------ xxv.
Ad Fines  ------ xxv.
Florentia (Firenze)  ------ xxv.
Ustoria (Pistoia)  ------ xxv.
Luca (Lucera)  ------ xxv.
**VIA CIMINIA.**

The Via Cassia branched off from the Via Flaminia just after crossing the Tiber by the Milvian Bridge, 3 miles from Rome. It then ascended the table-land, and proceeded over a dreary and monotonous plain to Arretium (Baccano), situated in the basin or crater of an extinct volcano. Two intermediate small stations are given in the Tabula; Ad Sextum, which, as its name imports, was situated 6 miles from Rome, and therefore 3 from the Pons Milvius; and Veii, 6 miles farther; but it is probable that the ancient Via Cassia, like the modern highroad, passed by, but not through, the ancient city; so that the station indicated was probably that where the road turned off to Veii, near the Isola Farnese. The Via Clodia separated from the Cassia about a mile beyond the station Ad Sextum, and struck off through Carniae (Galeria) and Sabate (Bracciano) to Forum Clodiium. The Tabula again gives an intermediate station, between Sutrium and Forum Cassii, called Viens Matrinii, the ruins of which are still visible 7 miles beyond Sutriti; and that of the Aquae Passeris, now called the Bagioni di Serpa, 12 miles beyond Forum Cassii. The stations given in that document can thus be identified as far as Clusium. They are:—

- Ad Sextum - vi. m.p.
- Veii (near Isola Farnese) - vi.
- Bagioni (Baccano) - ix.
- Sutria (Sutriti) - xii.
- Vicius Matrinii - (omitted, but should be vii.)

Forum Cassii (Tetralla) - iv.
Aqua Passeris (Bagioni di Serpa) - x.
Volsinii (Bolena) - ix.
Aii Pallian Fluvium (R. Paglia) -
Clausium (Chiasii) - x.

But from Clusium to Florentia the names of the stations are wholly unknown, and cannot be identified, with the exception of Arretium; and the entire route is given in so confused a manner that it is impossible to make anything of it.

Livy tells us that C. Flaminius, the colleague of M. Aemilius Lepidus in b. c. 187, after having effectually reduced the Ligurian tribes that had infested the territory of Bononia, constructed a road from Bononia to Arretium (Liv. xxxix. 2). But it is remarkable that we never hear anything more of this line of road, which would seem to have fallen into disuse; though this pass across the Apennines, which is still traversed by the modern highroad from Florence to Bologna, is one of the easiest of all. Cicero indeed might be thought to allude to this route when he speaks of proceeding to Cisalpine Gaul by the Via Cassia (L. c.); but the absence of any allusion to its existence during the military operations at that period, or on any other occasion, seems to prove conclusively that it had not continued in use as a military highway.

(For a careful examination and description of the portion of the Via Cassia near Rome, see Westphal, Röm. Kampf. pp. 147—163; Nibby, Vie degli Antich. pp. 75—82.)

**VIA EGNATIA.**

10 miles from Rome, near the inn of La Storta, where remains of the ancient pavement, indicating its direction, may still be seen. The name of the Via Clodia is known to us only from the Itineraries, and from inscriptions of imperial date (Quell. Itiner. 822, 3143); but from the form of the name there can be no doubt that it dates from the republican period, though we have no account when or by whom this line of road was constructed. The Itineraries indeed seem to have regarded the Via Clodia as the main line, of which the Via Cassia was only a branch, or rather altogether confounded the two; but it is evident from the passage of Cicero above quoted, that the Via Cassia was, properly speaking, the main line, and the Clodia merely a branch of it. At the same time, the occurrence of a Forum Clodiium on one branch, as well as a Forum Cassii on the other, leave no doubt which were the true lines designated by these names. The course of the Via Clodia as far as Sabate (Bracciano) admits of no doubt, though the distances given in the Tabula are corrupt and uncertain; but the position of Forum Clodiium is uncertain, and the continuation of the line is very obscure. It appears indeed to have held a course nearly parallel with that of the Via Cassia, through Blera, Tascania, and Saturnia; but from the latter place the Tabula represents it proceeding to Succena (Sub Cassa), which would be an abrupt turn at right angles, and could never have been the direction of the principal line of road. It is probable that this was either carried up the valley of the Ombrone to Siena (Sena Julia), or proceeded across the marshy plains of that river to join the Via Aurelia. But this is mere conjecture. The stations, as given in the Tabula (the only one of the Itineraries in which the true Via Clodia is found), are as follows:—

- From Rome to Ad Sextum - vi. m.p.
- Careia (Galera) - ix.
- Ad Novas - viii.
- Sabate (Braccianino) -
- Forum Clodiium -
- Blera (Bieda) - xvi. (?)
- Marta (Ad Martum?) - ix.
- Tuscania (Famese, ?) - xii.
- Saturnia (Saturnia) - xvii.

The Antonine Itinerary, without giving the route in detail, says simply:—

- A Trassecta Fere Clodiium, m.p. xxxvii.

If this distance be correct, Forum Clodiium must be placed either at or a little beyond Oriuudo, which is 6 miles beyond Sabate (Bracciano). The distance of Oriuudo from Rome by the line of the Via Clodia (as measured on Gell's map), somewhat exceeds 31 miles. But the distance from Blera must, in that case, be greatly overstated; the actual distance from Oriuudo to Bieda being scarcely more than 10 miles. (Westphal, Röm. Kampagne. pp. 154—158; Dennis's Estronia, vol. i. p. 273: but the distances there cited, in the note from the Tabula, are incorrect.)

**VIA DOMITIANA.** [Via Appia, No. I.]

**VIA EGNATIA** (in Estronia 885, Strab. vii. p. 322, seq.), a Roman military road, which connected Illyria, Macedonia, and Thrace. We are almost totally in the dark with regard to the origin of this road. The assumption that it was constructed by a certain person named Egnatius, who was likewise the founder of the town Egnatia, or Gnatia, between Barium and Brundusium, on the coast of Apulia, is
We will consider the road as far as Thessalonica, or the Via Candavia, first, and then proceed to the remainder of the Egnatian Way. Strabo (L.c. and p. 326) lays down the general direction of the road as follows: After passing Mount Candavia, it ran to the towns of Lychnidus and Pylon; which last, as its name implies, was the border town between Illyria and Macedonia. Hence it proceeded by Barnus to Heraclia, and on through the territory of the Lyncestae and Eordaer through Edessa and Peilla to Thessalonica. The whole extent of this line, as we have already seen, was 267 Roman miles; and this computation will be found to agree pretty accurately with the distance between Dyrrachium and Thessalonica as laid down in the Antonine Itinerary. According to that work, as edited by Parthey and Pinder (Berlin, 1848), who have paid great attention to the numbers, the stations and distances between these two places, starting from Dyrrachium, were as follow (p. 151) —

<table>

</table>

The difference of 2 miles probably arises from some variation in the MSS. of the Itinerary. It should be observed, however, that, according to Wesseling's edition (p. 148, seq.), the distance is 11 miles more, or 280 miles, owing to variations in the text. According to the Tab. Pent, the whole distance was 279 miles, or 10 more than that given in the Itinerary; but there are great discrepancies in the distances between the places.

The last-named work gives 307 miles as the sum of the distances between Apollonia and Thessalonica; or 38 miles more than the route between Dyrrachium and the latter town. Both these routes united, according to the Itinerary, at Clodia; and the distance from Apollonia to Clodia was 49 miles, while that from Dyrrachium to the same place was only 33. This accounts for 16 miles of the difference, and the remainder, therefore, must be sought in that part of the road which lay between Clodia and Thessalonica. Here the stations are the same as those given in the route from Dyrrachium, with the exception of the portion between Lychnidus and Heraclia; where, instead of the single station of Nicka, we have two, viz., Scirintis, 27 miles from Lychnidus, and Castra, 15 miles from Scirintis. And as the distance between Castra and Heraclia is stated at 12 miles, it follows that it was 11 miles farther from Lychnidus to Heraclia by this route than by that through Nicka. This, added to the 16 miles extra length to Clodia, accounts for 27 miles of the difference; but there still remain 11 miles to make up the discrepancy of 38; and, as the stations are the same, this difference arises in all probability from variations in the MSS.

According to the Itin. Hierosol. (p. 283, seq., Berlin ed.), which names all the places where the horses were changed, as well as the chief towns, the total distance between Apollonia and Thessalonica was 300 miles; which differs very slightly from that.
of the Itinerary, though there are several variations in the route.

Now, if we apply what has been said to the remark of Strabo, that the distance from Thessalonica was the same whether the traveller started from Ephesus (Dyrrachium) or from Apollonia, it is difficult to perceive how such could have been the case if the junction of the two branches existed in his time also at Clediana; since, as we have already seen, it was 16 miles farther to that place from Apollonia than from Dyrrachium according to the Itin. Ant.; and the Itin. Hierosol. makes it 24 miles farther. Indeed the maps would seem to show that if the two branches were of equal length their junction must have taken place to the E. of Lake Lynchitis; the branch from Dyrrachium passing to the N. of that lake, and that from Apollonia to the S. But, although Burmeister, in his review of Tafel's work (in Zimmermann's Zeitschrift für die Alterthumswissenschaft, 1840, p. 1145), adopted such an hypothesis, and placed the junction at Heraclea, it does not appear that the assumption can be supported by any authority.

Clodiana, where the two branches of the Via Egnatia, or Candavia, united, was seated on the river Genusus (the Tjrum or Skamhi). From this point the valley of the river naturally indicated the course of the road to the E. (Leake, Northern Greece, vol. iii. p. 312.)

We will now proceed to consider the second, or eastern, portion of the Egyptian Way, viz., that between Thessalonica and Cypselis.

The whole length of this route, according to Strabo, was 265 Roman miles; and the distances set down in the Itin. Ant. amount very nearly to that sum, or to 265, as follows. (Paul. and Parth. p. 157; Wess. p. 330, seq.)

Apollonia — — 36 miles.  
Amphipolis — — 32"  
Philippi — — 32"  
Acontisim — — 21"  
Otopisus (Toproras) — — 18"  
Salona (Salamis) — — 22"  
Maximinopolis — — 18"  
Brizice or Brendice — — 20"  
Trajanopolis — — 37"  
Cypselis — — 29"  
— — 265"

Another route given in the same Itinerary (Wess. p. 320, seq.) does not greatly vary from the above, but is not carried on Cypselis. This adds the following stations:—Melissurgis, between Thessalonica and Apollonia, Neapolis, between Philippi and Acontisim, Cosintas, which according to Tafel (pars ii. p. 21) is meant for the river Cosintes, between Topriras and Maximinopolis, and Milaunum and Tempira, between Brendice and Trajanopolis. The Itin. Hierosol. makes the distance only 250 miles.

Many remains of the Egyptian Way are said to be still traceable, especially in the neighbourhood of Thessalonica. (Beaujour, Voy. militaire dans l'Empire Othoman, vol. i. p. 205.)

VIA FLAMINIA. (Via Flaminia, 1299)

VI. FLAMINIA (Via Flaminia), one of the most ancient and important of the highways of Italy, which led from Rome direct to Ariminum, and may be considered as the Great North Road of the Romans, being the principal and most frequented line of communication with the whole of the north of Italy. It was also one of the first of the great highways of which we know with certainty the period of construction, having been made by C. Flaminius during his censorship (n. c. 220), with the express purpose of opening a free communication with the Gaulish territory, which he had himself reduced to subjection a few years before. (Liv. Epit. 22.) It is therefore certainly a mistake, when Strabo ascribes it to Q. Flaminius (his father to the preceding), who was consul together with M. Aurelius Lepidus, the author of the Aemelian Way, in n. c. 187, and himself constructed a road from Bocnaia to Arretium. (Liv. xxxix. 2; Strab. v. p. 217.) It is certain that the Flaminian Way was in existence long before, and its military importance was already felt and known in the Second Punic War, when the consul Sempronius proceeded by it to Ariminum, to watch the movements and oppose the advance of Hannibal. (Liv. xxix. 11.) Throughout the period of the Republic, as well as under the Empire, it was one of the best known and most frequented of the highways of Italy. Cicero, in one of the Philippics, says there were three ways which led from Rome to Calsalpine Gaul: the Flaminian by the Upper Sea (the Adriatic), the Aurelian by the Lower, and the Cassian through the midst of Etruria (Phid. xii. 9). During the contest between the generals of Vespasian and Vitellius (A. D. 69) the military importance of the Flaminian Way was fully brought out, and it was felt that its possession would be almost decisive of the victory. (Tac. Hist. i. 86, ii. 52, &c.) Tacitus alludes to the extent to which this great highway was at this period frequented, and the consequent bustle and crowding of the towns on its course (Ib. ii. 64). Most of these, indeed, seem to have grown up into flourishing and populous places, mainly in consequence of the traffic along the line of road.

So important a highway was naturally the object of much attention, and great pains were taken not only to maintain, but to restore and improve it. Thus, in b.c. 27, when Augustus assigned the care of the other highways to different persons of consular dignity, he reserved for himself that of the Via Flaminia, and completely restored it throughout its whole length from Rome to Ariminum, a service which was acknowledged by the erection of two triumphal arches in his honour, one at Rome, the other at Ariminum, the latter of which is still standing. [ARIMINUM.] Again, at a later period, Vespasian added materially to the convenience of the road by constructing a tunnel through the rock at a place called Interimia, now known as H. Furlo, a work which still subsists in its integrity. [INTERIMIA.] This remarkable passage is particularly noticed by the poet Claudian, who has left us a general description of the Flaminian Way, by which the emperor Honorius proceeded, in A. D. 404, from Ravenna to Rome. (Claudian, de VI. Cons. Hon. 494—522.) Indeed, it is evident that in the latter ages of the Empire, when the emperors for the most part took up their residence at Mediolanum or Ravenna, the Flaminian Way, which constituted the direct line of communication between those cities and Rome, must have become of still greater importance than before.

One proof of the important influence exercised by this great line of highway, is afforded by the circumstance that, like the Aemelian Way, it was extended to one of the provinces of Italy in the later division of that country under the Empire; though, by a strange confusion or perverseness, the name of Flaminia was given, not to the part of Umbria which was actually traversed by the Via Flaminia, but to the eastern
VIA FLAMINIA.

There is no doubt, from the description of Claudian above cited, compared with the narrative in Tacitus of the movements of the Vitellian and Vespasian armies in A. D. 69, that the main line of the Via Flaminia continued the same throughout the Roman Empire, but we find it given in the Itineraries with some deviations. The principal of these was between Narnia and Forum Flaminius, where the original road ran direct from Narnia to Mevania, while a branch or loop made a circuit by Interamna and Spoletum, which appears to have continued the ancient Flaminian line. It is certain that in both the Antonine and Jerusalem Itineraries this branch is given, instead of the direct line. Another route given in the Antonine Itinerary (p. 311) follows the line of the old Flaminian Way as far as Naceria, but thence turns abruptly to the right across the main ridge of the Apennines, and descends the valley of the Potentia to Ancona. Though given in the Itinerary under the name of the Via Flaminia, it may well be doubted whether this route was ever properly so called. Before enumerating the stations and distances along this celebrated line of road, as recorded in the different Itineraries, it will be well to give a brief general description of its course, especially of that part of it nearest to Rome.

The Via Flaminia issued from the gate of the same name, the Porta Flaminia, which was situated nearly on the same site as the modern Porta del Popolo, but a little farther from the Tiber, and was carried thence in a direct line to the Pons Milvius (Ponte Molle), where it crossed the Tiber. This celebrated bridge, which so often figures in Roman history, was reckoned to be 3 miles from Rome, though only 2 from the Porta Flaminia, the distances being as usual computed from the ancient gate, the Porta Ratumena. After crossing the Tiber, the Flaminian Way turned to the right, keeping pretty close to the river, while the Via Cassia, which diverged from it at this point, ascended the table-land and proceeded nearly due N. The line of the Via Flaminia is here distinctly marked by the remains of several ancient sepulchres, with which its course was studded on both sides, like the Via Appia and Latina, for some miles from the gates of Rome. The number of such sepulchres on the line of the Via Flaminia is particularly noticed by Juvenal (i. 171). One of these, which was discovered in the 17th century at a place called Grotta Rossa, obtained much celebrity from being supposed to be that of the family of Ovid, though in reality it belonged to a family of the name of Nasonius, which could have no connection with the poet, whose cognomen only was Naso.

Six miles from the Milvian Bridge (at a place now called Prima Porta) was the station of Sassa Rubra, or Ad Rubras as it is called in the Itineraries, which, from its proximity to Rome, and its position on the great northern highway, is repeatedly mentioned in history. [SAXA RUBRA.] It was here that the Via Tiberina, parted from the Flaminia, and, turning off to the right, followed closely the valley of the river, while the main line of the more important highway ascended the table-land, and held nearly a straight course to the station of Esratta Villa, which is placed by the Antonine Itinerary 24 miles from Rome. The exact site of this cannot be identified, but it may have been a little short of Regina. It is not mentioned in the Tabula or Je-

VIA FLAMINIA.

Rusalem Itinerary, both of which, on the contrary, give another station, Ad Vicissimum, which, as its name implies, was situated 20 miles from Rome, and, therefore, 11 from Ad Rubras. It must therefore have been situated a little beyond the Monte di Guardia, but was evidently a mere Mutatio, or station for changing horses, and no ruins mark the site. But the course of the Via Flaminia can be traced with certainty across this table-land to the foot of Soracte, by portions of the ancient pavement still existing, and ruined tombs mark the site. The next station set down in the Jerusalem Itinerary and the Tabula is Aqua Viva, 12 miles beyond Ad Vicissimum and this is identified beyond a doubt with the Osservatorio dell' Acqua Viva, which is just at the required distance (32 miles) from Rome. Thence the ancient road proceeded direct to the Tiber, leaving Civita Castellana (the ancient Fescenninum) on the left, and crossed the Tiber a little above Borghetto, where the remains of the ancient bridge are still visible, and still known as the File di Augusto. Thence it proceeded in a straight line to Orculenum, the ruins of which are situated below the modern town of Otricoli. Orculenum was 12 M. P. from Aqua Viva, or 44 from Rome, according to the detailed distances of the Jerusalem Itinerary, which are exactly correct. The Antonine Itinerary makes the distance in one place 45, in another 47 miles. [Itin. Ant. pp. 125, 311; Itin. Hier. p. 613. For a detailed examination of this first portion of the Via Flaminia, see Westphal, Romische Kompagnie, pp. 133—145; Nibby, Vie degli Antichi, pp. 57—74.)

The remainder of the route must be more briefly described. From Orculenum it led direct to Narnia (12 miles), where it crossed the Nar by the famous bridge, the ruins of which are still the admiration of travellers, and, quitting all-gether the valley of the Nar, crossed the hills nearly in a straight line due N. to Mevania (Bevagna), passing by a station Ad Martinus (16 M. P.), and thence to Mevania (16 M. P.), whence it proceeded to Forum Flaminius, at the foot of the Apennines. But the distances here have not been examined in detail, and most of the Itineraries (as already mentioned) give the circuitous or loop line (nearly coinciding with the modern road) by Interamna and Spoletum to Forum Flaminius. The stations on this road were, according to the Itin. Ant.:

<table>
<thead>
<tr>
<th>Station</th>
<th>Line</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interamna (Terni)</td>
<td>viii. M. P.</td>
</tr>
<tr>
<td>Spoletum (Spoleto)</td>
<td>xvii.</td>
</tr>
<tr>
<td>Forum Flaminius</td>
<td>xviii.</td>
</tr>
</tbody>
</table>

but the Jerusalem Itinerary, which gives them in greater detail, makes the total distance somewhat greater. The stations as there set down are:

<table>
<thead>
<tr>
<th>Station</th>
<th>Line</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interamna (Terni)</td>

</tbody>
</table>

The position of Forum Flaminius is well ascertained at a place called S. Giovanni in Forflamanum, where its ruins are still visible. This is, however, little more than 2 miles from Foligno, but is correctly placed by the Itineraries 12 miles from Nucus (Noccra). There can be no doubt that the foundation of the town of Forum Flaminius was contempo-
VIA FLAMINIA.

rary with the construction of the highroad itself; it was judiciously placed just at the entrance of the Apennines, where the passage of those mountains may be considered to have commenced. Thence the highway followed nearly the same line as the modern road from Foligno to Fano, skirting the main ridge of the Apennines, and the principal stations can be identified without difficulty. It passed by Helvillum (Sigillo), crossed the central ridge of the Apennines at La Schiaggia (probably Ad Esenum of the Tabula), and descended into the valley of the Cautilano, a tributary of the Metaurus, passing by Cales or Calles (Cagli), Intercisa (the Passo del Faro), and emerging into the valley of the Metaurus at Forum Sempronii (Fossombrole), whence it descended the course of that river to Fanum Fortunae (Fano) on the Adriatic, and thence along the coast to Ariminum (Rimini), where it joined the Via Aemilia.

We may now recapitulate the distances as given, first, in the Antonine Itinerary (p. 125)—

From Rome to
Rostra Villa  - -  xxiv. m.p.
Ocirculum (Otricoli)  - -  xii.
Narnia (Narni)  - -  xvi.
Ad Martis (near Massa)  - -  xvi.
Mevania (Bevagna)  - -  xvi.
Nuceria (Nocera)  - -  xviii.
Helvillum (Sigillo)  - -  xiv.
Cales (Cagli)  - -  xxiii.
Forum Sempronii (Fossombrole)  xviii.
Fanum Fortunae (Fano)  - -  xvi.
Pisaurum (Persero)  - -  viii.
Ariminum (Rimini)  - -  xxiv.

These distances are all approximately correct. The stations are given more in detail in the Jerusalem Itinerary (p. 613), as follow:

VIA LATINA.  1301

Ad Nuceria to
Dubi (? )  - -  viii. m.p.
Prolaqueum (Fioraco)  - -  viii.
Septempeda (S. Severino)  - -  xvi.
Treia (F. near Treia)  - -  ix.
Auxinum (Osimo)  - -  xviii.
Ancona  - -  xvi.

Thence a road was carried along the coast by Sena Gallica to Fanum Fortunae, where it rejoined the main line of the Via Flaminia. The stations were:

Ad Assil fl. (R. Esino)  - -  viii. m.p.
Sena Gallica (Siningaglia)  - -  xii.
Ad Furum (?)  - -  viii.
Fanum Fortunae (Fano)  - -  viii.

All the above distances appear to be at least approximately correct. (For a full and careful examination of the line of the Via Flaminia, and the distances of the stations upon it, see D'Anville, Analyse Géographique de l'Italie, pp. 147–162.)

VIA LABICANA (ν Λαμβικάνης) was one of the highroads that issued from the Porta Esquilina at Rome. It was evidently originally nothing more than a road that led to the ancient city of Labicum (16 miles from Rome), but was subsequently continued in the same direction, and, after sweeping round the E. foot of the Alban hills, it joined the Via Latina at the station Ad Pictas, in the plain between them and the Volscian mountains. (Strab. v. p. 257.) This route was in many respects more convenient than the proper Via Latina, as it avoided the ascent and descent of the Alban hills: and hence it appears to have become, in the later ages of the Empire, the more frequented route of the two; so that the Antonine Itinerary gives the Via Labicana as the regular highroad from Rome to Beneventum, and afterwards gives the Via Latina as falling into it. (Itin. Ant. pp. 304, 306.) But this is decidedly opposed to the testimony of Strabo (L. c.), and the usage of the Augustan age, which is generally followed by modern writers. Hence the Via Labicana will be here given only as far as the point where it joins the Latina.

The stations set down in the Antonine Itinerary are merely—

From Rome to Ad Quintanas  - -  xv. m.p.
Ad Pictas  - -  x.

The Tabula subdivides the latter stage into two; viz., Ad Statutas, iii. m. p., and thence to Ad Pictas, vii.; thus confirming the distance in the Itinerary. The station Ad Quintanas was undoubtedly situated at the foot of the hill on which stands the village of La Colombaria, occupying the site of the ancient LABICUM. The line of the ancient road from Rome thither followed nearly the same course, though with fewer windings, as the modern road to Palestrina and Valmontone. It is described in the ancient LABICUM.

VIA LATINA (ν Λαμβικάνης) was one of the principal of the numerous highroads that issued from the gates of Rome, and probably one of the most ancient of them. Hence we have no account of the time of its construction, and it was doubtless long in use as a means of communication before it was paved and converted into a regular highway. Some road or other must always have existed between Rome and Tuscumum; while again beyond the Alban hills the valley of the Secco (Trecus) is one of the

4 0 3
natural lines of communication that must have been in use from the earliest times. But it is not probable that the line of the Via Latina was completed as a regular road till after the complete reduction of both the Latins and Volscians under the Roman authority. It is true that Livy speaks of the Via Latina as if it already existed in the time of Coriolanus (ii. 39), but he in fact uses the name only as a geographical description, both in this passage and again in the history n. c. 296, when he speaks of Interamna as a colony "qua via Latina est" (x. 36).

Neither passage affords any proof that the road was then in existence; though there is no doubt that there was already a way or line of communication. The course of the Via Latina is, indeed, more natural for such a line of way than that of the more celebrated Via Appia, and must have offered less difficulties before the construction of an artificial road. Nor did it present any such formidable passes in a military point of view as that of Lautulac on the Appian Way, for which reason it was the route chosen both by Pyrrhus when he advanced towards Rome in n. c. 280, and by Hannibal in n. c. 211. (Liv. xxi. 8, 9.) On the latter occasion the Carthaginian general seems certainly to have followed the true Via Latina across Mount Algicus and to Tusculum (Liv. l. c.); Pyrrhus, on the contrary, turned aside from it as he approached Praeneste, which was the farthest point that he reached in his advance towards Rome.

Whatever may have been the date of the construction of the Via Latina, it is certain that long before the close of the Republic it was one of the best known and most frequented highways in Italy. Strabo speaks of it as one of the most important of the many roads that issued from the gates of Rome (v. p. 237), and takes it as one of the leading and most familiar lines of demarcation in describing the cities of Latium. (ib.) It was, however, in one respect very inferior to its neighbour the Via Appia, that it was not capable of any considerable extension, but terminated at Casilinum, where it joined the Via Appia. (Strab. l. c.) There was, indeed, a branch road that was continued from Teanum by Allia to Telesia to Beneventum; but though this is given in the Itineraries in connection with the Via Latina (Itin. Ant. pp. 123, 304), it certainly was not generally considered as forming a part of that road, and was merely a cross line from it to the Appian. On the other hand, the main line of the Via Latina, which descended the valley of the Sacco, received on its way the two subordinate lines of road called the Via Labicana and Via Praenestina, which issued from Rome by a different gate, but both ultimately joined the Via Latina, and became merged in it. (Strab. l. c.) Such at least is Strabo's statement, and doubtless was the ordinary view of the case in his time. But it would seem as if at a later period the Via Labicana came to be the more frequented road of the two, so that the Antonine Itinerary represents the Via Latina as joining the Labicana, instead of the converse. (Itin. Ant. p. 306.)

The stations, as given in the Itinerary just cited, are as follow:—

Ad Decimum - - - x. M. P.
Roboraria - - - iii. (vi.)
Ad Pictas - - - xvii.
Compitum Anagninum - xv.
Ferentium (Feronitio) - viii.
Frumento (Frosinone) - - vii.

VIA LATINA.

Fregellanum (Ceprano) - xiv. M. P.
Fabretiaria (S. Giovanni in Conco) - iii.
Aquino (Aquino) - - viii.
Casinum (S. Germano) - - vii.
Teatum (Teano) - - xxvii.
Cales (Calvi) - - vi.
Casilinum (Capua) - - vii.
Capena (Sta Maria) - - iii.

(The four last stages are supplied from the Tabula. The Antonine Itinerary gives only the branch of the road that led, as above noticed, to Beneventum.)

It will be observed that, in its course, as above set down, from Rome to Ferentum, the Via Latina did not pass through any town of importance, the stations given being mere Mutations, or places for changing horses. But, on account of the importance of this line of road, it will be necessary to describe it somewhat more in detail.

The Via Latina issued from the Porta Capena together with the Via Appia. It was not till about half-way between that gate and the later Porta Appia (Porta di S. Sebastiano), that the two separated, and the Via Latina pursued its own course through the gate in the walls of Aurelian that derived from it the name of Porta Latina. From this gate (now long closed) to a point 2 miles from the Porta Latina, where it crosses the modern road from Rome to Albano, the line of the ancient road may be readily traced by portions of the pavement, and ruins of sepulchres, with which the Latin Way, as well as the Flaminian and Appian (Juv. Sat. i. 171), was bordered. From that point the road may be seen proceeding in a perfectly straight line, which is marked from distance to distance by tombs and other ruins, to the foot of the Tusculan hills. The only one of these ruins which deserves any notice is that commonly called the temple of Fortuna Muliebris, which is in reality a sepulchre of imperial times. About 9 miles from the Porta Capena is a farm or hamlet called Morvina, near which are the extensive remains of a Roman villa, supposed to be that of Lucullus; and about a mile farther must be placed the station Ad Decimum, the 10 miles being undoubtedly reckoned from the Porta Capena. Almost immediately from this point began the ascent of the Tuscanal hills; the road still preserved nearly its former direction, leaving Otricola on the right, and the citadel of Tusculum on the left; it then passed, as it is described by Strabo (v. p. 237), between Tusculum and the Alban Mount, following the line of a deep valley or depression between them, till it reached the foot of Mount Algicus and, passing through a kind of notch in the ridge of that mountain, at a place now called La Casa, descended to the station Ad Pictas in the plain below. The course of the ancient road may be distinctly traced by remains of the pavement still visible at intervals; the second station, Loboraria (if the distance of six miles given in some MSS. be correct), must have stood near the ruins of a mediaeval castle called Molara. Thence to Ad Pictas the distance is stated at 17 miles, which is certainly greatly above the truth. It was at this station that the Via Labicana joined the Latina; and from this circumstance, compared with the distances given thence to Ferentum, we may place the site of Ad Pictas somewhere near the Osteria di Mezza Selva, about 10 miles beyond Loboraria. Strabo calls it 210 stadia (26 miles).
VIA LAURENTINA.

from Rome, but it is not clear whether he measured the distance by the Via Latina or the Labicana (v. p. 297). The actual distance of Ferentum (concerning which there is no doubt) from Rome is 45 miles; and the Compitum Anagninum is correctly placed 8 miles nearer the city, which would exactly agree with the point on the present highroad where the branch to Anagnia still turns off. Both the Itinerary and the Tabula place Ad Pictas 15 miles from the Compitum Anagninum, and this distance would fix it 10 miles from Boboraria, or 26 from Rome, thus agreeing closely with the statement of Strabo. We may, therefore, feel sure that the position above assigned to Ad Pictas, a point of importance, as that where the two roads joined, is at least approximately correct.

The next stations admit of no doubt, and the distances are correct. It was at the Compitum Anagninum, 15 miles beyond Ad Pictas, that the Via Praenestina joined the Latina, which was carried thence down the valley of the Sauce, nearly in the line of the present highroad, by Ferentum and Frasino, both of which still retain their ancient names, to Fregellanum (Coppone) on the Liris, whence it turned S. to Fabraria Nova (the name of which are still visible at S. Giovanni in Carcere), on the right bank of the Liris. Here it crossed that river by a bridge, of which the ruins are still extant, whence the course of the ancient road may be traced without difficulty through Aquinum, Casinum, Teanum, and Cales to Casilinum on the Vulturinus, where it fell into the Via Appia. Portions of the ancient pavement, sepulchres, and other ruins mark the line of the ancient way throughout the latest part of its course. At a station given in the Tabula under the name of Ad Flexum (9 miles from Casinum) a branch road turned off to Venusframi, whence it ascended the valley of the Vulturinus to Asseminia, and thence into the heart of Samnium. The Antonine Itinerary represents the Via Latina as following this cross-road, and making a bend round by Venafrum, but there can be no doubt that the regular highroad proceeded direct to Teanum. The remains of the ancient road may be distinctly traced, proceeding from Teanum nearly due N. through Cajano and Torre to S. Pietro in Fine, which was probably the site of the station Ad Flexum. This would be 18 miles from Teanum. The Tabula gives the distance as 20, for which there is no foundation we should read 18.3.

The branch of the Via Latina, already alluded to, which was carried to Beneventum, quitted the main road at Teanum, crossed the Vulturinus to Alliae, and thence was carried up the valley of the Calor by Telesia to Beneventum. The distances are thus given in the Antonine Itinerary (p. 304):—

<table>

(The first part of the Via Latina from Rome to the valley of the Liris is examined and discussed in detail by Westphal, Rom. Kom., pp. 78—97; and Nibby, L'Via degli Antichi, pp. 110—119.) [E.H.B.]

VIA LAURENTINA. [LAURENTUM.]

VIA NOMANTINA. [NOMANTUM.]

VIA OSTENSIS was, as its name imports, the road leading from Rome to Ostia, which must naturally have been an extremely frequented route when the city was at the height of its prosperity. It followed in its general direction the left bank of the Tiber, but cutting off the more considerable bends and windings of the river. It issued from the Porta Ostiensis, now called the Porta S. Paolo, from the celebrated basilica of St. Paul, about 14 miles outside the city, and is on the line of the ancient road. Three miles from Rome it passed through a village, or suburb, known as the Vicus Alexandri (Anulian, xvii. 4. § 14): it was at this point that the Via Laurentina struck off direct to Laurentum, 16 miles distant from Rome [LAURENTUM]; while the Via Ostiensis, turning a little to the right, pursued thenceforth nearly a straight course all the way to Ostia. On this line, 11 miles from Rome, is the *Osteria di Malia Fede*, where a road branches off to Porcigliano, which undoubtedly follows the same line as that mentioned by the younger Pliny, by which his Laurenzine villa could be reached as conveniently as by the Via Laurentina. (Itin. Ep. ii. 17.) Five miles farther the highroad reached Ostia, which was 16 miles from Rome. [*Itin. Ant.* p. 301. ] [OSTIA].

VIA POPILIA. [VIA APPIA, No. 5.]

VIA PORTUENSIS, was the road that led from Rome to the Portus Traiani, or the new port of the city constructed under the Empire on the right bank of the Tiber. [OSTIA.] The name could not, of course, have come into use until after the construction of this great artificial port to replace the natural harbour of Ostia, and is only found in the uncommon form of the Viae in the Curiosum Urbis and Notitia (pp. 28, 29, ed. Preller). But the line of the road itself may still be traced without difficulty. It issued from the Porta Portuensis, in the walls of Aurelian, and followed, with little deviation, the right bank of the Tiber, only cutting off the minor windings of that river. The Antonine Itinerary places the city of Portus 19 miles from Rome (p. 300); but this is certainly a mistake, the real distance being just about the same as that of Ostia, or 16 miles. (Nhiby, Dintorni, vol. iii. p. 624.) From Portus a road was carried along the coast by Fregene (9 miles) to Alcinum (9 miles), where it joined the Via Aurelia. [*Itin. Ant.* p. 300. ]

VIA POSTUMIA, was, as we learn from an inscription (Orell. Inscr. 3121), the proper name of the road that crossed the Apennines direct from Dertona to Genua. But it appears to have fallen into disuse; at least we do not find it mentioned by any ancient writer, and the road itself is included by the Itineraries under the general name of the Via Aurelia. It has therefore been considered more convenient to describe it in that article. [E.H.B.]

VIA PRAENESTINA (γα Πραενσην νδες, Strab.), was the name of one of the highways that issued from the Porta Esquilina at Rome, and led (as its name implies) direct to Praeneste. The period of its construction is unknown; but it is evident that there must have been from a very early period a highway, or line of communication from Rome to Praeneste, long before there was a regular paved road, such as the Via Praenestina ultimately became. The first part of it indeed, as far as the city of Gabii, 13 miles from Rome, was originally known as the Via Gabina, a name which is used by Livy in the history of the early ages of the Republic (Liv. ii. 11), but would seem to have afterwards fallen into disuse, so that both Strabo and the Itineraries give the name of Via Praenestina to the whole line. (Strab. v. p. 238; *Itin. Ant.* p. 302.) In the latter period of the Republic, indeed, Gabii had fallen very much into decay, while Praeneste was still an important and flourishing town, which will suf-
VIA SALARIA.

efficiently account for the one appellation having become merged in the other. A continuation of the same road, which was also included under the name of the Via Praenestina, was carried from the foot of the hill at Praeneste, through the subjacent plain, till it fell into the Via Latina, just below Anagnia.

The stations on it mentioned in the Antonine Itinerary (p. 302) are:

From Rome to Gabii, xii. M.

Praeneste, xii. M.

Sub Anagnia, xxiv.

The Tabula gives the same distances as far as Praeneste, which are very nearly correct. Strabo reckons it 100 stadia (12 miles) from Rome to Gabii, and the same distance thence to Praeneste. The continuation from Praeneste to Sub Anagnia is given only in the Antonine Itinerary, but the distance is overrated; it does not really exceed 18 miles.

The Via Praenestina issued from the Porta Equilina at Rome, together with the Via Labicana (Strab. v. 3): it was carried through the Porta Praenestina in the later circuit of the walls, now called Porta Maggiore; and separated from the Via Labicana immediately afterwards, striking off in a nearly direct line towards Gabii. About 3 miles from Rome it passed the imperial villa of the Gordians, the magnificence of which is attested by Julius Capitolinus (Gordian. 32), and is still in some degree attested by the imposing and picturesque ruins at a spot called Torre dei Sabichi. (Nibby, Diotaroi, vol. iii. pp. 707—710.) Nine miles from Rome the road is carried over the valley of a small stream by a viaduct of the most massive construction, still known as the Ponte di Nona: and 3 miles farther it passes the existing ruins of the city of Gabii. Thence to Praeneste the line of the road was not so direct: this part of the Campagna being intersected by deep gullies and ravines, which necessitated some deviations from the straight line. The road is however clearly marked, and in many places retains its ancient pavement of basaltic lava. It is carried nearly straight as far as a point about 5 miles beyond Gabii, where it passes through a deep cutting in the tufo rock, which has given to the spot the name of Caramonte; shortly afterwards it turns abruptly to the right, leaving the village of Gallinone (the probable site of Pedum) on the left, and thence follows the line of a long narrow ridge between two ravines, till it approaches the city of Praeneste. The highroad doubtless passed only through the lower part of that city. Portions of the ancient pavement may be seen shortly after quitting the southern gate (Porta del Sole), and show that the old road followed the same direction as the modern one, which leads through Crei and Palatino, to an inn on the highroad below Anagni; apparently on the very same site as the station Sub Anagnia (or Campitum Anagninum, as it is called in another route of the Itinerary).

VIA SALARIA (q. v. Salapia Abdi, Strab.) one of the most ancient and well-known of the highways of Italy, which led from Rome up the valley of the Tiber, and through the land of the Sabines to Reate, and thence across the Apennines into Picenum, and to the shores of the Adriatic. We have no account of the period of its construction as a regular road, but there can be little doubt that it was a fre-

VIA SALARIA.

quent route of communication long before it was laid down as a regular highway; and the tradition that its name was derived from its being used by the Sabines to carry into their own country the salt that they obtained from the Roman salt-works at the mouth of the Tiber, in itself seems to point to an early age. (Fest. s. v. Salaria.) It was indeed, with the exception of the Via Latina, the only one of the great Roman highways, the name of which was not derived from that of its own constructor. But it cannot be inferred from the expressions of Livy that the battle of the Alia was fought "ad undecimum lapidem," and that the Gauls on a subsequent occasion encamped "ad tertium lapidem via Salaria trans pontem Aniensis" (Liv. v. 37, vii. 9). that the regular road was then in existence, though there is no doubt that there was a much frequented line of communication with the land of the Sabines. We learn from the latter passage that a bridge had been already constructed over the Anio; and it is probable that the Via Salaria was constructed in the first instance only as far as Reate, and was not carried across the mountains till long afterwards. Even in the time of Strabo there is no evidence that it reached to the Adriatic: that author speaks of it merely as extending through the land of the Sabines, but as of great extent (ως παλλή ὅσα, Strab. v. p. 228), which renders it improbable that it had then been carried to the Upper Sea. But the Itineraries give the name of Salaria to the whole line of road from Rome to Castrum Truentinum on the Adriatic, and thence to Alia.

The Salarian Way issued from the Porta Collina of the ancient city together with the Via Nomentana (Strab. l. c. i. Fest. s. v. Salaria); but they diverged immediately afterwards, so that the one quitted the outer circuit of the city (as bounded by the walls of Aurelian) through the Porta Salaria, the other through the Porta Nomentana. Between 2 and 3 miles from Rome the Via Salaria crossed the Anio by a bridge, called the Pons Salarium, which was the scene of the memorable combat of Manlius Torquatus with the Gauls. (Liv. vii. 9.) The present bridge is ancient, though not strictly of Roman date, having been constructed by Narses, to replace the more ancient one which was destroyed by Totila. On a hill to the left of the road, just before it descends to the river, is the site of the ancient city of Antemnæ, and a hill to the right of the road immediately after crossing the river is worthy of notice, as the spot where the Gaals encamped in n. c. 361 (Liv. l. c.), and where Hannibal pitched his camp when he rode up to reconnoitre the walls of Rome. (Id. xxvi. 10.) Between 5 and 6 miles from Rome, after passing the Villa Spado, the road passes close to Castel Giubileo, a fortress of the middle age, which serves to mark the site of the ancient Fidenæ. From this point the road is carried through the low grounds near the Tiber, skirting the foot of the Crustumian hills, which border it on the right. Several small streams descend from these hills, and, after crossing the road, discharge themselves into the Tiber; and there can be no doubt that one of these is the far-famed Alia, though which of them is entitled to claim that celebrated appellation is still a very disputed point. [Allia.] The road continued to follow the valley of the Tiber till, after passing Monte Rotondo, it turned inland to Etruria, the site of which is probably to be fixed at Grotta Marozza,
and is marked in the Itineraries as 18 miles from Rome. Here the Via Nomentana again fell into the Salaria. (Strab. v. p. 228.) Hence to Reate the latter road traversed a hilly country, but of no great interest, following nearly the same line as the modern road from Rome to Rieti. The intermediate station of Ad Novas or Vicus Novus, as it is called in the Antonine Itinerary is still marked by ruins near the *Osteria Nova*, 32 miles from Rome, and 16 from Rieti. Here an old church still bore at a late period the name of *Vico Nuovo*. The stations on the original Salaria, from Rome to Reate, are correctly given, and can be easily identified.

From Rome to

* Eretum (Grotta Marozza) - xvi. M. P.
* Vicus Novus (Ost. Nuovo) - xiv.
* Reate (Rieti) - - - - xvi.

From Reate the Salaria (or the continuation of it as given in the Itineraries) proceeded nearly due E. by Cuttilae, which is identified by its celebrated lake, or rather mineral springs, to Intercorea (*Antrodoco*), situated at the junction of two natural passes or lines of communication through the central Apennines. The one of these leads from Intercorea to Amternum, in the upper valley of the Aternum, and was followed by a cross-road given in the Tabula, but of which both the stations and the distances are extremely confused: the other, which is the main valley of the Velinus, and bears nearly due N., was ascended by the Salaria as far as Falacrium, 16 miles from Intercorea, and near the sources of the Velinus. Thence that road crossed the ridge of the Apennines and descended into the valley of the *Tranto* (Truentus), which river it followed to its mouth at Castrum Truentinum, passing on the way by the strongly situated city of Asculum (*Ascoli*). The distances on this line of route are thus correctly given in the Antonine Itinerary (p. 307):

From Reate to

* Cuttilae (near *Puternum*) - - viii. M. P.
* Intercorea (*Antrodoco*) - - vi.
* Falacrium (near *Civita Reale*) - - xvi.
* Vicus Novus (near *Cucial Bradas*) - - - - xvi.
* Ad Centessmum* - - - - x.
* Asculum (*Ascoli*) - - - xii.
* Castrum Truentinum - - xx.

From this last point two roads branched off, the one turning N., and proceeding along the coast of the Adriatic to Ancona; the other proceeding S. along the same coast to Castrum Novum (near *Giulia Nuova*), and thence to Adria (*Atri*). The latter branch is given in the Itinerary as a part of the Salaria; but it is clear that neither of them properly belonged to that highway, both being in fact parts of the long line of road which followed the coast of the Adriatic continuously from Anconato Brandmuseum, and which is given in the Antonine Itinerary in connection with the Via Flaminia (*Bib. Ant.* pp. 313—316). (The course of the Via *Salaria* is examined, and the distances discussed in detail by D’Anville, *Analyse Géographique de l’Italie* pp. 163—169.)

**VIA VENERA.**

305

To

S. She is examined, and the distances discussed in detail by D’Anville, *Analyse Géographique de l’Italie* pp. 163—169.}

**VIA SUBLACENSIS.**

*VIA VALERIA.*

**VIA TIBERINA,** a name found in inscriptions, and noticed by the Notitia and *Carlo.* In among the roads that issued from the gate of Rome, was in all probability the road that quieted the Via Flaminia. It is evident that such a road is known from remains of it still visible; and it is the only one to which the name of Via Tiberina can well be applied. (Westphal, *Rom. Komp.*, pp. 134, 138.)

**VIA TIBURTINA.**

*VIA VALERIA.*

**VIA TIBURTINA.**

*VIA VALERIA.*

**VIA TRAJANA.**

*VIA APPIA.* No. 4.

**VIA VALERIA** (§ *Oba* *apia* 886., *Strabo*), one of the most celebrated and important of the Roman highways, which led from Rome, or, more strictly speaking, from Tibur, to the lake Fucinus and the land of the Marsi, and thence was subsequently continued to the Adriatic, at the mouth of the Aternum. The period of its construction is uncertain. It has indeed been frequently supposed to have derived its name from, and to have been the work of, *M. Valerianus Maximus*, who was censor with C. Junius Bubulcus in b. C. 307; but the expression of Livy, that the two constructed roads *per agros,* would certainly seem to refer to cross-roads in the neighborhood of Rome; and it is very improbable that the construction of so celebrated a highway as the Via Valeria should not have been more distinctly stated. (Liv. ix. 43.) The Via Valeria, indeed, was properly only a continuation of the Via Tiburtina, which led from Rome to Tibur; and though the Itineraries include the whole line of route under the name of the Via Valeria, it appears that the distinction was still kept up in the time of Strabo, who distinctly speaks of the Valerian Way as *beginning from Tibur*, and leading to the Marsi, and to Corfinium, the metropolis of the Peligni (Strab. v. p. 293). The expressions of the geographer would naturally lead us to conclude that the Via Valeria was in his time carried as a regular highway as far as Corfinium; but we learn from an inscription, that this was not the case, and that the regularly constructed road stopped short at Cerfena, at the foot of the Mons Ieneus or *Forca de Caruso,* a steep and difficult pass, over which the highway was not carried till the reign of Claudius, who at the same time continued it to the mouth of the Aternum. (*Orig. Inscr. 711.*) It appears that the portion thus added at first bore the name of the Via Claudia Valeria (*Inscr. Luc. c.*) but the distinction was soon lost sight of, and the whole line of route from Rome to the Adriatic was commonly known as the Via Valeria. (*Itin. Ant.* p. 308.) It will be convenient here to adopt the same usage, and consider the whole course of the road under one head.

The Via Tiburtina, as the road from Rome to Tibur was properly called, must undoubtedly have been of very ancient origin. There must indeed have existed from the earliest ages of Rome a frequent highway or communication between the two cities; but we are wholly ignorant as to the time when a regularly made road, with its solid pavement and all the other accessories of a Roman via, was constructed from the one city to the other. The road as it existed in the time of the Roman Empire may be distinctly traced by portions still remaining of the
pavement, or by subaqueous and fragments of ancient buildings, so that no doubt can exist as to its precise course. It quitted the original city by the Porta Esquilina, passed through the Porta Tiburtina (now Porta S. Lorenzo) in the walls of Aurelian, and then proceeded nearly in a straight line to the Anio, which it crossed by a bridge about 4 miles from Rome. This bridge, now called the Ponte Mammolo, is in its present state the work of Narses, having been restored at the same time as those on the Via Salaria and Nomentana, after their destruction by Totila, A. D. 549. From this bridge the ancient road followed very nearly the same line as the modern one along the valley of the lake or pool of sulphurous waters, similar in character to the more considerable pool called the Softalata or Aquae Albulae, about 2 miles farther on, and a mile to the left of the highroad. Leaving this on the left, the Via Tiburtina proceeded almost perfectly straight to the Ponte Lucoano, at the foot of the hill of Tivoli, where it recrossed the Anio. There can be no doubt that this bridge retains its ancient name of Ponte Lucanus, though this is not mentioned by any ancient author; but the origin of the name is evident from the massive sepulchre of the Plautian family (a structure not unlike the celebrated tomb of Cecilia Metella on the Appian Way), which stands close to the bridge, and which was constructed by M. Plautius Lucanus, who was censor together with Tibius in the reign of Augustus. From the inscription on an ancient milestone it appears that this part of the road was constructed by him at the same time; and it is probable that the original Via Tiburtina was carried from the Lago di Tartaro in a different direction, bearing away more to the left, so as to leave the Aquae Albulae on the right; while the road constructed by Plautius, like the modern highroad, passed between that lake and Tibur. The 14th milestone was found near the spot where the road crosses the artificial channel that carries off the waters of the lake. From the Ponte Lucoano the ancient road ascended the hill of Tibur by a very steep and straight ascent, passing through or under a portion of the vaulted substructions of the so-called villa of Maccenas. [TIBUR].

The Itineraries all agree in stating the distance of Tibur from Rome at 20 miles; but it in reality little exceeds 18 by the direct road, which crossed the Ponte Lucoano, as above described. The Tabula gives the Aquae Albulae as an intermediate station, but places it 16 M. P. from Rome, though the true distance is only 14.

From Tibur the Via Valeria ascended the valley of the Anio, passing by the town of Varia (Ficovera), 8 miles from Tibur, to a point marked by an inn, now called Osteria Ferrata, 5 miles beyond Ficovera and 13 from Tivoli. This point, where the Anio makes a sudden bend, is evidently the site of the station Ad Lamnas of the Tabula, whence a side road struck off to the right, ascending the upper valley of the Anio to Sublaquemum (Subiaco), whence the road derived the name of Via Sublaquemum, by which it is mentioned by Pomponius (de Aqueduct. 15). The road is given in the Tabula, but in so confused a manner that it is impossible to make it out. Sublaquemum was in reality 18 miles from Rome by this route, or 28 from Tibur.

The Via Valeria, on the other hand, turned to the left at the Osteria Ferrata, and crossed the hills to Carsioli, the ruins of which are still visible at some distance nearer Rome than the modern village of Carsioli. Thence it ascended a steep mountain-pass, where portions of the ancient road, with its pavement and substructions, are still visible, and descended again into the basin of the Lake Fucinus. After passing by, rather than through, Alba Fucens, it was carried along the N. shore of the lake to Cerfennia, the site of which is clearly identified at a spot just below the village of Colt Armeno. [CERFENNIA]. Here, as already mentioned, the original Via Valeria terminated; but the continuation of it, as constructed by Claudius, and given in the Itineraries, ascended the steep mountain-pass of the Mons Itius, and thence descended into the valley of the Aternum, and thence toward the coast near its confluence with the Gizio, stood the city of Confinium. Three miles from that city was a bridge over the Aternum (near the site of the present town of Popoli), which constituted an important military position. [ATENIUS.] Below this point the river flows through a narrow pass or defile, through which the Via Valeria also was carried. The station Interpromium, marked in the Itineraries as 12 miles from Confinium, must be placed at the Osteria di S. Valentino, below the village of the same name. Thence the road descended the valley of the Aternum to its mouth, which is correctly placed by the Itineraries 21 miles from Interpromium, and 9 beyond Teate (Chieti).

The distances given in the Antinian Itinerary from Rome to this point are as follows:

<table>

The distances stated in parentheses are the corrections suggested by D'Anville, who examined the whole of this line of route with much care, and are confirmed by the discovery of ancient milestones, which leave no doubt as to the actual distances. The general correctness of the result thus obtained is confirmed by a statement of Ploiro (iii. 5. 6.), in which he estimates the breadth of Italy in its central part, as measured from the mouths of the Tiber to that of the Aternum at 136 miles. Here the mention of the Aternum leaves little doubt that the measurement was taken along the Via Valeria. Now the corrected distances above given amount to 115 miles from Rome to Teate, or 125 miles to the mouth of the Aternum; and if to this be added 16 miles from Rome to Ostia, the result is 141 miles, agreeing, within 5 miles, with the statement of Ploiro.

(For a full examination of this whole line of route, see D'Anville, Analyse géogr. de l'Italie, pp. 170—182, and Kramer, Der Fucius Sec, pp. 59—62. The Via Tiburtina and the first part of the Valeria are also described and examined by Westphal, Rom. Kamp. pp. 108—121, and Nibby, Vie degli Antichi, pp. 96—104.)

The proper termination of the Via Valeria, as continuing by Claudia, was undoubtedly at the mouth of the Aternum. But the Antinian Itinerary continues it on to Ilidria, which it places at 14 M. P. from Teate; but this distance is much below the truth: we should perhaps read 24 M. P. The probability is, that at the mouth of the Aternum it fell into the line of road previously existing along the coast of the Adriatic, and which, without belonging properly to any of the three highways that proceeded
VIADUS.

from Rome to that sea, served to connect the Valerian, Salarian, and Flaminian Ways. For this reason it may be useful to set down here the stations and distances along this line of coast, from the month of the Aterius to Ancôna. They are thus given in the Antonine Itinerary (p. 313):—

From the Ostia Aterna (Pescana) to
Hadria (Atri) - - - xvi. M.P.
Castrum Novum (near Gallia
Nueva) - - - xv.
Castrum Truentium (at the mouth
of the Tronto) - - - xii.
Castellum Firmannum (Porto di
Fermo) - - - xxiv.
Potentia (Potenza) - - - xxii.
Numana (Numena) - - - x.
Ancôna - - - - - viii.

Here the coast-road joined one branch of the Via Flaminia; and the distances from Ancôna to Ariminum
will be found in the article on that road. [Via Flaminia.]

The Via Valeria, like the Aemilia and Flaminia, gave name to one of the later divisions of the provinces of Italy in the Roman Empire, which was called Valeria. It comprised the land of the Marsi, Peligni, and Vestini, through which the road really passed, as well as the land of the Sabines, which was traversed by the Via Salaria. [Italia, p. 93.] [E. H. B.]

VIADUS (Ouložos), a river of Germany, west of the Vistula, mentioned by both Ptolemy (ii. 11. § 2) and Marcianus (p. 53) as flowing into the Mare Suevicum or Baltic. Neither of these authors mentions either its source or its course, but it is generally assumed to be the Oder, Ptolemy in another passage (ii. 11. § 15) mentions, according to the common reading, a river 'Izovos, which some regard as a tributary of the Viadus, and others as a name of the upper Viadus; but Wilberg, the latest editor of Ptolemy, treating 'Izovos as a corrupt reading, has altered it to Ouložos. [L. S.]

VIANA (Oôwiiva), a place in Raetia, on the road from Venna to Augusta Vindelicorum (Ptol. ii. 12. § 4); it is marked in the Peringer Table as Vieca, and its site is now occupied by a place called Vogeck. [L. S.]

VIATIA. [BEATIA.]

VIVI FORUM. [Forum Viril.]

VIBINUM, or VIBONIUM (Vibovinum; Bovinum), a town of Apulia, in the interior of that country, 7 miles S. of Acce (Troja) and 15 from Luceria. Its correct name is given by Pliny, who enumerates the Vibianites among the municipal communities of Apulia, and by inscriptions which are still extant at Bovino, an episcopal town situated on one of the lower slopes of the Apennines, on the right of the river Cerbara (Cerulus). (Plin. iii. 11. 16; Holsten, Not. ed. Classe, p. 272.) There is no doubt that it is the place of which the name is corruptly written in Ptolemy, Vibarnum (Obołiwa or Obołiwa, ii. 1. § 72), and which is called by Polybius Vibinum ('Obołiwa, for which we should probably read Oboλiwa, Schweigg. ad loc.). The latter author distinctly places it among the Daunian Apulians, and mentions that Hannibal established his camp there, and thence laid waste the territory of Arpi and other neighbouring cities. (Polyb. ii. 88.) [E. H. B.]

VIBIONES (Obołiwa or 'Oboλiwa, Ptol. iii. 5. § 23), a people of European Sarmatia, on the N. side of Mount Besinus, probably on the river Java or Jecta in Tylusina. [T. H. B.]

VIBIO, VIBIO VALENTIA. [HIPPONIUM.]

VIBONIENSIS SINUS, another name of the Hippopontes Sarm. [HIPPONIUM.]

VICENTIA or VICETIA (Oôviyeta; Eth. Vicentius: Vicenza), a city of Venetia in the N. of Italy, situated between Patavium and Verona, and distant 22 miles from the former and 33 from the latter city (Hist. Ant. p. 128; Hist. Hier. p. 559). No mention is found of Vicentia before the Roman conquest of this part of Italy, and the earliest record of its existence is an inscription of the republican period which informs us that the limits between its territory and that of the Aestini were fixed and determined by the proconsul Sex. Attilius Saronus in B.C. 126. (Orell. Inscr. 3110.) It is also incidentally mentioned as one of the municipal towns in the N. of Italy, in B.C. 43. (Cic. ad Fam. xi. 19.) Strabo notices it as one of the minor towns of Venetia, and Tacitus tells us that it was taken by Antonius, the general of Vespasian, on his advance from Patavium to Verona, in a manner that sufficiently proves it not to have been a town of any great importance. (Tac. Hist. vi. 21. 1.)

VIADUS (Ouložos), a river of Germany, west of the Vistula, mentioned by both Ptolemy (ii. 11. § 2) and Marcianus (p. 53) as flowing into the Mare Suevicum or Baltic. Neither of these authors mentions either its source or its course, but it is generally assumed to be the Oder, Ptolemy in another passage (ii. 11. § 15) mentions, according to the common reading, a river 'Izovos, which some regard as a tributary of the Viadus, and others as a name of the upper Viadus; but Wilberg, the latest editor of Ptolemy, treating 'Izovos as a corrupt reading, has altered it to Ouložos. [L. S.]

VIANA (Oôwiiva), a place in Raetia, on the road from Venna to Augusta Vindelicorum (Ptol. ii. 12. § 4); it is marked in the Peringer Table as Vieca, and its site is now occupied by a place called Vogeck. [L. S.]

VIATIA. [BEATIA.]

VIVI FORUM. [Forum Viril.]

VIBINUM, or VIBONIUM (Vibovinum; Bovinum), a town of Apulia, in the interior of that country, 7 miles S. of Acce (Troja) and 15 from Luceria. Its correct name is given by Pliny, who enumerates the Vibianites among the municipal communities of Apulia, and by inscriptions which are still extant at Bovino, an episcopal town situated on one of the lower slopes of the Apennines, on the right of the river Cerbara (Cerulus). (Plin. iii. 11. 16; Holsten, Not. ed. Classe, p. 272.) There is no doubt that it is the place of which the name is corruptly written in Ptolemy, Vibarnum (Obołiwa or Obołiwa, ii. 1. § 72), and which is called by Polybius Vibinum ('Obołiwa, for which we should probably read Oboλiwa, Schweigg. ad loc.). The latter author distinctly places it among the Daunian Apulians, and mentions that Hannibal established his camp there, and thence laid waste the territory of Arpi and other neighbouring cities. (Polyb. ii. 88.) [E. H. B.]

VICIANUM, a place in Mesia (Tob. Petu.), probably the Bnopos of Procopius (de Aed. iv. 4. p. 281), and the present Nova Borda. [T. H. D.]

VICTORIA (Oôviyeta, Ptol. ii. 3. § 9), the most eastern place belonging to the Damniini in Britannia Barbara. Camden (p. 1190) thinks that it is Bede's Cuer Gued, and that it stood on Iuch-

keith Island, in the Frith of Forth; but Horsey is of opinion that it is Abernethy, near Perth. [T. H. D.]

VICTORIAE MONS, a mountain in Hispanic Citerior, near the Iberus. (Lib. xxiv. 41.) [T. H. D.]

VICTORIAE PORTUS, a haven belonging to Juliiobriga, a town of the Cantabri in Hispania Tarraconensis, (Ptol. iv. 20. 34.) Now Santonana. (Cf. Flores, Exp. Sagr. xxiv. p. 9.) [T. H. D.]

VICTUIVIAE. [TICINUS.]

VICUS ALEXANDRI. [VIA OSTIESCENSIS.

VICUS AMBIATINUS. [AMBITINAE.

VICUS AQUATIS, a place on the territory of the Vaeccii in Hispania Tarraconensis. (Hist. Ant.
VICUS AQUENSIS. [Aquae Caneranorum.] VICUS CARPILIUS, a place in Lusitania belonging to the Vettii, on the road from Augusta Emerita to Caesaraugusta. (Itin. Ant. p. 434.) Variously identified with Naralonicae and S. Estevan.

CHALON. The name occurs only on an inscription found at Halinghen, near Boulogne, the ancient Gesoricum [Gesoricium]. Vicus Dolencus may be the old name of Halinghen. (Ukert, Gallia.)

VICUS HELENAe, in Gallia, mentioned by Sidonius Apollinaris (Major. Carm. 5. 216), in the country of the Attabres; but geographers disagree about the site. Some place it at Hedin or Hesdin, on the Canche, but that river is in the country of the Morini. Others fix it at a place called Lens, and others in other places. (Ukert, Gallia.)

VICUS ICTIMOLORUM. [ICTIMULL.] VICUS JULII or ATURES, in Aquitania. The name Curtius Atuorium occurs in the Notitia of the Gallic Provinces. The name Atures also occurs in Sidonius Apollinaris (ii. ep. 1). In the passage of Tibullus, cited under ATURUS [Vol. i. p. 336], "Atur" is said to be a corruption of Scaliger, the MSS. having Atax: —

"Quem tremeret furti milite victus Atax;"

but the great critic is probably right.

At the council of Agye (Agatha), A. D. 506, there is a subscription by a bishop, "de civitate Vico Juli," and the same name occurs in Gregory of Tours. D'Anville affirms that Atures and Vicus Juli are the same place, relying on a Notice, where we read "Civitas Altiorum Vico Juli." The name of the river Atur was also given to a people Atures, who have given their name to the town of Aire, which is on the Adour. (D'Anville, Notice, &c.)

VICUS JULIUS, in Gallia, is mentioned only in the Notitia of the Empire as a post under the orders of the general residing at Mezentum (Matius). It is placed between Tabernae (Rhein-Zabern) and Nonetes (Speyer). D'Anville supposes Vicus Julius to be Gorzeheimen, at the place where the Queich enters the Rhine. (G. L.)

VICUS MATRIN. [Via Cassia.]

VICUS NOVUS. [Via Salaria.]

VICUS SPACORIUM. [Spacorum Vicos.]

VICUS VARIANUS. [Via Arimin. No. 5.]

VIDIUS (Oigios), a small coast river in the west of Germany, between the Rhine and the Amnia (Ptol. ii. 11. § 1: Marcin, p. 51), is probably the same as the Wacht. (L. S.)

VIDUA (Oigiosa, Ptol. ii. 2. § 2), a river on the N. coast of Hibernia; according to Camden (p. 1411), the Codoagh. Others identify it with the Cunmor or the Riven. (T. H. D.)

VIDUERIA or VIDUBIO, in Gallia, appears in the Table on a road from Andematum (Langres) to Cabiello, which is Cabillum (Chalon sur-Saone). The road passes through File or Tile [Tile.] to Vi-

VIENNA. The distance in the Table between Tile and Chalon, 39 leagues, is correct; and it is 19 from Tile to Vindubia. D'Anville fixes Vindubia at St. Bernard, on the little river Vouge, a branch of the Saone. (D'Anville, Notice, &c.)

VIDUCasses, a Celtic people in Gallia Lugdunensis. Pliny (iv. 18) mentions them before the Bodicasses, who are supposed to be the Balscasses [Balscasses]. Ptolemy (ii. 8. § 5) writes the name Ouiducassos or Ouiducassion, for we must assume them to be the Viducasses, though he places the Viducassii next to the Osismi, and the Veneti between the Viducassii and the Lexovi. But the Viducasses are between the Balscasses and the Lexovi. The boundary between the Viducasses and the Balscasses is indicated by a name Fins (Vines), which occurs in French geography.

There is a place named Vieux SW. of Cuen, in the department of Calvados, some distance from the left bank of the river Orne. This place is mentioned in the titles or monuments of the neighbouring abbey of Fontenay, on the other side of the Orne, under the name of Videc or Voevee, of which Vieux is a manifest corruption, as D'Anville shows, like Tricasses, Trecae, Troiez, and Durocasses, Druce, Drum. There is or was a stone preserved in the chateaux of Torigni, in the arrondissement of Saint Lo, in the department of Manche, which contains the inscription ordo civitatis vidicassiarum. This marble, which was found at Vieux in 1850, is said to be the pedestal of a statue placed in the third century of our era in honour of T. Severus Soennianus. In the excavations made at Vieux in 1705 were found remains of public baths, of an aqueduct, a gymnasium, fragments of columns, of statues, and a great number of medals of the imperial period, besides other remains. Inscriptions, of the date A. D. 238, found on the spot show that this city had temples and altars erected to Diana, to Mars, and to Mercury. (Jouveaux, Essai sur la Ville de Cuen, par M. L'Abele Delarue, 2 vols., Cuen, 1842, cited by Richard et Hoquart, Guide du Voyageur.)

The name of this old town is unknown, but the remains show that it was a Roman city, probably built on a Celtic site; and several Roman roads branch off from it. Some geographers suppose it to be the Aragonens or Aragonene of the Table, which D'Anville would fix at Bayeux. But the site of Aragonens is doubtful. [Augustodurum.] [G. L.]

VIENNA (G投注., O投注.; Eth. Viennaensis: Vienne), a city of the Allobroges (Ptol. ii. 10. § 11) in Gallia Narbonensis, on the east bank of the Rhone; and the only town which Ptolemy assigns to the Allobroges. Stephanus (v. i. Bizyeus) gives this form of the word and an Ethnic name Bethois, and he suggests also Bernardius and Breviares from a form Brui. He has preserved a tradition about Vienna being a Cretan colony from Biennus in Crete; and accordingly, if this were true, its origin is Hellecne. Dion Cassius (xlvi. 50) has a story about some people being expelled from Vienna by the Allobroges, but he does not say who they were. [Lugoenum.]

The position of Vienna is easily fixed by the name and its being the Roman road along the east side of the Rhone. There is a difficulty, however, as D'Anville observes, in the Antonine Itinerary, which makes Vienna xxiii. from Lugdunum, and adds the remark that by the shorter cut it is xvi. The number xvi. occurs also in the
VIENNA.

There is a singular monument near Vienna, sometimes called Pontius Pilate's tomb, there being a tradition that Pilate was banished to Vienna. But even if Pilate was sent to Vienna, that fact will not prove that this is his monument. It is a pyramid supported on a quadrangular construction, on the sides of which in the four arcades with some little arches at the top; and there are columns at each of the angles of the construction. Each side of the square of this basement is about 21 feet long, and the height to the top of the entablature of the basement is nearly 22 feet. The pyramid with its smaller base rests on the central part of the quadrangular construction; it is about 30 feet high, and the whole is consequently about 32 feet high. The edifice is not finished. It has on the whole a very fine appearance. There is a drawing of it in the Penny Cyclopaedia (art. Vienne), made on the spot in 1838 by W. B. Clarke, architect.

The remains of the amphitheatre have been found only by excavation. It was a building of great magnitude, the long diameter being above 500 feet and the smaller above 400 feet, which dimensions are about the same as those of the amphitheatre of Verona. It has been used as a quarry to build the modern town out of. Three aqueducts supplied Vienna with water during the Roman period. These aqueducts run one above another on the side of the hill which borders the left bank of the Gere, and they are nearly parallel to one another, but at different elevations. The highest was intended to supply the amphitheatre when a nannachia was exhibited. There are also remains of a fourth aqueduct large enough for four persons to walk in upright and abreast. These aqueducts were almost entirely constructed under ground, with a fall of about one in a thousand, and for the most part lined inside with a red cement as high up as the spring of the arches.

The Roman road, sometimes called the Via Domitia, ran from Arelate (Arles) along the E. side of the river to Lugdunum ( Lyon). Where it enters Vienna, it is not more than 3 feet below the surface of the ground, and this depth increases as it goes farther into the town. It is constructed of large blocks of stone. Another road went from Vienna to the Alpis Graia (Little St. Bernard) through Berginorum; and it is an interesting fact to find that several villages on this road retain names given to them in respect of the distance from Vienna: thus Septima is 7 miles, Ostier 8 miles, and Dicianis 10 Roman miles from Vienna. Another road led from Vienna through Cularo (Grenoble) to the Alpis Cottiae (Mont St. Genevre). (See Richard et Hoquart, Guide du voyageur, for references to modern works on the antiquities of Vienna, and particularly M. Mermont's work, Svo. Vienna, 1829, which contains the answers to a series of questions proposed by the Académie des Inscriptions et Belles Lettres; also the references in Kertul, Gallie, p. 433.)

VIGESISMUM, AD. 1. A station in Gallia Narbonensis, the distance of which from a given point determined its name, as we see in the case of other names of places derived from numerals. [DIOC.] DECUMIUM VEL VIENNA.] The place is xx. M. from Narbo (Vivane) on the road to Spain, and may be at or near a place called La Palme. 2. There is another Ad Vigesimum which occurs in the Itin. of Bordeaux to Jerusalem, on the road from Toulouse. These numerals show that such cities
had the privilege of reckoning their roads from the capital to the limit of their territories, where a Fines often occurs. [FINES.] (D'Anville, Notices, 9c.)

VILLA FAUSTINI, a place of the Iceni in Britain

in the time of Augustus, when it was bounded on the north by Germania Magna, that is, by the Danube and the Vium Hadriani or Limes, on the west by the territory of the Helvetii, on the south by Rhetaetia, and on the east by Noricum, from which it was separated by the river Oenus (Inn).

Villa Faustini, a place of the Iceni in Britain, an

The line of demarcation between Vindelicia and Rhetaetia is not mentioned anywhere, but was in all probability formed by the ridge of the Rhetaetian Alps. Vindelicia accordingly embraced the north-eastern parts of Switzerland, the south-eastern part of Rhaetia, the southern part of Wurttemberg and Bavaria, and the northern part of Tirol (Ptol. ii. 12. § 1, 13. § 1, viii. 7. § 1; Sext. Ruf. 8; Agathen. ii. 4.) The country is for the most part flat, and only its southern parts are traversed by offshoots of the Alpine Alps. As to the products of Vindelicia in ancient times, we have scarcely any information, though we are told by Dion Cassius (iv. 22) that its inhabitants carried on agriculture, and by other authors that the country was very fertile. (Solin. 21; Isid. Orig. i. 4.) The chief rivers of Vindelicia are: the Danube, the upper part of which flowed through the country and farther down formed its boundary. All the others are Alpine rivers and tributaries of the Danube, such as the Ilargus, Gentsia, Licus, Vedio, Isaris, and the Oenus, which separated Vindelicia from Noricum. The Laens Braeitovini in the south-west also belonged to Vindelicia.

The inhabitants of Vindelicia, the Vindelici, were a kindred race of the Rhaeti, and in the time of Augustus certainly Celts, not Germans, as some have supposed. Their name contains the Celtic root Vindia, which also occurs in several other Celtic names, such as Vindolana, Vindobona, Vindobosca, and others. (Zeuss, Die Deutschen, p. 228, foll.; Dienenich, Celtica, ii. 1. p. 134, foll.) Others, without assuming that the Vindelici were Germans, believe that their name is connected with the German Wenden, and that it was used as a general designation for nations or tribes that were not Germans, whence the modern Wend and also the name of the Vandals or Vindili. (Comp. Horat. Carm. iv. 4. 18; Strab. iv. pp. 193, 207, vii. pp. 293, 313; Tac. Ann. ii. 17, Hist. iii. 5; Sen. Aug. 21; Veil. Pat. ii. 39; Plin. iii. 24.) After their subjugation by the Thervingi, many of them were transplanted into other countries. (Strab. vii. 207.)

The principal tribes into which, according to Strabo, Pliny, and Ptolemy, the Vindelici were divided, were: the Brigantiae, Runicatae, Leuni, Conspectanea, Reuni, and Licatian. Their more important towns were: Augusta Vindelicorum, their capital, Reginum, Arbor Felix, Brigantium, Vennania, Campodunum, Abodicum, Abumina, Quinatana Castra, Batava Castra, Vallatum, Isenisia, Pons Oeni, and a few others, which are treated of in separate articles. (Comp. Ryser, Der Oberdonnerkreis Bayerns unter den Romanen, Augsburg, 1880; J. Becker, Drusus und die Vindelicher, in Scherberin's Philologus, v. p. 119, foll.)

VINDELICA [VINDELICA], a place in Upper Moesia, on the road from Naisus to Scodra. (ToL. Pent.) [T. H. D.]

VINDELICA [Vindelia, Vindelicum], the most western of the four Dacianic provinces of the Roman empire. In the time of Augustus, it formed a distinct province by itself, but towards the end of the first century after Christ it was united with Rhaetia. At a still later period the two countries were again separated, and Rhaetia Proper appears under the name of Rhaetia Prima, and Vindelicia under that of Rhaetia Secunda. We have here to speak only of the latter or Vindelicia, as it appears to have been used in the sense of the former. We find in fact that, as far as the roads are concerned, the Roman authors are greatly perplexed, and do not always use the name Vindelicia in its proper sense. [G. L.]

VINDELICA [Vindelia, Vindelicum], a town of the Atranigiius in his territory, between Viminacium and Deobriga. (Hist. Ant. p. 54.)

VINDELICA [Vindelicia or Bisdleca, the most western of the four Dacianic provinces of the Roman empire. In the time of Augustus, it formed a distinct province by itself, but towards the end of the first century after Christ it was united with Rhaetia. At a still later period the two countries were again separated, and Rhaetia Proper appears under the name of Rhaetia Prima, and Vindelicia under that of Rhaetia Secunda. We have here to speak only of the latter or Vindelicia, as it appears to have been used in the sense of the former. We find in fact that, as far as the roads are concerned, the Roman authors are greatly perplexed, and do not always use the name Vindelicia in its proper sense. [G. L.]

VINDELICA [Vindelia, Vindelicum], a place in Upper Moesia, on the road from Naisus to Scodra. (ToL. Pent.) [T. H. D.]

VINDILIS INSULA, on the Atlantic coast of
Gallia, is mentioned in the Maritime Itin. after Uxants and Sina or Sena. Middle age documents prove that the island of Belle-ile was once called Gauda or Gaudia. From the name Vibiplix, the interchange of Io or G and W or V being common. [VAPI-

...um.] Though this is the only evidence, it is suf-

...cient, for the names agree, and Belle-ile is not likely to have been omitted in the itin., when smaller islands along the coast are mentioned. [G.L.]

VINCIUM. [VINDICUM.]

VINDICIUS MONS (Oliv. 8, Ptol. vii. 1. § 28), a chain of mountains in Hinnodadia, extending NE. and SW. nearly, along the N. bank of the Namusus (now Nervobuda), in lat. 21°, long. 117° 30'. They are also known by the name of Vindomia, and form the principal watershed of the Nervobuda and Tauto, which flow into the Indian Ocean, a little to the N. of Bombay, and of the Soane and An-

...omati, which are great tributaries of the Ganges. [V.]

VINDICIUS or VINCIUS (Oliv. 8, Ptol. ii. G. § 21), a mountain in Hispania Tarracconensis, which ran in a W. direction from the Saltus Vasa-

...omm and formed the boundary between the Can-

...ari and the Astures. It formed, therefore, the W. portion of the Cantabrian chain. The Iberos had its source in it. [T. H. D.]

VINDOBONA (Vindobona; Tiana), a town on the Danube in Upper Pannonia, was originally a Celtic place, but afterwards became a Roman municipium, as we learn from inscriptions, (Gruter, Inscrip. p. 4.) This town, according to Ptolemy (ii. 15. § 3) for some time bore the name of Julianobona (Touwacehona), was situated at the foot of Mounts Çetsin, on the road running along the right bank of the river, and in the course of time became one of the most important military stations on the Danube; for after the decay of Car-

...itium it was not only the station of the principal part of the Danubian fleet, but also of the Legio x. Gennina. (It. Ant. pp. 233, 248, 261, 266; Tab. Peut. Aur. Vict. de Caes. 16; Agathem. ii. 4; Jornaed. Get. 50, where it is called Vindobona.)

Vindobona suffered severely during the invasion of the Huns under Attila, yet continued to be a flourishing place, especially under the dominion of the Longobards. (Jornaed. i. c.) It is well known that the emperor M. Aurelius died at Vindobona. (Aurel. Vict. de Caes. 16, Epit. 18; comp. Fischer, Brevis Notitia Urbis Vindobonae, Vindobonae, 1767; Von Hennay, Geschichte Wiens, i. p. 43, foll.; Muchar, Norikum, vol. i. p. 166, foll.) [L. S.]

VINDOLAGDIA, a place in Britannia Romana, probably in the territory of the Belgae on the road from Venta Belgarum to Isca Dumnoniwm. (It. Ant. pp. 483, 486.) The Geogr. Rav. (v. 31) calls it Bin-

...odigala. Some place it at Penribyn, near Old Sarum, where are remains of Roman fortifications. Camden, however (p. 61), identifies it with Wincham, and Horsley (p. 472) with Crewsbury. [T. H. D.]

VINDOLANA, a station on Hadrian's boundary wall in Britain, where the Cohors iv. Gallorum lay in garrison. (Not. Imp.) By the Geo. Rav. (v. 31) it is called Vindolanda. Camden (p. 1087) identifies it with Old Winchester, Horsley (p. 59, &c.) with Little Chesters. [VALLUM ROMANUM.] [T. H. D.]

VINDOMAGUS (Obolodogoras), in Gallia Narbonen-

...s, one of the two cities which Ptolemy (ii. 10. § 10) assigns to the Volece Areciotics. There is nothing to determine the name of Vindomagus, except the fact that there is a town Vigan, where some remains have been found. Le Vigan is NW. of Nimes, and on the southern border of the Cé-

...ennes. [G. L.]

VINDOMIS or VINDOMUS, a place belonging probably to the Belgae in Britannia Romana on the road from Venta Belgarum to Calleva. (Itin. Ant. pp. 483, 486.) Horsley (p. 439) identifies it with Farnham; others have sought it at E. Sherborne, and at Whitchurch. [T. H. D.]

VINDOMORA, a town of the Brittonici in the N. part of Britannia Romana. (Itin. Ant. p. 464.) It is commonly identified with Elchaste at the NW. boundary of Durham (Horsley, p. 398), where there are remains of a fort, and where Roman antiqui-

...ities have been discovered. (Cf. Camden, p. 1086; Philos. Trans, No. 278.) [T. H. D.]

VINDONISSA, in Gallia, is mentioned by Tacitus (Hist. iv. 61, 70). It was the station of the twenty-

...irst legion, A.D. 71, which entered Rhetaia from Vindonissa. The place is Windisch, in the Swiss canton of Aargau, near the junction of the Aur, Secus, and Eimmatt. Vindonissa was once a large place, and many Roman remains and coins have been found there. In the Böhlisgrube there are traces of an amphitheatre, and on the road from Branneck-

...berg to Königsfelden the remains of an aqueduct. The name of the xxl. Legion has been discovered in inscriptions found at Windisch. Near Windisch is the former convent and monastery of Königsfelden, where some of the members of the Habsburg family are buried. Several Roman roads help to fix the position of Vindonissa. The Table places it at the distance of xxl. from Augusta Rauracorum (Augusta Rauracorum) and from Vindonissa; and another road went from Vindonissa past Vindolitum (Vito-

...urum) to Arbor Felix in Rhetaia. Vindonissa is named Vindo in a Panegyric of Constantine by E-

...enius, and Castrum Vindonissense in Maxima Se-

...anorum in the Notitia of the Gallic Provinces. When Christianity was established in these parts, Vindonissa was the see of the first bishopric, which was afterwards removed to Constance. In the third and fourth centuries Vandals and Alamanni damaged the town. The Huns afterwards ravaged Vindonissa, and Chilperic king of the Franks destroyed it in the sixth century. (D'Aurirole, Notices, &c.; Erastii, Note de Tacit. Hist. iv, 70; Neige-

...aur, Neuestes Gemüdel der Schweiz.) [G. L.]

VINIOLAE, a place of the Oretani in Hispania 

...araconensis, between Acetucci and Mentesa Bastia. (Itin. Ant. p. 402.) Variously identified with Hin-

...ares and as a place on the river Borosa. [T. H. D.]

VINCIUS. [VINDUS.]

VINO VIA (in Ptol. Oiovudor, ii. 3. § 16), a town of the Brigantes in the N. of Britannia Romana. (Itin. Ant. p. 465.) Now Winchestr,- near Bishop Auckland, with remains of Roman walls and other antiquities. (Camden, p. 943.) In the Not. Imp. and by the Geogr. Rav. (v. 31) it is called Vinonim. [T. H. D.]

VINIUM (Oivioin: Vence), in Gallia Nar-

...enonensis, the chief town of the Nerausi. [Ner-

...vil.] Inscriptions have been found at Vence with the words civit. vint.; and in the Notitia of the Gallic Provinces it is placed in the Alpes Marit-

...ine under the name of Civitas Vintimensium or
Vendesiam. Vence is in the department of Var, near the river Var. (D’Anville, Noticia, etc.) [G.L.]

VIÑEZELA (Olivierela), a town of Galatia, in the territory of the Tectasates. (Ptol. v. 4. § 8) A second town of the same name is mentioned by Ptolemy (v. 5. § 8) in the south-east of Pisidia. [L.S.]

VIOLVASCENSIS PAGUS. [Martialis.]

VIPITENUM, a town in Raetia belonging to the Veneti, situated between Veldhena and Trientum. (Itin. Ant. pp. 275, 280.) Some place it in the Ober-Weißthal; others identify it with Staining on the Enns, at the foot of the Brenner. [T.H.D.]

VIPISCOANA, a place in Mauretania Tingitana, on the road from Tescosilla to Tingis. (Itin. Ant. p. 23.) Mannert (s. pt. ii. p. 487) supposes it to be the place called Prisciana by Mela (iii. 10. sub fin.), and Prisica or Phisica by Ptolemy (iv. 1. § 14). The same author identifies it with Mergo, whilst Lapike takes it to be Soc-er-Abra, and Graberg di Hemio, Dar-el-Khamara. [T.H.D.]

VIROCELUM (Briscelenum, Ptol.), a town of Etruria, mentioned only by Ptolemy (iii. 1. § 47) who places it among the islands in the NW. corner of that country. It is supposed by Cluverius to be represented by the l’eruccio or l’eruccchia, a mountain between the Scrabio and the Magno (Cruver, Ital. p. 75), but the identification is very doubtful. [E.H.B.]

VIRD (the Vertece), a small river in the territory of the Licatii in Vindelicia, a tributary of the Liesus, which it joins a little below Augusta Vindelicorum. (Paul. Diaec. Langob. ii. 13.; Venant. Fort. Vita S. Mart. iv. 646, where it is less correctly called Vindo or Vindia.) [L.S.]

VIROGULAE. [Bergule, Vol. I. p. 393, a.]

VIROBALLUM. [Cosica, Vol. I. p. 691, a.]

VIRITIUM (Olivierum), a place in northern Germany, mentioned only by Ptolemy (ii. 11. § 27), was probably in the territory of the Sidini, on the site of the modern town of Wrieten on the Odar. (Wilhelm, Germania, p. 275.) [L.S.]

VIROCOIXUM (Oxopodovum, Ptol. ii. 3. § 19), a town of the Cornavii in Britannia Romana, on the road from Deva to Londinium, by a by-road from Maridunum. (Itin. Ant. pp. 482, 484.) It is the town called Urioconium in another route of the Itinerary (p. 469). Now Wroxeter, with ruins and antiquities. (Camden, p. 652.) [T.H.D.]

VIRODUNUM. [Virodunenses.]

VIROMAGUS. [Bracomagus.]

VIROSIDUM (Not. Imp.), a fort or castle at the N. boundary of Britannia Romana and in the territory of the Brigantes, the station of the Coloria vs. Nerviorum. Camden (p.1022) places it near Warwik (Cumberland); whilst others seek it on the S. coast of Solway Frith, and at Preston. [T.H.D.]

VIROVESCA (Oviapovesca, Ptol. ii. 6. § 53), a town of the Atrigones in Hispania Tarraconensis, on the road from Pompelo to Asturica (Itin. Ant. pp. 394, 450, 454; Ptol. ii. 3. § 4). It is the modern Briecesca. (Cf. Pliny, Esp. Supr. xxiv. p. 10, xxi. p. 123; Coins in Scotiæ (p. 211).) [T.H.D.]

VIROVIACUM, in Gallia, in the Taile, Virovium, is placed on a route from Castellum (Cassel) to Turiacum (Tournaisy). The Antoine Itinerary fixes it xvi. from each place. The distances in the Tabule do not agree; but the site is certain. It is Werewic or Werwick, a large village on the Lys, 3 leagues from Lille in the French department of Nord. In 1514 a medal of C. Julius Caesar was dug up at Werewic, and some time afterwards other medals of the time of the Antonini. There is a tradition also of the remains of an ancient edifice having been seen here, and a fragment of a statue (Bust, Recueil d’Antiquités Romaines et Gauloises trouvées dans la Plancher proprement dite, Gand, 1804.) [G.L.]

VISTURDUM (Ouissagovre, Ptol. iii. 3. § 5), a promontory on the N. coast of Britannia Barbarea, and the most N. point of the island. It is apparently the present Dunghay Head. (Camden, p. 1280.) [T.H.D.]

VIURNI. [Vareini.]

VIUSNUM (Ouiunovou), 1. One of the most important towns in the interior of Noricum, south of Norcia, and on the road from Aquileia to Lauriacum. (Plin. iii. 27; Ptol ii. 14. § 3; Steph. Byz. s. v. Beynov; Suid. s. v. Beynov; It. Ant. p. 276; Tab. Peut., where it is called Varunum.) But notwithstanding its importance, which is attested by its widely scattered remains about the village of Marasun near Kloesentorf, no details about it are known, except from inscriptions, the fact that it was a Roman colony, with the surname of Claudia. (Orell, Inscriptiones Germanic. 17, 5074; comp. Mueller, Norikiux, vol. i. p. 271.)

2. A town in the country of the Sidini in Germany, of unknown site, and mentioned only by Ptolemy (ii. 11. § 27).

VIRUS (Ouiov óxovllai, Ptol. ii. 6, § 3), a river in the N. part of the W. coast of Hispania Tarraconensis. Variously identified with the Landroze and the Almona. [T.H.D.]

VISBURGH (Oyiislôpovfou), a tribe in the south-east of Germany, about the sources of the Vistula, and placed by Ptolemy (ii. 11. § 21) near the Quadri, in the district to which Tacitus (Germ. 43) assigns the Gothini. [L.S.]

VISOYUM (Oisovow, Ptol. ii. 6. § 54), a town of the Polonenæ in Hispania Tarraconensis, perhaps Vireoec or Viroesca. [T.H.D.]

VISPI (Oisvsci), a tribe in the south-west of Germany, is mentioned only by Ptolemy (ii. 11. § 10); nothing certain can be said as to the precise district they inhabited. [L.S.]

VISTULA, VISTILLUS (Oisiostóva, Oisiostóla: Vistula or Weichsel), one of the great rivers of Germany, separating, according to Ptolemy (vii. 10. § 2; comp. ii. 11. § 4, iii. 5. § 5), Germany from Sarmatia, while Pomp. Mela (iii. 4), who calls the river Wisula, describes it as forming the boundary between Scythia and Sarmatia. It cannot be expected that either Greeks or Romans should have possessed much information about this distant river. Ptolemy says that it had its origin in the Herycnia Silva, and discharged itself into the Sarmatian ocean (the Baltic), and Marcianus (p. 53) ascribes to it a course from 1850 to 2000 stadia in length. This is all the information to be gathered from the ancient authors. (Comp. Plin. iv. 27. s. 28; Solin. 29; Geogr. Itav. iv. 4; Ann. Marc. xxii. 8, where it is called Bisula; Jornand, Get. 3.) Jornandes in two passages (Get. 5 and 17) speaks of a river Wisula, which some geographers regard as identical with the modern Wiskom, a tributary of the Vistula, but it is probably no other than the Vistula itself, whose modern German name Weichsel seems to be formed from Wisca. [L.S.]

VISURGIS (Oisivouric, Bisouric, Ouivourc- gos, or Ouivouricovou: Weser), one of the principal rivers in north-western Germany, which was tolerably well known to the Romans, since during their
wars in Germany they often advanced as far as its banks, and at one time even crossed it; but they seem to have been unacquainted with its southern course, and with its real origin; for it is formed by the confluence of the Werra and the Fulda, while Ptolemy (ii. 11. § 1) imagined that it had its sources in the mountains near Velindia. Marcellus (Diall. Hist. 51) states that its length amounted to from 1600 to 1780 stadia. The Visurgis flowed into the German Ocean in the country of the Chauci. (Comp. Pomp. Mela, iii. 4; Plin. iv. 27; Tac. 'Ann. i. 70, ii. 9; Vell. Pat. ii. 105; Sidon. Apoll. 'Caron. xxiii. 243; Strab. vii. p. 291; Dion Cass. xlix. 33, lv. 1, 2, 8, lv. 18.)

VITELLIA (Βιτελλία, Steph. B.; Εθ. Βιτελλία, Vitellien), an ancient town of Latium, which was, however, apparently situated in the territory of the Aequi, or at least on their immediate frontiers, so that it is hard to determine whether it was properly a Latin or an Aequian town. But the circumstance that its name is not found in the list of the cities of the Latin League given by Dionysius (v. 61) is strongly in favour of the latter supposition. Its name is first mentioned by Livy (ii. 39) in the account of the celebrated campaign of Coriolanus, whom he represents as taking Vitellia at the same time as Corbio, Labicum, and Pedum; but in the more detailed narratives of the same campaign by Dionysius and Plutarch, no notice is found of Vitellia. The name is again mentioned by Livy in p. 393, when the city fell into the hands of the Aequi, who surprised it by a night attack (Liv. v. 29.) He there calls it "Coloniam Romanam," and says it had been settled by them in the territory of the Aequi; but we have no previous account of this circumstance; nor is there any statement of its recovery by the Romans. A tradition preserved to us by Suchonius recorded that the Roman colony was at one time entrusted to the sole charge of the family of the Vitellii for its defence (Such. Vitell. 1); but there can be little doubt that this is a mere family legend. Vitellia, as well as Tolerium and other towns in the same neighbourhood, disappears after the Gaulish invasion, and the only subsequent mention of the name occurs in the list given by Pliny (iii. 5. s. 9) of the cities of Latium which were in his time utterly extinct. The site is wholly uncertain, though it seems probable that it may be placed in the same part of Latium as Tolerium, Bola, Labicum, and other towns on the frontiers of the Aequian territory. It has been placed by Gell at Valmontone, a place which in all probability occupies an ancient site, and this would do very well for Vitellia, but that it is equally suitable for Tolerium, which must be placed somewhere in the same neighbourhood, and is accordingly fixed by Nibby at Valmontone [Tolerium]. The latter writer would transfer Vitellia to Civitella (called also Civitella d'Olerano), situated in the mountains between Olerano and Subiaco; but this seems decidedly too far distant from the other cities with which Vitellia is connected. It would be much more plausible to place Vitellia at Valmontone and Tolerium at Lugnano, about 3 miles NW. of it, but that Lugnano again would suit very well for the site of Bola, which we are at a loss to fix elsewhere [Bola]. The fact is that the determination of the position of these cities, which disappeared in such early times, and of which no record is preserved by inscriptions or other ancient monu-

ments, must remain in great measure conjectural. (Gell, Top. of Rome, p. 436; Nibby, 'Dintorni,' vol. i. p. 467, vol. iii. p. 370.)

VITIA (Οβία, Strab. xii. pp. 508, 514, 531: Eth. Οβίας). A small district in Media Atropatene, noticed by Strabo in his account of that province. It appears to have been in the northern part near the tribes of the Drabyces and Amauri. [V.]

VITIS [Utes].

VITODURUM or VITUDURUM, in Gallia, is mentioned in an inscription, in which it is said that the emperors Diocletian and Maximianus "nurum Vitodureseum a solo instauraverunt." The Antonine Itin. places it between Vindomissa (Windisch) and Fines (Flin) [Fines, No. 15]. At Winterthur in the Swiss canton of Zürich there is in the town library a collection of Roman coins and cut-stones, most of which have been found in the neighbourhood of the town and in the adjacent village of Oberwinterthur, which is the site of Vitodorum. (D'Anville, Notice, &c.)

VITRICUM (Vercia), a town or village of the Salassi, on the high road leading from Eupedia (Vercia), to Augusta Praetoria (Aosta). It is known only from the Itineraries, which place it 25 miles from Augusta, and 21 from Eupedia (Itin. Ant. pp. 345, 347, 351), but is undoubtedly identical with Vercia, a large village in the Val d'Aosta, at the entrance of the Val Chasson. [E.H.B.]

VIVANTAVGURIUM (OVIITAVGURIO, Pol. iii. 5, § 30), a place in European Sarmatia, between the rivers Axices and Tiras. [T. H. D.]

VIVISCI. VIVISCI. [BITURIGES VIVISCI.]

VIVISCUIS, in Gallia. In the Antonine Itin. the name is Bibiscus. The place is Vercy, or near it, in the Swiss canton of Woodi and Vaud. See the article PENNELOCUS. [G. L.]

ULCAEI LACVS (Ολκαία Λαξ), a succession of lakes and swamps in Pannonia, between the months of the Dravus and Savus. (Dion Cass. iv. 92.) They seem to be the same as the Pulae Huilaca mentioned by Arrius Victor (Epit. 41) as being near Clauzum in Pannonia. (Comp. Zosim. ii. 18.) Those lakes now bear the name of Laxicace. [L. S.]

ULCISIA CASTRA, a fort in Pannonia, on the road running along the right bank of the Danubius from Aquincum to Bregetto (Itin. Ant. p. 269), is now called Szent Endre. [L. S.]

ULIA (Ολία, Strab. iii. p. 141), a town in Hispanic Baetica, on a hill, on the road from Gades to Corduba. (Itin. Ant. p. 412.) It was a Roman municipium, with the surname of Fidentia, and belonged to the jurisdiction of Corduba. (Pline, iii. 3, 4; Hirt. B. H. 3, 4, 4. B. Alex. 61; Dion Cass. xliii. 31.) From inscriptions it appears to be the present Monte Mayor, where there are ruins. (Cf. Morales, Ant. p. 5; Flores, Esp. Sagra. x. p. 150, xii. p. 5; coins in Flores, Med. ii. p. 620, iii. p. 130; Monet, i. p. 27, Suppl. i. p. 47.) [T. H. D.]

COIN OF ULIA. 4 P
ULIAUS INSULA.

ULMUS INSULA (Eth. Olaviansensia, Sidonius Apollinaris), is placed by Pliny in the Aquitanian Sinus (iv. 19). It is the Ιελ d'ơlotrcn, which belongs to the department of Charente Inférieure, and is separated from the mainland by a narrow strait. [G. L.]

ULIZIBEREA (Ολιζιβερα, or Ολζιβερα, Ptol. iv. 3 § 37), the Ulusibritannum of Pliny (v. 4. s. 4), a town of Byzacium in Africa Prer, S. of Hadrumetum. [T. H. D.]

ULLA (called by Ptolemy Ολια, ii. 6 § 2), a river on the W. coast of Hispania Tarraconensis, which enters the sea between the Minus and the promontory of Numerio. (Meh, iii. 1.) It is still called Ulla. [T. H. D.]

ULMANETES. [Silvanetics.]

ULMI or ULMIUS, a place frequently mentioned in the Itineraries as situated in the interior of Lower Pannonia on the road leading from Secia to Cibalae and Sirmium (It. Ant. pp. 131, 232, 261, 267; It. Hieros. p. 563; Tab. Peut.); but its exact site is uncertain. [L. S.]

ULMIUS, a place in Upper Moesia, between Naissus and Remesiana. (Itin. Hieros. p. 566.) According to Lapic near Panicellus (P. T. H. D.)

ULPIANUM 1. (Ολπιανων, Ptol. iii. 9 § 6), called also Ulpiana (Ολπιανα, Hieroc. p. 656), a town of Upper Moesia on the southern declivity of Mt. Scomonius. It was enlarged and adorned by Justinian, whence it obtained the name of Justiniania Secunda. (Procop. de Aed. iv. 1. Gohth. iv. 25.) It is commonly identified with the present Gvstendil; but Leake (Northern Greece, iii. p. 475) takes that town to represent the ancient Pantalia or Pantaia in Thrace.

2. A place in Dacia, apparently in the neighbourhood of Iassus (It. Hieros.; Ptol. iii. 8 § 7) [T. H. D.]

ULTEIOR POTIUM. [Tius Potius.]

ULUBRAE (Eth. Uiburensis), a small town of Latium on the borders of the Pontine Marshes. It is not mentioned in history previous to the establishment of the Roman dominion, but is noticed repeatedly by Latin writers of the best period, though always as a poor and decayed town, a condition which appears to have resulted from its marshy and unhealthy position. Hence Cicero jestingly terms its citizens little frogs (vanusculi, Ep. ad Fam. viii. 18), and both Horace and Juvenal select it as an almost proverbial example of a deserted and melancholy place. (Hort. Ep. 1. vii. 30; Juv. xiii. 104.) Still it appears from the expressions of the latter, that it still retained the rank of a municipal town, and had its own local magistrates; and in accordance with this, we find the Ulibrans enumerated by Pliny among the municipal towns of the First Region. (Plin. iii. 5. s. 9.) The same thing is attested by inscriptions (Ovvi. Inscr. 121-123), and the discovery of these at the place now called Cisterna, about eight miles from Velletri, and 33 from Rome, immediately at the entrance of the Pontine Marshes, leaves no doubt that Ulibrae was situated somewhere in that neighbourhood. But the village of Cisterna (called in the middle ages Cisternaervorion), does not appear to occupy an ancient site, and the exact position of Ulubrae is still undetermined. (Sibyl, Divintorii di Roma, vol. i. p. 463.) [E. L.]

UMBENNUM, in Gallia Narbonensis, is placed in the Jerusalem Itin. between Batiana [Batiana] and Valentinia (Valentia). [G. L.]

UMBRAE, one of many tribes placed by Pliny near the mouth of the Iadius, adjoining, perhaps within, the larger district of Pataleone (vi. 20. s. 23). [V.]

UMBRAVICI, a people of Gallia Narbonensis, who had the Jus Latii. (Plin. iii. 4.) There is no further notice of these people who had this political privilege, except the occurrence of the name Umbraic or Umbrancia in the Table. [G. L.]

UMBRIA (♂ Ομβρίας: Eth. Umbur, Umbri, Ομβρίας), was one of the principal divisions of Central Italy, situated to the E. of Etruria, and extending from the valley of the Tiber to the shores of the Adriatic. The name was, however, at different periods applied within very different limits. Umbria, properly so called, may be considered as extending only from the Tiber, which formed its W. limit through the greater part of its course, and separated Umbrria from Etruria, to the great central range of the Apennines from the sources of the Tiber in the N. to the Monti della Sibilla in the S. But on the other side of this range, sloping down to the Adriatic, was an extensive and fertile district extending from the frontiers of Picenum to the neighbourhood of Ariminum, which had probably been at one time also occupied by the Umbrians, but, before it appears in Roman history, had been conquered by the Gaulish tribe of the Semones. Hence, after the expansion of these invaders, it became known to the Romans as "Gallicus ager," and is always so termed by historians in reference to the earlier period of Roman history. (Liv. xxxii. 14, xxxix. 44; Cic. Brut. 14, &c.) On the division of Italy into regions by Augustus, this district was again united with Umbria, both being included in the Sixth Region. (Plin. iii. 14. s. 19.) But even Pliny, in describing this union, distinguishes the "ager Gallicus" from Umbria Proper ("Jungitur his sexta regio Umbriam complexa agrumque Gallicum circa Ariminum," ib.); it is evident therefore that the name of Umbria did not at that time in common usage include the territory on the shores of the Adriatic. In like manner Ptolemy designates the coast from Ancus to Ariminum (termed by Pliny the "Gallica ora") as "the land of the Semones" (Ptol. iii. 1. § 22), a term which had certainly become inappropriate long before his time. It was according to Pliny (L. c.) this portion of the Gaulish territory which was properly designated as Gallia Togata, a name afterwards extended and applied to the whole of Chalpine Gaul. (Hist. B. G. viii. 24; Cic. Phil. viii. 9, &c.)

It was not until after the death of Augustus that the name of Umbria came into general use as including the whole of the Sixth Region of Augustus, or the land from the Tiber to the Adriatic.

Umbria, in this more extended sense of the name, was bounded on the W. by the Tiber, from a point near its source to a little below Orichenum, which was the most southern city included within the province. Thence the E. frontier ascended the valley of the Nar, which separated Umbria from the land of the Sabines, almost to the sources of that river in the great central chain of the Apennines. Thence it followed a line nearly parallel with the main ridge of those mountains, but somewhat farther to the E. (as Camerinum, Matilica, and other towns situated on the E. slopes of the Apennines were included in Umbria), as far as the sources of the Aesis (Esaio), and then descended that river to its mouth.

We know that on the coast the Aesis was the recognised boundary between Umbria and Picenum on the S., as the little river Rubicon was between Umbria and Gallia Cisalpina on the N.
From the mouth of the latter stream the frontier must have followed an irregular line extending to the central range of the Apennines, so as to include the upper valleys of the Sapis and Bedesia; thenoe it rejoined the line already traced from the sources of the Ticiber.

All ancient authors agree in representing the Umbrians as the most ancient people of Italy (Plin. iii. 14. s. 19; Flor. i. 17; Dionys. i. 19), and the traditions generally received described them as originally spread over a much more extensive region than that which ultimately retained their name, and occupying the whole tract from sea to sea, including the territories successively wrested from them by the Etruscans. That people, indeed, was represented as gaining possession of its new settlements step by step, and as having taken not less than 300 towns from the Umbrians. (Plin. i. c.) This number is doubtless fabulous, but there seems to be good reason for regarding the fact of the conquest as historical. Herodotus, in relating the Lydian tradition concerning the emigration of the Trryrhians, represents the land as occupied, at the time of their arrival, by the Umbrians. (Herod. i. 94.) The traditions reported by Dionysius concerning the settlements of the Pelasgiuns in Italy, all point to the same result, and represent the Umbrians as extending at one period to the neighbourhood of Spina on the Adriatic, and to the mouths of the Padus. (Dionys. i. 16—20.) In accordance with this we learn incidentally from Pliny that Butrium, a town not far from Raveuna, was of Umbrian origin. (Plin. iii. 15. s. 20.) The name of the river Umbro (Onbrome), on the coast of Etruria, was also in all probability a relic of their dominion in that part of Italy. On the whole we may fairly assume as a historical fact, the existence of the Umbrians at a very early period as a great and powerful nation in the northern half of Central Italy, whose dominion extended from sea to sea, and comprised the fertile districts on both sides of the Apennines, as well as the mountains themselves. According to Zenodotus of Troeeza (ap. Dionys. ii. 49), the powerful race of the Sabines itself was only a branch or offshoot of the Umbrians; and this statement is to a great extent supported by the result of recent philological researches. (SABIN.)

If the Umbrians are thus to be regarded as one of the most ancient of the races established in Italy, the question as to their ethnological affinities becomes of peculiar interest and importance. Unfortunately it is one which we can answer but very imperfectly. The ancient authorities upon this point are of little value. Most writers, indeed, content themselves with stating that they were the most ancient people of Italy, and apparently consider them as Abrignines. This was distinctly stated by Zenodotus of Troeeza, who had written a special history of the Umbrian people (Dionys. ii. 49); and the same idea was probably conveyed by the fanciful Greek etymology that they were called Ombricuns or Ombrions, because they had survived the deluge caused by floods of rain (Δεσπός; Plin. iii. 14. s. 19). Some writers, however, of whom the earliest seems to have been one Bocchus, frequently quoted by Solinus, represented the Umbrians as of Gaulish origin (Solin. 2. § 11; Serv. ad Aen. xii. 753; Isidor. Orig. lxx. 3); and the same view has been maintained by several modern writers, as Abrignines. Researches of this latter kind have indeed of late years thrown much light upon the affinities of the Umbrian language, of which we possess an important monument in the celebrated tables of Igviunu. (Iguvium.) They have clearly established, on the one hand its distinctness from the language of the neighbouring Etruscans, on the other its close affinity with the Ocean, as spoken by the Sabellian tribes, and with the old Latin, so that the three may fairly be considered as only dialects of one of the two families of languages. (Igviunu, p. 86.) The same researches tend to prove that the Umbrian is the most ancient of these cognate dialects, thus confirming the assertions of ancient writers concerning the great antiquity of the nation. While, therefore, they prove beyond a doubt that the Umbrian, as well as the nearly related Ocean and Latin, was a branch of the great Indo-European family, they show also that the three formed to a great extent a distinct branch of that family or an independent group of languages, which cannot with propriety be assigned to the Celtic group, any more than to the Teutonic or Slavonic.

The history of the Umbrians is very imperfectly known to us. The traditions of their power and greatness all point to a very early period; and it is certain that after the occupation of Etruria as well as of the plains of the Padus by the Etruscans, the Umbrians shrunk up into a comparatively obscure mountain people. Their own descendants the Sabines also occupied the fertile districts about Rave and the valley of the Velnus, which, according to the traditions reported by Dionysius, had originally been held by the Umbrians, but had been wrested from them by the Pelasgiuns (Dionys. ii. 49.) At a much later period, but still before the name of the Umbrians appears in Roman history, they had been expelled by the Senonian Gauls from the region on the shores of the Adriatic. Livy indeed represents them as having previously held also a part of the territory which was successively occupied by the Boians, and from which they were driven by the invasion of that people (Liv. v. 33).

It was not till the Romans had carried their arms beyond the immediate neighbourhood of the city, and penetrated beyond the barrier of the Cimbric forest, that they came into contact with the Umbrians. Their first relations were of a friendly nature. The consul Fabius having sent secret envoys through the land of the neighbouring Etruscans into Umbria, received from the tribe of the Cameretcs promises of support and assistance if he should reach their country. (Liv. ix. 36.) But the Umbrian people seem to have been divided into different tribes, which owned no common government and took different lines of policy. Some of these tribes made common cause with the Etruscans and shared in the defeat of Fabius (Liv. ix. 37.) This disaster was followed by two other defeats, which were sustained by the Umbrians alone, and the second of these, in which their combined forces were overthrown by the consul Fabius near Mevaenia (B.C. 305), appears to have been a decisive blow. It was followed, we are told, by the submission of all the Umbrian tribes, of whom the people of Ocriculum were received into the Roman alliance on peculiarly favourable terms. (Liv. ix. 39, 41.)

From this time we hear no more of hostilities with the Umbrians, with the exception of an expedition against a mere marauding tribe of mountaineers led by Livius (Liv. x. 1). This was, when the Samnite leader Gellius Egnatius succeeded in organising a general confederacy against Rome, in which the Umbrians and Semanian Gauls took part, as well as the Etrus-
UMBRIA.

Apenines, the ancient Ager Gallicus, was now again separated from Umbria, and became known by the name of Picenum Annonarium. (Mommsen, de Lib. Col. p. 246.)

Of the Umbrians as a nation during their period of independence we know almost nothing. We learn only that they enjoyed the reputation of brave and hardy warriors; and the slight resistance that they opposed to the Roman arms was probably owing to their want of political organisation. So far as we learn, they appear to have been divided into several tribes or "populi," such as the Camerets, Sarsinates, &c., each of which followed its own line of policy without any reference to a common authority. No trace is found in history of the existence among them of any national leagues or council such as existed among the Etruscans and Latins; and even where the Umbrians are spoken of in general terms, it is often doubtful whether the whole nation is really meant.

The physical characters of Umbria are almost wholly determined by the chain of the Apenines, which, as already described, enters the province near the sources of the Tiber, and extends thence without interruption to the lofty group of the Monti della Sibilla (the ancient Mons Fisicelli) at the sources of the Nar, and on the confines of Picenum and the land of the Sabines. The Apenines do not rise in this part of the chain to so great an elevation as they attain farther south, but their principal summits within the Umbrian territory range from 4000 to 5500 feet in height; while their numerous ramifications fill up a space varying from 30 to 50 miles in breadth. A very large portion of Umbria is therefore a mountain country (whence it is termed "montana Umbria" by Martial, iv. 10), though less rugged and difficult of access than the central regions of Italy farther to the S. On the W. the mountain district terminates abruptly on the edge of a broad valley or plain which extends from near Spoletto to the neighbourhood of Perugia, and is thence continued up the valley of the Tiber as far as Città di Castello. But beyond this plain lies another group of hills, connected with the main chain of the Apenines by a ridge which separates Spoletto from Termi, and which spreads out through almost the whole extent of country from the valley of the Nar to that of the Tiber. It is on the outlying hills or underfalls of this range that the ancient Umbrian cities of Tuder and Ameria were placed. The broad valley between this group and the main mass of the central Apenines is a fertile and delightful district, and was renowned in ancient times for the richness and luxuriance of its pastures, which were watered by the streams of the Tynia and Clitumnus. Here we find within a short distance of one another the towns of Trebi, Hispellum, Mesenia, and Assissium. This district may accordingly be looked on as the heart of Umbria properly so called.

On the E. of the central chain the Apenines descend more gradually to the sea by successive stages, throwing off like arms long ranges of mountains, sinking into hills as they approach the Adriatic. The valleys between them are nourished by numerous streams, which pursue nearly parallel courses from SW. to NE. The most considerable of these are the Assisian Umbrius, which formed the established limit between Umbria and Picenum; the SENA, which flowed under the walls of Sena Gallica (Sinigaglia); the far more celebrated METAURUS, which entered the sea at Fiume Fortunae (Fano); the PISARUS, which gave name to the city of Pi-
UMBRIA.

summon (Pescara); the Crustumius, now called the Conus; and the Ariminus (Marcellus), which gave its name to the celebrated city of Ariminum, and seems to have been regarded by Pliny as the northern boundary of Umbria, though that limit was certainly marked at an earlier period by the far-famed though trifling stream of the Rubicon. The river Saris also flowed through the Umbrian territory in the upper part of its course, and gave name to the Sabina Tribus, mentioned by Livy as one of the divisions of the Umbrian nation.

All the waters which descend on the W. of the Umbrian Apennines discharge themselves into the Tiber. None of them are considerable streams, and the Tinia and Clitumnus are the only two the ancient names of which have been preserved to us. The Nar, a much more important river, the sources of which are in the Sabine territory, seems to have formed the boundary between Umbria and the land of the Sabines, through a considerable part of its course; but it entered the Umbrian territory near Interamna (Torni), and traversed it thence to its junction with the Tiber.

Two principal passes crossed the main chain of the Apennines within the limits of Umbria, and served to maintain the communication between the two portions of that country. The one of these was followed by the main line of the Flaminian Way, which proceeded almost due N. from Forum Flaminium, where it quitted the valley of the Clitumnus, and passed by Nuceria, Tadurnum, and Helvillum, to the crest of the mountain chain, which it crossed between the last place and Calae (Cagli), and descended by the narrow ravine of the Furbo (Intericia) into the valley of the Metaurus, which it then followed to the Adriatic at Fano (Fanum Fortunae). This celebrated road continued throughout the period of the Roman Empire the main line of communication, not only from the plains of Umbria to the Adriatic, but from Rome itself to Ariminum and Cisalpine Gaul. Its military importance is sufficiently apparent in the civil war between Vitellius and Vespasian. (Tac. Hist. i. 86, iii. 50, 52, &c.) Another line of road given in the upper Apennines, and gave name to Nuceria, and, turning abruptly to the E., crossed a mountain pass to Prolaqueum (Pioraco), in the valley of the Potenza, and descended that valley to Septempedia in Picenum (S. Severino), and thence to Ancona. This pass has been in modern times wholly abandoned. The present road from Rome to Ancona turns to the E. from Foligno (Fulginum) and crosses the mountain ridge between that place and Camerino, descending to Todi, then to the valley of the Clusentiae (Fusoru).

The towns of Umbria were numerous, though few of them have retained importance. 1. On the W. of the Apennines, and beginning with those nearest to Rome, were: Oriculum, near the left bank of the Tiber; Narnia and Intermna, on the banks of the Nar; Amelia and Caesulae, a few miles to the N. of Narnia; Tudea, on a hill on the left bank of the Tiber; Spoletium, in the hills which separate the valley of the Marogga from that of the Nar; Treba, Meyania, Hesperium, Fulginum, and Assistium, all situated in or bordering on the broad valley above mentioned; Arnia and Tiberinum in the upper valley of the Tiber, and Iguvium, and several others. From it. Vescovia was probably situated at Cioccello di Benevosta, also in the valley of the Tiber. On the Flaminian Way, exactly at the entrance of the mountains, stood Forum Flaminii, and higher up, on the same line of road, Nuceria, Tadurnum, and Helvillum.

2. On the E. of the central ridge of the Apennines, but still high up among the mountains, were situated Camerinum, near the sources of the Fluso; Prolaqueum (Pioraco), near those of the Potenza; Pitiolum (Paelo), in the same valley; Matilica and Attidium, both in the upper valley of the Aeis; Sentinum, in a lateral branch of the same valley; Tuficum and Sasua, both of them in the valley of the Cesano; Calles (Cagli), on the Flaminian Way; Tiberinum Metaurense and Umbrium Metaurense, both of them in the upper valley of the Metaurus; Forum Segniomum (Fossombrone), lower down in the same valley; Umbrium Hortense (Urbino), between the valleys of the Metaurus and the Pisanus; Sentinum (Sextino), near the sources of the latter river; Pittinum Fia- saurense, probably at Pianigiano in the same valley; Sarsina, in the upper valley of the Sasps; and Meyania, which is fixed by Cluviers, on the faith of inscriptions discovered there, at Galeata, in the upper valley of the Bedesia or Ronco (Cluer. Ital. p. 623), and is therefore the most northerly town that was included in Umbria.

3. Along the coast of the Adriatic were the important towns of Sessa Gallica, Fanum Fortunae, Piaugeriae, and Ariminum. To the above must be added Alexia or Aesum (Jesi), on the left bank of the river of the same name, and Ostia, the ruins of which are said to exist between the rivers Cesano and Vipula. (Abeken. Mittel-Italien, p. 41.)

In addition to the above long list of towns, the position of which can be assigned with tolerable certainty, the following obscure names are enumerated by Pliny among the towns or communities of Umbria still existing in his time: the Cuestionilani, Dolates surnamed Salentini, Forogiolenses surnamed Cunebbienses, Forombrentani, Polesini, Vindiates, and Viventiani. The above towns being totally unknown, the correct form and orthography of the names is for the most part uncertain. The same is the case with several others which the same writer enumerates as having in his day ceased to exist. (Plin. iii. 14. s. 19.) Strabo also mentions a place called Lardolum as being situated on the Flaminian Way, in the neighbourhood of Narnia and Orculum (v. p. 227), which is otherwise wholly unknown, and the name is probably corrupt.

Of the natural productions of Umbria the most celebrated were its cattle, especially those of the valley of the Clitumnus [Clitumnus]; but its mountain tracts afforded also pastureage to flocks of sheep, which were driven southwards as far as Metapontum and Heraclea. (Var. R. R. ii. 9. § 6.) The lower portions of the country abounded in fruit-trees, vines, and olives; but when Propertius terms his native Umbria " terris fertiis uberibus," this can be understood only of the tracts on the W. of the Apennines, of which he is there speaking (Propert. i. 22. 9), not of the more extensive mountain regions.

The name of Umbria is still given to one of the provinces of the Papal States, of which Spoletum is the capital; but this is merely an official designation, the name having been wholly lost in the middle ages, and being no longer in use as a popular appellation. (F. Filpi.)

UMBRO (Ombro), a river of Etruria, and next to the Aruns the most considerable in that country. It rises in the hills between Siena and Arezzo, and
UNCILLI.

but and

and

UNELI or UNELI (Ovink), one of the Armo-

nii or maritime states of Gallia. (B. G. ii. 34, ii. 11.) Caesar mentions them with the Veneti, Osismi, Curiosolites, and other maritime states. The Unelli and the rest submitted to P. Crassus in B.C. 57; but in B.C. 56 it was necessary to send a force again into the country of the Unelli, Curiosolites, and Lexovii. Q. Titarius Sabinos had the command of the three

legions who were to keep the Unelli and their neigh-

bours quiet. The commander of the Unelli was Viri-

dovix, and he was also at the head of all the forces

of the states which had joined the Unelli, among

whom were the Aulerici Eburorices and the Lexovii.

The force of Viriodovix was very large, and he was

joined by desperate men from all parts of Gallia,

robbers and those who were too idle to till the ground.

The Roman general entrenched himself in his camp,

and made the Gallic believe that he was afraid and

was intending to slip away by night. The trick

deceived the Galli, and they attacked the Roman camp,

which was well placed on an eminence with a

sloping ascent to it about a mile in length. On

the Galli reaching the Roman camp exhausted by a

rapid march up the hill and encumbered with the

fascines which they carried for filling up the ditch,

the Romans rallied by two gates and punished the

enemy well for their temerity. They slaughtered

an immense number of the Galli, and the cavalry

pursuing the remainder let few escape. This clever

feat of arms is told clearly in the Commentaries.

The Unelli sent a contingent of 6000 men to

attack Caesar at the siege of Alesia. (B. G. vii.

75.)

Ptolomy (ii. 8. § 2) names Crociatontum the capital of the Veneti. [Crociatontum.] The people occupied the peninsula of Cotentin or Cotentin, which is now comprehended in the department of La Manche, except a small part which is included in the department of Cotentin. [G. L.]

UNGIS, according to a reading in Tacitus (Ann. ii. 70), a river in the north-west of Germany, but the correct reading in that passage is ad Ami-

nium, as Ritter has shown in his note upon it. Un-

sigin being only a conjecture of Alting manufactured

out of the modern name of a river called Una or

Zurize. [L. S.]

VOBAINA [Brixia]. VOCANUS AGEK, a district in Africa Proprica,

between Carthage and Thapsus. (Liv. xxxiii. 48.) [J. E.]

VOCARIUM or VACORIUM (Occonovor), a

place in Noricum, on the great road leading from

Augusta Vindelicorum to Aemona. (Ptol. ii. 14.

§ 3; Tab. Peut.) Its exact site is matter of con-

jecture only. [L. S.

VOCALES. [Vasates]

VOGETIUS MONS. This name occurs in

Taucitii (Hist. i. 68), and nowhere else. The history

shows that Taucitus is speaking of the country of the

Helvetii. The Voucetius is conjectured to be that

part of the Jura which is named Boetsberg. The

road from Bâle runs through the Friehof, the Guthberg to Baden and Zurich. The Helvetii fled from C cacina (A. D. 70) into the Voucetius, where

many were caught and massacred. Aventicum, the

chief city (caput gentis), surrendered to Cacina. [AVENTICUM.] It has been proposed to write Vogesus for Voucetius in the passage of Taucitus; but there is no reason for the alteration. [G. L.]

VOCONITII FORUM. [FORUM VOCONII.]

VOCONITII (Ovonotii), a people of Gallia Nar-

bennise, between the Rhône and the Alps. The

only city which Ptolomy (ii. 10. § 17) assigns to

them is Vasio [Vasio]. On the north they be-

touched on the Allobroges, as we learn from Caesar's

march (B. G. i. 10). Strabo places the Caves

west of the Voucetii, but he has not fixed the position

of the Caves well [Cavares]. The position of the

Voucetii, and the extent of their country, are best

shown by looking at the position of Vasio, which was

in the south part of their territory, and of Dea

[Dea], which is in the north part, and Lucus Au-

gusti, which lies between them [LUCUS AUGUSTI].

In the Notitia of the Gallic Provinces we find

both Civitas Deenlium and Civitas Vassianum or

Vassianum. The Voucetii were between the Isère and

the Durance, their southern limit being probably a little

south of Vasio. D'Anville supposes that the

Voucetii occupied the dioceses of Vasio and Die, and

also a part of the country comprised in the diocese of Gyp [Vapincum], and a part of the diocese of Sisteron, which borders on Vasio. Pline

(iii. 4) calls the Voucetii a "Civitas foederata," a

people who had a "foedus" with Rome; and besides

the chief places, Vasio and Lucus Augusti, he says they have nineteen small towns. Pline (ii. 58) mentions that he had been in the

country of the Voucetii, where he saw an aerolite which the people called "delapas" or "delapam.). The Voucetii occupied the eastern part of the department of Drôme, which is a

mountainous country, being filled with the lower

offsets of the Alps, and containing numerous valleys

drained by mountain streams. Part of the country

is fitted for pasture. Silius Italicus (iii. 466) has:—

"Tuam faciles campas, jam rana Vociatia carpit;"

for he makes Hannibal pass through the Voucetii to the Alps, as Livy (xxxi. 31) does. [G. L.]

VODORIACUM, in Gallia, is the first place in the Itins, on the road from Bagacum (Baro) to Aventicum (Tongern). This remarkable Roman

road is called the Chausée de Bruneau, or the

Haut Chemin. The distance of Vodoriacum from

Bagacum is xii, and the place is supposed to be

Vouoici or Vovare. (D'Anville, Notice, &c.) [G. L.]

VORGESUS. [Vosegus.]

VOIARA. [Sannium.]

VOLANDUM, a castle in Armenia Major, lying a day's journey W. of Artaxata. (Tac. Ann. xii. 39.) [T. R. B. D.]

VOLATERRAE (Ooauetrrans: Elba Volaterra-

nus; Volterra), one of the most important and

powerful of all the Etruscan cities. It was situ-

ated on a lofty hill, rising above the valley of

the Cecina, about 5 miles N. of that river and 15

from the sea. Strabo has well described its remark-

able position: "In the plain of Etruria lies the

plain of Volaterrae, a very important place, com-

monly called the city of the Etruscans. To the

north it is surrounded by the plains of Terra di Ze, to the west by the plain of the Etruscan hill of Cerveteri, and to the south by the

plain of Capena. Its position is thus very well

situated for an Etruscan city, as it is well

protected on all sides by the surrounding

hills."

VOCE.
able situation on the summit of a hill, which required a steep ascent of 15 stadia from whatever side it was approached, while the summit itself presented a level surface of considerable extent, bounded on all sides by precipices, and crowned by the walls of the ancient city. (Strab. v. p. 223.)

The hill on which it stands, according to modern measurements, more than 1700 English feet in height above the sea, and completely overlooks all the surrounding heights, so that the position of the city is extremely commanding. It is indeed the most striking instance of the kind of position which the Etruscans seem to have generally preferred for their cities.

There can be no doubt of the great antiquity of Volaterrae, nor that it was, from the earliest period of Etruscan history with which we have any acquaintance, one of the twelve principal cities of the Etruscan confederation: this conclusion, to which we should be irresistibly led by the still existing proofs of its ancient greatness, is confirmed by the earliest notice of it that we find in history, where it appears as one of the five Etruscan cities which furnished support to the Latins in their war with Tarquinius Priscus. (Dionys. iii. 51.) But from this time we find no subsequent mention of Volaterrae in history till a much later period. Its remoteness from Rome will indeed sufficiently account for the fact that its name never figures in the long protracted wars of the Romans with the southern Etruscans; but even after the Roman arms had been carried into the heart of Etruria, and the cities of Perusia and Arretium took active part in the wars, we find no mention of Volaterrae. In b. c. 298, however, we are told that the Roman consul L. Scipio was encountered near Volaterrae by the combined forces of the Etruscans (Liv. x. 12), among which there is little doubt that those of the Volaterrans themselves were included, though this is not expressly stated. But we do not again find their name noticed in the extant accounts of these wars, and the terms on which they were finally reduced to submission by the Romans are unknown to us. We learn only that in common with most of the Etruscan cities they were received on the footing of independent allies, and they appear among the "soil" who in the Second Punic War came forward to furnish supplies for the fleet of Scipio, n.c. 205. On that occasion the Volaterrans provided materials for shipbuilding as well as corn. (Liv. xxvii. 45.)

From this time we hear no more of Volaterrae till the civil wars between Marius and Sulla, when the city espoused the cause of the former, and from its great natural strength became the last stronghold of the Marian party in Etruria, and indeed in Italy. It was besieged by Sulla himself long after every other city in Italy had submitted, and did not surrender till after a siege of rather more than two years' duration. (Strab. v. p. 223; Liv. Epit. lixxiv.; Cic. pro Rose. Amer. 7; pro Cace. 7.) As a punishment for its obstinacy, its territory was confiscated by the conqueror; but it appears that it was never actually divided, and the citizens who had survived the calamities of the war remained in possession of their lands, as well as of the rights of Roman citizens, which had been doubtless conferred upon them in common with the other Etruscans by the Lex Julia in n. c. 89. (Cic. pro Dom. 30, ad Fam. xiii. 4, 5, ad Atti. i. 19.) It appears that another attempt was made to suppress the city by an agrarian law in the consulship of Cicero, but this calamity was averted from them by the efforts of the great orator, to whom the citizens in consequence became warmly attached (Id. ad Fam. xiii. 4), and it appears probable that Caesar subsequently confirmed them in the possession both of their lands and municipal privileges. (Ib.)

Volaterrae, however, certainly received a colony under the Triumvirate (Livy. Col. p. 214), but does not appear to have retained the title of a Colony; it is expressly included by Pliny among the municipal towns of Etruria. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 48.) We find no mention of the name in history under the Roman Empire; but it is certain that the city continued to exist; and it appears again, after the fall of the Western Empire, as a place of importance during the wars of the Goths with Narres (Agath. B. G. i. 11). It continued to subsist throughout the middle ages, and still retains the title of a city and its episcopal see; though it has little more than 4000 inhabitants, and occupies only a small portion of the area of the ancient city. The latter is clearly marked out, having comprised the whole level surface of the hill, a very irregular space, above a mile and a half in length and more than 1000 yards in its greatest breadth; the whole circuit of the ancient walls is above three miles and a quarter. Very large portions of these walls are still visible, and these massive fortifications are incontestably the finest specimens of the kind now existing in Etruria: they resemble in their general style of construction those of Fiesole and Cortona, but are composed of a different material, a soft, arenaceous limestone, which comprises the whole summit of the hill on which Volterra stands. This stone, however, like the maccigno of Fiesole and Cortona, lends itself readily to the horizontal structure, and is wholly distinct from the hard Apennine limestone of which the polygonal walls of Cosa and other cities are composed. These walls may be traced, at intervals, all round the brow of the hill, following the broken and irregular outlines of its summit, and frequently taking advantage of projecting points to form bold salient angles and outworks. Two of the ancient gates are still protected by the one called the Porta all'Arco, which serves as the principal entrance to the city. It is of very massive construction, but regularly built, and surmounted by an arch of perfectly regular form and structure, adorned with three sculptured heads, projecting in relief from the keystone and two of the principal voussoirs. The antiquity of this arch has been a subject of much dispute among antiquaries; some maintaining it to be a specimen of genuine Etruscan architecture, others ascribing it to the Roman period. The arguments in favour of the latter view seem on the whole to preponderate; though there is no reason to doubt that the Etruscans were acquainted with the true principles of the construction of the arch. (Dennis's Etruria, vol. ii. pp. 146-150; Milzioli, Antichi Popoli Italiani, vol. iii. pp. 4, 5.) The other gate, on the N. side of the Etruscan walls, now known as the Porta di Diana or Portone, is of similar plan and construction to the Porta all'Arco; but the arch is wanting.

No other remains of ancient edifices are now extant on the site of Volaterrae, except some portions of Thermae, of Roman date and little interest; but the sepulchral which have been exhumed in various parts of the city, but particularly on the N. slope of the hill, have yielded a rich harvest of Etruscan antiqui-
ties. Among these the most conspicuous are the sepulchral urns, or rather chests, for ashes, re-embalmed small sarcophagi, and generally formed of alabaster, a material which is quarried in the immediate neighbourhood. Many of them are adorned with sculptures and bas-reliefs, some of them purely Etruscan in character, others taken from the Greek mythology, and there is no doubt that many of them belong to a period long after the fall of Etruscan independence. The inscriptions are for the most part merely sepulchral, and of little interest; but those of one family are remarkable as preserving to us the original Etruscan form (Cieca) of the well-known family of the Cae- cinae, who figure frequently in Roman history [Car- cina, Biogr. Dict.]. Indeed, the first of this family of which we have any knowledge—the Aulus Caecina defended by Cicero in b.c. 69—was himself a native of Volaterrae (Cic. pro Caec. 7). His son was the author of a work on the "Etruscan discipline," which is frequently referred to as a valuable source of information in regard to that department of antiquities (Cic. ad Fam. vi. 6; Plin. i. Arg. Lib. ii; Senec. Nat. Quaest. ii. 39).

There is no doubt that Volaterrae in the days of its independence possessed an extensive territory. Strabo distinctly tells us (v. p. 223) that its territory extended down to the sea-coast, where the town of Vada, or as it was called for distinction's sake, Vada Volaterrana, constituted its sea-port. It was not indeed a harbour or port in the strict sense of the word; but a mere roadstead, where the ships, from which it derived its name, afforded a good anchorage and some shelter to shipping. Hence it was, in the Roman times, a frequented station for vessels proceeding along the coast of Etruria (Cic. pro Quinct. 6: Plin. iii. 5. s. 8; His. Marit. p. 301); and Rutulius, in particular, has left us an exact description of the locality (Rutul. Itin. i. 453—462). The site is still marked by a mediæval tower on the coast, called Torre di Vada.

The coins of Volaterrae are numerous, and belong to the class called Aes Grave, from their large size and weight; but they are distinguished from all other Etruscan coins of this class by their having the name of the city in full; whence we learn that the Etruscan form of the name was Felathiria, or Velatiria, as on the one of which a figure is annexed. [E. H. B.]

COIN OF VOLATERRAE.

Volcae, a people of South Gallia, divided into Volcae Arecomici and Volcae Tectoses (Ovédax: *Aricomii, Ovédax Tectosages, Pot. ii. 10. §§ 9, 10; Ovédax *Aricomiiusii, Strabo).

Ptolemy says that the Tectoses occupied the most western parts of the Narbonensis, and that these are their cities: Illices, Iscina, Tolosa Colonies, Cessare, Carcasa, Barcatha, and Narbo Colonia. Next to them and extending to the Rhône he places the Arecomici, or Aricomi, as the name is in Ptolemy's text; and he assigns to the Arecomici only Vindomagus [Vindomagus] and Nemausus Colonia (Nemera). These two nations occupied all the Provincia from the Rhône to its western limits; and if Livy is not mistaken (xxi. 26), at the time of Hannibal's invasion of Italy, the Volcae had also possessed east of the Rhône.

The Cisenna (Cœnus) formed a natural boundary between the Volcae Arecomici and the Gabali and Buteni. As to the limits between the Tectoses and the Arecomici there is great difficulty; for while Ptolemy assigns Narbo to the Tectoses, Strabo (iv. p. 203) says that Narbo is the port of the Arecomici; and it is clear that he supposed the Arecomici to have possessed the greater part of the Provincia, which is west of the Rhône, and that he limited the country of the Tectoses to the part which is in the basin of the Garonne. He makes the Tectoses extend also northwards to the Cœnus, in the western prolongation of this range. The chief city of the Arecomici was Nemausus [Nemausus]; and the chief city of the Tectoses was Tolosa; and if Narbo belonged to the Arecomici, we must limit the Tolosates, as already observed, to the basin of the Garonne. [Narbo; Tolosa.]

There is some resemblance between the names Volcae and Belgae, and there is some little evidence that the Volcae were once named Belgae or Belgae. But it would be a hasty conclusion from this resemblance to assume a relationship or identity between these Volcae and the Belgae of the north of Galia. There was a tradition that some of the Volcae Tectoses had once settled in Germany about the Hercynia Silva; and Caesar (B.G. vi. 24) affirms, but only from hearsay, that these Volcae in his time still maintained themselves in those parts of Germany, and that they had an honourable character and great military reputation. He adds that they lived like the other Germans. The Tectoses also were a part of the Gallic invaders who entered Macedonia and Greece, and finally fixed themselves in Asia Minor in Galatia [Galatia]. With the Roman conquest of Tolosa ended the fame of the Volcae Tectoses in Europe. [G. C.]

Volcarum Stagnæ. [Stagna Volcei- na.]

Volcelium or Volcentum (Ethin. Volcentanum, Plin.; Volcentium, Inscr.: Buccinum), a municipal town of Lucania, situated in the mountains W. of Potentia, a few miles from the valley of the Ta- nager. The name is variously written by ancient authors. Livy mentions the Volcentes as a people who in the Second Punic War revolted to Hannibal and received a Carthaginian garrison into their town, but, in B. C. 209, returned to the Roman alliance. (Livy xxvii. 12.) There can be no doubt that these are the same people as the Volcentani of Pliny, who are enumerated by that author among the municipal communities of the interior of Lucania (Plin. iii. 10. s. 15), and it is certain that the Ulci or Volci of Ptolemy (Ołówax, Pot. iii. 1. § 70) refers to the same place, the correct name of which, as we learn from inscriptions, was Volceii or Volceini, and the people Volceiani. (Mumm. Inscr. R. N. pp. 10. 16.) The discovery of these inscriptions at Buccinum leaves no doubt that this town occupies the site of the Lucanian city of Volceii. (Bomanelli, vol. i. p. 422; Holsten, Nachr. ad Claser, p. 299.) It appears to have been a considerable municipal town under the Roman Empire, and is one of the "Praefecturae Lucaniae" mentioned in the Liber Coloniarum (p. 209). [E. H. B.]
VOLSCI.

VOLSCI (Ov. Volci, Ptol.: Eth. Volcena: Ra. near Ponte della Badia), a city of Etruria, situated in the plain on the right bank of the river Arminia (Arno), about 8 miles from its mouth. Very little mention is found of it in history. It is known from the Livy as well as from Pliny, who enumerates, among the municipal towns of Etruria, the "Volcenuini cognomine Etrusi," an appellation evidently used to distinguish them from the people of Volcetium in Lucania. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 49.) The name is quoted also by Stephans of Byzantium, who writes it "Oäçeœ, from Polybius. (Steph. B. v.) But the only indication that they had once been a powerful people, and their city a place of importance, is found in the Fasti Capitolini, which record a triumph in the year B. C. 280 over the Volcinienses and Volcetians (Fast. Capit. ad ann. 475). This was one of the last struggles of the Etruscans for independence, and it was doubtless in consequence of the spirit shown on this occasion by the Volcenses that the Romans shortly afterwards (in B. C. 273) established a colony at Cosa, in their territory. (Vell. Pat. i. 14; Plin. iii. 5. 8.) It is expressly stated on this occasion by Pliny, that Cosa was a dependency of Volci (Cosa Volcetium), a statement which has been ignored by those modern writers who have represented Cosa as an independent and important Etruscan city. But while this is very doubtful in the case of Cosa, the evidence, though scanty, is conclusive that Volci was such; and there is even reason to suppose, from a monument discovered at Cervetri, that it was at one time reckoned one of the twelve chief cities of the Etruscan League. (Ann. d. Inst. Arch. 1814, pp. 37—40.)

But notwithstanding these obscure hints of its greatness, the name of Volci was almost forgotten, and its site unknown, or at least regarded as uncertain, when the first discovery of its necropolis in 1826 led to subsequent researches on the spot, which have brought to light a number of painted vases greatly exceeding that which has been discovered on any other Etruscan site. The unprecedented number, beauty, and variety of these works of art have given a celebrity in modern times to the name of Volci which is probably as much in excess of its real importance in ancient times as in the somewhat parallel case of Pompeii. It is impossible here to enter into any detailed account of the result of these excavations. It is calculated that above 6000 tombs in all have been opened, and the contents have been of the most varied kind, belonging to different periods and ages, and varying from the coarsest and rudest pottery to the finest painted vases. The same tombs have also yielded very numerous objects and works of art in bronze, as well as delicate works in gold and jewellery; and after making every allowance for the circumstance that the cemetery at Volci appears to have enjoyed the rare advantage of remaining undisturbed through ages, it affords incontestable proof that it must have belonged to a wealthy and populous city. The necropolis and its contents are fully described by Mr. Dennis (Etruria, vol. 1. pp. 397—427). The results of the excavations, in regard to the painted vases discovered, are given by G. Garzoni in Rapporto sull’ Attuale del "Istituto" 1831. It is remarkable that only one of the thousands of tombs opened was adorned with paintings similar to those found at Tarquinii, and, in this instance, they are obviously of late date. The site of the city itself has been carefully ex-

plored since these discoveries have attracted so much interest to the spot. It stood on the right bank of the river Arminia, just below the point where that stream is spanned by a noble bridge, now called the Ponte della Badia. Undoubtedly, like many of Roman towns, though the foundations may be Etruscan. The few remaining relics of antiquity still visible on the site of the city, which occupied a plateau of about 2 miles in circumference, are also of Roman date, and mostly belong to a late period. Inscriptions also have been discovered, which prove it to have continued to exist under the Roman Empire; and the series of coins found there shows that it was still in existence, at least as late as the fourth century of the Christian era. In the middle ages it seems to have totally disappeared, though the plain in which it stood continued to be known as the "Pian di Voci," whence Holstein correctly inferred that this must have been the site of Volci. (Holsten. Not. ed Chavcr. p. 40.) The necropolis was, for the most part, on the other side of the river; and it is here that the excavations have been carried on most diligently. The site of Volci (which is now wholly unoccupied) is about 8 miles from Montalto, a small town at the mouth of the Flora, where that river was crossed by the Via Aurelia. (Den- nis, l. c.)

VOLCIANI, a people in Hispania Tarraconensis. (Liv. xxxi. 19.)

VOLCENOS, a fort in Etruria, in the territory of Teateatum, which was destroyed by the Franks (Paul. Dia. Longob. iii. 31), and is generally identified with the modern village of Valentiso the Adige, south of Caliano. [L. S.]

VOLIBA (Ov. V. A. Pt. ii. 3. § 30), a town of the Dumnonii in Britain. Volci. (R. M. P.)

VOLôBRIGâ (Ov. Volôbriga, Ptol. ii. 6. § 41), a town in Gallaecia in Hispania Tarraconensis belonging to the Nemuatarii. [T. H. D.]

VOLOGATIS, in Gallia Narbonensis, is placed by the Jerusalem Itin. after Lucus (Luci), on the road to Vajuncum (Vapé) past Mons Silicius. The distance from Lucus is i.; and D’Aviville supposes that Vologatis may be a place named Lëches, but the distance i. is too much. Others fix the place at Béouricé; and others propose Lethes or Beou- ment. All this is uncertain. [G. L.]

VOLOGEÂSIA (Ov. Volôgeâsia, Ptol. v. 20. § 6), a city built by and named after Vologenses, one of the Araschid kings of Parthia, in the immediate neighborhood of Silicia upon the Tigris. It is called by Pliny, Vologeucrossa (vi. 26. 50), the latter portion of the name implying the "city of." The extensive ruins, still existing, on both sides of the Tigris, are probably those of the two great cities of Silicia and Vologesia. [V.]

VOLHAS (Ov. Volôphas, Ptol. ii. 3. § 1) a bay on the W. coast of Britain, probably Luc. Brey. (Horsley. p. 378.)

VOLJCI (Ov. Ovljca; Strab.: Ovôlacocci; Diàgus.), an ancient people of Central Italy, who bear a prominent part in early Roman history. Their territory was comprised within the limits of Latium; and that name was employed at a late period, and under the Roman Empire; but there is no doubt that the Volcians were originally a distinct people from the Latins, with whom, indeed, they were almost always on terms of hostility. On the other hand they appear as constantly in alliance with the Aeques; and
there is little doubt that these two nations were kindred races, though always distinguished from each other as two separate peoples. We have no statement in any ancient writer as to the ethnic origin or affinities of the Volscians, and are left almost wholly to conjecture on the subject. But the remains of the language, few and scanty as they are, afford nevertheless the safest foundation on which to rest our theories; and these had led us to regard the Volscians as a branch of the same family with the Umbrians and Oscans, who formed the aboriginal population of the mountain tracts of Central Italy. It would appear, indeed, as if they were more closely connected with the Umbrians than either the Sabines and their Sabellian offshoots, or the Oscans properly so called; it is probable, therefore, that the Volscians had separated at a still earlier period from the main stock of the Umbrian race. (Mommsen, *Cultur-Ital. Dialekt.* pp. 319—326; Schwegler, *Röm. Gesch.* vol. i. p. 178.)

The only notice of their language that occurs in Roman authors, also points to it distinctly as different from Oscon (Titiianus, *op. Fec.* v. *Oscenum.* p. 189), though the difference was undoubtedly of two cognate dialects, not of two radically distinct languages.

When the Volscians first appear in Roman history, it is as a powerful and warlike nation, who were already established in the possession of the greater part at least of the territory which they subsequently occupied. Their exact limits are not, indeed, to be determined with accuracy; and it is probable that they underwent considerable fluctuations during their long wars with the Latins and Romans. But there seems no doubt that from a very early period they held the whole of the detached mountain group S. of the Tiberus (Sacco), termed by modern geographers the *Monti Lepini,* together with the valley of the Liris, and the mountain district of Arpinum, Socia, and Atina. Besides this they were certainly masters at one time of the plains extending from the Volscian Aepuneus to the sea, including the Pompian Marshes and the fertile tract that borders on them. This tract they had, according to Cato, wrested from the Aborigines, who were its earliest possessors (Cato *op. Priscian.,* v. p. 688). The first mention of the Volscians in Roman history is in the reign of the second Tarquin, when they appear as a numerous and warlike people. It is clear that it was the great extension of the Roman power under its last king (which must undoubtedly be admitted as a historical fact), and the supremacy which he had assumed over the Latin League, that first brought him into collision with the Volscians. According to the received history he marched into their country and took their capital city, Suessa Potentia, by assault. (Liv. i. 53; Dionys. iv. 50; *Civ. de Rep.* ii. 24.) The tradition that it was the spoils then obtained which enabled him to build the Capitol at Rome, sufficiently proves the belief in the great power and wealth of the Volscians at this early period; and the foundation of the two colonies of Circeii and Signia, both of which are expressly ascribed to Tarquin, was doubtless intended to secure his recent conquests, and to impose a permanent check on the extension of the Volscian power. It is evident, moreover, from the first treaty with Carthage, preserved to us by Polybius (iii. 22), that the important cities of Antium and Tarraconia, as well as Circeii, were at this time subject to Tarquin, and could not, therefore, have been in the hands of the Volscians.
continued constantly in the hands of the Romans, must have been a severe blow to the power of the Volscians, and may be considered as marking an era in their decline. Throughout this period it is remarkable that Antium, one of the most powerful cities of the Volscians, continued to be on peaceful terms with Rome; the war was carried on almost exclusively upon the NE. frontier of the Volscians, where they were supported by the Aequians, and Eceatra was the city which appears to have taken the lead in it.

The capture of Rome by the Gauls marks the commencement of the fourth period of the Volscian Wars. It is probable that their Aequan allies suffered severely from the same invasion of the barbrians that had so nearly proved the destruction of Rome [Aequi], and the Volscians who adjoined their frontier, may have shared in the same disaster. But on the other hand, Antium, which was evidently at this period a powerful city, suddenly broke off its friendly relations with Rome; and during a period of nearly 13 years (B.C. 386—374), we find the Volscians engaged in almost perpetual hostilities with Romans, in which the Volscians uniformly took the lead. The seat of war was now transferred from the Aequan frontier to the southern foot of the Alban hills: and the towns of Veiiatine and Saturnum were taken and retaken by the Volscians and Romans. Soon after the conclusion of peace with the Antiiates we hear for the first time of Prerumnum, as engaging in hostilities with Rome, B.C. 338, and it is remarkable that it comes forward single-handed. Indeed, if there had ever been any political league or bond of union among the Volscian cities, it would seem to have been by this time completely broken up. The Antiiates again appear repeatedly in arms; and when at length the general defection of the Latiius and Campanians broke out in B.C. 340, they were among the first to join the enemies of Rome, and laid waste the whole sea-coast of Latium almost to the walls of Ostia. But they shared in the defeat of the Latin armies, both at Pedum and on the Astura: Antium itself was taken, and received a colony of Romans within its walls, but at the same time the citizens themselves were admitted to the Roman franchise. (Liv. viii. 14.) The people of Fundus and Formiae, both of them probably Volscian cities, received the Roman franchise, at this period, of which the antisites uniformly took the lead. The Prieneians alone ventured once more to provoke the hostility of the Romans in B.C. 327, but were severely punished, and their city was taken by the consi C. Plautins. Nevertheless, the inhabitants were admitted to the Roman Civitas; at first, indeed, without the right of suffrage, but they soon afterwards obtained the full franchise, and were enrolled in the Uentine tribe. The greater part of the Volscians, however, was included in the Pompeian tribe.

Of the fate of the cities that were situated on the borders of the valley of the Tumus, or in that of the Liris, we have scarcely any information; but there is reason to suppose that while the Antiiates and their neighbours were engaged in hostilities with Rome, the Volscians of the interior were on their side fully occupied with opposing the advance of the Sammites. Nor were their efforts in all cases successful. We know that both Arpian and Fregellae had been wrested from the Volscians by the Sammites, before the Romans made their appearance in the contest (Liv. viii. 23, ix. 44), and it is probable that other cities of the Volsciads readily took shelter under the protection of Rome, for security against their common enemy. It seems certain, at all events, that before the close of the Second Samnite War (B.C. 304), the whole of the Volscian people had submitted to the authority of Rome, and been admitted to the privileges of Roman citizens.

From this time their name disappears from history. Their territory was comprised under the general appellation of Latium, and the Volscian people were merged in the great mass of the Roman citizens. (Strab. vi. pp. 228, 231; Plin. nat. hist. 5. s. 9; Cic. pro Balbo 13.) But a rude and simple manner of life, and the country, so far as it can be judged by Juvenal and other authors, and still more by Tacitus and other historians, would be natural enough to Volscian customs and traditions; and it is clear, from the manner in which Juvenal incidentally alludes to it, that even under the Roman Empire, the name of the Volscians was by no means extinct or forgotten in the portion of Central Italy which was still occupied by their descendants. (Juv. Sat. viii. 245.)

The physical geography of the land of the Volscians will be found described in the article LATIUM. Of the peculiar characters of the people themselves, or of any national customs or institutions that distinguished them from their Latin neighbours, we know absolutely nothing. Their history is a record only of the long struggle which they maintained against the Roman power, and of the steps which led to their ultimate subjugation. This is the only memory that has been transmitted to us, of a people that was for so long a period the most formidable rival of the Roman Republic. [E. H. B.]

VOLSCIENSI S LACUS (γας περί Οὐδάρινος Λιμνί, Strab. v. p. 226; Lago di Bolsena), a considerable lake of Etruria, scarcely inferior in size to that of Trasimeni. It took its name from the town of Volsci, which stood on its NE. shore; but it was also sometimes called Lacus Tarquiniensis, as its western side adjoined the territory of Tarquinii. (Plin. ii. 96.) Notwithstanding its great size, it is probable, from the nature of the surrounding hills and rocks, that it is the crater of an extinct volcano (Dennis, Etruria, vol. i. p. 514). In this lake the river Marta has its source. It aboundeth in fish, and its sedgy shores harboured large quantities of water-fowl, with which articles it supplied the Roman markets. (Strab. i. a; Colum. viii. 16.) It contained two islands, of which, as well as of the lake itself, wonderful stories were related by the ancients. They were remarked to be ever changing their forms (Plin. loc.), and on one occasion during the Second Punic War its waters are said to have flowed with blood. (Liv. xxxvi. 23.) The shores of the lake were noted for their quarries. (Plin. xxxvi. 22. a. 49.) In a castle on one of the islands queen Amalasunta was murdered by order of her husband Theodatus. (Procop. B. Goth. i. c. 4, p. 23, ed. Bonn.)

[TA. H. D.]

VOLSCI or VOLSIINI (Οὖδάρινος, Strab. v. p. 226; Οὐδαρίνος, Plut. iii. 1. § 50; Bolsena), an ancient city of Etruria, situated on the shore of a lake of the same name (Lacus Volsciensiis), and on the Via Clodia, between Clusium and Forum Cassii. (Itin. Ant. p. 256; Tab. Peut.) But in treating of Volsciini we must distinguish between the Etruscan and the Roman city. We know that the ancient town lay on a steep height (Zonara, Ann. viii. 7; cf. Aristot. Ath. 11. 10; while Bolsena, the representative of the Roman Volsci, is situated in the plain. There is considerable difference of opinion as to the origin of this height should be sought. Abeken (Mitteleuropa, p. 94, seq.) looks for it at Monte Faconnene,
at the southern extremity of the lake; whilst Müller (Etrusker, i. p. 431) seeks it at Orvieto, and adds the name of that place—Urbo Vetnus, "the old city," as an argument in favour of his view; but Mr. Dennis (Etruria, vol. i. p. 508) is of opinion that there is no reason to believe that it was so far from the Roman town, and that it lay on the summit of the hill, above the amphitheatre at Bolsena, at a spot called Il Piazzano. He adduces in support of this hypothesis the existence of a good deal of broken pottery there, and of a few caves in the cliffs below. Volsinii appears to have been one of the most powerful cities of Etruria, and was double-s one of the 12 which formed the Etruscan confederation, as Volsini is designated by Livy (x. 57) and Valerius Maximus (i. i. extern. 2) as one of the "capita Etruriae." It is described by Juvenal (iii. 191) as seated among well wooded hills.

We do not hear of Volsinii in history till after the fall of Veii. It is possible that the success of the Roman arms may have excited the alarm and jealousy of the Volscines, as their situation might render them the next victims of Roman ambition. At all events, the Volscines, in conjunction with the Salpinates, taking advantage of a famine and pestilence which had desolated Rome, made inroads into the Etruscan territory in n. c. 391. But they were easily beaten: 5000 of them were made prisoners; and they were glad to purchase a twenty years' truce on condition of restoring the booty they had taken, and furnishing the pay of the Roman army for a twelvemonth. (Liv. v. 31, 32.)

We do not again hear of Volsinii till the year n. c. 310, when, in common with the rest of the Etruscan cities, except Arretium, they took part in the siege of Sutrium, a city too strong for Rome. (Liv. ix. 32.) This war was terminated by the defeat of the Etruscans at lake Vadimo, the first fatal shock to their power. (Ib. 39.) Three years afterwards we find the consul P. Decius Mus capturing several of the Volscian fortresses. (Ib. 41.) In 295, L. Postumius Megellus ravaged their territory and defeated them under the walls of their own city, slaying 2500 of them; in consequence of which they, together with Persia and Arretium, were glad to purchase a forty years' peace by the payment of a heavy fine. (Ib. x. 57.) Not more than fourteen years, however, had elapsed, when, with their allies the Volscines, they again took arms against Rome. But this attempt ended apparently in their final subjugation in n. c. 280. (Liv. Ep. xii.; Fast. Cons.) Pliny (xxxiv. 7. s. 16) relates an absurd story, taken from a Greek writer called Metrodorus Scerpinus, that the object of the Romans in capturing Volsinii was to make themselves masters of 2400 statues which it contained. The story, however, suffices to show that the Volscines had attained to a great pitch of wealth, luxury, and art. This is confirmed by Valerius Maximus (l. c.), who also adds that this luxury was the cause of their ruin, by making them so indolent and effeminate that they at length suffered the management of their commonwealth to be usurped by slaves. From this degrading tyranny they were rescued by the Romans. (Flor. i. 21; Romanz, l. c.; A. Victor, Vitr. Illust. 36; Oros. iv. 5.)

The Romans, when they took Volsinii, razed the town, and compiled the inhabitants, as we have already intimated, to migrate to another spot. (Zonaras, l. c.) This second, or Roman, Volsinii continued to exist under the Empire. It was the birthplace of Sejanus, the minister and favourite of Tiberius. (Tac. Ann. iv. 1, vi. 8.) Juvenal (x. 74) alludes to this circumstance when he considers the fortunes of Sejanus as dependent on the favour of Narsus, or Narsia, an Etruscan goddess much worshipped at Volsinii, into whose temple there, in that of Jupiter Capitolinus at Rome, a nail was annually driven to mark the years. (Liv. vii. 3; Terceull. Apol. 24.) According to Pliny, Volsinii was the scene of some supernatural occurrences. He records (ii. 54) that lightning was drawn down from heaven by king Porson to destroy a monster called Volta that was ravaging its territory. Even the commonplace invention of hand-nails, ascribed to this city, is embellished with the traditional prolixity that some of them turned of themselves! (Id. xxxvi. 18. s. 29.) Indeed, in the whole intercourse of the Romans with the Etruscans, we see the ignorant wonder excited by a cultivated people in their semi-barbarous conquerors.

From what has been already said it may be inferred that we should look in vain for any traces of the Etruscan Volsinii. Of the Roman city, however, some remains are still extant at Bolsena. The most remarkable are those of a temple near the Florence gate, vulgarly called Tempio di Narsia. But the remains are of Roman work; and the real temple of that goddess most probably stood in the Etruscan city. The amphitheatre is small and a complete ruin. Besides these there are the remains of some baths, cippi, sepulchral tablets, a sarcophagus with reliefs representing the triumph of Bacchus, &c.

For the coins of Volsinii, see Müller, Etrusker, vol. i. pp. 324, 333; for its history, &c., Adami, Storia di Volsinii; Dennis, Etruria, vol. i.; Abeken, Mitteilungen, [T. H. D.]

VOLTUMNIAE FANUM [FANUM VOLCTNUMAE]; VOLUBILIANI. [VOLUBILIS.]

VOLUBILIS (Oe/ao/oa, Proo. iv. 1. § 14), a town of Mauretania Tingitana, seated on the river Subir, and on the road from Toechobida to Tingis, from the former of which places it was only 4 miles distant. (Itin. Ant. p. 23.) It lay 33 miles SE. from Bamusa, and the same distance from the coast. (Itin. Proo. i. s. 1; Mela, iii. 10.) It was a Roman colony (Itin. Ant. l. c.) and a place of some importance. Polyb. calls the inhabitants of the surrounding district, Volubiliani (Oe/oa/oa, Proo. iv. 1. § 10). In the time of Leo Africanus (p. 279, ed. Lorschach) it was a deserted town between Fez and Mequinez, bearing the name of Vellii or Guelti, the walls of which were 6 Italian miles in circumference. That position is now occupied by the town of Zanitlt-Mblia-Drias, on mount Zarchon. At some distance to the NW. are the splendid ruins of Ksler Paraun (Pharaoni's castle), with Roman inscriptions; but to what ancient city they belong is unknown. (Cf. Mannert, x. p. ii. p. 486; Gruber di Hemi, p. 28; Wimmer, Gemilale von Africen, i. p. 349.)

VOLUCE (probably the Oe/oa/oa of Proo. ii. § 56), a town of the Pelendones in Hispania Tarraconensis, on the road from Asturica to Caesar- angusta, and 25 miles W. of Numantia. (Itin. Ant. p. 142.) Variously identified with Veuca (Vela- che), Velaecho, and Calataiulav. (T. H. D.)

VOLTINIT (Oe/oa/oa, Proo. ii. § 9), a people on the E. coast of Hibernia. (T. H. D.)

VOLUSTANA. [CAMIIIUNI MONTES.]
VOMANUS.

VOMANUS (Vomano), a river of Picenum, which rises in the lofty group of the Apennines now known as the Gran Sasso d’Italia, and flows into the Adriatic, after passing within a few miles to the N. of the city of Adria (Atria). Its name is mentioned by Pliny only (Hist. Nat. ii. 13, § 18). [E. H. B.]

VORDENSES, in Gallia Narbonensis, an ethnic name which occurs in an inscription found at Apt, the site of Apta Julia (Apta Julia). The inscription states that the "Vordenses pæzæi" dedicate this monument to their patrons, who is designated "iii:vir" of the Colonia Apta. The place is supposed to be Gordex, which is contiguous to the diocese of Apt, and in that of Caravallon. The change of Vord into Gord is easily explained. [VASC.] (D’Anville Notice, etc.) [G. L.]

VOREDA, a town of the Brigantes in Britannia Romana, on the road from Cartarama to Lucavi- vallum. (Itin. Ant. p. 467.) It is variously identified with Old Penwith, Whelp Castle, and Cool Hills. By the Geogr. Rav. (v. 31) it is called Bereda. [T. H. D.]

VORGANIIUS (Ovogydron), in Gallia Lugdunensis, the capital of the Oasiiti (Oasamenti), a Celtic people in the north-west part of Bretagne (Ptol. ii. 8. § 5). This seems to be the same place as the Vorganiun of the Table; and it appears on a map which leads from the capital of the Narmanes through the capital of the Veneti, and ends on the coast at Genoverae, or Gesevriate, as some would write it. Between the capital of the Veneti and Vorganiun is Sulis, supposed to be at the junction of the Som and the Basset (Sulis). From Sulis to Vorganiun the distance is marked xiii, and this brings us to a place named Karhes (D’Anville). But all this is very uncertain. Others fix Vorganiun at a place named Guemene. [G. L.]

VORGIUM, in Gallia, is placed in the table on a road from Augustanemetum (Clermont Ferrand) through Aquae Calidae (Vichy) to Ariolica (Avril). The distance is marked viii, from Aquae Calidae, and xiii, from Vorganiun to Ariolica. There is a place named Vourroux, which is the same name as Vorganiun. Vorroux is near the small town of Varennes, and somewhat nearer to the banks of the Allier. The direct distance from the springs of Vichy to Varennes is somewhat less than the Itin. distance of vii. Gallie leagues, but the 8 leagues are not more than we may assign to the distance from Vichy to Varennes along the river. But the Itin. distance from Vorganiun to Ariolica is somewhat too large compared with the real distance. (D’Anville, Notice, etc.) [G. L.]

VOSALIA. [Vosava.]

VOSAVA or VOSAVIA, in North Gallia, is placed by the Table on the Roman road along the west bank of the Rhine, and between Bontobrica or Baudobrica (Boppard) [BAUDORICA] and Bingium (Bingen). It stands half-way between these places and at the distance of viii. Vosava is Ober- weschel on the Rhine, north of Bingen; and it is almost certain, as D’Anville suggests, that the name is erroneously written in the Table, and that it should be Bals[i]. [V. S.]

VOSEGUS. (Vogezen, Vogay, Vosjes). The form Voseges has better authority than Vosges (Schneider’s Caesar, B. G. iv. 10); and the modern name is also in favour of the form Voseges. Lucan is sometimes quoted as authority for the form Vosges:

"Castraque quae Vosges curvam super ardua rupem Pugnaces pictis cohaerentur Lignosus armis." (Pharsal. i. 397.)

The name is Βωσάγου in the Greek version of the Commentaries.

Caesar says that the Mossa (Maus) rises in the Vosges, by which he means that the hills in which the Maus rises belong to the Vosges. But he says no more of this range. The battle with Ariovistus, r. c. 58, was fought between the southern extremity of the Vosges and the Rhine, but Caesar (B. G. i. 43, 48) gives no name to the range under which Ariovistus encamped in the great plain between the Vosges and the Rhine. D’Anville observes that an inscription in honour of the god Vosocus was found at Berg-Anzen on the confines of Alsace and the Palatinate, which proves that the name Vosegus extended as far as that place. It seems likely that the name was given to the whole range now called Vosges, which may be considered as extending from the depression in which is formed the canal of the Rhône and Rhine, between Betzen and Altkirch, to the head of the Rhine between Mainz and Bingen, a distance of about 170 miles. The range of the Vosges is parallel to the Rhine. The hilly country of the Faucilles in which the Maus rises is west of the range to which the name of Vosges is now given. The Vosges are partly in France, and partly in Rhenish Bavaria and Hesse Darmstadt.

The territory of the Sequani originally extended to the Rhine, and the southern part of the Vosges was therefore included in their limits. North of the Sequani and west of the Vosges were the Lenici and Mediomatrici; and east of the Vosges and between the Vosegus and the Rhine were the Rauraci, Triboci, Nemets, Vangiones, and Caracates.

In the Table the Silva Vosagens is marked as a long forest on the west side of the Rhine, Pliny (xvi. 39) also speaks of the range of the Vosges as containing timber. [G. L.]

UR, a castle of the Persians mentioned by Ammianus Marcellinus (xxx. 8), in his account of the war between Julian and the Persians. It must have been situated in Mesopotamia, at no great distance from Hatra (Al-Hathr). It has been generally supposed that Ur is the same place as that mentioned in Genesis (xi. 28); but the recent researches of Colonel Rawlinson have demonstrated that the Ur whence Abraham started was situated in the S. part of Babylonia, at a place now called Mousher. (Journ. Roy. As. Soc. 1855.) [Y.]

URANOPTOLIS (Ovrapô'tolos), a town in a peninsula Acte of Chalcidice in Macedonia, of which we know nothing, except that it was founded by Alex- andros, the brother of Cassander, king of Macedonia (Athen. iii. p. 98; Plin. iv. 10. s. 17). As Pliny does not mention Sane in his list of the towns of Acte, it has been conjectured by Leake that Uranopolis occupied the site of Sane. (Northern Greece, vol. iii. p. 149.) [Y.]

URANOPTOLIS (Ovrapô'tolos), a town in the peninsula Acte of Chalcidice in Macedonia, of which we know nothing, except that it was founded by Alex- andros, the brother of Cassander, king of Macedonia (Athen. iii. p. 98; Plin. iv. 10. s. 17). As Pliny does not mention Sane in his list of the towns of Acte, it has been conjectured by Leake that Uranopolis occupied the site of Sane. (Northern Greece, vol. iii. p. 149.) [Y.]

URBA, a town of Gallia, in the territory of the Helvetii. It is placed in the Antonine Itin. between Lucus Lauzunius and Ariolica [ARIOLICA], xviii. from Lucus Lauzunius and xxiii. from Ariolica. Urbis is Orbe in the Swiss Canton Vaadt or Pays de Vaud, on the road from the Lake of Neuf-
URBANA COLONIA.

chapel to the Lake of Genova, and on a hill nearby surrounded by the river Orbe. [G. L.]

URBANA COLONIA, mentioned by Pliny only (xv. 6. s. 8), was a colony founded by Sulla in a part of the territory of Capua, adjoining the Falernian ager. From its name it would appear probable that it was a colony of citizens from Rome itself, who were settled by the dictator in this fertile district. It is doubtful whether there ever was a town of the name, as no allusion is found to it as such, and the district itself was reunited to that of Capua before the time of Pliny. (Plin. l. c.; Zumpt, de Col. p. 252.)

URBATE, a place in Lower Lomania, on the road from Siscia to Sirinium (It. Ant. p. 208; Tubb. Pent.); its exact site is unknown. [L. S.]

URBISINUM (Ubésoy), was the name of two cities or municipal towns of Umbria, situated within a short distance of each other, which were distinguished by the epithets Hortense and Metaurense. (Plin. iii. 14. 1.)

URBISINUM HORTENSE (Ubéno), apparently the more considerable of the two, and for that reason frequently called simply Urbisinum, was situated on a hill between the valleys of the Metaurus and the Psaurus (Foglio), rather more than 20 miles from the Adriatic. It is mentioned by Pliny among the municipal towns of Umbria, and is incidentally noticed by Tacitus as the place where Fabius Valens, the general of Vitellius, was put to death, in a.d. 69, after he had fallen into the hands of the generals of Vespasian. (Tac. Hist. iii. 62.) Its municipal rank is confirmed by numerous inscriptions, which prove it to have been a town of some importance. (Orell. Inscrip. 3714; Gruter, Inscrip. p. 387. s. p. 392. 1, sc.) Procopius also notices it during the Gothic Wars, and correctly describes it as situated on a steep and lofty hill; it was at that time a strong fortress, but was besieged and taken by Belisarius in a.d. 583. (Procop. B. G. ii. 19.) From this time it seems to have continued to be a place of consideration, and in the middle ages became the seat of government of a race of independent dukes. It is still a considerable city, and one of the capitals of the delegation of Urbino and Pesaro, but has no remains of antiquity, except the inscriptions above noticed.

2. URBISINUM MATAURENSIS (Urbisina), was situated, as its name imports, in the valley of the Metaurus, on the right bank of the river, about 6 miles below S. Angelo in Vado (Tiberinus Metaurus), and 9 from Urbino. Its municipal rank is attested by an inscription, in which the inhabitants are termed Urbisinae Mataurensec, as well as by Pliny (Gruter, Inscrip. p. 463. 4; Plin. iii. 14. 19.) but it seems never to have been of a place of much importance. In the middle ages it fell into complete decay, and was replaced by a village called Castel Durante, which, in 1625, was enlarged and raised to the dignity of a city by Urban VIII., from whom it derives its present name of Urbisina. (Claver. Itol. p. 629; Rampoldi, Dia. Top. vol. iii. p. 1278.) [E. H. B.]

URBS SALVIA (Obréa Sálvia, Plot. iii. 1. § 52; Eth. Urbis Salvisiensis or Urbis saliva: Urvingsia, a town of Picenum, mentioned by Pliny among the municipal towns of that district. (Plin. iii. 13. s. 18.) It was situated on a hill above the valley of the Flassor (Chienti), about two miles from the right bank of that river, and 7 miles E. of Tolentino. [E. H. B.]

The identity of Pliny's name with that of Urbisalviansium is confirmed by the Liber Colonarium, which mentions the "ager Urbis Salvisiensis," as well as by an inscription (Lib. Col. p. 326; Orell. Inscr. 1870); and it seems to have been a flourishing town until it was taken and destroyed by Alaric, a calamity from which it never recovered, so that it still lay in ruins in the time of Procopius. (Procop. B. G. ii. 16.) Dante also notices it in the 13th century as in complete ruins (Par. xvi. 73); but the name has always survived, and is still attached to the modern Urbisalviana, which is, however, a mere village, dependent on Mesagne. The Itineraries give two lines of crossroads which passed through Urbisalvina, the one from Septempeda (S. Severino) to Firmum (Fermo), the other from Albaeum through Licina and Urbisalvina to Asculum. (Itin. Ant. p. 316; Tab. P lent.)

URBS VETUS (Orieto), a city of Etruria mentioned by Paullus Diaconus (Hist. Lang. iv. 33) together with Binalium legum (Bignarae) in the same neighborhood. No mention of any other name occurs in any writer before the fall of the Roman Empire, but it is probable that the Urbivenium (Obréa Venteri) of Procopius, which figures in the Gothic Wars as a fortress of some importance, is the same place as the Urbis Vetus of P. Diaconus. (Procop. B. G. ii. 20.) There is no doubt that the modern name of Orieto is derived from Urbis Vetus; but the latter is evidently an appellation given in late times, and it is doubtful what was the original name of the city thus designated. Niebuhr supposes it to be Salpinus, noticed by Livy in b. c. 389 (Liv. v. 31: Niebuhr, vol. ii. p. 493) [Salpinus], while Italian antiquaries in general identify it with Herculanum. [HERBANUM.] But both suggestions are mere conjectures. [E. H. B.]

URCESA (Obréa Cesara or Obrea Cesara, Plot. ii. 6 § 58), a town of the Celtiberi in Hispania Tarraconensis. According to some, the modern Regina, whilst others identify it with Velez or Organ. (Coins in Sestini p. 212.)

URCI (Plin. iii. 3. s. 4; Obréa, Plot. ii. 6 § 14), a town of the Bastetani in Hispania Tarraconensis, on the borders of Baetica, or according to another boundary line, which makes the latter reach as far as Barca, in Baetica itself, on a bay named after it, and on the road from Castulo to Malea. (Olea, ii. 6, where the editions incorrectly have Urci and Virgi; Itin. Ant. p. 404.) Variously identified with Albercia, Puerto de Aguas, and Alcudia. Ukert, however (ib. p. i. p. 332), would seek it in the neighborhood of Almeria. [T. H. D.]

URCITANUS SINUS, a small bay either on the S. coast of Hispania Tarraconensis or in Baetica, named after the town of Urci. It was separated by the Praenitorium Charidemi from the Sinus Massienus on the E. (Mela, ii. 6.) Now the bay of Almeria. [T. H. D.]

URGAO, a town in Hispania Baetica, on the road from Corduba to Castulo (Itin. Ant. p. 403), with the surname of Alca. (Plin. iii. 1. s. 3.) In the editions of the Itinerary it is called Urga and Viraeo; and according to inscriptions in Gruter (ccxl. 3, ccxlil. 6), it was a municipium, with the name of Alcense Urgavonense. Most probably Arjona. (Cf. Morales, Ant. p. 74; Florcz, Esp. Segr. xii. p. 379.)

[T. H. D.]
URGO. [Gorgona.]

URIA. [Hyrum.]

URIA LACUS. [AEtolia, p. 64, a.]

URIAS SINUS. [Aulnia.]

URISISM (L. Hier. p. 569), a town in Thrace, on the road between Tarpendunae and Bergulc: according to D'Anville it corresponds to the modern Abnurti or Alpuri; but according to Lapioli, to Kirk-Kalisia. [J. L.]

URIO (Ofiow, Ptol. ii. 4. § 12). 1. A town in Hispania Baetica, on the borders of Lusitania; according to Reichard, now Toro del Oro.

2. A river in Hispania Baetica, between the Baetic and the Annas, which entered the sea near the town just named. (Plin. iii. i. s. 3.) Now the Tinto. [T. H. D.]

URIPANUS, a small river of Pannonia, a tributary of the Satnus, is now called the Verboz. (Plin. iii. 28; Tab. Peut., where it is called Urbas.) [L. S.]

URSI PROMONTORIUM. [Sardina.]

URSO (Ofiow, Strab. iii. p. 141), a strong mountain town in Hispania Baetica, the last refuge of the Pompeians. It was a Roman colony, with the surname of Genua Urbanorum, and was under the jurisdiction of Astigi. (Plin. iii. 1. s 3; Hirt. B. H. 26. 41, 63; Appian, B. H. 16.) It is the modern Ommone, where some inscriptions and ruins have been found. (Ct. Muratori, p. 1095; Florence, Esp. Sgr. x. p. 77.) For coins of Urso, see Florence, Med. ii. p. 624, iii. p. 130; Momnet, i. p. 28, Suppl. i. p. 47; Sestini, p. 94. [T. H. D.]

URSO. [Gorgona.]

URSOI. a place in Gallia Narbonensis, fixed by the Antonine Itin, on the road between Valantia (Valence) and Vienna (Vienna), xxii. from Valentia, and xxvii. from Vienna. This agrees pretty well with the whole distance between Valence and Vienna. There are no means of determining the site of Ursoli except the distances; and D'Anville fixes on S. Valier, a place on the right bank of the Galeure near the place where it enters the Rhone. [G. L.]

URUNCI, a place in Gallia between the Rhoen and the Rhine. It occurs twice in the Antonine Itin, and in both cases the road from Urunci runs to Mons Brisciaus. [Mons Brisciaus.] In one route it is placed between Larga (Largitrun) and Mons Brisciaus, xviii. from Larga, and xxiii. from Brisciaus. This route is from south to north-east. The other route is from Ariabinnum, supposed to be Rinum near Basle, to Mons Brisciaus, from south to north, and Urunci is xxii. M. P. or 15 leagues from Mons Brisciaus. D'Anville supposes that Urunci may be a place named Rucena or Ricon, on the line of the road from Larga to Mons Brisciaus or Brisciaca. [G. L.]

USA, the most easterly river of Maurétania. (Plin. v. 2. s. 1.) It seems to be the river called Sarap by Ptolemy (iv. 2. § 10), and is probably the Jofy, which falls into the gulf of Bugie. [T. H. D.]

USARGALA (Ουσαργάλα, Ptol. iv. 6. § 7, &c.), a very extensive mountain chain in the country of the Garamantes on the N. border of Libya, Interior, and S. of Numidia and Mauretania, stretching in a N.W. direction as far as Atlas. It is in this mountain that the river Bagradas has its source. [T. H. D.]

USRIUM (Ουσρίου), a town mentioned by Ptolemy (ii. 11. § 30) in the south-east of Germania, probably in the territory of the Marcomanni, seems to be identical with the modern Ispern, on a rivulet of the same name. [L. S.]

US'CANA, the chief town of the Penestae, a people of Illyricum, which contained 10,000 inhabitants at the time of the Roman war with Persians. At the commencement of this war it appears to have been in the hands of Persians, and the first attempt of the Roman commander, App. Claudius, to possess possession of the place proved unsuccessful, n. c. 170. (Liv. xiii. 10.) It would seem, however, to have been afterwards taken by the Romans, since we read that Persians in the following year surprised Usacana, marching thither in three days from Stubera. (Liv. xiii. 17, 18.) Shortly afterwards L. Coelius, the Roman commander in Illyricum, made an unsuccessful attack upon Usacana. (Ib. 21.) The site of this town is uncertain.

USCENUM (Ουσκενος, or Οσκαους, Ptol. ii. 7. § 2), a town of the Jassenses Metamatae. [T. H. D.]

USCUDAMA, a town belonging to the Bessi, near Mount Haemus, which M. Lucullus took by assault. (Eutr. vi. 10.) [J. R.]

USELLIS (Ουσέλλας, Ptol: Usellus), a city of Sardinia, situated in the interior of the island, about 16 miles from the Gulf of Oristano on the W. coast, and the same distance S. of Forum Trajani. Its name is not found in the Itineraries, and the only author who mentions it is Ptolemy (ii. 3. § 2), who erroneously places it on the W. coast of the island; but the existing ruins, together with the name of Usellus, still borne by a village on the site, leave no doubt of its true situation. It is about 3 miles N.E. of the modern town of Als. Ptolemy styles it a colony, and this is confirmed by an inscription in which it bears the title of "Colonia Julia Augusta." It would hence appear probable that the colony must have been founded under Augustus, though Pliny tells us distinctly that Turris Libysoma was the only colony existing in Sardinia in his time. (De la Marmora, Voy. en Sardeigna, vol. ii. pp. 367, 466.) [E. H. B.]

USILLA (Ουσίλα, Ptol. iv. 3. § 10), a place in Lycia on the coast of Africa Prope. It is the Usula of the Itin. Ant. (p. 59), lying between Taras and Thamyris. Variously identified with Inchilla or Siddi Malolofy, and Uskibilla. [T. H. D.]

USPITETES or USPITI (Ουσιτετας, Οστετα), a German tribe, mostly mentioned in conjunction with the Tencteri, with whom they for a long time shared the same fate, until in the end, having crossed the lower Rhine, they were treacherously attacked and defeated by Julius Caesar. (Caes. B. G. iv. 4, &c.; Appian, de Reb. Gall. 18; comp. Tenereter.) After this calamity, the Usipetes returned across the Rhine, and were received by the Sgambri, who assigned to them the district on the northern bank of the Loppia, which had previously been inhabited by the Chamavi and Tubantes, and in which we henceforth find the Usipetes as late as the time of Tacitus. (Ann. xii. 55, Hist. iv. 37, Germ. 26; Dion Cass. liv. 32, fol.) Afterwards the Usipetes are met with
UTICA.

The hills behind the town, as well as the district near the present Porto Faraon, contained rich veins of various metals; and the coast was celebrated for producing vast quantities of salt of a very peculiar quality. (Plin. xxxi. 7. s. 39; Caes. B. C. ii. 37; Polyb. xii. 3, seq.; Dio. xx. 8, &c.) Among the buildings of the town, we hear of a temple of Jupiter (Pint. Cat. Min. 5) and of one of Apollo, with its planks of Numidian cedar near two centuries old (Plin. xvi. 40. s. 79); of a forum of Tnajan, and a theatre outside the city. (Tiro Prosper, ap. Moreelli, Afr. Chrét. iii. p. 40; Caes. B. C. ii. 25.) The tomb and statue of Caton on the sea-shore were extant in the time of Plutarch (Ib. 79). Shaw (Travels, vol. i. p. 160, seq.) has the merit of having first pointed out the true situation of this celebrated city, the most important in N. Africa after Carthage. Before the time of Shaw, it was sought sometimes at Biserta, sometimes at Porto Farina; but that learned traveller fixed it near the little miserable Ducra, which has a holy tomb called Boo-shatter; and with this view many writers have agreed (Falbe, Recherches sur l’Emplacement de Carthage, p. 66; Barth, Wanderungen, &c. p. 109; Semillas, pp. 39, 46; Ritter, Afr. i. 913, &C.) Since the Roman times the muddy stream of the Bagradas has deposited at its mouth a delta of from 3 to 4 miles in extent, so that the innermost recess of the Bay of Carthage, on which ancient Utica was situated, as well as the eastern arm of the river itself, have been converted into a broad morass, in which traces are still visible of the quays which formerly lined the shore, and of the northern mole which enclosed the harbour. More towards the E., at the margin of the chain of hills which at an earlier period descended to the sea, may be discerned blocks of masonry belonging to the ancient town wall. On the declivity of the hills towards the E., are the remains of six cisterns, or reservoirs, 136 feet long, 15 to 19 feet broad, and 20 to 30 feet deep, covered with a remarkably thin arched roof. These are connected with an aqueduct, which may be traced several miles from Boo-shatter, in the direction of the hills; but its most remarkable remains are a treble row of arches by which it was carried over a ravine. These reservoirs may probably have served to furnish water for a naumachia in the neighbouring amphitheatre, which is hollowed out of the hills, and is capable of containing about 20,000 persons. The ancient site of the city is covered with ruins. Near its centre rises the highest summit of the chain of hills on which stood the citadel and, probably, also the ancient temple of Apollo. The ruins of other temples and castles have been discovered, as well as the site of the senate house (Pint. Cat. Min. 67), which has been thought to be determined by the excavation of a number of statues. These are now preserved in the museum at Legden.

In the course of time, as is usual with such connections, Utica became severed from the mother-city, and first appears in history as independent of it. In the first commercial treaty between Rome and Carthage, in the year 509 B.C., Utica was probably included in it among the allies of the Carthaginians (Polyb. ii. 22); in the second, in B.C. 348, it is expressly named (ib. 24; Dio. lvi. 49, who however confounds the two treaties); as well as in the alliance concluded by Hannibal with Philip of Macedon in the Second Punic War, B.C. 215 (Polyb. viii. 9). Subsequently, however, Utica appears to have thrown off her dependence upon, or perhaps we should rather
call it her alliance with, Carthage, and, with other cities of N. Africa, to have joined the Sicilian Agathocles, the opponent of Carthage; to have afterwards revolted from that conqueror, but to have been again reduced to obedience (Diod. xx. 17, 54: cf. Polyb. i. 82). In the First Punic War, Utica remained faithful to Carthage; afterwards it joined the Libyans, but was compelled to submit by the victorious Carthaginians (Polyb. ib. 88: Diod. Fr. xxxv.). In the Second Punic War also we find it in firm alliance with Carthage, to whose fleets the excellent harbour of Utica was very serviceable. But this exposed it to many attacks from the Romans, whose frequent foraging expeditions were frequently directed against it from Lilybaeum, as well as to a more regular, but fruitless siege by Scipio himself (Liv. xxv. 31, xxxvii. 5, xviii. 4, xxxiii. 35, xxx. 3, &c.; Polyb. xiv. 2; Appian, Punic. 16, 25, 30). In the third war, however, the situation of Carthage being now hopeless, the Uticenses induced their ancient grudge against that city, and made their submission to Rome by a separate embassy (Polyb. xxxvi. 1; Appian, Pun. 75, 110, 113). This step greatly increased the material prosperity of Utica. After the destruction of Carthage, the Romans presented Utica with the entire province, with that city and Hippo Diarrhytus, it became the chief town of the province, the residence of the Roman governor, the principal emporium for the Roman commerce, and the port of departure for the Roman armaments destined to act in the interior of Africa. Owing to this intimate connection with Rome, the name of Utica appears very frequently in the later history of the republic, as in the accounts of the Jugurthine War, of the war carried on by Pompey at the head of Sulla’s faction, against the Marian party under Domitius and his ally the Numidian king Ibarbas, and in the struggle between Caesar and the Pomp-eians, with their ally Juba. It is unnecessary to quote the numerous passages in which the name of Utica occurs in relation to these events. In the last of these wars, Utica was the scene of the celebrated death of the younger Cato, so often related or adverted to by the ancients (Plut. Cat. Min. 58, seq. : Dion Cass. xiii. 10, sqq.; Val. Max. iii. 2 § 14 ; Cic. pro Lig. 1, &c.; cf. Dict. of Biogr. Vol. i. p. 649). Augustus presented the Uticenses with the Roman civitas, partly as a reward for the inclination which they had manifested for the party of his uncle, and partly also to indemnify them for the depredations of Carthage (Dion Cass. xiii. 16; cf. Sext. Rufus, Eretr. 4). We know nothing more of Utica till the time of Hadrian, who visited N. Africa in his extensive travels, and at whose desire the city changed its ancient constitution for that of a Roman colony (Spartian. Hadr. 13; Gall. N. Att. xvi. 13). Thus it appears in the Tab. Peut. with the appellation of Colobia, as well as in an inscription preserved in the museum of Leyden (Col. Jul. Ael. Hadr. Utic. ap. Jansen, Mut. Legd. Batav. Insbr. Gr. et Lat.). Septimius Severus, an African by birth, endowed it as well, as Carthage and his birthplace Leptis Magna, with the Jus Italicum. We find the bishopric of Utica frequently mentioned in the Christian period from the time of the great Symod under Cyprian of Carthage in 256, down to 654, when a bishop of Utica appeared in the Council of Toledo. The city is said to have witnessed the martyrdom of 300 persons at one time (cf. Morcelli, AFR. Chrest. i. p. 362, ii. p. 150 ; Muntzer, Privat. Eccl. Afr. p. 32; Augustin, e. Donat. vii. 8). Utica probably fell with Carthage, into the hands of the Vandals under Genserich in 439. Subsequently it was recovered by the Byzantine emperors, but in the reign of the Chalif Abdelmalik was conquered by the Arabs under Hassam; and though it appears to have been again recovered by John the prefect or patrician, it finally sank under the power of the Saracens during the reign of the same Chalif, and on its second capture was destroyed (cf. Papenoord, die Vandals Herrschaft in Afr. p. 72, sq., 151, sq.; Weil, Gesch. der Chalifer, i. p. 473, sqq.; Gibbon, Decl. and Fall, vi. 350, sqq. ed. Smith). The remains of its marbles and columns were carried away in the preceding century, to serve as materials for the great mosque of Tunis (Semihan, p. 43.)

Several coins of Utica are extant bearing the heads of Tiberius or Livia: a testimony perhaps of the gratitude of the city for the rights bestowed upon it by Augustus (cf. Mioen, Med. Ant. vi. p. 589; Supp. viii. p. 208).

UTIDAVA (OtiRbava, Ptol. viii. 8 § 7), a town in Dacia, E. of the Alata. Identified with the ruins at Kosmin, near the confluence of the Katozlar and the Fruth (cf. Ubert, iii. pt. ii. p. 620). [T. H. D.]

UTIH (Otracu), one of the nations belonging to the fourteenth satrapy of the Persian empire (Herod. iii. 93), which was armed in the same manner as the Pactyes (Id. vii. 68), and, according to Bobrik’s conjecture, perhaps dwelt in Pactyca. (Geog. des Herod. p. 181.)

UTIS or VITIS (Montone), a river of Gallia Cisalpina, which rises in the Apennines, flows under the walls of Forli (Forum Livii), and subsequently by the city of Ravenna, and enters the Adriatic about 5 miles from that city. At the present day it joins the Roveco (the Bedesia of Pliny), before reaching the latter city, but in ancient times it probably discharged its waters by a separate channel into the lagoons which at that time surrounded Ravenna. The name is written Vitis by Pliny (iii. 14. 19), but it is probable that Ucis or Utensis the more correct form, which is found in Lyivy. According to that author it at one time formed the boundary between the Boian and Semsonian Gauls. (Liv. v. 35.)

UTUS, an affluent of the Danube in Moesia. The Utus had its sources in Mount Haenus, and formed the E. boundary of Dacia Ripensis (Itin. iii. 26. s. 29). Now the Iid. [T. H. D.]

UTUS (Obras, Proc. de Aed. iv. 1), a town of Moesia Inferior, a little to the S. of the confluence of the like-named river with the Danube, and between Oceaen and Securisca (Itin. Ant. p. 221). Variously identified with Staroseliti, Hatuladech, and a place near Brесторцев. [T. H. D.]

VULCANI FORUM. [Putfolia]

VULCANIAE INSULAE. [Azoiaiae Insulae.]

VULCHALO is mentioned by Cicero (pro Fontico, 9) as a place in the west part of Gallia Narbonensis, but nothing more is known of it. [G. L.]

VULGENTES. [Apta Julia.]

VULSINIL. [Yolisinil.]

VULTUR MONS (Monte Voltore), one of the most celebrated mountains of Southern Italy, situated on the confines of Apulia, Lucania, and the country of the Hirpini. It commences about 5 miles.
to the S. of the modern city of Melfi, and nearly due W. of Tenea (Venusia), and attains an elevation of 4,433 feet above the level of the sea. Its regular conical form and isolated position, as well as the crater-like basin near its summit, at once mark it as of volcanic origin; and this is confirmed by the nature of the rocks of which it is composed. Hence it cannot be considered as properly belonging to the range of the Apennines, from which it is separated by a tract of hilly country, forming as it were the base from which the detached cone of Monte Vulture rises. No ancient author alludes to the volcanic character of Mount Vulture; but the mountain itself is noticed, in a well known passage, by Horace, who must have been very familiar with its aspect, as it is a prominent object in the view from his native city of Venusia. (*Carm.* iii. 4. 9—16.) He there terms it "Vulture Apulis," though he adds, singularly enough, that he was without the limits of Apulia ("altissima exus limen Apuliae") when he was wandering in its woods. This can only be explained by the circumstance that the mountain stood (as above stated) on the confines of three provinces. Lucan also incidentally notices Mt. Vulture as one of the mountains that directly fronted the plains of Apulia. (Lucan, ix. 183.)

The physical and geological characters of Mount Vulture are noticed by Romaneu (vol. ii. p. 233), and more fully by Daubeny (*Description of Volcanoes*, chap. 11).

**VULTURNUM** (*Ovulx Timovwv; Castell Vulturno*), a town of Campania, situated on the sea-coast at the mouth of the river of the same name, and on its S. bank. There is no trace of the existence of any town on the site previous to the Second Punic War, when the Romans constructed a fortress (castellum) at the mouth of the river with the object of securing their possession of it, and of establishing a magazine of corn for the use of the army that was besieging Capua. (Liv. xxv. 20, 22.) It is probable that this continued to exist and gradually grew into a town; but in B.C. 154, a colony of Roman citizens was established there, at the same time with Liternum and Puteoli. (Id. xxxiv. 45.)

The number of colonists was in each case but small, and Vulturnum does not appear to have ever risen into a place of much importance. But it is noticed by Livy as existing as a town in his time ("ad Vulturni oecum, ubi non usque est. xxv. 22"), and is mentioned by all the geographers. (Strab. *v. p. 238; Plin. iii. 5. s. 9; Mel. ii. 4. § 9; Ptol. iii. 1. § 6.) We learn also that it received a fresh colony under Augustus (*Lib. Colon.* p. 239), and retained its colonial rank down to a late period. It became an episcopal see before the close of the Roman Empire, and appears to have continued to subsist down to the 9th century, when it was destroyed by the Saracens. In the 17th century a new fortress was built nearly on the ancient site, which is called *Castel Vulturno* or *Castell a Mare di Vulturro*. But from the remains of the ancient city still visible it appears that this occupied a site somewhat nearer the sea than the modern fortress. Several inscriptions have been found on the spot, which attest the colonial rank of Vulturnum as late as the age of the Antonines. (*Mmmsm.* i. R. X. 3535—3539.)

**VULCURNUS** (*Ovulx Timovwv; Vulturno*), the most considerable river of Campania, which has its sources in the Apennines of Samnium, about 5 miles S. of Ausonia, flows within a few miles of Aesernia on its left bank, and of Venusium on its right, thence pursues a S.E. course for about 35 miles, till it receives the waters of the Calor (Calore), after which it turns abruptly to the W.S.W., passes under the walls of Casilinum (Capona), and finally discharges itself into the Tyrrhenian sea about 20 miles below that city. Its mouth was marked by ancient times by the town of the same name (Vulturnum), the site of which is still occupied by the modern fortress of *Castel Vulturno* (*Vulturum*). (Strab. *v. pp. 338, 249; Plin. iii. 5. s. 9; Mel. ii. 4. § 9.) The Vulturnus is a deep and rapid, but turbid stream, to which character we find many allusions in the Roman poets. (Virg. *Aen.* vii. 729; Ovid. *Met.* xv. 714; Lucan. ii. 423; Claudian. *Pamq. Prob. et Obl.* 256; *Sil. Ital.* viii. 530.) A bridge was thrown over it close to its mouth by Domitian, when he constructed the Via Domitia that led from Sinnessa direct to Cumae. (Stat. *Silv.* iv. 3. 67, &c.) From the important position that the Vulturnus occupies in Campania, the fertile plains of which it traverses in their whole extent from the foot of the Apennines to the sea, its name is frequently mentioned in history, especially during the wars of the Romans with the Campanians and Samnites, and again during the Second Punic War. (Liv. viii. 11. x. 20, 31, xxiv. 14, &c.; *Polb.* iii. 92.) Previous to the construction of the bridge above mentioned (the remains of which are still visible near the modern *Castel Vulturum*), there was no bridge over it below Casilinum, where it was crossed by the Via Apia. It appears to have been in ancient times navigable for small vessels at least as far as that city. (Liv. xxvi. 9. *Stat. Silv.* iv. 3. 77.)*

Its only considerable tributary is the Calor, which brings with it the waters of several other streams, of which the most important are the Tamarius and Sabates. These combined streams bring down to the Vulturnus almost the whole waters of the land of the Hirpin; and hence the Calor is at the point of junction nearly equal in magnitude to the Vulturnus itself. (E. H. B.)

**VUGGUS, VICVS**, in North Gallia, is placed by the Antonine Itinerary on the road from *Durocortorum* (Reims) to Augusta Treverorum (Trier). Vuggus is between Durocortorum and Epoisson (Epitch, Ivois), or Epuusum [*Epouosum*], and marked xxii. leagues from each place. The direction of this road from Reims is to the passage of the Maug or Mense at Mousson; and before it reaches Ivois it brings us to a place named Vorn, near the river Alume, a little above Attigni. This is a good example, and there are many in France, of the old Gallic names continuing unchanged. Flodoard, in his history of Reims, speaks of "Municipium Vongusum, et proximam Annam, Pagonis linguis circa Axonum ripas." The Axonum is the Alime. The Roman road may be traced in several places between Reims and Vorn; and there is an indication of this road in the place named Van d'Elzé (de strata), at the passage of the river Sioupe. (*G. L.*)

**UXACONAC, a town belonging apparently to the Cornavii in Britannia Romana, on the road from Deva to Lindinum, and between Urioconium and Pennoconicum. Camden (p. 633) and others identify it with Okanyate, a village in Shropshire;* Horsley (*p. 419*) and others with Sheriff Hales, *Shrop.* (*T. H. D.*)

**UXAMA** (*Ovulx Tumovv;* Ptol. ii. 6. § 56), a town of the Areovaci in Hispania Tarraconensis, on
the road from Asturica to Caesarangusta, 50 miles W. of Numantia, and in the neighbourhood of Clunia (Itin. Ant. p. 441), where, however, the more recent editions read Vasana. (Plin. iii. 3. s. 4; Flor. iii. 22; Sil. Ital. iii. 384.) It is called Uxuma in the Great Itinerary (iv. 45); and according to Ubert (ii. pt. i. p. 453), it was called the A̓̂Σελλοιον Καλλικράτιον (vi. 47). Now Oema.

UXAMABARCA (Οξαιμαβαρκα, Ptol. ii. 6. § 53), a town of the Antigones in Hispania Tarraconensis. (Murat. Inscr. p. 1095. 8.) Ubert (ii. pt. i. p. 416) identifies it with Oma in Bisaccia. [T. H. D.]

UXANIS INSULA, for so the name should be read in the Maritime Itin., is 1 lyne's Añontos (iv. 30), an island off the Atlantic coast of Gallia. Uxantis is Ουςαντις, or Uṣant, as the English often write it, a small island belonging to the department of Finisterre, and nearly in the latitude of Brest.

UXELLA (Οξελλα, Ptol. ii. 3. § 10), called by the Geogr. Rav. (v. 30) Uxelli, a city of the Dumnonii in Britannia Romana. Camden (p. 18) identifies it with the little town of Lostwithiel in Cornwall; whilst Horsley (p. 378) and others take it to be Exeter. [T. H. D.]

UXELLODUNUM, in Gallia. In n. c. 51 Drappes a Senon and Lucterius a Codannec, who had given the Romans much trouble, being pursued by C. Caninius Rebolor, one of Caesar's legates, took refuge in Uxelodunum, a town of the Cadurci (B. G. viii. 32—44); Uxelodunum was in a position naturally strong, protected by rocks so steep that an armed man could hardly climb up, even if no resistance were made. A deep valley surrounded nearly the whole elevation on which the town stood, and a river flowed at the bottom of the valley. The interval where the river did not flow round the steep sides of this natural fortress was only 300 feet wide, and along this part ran the town wall. Close to the wall was a large spring, which supplied the town during the siege, for the inhabitants could not get down the rocks for water without risk of their lives from the Roman missiles. Caninius began his bio-kade of Uxelodunum by making three camps on very high ground, with the intention of gradually drawing a vallum from each camp, and surrounding the place. On the river side his camps were of course separated from the town by the deep valley in which the river flowed; he may have planted two camps here and one on the land side of Uxelodunum.

The townsmen remembering what had happened at Alesia the year before, sent out Lucterius and Drappes to bring supplies into the place. Lucterius and Drappes took all the fighting men for this purpose except 2000, and they collected a large quantity of corn; but as Lucterius was attempting to carry it into the town by night, the Romans surprised him, and cut his men to pieces. The other part of the force which had gone out was with Drappes about 12 miles off. Caninius sent his cavalry and light German troops against Drappes to surprise him, and he followed with a legion. His success was most complete. Drappes was taken prisoner and his force destroyed or captured. Caninius was now enabled to go on with his siege in a vallation without fear of interruption from without, and C. Fabius arriving the next day with his troops undertook the blockade of part of the town.

Caesar hearing the news about Uxelodunum and resolving to check all further risings in Gallia by one signal example more, hurried to the place with all his cavalry, ordering C. Caienus and two legions to follow him by regular marches. He found the place shut in, but it was well supplied with provisions, as the deserters told him; and there remained nothing to do but to cut off the townsmen from the water. By his archers and slingers, and by his engines for discharging missiles, (tormenta) placed opposite these parts of the town where the descent to the river was easiest, he attempted to prevent the enemy from coming down to the river to get water. His next operation was to cut them off from the spring, and this was the great operation of the siege on which depended the capture of the town. Caesar dealt with his enemies as a doctor with a disease—he cut off the supplies. (Frontin. Strat. iv. 7. 1.) He moved his vineas towards that part of the town where the spring lay under the wall, and this was the isthmus which connected the hill fort with the open country. He also began to construct mounds of earth, while the townsmen from the higher ground annoyed the Romans with missiles. Still the Romans pushed on their vineas and their earthworks, and at the same time began to farm mines (cuniculi) to reach the source of water and draw it off. A mound of earth 9 feet high was constructed, and a tower of ten stories was placed upon it, not high enough to be on a level with the top of the wall, but high enough to command the summit level of the spring. Thus they prevented the enemy from reaching the spring, and a great number of cattle, horses, and men died of thirst. The townsmen now tumbled down blazing barrels filled with fat, pitch, and chips of wood, and began a vigorous onset to prevent the Romans from quenching the flames; for the burning materials being stopped in their descent by the vineas and mounds, set the Roman works on fire. On this Caesar ordered his men to scale the heights on all sides and to divert the defendants from the land side by a feint of attacking the walls. This drew the enemy from the fire; and all their force was employed in manning the walls. In the meantime two engines put out the fire or cut it off. The obstinate resistance of the enemy was terminated by the spring being completely dried up by the diversion of the water through the subterraneous passages which the Romans had constructed; and they surrendered after many of them had died of thirst. To terrify the Galli by a signal example, Caesar cut off the hands of all the fighting men who remained alive.

The attack and defence of Uxelodunum contain a full description of the site. This hill-fort was surrounded by a river on all sides except one, and on this side also the approach to it was accepted. It is agreed that Uxelodunum was somewhere either on the Olta (Lot) or on the Dourain (Dordogne). D'Anville places it at Puech d'Isolou, on a small stream named the Tournement, which flows into the Dordogne after passing Puech d'Isolou. He was informed by some person acquainted with the locality that the spring still exists, and we may assume that it to be true, for Caesar could not destroy the source; he only drew off the water, so that the besieged could not get at it. D'Anville adds that what appeared to be the remains of the place is called in the country le portail de Rome, and that a hill which is close to the Puech, is named Eut-Castel. But this distinguished geographer had no exact plan of the place, and had not seen it. Walekenuay (Geog. des Gaulois, i. p. 353) affirms that the plan of Puech

UXELLODUNUM. 1334

4 Q 2
UXELLODUNUM, UXELLUM (Osigew, Plut. ii. 3. § 8), a town of the Seleucis in Brittonia Barbara. Camden (p. 1193) takes it to have been on the river Euse in Fosdale; whilst Horsley (p. 366) identifies it with Caerlorne near Dumfries. [T. H. D.]

UXELLUM (Osigew, Plut.: Eth. Uxentiis: Uxento), a town of Calabria, in the territory of the Salentinians, situated about 5 miles from the sea coast, and 16 from the Iapigian Promontory (Capo di Lenio). It is mentioned by both Pliny and Procopius among the inland towns which they assign to the Salentinians, and is placed by the Tabula on the road from Tarentum to the extremity of the peninsula. (Plin. iii. 11. s. 16; Plut. iii. 1. § 76; Tab. Peut.) The name is corruptly written in the Tabula Umbintum, and in Pliny the MSS. give Ulotini, for which the older editors had substituted Valentinii. Hence Podeni is the only authority for the form of the name (though there is no doubt that the place meant is in all cases the same); and as coins have the Greek legend OXAN, it is doubtful whether Uxentum or Uxentium is the more correct form. The site is clearly marked by the modern town of Ugeno, and the ruins of the ancient city were still visible in the days of Galateo at the foot of the hill on which it stands. (Galateo, de Sit. Iappp. p. 100; Romanelli, vol. ii. p. 43.) Many tombs also have been found there, in which coins, vases, and inscriptions in the Messapian dialect have been discovered. [E. H. B.]

UXENTUS (τὸ Οξεγεώτων, Plut. vii. 1. §§ 24, 76), a chain of mountains in the Deccan of India, between lat. 22° and 24° and long. 136° and 148°, probably those called Cambodum. They formed the watershed of several rivers which flowed into the Bay of Bengal, as the Adanuus, Duson and Tyndus. [V.]

UXII (Οξεγεώτων, Arrian, Arab. iii. 17; Strab. xi. p. 524, xv. pp. 729, 744), a tribe of ancient Persis, who lived on the northern borders of that province between Persis and Susiana, to the E. of the Pashigris and to the W. of the Oreatis. They were visited by Alexander the Great on his way from Susa; and their capital town, Uxia (Strab. xv. p. 744), was the scene of a celebrated siege, the details of which are given by Arrian and Curtius. It has been a matter of considerable discussion where this city was situated. The whole question has been carefully examined by the Baron de Bode, who has personally visited the localities he describes. (Geogr. Journ. xiii. pp. 108—110.) He thinks Uxia is at present represented by the ruins near Shikasteli-Soliman in the Bakhgari Mountains, to the E. of Shuster. [V.]

Uz, a district of Western Asia, to which the prophet Job belonged. (Job, i. 1.) It cannot be certainly determined where it was; hence, learned men have placed it in very different localities. Winer, who has examined the question, inclines to place it to the neighbourhood of Edom, adjoining Arabia and Chaldea. (Biblisch. Realwörterb. s. v. Uz.) The people are perhaps represented in classical geography by the Aodis or Aodis of Polemy (v. 9, § 2), a tribe who lived on the borders of Babylonia. In Genesis x. 23, Uz is called the son of Aram: hence Josephus says, Osios kteis τινων Τριχονιτων καὶ Δαμανων (Antip. i. 6. § 4); but there is no sufficient evidence to show that the "land of Uz" of Job is connected with Northern Mesopotamia.

UZITA (Οξεγεώτα, or Οξεγα, Plut. iv. 3. § 37), a town of Byzaun in Africa Prapria, lying S. of Hadrutnetum and Ruspina, and W. of Thysidus. (Cl. Hirt. B. Afr. 41, 51.) [T. H. D.]

COIN OF UXENTUM.

UXENTUS (τὸ Οξεγεώτων, Plut. vii. 1. §§ 24, 76), a chain of mountains in the Deccan of India, between lat. 22° and 24° and long. 136° and 148°, probably those called Cambodum. They formed the watershed of several rivers which flowed into the Bay of Bengal, as the Adanuus, Duson and Tyndus. [V.]

UXII (Οξεγεώτων, Arrian, Arab. iii. 17; Strab. xi. p. 524, xv. pp. 729, 744), a tribe of ancient Persis, who lived on the northern borders of that province between Persis and Susiana, to the E. of the Pashigris and to the W. of the Oreatis. They were visited by Alexander the Great on his way from Susa; and their capital town, Uxia (Strab. xv. p. 744), was the scene of a celebrated siege, the details of which are given by Arrian and Curtius. It has been a matter of considerable discussion where this city was situated. The whole question has been carefully examined by the Baron de Bode, who has personally visited the localities he describes. (Geogr. Journ. xiii. pp. 108—110.) He thinks Uxia is at present represented by the ruins near Shikasteli-Soliman in the Bakhgari Mountains, to the E. of Shuster. [V.]

Uz, a district of Western Asia, to which the prophet Job belonged. (Job, i. 1.) It cannot be certainly determined where it was; hence, learned men have placed it in very different localities. Winer, who has examined the question, inclines to place it to the neighbourhood of Edom, adjoining Arabia and Chaldea. (Biblisch. Realwörterb. s. v. Uz.) The people are perhaps represented in classical geography by the Aodis or Aodis of Polemy (v. 9, § 2), a tribe who lived on the borders of Babylonia. In Genesis x. 23, Uz is called the son of Aram: hence Josephus says, Osios kteis τινων Τριχονιτων καὶ Δαμανων (Antip. i. 6. § 4); but there is no sufficient evidence to show that the "land of Uz" of Job is connected with Northern Mesopotamia.

UZITA (Οξεγεώτα, or Οξεγα, Plut. iv. 3. § 37), a town of Byzaun in Africa Prapria, lying S. of Hadrutnetum and Ruspina, and W. of Thysidus. (Cl. Hirt. B. Afr. 41, 51.) [T. H. D.]

XANTHUS (Σανθος: Eth. Σανθεος), the greatest and most celebrated city of Lycia, was situated according to Strabo (xiv. p. 666) at a distance of 70 stadia from the mouth of the river Xanthus, and according to the Stadiasmus (§ 247) only 60 stadia. Pliny (v. 28) states the distance at 15 Roman miles,
which is much too great. (Comp. Steph. B. s. v.; Ptol. v. 3, § 3; Mela, i. 15; Polyb. xxvii. 7.) This famous city was twice destroyed, on each of which occasions its inhabitants defiled themselves with undaunted valour. The first catastrophe befell the city in the reign of Cyrus, when Harpagus besieged it with a Persian army. On that occasion the Xanthians buried themselves, with all they possessed, under the ruins of their city. (Herod. i. 176.) After this event the city must have been rebuilt; for during the Roman civil wars consequent upon the murder of Caesar, Xanthus was invested by the army of Brutus, as its inhabitants refused to open their gates to him. Brutus, after a desperate struggle, took the city by assault. The Xanthians continued in the street, and perished with their wives and children in the flames, rather than submit to the Romans. (Dion Cass. xlvii. 34; Appian, B. C. iv. 18, foll.) After this catastrophe, the city never recovered. The chief buildings at Xanthus were temples of Sarpedon (Appian, l. c.), and of the Lycean Apollo. (Diod. v. 77.) At a distance of 60 stadia down the river and 10 stadia from its mouth, there was a sanctuary of Leto on the bank of the Xanthus. (Strab. l. c.)

The site of Xanthus and its magnificent ruins were first discovered and described by Sir C. Fellows in his Excursion in Asia Minor, p. 223, foll. (comp. his Lyca. p. 164, foll.) These ruins stand near the village of Koonik, and consist of temples, tombs, triumphal arches, walls, and a theatre. The site, says Sir Charles, is extremely romantic, upon beautiful hills, some crowned with rocks, others rising perpendicularly from the river. The city does not appear to have been very large, but its remains show that it was highly ornamented, particularly the tombs. The architecture and sculptures of the place, of which many specimens are in an excellent state of preservation, and the inscriptions in a peculiar alphabet, have opened up a page in the history of Asia Minor previously quite unknown. The excavations in Fellows' works furnish a clear idea of the high perfection which the arts must have attained at Xanthus. (See also Spratt and Forbes, Travels in Lycia, i. p. 5, and ii., which contains an excellent plan of the site and remains of Xanthus; E. Braun, Die Marmorwerke von Xanthos in Lykia, Rhein. Mus. Neue Folge, vol. iii. p. 481, foll.)

A large collection of marbles, chiefly sepulchral, discovered at Xanthus by Sir C. Fellows, and brought to England in 1842 and 1843, has been arranged in the British Museum. Of these a full account is given in the Supplement to the Penny Cyclopaedia, vol. ii. p. 713, foll. [L. S.]

**XANTHUS (Ξανθός),** an important river in the W. of Lybia, which is mentioned even in Homer (Od. ii. 877, v. 479), and which, according to Strabo (xiv. p. 665), was anciently called Sirbes, that is in Phoenician and Arabic "reddish yellow," so that the Greek name Xanthus is only a translation of the Semitic Sirhes or Zirha. The Xanthus has its sources in Mount Taurus, on the frontiers between Lycia and Pisidia, and flows as a navigable river in a SW. direction through an extensive plain (Chersonesus pediao, Herod. i. 176), having Mount Braga or the W. and Massacytus on the E., towards the sea, into which it discharges itself about 70 stadia S. of the city of Xanthus, and a little to the NW. of Pinaru. (Herod. l. c.; Ptol. v. 3, § 2; Dion. Per. 848; Or. Met. ix. 645; Mela, i. 15; Plin. v. 28.) Now the Ekoton or Essenade. (Fellows, Lycia, pp. 123, 278.)

Respecting Xanthus as a name of the Trojan river Scamander, see SCAMANDER. [L. S.]

**XANTHUS. [BUTHRIDOT.]**

**XANTHRI (Ξανθρια, Arrian, Anab. vi. 15), a tribe of free Indians who dwelt along the banks of the Hydaiotes (Iaraios) in the Punjab. There can be little doubt that they derive their name from the Indian caste of the Kshatriyas.** [V.]

**XENAGORAE INSULAE (Ξεναγόρας ἦρμος),** according to Pliny (v. 35), a group of eight small islands off the coast of Lycia, which the Stadiasmus (§ 218) states were situated 60 stadia to the east of Patara. They are commonly identified with a group of islands in the bay of Kalamaki. [L. S.]

**XENIPA, a small place in the NE. part of Sevadia, noticed by Curtius (viii. 2, § 14); perhaps the present Urtipa.**

**XEROGYPSUS (Ξερογύπσος, Ann. Comm. v. 11, p. 378, Bonn), a small river in the SE. of Thrace, which falls into thePropontis, not far from Perinth. In some maps it is called the Erginos, upon the authority of Mela (ii. 2).** [J. R.]

**XERXENIE (Ξερξενί, Strab. x. 528), a district on the Euphrates, in the NW. part of Armenia, more properly, however, belonging to Cappadocia. It is called Derxene by Pliny (v. 24, s. 20), and this perhaps is the more correct name. (Cf. Plin. v. 269.)** [T. H. D.]

**XIMENIE (Ξιμένι),** a district in the NW. part of Pontus, on the Halys, and near the frontiers of Cappadocia, was celebrated for its salt-works. (Strab. xii. p. 561.) [L. S.]

**XION (Ξίων, Sclalya, p. 53), a river on the W. coast of Libya Interior.** [T. H. D.]

**XIPHONIUS PORTUS (Ξιφόνιος πορτος) Syll. p. 4: Bay of Augustus), a spacious harbour on the E. coast of Sicily, between Catana and Syracuse. It is remarkable that this, though one of the largest and most important natural harbours on the coasts of Sicily, is rarely mentioned by ancient authors. Sclalya, indeed, is the only writer who has preserved to us its name as that of a port. Strabo speaks of the Xiphonian Promontory (το τῶν Ξιφω- νιας ἀκροτηρίων, vi. p. 267), by which he evidently means the projecting headland near its entrance, now called the Capo di Santo Croce. Diodorus also mentions that the Carthaginians, in n. c. 263, landed at Xiphonia on its way to Syracuse (εἰς τῆν Ξιφωνίαν, x. 3, p. 502). None of these authors allude to the existence of a town of this name, and it is probably a mistake of Stephanus of Byzantium, who speaks of Xiphonia as a city (ε. c. v.). The harbour or bay of Augustus is a spacious gulf, considerably larger than the Great Harbour of Syracuse, and extending from the Capo di Santo Croce to the low peninsula or promontory of Magnisi (the ancient Thapsus). But it is probable that the port designated by Sclalya was a much smaller one, close to the modern city of Augusta, which occupies a low peninsular point or tongue of land that projects from near the N. extremity of the bay, and strongly resembles the position of the island of Ortigia, at Syracuse, except that it is not quite separated from the mainland. It is very singular that so remarkable and advantageous a situation should not have been taken advantage of by the Greek colonists in Sicily; but we have no trace of any ancient town on the spot, unless it were the site of the ancient Megara. [MEGARA.] The modern town of Augusta, or Agosta, was founded in the 13th century by Frederic II. [E. H. B.]
ZACYNTHUS. (Zakynthos; Eth. Zakynthos; Zante,) an island in the Sicilian sea, lying off the western coast of Peloponnesus, opposite the promontory Chelonatas in Elis, and to the S. of the island of Cephallenia, from which it was distant 25 miles, according to Pliny (iv. 12. s. 9) but according to Strabo, only 60 stadia (x. p. 438). The latter is very nearly correct, the real distance being 8 English miles. Its circumference is stated by Pliny at 96 m. r., by Strabo at 160 stadia; but the island is at least 50 miles round, its greatest length being 23 English miles. The island is said to have been originally called Hyrie (Plin. l. c.), and to have been colonized by Zacynthus, the son of Dardanus, from Phocis in Arcadia, whence the acropolis of the city of Zacynthus was named Phocis. (Faun. viii. 24. § 3; Stephan. B. s. v.) We have the express statement of Thucydides that the Zacynthians were a colony of Achaean origin from Peloponnesus (ii. 66). In Homer, who gives the island the epithet of "woolly" (λιθάς καὶ λιθίσαος), Zacynthus forms part of the dominions of Ulysses. (Ili. l. 634. Od. i. 246, l. 24. xvi. 123, 125; Strab. x. p. 457.) It appears to have attained considerable Importance at an early period; for according to a very ancient tradition Saguntum in Spain was founded by the Zacynthians, in conjunction with the Rutuli of Ardea. (Liv. xxi. 7; Plut. xvi. 40. s. 79; Strab. iii. p. 159.) Bocchus stated that Saguntum was founded by the Zacynthians 200 years before the Trojan War (ap. Plin. l. c.) In consequence probably of their Achaean origin, the Zacynthians were hostile to the Lacedaemonians, and hence we find that fugitives from Sparta fled for refuge to this island. (Herod. vi. 70, ix. 37.) In the Peloponnesian War the Zacynthians sided with Athens (Thuc. ii. 7. 9); and in B.C. 430 the Lacedaemonians made an unsuccessful attack upon their city. (Ib. 66.) The Athenians in their expedition against Pylos found Zacynthus a convenient station for their fleet. (Id. iv. 8. 13.) The Zacynthians are enumerated among the autonomous allies of Athens in the Sicilian expedition. (Id. vii. 57.) After the Peloponnesian War, Zacynthus seems to have passed under the supremacy of Sparta; for in B.C. 374, Timoleon the Athenian commander, in his return from Corcyra, landed some Zacynthian exiles on the island, and assisted them in establishing a fortress. These must have belonged to the anti-Spartan party; for the Zacynthian government applied for help to the Spartans, who sent a fleet of 25 sail to Zacynthus. (Xen. Hell. vi. 2. § 3; Diodor. xv. 45, seq.; as to the statements of Diodorus, see Grote, Hist. of Greece, vol. x. p. 192.) The Zacynthians

ZABA (Zaēs), a small place on the northern coast of Taprobane or Ceylon, noticed by Ptolemy (vii. 4. § 13). It has not been identified with any modern site.

ZABAE (Zaēbu, Ptol. i. 14. §§ 1, 4, 6, 7, vii. 2, viii. 27. § 4), a town of some importance in India intra Gangem, on the sinus Gangeticus, perhaps the modern Ligyor.

ZABATUS (Zaēvara), a river of Assyria, first noticed by Xenophon (Anab. ii. 5. § 1, iii. 3. § 6), and the same as the LyCUS of Polybius (v. 51).
ZACYNTHUS.

The chief town of the island, also named Zacynthus (Liv. xxvi. 14; Strab. x. p. 458; Ptol. iii. 14. § 18), was situated upon the eastern shore. Its site is occupied by the modern capital, Zante, but nothing remains of the ancient city, except a few columns and inscriptions. The situation of the town upon the margin of a semi-circular bay is very picturesque. The citadel probably occupied the site of the modern castle. The beautiful situation of the city and the fertility of the island have been celebrated in all ages (καὶ ἀπὸ τῶν ἡγούμενων, Theocr. Id. iv. 32; Strab. Ptol., II. cc.). It no longer deserves the epithet of "woolly," given to it by Homer (l. c.) and Virgil ("memoriae Zacynthus," Aen. iii. 270); but its beautiful olive-gardens, vineyards, and gardens, justify the Italian proverb, which calls Zante the "flower of the Levant."

The most remarkable natural phenomenon in Zante is the celebrated pitch-wells, which are accurately described by Herodotus (iv. 195), and are mentioned by Piny (xxxv. 15. s. 51). They are situated about 12 miles from the city, in a small marlshy valley near the shore of the Bay of Chichir, on the SW. coast. A recent observer has given the following account of them: "There are two springs, the principal surrounded by a low wall; here the pitch is seen bubbling up under the clear water which is about a foot deep over the pitch itself, with which it comes out of the earth. The pitch-bubbles rise with the appearance of an India-rubber bottle until the air within bursts, and the pitch falls back and runs off. It produces about three barrels a day, and can be used when mixed with pine-pitch, though in a pure state it is comparatively of no value. The other spring is in an adjoining vineyard; but the pitch does not bubble up, and is in fact only discernible by the ground having a burnt appearance, and by the foot adhering to the surface as one walks over it. The demand for the pitch of Zante is now very small, vegetable pitch being preferable." (Bowes, in Murray's Handbook for Greece, p. 93.)

The existence of these pitch-wells, as well as of numerous hot springs, is a proof of the volcanic agency at work in the island; to which it may be added that earthquakes are frequent.

ZAGOCUS.

The ascent of Mount Eutresis (Liv. xv. 6; Ptol. ii. 458) was probably made by M. Valerius Sicinius, who, it is supposed, was the author of the "Journey to Greece" (Liv. xxv. 24). It was afterwards restored to Philip, by whom it was finally surrendered to the Romans in B.C. 191. (Id. xxxvi. 32.)

In the Mitridatic War it was attacked by Archelaus, the general of Mithridates, but he was repulsed. (Appian, Mithr. 45.) Zacynthus subsequently shared the fate of the other Ionian islands, and is now subject to Great Britain.

ZAGOCUS MONS (Θάλαττα, τὸ Ζάγοκον ὅπρος, Ptol. vi. 34; Strab. xxi. p. 522), the central portion of the great chain of mountains which, extending in a direction nearly N. and S. with an inclination to the W. at the upper end, connects the mountains of Armenia and the Caucasus with those of Susiana and Persia. It separates Assyria from Media, and is now represented by the middle and southern portion of the mountains of Kurdistan.

Near this latter mountain was the great highway which led from Assyria and its capital Nineveh into Media, and, at its base, was in all probability the site of the pass through the mountains, called by Ptolemy αἱ τῶν Ζάγορων πόλεις (vi. 2, § 7), and by Strabo, ἡ Μινδουρὴ πόλις (xi. p. 525). Polybius notices the difficulty and danger of this pass (v. 44), which, from Colonel Rawlinson's narrative, would seem to have lost none of its dangers (Rawlinson, in Trans. Geogr. Soc. vol. x., Pass and Pillar of Kolmile-Sin, p. 83, seq.).

ZALACUS (τὸ Ζάλακον ὅπρος, Ptol. iv. 2, §§ 14, 19), a mountain chain of Mauretania near the river Chilamph, the highest and most rugged branch of the Atlas in this neighbourhood. Now the Wunnessree or Gunenusree. (Cl. Shaw, Travels, i. p. 74.)

ZALDAPA (Ζάλδαπα, Procop. de Aed. iv. 11. p. 308), a town in the interior of Lower Moesia. It is called Saldapa by Theophylact (Ζάλδαπα, i. 8), and Zeldapa by Hierocles. (Zaldapam, p. 627.)

ZALÉCUS (Ζάλεκος, or Zالکوس, in Ptol. iv. 3, § 3), a small river on the coast of Paphlagonia, discharging itself into the Euxine at a distance of 210 stadia west of the Halys. (Marcian. p. 73.) At its mouth there was a small town of the same name, about 90 stadia from Zagorsus, or Zagorum (Anon.

4 A 4
The page contains a text discussing various ancient places and their historical significance. The text appears to be a selection from a larger work, possibly a historical or geographical study. It mentions places such as Zaleous, Zara, and Zara, Zaleous, etc., which are often associated with Dionysios the Areopagite. The text references Pliny, Strabo, and other classical authors, indicating a scholarly nature. The page includes discussions on the location of these places, their historical importance, and their current status, providing a detailed account of the geographical and cultural contexts of the regions mentioned.
place consecrated to the worship of the goddess Anna-
tis, to whom a temple was built there by the Per-
sians in commemoration of the victory over the Sami.
The site of this temple was regarded as the sev-
ority of Zela and its territory (Ζελῶτης). Not-
withstanding this, however, it remained a small
place until Pompey, after his victory over Mithri-
dates, raised it to the rank of a city by increasing
its population and extending its walls. Zela is ce-
lebrated in history for its victory obtained in its
vicinity by Mithridates over the Romans under
Triarius, and still more for the defeat of Pharnaces,
which occurred near to Zela. (Ptol. vi. 6, § 10;
Hieroc. p. 701; Steph. B. s. v.) Zela was situ-
ated at a distance of four days' journey (ac-
tording to the Pent. Table 80 miles) from Tavium,
and south-east of Amasia. The elevated ground
on which the town was situated, and which Strabo
calls the mound of Semiramis, was, according to Hirtius,
the ancient citadel, but the newly built temple, which still
bears the name of Zilea. (L. S.)

ZELASÍUM. [Τόποισμιον, p. 662, Νο 4]

ZELÉLEA. [Ζαλδάπα.]

ZELÉLEA (Ζάλελεα), a town of Tross, at the foot
of Mount Ida and on the banks of the river Aeseus,
at a distance of 80 stadia from its mouth. It is
mentioned by Homer (II. ii. 824, iii. 103), who calls
it a holy town. (Comp. Strab. xii. p. 563, xiii.
pp. 555, 587, 603; Steph. B. s. v.) Arrian (Anab. l.
15) mentions it as the head-quarters of the Persian
army before the battle of the Granicus: it existed
in the time of Strabo; but afterwards it disappears.
Some travellers have identified it with the modern
Biga, between Bosanep and Sorriani. (L. S.)

ZELÊTIS. [Ζέλτα.]

ZENOBH INSELAE. (Σπορέου υπερία, Ptol. vi.
7. § 47), seven small islands lying in the Sinus Sa-
chaites, at the entrance of the Arabian Gulf. (Cf.
Arrian, Per. M. Erith. p. 19.)

[V.]

ZENODÔTUM (Σπορέουσας, Dion Cass. 12. 12;
Steph. B. s. v.), a strong castle in the upper part
of Mesopotamia, which was held by the Parthians dur-
ing the war between them and the Romans under
Crassus. It is called by Plutarch, Zenodotia (Crass.
c. 17). It cannot be identified with any modern
site, but it was, probably, not far distant from
Edessa. (V.)

ZEONXIS CHERSONIΣUS (Ζύρωνος Χερο-
rôνος, Ptol. iii. 6. § 4), a point of land on the N.
coast of the Chersonus Taurica in European Sa-
rmania, probably the narrow tongue of Ararat,
between the Sea of Azof and the Black Sea. (T.I.H.)

ZEÔPHYTEE, a small island off the promontory
Sammonium in Crete. (Plin. iv. 12. 20.)

ZEÔPHYRIÂ. [Ηλιακαρναςίαν.]

ZEÔPHYRIUM (Ζεθφύριον), the name of a great
number of promontories, as 1. At the western ex-
tremity of the peninsula of Myrina in Caria, now
called Gümüşdoû or Angoli. (Strab. xiv. p. 658.)

2. On the coast of Cilicia, between Cilicia Tria-
cheia and Pedias, a little to the west of the town of
An-
ciaia. (Strab. xiv. p. 671.) It contained a fort
of the same name, and was 120 stadia from Tarsus,
and 13 miles east of Soli. (Stadium. § 157;
Tab. Pent. comp. Scyl. p. 40; Ptol. v. 8. § 4;
Liv. xxix. 40. 10; Plin. xx. 22; Hieroc. p. 704.)

When Pline (xxxv. 50) states that the best mel-
adexa was prepared at Zephyrium, he no doubt al-
ludes to this place, since we know from Diodorces
(v. 100) that this mineral was obtained in the
neighbouring hill of Corycus, and that there it was
of excellent quality. Leuke (Asia Minor, p. 214)
refers to it near the mouth of the river Merin.

3. On the coast of Cilicia, near the mouth of
the river Calycadnus. (Strab. xiv. p. 670; Ptol. v. 8.
§ 3.)

4. On the town of Paphlagonia, 60 stadia
to the west of Cape Canabia. (Arrian, Peripl. P. E.
15; Anon. Peripl. P. E. p. 6; Ptol. v. 4. § 2.)

5. A town and promontory on the coast of Pontus,
in the country of the Musynoei, 90 stadia to the
west of Tripolis. (Ptol. v. 6. § 11; Arrian, Peripl.
P. E. p. 17; Scylax, p. 33; Anon. Peripl. P. E.
13; Tab. Pent.) The cape still bears the name
of Zafra or Zephyrê, and Hamilton (Researches, 1.
p. 261) regards the modern Kako Liman as occu-
pying the site of the ancient Zephyrium. (L. S.)

ZEPHYRIUM PROMONTORIUM (τὸ Ζέφυριον
Κατα τη Γρασίας) a promontory on the E. coast
of the Bruttian peninsula between Locri and the
SE. corner of Bruttium. It is mentioned principally
in connection with the settlement of the Locrian
colonists in this part of Italy, whose city thence
derived the name of Locuri EPIZEPHYRIL.

According to Strabo, indeed, these colonists settled
in the first instance on the headland itself, which had a
small port contiguous to it, but after a short time
removed to the site of their permanent city, about
15 miles farther N. (Strab. vi. pp. 259, 270.)
The Zephyrian Promontory is mentioned by all the
geographers in describing the coast of Bruttium, and
is undoubtedly the same now called the Capo di
Brusanza, a low but marked headland, about 10
miles N. of Cape Sportovento, which forms the
SE. extremity of the Bruttian peninsula. (Strab.
L. c.; Plin. iii. 5. s. 10; Mel. ii. 4. § 8; Ptol. iii.
1. § 10; Steph. Byz. s. c.)

[Ε. Β. Ε.]

ZEPHYRIUM (Ζεθφύριον ἅκρον, Ptol. iii. 17. §
5). 1. A promontory on the E. part of the N.
coast of Crete, near the town of Apollonia. Now
Ponta di Tigani.

2. A promontory on the W. coast of Cyprus, near
Paphos, probably the cape which closed the bay of
Bipoli to the W. (Ptol. v. 14. § 1; Strab. xiv.
p. 683.)

3. A promontory in the E. part of Cyrenaica,
150 stadia to the W. of Darnis. (Strab. xvii.
p. 799, whom it attributes to Marmarica; Ptol. iv.
4. § 5; Stadias. M. Magus, §§ 47, 48.) Now Cape Derne.

4. Another promontory of Cyrenaica, with a har-
bour. (Strab. xvii. p. 838.)

5. A promontory near Little Taposiris in Lower
Aegypt, having a temple of Arsinôe-Aphrodite. (Strab.
xvii. p. 800.) Hence that goddess derived the
spoil of Zephyrinides (Zeôphyrînides, Athen. vii.
p. 318, D; Calim. Ep. 31; Steph. B. s. c.).

6. A town of the Chersonus Taurica, mentioned
only by Pline (iv. 12. 26). (T. H. D.)

ZERNES (Ζέρνυς), Procop. de Aed. iv. 6. p. 288,
a fortress in Upper Moeia, apparently the present
Old Orontes, at the mouth of the Terna. (T. H. D.)

ZERSYTHUS (Ζερσίθυς, Lycoph. 17; Steph. B.
s. c.), a town of Thrace not far from the borders
of the Aœaniotes. It contained a cave of Hecale, a tetu-
ples of Apollo, and another of Aphrodite, which two deities hence derived the epithet of Zeythyan. (Cf. Liv. xxviii. 41; Ov. Trist. i. 10. 19; Tzetz. ad Lyochpr. 449, 928.) [T. H. D.]

ZESUTERA. (It. Hier. p. 602), a town in the SE. of Thrace, on the Ægatian Way, between Apri and Siracelae, which Lapic identifies with Kohraman. [J. R.]

ZEGITANA REGIO, the more northern part of the Roman province of Africa. Pliny seems to be the earliest writer who mentions the name of Zegitana (v. 4. s. 3). A town of Zeugis is mentioned by Aethicus (Cosmogr. p. 63), and a Zeugitanus, apparently a mountain, by Solinas ("a pede Zeugtano," c. 27), which is perhaps the same as the Mons Zignesius of Victor (de Pers. Vandel.iii.), the present Zow-wan, and according to Shaw (Travels, i. p. 191, sq.), if the existence of a town or mountain so named is not altogether problematical, the province probably derived its name from either one or the other. The district was bounded on the S. by Byzacium, on the W. by Numidia, from which it was divided by the river Tusca (now Z coupe), and on the N. and E. by the Mare Internum. After the time of Caesar it appears to have been called Provincia Vetus, or Africa Propria, as opposed to the later acquired Numidia. (Dion Cass. xii. 10; Plin. l. c. Mela, i. 7.) Strabo mentions it only as Καρχησσία, or the province of Carthago (vi. p. 267, &c.). It embraced the modern Frigescul (which is doubtless a corruption of the ancient name of Africa) or northern part of the kingdom of Tunis. Zegitana was walled by the Bagradas, and was a very fertile country. There were no towns of importance in the interior, but on the coast we find Sageni, Neapolis, Carthago, Aspis or Clupea, Capras, Tunis, Carthago, Cosa, Carthala, Utica, and Hippo Diarrhytus. For further particulars concerning this province see AFRICA. [T. H. D.]

ZEGMA. 1. (Σείγμα, Plot. v. 15. § 14), a town founded by Seleucus Nicator, in the province of Cyprehestica, in Syria. It derived its name from a bridge of boats which was here laid across the Euphrates, and which in the course of time became the sole passage over the river, when the elder one at Thapsacus, 2000 stadia to the S., had become impracticable, or at all events very dangerous, owing to the spreading of the Arabian horses. (Plin. v. 24. s. 21; Strab. xvi. p. 749; Tab. Punt.) It was therefore opposite to the modern Bir or Bireckajir, which occupies the site of the ancient Apamea. (Cf. Ritter, Erdkunde, x. p. 944, seq.) In the time of Justinian, Zeugma had fallen into decay, but was restored by that emperor. Procop. de Aed. ii. 9, p. 237, ed. Boon.) (Cf. Polyb. v. 43; Dion Cass. xi. 17, xiii. 19; Lucan, viii. 236; Bith. Ant. pp. 184, 185, &c.)

ZICCHI (Ziacchi, Arrian, Perip. P. Fusc. p. 19), ZICCHII (Zigchi, Plot. v. 9. § 18), or ZIGNI (Plin. vi. 7. s. 7), a savage piratical tribe of Asiatic Sarmatia, on the coast of the Pontus Euxinus, between Sambage and Achaei. They are called by Procopius Ziegziou and Ziegziou (B. Goth. iv. 4, B. Pers. ii. 29), and by Strabo, Zeyziou (i. p. 129, xi. pp. 492, 495), if, and indeed he means the same people, as he places them in the interior on the Caucasus. [T. H. D.]

ZIGAE, a people of Sarmatia, on the Tannis (Plin. vi. 7. s. 7). [T. H. D.]

ZIGER, a place in Lower Mesia, in the neighbourhood of Axiopolis (Plin. iv. 11. s. 18). [T. H. D.]

ZIGUENSIS MONS. [ZEUGITANA.]

ZIKLAG, a town in the tribe of Simeon (Jos. xix. 5), which at first belonged to the Philistine city of Gath (v. xix. 5), but was annexed to the kingdom of Judah by David. (1 Chron. xxi. 1.) It appears to be the same as that called Zewn com by Josephus (Ant. vi. 14) and Ζωβαν by Stephanius B. It is now entirely destroyed. (Robinson, Travels, ii. p. 424.) [V.]

ZILIA (Mel. iii. 10; Zilia, or Aegia, Plot. iv. 1. § 2), a river on the W. coast of Manaretia Tingitana, which fell into the sea near the town of the same name, N. of the Lixius. It is still called Ar Zila. [T. H. D.]

ZILIA (Mel. iii. 10: Zilia, Ζωβαν, and Ζυλια, Plon. iv. 1. § 13, viii. 13. § 4; Zilias and Zelias, Strab. xvii. p. 257, iii. p. 140), a town of some importance on the N. coast of Manaretia Tingitana, at the mouth of the like-named river, and on the road from Lix to Tingis, from which latter place it was 24 miles distant (Bith. Ant. p. 8, where, and in Plin. v. i. s. 1, it is called Zilis). It was founded by the Carthaginians, and made a colony by the Romans, with the surname of Julia Constantia. (Plin. i. c.) According to Strabo (iii. p. 140), the Romans transplanted the inhabitants, as well as some of the citizens of Tingis, to Julia Joza in Spain. The place is still called Azzila, Azila, Ar Zila. [T. H. D.]

ZIMARA (Zigma), a town in Armenia Minor, on the road from Satala to Melitene, between Armenia and Tarsicia (It. Ant. p. 208; Plin. v. 7. § 2; Tab. Peut.) The exact site is still matter of uncertainty, some finding traces of it near Pashoba, others near Divikir, and others near Kemakha. (Ritter, Erdkunde, x. p. 800.) [L. S.]

ZINGIS PROMONTORIUM (Ζίγγις Promontorium, Plon. 17. § 19, iv. 7. § 11), probably the Modern Morave, was a headland on the eastern coast of Africa about lat. 10° N. It was conspicuous from its forked head and its elevation above a level shore of nearly 400 miles in extent. [W. B. D.]

ZIOBERIS, a small river of Parthia mentioned by Curtius (vi. 4. § 1). It is probably the same as the Stibotes (Στιβώτης) of Dio Diores (xiv. 75), which flowed under the earth in some places, and at length fell into the Rhaducus (Curt. vi. 4. § 6). [V.]

ZION. [Sion.]

ZIPHI. [Siph.]

ZIPHA (Zípha, Zeufa, or Zifar, Plon. iv. 8. § 6), a mountain in the interior of Libya. [T. H. D.]

ZIPHÆNE (Ziphæn, Joseph, Antiq. vi. 13), a district of Palæstina, in the neighbourhood of Mr.
Carmel, which probably took its name from Ziph. (Josh. xv. 14.) Steph. Byz. notices it, quoting from Josephus. [STEPH.]

APPLEA, or ZEITHA (Zeita, Ptol. v. 18. § 6), a small place in Mesopotamia near the Euphrates, noticed by Ptolem. It is in all probability the same as the Sisus of Zosimus (ii. 15). [V.]

ZITHA (Zeita, Ptol. iv. 3. § 12), a promontory in Africa Propria between the two Syrtis and W. of Sabatha. On it lay the place called Pons Zitha. [T. H. D.]

ZOARA (Sópa, Steph. B. s. c.), a small town at the southern end of the Lacus Asphaltites in Judaea, to which Lot escaped from the burning of Sodom. (Gen. xiv. 2, 8, xix. 22.) Josephus, in describing the same lake, states that it extended to *Sopara* or Zopian 'a Sopara' (Ptolemy, iv. 27). During the latter times of the Roman Empire, there was a guard maintained in that part of the country, a corps of native mounted bowmen ("Equites sauciattii Indigeones Zoarae") who were under the command of the Pux Palaestinae. [Notit. Imper.] [V.]

ZOELAE, a town of the Astures in Hispalia Tarraconensis, not far from the sea, and noted for the cultivation of flax. (Plin. iii. 3. s. 4, xiv. 1. s. 2; comp. Flores, *Esp. Segr.* xvi. p. 17; *Inser.* in *Sopon. Med.* p. 278; 3; Orelli, no. 156.) [T.H.D.]

ZOETIA. [Nestalopolis, p. 309, b.]

ZORBA (Zóps, Steph. B. s. v.), a small place in Upper Media, noticed by Arnimianus (xixii. 6). [V.]

ZONE (Plin. iv. 11. s. 18; Mela, ii. 2. § 8; Zóps, Herodot. vii. 59; Scyl. p. 27; Steph. B. p. 291; Schol. Nicand. Ther. 462; Schol. Apoll. Rhod. i. 29), a town on the S. coast of Thrace, on a promontory of the same name, a short distance to the W. of the entrance of the Lacus Stenitores. According to Apollonius and Mela (U. c.) it was to this place that the woods followed Orpheus, when set in motion by his wondrous music. [J. R.]

ZOBAMBUS (Zoipabos), a small stream on the coast of Gordius, mentioned by Marcian (Peripl. c. 29, ed. Müller), called Zorambos by Ptolem. (vi. 8. § 9). [V.]

ZORLANAE (Tab. Peut.; in Geogr. Rav. v. 12, Strodanæ), a place in Thrace, on the road from Siracalæ to Aeumns. [J. R.]

ZOORANDA (Plin. vi. 27. s. 31), a place on the range of Mount Taurus, where the Tigris fell into a cavern, and reappeared on the other side of the mountain; perhaps the spot discovered by Rich, 11 leagues from Judaimerik, where an eastern tributary of the Tigris suddenly falls into a chasm in the mountain. (Rich, *Kuordistan*, i. p. 778; cf. Ritter, Erdk. x. p. 86, sqq.; D'Anville, *L'Euphr. et le Tigre*, p. 74.) [J. R.]

ZOSTER. [Attica, p. 330, b.]

ZUCHABBARI (Zovhedsap, Ptol. iv. 3. § 20), a mountain at the S. borders of the Regio Syrtica. [T. H. D.]

ZUCHABBARI. [Succabar.]

ZUCHIS (Zovis, Strab. xvii. p. 835), a lake 400 stadia long, with a town of the same name upon it, in Libya, not far from the Lesser Syrtis. Stephanus B. (p. 290) mentions only the town, which, according to Strabo, was noted for its purple dyes and salt fish. It seems to be the place called *Zoiehis* by Ptolem. (iv. 3. § 41.) [T. H. D.]

ZUGAR (Zovçap, Ptol. iv. 3. § 40), a town of Africa Propria, between the rivers Bagrades and Triton. [T. H. D.]

ZUMI (Zumaia), a German tribe occupying a district in the neighbourhood of the Lugii, are mentioned by Strabo (vii. p. 209), the only author that notices them, as having been subdued by Maroboduus. [L. S.]

ZUPHONES (Zovphoies, *Dict. xx. 38*), a Numidian tribe in the vicinity of Carthage. [T. H. D.]

ZURMENTUM (Zovpmaevov, Ptol. iv. 3. § 37), a town of Byzacium, in Africa Propria, lying to the S. of Hadrumetum. [T. H. D.]

ZURIBARA (Zovróbap, Ptol. iii. 8. § 9), a town of Dacia, situated where the Marosch falls into the Theiss. [T. H. D.]

ZUSIDAVA (Zovridava, Ptol. iii. 8. § 9), a part of Dacia, probably on the site of the ruins called *Tzetkhatia de Pourn*, below *Burlau* (cf. Uberti). [T. H. D.]

ZYDRETAE (Zovdretai or Zovdieta, Arrian, *Peripl. Pont. Eux.* p. 11), a people of Colchis, on the coast of the Pontus Euxinus, on the S. side of the Phasis, and between the Machelones and the Lasi. [T. H. D.]

ZYGANTIS (Zogantis, Hecat. Fr. op., Steph. B. p. 290), a town of Libya, whose inhabitants were noted for their preparation of honey. Hence Klaussen (ed. Hecat. p. 154) identifies them with the Gymnies of Herodotus (iv. 194), on the W. side of the lake Tritonis, of whom that historian relates the same thing. [T. H. D.]

ZYGENSES (Zogénis, Ptol. iv. 5. § 22), a people on the coast of the Libyan Nomos in Marmara. [T. H. D.]

ZYG (Zoci, Strab. xi. p. 496), a wild and savage people on the Pontus Euxinus in Asiatic Sarmatia, and on the heights stretching from the Caucasus to the Cimmerian Boasorus. They were partly nomad shepherds, partly brigands and pirates, for which latter vocation they had shipped specially adapted (cf. Id. ii. 129, xi. 492, xvi. 839). Stephanus B. (p. 290) says that they also bore the name of Zogyravai; and we find the form *Zygii* (Zoei) in Dionysius (Perig. 687) and Avienus (Descrip. Orb. 871). [T. H. D.]

ZYGOPOLIS (Zogopolis, Strab. xii. p. 518), a town in Pontus, in the neighbourhood of Colchis. Stephanus B. (p. 290) conjectures that it was in the territory of the Zygii, which, however, does not agree with Strabo's description. [T. H. D.]

ZYGRIS (Zogris, Ptol. iv. 5. § 4), a village on the coast of the Libyan Nomos in Marmara, which seems to have given name to the people called *Zygrianae* dwelling there (Zogriana, Ptol. iv. § 492). [T. H. D.]

ZYGITHAE. [Zygris.]
